PUBLISHERS' NOTE ON THE COMPLETED WORK

The publication of the Atlas, which is incorporated in the present edition, completed the plan of The Century Dictionary and Cyclopedia. As the Cyclopedia of Names grew out of the Dictionary and supplemented it on its encyclopedic side, so the Atlas grew out of the Cyclopedia, and serves as an extension of its geographical material. Each of these works deals with a different part of the great field of words,—common words and names,—while the three, in their unity, constitute a work of reference which practically covers the whole of that field. The two new volumes now issued make the material of the Dictionary and Cyclopedia complete. The total number of words and names defined or otherwise described in the completed work is over 500,000.

The special features of each of these several parts of the book are described in the Prefaces which will be found in the first, ninth, tenth, and eleventh volumes. It need only be said that the definitions of the common words of the language are for the most part stated encyclopedically, with a vast amount of technical, historical, and practical information in addition to a wealth of purely philological material; that the same encyclopedic method is applied to proper names—names of persons, places, characters in fiction, books—in short, of everything to which a name is given; and that in the Atlas geographical names, and much besides, are exhibited with a completeness and serviceableness seldom equaled. Of the Century Dictionary and Cyclopedia as a whole, therefore, it may be said that it is in its own field the most complete presentation of human knowledge—scientific, historical, and practical—that exists.

Moreover, the method of distributing this encyclopedic material under a large number of headings, which has been followed throughout, makes each item of this great store of information far more accessible than in works in which a different system is adopted.

The first edition of The Century Dictionary was completed in 1891, that of the Century Cyclopedia of Names in 1894, that of the Atlas in 1897, and that of the two new volumes in 1909. Each of the works published at the earlier dates has been subjected to repeated careful revisions, and the results of this scrutiny are comprised in this edition.

ABBREVIATIONS USED IN THE ETYMOLOGIES AND DEFINITIONS.

a., adj.	adjective.
abbr.	abbreviation
abl.	ablative.
acc.	accusative.
accom.	accommodated,accommodation.
act.	active.
adv.	adverb.
AF.	Anglo-French.
agri.	agriculture.
AL.	Anglo-Latin.
alg.	algebra.
Amer.	American.
anat.	anatomy.
anc.	ancient.
antiq.	antiquity.
aor.	aorist.
appar.	apparently.
Ar.	Arabic.
arch.	architecture.
archæol.	archæology.
arith.	arithmetic.
art.	article.
AS.	Anglo-Saxon.
astrol.	astrology.
astron.	astronomy.
attrib.	attributive.
aug.	augmentative.
Bav.	Bavarian.
Beng.	Bengali.
biol.	biology.
Bohem.	Bohemian.
bot.	botany.
Braz.	Brazilian.
Bret.	Breton.
bryol.	bryology.
Bulg.	Bulgarian.
carp.	carpentry.
Cat.	Catalan.
Cath.	Catholic.
caus.	causative.
ceram.	ceramics.
cf.	L. *confer*, compare.
ch.	church.
Chal.	Chaldee.
chem.	chemical, chemistry.
Chin.	Chinese.
chron.	chronology.
colloq.	colloquial,colloquially.
com.	commerce, commercial.
comp.	composition, compound.
compar.	comparative.
conch.	conchology.
conj.	conjunction.
contr.	contracted, contraction.
Corn.	Cornish.
craniol.	craniology.
craniom.	craniometry.
crystal.	crystallography.
D.	Dutch.
Dan.	Danish.
dat.	dative.
def.	definite, definition.
deriv.	derivative, derivation.
dial.	dialect, dialectal.
diff.	different.
dim.	diminutive.
distrib.	distributive.
dram.	dramatic.
dynam.	dynamics.
E.	East.
E.	English (*usually meaning* modern English).
eccl., eccles.	ecclesiastical.
econ.	economy.
e. g.	L. *exempli gratia*, for example.
Egypt.	Egyptian.
E. Ind.	East Indian.
elect.	electricity.
embryol.	embryology.
Eng.	English.
engin.	engineering.
entom.	entomology.
Epis.	Episcopal.
equiv.	equivalent.
esp.	especially.
Eth.	Ethiopic.
ethnog.	ethnography.
ethnol.	ethnology.
etym.	etymology.
Eur.	European.
eyclam.	exclamation.
f., fem.	feminine.
F.	French (*usually meaning* modern French).
Flem.	Flemish.
fort.	fortification.
freq.	frequentative.
Fries.	Friesic.
fut.	future.
G.	German (*usually meaning* New High German).
Gael.	Gaelic.
galv.	galvanism.
gen.	genitive.
geog.	geography.
geol.	geology.
geom.	geometry.
Goth.	Gothic (Mœsogothic).
Gr.	Greek.
gram.	grammar.
gun.	gunnery.
Heb.	Hebrew.
her.	heraldry.
herpet.	herpetology.
Hind.	Hindustani.
hist.	history.
horol.	horology.
hort.	horticulture.
Hung.	Hungarian.
hydraul.	hydraulics.
hydros.	hydrostatics.
Icel.	Icelandic (*usually meaning* Old Icelandic, *otherwise called* Old Norse).
ichth.	ichthyology.
i. e.	L. *id est*, that is.
impers.	impersonal.
impf.	imperfect.
impv.	imperative.
improp.	improperly.
Ind.	Indian.
ind.	indicative.
Indo-Eur.	Indo-European.
indef.	indefinite.
inf.	infinitive.
instr.	instrumental.
interj.	interjection.
intr., intrans.	intransitive.
Ir.	Irish.
irreg.	irregular, irregularly.
It.	Italian.
Jap.	Japanese.
L.	Latin (*usually meaning* classical Latin).
Lett.	Lettish.
LG.	Low German.
lichenol.	lichenology.
lit.	literal, literally.
lit.	literature.
Lith.	Lithuanian.
lithog.	lithography.
lithol.	lithology.
LL.	Late Latin.
m., masc.	masculine.
M.	Middle.
mach.	machinery.
mammal.	mammalogy.
manuf.	manufacturing.
math.	mathematics.
MD.	Middle Dutch.
ME.	Middle English (*otherwise called* Old English).
mech.	mechanics, mechanical.
med.	medicine.
mensur.	mensuration.
metal.	metallurgy.
metaph.	metaphysics.
meteor.	meteorology.
Mex.	Mexican.
MGr.	Middle Greek, medieval Greek.
MHG.	Middle High German.
milit.	military.
mineral.	mineralogy.
ML.	Middle Latin, medieval Latin.
MLG.	Middle Low German.
mod.	modern.
mycol.	mycology.
myth.	mythology.
n.	noun.
n., neut.	neuter.
N.	New.
N.	North.
N. Amer.	North America.
nat.	natural.
naut.	nautical.
nav.	navigation.
NGr.	New Greek, modern Greek.
NHG.	New High German (*usually simply* G., German).
NL.	New Latin, modern Latin.
nom.	nominative.
Norm.	Norman.
north.	northern.
Norw.	Norwegian.
numis.	numismatics.
O.	Old.
obs.	obsolete.
obstet.	obstetrics.
OBulg.	Old Bulgarian (*otherwise called* Church Slavonic, Old Slavic, Old Slavonic).
OCat.	Old Catalan.
OD.	Old Dutch.
ODan.	Old Danish.
odontog.	odontography.
odontol.	odontology.
OF.	Old French.
OFlem.	Old Flemish.
OGael.	Old Gaelic.
OHG.	Old High German.
OIr.	Old Irish.
OIt.	Old Italian.
OL.	Old Latin.
OLG.	Old Low German.
ONorth.	Old Northumbrian.
OPruss.	Old Prussian.
orig.	original, originally.
ornith.	ornithology.
OS.	Old Saxon.
OSp.	Old Spanish.
osteol.	osteology.
OSw.	Old Swedish.
OTeut.	Old Teutonic.
p. a.	participial adjective.
paleon.	paleontology.
part.	participle.
pass.	passive.
pathol.	pathology.
perf.	perfect.
Pers.	Persian.
pers.	person.
persp.	perspective.
Peruv.	Peruvian.
petrog.	petrography.
Pg.	Portuguese.
phar.	pharmacy.
Phen.	Phenician.
philol.	philology.
philos.	philosophy.
phonog.	phonography.
photog.	photography.
phren.	phrenology.
phys.	physical.
physiol.	physiology.
pl., plur.	plural.
poet.	poetical.
polit.	political.
Pol.	Polish.
poss.	possessive.
pp.	past participle.
ppr.	present participle.
Pr.	Provençal (*usually meaning* Old Provençal).
pref.	prefix.
prep.	preposition.
pres.	present.
pret.	preterit.
priv.	privative.
prob.	probably, probable.
pron.	pronoun.
pron.	pronounced, pronunciation.
prop.	properly.
pros.	prosody.
Prot.	Protestant.
prov.	provincial.
psychol.	psychology.
q. v.	L. *quod* (or pl. *quæ*) *vide*, which see.
refl.	reflexive.
reg.	regular, regularly.
repr.	representing.
rhet.	rhetoric.
Rom.	Roman.
Rom.	Romanic, Romance (languages).
Russ.	Russian.
S.	South.
S. Amer.	South American.
sc.	L. *scilicet*, understand, supply.

superl.	superlative.
surg.	surgery.
surv.	surveying.
Sw.	Swedish.
syn.	synonymy.
Syr.	Syriac.
technol.	technology.
teleg.	telegraphy.
teratol.	teratology.
term.	termination.
Teut.	Teutonic.
theat.	theatrical.
theol.	theology.
therap.	therapeutics.
toxicol.	toxicology.
tr., trans.	transitive.
trigon.	trigonometry.
Turk.	Turkish.
typog.	typography.
ult.	ultimate, ultimately
v.	verb.
var.	variant.
vet.	veterinary.
v. i.	intransitive verb.
v. t.	transitive verb.
W.	Welsh.
Wall.	Walloon.
Wallach.	Wallachian.
W. Ind.	West Indian.
zoögeog.	zoögeography.
zoöl.	zoölogy.
zoöt.	zoötomy.

KEY TO PRONUNCIATION.

a as in fat, man, pang.
ā as in fate, mane, dale.
ä as in far, father, guard.
â as in fall, talk, naught.
ȧ as in ask, fast, ant.
ã as in fare, hair, bear.

e as in met, pen, bless.
ē as in mete, meet, meat.
ė as in her, fern, heard.

i as in pin, it, biscuit.
ī as in pine, fight, file.

o as in not, on, frog.
ō as in note, poke, floor.
ö as in move, spoon, room.
ô as in nor, song, off.

u as in tub, son, blood.
ū as in mute, acute, few (also new, tube, duty: see Preface, pp. ix, x).
u̇ as in pull, book, could.
ü German ü, French u.

oi as in oil, joint, boy.
ou as in pound, proud, now.

A single dot under a vowel in an unaccented syllable indicates its abbreviation and lightening, without absolute loss of its distinctive quality. See Preface, p. xi. Thus:

ạ̄ as in prelate, courage, captain.
ẹ̄ as in ablegate, episcopal.
ọ̄ as in abrogate, eulogy, democrat.
ụ̄ as in singular, education.

A double dot under a vowel in an unaccented syllable indicates that, even in the mouths of the best speakers, its sound is variable to, and in ordinary utterance actually becomes, the short *u*-sound (of but, pun, etc.). See Preface, p. xi. Thus:

a̤ as in errant, republican.
e̤ as in prudent, difference.
i̤ as in charity, density.
o̤ as in valor, actor, idiot.

ā̤ as in Persia, peninsula.
ē̤ as in *the* book.
ṳ̄ as in nature, feature.

A mark (‿) under the consonants *t*, *d*, *s*, *z* indicates that they in like manner are variable to *ch*, *j*, *sh*, *zh*. Thus:

t̮ as in nature, adventure.
d̮ as in arduous, education.
s̮ as in pressure.
z̮ as in seizure.

th as in thin.
ŦH as in then.
ċh as in German ach, Scotch loch.
ṅ French nasalizing n, as in ton, en.
ly (in French words) French liquid (mouillé) l.
′ denotes a primary, ″ a secondary accent. (A secondary accent is not marked if at its regular interval of two syllables from the primary, or from another secondary.)

SIGNS.

< read *from*; i. e., derived from.
> read *whence*; i. e., from which is derived.
+ read *and*; i. e., compounded with, *or* with suffix.
= read *cognate with*; i. e., etymologically parallel with.
√ read *root*.
* read *theoretical* or *alleged*; i. e., theoretically assumed, or asserted but unverified, form.
† read *obsolete*.
★ references so marked are to the supplementary volumes.

SPECIAL EXPLANATIONS.

A superior figure placed after a title-word indicates that the word so marked is distinct etymologically from other words, following or preceding it, spelled in the same manner and marked with different numbers. Thus:

back^{1} (bak), *n.* The posterior part, etc.
back^{1} (bak), *a.* Lying or being behind, etc.
back^{1} (bak), *v.* To furnish with a back, etc.
back^{1} (bak), *adv.* Behind, etc.
back^{2}† (bak), *n.* The earlier form of *bat*^{2}.
back^{3} (bak), *n.* A large flat-bottomed boat, etc.

Various abbreviations have been used in the credits to the quotations, as "No." for *number*, "st." for *stanza*, "p." for *page*, "l." for *line*, ¶ for *paragraph*, "fol." for *folio*. The method used in indicating the subdivisions of books will be understood by reference to the following plan:

Section only	§ 5.
Chapter only	xiv.
Canto only	xiv.
Book only	iii.
Book and chapter	iii. 10.
Part and chapter	
Book and line	
Book and page	
Act and scene	
Chapter and verse	
No. and page	
Volume and page	II. 34.
Volume and chapter	IV. iv.
Part, book, and chapter	II. iv. 12.
Part, canto, and stanza	II. iv. 12.
Chapter and section or ¶	vii. § or ¶ 3.
Volume, part, and section or ¶	I. i. § or ¶ 6.
Book, chapter, and section or ¶	I. i. § or ¶ 6.

Different grammatical phases of the same word are grouped under one head, and distinguished by the Roman numerals I., II., III., etc. This applies to transitive and intransitive uses of the same verb, to adjectives used also as nouns, to nouns used also as adjectives, to adverbs used also as prepositions or conjunctions, etc.

The capitalizing and italicizing of certain or all of the words in a synonym-list indicates that the words so distinguished are discriminated in the text immediately following, or under the title referred to.

The figures by which the synonym-lists are sometimes divided indicate the senses or definitions with which they are connected.

The title-words begin with a small (lowercase) letter, or with a capital, according to usage. When usage differs, in this matter, with the different senses of a word, the abbreviations [*cap.*] for "capital" and [*l. c.*] for "lower-case" are used to indicate this variation.

The difference observed in regard to the capitalizing of the second element in zoölogical and botanical terms is in accordance with the existing usage in the two sciences. Thus, in zoölogy, in a scientific name consisting of two words the second of which is derived from a proper name, only the first would be capitalized. But a name of similar derivation in botany would have the second element also capitalized.

The names of zoölogical and botanical classes, orders, families, genera, etc., have been uniformly italicized, in accordance with the present usage of scientific writers.

M 3. As a symbol: (*c*) M denotes (1) magnetic moment: usually printed in old English; (2) a gaseous pressure of the millionth of an atmosphere. (*d*) μ denotes (1) magnetic permeability or the specific conductivity of any substance for lines of magnetic force; (2) the coefficient of friction. (*e*) *m* stands for the intensity or strength of a magnetic pole. (*f*) m^2 stands for *square meters*, m^3 for *cubic meters*.—**4.** As an abbreviation: (*a*) In titles, M. stands also for *Marquis*, *Matthew* (a book of the New Testament), and *Monsieur*. (*g*) In a ship's log-book, *m.* is an abbreviation (2) of *moderate*. (*h*) In a chart, *m.* stands for *mud*; in *meteor.*, for *mist*; in *ophthalmol.*, for *myopia*. (*i*) In *phar.*, M. or *m.* stands for *macerare* (macerate), *manipulus* (a handful), *mensura* (measure or by measure), *minimum* (minim), *misce* (mix), *mistura* (mixture). (*j*) In astronomical tables, M. or *m.* (abbreviation of L. *meridies*) indicates meridian or meridional: 12 M. stands for noon. See *A.M.* and *P.M.* (*k*) In *astron.*, M. stands for *Messier*, referring to his catalogue of 103 nebulæ and star-clusters: thus, 51M. or M.51 is the famous whirlpool nebula. (*l*) M. stands for *Monday*; M. or *m.*, for *mile* or *miles*, *mill* or *mills*, *month* or *months*, *moon*, *muster*; *m.*, for *married*, *masculine*, *middle*, *minutes*, *morning*, and the Latin *mille* (a thousand).

maal (mâl), *n.* [Norw. Dan. *maal* = Sw. *mål* = Icel. *māl*, speech, language.] In Norway, language: a term occurring in several compounds of some historic note, as *maalstræv*, 'the language struggle,' namely, the struggle to substitute the *landsmaal*, or 'popular speech,' as partly normalized by Aasen in his grammar (1848) and dictionary (1858 and 1873), in place of the *rigsmaal*, or 'national speech,' the literary Norwegian, nearly identical with Danish.

> The close of 1899 and the beginning of 1900 were occupied by a discussion, which drowned all other interests, and in which every Norwegian author took part, as to the adoption of the *landsmaal*, or composite dialect of the peasants, as the national language in place of the *rigs-maal* or Dano-Norwegian. Political prejudice greatly embittered the controversy, but the proposition that the *landsmaal*, which dates from the exertions of Ivar Aasen (*q. v.*) in 1850, should oust the language in which all the classics of Norway are written, was opposed by almost every philologist and writer in the country, particularly by Bjornson and Sophus Bugge (born 1833). On the other side, Arne Garborg's was almost the only name which carried any literary weight. *Encyc. Brit.*, XXXI. 275.

ma'am, *n.* At the British Court it is used, instead of 'madam,' in addressing the queen or a royal princess.

ma'amselle (mäm-zel'), *n.* An Englished form of *mademoiselle*.

maar (mär), *n.* [G. dial., a form of *meer*, sea: see *mere*¹.] In *geol.*: (*a*) A local German name originally applied to certain small crater-lakes in the recently extinct volcanic region of the Eifel, near Bonn, on the Rhine. The craters were believed to have resulted from explosive outbreaks, without emissions of lava. (*b*) Technically, any crater which has been produced by an explosion unaccompanied by lava. *Annals and Mag. Nat. Hist.*, Feb., 1904, p. 135.

maara-shell (mä'rä-shel), *n.* A large ornamental top-shell, *Turbo margaritaceus*, found in the South Pacific.

maatje (mät'ye), *n.* [D., a small measure, a deciliter, dim. of *maat*, measure: see *mete*¹, *n.*] The name given in Holland to the deciliter.

mabi (mä-bē'), *n.* [Carib.; cf. *mabby*, *mobby*, *mobee*.] **1.** A name in Porto Rico for a West Indian tree of the buckthorn family, *Colubrina reclinata*, yielding a heavy, hard, strong, dark-brown wood and a medicinal bark. See *naked-wood*.—**2.** A drink prepared from the bark of the mabi and also from that of *Colubrina Colubrina*. It is commonly sold in the markets and peddled in the streets of Porto Rico, where it is used as a beverage and as a remedy for indigestion.

mabolo (mä-bō'lō), *n.* [Bisaya *mabolo*.] In the Philippine Islands, the kamagon, *Diospyros discolor*, which bears an edible fruit covered with down. Also called *talang*. See ★*kamagon*.

mac (mak), *n.* Short for *macadam*. [Colloq.]

> Until of late years little attention was paid to "*Mac*," for it was considered in no way distinct from other kinds of street-dirt. *Mayhew*, London Labour, II. 197.

Mac., Macc. Abbreviations of *Maccabees*.

macabi (ma-kä'bi), *n.* The ladyfish.

macadam, *n.* **2.** The material used for a macadam pavement.—**Tar-macadam,** the material used in a form of macadam roadway or pavement in which the broken stone for the upper courses is treated with coal-tar for the purpose of increasing the strength and durability of bond, preventing the formation of dust, and rendering the surface of the roadway impervious to moisture.

macadamite (mak-ad'ạm-īt), *n.* An alloy containing about 72 per cent. of aluminium, 24 per cent. of zinc, and 4 per cent. of copper. It is said to possess a tensile strength of more than 44,000 pounds to the square inch. *Mineral Resources of U. S.*, 1902, p. 233.

macadoub (mak'a-döb), *n.* [Etym. uncertain; probably S. A. Indian.] A name given by natives of British Guiana to a luminous larviform insect, probably the larviform female of a coleopterous insect of the tribe *Phengodini*. Probably same as ★*railway-beetle* (which see).

> Mr. C. W. Anderson exhibited a specimen of a light-giving larva brought by him from near the boundary of British Guiana with Brazil, exhibiting when living a ruby light in its head, and a double row of phosphorescent spots along the body, two on each segment. These lights were not intermittent, but glowed continuously. This presumed coleopterous larva was called "*macadoub*" by the natives, and is not uncommon in the region named. *Athenæum*, Nov. 30, 1907, p. 694.

macana (mä-kä'nä), *n.* [Arawak of the Greater Antilles *macana*, a war-club; also in various idioms of the isthmus of Panama.] **1.** A war-club made of heavy wood, or sometimes of stone, formerly used by the Indians in parts of the West Indies. Through the Spaniards the word was circulated in many parts of Spanish America and became incorporated as a designation for Indian war-club in general in many Indian tongues, alongside of original native terms. It is used chiefly by Spanish authors, although the Indians occasionally use it also.

2. A common name of *Eigenmannia humboldti*, a fish of the family *Gymnotidæ*, found in rivers near Panama.

macaroni, *n.* **5.** A vulgar name in Jamaica for a Mexican quarter-dollar, or, afterward, for an English shilling. [Spelled *maccaroni*; also called *macaroni-piece*.]

macaronicism (mak-ạ-ron'i-sizm), *n.* [*macaronic* + *-ism*.] The literary style known as macaronic. See *macaronic*, *a.*, 3.

macaronism (mak-ạ-rō'nizm), *n.* [*macaron-i* + *-ism*.] The style and manners of a macaroni; dandyism. See *macaroni*, 3.

macasla (mä-käs'lä), *n.* [Bisaya *macasla*.] A shrub whose root affords a counterpoison, and whose fruit is poisonous to fish. A mixture containing the poison is thrown into the water. The fish are stupefied, rise to the surface, and are easily caught.

macauco (mä-kä-ō'kō), *n.* [W. Ind.] In Guiana and the British West Indies, the larva of a cerambycid beetle of the genus *Prionus*. This larva is, or was, eaten by both whites and blacks, after cleaning and roasting.

Macaulayese (mạ-kâ-lā-ēs'), *n.* The literary style of the historian and essayist, T. B. Macaulay (1800–1859).

maccaluba (mak-ạ-lö'bạ), *n.* [Sicilian name.] An eruptive vent whence gases (usually hydrocarbons), brines, mud, and, less often, boulders are blown out, building small cones which resemble normal volcanoes. Such vents have no apparent connection with true volcanoes but are due to the generation of gas in the depths.

> On the other hand, solfataras and pits of boiling mud (*maccalubas*) are very common in the volcanic regions where tuff is the predominating rock. The solfataras at Krisuvik and Mývatn [in Iceland] are very well known. *Geog. Jour.* (R. G. S.), XIII. 513.

M. Acct. An abbreviation of *Master of Accounts*.

mace⁴ (mās), *n.* [Origin obscure.] Swindling; a swindler; a swindling loan-office.—**On mace,** on tick.

mace⁴ (mās), *v. t.* and *i.*; pret. and pp. *maced*, ppr. *macing*. [See ★*mace* ⁴, *n.*] To swindle.

Maced. An abbreviation of *Macedonian*.

macédoine (mä-sā-dwon'), *n.* [F., a medley, a mess, lit. Macedonia; in allusion perhaps to the chronic confusion in modern Macedonia.] **1.** A mold of jelly containing a mixture of fruits; also, a mixture of vegetables served as a garnish to meat or, with a sauce, as a vegetable dish or as a salad.—**2.** Hence, figuratively, any mixture of unrelated things.

> That strange *macedoine* of mental and moral qualities—the late Count Gurowski—once remarked to James Russell Lowell, with that easy superiority of knowledge about this country which is the monopoly of foreigners, that we have no singing birds. *Springfield Republican*, June 23, 1902.

macene (mạ-sēn'), *n.* [*mac(e)*² + *-ene*.] A colorless liquid terpene, $C_{10}H_{16}$, contained in oil of mace. It has an odor of thyme.

macer² (mā'sėr), *n.* [*mace*⁴ + *-er*¹.] A swindler.

Maceration process. See ★*process*.

mach., machin. Abbreviations (*a*) of *machinery*: (*b*) of *machinist*.

machæracanthus (mạ-kē-ra-kan'thus), *n.* [NL., < Gr. *μάχαιρα*, knife, + *ἀκανθα*, thorn.] The fin-spines of a genus of Devonian selachians or sharks of large size: the only parts of these fishes yet known.

machærodontine (mạ-kē-rọ-don'tin), *a.* [*Machærodus* (*-odont-*) + *-ine*¹.] Related to or having the characters of *Machærodus*.

machairomancy (mạ-kī'rọ-man-si), *n.* [Gr. *μάχαιρα*, knife, sword, + *μαντεία*, divination.] Divination by means of a sword.

machan (ma-chän'), *n.* [Also *muchan*; < Hind. *machán*, an elevated platform.] In *tiger-shooting*, a high platform or some device to protect and conceal the hunter while he is watching for the tiger. The machan is usually built in a tree and is concealed by the branches.

> We stayed three days, trying every means which might enable us to shoot a specimen [buffalo], but without luck. We tried *machans* at night; we tried walking round the outskirts in bright moonlight, and nearly with success. *Geog. Jour.* (R. G. S.), XVIII. 262.

machete, *n.* **2.** (*b*) Same as *cutlas-fish*.—**3.** A small guitar with four strings, common in Portugal. Its usual tuning is an octave above that of the ordinary guitar.

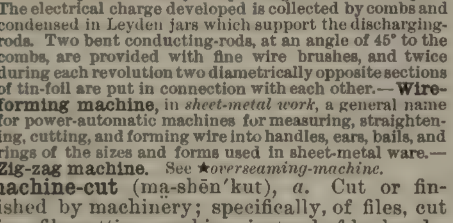
machetero (mȧ-chā-tā'rō), *n.* [Sp., < *machete*, machete.] A person who carries and uses a machete or cutlass.

machicot (mäsh-i-kō'), *n.* [OF. *machicot*, a minor singer in a choir.] In *music*, a singer who is skilful in machicotage.

machicotage (mäsh-i-kō-täzh'), *n.* [F., < *machicot*; see ★*machicot*.] In *medieval music*, the practice or effect of adding passing-notes and other embellishments to a plain-song melody.

machilla (mä-chil'ä), *n.* [East African.] A hammock or chair slung on a pole and carried by porters.

machine, *n.*—**Beating-out machine.** Same as ★*leveling-machine*.—**Belt-machine.** See ★*sandpapering-machine*.—**Bornhardt's machine,** a portable frictional electrical machine much used in France for firing explosives in blasting.—**Compound machine,** a dynamo-electric machine which has two field-windings, a shunt-winding which receives a small branch current at full voltage, and a series-winding having only a few turns of large size, which receives the full armature current, or a large part thereof, before it passes to the external circuit. —**Convertible cutting-machine,** an apparatus used by cracker-bakers. It can be changed from a cutting-machine into a panning-machine, or vice versa.—**Expanding machine,** a machine for expanding the end of a pipe or tube to secure it in a flange or tube-sheet.—**Fiber-cleaning machine.** See *leaf-★fiber machine.*—**Garnett machine,** a machine similar to a wool-carding machine, with two large cylinders and a number of small top-rollers, but with stronger carding-teeth, used for opening wool waste, especially yarn waste: named after the original builders, P. and C. Garnett, of Cleckheaton, England. See cut at ★*garnett.*—**Magneto-electric machine.** See *electric machine,* under *electric.*—**Matrix-rolling machine.** See *matrix.*—**Moving-picture machine.** See ★*picture.* —**Nail-making machine,** a machine for making cut nails, by cutting them from a strip and forging the heads; also, a machine in which wire nails are formed from wire of the same diameter as the body of the nail.—**Paper-cutting machine,** a machine with a long and heavy blade of steel that quickly cuts many sheets of paper to the required length or width.—**Rounding-and-backing machine,** in *bookbinding,* same as *rounding-machine* (*b*).—**Sand-disk machine.** See ★*sandpapering-machine.*—**Sash-sticking and -plowing machine.** See ★*sticker*1, 4.—**Screw-measuring machine,** a machine having a microscope and micrometer for measuring the diameters and pitch and angle of thread on a screw.—**Series-machine,** in *elect.,* a dynamo-electric machine in which the field exciting-coils are connected in series to the armature, so that the whole or a large part of the armature current traverses the field-coils, but only a small part of the voltage generated by the machine (or supplied to it, in a motor) is consumed by the field-coils, which then consist of relatively few turns of large wire or copper bars.—**Shunt-machine,** in *elect.,* a dynamo-electric machine in which the field exciting-coils are connected in shunt to the armature, and so receive only a small part of the total machine current, at full or nearly full machine voltage. The field-coils then contain very many turns of relatively small wire.—**Sigsbee machine.** Same as *Sigsbee* ★*sounding-machine.*—**Strip-covering machine.** See ★*strip-machine.*—**Synchronous machine,** in *elect.,* an alternating-current machine revolving in step with the alternations of the current traversing the machine. —**Tin-pickling machine,** a machine for hoisting and lowering the metal plates into the acid bath in the process of pickling and washing.—**Truing-up machine,** a machine for turning rollers to a uniform diameter, as those on a drawing-frame in cotton-manufacturing.—**Universal machine,** a name applied to certain types of milling and emery grinding-machines that perform various operations within the sphere of milling, gear-cutting, and grinding.—**Wimshurst machine,** a simple, self-exciting, highly efficient induction electrical machine. It consists of two well-varnished glass disks which are rotated in opposite directions about a fixed horizontal spindle.



Wimshurst Machine.

These disks carry, on their outer surfaces, narrow sections of tin-foil placed radially at equal angular distances apart. The electrical charge developed is collected by combs and condensed in Leyden jars which support the discharging-rods. Two bent conducting-rods, at an angle of 45° to the combs, are provided with fine wire brushes, and twice during each revolution two diametrically opposite sections of tin-foil are put in connection with each other.—**Wire-forming machine,** in *sheet-metal work,* a general name for power-automatic machines for measuring, straightening, cutting, and forming wire into handles, ears, bails, and rings of the sizes and forms used in sheet-metal ware.—**Zig-zag machine.** See ★*overseaming-machine.*

machine-cut (ma̤-shēn′kut), *a.* Cut or finished by machinery; specifically, of files, cut in a file-cutting machine, instead of by hand.

machine-fitted (ma̤-shēn′fit″ed), *a.* Finished or brought to an exact size in a machine-tool, instead of by hand.

machinely (ma̤-shēn′li), *adv.* By or as if by a machine; correctly. [Rare.]

> To the legion of the lost ones, to the cohort of the damned,
> To my brethren in their sorrow overseas,
> Sings a gentleman of England, cleanly bred, *machinely* crammed,
> And a trooper of the Empress, if you please.
> *R. Kipling,* Gentlemen-Rankers, in Barrack-room [Ballads, p. 63.

machine-screw (ma̤-shēn′skrö), *n.* A bolt or screw having a moderately fine machine or standard bolt-thread, a blunt end, and a fillister, flat, or button head to be set home by a screw-driver rather than a wrench: used for holding together parts of machines or other metal-work.

machine-thread (ma̤-shēn′thred), *n.* Cotton thread made especially for use on the sewing-machine; sewing-machine thread.

machinism (ma̤-shēn′izm), *n.* [*machine* + *-ism.*] The methods of the 'machine' in party politics, in the United States. *Kansas City Daily Star,* April 9, 1903.

machinization (ma̤-shē-ni-zā′sho̤n), *n.* [*machinize* + *-ation.*] The process or the result of machinizing.

machromin (ma̤-krō′min), *n.* [*ma*(*clurin*) + Gr. *χρῶμα,* color, + *-in*2.] A yellow substance, soluble in water, formed, together with phloroglucin, when maclurin is reduced with zinc and sulphuric acid. When oxidized it turns blue.

machuelo (mä-chö-ā′lō), *n.* [Sp., a small he mule.] Same as *thread-herring,* 2.

machuto (mä-chö′tō), *n.* [Sp.] The common mullet.

macies (mā′ṣi-ēz), *n.* [L.: see *meager, emaciate.*] Marasmus; emaciation.

macilence (mas′i-lens), *n.* Same as *macilency.*

macilent, *a.* **2.** Of literary products, thin; dry; jejune.

mackerel1, *n.* In Australia, a fish, *Scomber antarcticus,* Castln., similar to the chub mackerel, *Scomber Japonicus,* Houttuyn; in New Zealand, *Scomber australasicus,* Cuv. and Val. *E. E. Morris,* Austral English.—**Monterey Spanish mackerel,** a scombroid fish, *Scomberomorus concolor,* found on the California coast.

mackerel-bird (mak′e̤-rel-bėrd″), *n.* A local English name for young kittiwake gulls, *Larus tridactylus,* which begin to fly about the time that the mackerel come on the coast.

mackerel-breeze (mak′e̤-rel-brēz), *n.* A fresh breeze which has good sailing power. Compare *mackerel gale* (which see, under *gale*2).

mackerel-pocket (mak′e̤-rel-pok″et), *n.* A bag of netting immersed in the water to hold mackerel and keep them alive.

mackerel-spiller (mak′e̤-rel-spil″ėr), *n.* Same as ★*mackerel-pocket.*

mackintoshite (mak′in-tosh-īt), *n.* [Named after J. B. *Mackintosh,* New York, who died in 1891.] A silicate of uranium and thorium, occurring in black nodular masses and also, rarely, in square prisms: found with gadolinite in Llano County, Texas. It exhibits radioactivity in a marked degree.

mackite (mak′īt), *n.* [From a surname (?) + *-ite*2.] A trade-name for a material said to consist essentially of a mixture of asbestos and plaster of Paris, intended for use in house-construction as a fire-proof substitute for wood in floors, partition walls, pipe-coverings, etc.

Maclaurin expansion. Same as *Maclaurin's theorem* (which see, under *theorem*).—**Maclaurin's configuration.** See ★*configuration.*

macleyine (mak-lā′in), *n.* Same as ★*protopine.*

Maclurea (mak-lö′rẹ-ä̤), *n.* See *Maclurites.*

maclurin (mak-lö′rin), *n.* [*Maclura* + *in*2.] A pale yellow crystalline compound, $(OH)_3$-$C_6H_2.CO.C_6H_3(OH)_2 + H_2O$; protocatechuphloroglucinol. It occurs in yellow-wood, *Morus tinctoria* (or *Maclura aurantiaca*). When boiled with concentrated caustic potash or when heated with dilute sulphuric acid to 120° C., it yields phloroglucinol and protocatechuic acid. It loses its water of crystallization at 130° C. and melts at 200° C. See ★*morintannic acid.*

Macquaria (ma-kwā′ri-ä̤), *n.* [NL., from the river *Macquarie.*] A genus of serranoid fishes found in rivers of southeastern Australia.

macro-æsthesia (mak″rọ-es-thē′si-ä̤), *n.* [NL., < Gr. *μακρός,* long, large, + *αἴσθησις,* perception.] A form of paræsthesia in which objects give the sensation, when touched, of being larger than they really are.

macro-axis (mak′rọ-ak″sis), *n.* [NL., < Gr. *μακρός,* long, + L. *axis,* axis.] In *crystal.,* the macrodiagonal axis.

Macrobdella (mak-rob-del′ä̤), *n.* [NL., < Gr. *μακρός,* large, + *βδέλλα,* leech.] A genus of large leeches belonging to the family *Ichthyobdellidæ. M. decora* is sometimes used for blood-letting.

macrobian1 (ma-krō′bi-a̤n), *a.* and *n.* [Gr. *μακρόβιος,* long-lived, < *μακρός,* long, + *βίος,* life.] **I.** *a.* Long-lived.

II. *n.* One who has a long life; a macrobiote.

Macrobian2 (ma-krō′bi-a̤n), *a.* [LL. *Macrobius,* < Gr. *Μακρόβιος,* a personal name, lit. 'long-lived.'] Pertaining to Aurelius Theodosius Macrobius, a writer who lived probably in the first part of the fifth century after Christ. —**Macrobian sketches,** special map-illustrations furnished by Macrobius in connection with various passages in his commentary on Cicero's "Dream of Scipio," which discuss especially the question of the terrestrial zones, to which most of the sketches refer.

> Macrobius shares with Sallust the peculiarity of special map-illustration, arising out of specific passages in the works of each; but whereas the Sallust maps stand comparatively apart, these *Macrobian sketches,* as we have seen, are clearly members of a large and interesting family. *Geog. Jour.* (R. G. S.), XV. 383.

macrobiostigmatic (mak″rọ-bī-ọ-stig-mat′ik), *a.* [Gr. *μακρόβιος,* long-lived, + *στίγμα,* point (stigma): see *stigmatic.*] In *bot.,* having the stigma long-lived: said of a proterogynous flower in which the stigma continues receptive to pollen until the anthers mature.

macrobiostigmatous (mak-rọ-bī-ọ-stig′ma̤-tus), *a.* Same as ★*macrobiostigmatic.*

macrobrachia (mak-rọ-brā′ki-ä̤), *n.* [NL., < Gr. *μακρός,* long, + *βραχίων* (L. *brachium*), arm.] A condition in which the arms are abnormally long or large.

macrobranchiate (mak-rọ-brang′ki-āt), *a.* [Gr. *μακρός,* large, + *βράγχια,* gills, + *-ate*1.] Having large gills; also, of or pertaining to the large gill: as, the *macrobranchiate* segment, which contains the greater gill, in the body of *Nautilus.* Opposed to ★*microbranchiate.*

> In the body of the animal [Nautilus] two metameres are recognized—the microbranchiate segment, containing the smaller gill, the outer osphradium, pericardial gland, kidney, and kidney opening, with the generative opening on the right side and the opening of the pear-shaped body on the left; and the *macrobranchiate* segment, containing the greater gill and the inner osphradium, pericardial gland, kidney, and renal opening. *Annals and Mag. Nat. Hist.,* Jan., 1903, p. 135.

macrocentrosome (mak-rọ-sen′trọ-sōm), *n.* [Gr. *μακρός,* long, + E. *centrosome.*] In *cytol.,* the centrosome of Boveri, that is, a centrosome containing a central granule: probably the equivalent of the ★*entosphere* (which see). *Ziegler,* 1898.

macrocephalia (mak″rọ-se̤-fā′li-ä̤), *n.* [NL.] Same as ★*macrocephaly.*

macrocephalism (mak-rọ-sef′a̤-lizm), *n.* [*macrocephal*(*ous*) + *-ism.*] Same as ★*macrocephalia.*

macrocephalus (mak-rọ-sef′a̤-lus), *n.*; pl. *macrocephali* (-lī). [NL., < Gr. *μακροκέφαλος,* long-headed: see *macrocephalous.*] One who has an abnormally large head.

macrocephaly (mak-rọ-sef′a̤-li), *n.* [NL. *macrocephalia,* < Gr. *μακροκέφαλος,* long-headed. See *macrocephalous.*] The condition of having an abnormally, or unusually, large head; macrocephalia.

> The evolution of man from microcephaly to *macrocephaly* has been associated with the passages from macrodontic to a microdontic condition. *Science,* Oct. 30, 1903, p. 550.

macrochæta (mak-rọ-kē′tä̤), *n.*; pl. *macrochætæ* (-tē). [NL., < Gr. *μακρός,* long, + *χαίτη,* mane (bristle).] One of certain large bristles on the body of dipterous insects, used in classification. See ★*chætotaxy.*

macrochemistry (mak-rọ-kem′is-tri), *n.* [Gr. *μακρός,* long, large, + E. *chemistry.*] The chemistry of substances as observed in quantities easily perceptible by the unassisted eye: opposed to *microchemistry,* which deals with the chemical behavior of substances as seen under the microscope.

macrochilia (mak-rọ-kī′li-ä̤), *n.* [NL., < Gr. *μακρός,* long, large, + *χεῖλος,* lip.] Abnormal thickness of the lips.

macrochiria (mak-rō-kī′ri-ä̤), *n.* [NL., < Gr. *μακρός,* long, large, + *χείρ,* hand.] Abnormal size of the hands.

macrocnemia (mak-rok-nē′mi-ä̤), *n.* [NL., < Gr. *μακρός,* long, large, + *κνήμη,* tibia.] The condition in which the legs, especially below the knee, are of abnormal length or size.

macrocnemic (mak-rok-nē′mik), *a.* [*macrocnem*(*ia*) + *-ic.*] Same as ★*dolichocnemic.*

macrocosmology (mak″rọ-koz-mol′ọ-ji), *n.* [*macrocosm* + *-ology.*] A description or an account of the macrocosm.

macrocranial (mak-rọ-krā′ni-a̤l), *a.* [Gr. *μακρός,* long, + *κρανίον,* skull, + *-al*1.] In *anthrop.,* characterized by or exhibiting a skull of more than middle length.

> Dolichocephaly and chamaecephaly in both races are associated with *macrocranial* characters. *Biometrika,* Aug., 1902, p. 462.

macrocytase (mak-rọ-sī′tās), *n.* [Gr. *μακρός,* long, large, + E. *cytase.*] A cytase (complement) in the sense of Metchnikoff, derived from the large lymphocytes of the lymph-nodes, etc.

macrocyte (mak′rọ̄-sīt), *n.* [Gr. *μακρός*, long, large, + *κύτος*, a hollow (a cell).] A red blood-corpuscle of abnormally large size.

> In secondary anæmias . . . microcytes . . . disappear as convalescence sets in, and give place to *macrocytes*.
> *Buck*, Med. Handbook, I. 204.

macrocythemia (mak″rọ̄-sī-thē′mi-ạ̈), *n.* [Gr. *μακρός*, long, large, + *κύτος*, a hollow (a cell), + *αἷμα*, blood.] The occurrence of large red corpuscles in the blood.

macrocytosis (mak″rọ̄-sī-tō′sis), *n.* [NL., < Gr. *μακρος*, long, large, + *κύτος*, a hollow (a cell), + *-osis*.] Same as ★*macrocythemia*; also, the process of formation of macrocytes: a tendency to over-size of the red blood-corpuscles.

macrodactylia (mak″rọ̄-dak-til′i-ạ̈), *n.* [NL., < Gr. *μακροδάκτυλος*, long-fingered: see *macrodactyl*.] Abnormal length or thickness of the fingers or toes.

macrodactylism (mak-rọ̄-dak′ti-lizm), *n.* [*macrodactyl* + *-ism*.] Same as ★*macrodactylia*.

Macrodon (mak′rọ̄-don), *n.* [NL., < Gr. *μακρός*, long, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of fishes belonging to the family *Erythrinidæ*, found in fresh waters of South America.

macrodontic (mak-rọ̄-don′tik), *a.* [*macrodont* + *-ic*.] Same as ★*megadont*, 2.

macroërgate (mak-rō-ėr′gạ̄t), *n.* [Gr. *μακρός*, long, large, + *ἐργάτης*, worker.] A very large ergatoid ant (See ★*ergatoid*.) Wheeler has shown that the enormous size of some of the macroergates of *Pheidole commutata* is a swollen condition caused by the presence in the body of a parasitic worm of the genus *Mermis*.

> These *macroërgates* are compared with phenomena observed among other species, the author concluding that the character of the adult ants is not due to the efforts of the attendant workers alone, but also to a certain amount of initiative in the larvæ.
> *Science*, Dec. 13, 1901, p. 932.

macroflora (mak′rọ̄-flō-rạ̈), *n.* [Gr. *μακρός*, large, + NL. *flora*.] See the extract.

> The Italian botanists, Messieurs Levier and Sommier, have given a vivid account of what they call the *makroflora* of the Central Caucasus—those wild-flower beds, in which a man and a horse may literally be lost to sight, the product of sudden heat on a rich and sodden soil composed of the vegetable mold of ages. Has any competent hand celebrated the mikroflora of the highest ridges, those tiny, vivid forget-me-nots and gentians and ranunculuses that flourish on rock-island 'Jardins' like that of Mont Blanc, among the eternal snows, and enamel the highest rocks of the Basodano and the Lombard Alps?
> *Smithsonian Rep.*, 1904, p. 351.

macrogamete (mak-rọ̄-gam′ēt), *n.* [Gr. *μακρός*, long, + E. *gamete*.] A female germ-cell or ovum.

> Coccidium differs further from Monocystis in that the conjugating gametes are sexually differentiated, the small, active one, or microgamete, functions as the male cell, and the larger, quiescent one, or *macrogamete*, as the female or egg cell, while in the gregarine, on the other hand, the conjugating gametes are of equal size.
> *Pop. Sci. Mo.*, June, 1901, p. 192.

macrogametocyte (mak-rō-gam′e-tọ̄-sīt), *n.* [Gr. *μακρος*, long, large, + E. *gametocyte*.] In sporozoans, the mother-cell of a macrogamete or a female element: opposed to ★*microgametocyte*.

Macroglossini (mak″rọ̄-glo-sī′nī), *n. pl.* [NL., < Gr. *μακρός*, long, + *γλῶσσα*, tongue, + *-ini*.] A group of hawk-moths, or *Sphingidæ*, all of which have a remarkably long proboscis. They are called the *humming-bird hawk-moths*.

macrognathism (ma-krog′nạ-thizm), *n.* [*macrognath(ic)* + *-ism*.] The character or state of being macrognathic.

macrographic (mak-rọ̄-graf′ik), *a.* [*macrograph(y)* + *-ic*.] Relating to or characterized by large or coarse handwriting.

macrography (mak-rog′rạ-fi), *n.* [Gr. *μακρός*, long, large, + *-γραφια*, < *γράφειν*, write.] The use of very large characters in writing, sometimes carried to such an extreme by the insane that a word of three or four letters will run across the entire page.

macrogyne (mak′rọ̄-jin), *n.* [Gr. *μακρός*, long, large, + *γυνή*, female.] A female, or queen, ant of conspicuously larger stature than the normal female form of the species. *Wheeler*, 1907.

macrohemozoite, macrohæmozoite (mak″rọ̄-hem-ọ̄-zō′it), *n.* [Gr. *μακρός*, large, + *αἷμα*, blood, + *ζῷον*, animal, + *-ite*^{2}.] The large form of schizont in the development of the hemogregarine *Drepanidium serpentium*, which infests various snakes. Compare ★*microhemozoite*. *Lutz*.

macro-illuminator (mak″rō-i-lū′mi-nā-tọr), *n.* [Gr. *μακρός*, long, large, + E. *illuminator*.] In a microscope, a single achromatic combination of 1¼-inch clear aperture and 2-inch focus. This lens is mounted to fit into the substage, close to the object, so as to focus the image of the source of light on the objective. Objects up to fully 1 inch in diameter may be thus illuminated with absolute uniformity. It is valuable for photography with the holostigmat and planar types of lenses. *Jour. Roy. Micros. Soc.*, Feb. 1903, p. 91.

macrolecithal (mak-rọ̄-les′i-thạl), *a.* [Gr. *μακρός*, long, large, + *λέκιθος*, yolk of an egg.] Containing a large amount of food-yolk: said of certain eggs, like those of birds, reptiles, sharks, many insects, crustaceans, etc.: opposed to ★*microlecithal* or ★*alecithal*.

macrolepidopterous (mak″rọ̄-lep-i-dop′tẹ̈-rus), *a.* Of or pertaining to the *Macrolepidoptera*.

macrolophic (mak-rọ̄-lof′ik), *a.* [Gr. *μακρός*, long, large, + *λόφος*, crest, + *-ic*.] In *craniom.*, having a high incisor crest in the anterior nasal aperture and a sharp alveolar line. *Harrison Allen*, in *Jour. Acad. Nat. Sci. Phila.*, N. S., X. 419.

macromania (mak′rọ̄-mā″ni-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *μανία*, madness.] 1. Same as *megalomania*.—2. The persistent delusion that surrounding objects, including one's own body, are larger than they really are.

macromastia (mak-rọ̄-mas′ti-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *μαστός*, breast.] Abnormal size of the breasts or nipples.

macromazia (mak-rọ̄-mā′zi-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *μαζός*, breast.] Same as ★*macromastia*.

macromelia (mak-rọ̄-mē′li-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *μέλος*, limb.] Abnormal size of one or more of the limbs.

macromere, *n.* In *embryol.*: (*b*) One of the large yolk-laden cells, found about one pole of an egg in case of unequal segmentation, such as occurs in the hagfish, *Myxine*: contrasted with ★*micromere*.

macromerite (mak-rom′ẹ-rīt), *n.* [Gr. *μακρός*, long, + *μέρος*, a part, + *-ite*^{2}.] In *petrog.*, a rock whose component crystals are large enough to be seen by the unaided eye. Same as ★*phanerite*. *Vogelsang*.

macromerozoite (mak″rọ̄-mer-ọ̄-zō′it), *n.* [Gr. *μακρός*, large, + *μέρος*, part, + *ζῷον*, animal, + *-ite*^{2}.] In sporozoans, a macrosporozoite: contrasted with ★*micromerozoite*.

macromesentery (mak-rọ̄-mez′en-ter-i), *n.* [Gr. *μακρός*, large, + E. *mesentery*.] In anthozoans, a large complete mesentery bearing gonads and filaments: contrasted with ★*micromesentery*.

> The first twelve mesenteries are disposed in couples, and do not differ from those of Actinia except in size. The mesenterial pairs, I, II, and III, are attached to the stomodæum, and are called *macromesenteries* . . ., but IV, V, and VI are much shorter, and are called micromesenteries. *Encyc. Brit.*, XXV. 458.

macromicrometer (mak″rō-mī-krom′e-tėr), *n.* [Gr. *μακρος*, long, + *μικρός*, small, + *μέτρον*, measure.] Dolland's micrometer, with wires not magnified by the eyepiece. [Obsolete.]

macrophage (mak′rọ̄-fāj), *n.* [Gr. *μακρός*, long, large, + *φαγεῖν*, eat.] A very large phagocyte or wandering amœboid cell that devours other cells. Macrophages develop from small lymphocytes and are found in the lymphoid tissues of the alimentary canal.

macrophagocyte (mak-rọ̄-fag′ọ̄-sīt), *n.* [Gr. *μακρός*, long, large, + E. *phagocyte*.] Same as ★*macrophage*.

macrophonous (mak-rof′ọ̄-nus), *a.* [Gr. *μακρόφωνος*, < *μακρός*, large, + *φωνή*, sound, voice.] Having a loud, stentorian voice.

macrophotography (mak″rọ̄-phọ̄-tog′rạ-fi), *n.* [Gr. *μακρός*, long, + E. *photography*.] The production of an enlarged negative from a negative by means of the camera. *Woodbury*, Encyc. Dict. Photog., p. 274.

macrophysical (mak-rọ̄-fiz′i-kạl), *a.* [Gr. *μακρος*, long, large, + E. *physical*.] Of or pertaining to the physics of matter in the mass: opposed to *microphysical*, which relates to the ultimate structure of matter. *P. Drude*, Theory of Optics, p. vii.

macrophysics (mak-rọ̄-fiz′iks), *n.* The physics of the relations of large masses, or of bodies as a whole, the problems of ultimate structure being ignored.

macrophyte (mak′rọ̄-fīt), *n.* [Gr. *μακρός*, long, + *φυτόν*, plant.] A plant visible to the unassisted eye: contrasted with *microphyte*. See quotation under ★*dysphotic*.

macrophytic (mak-rọ̄-fit′ik), *a.* [*macrophyte* + *-ic*.] Having the character of a macrophyte; pertaining to macrophytes.

macropia (mak-rō′pi-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *ὤψ* (*ὠπ-*), eye.] Same as *megalopsia*.

macropine (mak′rọ̄-pin), *a.* [*Macropus* + *-ine*^{1}.] Pertaining to or having the characters of the kangaroos, *Macropodidæ*.

macroplasia (mak-rọ̄-plā′si-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *πλάσις*, a forming.] Overgrowth of a part of the body, or of any special tissue.

macropodal, *a.* **2.** In *bot.*, same as *macropodous*.

Macropodia, *n.* 2. [*l. c.*] The condition of having abnormally large feet.

macroprosopia (mak″rọ̄-prọ̄-sō′pi-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *πρόσωπον*, face.] The condition of having a disproportionately large face.

macroprosopous (mak″rọ̄-prọ̄-sō′pus), *a.* Characterized by macroprosopia.

macropsia (mak-rop′si-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *ὄψις*, view.] A state in which a visual defect makes objects appear to be of too great size. Also called *macropia* and *megalopsia*.

Macropterygidæ (mak-rop-tẹ-rij′i-dē), *n. pl.* [NL., < *Macropteryx* (*-yg-*) + *-idæ*.] A family of birds containing the tree-swifts of southeastern Asia. They have the vomer narrow; palatines exteriorly unnotched; posterior margin of sternum concave, with two perforations; and the tarsus shorter than the first digit.

Macropteryx (mak-rop′tẹ-riks), *n.* [NL., < Gr. *μακρός*, long, + *πτέρυξ*, wing.] A genus of birds containing the tree-swifts of southeastern Asia and the larger adjoining islands. They are distinguished from other swifts by many anatomical peculiarities and are placed in a separate family, the *Macropterygidæ*.

macrorhinia (mak-rō-rin′i-ạ̈), *n.* [NL., < Gr. *μακρός*, long, large, + *ῥίς* (*ῥιν-*), nose.] The condition of having a disproportionately large nose.

macrosceles (mak-ros′e-lēs), *n.* [NL., < Gr. *μακροσκελής*, long-legged: see ★*macroscelia*.] One who is long-legged.

macroscelia (mak-rọ̄-sē′li-ạ̈), *n.* [NL., < Gr. *μακροσκελής*, long-legged, < *μακρός*, long, large, + *σκέλος*, leg.] Same as ★*macrocnemia*.

macroscelic (mak-rọ̄-sē′lik), *a.* Pertaining to or characterized by macroscelia.

> What is more, in a race like the French, there are two distinct types, each having the same measurement, but the one class is long-legged (*macroscelic*, in the term of the anthropologists), the other short-legged (microscelic).
> *Smithsonian Rep.*, 1904, p. 528.

macroscope (mak′rọ̄-skōp), *n.* [Gr. *μακρός*, long, large, + *σκοπεῖν*, view.] An imaginary instrument, antithetic to the microscope, which should bring vast regions of the universe within the range of vision. See the extract.

> We may imagine a *macroscope*, which should shrink experience as the microscope expands it, thus disclosing to us more and more of immensity at once.
> *C. A. Strong*, Why the Mind has a Body, p. 230.

macroseism (mak′rọ̄-sīzm), *n.* [Gr. *μακρός*, long, large, + *σεισμός*, an earthquake.] A great earthquake; a heavy or intense earthquake.

> Prof. Milne pointed out the distinction which exists between *macroseisms*, or large earthquakes, and microseisms, or small earthquakes. The former he described as world-shaking disturbances, while as regarded the latter, there were about thirty thousand such disturbances every year, each of which disturbs from ten up to several hundreds of square miles of the earth's surface.
> *Sci. Amer. Sup.*, May 2, 1903, p. 22855.

macroseismic (mak-rọ̄-sīs′mik), *a.* [*macroseism* + *-ic*.] Of the nature of a macroseism; relating to an intense earthquake, or to one of great area or of long continuance.

> In the earthquakes with distant origins, the periods of the preliminary tremors do not depend upon their duration, the duration of preliminary tremors being proportional to the distance such earthquake motion may have travelled. This is probably true for other phases of motion, and it has also been shown to exist for *macroseismic* disturbances. *Nature*, July 9, 1903, p. 235.

macroseismograph (mak-rọ̄-sīs′mọ̄-gråf), *n.* [Gr. *μακρός*, long, large, + *σεισμός*, earthquake, + *γράφειν*, write.] A seismograph adapted for recording large movements of the earth, or macroseisms.

macrosepalous (mak-rọ-sep′ạ-lus), *a.* [Gr. *μακρός*, long, large, + NL. *sepalum*, sepal, + *-ous.*] In *bot.*, having long or large sepals.

macrosis (mak-rō′sis), *n.* [NL., ‹ Gr. *μάκρωσις*, lengthening, enlarging, **μακροῦν*, lengthen, enlarge, ‹ *μακρός*, long, large.] In *pathol.*, increase in size.

macrosmatic (mak-ros-mat′ik), *a.* [Gr. *μακρός*, long, large, + *ὀσμή*, smell, + *-atic*^{2}.] Having the organs of smell, especially the ethmoturbinals, well developed: contrasted with ★*microsmatic.* According to Turner, the application of this and related terms depends largely upon the number of ethmoturbinals, five being characteristic of most osmatic animals, anosmatic animals having four or less, and macrosmatic animals from six to eight.

> Echidna, on the other hand, is, to use Turner's nomenclature, "*macrosmatic.*"
> *Proc. Zool. Soc. London*, 1894, p. 9.

macrosmatism (mak-ros′mạ-tizm), *n.* [*macrosmat(ic)* + *-ism.*] A characteristic condition in mammals which consists in their having the organs of smell well developed. *Trans. Linnean Soc. London*, Zool., Jan., 1899, p. 298.

macrosomatia (mak″rọ-sọ-mā′shiạ̈), *n.* [NL., ‹ Gr. *μακρός*, long, large, + *σῶμα(τ-)*, body.] Great size of the body; gigantism.

macrosomatous (mak-rọ-sō′mạ-tus), *a.* [Gr. *μακρός*, long, large, + *σῶμα(τ-)*, body, + *-ous.*] In *anat.*, having a large body.

macrosome (mak′rọ-sōm), *n.* [Gr. *μακρός*, long, large, + *σῶμα*, body.] In *cytol.*, one of the larger granules scattered among the smaller ones (microsomes) in certain cell-nuclei. Some cytologists regard the macrosomes as composed of chromatin, the microsomes of achromatic substance. According to others, the macrosomes are true nucleoli, whereas the microsomes are true chromatin granules.

macrosomia (mak-rọ-sō′mi-ạ̈), *n.* [NL.: see ★*macrosome.*] Abnormal size of the body: gigantism.

macrosporic (mak-rọ-spō′rik), *a.* [*macrospore* + *-ic.*] Relating to or of the nature of a macrospore.

macrosporozoite (mak″rō-spō-rọ-zō′īt), *n.* [Gr. *μακρός*, large, + E. *sporozoite.*] In *Sporozoa*, a large endogenous sporozoite; a macromerozoite. Compare ★*microsporozoite. Podwyssotzki.*

> The discovery by Schaudinn and Siedlecki of a true fertilization in a certain number of Sporozoa, for which the present writer's announcement in 1896 of the sexual dimorphism of *macrosporozoites* and microsporozoites prepared the way.
> *Encyc. Brit.*, XXXII. 814.

Macrostoma, *n.* 2. *sing.* A genus of deep-sea fishes of the family *Myctophidæ.*—3. *sing.* The typical genus of the family *Macrostomidæ. M. hystrix* is found in stagnant water. *Van Beneden.*

Macrostomatidæ (mak″rọ-stọ-mat′i-dē), *n. pl.* [NL.] Same as ★*Macrostomidæ*, 2.

macrostomatous (mak-rọ-stom′ạ-tus), *a.* [Gr. *μακρός*, long, large, + *στόμα* (*τ-*), mouth, + *-ous.*] Having a mouth of unusually large size.

macrostomia (mak-rọ-stō′mi-ạ̈), *n.* [NL.] The state of having an abnormally large mouth.

Macrostomidæ, *n. pl.* 2. A family of rhabdocœlous turbellarians in which the female gonad is an ovary and the female pore is in front of the male pore. It contains the genera *Macrostoma*, *Omalostoma*, and *Mecynostoma.* Also called *Macrostomatidæ.*

macrostomoid (mak-ros′tọ-moid), *a.* Resembling the *Macrostomidæ*; having a large mouth or aperture, as a shell.

macrostomous (mak-ros′tọ-mus), *a.* Same as ★*macrostomatous.*

macrostomus (mak-ros′tọ-mus), *n.*; pl. *macrostomi* (-mī). [NL.] One who has a very large mouth.

macrostructural (mak-rọ-struk′tụ̈-ral), *a.* [Gr. *μακρός*, large, + E. *structure* + *-al*^{1}.] Of or pertaining to gross, as distinguished from microscopic, structure.—**Macrostructural metamorphism.** See ★*metamorphism.*

macrostylous (mak-rọ-stī′lus), *a.* [*macrostyle* + *-ous.*] Same as *macrostyle.*

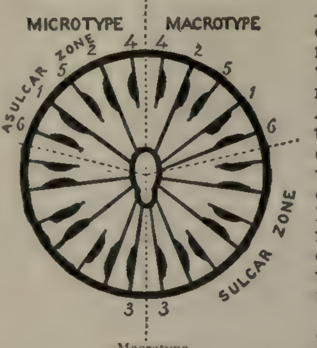
macrotia (mak-rō′ti-ạ̈), *n.* [NL., ‹ Gr. *μακρός*, long, large, + *οὖς* (*ὠτ-*), ear.] Abnormal size of the ears.

macrotrachelous (mak″rọ-trạ-kē′lus), *a.* [Gr. *μακρός*, long, + *τράχηλος*, neck, + *-ous.*] Having the preintestinal longer than the postanal part of the body, as certain rotifers.

macrotypal (mak′rọ-tī-pạl), *a.* [*macrotype* + *-al*^{1}.] Relating or pertaining to a macrotype: as, the *macrotypal* arrangement of the mesenteries in anthozoans.

macrotype (mak′rọ-tīp), *n.* [Gr. *μακρός*, large, + *τύπος*, type.] A modification of the usual arrangement of the mesenteries in certain *Zoanthidea*, in that the mesenteries 6, 6, which form couples with 1, 1, are macromesenteries: contrasted with ★*microtype.*

> Some such relationship may perhaps hold between the complete (*macrotype*) or incomplete (microtype) sixth protocnemic pair and the enlarged or diminutive alar septa.
> *Annals and Mag. Nat. Hist.*, May, 1902, p. 393.



Macrotype.

Diagram of the final arrangement of the mesenteries in the *Zoantheæ.* The left of the figure shows the microtypal; the right, the macrotypal arrangement. The five mesenterial pairs, 1, 1; 2, 2; 4, 4; 5, 5; 6, 6, occupy the asulcar aspect of the zooid, and it is seen that in this region the macromesentery of each couple is furthest from the sulcar directives. In this remaining sulcar region the macromesentery of each couple is nearest the directives. (From Lankester's "Zoology.")

Macrourus (mak-rö′rus), *n.* Same as *Macrurus*, 1.

macrovariolitic (mak″rọ-vā-ri-ọ-lit′ik), *a.* [Gr. *μακρός*, large, + E. *variolitic*]. Coarsely variolitic or spotted: applied to certain variolitic eruptive rocks. *Amer. Geol.*, Sept., 1904, p. 139.

macruran, *n.* **II.** *a.* Relating or pertaining to the *Macrura.*

> Spence Bate maintained that the Schizopoda ought not to form a separate order but to be ranged as a *macruran* tribe.
> *Encyc. Brit.*, XXX. 479.

macula-ring (mak′ụ̄-lạ̈-ring), *n.* A ring which surrounds the macula or spot of most acute vision in man and some of the apes. *Philos. Trans. Roy. Soc.* (London), 1901, ser. B, p. 74.

maculature, *n.* 3. In *etching*, an impression or proof taken upon a sheet of common absorbent paper laid upon the plate.

> One of these [the Hundred Guilder Plate], in the Museum of Amsterdam, is a '*maculature*,' an impression on a sheet of ordinary paper passed over the plate to remove the ink. *Rose Kingsley*, in Burlington Mag., V. 70.

macule, *n.* 2. In *pathol.*, same as *macula.*

> A *macule*, excoriation, or bulla on the site of the destruction.
> *Buck*, Med. Handbook, I. 147.

maculicolous (mak-ụ̄-lik′ọ-lus), *a.* [L. *macula*, a spot, + *colere*, inhabit, + *-ous.*] In *bot.*, found in definite spots upon the surface of leaves or stems: applied to fungi.

maculiferous (mak-ụ̄-lif-ẹ-rus), *a.* [L. *macula*, spot, + *ferre*, bear, + *-ous.*] Covered with spots; bearing spots.

maculopapular (mak″ụ̄-lọ-pap′ụ̄-lạ̈r), *a.* [L. *macula*, spot, + *papula*, pimple, + *-ar*^{3}.] Both macular and papular.

Mad., Madm. Abbreviations of *Madam.*

Madagass (mad-ạ-gas′), *n.* 1. Same as *Malagasy.*—2. A light-colored Jamaica negro whose hair is more nearly straight than is usual with the race.

madarin (mad′ạ-rin), *n.* Same as ★*mudarin.*

madaroma (mad-ạ-rō′mạ̈), *n.* [NL., ‹ Gr. *μαδαροῦν*, make bald, ‹ *μαδαρός*, bald.] Same as *madarosis.*

madarotic (mad-ạ-rot′ik), *a.* [*madarosis* (*-rot-*) + *-ic.*] Relating to or marked by madarosis, or a falling of the hair, especially of the eyelashes.

mad-bred (mad′bred), *a.* Bred by madness in the brain; madness-bred. [Rare.]

> This fell tempest shall not cease to rage
> Until the golden circuit on my head,
> Like to the glorious sun's transparent beams,
> Do calm the fury of this *mad-bred* flaw.
> *Shak.*, 2 Henry VI., iii. 1.

madder^1, *n.*—**Blue field-madder.** Same as *field-madder*: now adventive in Ontario and Massachusetts, also in Bermuda.—**Purple madder.** (*a*) See *madder lakes.* (*b*) Same as ★*purple-black.*—**Wild madder.** (*c*) The dyer's-cleavers, *Galium tinctorium.*

madder-bleach (mad′ėr-blēch), *n.* Originally, a very thorough bleaching process to which cotton cloth was subjected before it was printed with madder: now used in many cotton-bleacheries to designate the most thorough form of cotton-bleaching.

> In calico-printing with alizarine colors, or in fact with any colors where a particularly clear and white ground is desired the *madder-bleach* is used.
> *L. A. Olney*, Textile Chem. and Dyeing, II. 48.

maddish (mad′ish), *a.* [*mad*^{1} + *-ish.*] 1. Like a madman; characteristic of a madman.—2. Somewhat mad; rather mad.

Mad-dog weed. See ★*weed*^{1}.

madega (ma-dā′gạ̈), *n.* [Abyssinian.] A measure of capacity in Abyssinia, equal to 3.466 bushels. *C. H. Haswell*, Mech. and Engin. Pocket-book, p. 48.

madeleine (mäd-lān′), *n.* [F. *madeleine*, from *Madeleine*, a feminine name. See *maudlin.*] A small iced and decorated cake, usually made with a layer of jelly or jam.

mademoiselle, *n.* 4. A French governess: used as '*Fräulein*' is used for a German governess.

madescent (ma-des′ẹnt), *a.* [L. *madescens* (*-ent-*), ppr. of *madescere*, become moist, ‹ *madere*, be moist.] Slightly moist.

Madhuca (mad-hö′kạ̈), *n.* [NL. (Gmelin, 1791), ‹ Skt. *madhūka*, a bee, also the name of a tree, *Bassia latifolia* or *Madhuca Indica*, the mahwa-tree.] A genus of dicotyledonous trees belonging to the family *Sapotaceæ.* About 30 species are known, natives of the East Indies. (See *Bassia.*) Several species are valuable for the oil yielded by the seeds, and for their fleshy flowers, which are largely used as food in central India and yield a coarse spirit by distillation. The mahwa-tree, *Madhuca Indica*, is cultivated throughout India for these purposes. *M. butyracea*, the Indian butter-tree, yields a solid white oil known as *fulwa-butter.* *M. longifolia* of southern India is the principal source of illupi-oil. The bark, leaves, and oil of these trees are used in rheumatic and cutaneous diseases, and the timber is hard and durable. See *illupi.*

madnep, *n.* (*b*) *Heracleum lanatum*, the cow-parsnip or masterwort.

madness, *n.*—**Greenland dog-madness.** Same as ★*piblockto.*

mado (mā′dō), *n.* [Prob. aboriginal Australian.] A fish, *Therapon cuvieri*, of the family *Hæmulidæ*, found in Australian waters.

madonnina (ma-do-nē′nạ̈), *n.* [It., ‹ *madonna*, madonna.] A silver coin of Genoa, with a device of the immaculate conception on the reverse, worth 1*s.* 6¾*d.*; the double lira.

madras, *n.* 2. A thin cotton cloth, generally corded or figured, used for shirts, etc.

Madreporic gland, in echinoderms. Same as ★*axial organ.*

madreporidan (mad-rẹ-por′i-dan), *a.* Resembling or characteristic of the *Madreporidæ.*

madreporigenous (mad″rẹ-pọ-rij′e-nus), *a.* [*madrepore* + *-gen* + *-ous.*] Producing madrepore coral: as, *madreporigenous* polyps.

madriale (mä-drẹ-ä′le), *n.* [It.: see *madrigal.*] In *music*: (*a*) A madrigal. (*b*) An intermezzo: so called because madrigals were once much used as intermezzi in the opera.

madrina (mä-drē′nạ̈), *n.* [Sp., lit. 'godmother'; also sponsor, protectress, ‹ *madre*, ‹ L. *mater*, mother.] In South America, the leading animal of a mule-train, usually distinguished by some head-ornament, chiefly by a bell dangling from the neck. In Spain the term is also used to designate the rope or leather band by which two mules are tied together; and for a wooden support in the shape of a pillar or column.

madroño, *n.* The name was originally applied to the strawberry-tree, *Arbutus Unedo*, which is so called in Spain. It was transferred to its congener, *A. Menziesii*, of the American Pacific Coast. It is now also applied to *A. Xalapensis* and *A. Arizonica*, of the southwestern United States and northern Mexico.

madupite (ma-dū′pīt), *n.* [*Madùpa*, an Indian name for *Sweetwater*, a county in Wyoming, + *-ite*^{2}.] In *petrog.*, an aphanitic volcanic rock composed of diopside and phlogopite, with leucite in subordinate amount, also a little glass base. *Cross*, 1897.

Madurese (mad′ụ̄-rēs or -rēz), *a.* and *n.* **I.** *a.* Of or pertaining to Madura, an island in the Malayan archipelago, east of Java.

II. *n. sing.* and *pl.* A native or the natives of the island of Madura.

madwoman's-milk (mad′wụ̇m-ạnz-milk″), *n.* The sun-spurge, *Euphorbia Helioscopia.*

Ma. E. An abbreviation of *Master of Engineering.*

mæandrinoid (mẹ-an′dri-noid), *a.* Resembling the *Mæandrinidæ*, a family of corals.

mæandroid (mẹ-an′droid), *a.* [Gr. *μαίανδρος*, a meander, + *εἶδος*, form.] Having the form of a meander, as a brain-coral.

> Aporose, mainly colonial corals, massive, branching, or *mæandroid.*
> *Encyc. Brit.*, XXV. 462.

maestrale (mä-es-trä′le), *a.* [It., ‹ *maestro*, master.] See *stretto.*

Maestrichtian (mäs-trich′ti-ạn), *n.* [*Maestricht* + *-ian.*] In *geol.*, the designation of a substage of the Cretaceous in Belgium and northern France: equivalent to *Maestricht beds* (which see, under *bed*1).

maffia (mä′fi-ä or mä-fē′ä), *n.* [Also *mafia* (N. E. D., Internat. Encyc.); = F. *maffia* (Larousse), < It. *maffia* (marked *máffia*, Edgren), a Sicilian word of obscure origin not in the local glossaries and only lately inserted in Italian dictionaries.] 1. In Sicily, (*a*) a general sentiment of hostility to legal restraint or punishment, or to the invoking of the law for any purpose; also, (*b*) the collective number of those who sympathize with this hostility and often express it by criminal acts.—2. A supposed wide-spread secret society of Sicilians, or other Italians, leagued in opposition to the laws or for purposes of revenge by assassination. [This is the sense reflected in the American newspapers since 1888.]

> Here and there it [the insurrection in Sicily] was based upon a bastard Socialism, in other places it was made a means of municipal party warfare under the guidance of the local *maffia*. *Encyc. Brit.*, XXIX. 649.

> The *Maffia* is not, as is generally believed, one vast society of criminals, but is rather a sentiment akin to arrogance which imposes a special line of conduct upon persons affected by it. In substance the maffioso considers it dishonourable to have recourse to lawful authority to obtain redress for a wrong or a crime committed against him. *G. Mosca*, in Encyc. Brit., XXXII. 618.

maffick (maf′ik), *v. i.* [A back-formation from *mafficking*, taken as a verbal noun.] To give way to a frenzy of enthusiasm; celebrate a victory with a delirious uproar. [Slang, Eng.]

> The word had its origin in the scenes witnessed in London on May 18, 1900, the night after the raising of the siege of Mafeking was announced. . . . And because the celebration was so utterly unprecedented, because such scenes had been supposed to be impossible in London, or anywhere else where English is spoken, there was no word to describe it. Afterward, therefore, when the London mob has shown a disposition to celebrate in a similar manner, a brand-new word has been employed to describe these manifestations of enthusiasm—the word '*maffick*.' *N. Y. Times*, July 6, 1902.

maffick (maf′ik), *n.* [*maffick*, *v.*] A particular act of mafficking. See ★*maffick*, *v.* [Slang, Eng.]

> The Peace '*maffick*' has not yet been completely worked off. *Westminster Gazette*, June 4, 1902, p. 7. *N. E. D.*

mafficker (maf′i-kėr), *n.* One who 'mafficks,' or celebrates a joyful event with frenzied enthusiasm. [Slang, Eng.]

mafficking (maf′i-king), *n.* [From the name of *Mafeking*, a town in South Africa which became famous in the Boer war (1899–1900). Held by British troops under Colonel (later Major-General) R. S. S. Baden-Powell, it underwent a severe siege by the Boers. It was finally relieved on May 18, 1900. The announcement of the relief of Mafeking produced an extraordinary outburst of popular enthusiasm in London on the night of May 18. The name was humorously treated as a verbal noun in *-ing*, and the verb *maffick* was thus evolved.] A frenzied celebration of a victory, when the people of a city go wild with joy. See ★*maffick*, *v.* [Slang, Eng.]

> Probably in years to come the perfervid ebullitions which were described as "*Mafficking*" will be looked upon as beyond the bounds of physiological limits. *Lancet*, June 6, 1903, p. 1574.

mafficky (maf′i-ki), *a.* [*maffick* + *-y*1.] Inclined to be uproariously enthusiastic; frenzied with joy: as, a *mafficky* crowd. *N. Y. Times*, July 6, 1902. [Slang, Eng.]

maffioso (mä-fi-ō′sō), *n.*; pl. *maffiosi* (-sē). [It., < *maffia*.] One who sympathizes with the maffia; a member of the maffia.

mafoo (mä-fö′), *n.* [Chin. *ma fu*, a groom, servitors in general: *ma*, horse, + *fu*, a man (servant).] A groom; by extension, a coachman. [Anglo-Chinese.] *N. and Q.*, 10th ser., III. 305.

mag. An abbreviation of *magnetism*.

magaline (mag′a̤-lin), *n.* [*mag*(*netic*) + *-a-* + *line*2.] A practical unit of magnetic flux density equal to 1,000,000 gausses or lines per unit of cross-section.

magastromancy† (mā̤-gas′trọ̄-man-si), *n.* [Gr. *μάγος*, magus, + *ἄστρον*, star, + *μαντεία*, divination.] Magical astronomy.

> If there were any congruity or consistency betwixt prophecy and *magastromancy*. *Rev. J. Gaule*, The Magastromancer. *N. E. D.*

magautrap (mag′â-trap), *n.* [*mag*(*azine*) + *au*(*to-*) + *trap*1.] A machine for throwing clay pigeons used in trap-shooting. It contains a magazine from which the pigeons are discharged automatically.

> During the day others shot at targets from the *magautrap*. *Forest and Stream*, Feb. 21, 1903, p. 159.

magazine, *n.*—**Expense magazine**, a magazine for keeping small quantities of ammunition for immediate use, as distinguished from a storage magazine.—**Magazine flood-pipe.** See ★*flood-pipe*.

magazine-cock (mag-a̤-zēn′kok), *n.* A cock or valve in an ammunition-room which, when opened, permits sea-water to flow from the magazine flood-pipe into the room and to flood the ammunition in case of fire on board the vessel.

magazine-dress (mag-a̤-zēn′dres), *n.* A special woolen outside dress with slippers worn by men who handle powder in a magazine.

magazine-fuse (mag-a̤-zēn′fūz), *n.* A device for protecting electric circuits from excessive currents, in which, when the fuse is melted, it is replaced automatically by another.

magazine-passage (mag-a̤-zēn′pas″ā̤j), *n.* On shipboard, an alleyway in the magazine; a small passageway cut off from the magazine proper but communicating with it by small doors.

magazine-pistol (mag-a̤-zēn′pis″tọl), *n.* A repeating pistol; a pistol which has a magazine containing a number of cartridges which are fed automatically into the chamber so that all of them may be fired in rapid succession.

Magdalenian (mag-da̤-lē′ni-a̤n), *a.* and *n.* [See *magdalen*.] **I.** *a.* In *geol.*, noting one of the divisions of the postglacial series in France, based upon the character and workmanship of the human relics they contain. The name is derived from the caves of La Madeleine in Périgord, where well-finished flints are found associated with carved bone and ivory. It is equivalent to the ★*Glyptic period*.

II. *n.* The paleolithic epoch described above.

Magellania (maj-e-lā′ni-ä̤), *n.* [NL., < *Magellan* (in allusion to the Straits of Magellan?).] A genus of brachiopods having a long and deeply reflected loop. It appeared in Jurassic time, and still exists in southern seas.

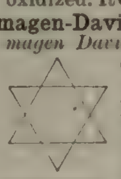
Magellanian (maj- or mag-e-lā′ni-a̤n), *a.* Same as ★*Magellanic*, 2.—**Magellanian series.** See ★*series*.

Magellanic, *a.* **2.** Pertaining to the region in the vicinity of the Straits of Magellan.—**Magellanic jacket**, a sailor's watch-coat, with a hood. *N. E. D.*

Magelona (maj-ẹ̄-lō′nä̤), *n.* [NL.] The typical and sole genus of the family *Magelonidæ*. *M. papillicornis*, of which the blood is madder-pink in color, is found between tide-marks along the coast of the United States. *F. Müller*, 1858.

Magelonidæ (maj-ẹ̄-lon′i-dē), *n. pl.* [NL., < *Magelona* + *-idæ*.] A family of marine, sand-inhabiting polychætous worms, having the body divisible into two regions by differences in the setæ, the prostomium large and flat, two long peristomial cirri, and a large eversible buccal region. The blood is madder-pink when oxygenated, but colorless when deoxidized. It contains the single genus *Magelona*.

magen-David (mä′gān-dä′vēd), *n.* [Heb. *magen David*, shield of David.] A cabalistic emblem consisting of two intertwined triangles, forming a six-pointed star. This emblem has been adopted by modern Jews, although it is of non-Jewish origin. The supposed miracle-working cabalists inscribe it upon parchment along with certain formulæ and use it as a protecting amulet. The Zionists have placed the *magen-David* on their flag. See *Zionist* ★*flag*.



Magen-David.

Magenta bronze. See *tungsten* ★*bronze*.—**New magenta**, a basic coal-tar color of the triphenyl-methane type. It dyes tannin-mordanted cotton a red which is brighter and bluer than magenta.

maggiolata (mäj-ō-lä′tä), *n.* [It., < *Maggio*, < L. *Maius*, May.] An Italian May-day song.

maggot, *n.*—**Beet leaf-maggot**, the larva of an anthomyiid fly, *Pegomya vicina*, which mines the leaves of the sugar-beet and other closely allied plants. See ★*Pegomya*, with cut.—**Cabbage-root maggot.** Same as *cabbage-maggot*.—**Corn-stalk maggot.** See ★*corn*1.—**Processional maggots.** See *snakeworm*.—**Red maggot**, the larva of the wheat-midge. See *wheat-midge*, 1.

Magian. I. *a.* **2.** [*l. c.*] Magic. [Rare.]

> Will he touch me with his searing hand, . . .
> Or tear me piecemeal with a bony saw,
> And keep me as a chosen food to draw
> His *magian* fish through hated fire and flame?
> *Keats*, Endymion, iii.

II. *n.* **2.** [*l. c.*] A wizard.

Magic parallelepiped, photograph. See ★*parallelepiped*, ★*photograph*.—**Magic square** (*general* and *ordinary*). See ★*square*1.

magicalize (maj′i-ka̤l-īz), *v. t.*; pret. and pp. *magicalized*, ppr. *magicalizing*. [*magical* + *-ize*.] To invest with a magical charm. [Rare.]

> The landscape, up to this point so Greek in its clear beauty, is suddenly *magicalised* by the romance touch. *M. Arnold*, Celtic Lit., p. 122.

magiric (ma-jī′rik), *a.* [Gr. *μαγειρικός*, < *μάγειρος*, a cook, also a butcher, earlier (by etym.) a baker, lit. 'kneader,' < *μάσσειν*, knead: see *mass*2, n.] Of or pertaining to cookery. *Soyer*. *N. E. D.*

magirist (ma-jī′rist), *n.* [*magir-ic* + *-ist*.] An expert in magirology.

magirology (ma-jī-rol′ọ̄-ji), *n.* [Gr. *μάγειρος*, a cook, + *-λογια*, < *λέγειν*, speak.] The art of cookery. [Rare.]

magistrate, *n.*—**Glasgow magistrate**, a red herring.

magistratial (maj-is-trā′shia̤l), *a.* [Irreg. < *magistrate* + *-ial*.] Same as *magisterial*. [Rare.]

> Then nodding with a *magistratial* air,
> To farther anecdote he call'd the fair.
> *Wolcot*, Bozzy and Piozzi, ii.

magna cum laude (mag′nä̤ kum lâ′dē). [L.] With great praise: a phrase used in conferring a degree which has been taken with high honors.

magnalium (mag-nā′li-um), *n.* [NL., < L. *magnus*, great.] An alloy of aluminium and magnesium combined in varying proportions. Magnalium containing 25–30 per cent. of magnesium is not affected by air or water and gives good castings; with 7½–10 per cent. of manganese, it takes on a good polish and is suitable for bells. The alloy also possesses great ductility and its melting-point lies between 600° and 700° C.

Magner's hitch. Same as *Magnus hitch* (which see, under *hitch*).

Magnesia bleach-liquor. Same as ★*magnesium hypochlorite*.—**Magnesia nigra**, an early name for pyrolusite or black oxid of manganese, for a long time looked upon as an inferior kind of magnetite or lodestone, incapable of attracting iron.—**Magnesia soap.** See ★*soap*.—**Magnesia usta**, an old pharmaceutical name for magnesium oxid produced by heating magnesium carbonate or magnesia alba. More commonly called *calcined magnesia*.—**Sorel's magnesia cement.** See ★*cement*.—**Milk of magnesia.** See ★*milk*.

Magnesic oxychlorid. Same as ★*magnesium oxychlorid*.

magnesiferous (mag-nẹ̄-sif′ẹ-rus), *a.* [*magnesium* + L. *ferre*, bear, + *-ous*.] Containing magnesium as a constituent: as, a *magnesiferous* limestone.

Magnesite bricks. See ★*brick*2.

magnesium, *n.*—**Deville and Caron's magnesium process.**—See ★*process*.—**Gratzel's electrolytic magnesium process**, a process which consists in electrolyzing a bath of carnallite for about thirty-six hours, a current of moderately high tension being employed. The reduced magnesium separates in globules which are collected and, on being remelted, yield a chemically pure metal.—**Magnesium fluting.** See ★*fluting*.—**Magnesium hypochlorite**, a substance used to some extent in bleaching, made by decomposing a solution of ordinary bleaching-powder with magnesium sulphate. Also called *magnesia bleach-liquor*.—**Magnesium manganite**, a compound obtained, instead of calcium manganite, in Waldon's modified process for recovering manganese in the manufacture of bleaching-powder. This process, though possessing certain advantages, has not come into general use.—**Magnesium nitride**, a yellow powder produced by heating metallic magnesium in nitrogen gas. It reacts energetically with water, forming magnesium hydroxid and ammonia. Its production furnishes the means of separating nitrogen from argon and the other inert gases of the atmosphere, and its action upon water, or that of the analogous but cheaper nitride of calcium, may become industrially important as a means of making ammonia from atmospheric nitrogen.—**Magnesium oxychlorid.** This substance, or the hydroxychlorid, is the essential material of Sorel's cement, used in building and in the manufacture of artificial stone. Also called *magnesic oxychlorid*.—**Magnesium peroxid**, a substance, MgO_2, produced by the interaction of sodium dioxid and magnesium sulphate. It is valuable in the modern use of hydroxyl in bleaching, having the advantage over the original sodium dioxid of not leaving a residue of corrosive character injurious to the fabric to be bleached. Also known as *magnesium dioxid*.—**Magnesium pyrophosphate**, the salt which is left on heating to redness ammoniomagnesium orthophosphate. It is the form in which phosphoric acid is most commonly determined in analysis.

magnet, *n.*—**Club-foot magnet**, a horseshoe magnet only one leg of which has a magnetizing coil.—**Lifting magnet**, an electromagnet used instead of hooks, chains, or clamps in lifting iron or steel sheets, bars, billets, rails, or structural shapes in a crane or derrick. It is made in many forms adapted to the shapes of the metal to be raised. The magnet, whatever its form, is suspended from the hoisting wire rope or chains of a traveling crane or the boom of a derrick, and is supplied with current through wires. The man who operates the crane controls the current by a small switch. When the magnet touches the metal to be lifted and the current is turned on, the magnet holds the metal until the current is cut off.—**Molecular magnets**, molecules of a substance, such as iron, each of which, according to Ewing's theory of magnetism, has a north and south pole.

> The phenomenon of magnetism consists of these *molec-*

ular magnets being placed with their poles pointing in the same direction.
W. Watson, Text-book of Physics, p. 729.

Normal magnet, a magnet the dimensions of which are such as to give the greatest attractive force at the ends possible with a given weight of iron.—**Vibration-magnet,** a suspended magnet from the rate of vibration of which the relative intensity of the field in which it swings is determined, or from the vibration of which one of the elements for the computation of the absolute horizontal intensity of the earth's magnetic field is derived.

magnetarium (mag-ne-tā′ri-um), *n.*; pl. *magnetaria* (-ä). [NL.] An instrument devised by H. Wilde (1890) for illustrating some of the phenomena of terrestrial magnetism. It consisted of a globe surrounded with a coil of wire and an outer concentric globe representing the earth's surface.

Magnetic alloy, an alloy which may be produced from non-magnetic metals by melting together copper, manganese, and aluminium in the proportion of about 60, 27, and 13 per cent., in the order named.—**Magnetic chuck, clutch, conductivity.** See ★*chuck*4, etc.—**Magnetic concentration,** the process of separating the magnetic from the non-magnetic particles of an ore by the action of a magnetic field.—**Magnetic concentrator,** a machine for concentrating magnetic minerals which occur with non-magnetic material. By the use of powerful magnetic fields this method of separation has lately been applied to feebly magnetic minerals.—**Magnetic creeping,** the phenomenon of gradual increase in the magnetization of a specimen of iron when subjected to a sudden magnetizing force.—**Magnetic curves.** (*b*) Lines of force, or lines of flow, or stream-lines, supposed to emanate from the polar regions of the sun and communicate energy to the earth from the sun by the motion of the ether. The coronal streamers that are seen during solar eclipses have the curvature of stream-lines and are therefore assumed by some to be true magnetic curves in a coronal field of force.—**Magnetic detector.** See ★*detector*.—**Magnetic explorer,** a device for exploring the magnetic field. It consists of a spiral of bismuth the resistance of which varies with the strength of the field, or sometimes of a small, flat coil of wire of known dimensions in circuit with a ballistic galvanometer.—**Magnetic fatigue.** See ★*fatigue*.—**Magnetic flux.** See ★*magnetism*, 1.—**Magnetic fringe,** that portion of the magnetic field of a generator, motor, or electromagnet which extends into the air-space outside of the edges or horns of the pole-pieces of the machine.—**Magnetic hammer, hysteresis, latitude, loop,** etc. See ★*hammer*1, etc.—**Magnetic permeance.** See ★*magnetism*, 1.—**Magnetic permeation, perturbation, phantom, polarization, pole, pressure, pulley, reactance.** See ★*permeation*, etc. —**Magnetic reluctivity.** See ★*magnetism*, 1.—**Magnetic resistivity, resonance, retardation, saturation,** etc. See ★*resistivity*, etc.—**Magnetic separator.** (*b*) Same as ★*magnetic concentrator*.—**Magnetic shield, shoal shunt,** etc. See ★*shield*, etc.—**Open magnetic circuit.** See ★*circuit*.—**Solar magnetic period.** See ★*period*.—**Unit of magnetic flux.** See ★*unit*.—**Unit magnetic reluctance.** See ★*reluctance*.

magnetiferous (mag-ne-tif′ẹ-rus), *a.* [L. *magnes* (*magnet-*), magnet, + *ferre*, bear, + *-ous*.] Having magnetic properties.

magnetification (mag-net″i-fi-kā′shọn), *n.* The production of magnetic flux; magnetization.

magnetify (mag-net′i-fī), *v. t.*; pret. and pp. *magnetified*, ppr. *magnetifying*. [*magnet*.] To render magnetic; magnetize. [Rare.]

magnetism, *n.* **1.** As in the electric circuit so in the magnetic circuit there exists a quantity component, the magnetic current, or *magnetic flux*, measured in lines of magnetic force, and a pressure component, the *magnetomotive force*, measured in absolute units, or frequently in ampere-turns. The ratio of magnetomotive force divided by magnetic flux is called the *magnetic resistance* or *reluctance*, and its reciprocal is called the *permeance*. *Magnetizing force* is the magnetomotive force per unit length of magnetic circuit; *magnetic induction* is the magnetic flux per unit section; *reluctivity* is the reluctance, and *permeability* the permeance per unit volume. To produce a magnetic circuit energy is required, which is partly or completely returned when the magnetic circuit is destroyed. No energy is required to maintain the magnetic circuit. Magnetic materials—that is, materials of high permeability, as iron, nickel, and cobalt—remain permanently magnetized after withdrawing the exciting magnetomotive force. The remaining permanent magnetism is called the *remanent magnetism*, the permanent magnetomotive force the *coercive force*. The coercive force, therefore, equals the magnetomotive force which has to be applied in the opposite direction to destroy the remanent magnetism. (See *magnetic* ★*hysteresis*.) The magnetic permeability, or conductivity for magnetism, is practically the same for all substances, with very few exceptions (the so-called *magnetic substances*), in which it is from hundreds to thousands of times greater. The magnetic substances are iron, cobalt, nickel, magnetite, liquid oxygen, and certain alloys of unmagnetic metals, as copper manganese and aluminium. All the other substances differ from one another in permeability only by a fraction of 1 per cent., and are called *paramagnetic* or *diamagnetic*, according as they are of higher or lower permeability than air.

magnetization, *n.*—**Longitudinal magnetization,** magnetization of a bar or ring such that lines of flux are parallel to the axis of the magnetized body.—**Magnetization by separate touch,** a method of magnetizing a bar of iron or steel in which two magnets are used. They are placed with opposite poles together at the center of the bar to be magnetized, and are simultaneously drawn apart along the bar.

magnetize, *v. t.*—**Unit of magnetizing force.** See ★*unit*.

magnetizer, *n.* **3.** Specifically, one who assumes to cure disease by means of so-called magnetic passes, magnetized water, etc. *Lancet*, June 16, 1900, p. 1761.

magneto, *n.* **2.** Specifically, the electric generator used as the source of the current in internal-combustion motors (the engines of motor-cars in particular) to cause the spark which ignites the combustible mixture. The magneto, which is in effect a dynamo, is driven from the motor-shaft and supplies current through a small storage battery for use in starting or before the magneto armature reaches speed. The magneto is not liable to stoppage of its current, nor to change of voltage, and the renewal of the battery-cell is eliminated. See ★*ignition*, 5, and *internal-combustion* ★*motor*.

magneto-acoustic (mag″ne-tō-ạ-kös′tik), *a.* Of or pertaining to magnetic and also to acoustic properties of a substance: as, the *magneto-acoustic* quality of a telephone diaphragm. *Elect. World and Engin.*, Aug. 29, 1903, p. 340.

magneto-alternater (mag″ne-tō-al′tėr-nā-tėr), *n.* An alternating current, generator, or motor with permanent field-magnets.

Magneto-cathode rays. See ★*ray*1.

magnetocrystallic (mag″ne-tō-kris-tal′ik), *a.* Same as *magne-crystallic*.

magneto-drop (mag′ne-tō-drop″), *n.* An annunciator or drop-signal operated by an electromagnet. *Elect. World and Engin.*, Dec. 12, 1903, p. 967.

magnetofriction (mag″ne-tọ-frik′shọn), *n.* A phenomenon observed when an electric discharge is acted upon by a powerful magnetic field.

> He [H. Pellat] describes how the positive column is squeezed together into a thin pencil and calls this phenomenon *magneto-friction*.
> *Sci. Amer. Sup.*, June 20, 1903, p. 22969.

magnetographic (mag″ne-tō-graf′ik), *a.* [L. *magnes* (*magnet-*), magnet, + γράφειν, write, + *-ic*.] Of or pertaining to the graphical recording of fluctuations in the intensity of terrestrial magnetism.

magneto-inductive (mag″ne-tō-in-duk′tiv), *a.* Of or pertaining to magnetic induction.—**Magneto-inductive capacity,** magnetic induction per unit of magnetizing force; permeability.

magnetometer, *n.*—**Differential magnetometer,** an instrument for testing the permeability of iron by means of a balanced, divided magnetic circuit: analogous in principle to the Wheatstone bridge.—**Vibration magnetometer,** a magnetometer of which the time of vibration is lengthened by attaching a plumb-bob to the magnet.

magnetometrically (mag″ne-tō-met′ri-kạl-i), *adv.* By a magnetometric method or process.

magnetomotive, *a.*—**Unit of magnetomotive force.** See ★*unit*.

magneto-motor (mag′ne-tō-mō″tọr), *n.* An electric motor the field of which is furnished by permanent magnets.

magneto-optical (mag″ne-tō-op′ti-kạl), *a.* Of or pertaining to the influence of the magnetic field upon optical phenomena or to optical phenomena dependent upon magnetic action; specifically, pertaining to the power of the magnetic field to cause rotation of the plane of polarization of light; magneto-optic.

magneto-phonograph (mag″ne-tō-fō′nọ-gråf), *n.* In *elect.*, a phonograph which records speech magnetically. It consists of a very small magnet attached to a diaphragm and acting on a moving steel tape or wire which is magnetized in waves by the vibrations of the magnet when some one speaks against the diaphragm. In repeating, the magnetized steel tape, moving in front of the magnet, sets the magnet, and thereby the diaphragm, in vibration and reproduces the sound. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 47.

magneto-regulator (mag″ne-tō-reg′ụ̄-lā-tọr), *n.* An electric potential regulator, consisting of two stationary coils at right angles, a primary and a secondary, and an iron core which is moved to change the path of the magnetic flux and thereby varies the secondary voltage or potential.

magnetostatic (mag″ne-tọ-stat′ik), *a.* Of or pertaining to a magnetic field whose lines are stationary.

magnetostatics (mag″ne-tō-stat′iks), *n.* That part of the science of magnetism which deals with stationary magnetic fields.

magneto-striction (mag″ne-tō-strik′shọn), *n.* Change of length or mechanical deformation of a body produced by the action of a magnetic field. *Physical Rev.*, March, 1902, p. 158.

magneto-stricture (mag″ne-tō-strik′tụ̄r), *n.* Same as ★*magneto-striction*.

magneto-therapy (mag″ne-to-ther′ạ-pi), *n.* The use of magnetism in the treatment of disease.

magnetropism (mag-net′rọ-pizm), *n.* [Short for **magnetotropism*, < μάγνης, magnet, + τρόπος, a turning, + *-ism*.] An alleged change of direction of growth of organisms under the action of a magnet.

magnet-wire (mag′net-wīr), *n.* Wire of the sort commonly used in winding electromagnets and similar apparatus; copper wire with a thin insulating layer of cotton or silk.

magnicaudate (mag-ni-kâ′dāt), *a.* [L. *magnus*, great, + E. *caudate*.] Having a large tail.

magnification, *n.* **4.** In the theory of optical images, the ratio f/x or x'/f', where f is the focal length of the object-space of the optical system and x the distance of the object from the principal focal plane of that space, or where f' and x' are the corresponding quantities in the image-space.—**5.** In *math.*, in conformal representation, the modulus of the derivative $\frac{dw}{dz} = \text{limit}\,\frac{\Delta w}{\Delta z}$.—**Normal magnification,** the magnification obtained from a lens-system when the exit-pupil equals the pupil of the eye.

magnificative (mag-nif′i-kạ̄-tiv), *a.* and *n.* [*magnificate* + *-ive*.] **I.** *a.* Serving to magnify.

II. *n.* In *gram.*, an augmentative, a word expressive of increased or large size: opposed to *diminutive*. *Whitney*, Life and Growth of Lang., xi. 214.

magnipotence (mag-nip′ọ̄-tẹns), *n.* [*magnipoten*(*t*) + *-ce*.] The possession of great power. [Rare.]

> Jehovah's mild *magnipotence*
> Smiles to behold His children play
> In their own free and childish way.
>
> *Coventry Patmore*, in Macmillan's Mag., Dec., 1861, 114.

magnipotent (mag-nip′ọ̄-tẹnt), *a.* [NL. **magnipotens* (*-ent-*), < *magnus*, great, + *potens*, powerful. See *potent*.] Having great strength and power.

> Satan, as he is a spirit, is *magnipotent*, but he never was omnipotent; and therefore there may be, and are, abundance of fine things which such People expect of him. *Defoe*, System of Magick, iii.

magnitude, *n.*—**Algebraic magnitude,** a magnitude considered as negative or positive. This character is usually indicated by a qualitative use of the algebraic signs + and −.—**Intensive magnitude,** a magnitude which evinces degrees of 'more' and 'less,' but which is not a measurable magnitude or quantity. Thus, sensations are intensive magnitudes, since they are directly given as 'louder,' 'weaker,' 'brighter,' 'fainter,' 'colder,' etc.; but they are not quantities, since a 'loud' sensation is not the sum of so-and-so many 'weak' sensations, and the difference between a 'loud' and a 'weak' sensation cannot itself be represented as a sensation-magnitude made up of so-and-so many sensation-units.—**Median magnitude,** in *biol.*, one above which and below which equal numbers of the variates occur.—**Star magnitude.** On the absolute scale (see *magnitude*, 5), Aldebaran is taken as the standard first-magnitude star and the scale is carried downward for the fainter stars. The equation which connects the magnitudes of two stars with their relative brightness is $\log \frac{b_m}{b_n} = \frac{4}{10}(n-m)$, in which m is the magnitude of the brighter star, and n that of the fainter one, while b_m and b_n are their respective brightnesses. In applying the scale to objects brighter than Aldebaran fractional and negative numbers must be used. Thus the magnitude of Vega is 0.3; that of Arcturus is ± 0.0; of Canopus −1.0; of Sirius, −1.4; of Venus, when brightest, about −4.0. That of the sun would be about −26. The earlier observers, Herschel, Struve, and Argelander, used scales of their own, differing widely for the telescopic stars. The absolute scale most nearly agrees with Argelander's, the standard first magnitude having been selected to secure such accordance as far as possible.

magnitudinous (mag-ni-tū′di-nus), *a.* [L. *magnitudo* (*-din-*), greatness, + *-ous*.] Having the quality of greatness in size, amount, importance, etc. [Rare.]

magnium (mag′ni-um), *n.* [NL. (Davy, 1808), < *magn*(*esia*) + *-ium*.] A former name of the element magnesium.

magnochromite (mag-nọ̄-krō′mīt), *n.* [*magn*(*esium*) + *chromite*.] A variety of chromite in which magnesium replaces a considerable part of the ferrous iron. The mineral from Grochau, Silesia, to which the name was first applied (1868), yielded 14 per cent. of magnesia. Mitchellite, from Webster, North Carolina, is essentially the same mineral. It gave 17.3 per cent. of magnesia.

magnofranklinite (mag-nọ̄-frangk′lin-īt), *n.* [*magn*(*etic*) + *franklinite*.] A variety of franklinite from Franklin Furnace, New Jersey, stated to be highly magnetic and to contain but little zinc.

Magnolia metal. See ★*metal*.

magnolin (mag′nọ̄-lin), *n.* [*magnolia* + -*in*^{2}.] An aromatic bitter principle contained in the bark and leaves of various species of magnolia.

magnolite (mag′nọ̄-līt), *n.* [*Magnolia* + -*ite*^{2}.] A mercury tellurate (perhaps Hg_2TeO_4) occurring in tufts of silky white crystals: found in the Magnolia district, Colorado.

magootee (ma-gö′tẹ̄), *n.* [E. Ind.] A flute-like musical instrument used by East Indian snake-charmers. In the reed a mirror is set, to which, while the instrument is being played, the snake's eyes are attracted with a hypnotizing effect.

magophony (mạ̄-gof′ọ̄-ni), *n.* [Gr. *μαγοφόνια*, < *μάγος*, magus, + *φόνος*, slaughter.] The massacre of the magi, an event in Persian history. *N. E. D.*

magpie, *n.* 6. A breed of small domesticated pigeons having the head, the under side of the body, and the long flight-feathers white, and the rest of the plumage clear black, red, yellow, or blue: the line between the two colors should be sharply defined. The name is derived from the suggestion of a magpie found in the black-and-white variety.—7. A black-and-white costume for women in which the contrasts are very marked, the masses of color being large.

magpied (mag′pīd), *p. a.* [*magpie* + -*ed*^{2}. Compare *pied*.] Variegated with black and white like a magpie: said of a black-and-white costume for women, at one time fashionable.

magpie-goose (mag′pī-gös), *n.* A black-and-white goose, *Anseranas melanoleucus*, found in Australia.

magpie-lark (mag′pī-lärk″), *n.* The pied grallina, *Grallina picata*.

M. Agr. Same as ★*Agr. M.*

magra (mä′grạ̈), *n.* [Aboriginal Australian.] A sort of sling or support by means of which the native Australian women carry their children on their backs.

magrepha (mä-grā′fä), *n.* [Heb.] A musical instrument mentioned in the Talmud as used in the temple at Jerusalem in the first century A.D.: usually supposed to be a rude organ. Its sound is said to have been excessively loud.

Magyarism (ma′dyar-izm), *n.* The political principles, sentiments, or aims of the Magyars; adherence to those principles or aims.

Magyarization (ma″dyar-i-zā′shọn), *n.* The act of Magyarizing, or the state of being Magyarized.

Magyarize (ma′dyar-īz), *v. t.*; pret. and pp. *Magyarized*, ppr. *Magyarizing*. To render Magyar in character, language, or sentiment.

mahajun (mạ-hä′jun), *n.* [Hindi *mahājan*, a great person.] A banker or merchant; a money-lender; a usurer. *Yule and Burnell*, Hobson-Jobson.

mahakavya (mạ-hä-käv′yạ̈), *n.* [Skt. *mahākāvya*, a great poem, < *mahā*, great, + *kāvya*, poem.] In *Skt. lit.*, a great or classical poem (a term specifically applied to six particular poems.)

> The artificial rules of prosody and poetics, according to which a poem, a *mahākāvya*, ought, according to the later writers on the Ars poetica, to be composed.
> *Encyc. Brit.*, XXVI. 432.

mahal (mạ-häl′), *n.* [Also *muhal*, *mahl*; < Hind. *mahall*, < Ar. *mahall*, < *halla*, lodge.] 1. Private apartments.—2. A palace; a summer house.—3. A territorial division; also, a division of land for farming and hunting purposes.

[Anglo-Indian in all uses.]

mahala (ma-hä′lạ̈), *n.* [Also *mahaly*, *mohale*: said to be a corruption of Sp. *mujeres*, women, adopted by California Indians, and later taken up by the whites.] 1. An Indian woman; a squaw. [Pacific coast of the U. S.]—2. A female salmon.

mahala-mats (ma-hä′lạ̈-matz), *n.* A prostrate shrub, *Ceanothus prostratus*, which forms carpets in the Sierra and northern Coast Range of California, especially under yellow pine. In spring it is covered with delicate clusters of blue flowers, and in late summer bears scarlet fruit among a rich green foliage. Also called *squaw's-carpet*.

mahamari (mä-hä-mä′rē), *n.* [Also *mahamurree*: < Hindi (?) *mahāmārī*, Hind. *mahamār*, pestilence, < *mahā*, great, + *mār*, beating, striking, in comp., killing, destroying.] The East Indian name for the plague, or a disease resembling it, which occurs on the southern slopes of the Himalayas.

> The native form of plague, known as *mahamari*, is confined to the southern slopes of the Himalaya.
> *Encyc. Brit.*, XXXI. 786.

mahant (mä-hunt′), *n.* [Hindi.] A religious superior. *N. E. D.*

Maharanee (mä-hä-rä′nē), *n.* [Hind. *mahārānī*, < *mahā*, great, + *rānī*, queen.] The wife of a maharaja.

> "Room for the *Maharanee* av Gokral-Seetarum." . . . She is a very estimable old queen of the Central Indian States, and they say she is fat.
> *R. Kipling*, Incarnation of Krishna Mulvaney.

maharif (mä-hä-rēf′), *n.* One of the large horse-antelopes of Central Africa, *Hippotragus bakeri*, a relative of the sable antelope, and, like that species, having long, decurved horns. It is pale liver-color, with a dark stripe over the shoulders.

mahatma (mạ-hat′mạ̈), *n.* [Skt. *mahātmā*, nom. sing. of *mahātman*, great-souled, of great intellect, very wise; as a noun, great spirit, universal soul; < *mahā*, great, + *ātman*, soul, spirit.] An alleged adept in Brahmanism: a name applied by modern European and American theosophists to certain imaginary persons who have acquired, by ascetic or 'astral' means, preternatural powers, and are asserted to exist in or near India. The term so used is modern and is due to European manipulation. No beings so named and endowed have any ancient recognition in Indian literature.

maha-white (mä-hä-hwīt′), *n.* In New Zealand, a name for one of the mullets, *Agonostomus forsteri*.

mahayana (mä-hä-yä′nạ̈), *n.* [Skt., 'the great vehicle,' < *mahā*, great, + *yāna*, vehicle, road, way, course.] A later form of Buddhism, originated by Nagarguna.

> The *Mahâyâna* or modern form of Buddhism in India.
> *Encyc. Brit.*, XXVI. 432.

Mahdiship (mä′dē-ship), *n.* The dignity or office of a Mahdi.

Mahdist, *n.* **II.** *a.* Of or pertaining to the Mahdists.

> As to the remainder of the region in question, the *Mahdist* troubles account sufficiently for the absence of white men during the recent years.
> *Geog. Jour.* (R. G. S.), XVIII. 47.

mahoe, *n.*—**Wild mahoe**, *Malvaviscus arboreus*, which, besides being an ornamental greenhouse plant, yields a coarse bast-fiber applied to various uses in South America. See ★*Malvaviscus*.

mahogany, *n.* 5. An old British collectors' name for a European and Asiatic noctuid moth, *Amphipyra tetra*.—**False mahogany**, the red bay or isabella-wood, *Persea Borbonia*. Also called *Florida mahogany*.—**Irish mahogany**, the European alder, *Alnus glutinosa*. **Philippine mahogany**, a name sometimes given to the wood of *Pterocarpus Indicus* and *P. echinatus*. Called in the Philippine Islands *narra* and *asana*. See ★*asana*.—**Valley mahogany**, *Cercocarpus parvifolius*, which grows in valleys and on mountain slopes, and is also called *mountain mahogany*.

maholi (mä-hō′li), *n.* [African.] A species of galago, *Galago maholi*, found in central Africa. See cut under *Galago*, 1.

Mahoning sandstone. See ★*sandstone*.

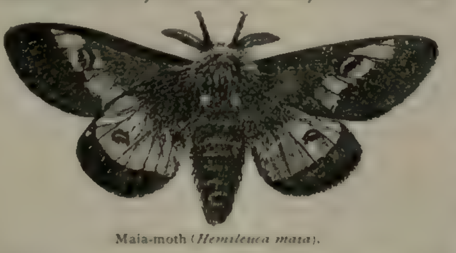
mahow (mạ-hou′), *n.* [S. African.] An intoxicating drink made from fermented mealie meal. [South Africa.]

> Excess mealie meal (this was burnt and drunk as a black liquor termed 'native coffee'), fermented makes a drink called '*mahow*' (intoxicating).
> *Lancet*, June 18, 1904, p. 1717.

mahzor (maċh′zōr), *n.*; pl. *mahzorim* (-zō-rēm). [Heb., < *hazar*, return.] 1. A cycle; a solar cycle of 28 years or a lunar cycle of 19 years.—2. A Jewish festival prayer-book. Each of the five principal festivals has a special liturgy.

mai (mä′ẹ̄), *n.* [Maori.] In New Zealand, a tree, the same as *matai*.

maia-moth (mā′yạ̈-môth), *n.* An American saturniid moth, *Hemileuca maia*, in color black with white markings. Its larvæ feed on oak-leaves.



Maia-moth (*Hemileuca maia*).

maid (mād), *v. i.* [*maid*, *n.*] To do the work of a maid: usually referring to a lady's-maid. *N. E. D.*

maiden. **I.** *n.* 7. A frame on which clothes are dried. [Prov. Eng.].—8. *pl.* See ★*mingles*.

II. *a.*—**Maiden number.** See ★*number*.

maiden-cane (mā′dn-kān), *n.* See ★*cane*^{1}.

maidenism (mā′dn-izm), *n.* [*maiden* + -*ism*.] The manner or bearing of a maiden; a maidenish peculiarity or idea. [Rare.]

> When he confessed these *maidenisms*, I despaired of his suiting the pleasant, prancing, pop-gun situation of butler at Prior's Lea, and was the less concerned to find him in treaty for another place.
> *Anna Seward*, Letters, III. 38.

maiden's-blush, *n.* 3. In Australia, either of two timber-trees, *Echinocarpus australis* of the linden family, and *Euroschinus falcatus* of the cashew family, the wood of which has a delicate rosy color when freshly cut.—4. In Tasmania, *Convolvulus erubescens*, a species of morning-glory.

maiden's-tears (mā′dnz-tērz), *n.* The bladder-campion, *Silene vulgaris*.

maïdism (mā′i-dizm), *n.* Same as ★*maïdismus*.

maïdismus (mā-i-dis′mus), *n.* [NL., < *maïd-*, false stem of *maïs*, maize, + -*ismus*, E. -*ism*.] Same as *pellagra*, a disease produced by eating damaged Indian corn. *Vaughan and Novy*, Cellular Toxins, p. 223.

maid's-hair (mādz′hãr), *n.* The yellow bedstraw, *Galium verum*; also the common bedstraw or goose-grass, *G. Aparine*.

mail^1, *n.* 9. The breast feathers of a hawk when full grown. *E. B. Mitchell*, Art and Practice of Hawking, p. 9.

mail^2, *n.*—**Open mail**, in the *postal service*, mail forwarded to any country for redistribution in that country or distribution onward to still other countries or places of final destination.

mail-boat (māl′bōt), *n.* A steamboat or steamship which carries the mail on lakes, rivers, or the sea. Also *mail-steamer*.

mail-chute (māl′shöt), *n.* A vertical mailing-tube, having a glass front, erected in a hotel or office-building, and passing through all or several floors; a chute for letters. At each floor is a letter-drop, and on the first floor a collecting-box. The box and chute are nearly air-tight and the inclosed air acts as an air-cushion to check the fall of the letters.

maile (mä′ẹ̄-lạ̄), *n.* [Hawaiian, etc., *maile*, *ma-i-le* = Maori *maire*.] A name widely used throughout the islands of the Pacific Ocean for plants having myrtle-like leaves, and especially applied in certain groups to *Gynopogon*, a genus of plants belonging to the *Apocynaceæ*, which have the agreeable fragrance of coumarin. The glossy branches of the Hawaiian maile, *Gynopogon olivæformis*, are in great favor with the natives for making garlands and for decorating their houses and lanais on festive occasions; and the lau-maile of Samoa, *G. bracteolosus*, is used by the natives for wreaths and garlands, but is not so highly esteemed by them as the more fragrant moso'oi blossoms. For other kinds of maile, see ★*maire*^{2}.

mailer^1, *n.* 2. A boat or steamer which carries mail; a mail-boat. [Colloq.]

mailer^2 (mā′lėr), *n.* [*mail*^{3} + -*er*^{2}.] 1. One who pays rent.—2. A squatter on waste ground (with the consent of the owner) who holds himself ready to be hired by the day. [Scotch, in both uses.]

mail-flag (māl′flag), *n.* A distinguishing pennant carried by vessels having the mail in transportation. The United States mail-flag is a swallow-tail pennant with a red field, a blue border, and a spread-eagle in the upper corner.

mailing-tube (mā′ling-tūb), *n.* A pasteboard tube, used as a cover for maps, engravings, photographs, and the like when sent in the mails.

mail-order (māl′ôr″dėr), *n.* In *com.* and *manuf.*, an order for goods, received by mail.—**Mail-order house**, a business house which conducts a retail business by receiving orders and cash by mail and distributing the goods through the mails. In England, called a *postal-trade house*.

mail-room (māl′röm), *n.* A room which is used in receiving and distributing mail-matter.

mail-steamer (māl′stē″mėr), *n.* A steamship that carries the mails.

maimakterion (mī-mak-tē′ri-on), *n.* [Gr. *Μαιμακτηριών*, so called from the festival, held in this month, of *Ζεῦς Μαιμάκτης*, Zeus 'the boisterous' or 'stormy,' < *μαιμάσσειν*, *μαιμάειν*, be eager, rage.] The fifth Attic month, containing the end of November and the beginning of December.

maimer (mām′ėr), *n.* One who maims or mutilates.

main¹, *n.*—**Forcing-main** or **force-main**, a main-pipe through which water or other fluid material is forced, by pumping, to a reservoir, tank, or system of pipes for distribution or supply: used in distinction from a *main supply-pipe*, which derives its motive pressure from gravity due to an elevated source of supply of the water or other fluid material transmitted.

main², *a.*—**Main clue-garnets**, the tackles which haul up the clues of the mainsail or course, and which on all sails above the courses are called *clue-lines*.—**Main clue-lines**, the purchases which haul up the clues of the main-topsail, topgallantsail, and royal.

main-backstays (mān′bak″stāz), *n. pl.* The backstays of the maintopmast and maintopgallantmast; also, the backstays of the main-royal-pole.

main-breadth (mān′bredth), *n.* The broadest part of a ship at any given timber or frame. Compare *bearing*, 10.

main-buntlines (mān′bunt″linz), *n. pl.* The buntlines belonging to the square sails on the mainmast.

main-center (mān′sen″tėr), *n.* **1.** A shaft or axle on which a walking-beam rocks in a beam-engine.—**2.** The center of the heaviest revolving part, as the shaft on which the levers vibrate in side-lever engines.

main-chains (mān′chānz), *n. pl.* The locality where are situated the iron links on plates for securing the shrouds of the mainmast. See *chain*, 7.

main-chuck (mān′chuk), *n.* A lathe-chuck which carries other chucks or clamps for grasping the work to be turned.

main-crosstrees (mān′krôs″trēz), *n. pl.* The crosstrees on the mainmast, situated at the meeting of the head of the topmast and foot of the topgallantmast on square-rigged vessels, and at the meeting of the head of the lower mast and foot of the topmast on fore-and-aft rigged vessels.

main-en-griffe (maṅ-oṅ-grēf′), *n.* [F.] Same as *claw-hand*.

main-gaff (mān′gaf), *n.* The spar to which the head of the fore-and-aft mainsail is bent.

main-keel (mān′kēl), *n.* In *wood ship-building*, a name used to distinguish the keel proper from the false keel. See cut under *keel*¹, 2.

mainland, *n.* **2.** The principal island of a group: as, the *mainland* of Orkney.

mainmast, *n.* **2.** *pl.* The lower topmast and topgallantmasts of the mast next abaft the foremast.

mainmort† (mān′môrt), *n.* [F. *mainmorte*, 'dead-hand': see *dead-hand* and *mortmain*.] **1.** Same as *mortmain*.—**2.** In *Fr. feudal law*, a right which the lord had (on the death of the chief of a family which is mainmortable) of taking the best movable in the house. *Chambers.*

mainmortable (mān-môr′ta̤-bl), *a.* and *n.* [F. *mainmortable*, < *mainmorte*. See ★*mainmort*.] **I.** *a.* Not having the right of alienating one's possessions in the event of dying childless, as serfs under the old feudal law of France; also, not subject to this right, as the possessions themselves.

II. *n.* A serf who, under the feudal law in France, did not have the right of alienating his possessions in the event of a childless death.

main-piece (mān′pēs), *n.* *Naut.*, the timber of which the rudder-head is composed; the principal part of a timber; the main section of a timber.

main-rope (mān′rōp), *n.* In *mining*, in the tail-rope system of haulage, the rope which draws out the loaded cars. See *tail-rope system*, under *tail-rope*.

mainsail, *n.* **2.** *pl.* The square sails on the mainmast: they are the course, or mainsail proper, the lower and upper topsails, the topgallantsail and royal, and also a skysail if the ship is lofty. Men-of-war usually carry single topsails instead of a divided sail.—**Mainsail haul!** an order to swing the main-yards so that the sails on the main may be filled on the new tack.

main-sheet, *n.* **2.** *pl.* Collectively, all the sheets of the square sails on the mainmast, but especially the sheets which belong to the main course.—**3.** In Jamaica, weak rum and water. [Slang.]

> We . . . have seen an old man invited to have a drink of "*main-sheet*" (Jamaican for a cool and seductive mixture of rum and water).
>
> *Blackwood's Mag.*, June, 1890, p. 784.

To haul aft the main-sheet. See ★*aft*¹.

main-shrouds (mān′shroudz), *n. pl.* The shrouds on the main lower mast.

mainstay, *n.* **3.** *pl.* All the stays which give support to the main lower mast, maintopmast, and maintopgallantmast.

Maintenance of way. See ★*way*¹.

maintop-bowline (mān′to̤-bō″lin), *n.* *Naut.*, something very long: as, his yarn was as long as the *maintop-bowline*. [Sailors' slang.]

maintopgallant (mān′top″gal-a̤nt), *n.* The name given to the rigging, yard, and sail belonging to the maintopgallant-mast.—**Maintopsail haul!** the order to swing the after-yards when tacking. This order is given in distinction from *mainsail haul*, which is the order proper when the mainsail is not clued up before tacking.

main-yard, *n.* **2.** *pl.* All the yards which belong to the mainmast, namely, the lower, lower topsail, upper topsail, topgallant, royal, and skysail yards.

main-yardman (mān′yärd-ma̤n), *n.* A sailor whose station is on the main-yard for the purposes of loosing, furling, and reefing the mainsail, or for sending the main-yard on deck.

Maioli (mī-ō′lē̤), *a.* The name of an Italian bookbinder (Thomas Maioli) of the first half of the eighteenth century: used as descriptive of his style, or of a style resembling his.

> The principal features of a *Maioli* design, I claim, are a perfect curve in scrollwork where it is used, a framework of flowing curved lines more than of figures of geometrical shape, ornaments of Moresque character, mostly in outline, sometimes azured, and an enrichment of part of the field with a studding of gold dots.
>
> *W. Matthews*, Modern Bookbinding, p. 71.

maiotic, *a.* See ★*miotic*. *Nature*, Nov. 29, 1906, p. 98.

maipuri (mī-pö′ri), *n.* [S. Amer.] An Indian name, used to some extent as a common name, for the South American tapir, *Tapirus terrestris*.

maire² (mä′i-rā), *n.* [Maori *maire* = Hawaiian, etc., *maile*, a widely spread name for plants with myrtle-like leaves.] **1.** *Eugenia Maire*, a small New Zealand tree of the myrtle family, with white bark and four-angled branches, oblong-lanceolate, acuminate leaves, and white flowers having a tuft of many stamens. The fruit is a red berry crowned by the thickened rim of the calyx. It is distinguished from the other maires of New Zealand as *maire-Tawhiki*, or 'myrtle of the god Tawhiki' (the Tafa'i of Samoan myths and Kahai of the ancient Hawaiians).—**2.** *Mida salicifolia*, a small New Zealand tree of the sandalwood family, having variable, myrtle-like or willow-like leaves and short axillary cymes of small green flowers.—**3.** One of several species of *Olea* indigenous to New Zealand: (*a*) The black maire, *O. Cunninghamii*, a lofty tree with white limbs, long coriaceous leaves, racemes of unisexual flowers, and fruit in the form of a drupe containing a bony nut. The wood is dense, hard, and durable. (*b*) The white maire, *O. lanceolata*, a smaller and less robust tree, yielding the New Zealand boxwood (which see, under ★*boxwood*). (*c*) The narrow-leaved maire, *O. montana*, a large bushy tree with leathery linear leaves and racemes of minute flowers. (*d*) The broad-leaved maire, *O. apetala*, which yields the ironwood of Norfolk Island.—**4.** In Tahiti, *Gynopogon stellatus*, a plant with ternate, myrtle-like leaves. Compare ★*maile*.

mairie (mā̃-rē′), *n.* [F., < *maire*, mayor.] In France, the public building which serves as the office, and usually as the residence, of the mayor of a town, or, in Paris, of one of the great divisions of a city.

mairogallol (mā-rō̤-gal′ol), *n.* A colorless compound, $C_{18}H_7O_{10}Cl_{11}$, which is formed by the action of chlorin on pyrogallol. It crystallizes in lustrous prisms, and melts at about 190° C.

maise² (māz), *n.* The mayweed, *Anthemis Cotula*.

maisin (mā′zin), *n.* [NL. *maïs*, maize, + *-in*².] A colorless pulverulent proteid, $C_{184}H_{300}O_{51}.N_{46}S$, found in the seeds of maize, which contain from 4 to 4½ per cent. of it.

maisonette (mā-zo̤-net′), *n.* [F., dim. of *maison*, house.] A small house. [Rare.]

> The Charlevilles have exchanged their *maisonette* in Berkeley Square for Queensberry House, Piccadilly, and, with their usual kindness, have invited us to two dinners and one rout whilst we remain.
>
> *Lady Morgan*, Autobiography, p. 38.

maiz, *n.* A simplified (and former) spelling of *maize*.

maize, *n.* **1.** Indian corn presents numerous varieties, which fall under 6 types, all referable to *Zea Mays*. According to E. L. Sturtevant, who based his classification on the character of the kernel (endosperm), these types (agricultural species) are as follows: (1) *Pop-corn*, distinguished by the small size of the kernel and by its property of popping with heat. See *pop-corn*. The kernel, split transversely, exhibits the chit (embryo) surrounded by corneous matter, glossy in appearance, sometimes having a thin line of starchy matter between. (2) *Flint corn*, which has larger kernels incapable of popping with heat; the chit is surrounded by starchy matter, and this by a corneous envelop; the kernels are in from 8 to 16 rows in different varieties, but usually in 8. (3) *Dent corn*, which has kernels with a transverse furrow at the top, the section showing corneous matter at the sides and starchy matter between, reaching from the chit to the summit; the kernels are usually in from 16 to 20 rows. (4) *Soft corn*, in which the grain is wholly starchy (amylaceous). (5) *Sweet corn*, which has kernels with a translucent appearance, usually corneous throughout, the starch being more or less reduced to sugar, the grains generally with a wrinkled surface, usually in 12 rows. (6) *Starchy sweet corn*, in which the lower half of the kernel is starchy, the upper half corneous and translucent. (7) *Pod-corn*, in which each kernel is inclosed in a separate husk, the whole ear being also in a husk. Each of these groups except the last two, admits, according to Sturtevant, of subdivision into three, according as the kernel is broader than deep, as broad as deep, or much deeper than broad. Pop-corn is divided into three subgroups: *golden pop-corn*, marked by the small size of the ear and kernel, and by its extreme earliness: regarded by some as a form of pearl pop-corn; *pearl pop-corn*, in which the kernels are densely aggregated and have a nacre-like color; and *rice pop-corn*, which has pointed kernels, and a tendency to yield cone-formed ears with the kernels imbricate rather than side by side. The pop-corn stalk usually grows from 5 to 7 feet high, and tends to bear many ears. Flint corn usually grows from 5 to 8 feet high, and inclines to bear two ears to the stalk. Though less prolific than dent corn, its varieties are planted in the more northerly regions on account of their shorter season, prevailing over New England, New York, and Canada. Dent corn ordinarily attains a height of from 8 to 12 feet, and bears but one ear to the stalk. Its varieties alone are planted in the corn-belt of the United States (see below). Soft corn was liked by the aborigines on account of its being more easily crushed, but it has no modern commercial standing. The best quality of sweet corn is produced in the more northerly regions, where it is grown chiefly for use as a fresh vegetable and for canning. Soft sweet corn consists, as far as is known, of a few Mexican varieties. Pod-corn is grown, under various names, merely as a curiosity. It is thought to approach nearest to the primitive form from which all these types have sprung. No wild species of maize is at present clearly known. Corn was grown by the American aborigines from Maine to Chile and Argentina, whence its cultivation has spread over the warmer parts of the globe. The world's product from 1902 to 1906 inclusive averaged 3,340,000,000 bushels, of which North America, chiefly the United States, yielded 2,680,000,000. Almost three fifths of the crop of the United States is produced (1907) by the seven States (named in the order of quantity) of Illinois, Iowa, Missouri, Nebraska, Kansas, Indiana, and Ohio, these being known as the *corn*, or *maize*, *surplus States* and forming the *corn-belt*. Among other important corn-producing States, are Texas and Oklahoma.—**Millo maize**, one of the non-saccharine sorghums, related to Kafir-corn, cultivated for forage in warmer parts of the United States.

maize-meal (māz′mēl), *n.* Same as *Indian meal* (which see, under *meal*¹).

maizenic (mā-zē′nik), *a.* Pertaining to or derived from maize.—**Maizenic acid**, an organic acid contained in the styles and stigmas of *Zea Mays*.

maize-thorn (māz′thôrn), *n.* Same as *mouse-thorn*.

maja (mä′hä), *a.* [Sp., fem. of ★*majo*.] Noting a Spanish woman of the lower classes who dresses gaily and is a belle in her circle. See ★*majo*.

> Now bring me, dear Dolores, my basquiña,
> My richest *maja* dress.
>
> *Longfellow*, Span. Student, ii. 1.

majagua (mä-hä′gwä), *n.* [West Indian Sp., from a native name.] **1.** A malvaceous tree, *Pariti tiliaceum*, native in Porto Rico, Cuba, Mexico, Central America, and South America, and widely distributed throughout the warm regions of the world. Its strong, flexible bast-fiber was in use by the natives of America before the advent of Europeans. In Porto Rico, nearly all the ropes in use are made from this fiber. Called also *emajagua*. See ★*balibago*, ★*fau*, 2.

2. A collective name used in Spanish-speaking countries for the bast-fibers of a number of malvaceous and similar plants. See *mahoe*.

majo (mä′hō), *a.* [Sp., gay, fine.] Noting a Spaniard of the lower classes, who is a gaily dressed dandy. The feminine is *maja*.

> Here, too [in the Vivarrambla], were the *Majos* and *Majas*, the rural beaux and belles, with fine forms, flashing eyes, and gay Andalusian costumes.
>
> *Irving*, Alhambra, p. 155.

majolist (ma-jol′ist), *n.* [*majol*(*ica*) + *-ist*.] A maker of majolica; a potter who makes pottery in the style of the old Italian majolica. Also *maiolist*.

major, *a.* **6.** In *pros.*, noting the longer of two types of verse which bear a common name.—**Major arc**, the arc on the same side of its chord as the center of the circle.—**Major circle**, a great circle.

majordomo, *n.* 2. See ★*water-master.*

major-generalcy (mā″jor-jen′e-ral-si), *n.* Same as *major-generalship.*

Majorism (mā′jor-izm), *n.* The doctrines of Georg Major. See *Majoristic.*

majorize (mā′jor-īz), *v. i.*; pret. and pp. *majorized*, ppr. *majorizing.* [*major* + *-ize.*] 1. To come of age.—2. In *Rugby foot-ball*, to convert a try into a goal, that is, to increase the points from three to five. *N. E. D.*

mak (mäk), *a.* [D., tame, domesticated.] In South African Dutch, tame: applied especially to Kafirs who have come under European influences.

makaisa (mä-kī′sä), *n.* [Tagalog *makaisa.*] In the Philippine Islands, *Croton Tiglium*, a shrub or small tree bearing poisonous fruit which is used by the natives for stupefying fish and crabs and for killing dogs. It is very acrid and is used medicinally as a counter-irritant, the seeds being made into a paste or plaster and applied externally to the body; taken internally, it acts as a drastic purgative. The natives sometimes administer the fourth part of a seed, but its action is so violent that the remedy is considered dangerous. This plant is also called *tuba*, or *tuba makaisa*, and by the Bisayans *makasla.* See *Croton*, 1 (with cut).

makara (mä′ka-rä), *n.* [Skt. *mákara.*] In *Hindu myth.* and *art*, a fantastic marine monster figured with the body and tail of a fish and the forelegs, neck, and head of an antelope, an alligator, or a shark: used as a symbolic or ornamental figure, and as the zodiacal sign Capricorn.

makasla (mä-käs′lä), *n.* [Bisayan *makasla.*] See ★*makaisa.*

make¹, *v.* **I.** *trans.* **24.** To reach; catch (a train, etc.): as, we *made* Paris in three hours. [Colloq.]

> He . . . jumped on board the steam-boat . . . "Just *made* it," he said: "and that's what I like to do."
> *Howells*, Silas Lapham, vi.

To make a balk. See ★*balk*1.—**To make a berth** (*naut.*), to reach an anchorage; obtain dockage.—**To make an anchorage** (*naut.*), to come to anchor; find an anchorage berth.—**To make a pair of spectacles**, in *cricket.* See ★*spectacle.*—**To make colors** (*naut.*), to display the ensign on board of naval vessels, yachts, etc.: a ceremony which takes place at 8 A.M.—**To make it so** (*naut.*), an order, given by the captain, which means that authority is given to strike the ship's bell eight strokes as the official announcement of meridian, or 12 o'clock by the sun.—**To make the course good** (*naut.*), to allow the vessel's head alternately to incline as much on one side of the given course as on the other, so that the mean of the two will give the course that it is desired to steer. This is done on sailing vessels when, owing to a heavy sea or other cause, the ship's head cannot be kept steady, but yaws away from the proper course.

II. *intrans.*—**To make clear** (*naut.*), to pass without touching; avoid.—**To make off.** (*b*) *Naut.*, to chop whale-blubber into pieces.

make¹, *n.* 7. In *bridge*, the declaration.

> In considering a heart *make*, the dealer should be influenced by the general strength of his hand and by the number of honours he holds in the trump suit.
> *J. B. Elwell*, Bridge, p. 13.

8. In *mining*, a system of metal-bearing veins which are not stratified; a network of veins. [Australia.]

make-and-break (māk′and-brāk′), *n.* A device for alternately closing and opening an electric circuit; an interrupter.

make-key (māk′kē), *n.* In *physiol.* and *exper. psychol.*, an electric key the action of which closes an electrical circuit.

> It [the Scripture-Dessoir reaction key] may also be used, though less accurately, as a *make key.*
> *E. B. Titchener*, Exper. Psychol., II. i. 165.

maker, *n.* **4.** In *bridge*, the declaring hand.

> When the *maker* is on your right, you have the advantage that your trumps are over his.
> *J. B. Elwell*, Bridge, p. 24.

5. In *shoemaking*, the laster (a man or boy) who places the closed uppers of a boot (in hand-sewn work) over the last and attaches the bottom material. *Webb*, Industrial Democracy, I. 418.

make-record (māk′rek″ord), *n.* In *physiol.* and *exper. psychol.*, a record (chronoscopic or chronographic) obtained by the use of a make-key.

> The lost time of the *make-records* may be reduced to a minimum by adjustment of the lower sliding block.
> *E. B. Titchener*, Exper. Psychol., II. i. 165.

makeshiftiness (māk′shif-ti-ness), *n.* The character of being makeshifty. *Ruskin*, Præterita, ii. 267.

makeshifty (māk′shif-ti), *a.* [*makeshift* + *-y*³.] Of the nature of a makeshift; characterized by the use of makeshifts. [Rare.]

make-spark (māk′spärk), *n.* A spark produced in the air-gap of the secondary circuit of an induction-coil or transformer when the primary circuit is made or closed.

makhna, makna, *n.* Same as ★*muckna.*

making-up (mā′king-up′), *n.* 1. The act or process of compensating.—2. In *printing*, the process of arranging composed type in columns and pages.

> Notes are a hindrance in composition and *making-up* . . . The composition and *making-up* of this matter must have been an affliction to be avoided.
> *De Vinne*, Practice of Typography, p. 171.

Making-up piece, a smooth convex plate fastened to the comb-cylinder of a Heilmann cotton-combing machine, between the needle and the fluted segments, to allow time for the auxiliary parts to act.

makita (mä-kē′tä), *n.* [Fijian.] In *bot.*, see ★*ais.*

mako (mä′kō), *n.* [Maori.] The tiger-shark (which see). The teeth of the mako are used for ornaments by the Maoris. *E. E. Morris*, Austral English.

Mal. An abbreviation (*a*) of *Malachi*, a book of the Old Testament; (*b*) of *Malayan.*

mal, *n.*—**Mal de caderas** [Sp. 'disease of the hips'], a chronic (at present, incurable) infectious (but not contagious) disease of horses in South America, caused by the presence of flagellate protozoa of the species *Trypanosoma equinum.* The parasites live in the blood plasma and are supposed to be transmitted by flies.—**Mal de los pintos.** Same as *pinta.*—**Mal de mer.** Same as *seasickness.*—**Petit mal**, a mild epileptic attack, not marked by strong convulsions or complete unconsciousness. Compare *grand mal.*

mala² (mā′lä), *n.* [L. *mala*, jaw, cheek: see *malar.*] A sclerite in the mouth-parts of certain *Myriapoda*, the third joint of the mandible, supporting the sclerites which homologize with the galea and lacinia of an insect's maxilla.

Malabar almond. Same as *country almond* (which see, under *almond*).

malabathrum (mal-a-bath′rum), *n.* [L. *malabathrum*, *malobathrum*, < Gr. *μαλάβαθρον*, *μαλόβαθρον*, < Skt. *tamālapattra*, 'leaf of the tamāla tree,' < *tamāla*, Hindi *tamal*, name of several trees, + *pattra*, leaf.] 1. The dried, aromatic leaves of several Indian species of *Cinnamomum*, especially *C. iners* and *C. nitidum*, formerly used in medicine. Also called *Indian* or *Malabar leaves.* (See *Malabar leaves*, under *leaf.*)—2. An ointment or perfume prepared from the malabathrum leaf.

malac. An abbreviation of *malacology.*

Malacanthidæ (mal-a-kan′thi-dē), *n. pl.* [NL., < *Malacanthus* + *-idæ.*] A family of trachinoid fishes of the temperate and tropical seas, including about six genera, the greater number of species being American.

Malacanthus (mal-a-kan′thus), *n.* [NL., < *μαλ*(*ακός*), soft, + *ἄκανθα*, thorn.] A genus of fishes found in West Indian waters.

Malaceæ (ma-lā′sē-ē), *n. pl.* [NL. (Small, 1903), < *Malus* + *-aceæ.*] A family of dicotyledonous choripetalous trees and shrubs of the order *Rosales*, the apple family, typified by the genus *Malus:* usually included in the family *Rosaceæ*, as the tribe or subfamily *Pomeæ* (which see).

Malache (mal′a-kē), *n.* [NL. (B. Vogel, 1772), < Gr. *μαλάχη*, the common mallow: see *mallow.*] A genus of dicotyledonous plants of the family *Malvaceæ.* See *Pavonia.*

malachite-green, *n.* **3.** One of the modern artificial dyes, a salt of tetramethyl-paradiamido-triphenylcarbinol: used in dying silk, wool, and cotton. Also called *benzaldehyde green*, *solid green*, and *Victoria green.*—**Malachite-green G.** Same as *ethyl green* (which see, under *green*¹).

malacia, *n.* **2.** A longing for some special article of food; specifically, a depraved appetite. *Syd. Soc. Lex.*

Malacocephalus (mal″a-kō-sef′a-lus), *n.* [NL., < Gr. *μαλακός*, soft, + *κεφαλή*, head.] A genus of deep-sea fishes of the family *Macruridæ.*

Malacocottus (mal″a-kō-kot′us), *n.* [NL., < Gr. *μαλακός*, soft, + NL. *Cottus.*] A genus of cottoid fishes found in the North Pacific.

Malacocotylea (mal″a-kō-kot-i-lē′ä), *n. pl.* [NL., < Gr. *μαλακός*, soft, + *κοτύλη*, cup, socket.] An order of endoparasitic *Trematoda* equivalent to *Digenea.* Also *Malacotylea.*

malacocotylean (mal″a-kō-kot-i-lē′an), *a.* and *n.* **I.** *a.* Having the characteristics of the *Malacocotylea.*

II. *n.* One of the *Malacocotylea.*

Malacoctenus (mal-a-kok′te-nus), *n.* [NL., < Gr. *μαλακός*, soft, + *κτείς* (*κτεν-*), comb.] A genus of blennioid fishes found on both coasts of tropical America.

malacoderm, *n.* **II.** *a.* Malacodermatous.

malacodermous (mal″a-kō-dėr′mus), *a.* Same as *malacodermatous.*

malacologic (mal″a-kō-loj′ik), *a.* [*malacolog*(*y*) + *-ic.*] Same as *malacological.*

malacophilous (mal-a-kof′i-lus), *a.* [Gr. *μαλακός*, soft (see *mollusk*), + *φιλεῖν*, love, + *-ous.*] In *bot.*, adapted to cross-fertilization by mollusks: applied to plants or their flowers.

malacophonous (mal-a-kof′ō-nus), *a.* [Gr. *μαλακόφωνος*, < *μαλακός*, soft, + *φωνή*, voice.] Soft-voiced; having a gentle voice.

malacopod (mal′a-kō-pod), *n.* A member of the *Malacopoda.*

malacostome (mal′a-kō-stōm), *n.* [Gr. *μαλακός*, soft (*μαλάκια*, mollusks), + *στόμα*, mouth.] The mouth of a mollusk.

malacotomist (mal-a-kot′ō-mist), *n.* [*malacotom-y* + *-ist.*] One who is versed in malacotomy; a student of the anatomy of mollusks.

Malacotylea (mal-a-cot-i-lē′ä), *n. pl.* Same as ★*Malacocotylea.*

malacozoölogy (mal″a-kō-zō-ol′ō-ji), *n.* [Gr. *μαλακός*, soft (*μαλάκια*, mollusks), + E. *zoölogy.*] The zoölogy of mollusks; malacology.

malactic (ma-lak′tik), *a.* and *n.* [Gr. *μαλακτικός*, < *μαλάσσειν*, make soft.] **I.** *a.* Making soft; emollient.

II. *n.* An emollient medicine.

maladif (mä-lä-dėf′), *a.* [F., < *malade*, sick: see *malady.*] Sickly; delicate.

> He [Hans Makart], . . . standing in the corner, silent, inanimate, save for his gleaming black eyes and his smoking cigarette—a fragile, *maladif* little figure, with a disproportionately impressive head.
> *M. G. van Rensselaer*, in Portfolio, 1886, p. 51.

maladminister (mal-ad-min′is-tėr), *v. t.* [*mal-* + *administer.*] To administer in a faulty, inefficient way, particularly public affairs.

> The people, themselves, in all countries, might confide in it [the true Scheme of Human Economy], to vindicate their respective interests, by its moderate representations, when necessary to their several sovereigns, or otherwise, as those interests might be *maladministered.*
> *G. Edwards*, Practical Plan, iii.

maladministrator (mal-ad-min′is-trā-tor), *n.* One who maladministers affairs, especially public affairs.

malafu (mal′a-fö), *n.* Same as *toddy*, 1.

Malaga pottery. See ★*pottery.*

Malagasy, *n.* **2.** The language of Madagascar.

malakin (mal′a-kin), *n.* [Gr. *μαλακός*, soft, + *-in*².] The trade-name of salicyl-paraphenetidine, $C_2H_5\overset{4}{O}C_6H_4\overset{1}{N}:\overset{2}{C}HC_6H_4\overset{1}{O}H$, prepared by the action of paraphenetidine on salicylic aldehyde. It crystallizes in silky, lustrous needles and is used in medicine as an antipyretic and antirheumatic.

malakon, *n.* See *malacon.*

malamethane (mal-a-meth′ān), *n.* [*mal-ic* + *methane.*] A colorless compound, $NH_2COCH(OH)CH_2COOC_2H_5$, formed by the action of dry ammonia on diethyl malate. Also called *ethyl malamate.*

malamic (mal-am′ik), *a.* [*malam*(*ide*) + *-ic.*] Noting an acid, a colorless compound, $NH_2COCH(OH)CH_2COOH$, prepared from diazosuccinic ester. It crystallizes in short, thick prisms and melts at 146° C.

malamide (mal-am′id), *n.* [*mal*(*ic*) + *amide.*] A colorless compound, $H_2NCOCH(OH)CH_2CONH_2$, prepared by the action of ammonia on ethyl malate. It crystallizes in rectangular prisms.

mala-mujer (mä″lä-mö-her′), *n.* [Sp. *mala*, bad, + *mujer*, woman.] A name applied in Mexico to several pernicious plants, some of which are armed with prickles. Among them are *Solanum rostratum*, called *sand-bur* in the southwestern United States; *Cnidoscolus urens* (*Jatropha urens* of Linnæus), which is armed with stinging hairs; and *Rhus Toxicodendron*, the poison oak, also called *guao* and *tetlatia.* See ★*guao* and ★*tetlatia.*

malamute (mal′a-mūt), *n.* [Name of an Alaskan Indian tribe.] A local name for the Eskimo dog, apparently used in Alaska.

> Few pure *malamutes* (native dogs descended from the Siberian wolf) are now employed in the mail service. Their legs are too short, their feet sink too readily through the snow.
> *Lida Rose McCabe*, in St. Nicholas, March, 1908, p. 387.

malapaho (mä-lä-pä′hō), *n.* [Philippine Sp., said to be Tagalog.] In the Philippine Islands, a name of several forest trees, especially of *Sindora Wallichii* and *Dipterocarpus vernicifluus.* The latter yields a valuable oleoresin. Also called *panao.*

malappropriate (mal-a̤-prō′pri-ā̤t), *a.* [*mal-* + *appropriate, a.*] Inappropriate.

malappropriation (mal-a̤-prō-pri-ā′sho̤n), *n.* [*mal-* + *appropriation.*] Misappropriation.

malapropian (mal-a̤-prop′i-a̤n), *a.* [*malaprop* + *-ian.*] Of the nature of or addicted to malapropism.

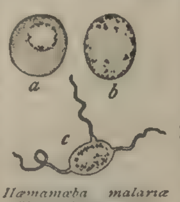
malapropoism (mal-ap-rō̤-pō′izm), *n.* [*mal-apropo(s)* + *-ism.*] Same as *malapropism.*

Bipartite Malar Bone.

malar, *a.*—**Malar division**, in *craniom.*, the condition, of the malar bone, of being divided by a suture into two bones; a bipartite malar.

malare (mā-lā′rē), *n.* [NL. (sc. *os*), the malar bone. See *malar.*] In *craniom.*, the most prominent point of the tuberositas malaris. *Von Török.*

malaria, *n.* Numerous investigations made in recent years have established the fact that malaria is a disease resulting from the presence within the red blood-corpuscles of a protozoan parasite, the *Hæmamœba malariæ*, or *Plasmodium malariæ.* The parasite has two cycles of existence, one in the human body, the other in the body of a mosquito of the genus ★*Anopheles* (which see, with cut). In the blood, reproduction of the parasite occurs only by fission or segmentation; but in the stomach-wall of the mosquito, which it reaches in the blood sucked by this insect from the skin of the sick, sexual reproduction occurs, the parasite giving birth to a large number of exceedingly minute forms, called sporozoids. These make their way through the tissues of the mosquito to its salivary glands, whence they are injected into the blood of the human subject whom this infected mosquito stings. On reaching maturity in the blood, the protozoan invades the red blood-corpuscles, and so completes the two cycles of its existence. The malarial paroxysm of chill, fever, and sweating occurs at the time of invasion of the blood-cells by a new brood of the parasites, either those resulting from segmentation of the protozoan within the human blood-vessels or those reproduced sexually in the body of the mosquito and thence injected into man. There are three varieties of the *Hæmamœba* which are concerned in the production of the three varieties of malaria, *tertian*, *quartan*, and *estivo-autumnal* or *pernicious.* Symptomatically, there are four forms of malaria: the *intermittent*, in which the interval between the paroxysms is fever-free; the *remittent*, in which the fever is continuous, but is marked by exacerbations with intercurrent chill and sweating; the *pernicious* or *congestive* form, in which the blood-poisoning is profound; and the *chronic* form, constituting what is called the *malarial cachexia*. See ★*Laverania.*—**Hybrid malaria**, malaria modified by association with some other disease.



Hæmamœba malariæ (*Plasmodium quartanæ*), the Parasite of Quartan Fever.

a, a developing form within the red blood-corpuscle; *b*, a full-grown body, the substance of the red corpuscle having disappeared; *c*, flagellate body.

(From Johns Hopkins Hospital Reports—Thayer and Hewetson.)

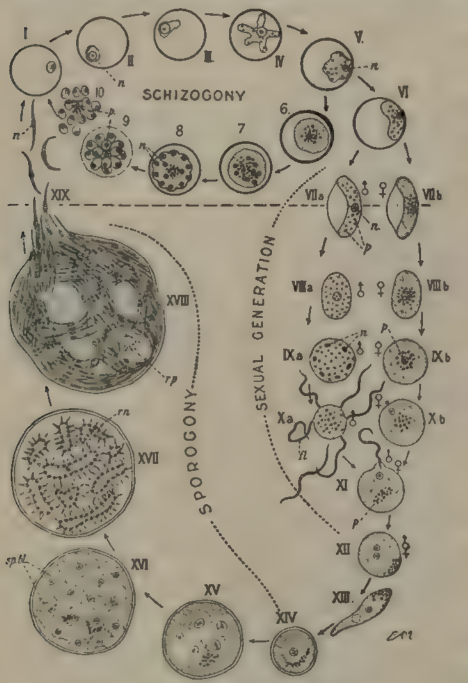


Diagram of the Complete Life-cycle of the Parasite of Pernicious Malaria, *Hæmamœba* (*Plasmodium*) *malignum* or *Laverania malariæ.*

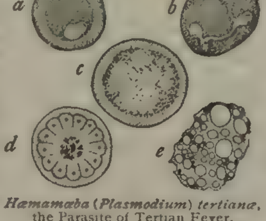
The stages shown above the dotted line are those found in human blood; below the dotted line are seen the phases through which the parasite passes in the intermediate host, the mosquito. I-V and 6-10 show the schizogony; VI-XII, the sexual generation, which at VII splits into two lines, male (*a*) and female (*b*), to be united again by conjugation (XI and XII); XIII, the motile zygote; XIV-XIX, sporogony. I-III, young amœbulæ in blood-corpuscles, the last two showing the ring-form (which is, however, not quite correctly drawn). IV, older, actively amœboid trophozoite. V, still older, less amœboid trophozoite. 6, mature schizont. 7, schizont with nucleus dividing up. 8, young rosette stage. 9, fully formed rosette stage, merozoites round a central residual mass of protoplasm containing the pigment, and blood-corpuscle beginning to break down. 10, merozoites free in the blood by breaking down of the corpuscle. VI, young, indifferent gametocyte. VIIa, male crescent. VIIb, female crescent. VIIIa and VIIIb, the gametocytes becoming oval. IXa and IXb, spherical gametocytes; in the male (IXa) the nucleus has divided up. Xa and Xb, formation of gametes; in the male (Xa) the so-called flagella or male gametes (*fl*) are thrown out—one of them is seen detached; in the female (Xb) a portion of the nucleus has been thrown out. XI, a male gamete penetrating a female gamete at a cone of reception formed near the nucleus. XII, zygote with two pronuclei in proximity. XIII, zygote in the motile stage (vermicule or oökinete). XIV, encysted zygote (oöcyst). XV, commencing multiplication of the nuclei in the oöcyst. XVI, oöcyst with numerous sporoblasts. XVII, commencing formation of sporozoites; the nucleus of each sporoblast has divided to form numerous nuclei, each of which is growing out in a little tongue of protoplasm to become a sporozoite, but a few nuclei remain behind as residual nuclei. XVIII, full-grown oöcyst crammed with ripe sporozoites; on one side the cyst has burst and the sporozoites are escaping. XIX, free sporozoites, showing their changes of form. *n*, nucleus of the parasite; *p*, melanin pigment; *fl*, flagella; *sp.bl*, sporoblasts; *r.n.*, residual nuclei; *r. p*, residual protoplasm. (Chiefly after Neveu-Lemaire, from whom the plan and arrangement of the different stages are borrowed, with slight modifications; details of the figures are founded on the figures of Grassi, Schaudinn (Leuckart's "Zoologische Wandtafeln"), Ross, and others.)

(From Lankester's "Zoology.")



Hæmamœba (*Plasmodium*) *tertianæ*, the Parasite of Tertian Fever.

a, a young form within a red blood-corpuscle; *b*, a developing pigmented form within the corpuscle; *c*, a full-grown body; *d*, a segmenting body; *e*, a degenerating form undergoing vacuolization.

(From Johns Hopkins Hospital Reports—Thayer and Hewetson.)

malarial, *a.*—**Malarial cachexia.** See ★*cachexia.*—**Malarial crescent.** Same as ★*crescent*, 4 (*e*).—**Malarial fever of cattle.** Same as *Texas fever.*

II. *n.* One who suffers from or is subject to malaria.

malariated (mā̤-lā′ri-ā-ted), *a.* [*malaria* + *-ate*² + *-ed*².] Infected with malaria.

malarigenous (mal-ā̤-rij′e-nus), *a.* [*malaria* + L. *-genus*, -producing.] Producing malaria; malarious. [Rare.]

malarin (mal′ā̤-rin), *n.* [*malar(ia)* + *-in*².] The trade-name of acetophenone-paraphenetidine citrate, $(C_2H_5OC_6H_4N:C(CH_3)C_6H_5)_3$-$C_6H_8O_7$. It is prepared by the action of acetophenone on paraphenetidine, forms a crystalline powder, and is used in medicine as a febrifuge. Also called *acetophenone-phenetidide.*

malarioid (mā̤-lā′ri-oid), *a.* [*malari(a)* + *-oid.*] Like or resembling malaria. *Syd. Soc. Lex.*

malariologist (mā̤-lā-ri-ol′ō̤-jist), *n.* Same as *malarialist.*

malarrangement (mal-a̤-rānj′me̤nt), *n.* [*mal-* + *arrangement.*] Bad, defective arrangement.

malashaganay (mä-lä-shä′ga̤-ni), *n.* [*Amer. Ind.*] Same as *fresh-water drum*, which see, under *drum*¹, 11 (*b*).

Malaspina glacier. See ★*glacier.*

malaxation, *n.* **2.** In *entom.*, with certain solitary wasps, the act of kneading or bruising with their jaws insects already stung, in order more thoroughly to paralyze them before storing them away in their burrows as food for their future young.

Malay cat. See ★*cat*¹.

Malayic (mā̤-lā′ik), *a.* [*Malay* + *-ic.*] Same as *Malay.*

Malayo-African (mā̤-lā″ō-af′ri-ka̤n), *a.* Malayan and African; connected with Malaysia and Africa. *Keane*, Ethnology, p. 331.

Malayo-Chinese (mā̤-lā″ō-chī-nēs′), *a.* Malayan and Chinese; connected with Malaysia and China. *Keane*, Ethnology, p. 333.

Malayo-European (mā̤-lā′ō-ū-rō̤-pē′an), *a.* Connected with Malaysia and Europe. *Keane*, Ethnology, p. 333.

Malayoid (mā̤-lā′oid), *a.* [*Malay* + *-oid.*] Similar to the Malays.

Malayo-Indonesian (mā̤-lā″ō-in-dō̤-nē′si-a̤n), *a.* Connected with Malaysia and Indonesia. *Keane*, Ethnology, p. 333.

Malayo-Malagasy (mā̤-lā″ō-mal-a̤-gas′i), *a.* Malayan and Malagasy; connected with Malaysia and Madagascar. *Keane*, Ethnology, p. 285.

Malayo-Papuan (mā̤-lā″ō̤-pap′ṳ̄-a̤n), *a.* and *n.* **I.** *a.* Common or relating to both Malays and Papuans.

II. *n.* One of mixed Malay and Papuan blood.

malchite (mal′kīt), *n.* [*Malchen*, Mount Melibocus, Hesse, Germany, + *-ite*².] In *petrog.*, a fine-grained to aphanitic, porphyritic, igneous rock, composed of labradorite and hornblende, with a subordinate amount of quartz. *Osann*, 1892.

malconduct (mal-kon′dukt), *n.* [*mal-* + *conduct.*] Wrong, faulty, or improper conduct; especially, maladministration of public affairs: as, *malconduct* in office.

malcontentism (mal-ko̤n-tent′izm), *n.* [*malcontent* + *-ism.*] The condition or state of being malcontent or dissatisfied.

maldigestion (mal-di-jes′tyo̤n), *n.* [*mal-* + *digestion.*] Imperfect digestion.

mal-di-gomma (mal-dē-gom′ä̤), *n.* [It.: *mal*, disease; *di*, of; *gomma*, gum, also the name of a disease.] Same as ★*foot-rot*, 2.

malduck (mal′duk), *n.* The fulmar petrel, *Fulmarus glacialis.* Also *malmarsh.*

male¹, *n.* **3.** A 'male' precious stone. In the middle ages and until quite recent times, all the darker gems, such as sapphire, ruby, and topaz, were known as 'male' gems; the lighter blue, lighter red, or lighter yellow were called 'female' gems.—**Dwarf male.** (*b*) The minute, parasitic male which is attached to the body of the ordinary hermaphrodite individual in certain cirripeds. It is supposed to secure the cross-fertilization of the hermaphrodite. See *complemental*, 2.

Malebolgian (mal-ē̤-bol′ji-a̤n), *a.* [*Malebolg(e)*, < It. *male*, fem. pl. of *malo*, evil, + *bolge*, pl. of *bolgia*, budget, + *-ian.*] Pertaining to or resembling Malebolge, the eighth circle in Dante's description of Hell.

Malebolgic (mal-ē̤-bol′jik), *a.* Same as ★*Malebolgian.*

malediction, *n.* **2.** In *anc. eccles. law*, a curse annexed to the donation of lands to churches or religious institutions against those who should violate their rights. *Cowell.*

maleducation (mal″ed̤-ṳ̄-kā′sho̤n), *n.* [*mal-* + *education.*] Faulty, imperfect education. *Emerson.*

malefactory (mal-ē̤-fak′tō̤-ri), *a.* [NL. **malefactorius*, < *malefactor.*] Ill-doing; criminal. [Rare.]

> One of the boasts of Riversley was that while the rest of the world ate and drank poison, the Grange lived on its own solid substance, defying *malefactory* Radical tricksters.
> *G. Meredith*, Adventures of Harry Richmond, xlix.

male-fern, *n.* **2.** The dried rhizome of *Dryopteris Filix-mas* of Schott, or of *Dryopteris marginalis* of Gray, used as an anthelmintic. The chaff, together with the dead portions of the rhizome and stipes, should be removed, and only such portions used as have retained their internal green color.—**Oleoresin of male-fern.** See ★*oleoresin.*

maleness (māl′nes), *n.* The character of being male. [Rare.]

> The discovery of these morphological facts does not in the least shift the old-time attribute of *maleness* as applied to the stamen or of femaleness as applied to the pistil. *L. H. Bailey*, in Science, June 5, 1896, p. 826.

mal-entendu (mäl′oṅ-toṅ-dü′), *a.* and *n.* [F. *mal*, ill, + *entendu*, understood.] **I.** *a.* Wrongly understood; mistaken.

II. *n.* A misunderstanding.

Maletra burner. See ★*burner.*

malfeasant (mal-fē′za̤nt), *a.* and *n.* [F. *malfaisant*, < *mal*, ill, + *faisant*, ppr. of *faire*, do. Compare *damage feasant.*] **I.** *a.* Doing ill; guilty of misconduct in office.

II. *n.* An ill-doer; a malefactor.

malgovernment (mal-guv′ėrn-me̤nt), *n.* [*mal-* + *government.*] Bad government; misgovernment.

malgrace (mal-grās′), *n.* [OF. *male grace*, 'bad grace.' See *mal-* and *grace.*] **1†.** Ill grace; ill favor; disfavor.—**2.** Something of ill grace or ill favor; something unbecoming.

> May these not see in us some *malgrace* which it needs the gentleness of Christ to get over and forget, some savagery of which we are not aware, some gaucherie that repels though it cannot estrange them?
> *Geo. MacDonald*, Weighed and Wanting, iv.

malice, *n.* **5.** The common dwarf mallow, *Malva rotundifolia.*—**Particular malice**, actual malevolence; positive ill-will: it is directed toward a definite person or persons and is distinguished from *legal malice*, that is, the doing of a wrongful act without spite; and from Blackstone's *universal malice*, which is intentional but not definite.

malignite (ma-lig′nīt), *n.* [*Maligne* river, Canada, + *-ite*².] In *petrog.*, a name given by Lawson (1896) to phaneric igneous rocks composed of orthoclase with ægirite-augite, biotite, sodic amphibole, nephelite, melanite, sphene, and apatite. Some varieties of malignite are rich in melanite, others in nephelite.

malik (mä'lik), *n.* [Ar.] The head man of a village in parts of India and central Asia.

About this time a letter arrived from the Prince Sultán Dániyál, reporting that (*Malik*) Ambar had collected his troops in Bidar. *Elliot*, Hist. Ind., VI. 104.

mali-mali (mä'li-mä'li), *n.* A form of chronic chorea or tic prevalent in the Philippine Islands.

malipes (mal'i-pēz), *n.* Singular of *malipedes.*

malism (mā'lizm), *n.* [L. *malus*, bad, + *-ism.*] The doctrine that the world is evil, or that, on the whole, evil prevails over good: a less extreme doctrine than pessimism.

Malism, to me a convenient expression, is acknowledged on all hands. *H. Goodwin*, Science and Faith, p. 243. *N. E. D.*

malist (mā'list), *n.* [L. *malus*, bad, + *-ist.*] One who believes that the world is bad, but not the worst possible.

Bad as things are, he does not believe that the world is getting worse and worse . . . he is a '*malist.*' *Cheyne*, Job & Solomon, p. 202. *N. E. D.*

malistic (ma-lis'tik), *a.* [*malist* + *-ic.*] Pertaining to or of the nature of malism.

malitza (mä-lit'sä), *n.* [Samoyed ?] A kind of fur coat or tunic reaching to the knees, and open only at the neck and hem, worn by the Samoyeds. It is made with the hair inside, and with mitts attached to the sleeves. See extract under ★*loupthu.*

malkuth (mal-köth'), *n.* [Heb. kingdom, < *malak*, to rule, < *melek*, king.] The tenth Sephira, forming the Adam Kadmon. See ★*Sephiroth* and ★*Adam Kadmon.*

mallagong (mal'a̤-gong), *n.* [Australian.] A native name for the Australian duck-mole or platypus, *Ornithorhynchus paradoxus:* used to some extent locally as a common name. Also, in books, *mallangong* and *mullagong.*

Malleable castings. See ★*casting.*

malleableize (mal'ẹ̄-a̤-bl-īz), *v. t.*; pret. and pp. *malleableized*, ppr. *malleableizing.* [*malleable* + *-ize.*] To make malleable, as iron or other metals. [Rare.]

malleal (mal'ẹ̄-a̤l), *a.* and *n.* [*malleus* + *-al*¹.] **I.** *a.* Of or relating to the malleus.

II. *n.* Same as *interoperculum.* *Starks*, Synonymy of the Fish Skeleton, p. 515.

malleate (mal'ẹ̄ āt), *a.* [*malleus* + *-ate*¹.] In rotifers, having the mallei stout, the manubria and unci being of equal length: as, the *malleate* type of trophi.

malleatory (mal'ẹ̄-ā̤-tō-ri), *a.* [NL. **malleatorius*, < L. *malleator*, a hammerer, < *malleare*, *v.*, hammer: see *malleate.*] Of or pertaining to a hammerer or hammering.—**Malleatory spasm** or **chorea.** Same as *malleation*, 3.

mallee² (mäl'ē), *n.* Same as *molly*³.

mallee-scrubber (mal'ē-skrub″ėr), *n.* In Australia, a name given to cattle that run wild in the mallee-scrub, or thickets of dwarf eucalyptus, *Eucalyptus dumosa* and *E. oleosa.* The brush-turkey, *Leipoa*, is similarly known as the *mallee-bird.*

mallein (mal'ẹ̄-in), *n.* [L. *malle(us)*, glanders, + *-in.*] A sterilized filtered extract of glycerin-bouillon cultures of the bacillus of glanders, containing substances from the bodies of the bacilli and their soluble products which have not been destroyed by heat.

malleh-bug (mal'e-bug), *n.* Same as *miana-bug* (which see).

mallemak, *n.* See *mallemuck.*

mallemot (mä-le-mōt'), *n.* [Cape D. *mallemót*, < *mal*, foolish, + *mot*, moth.] A name given in South Africa to a poisonous wasp.

malleotomy (mal-ẹ̄-ot'ō̤-mi), *n.* [*malleus* + Gr. *-τομια*, < *ταμεῖν*, cut.] **1.** An operation for separating the malleoli by division of the ligament which holds them in apposition.—**2.** An operation of division of the malleus in the middle ear in cases of ankylosis of the ossicles.

mallochorion (mal-ō̤-kō'ri-o̤n), *n.* [NL., < Gr. *μαλλός*, a lock of wool, + *χόριον*, membrane. See *chorion.*] In *embryol.*, the presumably primitive form of the mammalian chorion, characterized by a uniform covering of villi.

malloplacenta (mal″ō̤-plā̤-sen'tä), *n.* [NL., < Gr. *μαλλός*, a lock of wool, + NL. *placenta.*] In *embryol.*, a non-deciduate placenta corresponding to the mallochorion, that is, having uniformly distributed villi. Such a placenta occurs in many ungulates and in cetaceans.

mallotoxin (mal-ō̤-tok'sin), *n.* [Gr. *μαλλός*, lock of wool, + E. *toxin.*] Same as ★*rottlerin.*

mallow, *n.*—**Bristly-fruited mallow**, *Modiola Caroliniana*, a low plant of the mallow family with pedately cleft leaves, red flowers, and hispid-aristate carpels, found from Virginia to Florida and Texas, and also in Central and South America.—**European mallow**, *Malva Alcea* of Europe, cultivated in, and escaped from, gardens in some parts of the United States. Also called *vervain-mallow.*—**Globe mallow.** The name is applied especially to the species *Sphæralcea acerifolia*, the maple-leaved globe mallow, and *S. cuspidata*, the sharp-fruited globe mallow, of western North America.—**High mallow.** See *high-mallow.*—**Low mallow**, the dwarf mallow, *Malva rotundifolia.*—**Running mallow.** Same as *dwarf mallow:* so called from its procumbent, spreading habit.—**Swamp-mallow**, the swamp rose-mallow, *Hibiscus Moscheutos.*—**Virginia** or **Virginian mallow**, *Sida hermaphrodita.* See *Sida*, 1.—**Water-mallow**, the swamp rose-mallow.—**White mallow**, the marsh-mallow, *Althæa officinalis.*

malm, *v. t.* **2.** To mix (clay and chalk) for making bricks.

malma (mal'mä̤), *n.* [Kamchatkan.] Same as *Dolly Varden trout* (which see, under *trout*¹).

malo (mä'lō), *n.* [Fijian and Hawaiian, the paper-mulberry, a malo or girdle made from it, Maori *maro*, a girdle.] **1.** In the Fiji Islands, Hawaii, and other parts of Polynesia, the paper-mulberry, *Papyrius papyrifera.*—**2.** A cloth or girdle made from the fiber of the paper-mulberry. See *Broussonetia*, ★*kapa*, *tapa*, ★*aute*, and ★*wauke.*

malobago (mä-lō-bä'gō), *n.* [Bicol *malubago.*] Same as ★*balibago.*

malobservance (mal-o̤b-zėr'va̤ns), *n.* [*mal-* + *observance.*] Wrong observance: as, *malobservance* of the Sabbath.

malobservation (mal″ob-zėr-vā'sho̤n), *n.* [*mal-* + *observation.*] Incorrect observation; the act of seeing or observing wrongly.

Further experiment [in "crystal-gazing"] may reveal some normal explanation, while scepticism (which seldom takes the trouble to examine the alleged facts with any care) can always repose on a theory of *malobservation* and imposture. *Encyc. Brit.*, XXXII. 53.

malofrontal (mā-lō-fron'ta̤l), *a.* [L. *mala*, jaw, + *frons* (*front-*), forehead, + *-al*¹.] In *craniom.*, pertaining to both the malar and the frontal bone.

malonic (ma-lon'ik), *a.* [*mal(ic)* + *-on* + *-ic.*] Noting an acid, a colorless compound, $CH_2(COOH)_2$, found in the sugar-beet and prepared by the hydrolysis of cyanacetic acid; propanediacid. It crystallizes in triclinic plates and melts and decomposes into carbon dioxid and acetic acid at 132° C. Malonic esters and their sodium derivatives are extensively used for organic syntheses.

malorganization (mal-ôr″ga̤n-i-zā'sho̤n), *n.* [*mal-* + *organization.*] Imperfect or wrong organization.

malorganized (mal-ôr'ga̤n-īzd), *a.* [*mal-* + *organized.*] Imperfectly or wrongly organized.

Malo-Russian, *n.* **II.** *a.* Pertaining or relating to the Little-Russians.

malpais (mäl-pä-ēs'), *n.* [Sp., 'bad land': see *mal-*, *pais*, *peasant.*] The ragged surface of a lava-flow. [Southwestern U. S.]

In the old times, up to the present generation, in their trading visits to the Pimas the Hopi took the trail through Chaves Pass, an available one for them to cross the rugged *malpais* of the Mogollones. *J. W. Fewkes*, in Smithsonian Rep., 1896, p. 520.

malposed (mal-pōzd'), *a.* [*mal-* + *pose*² + *-ed*².] Badly placed; wrongly placed.

Malposed teeth are not only unsightly but prone to disease. *Encyc. Brit.*, XXVII. 417.

malpraxis (mal-prak'sis), *n.* [*mal-* + *praxis.*] Malpractice.

malt¹, *n.*—**Pale malt**, in *brewing*, malt which has been dried in a kiln, but at a comparatively low temperature, so that it has less color than yellow or amber malt.—**Slack malt**, malt which, after having been dried, has absorbed moisture from the atmosphere. It produces inferior beer, and requires to be redried before use.

Malta gray. Same as *methylene* ★*gray.*

maltan (mâl'tan), *n.* [*malt*¹ + *-an.*] The term used in organic chemistry to designate an atomic complex which is supposed to be present in the starch molecule and which gives rise to maltose and its derivatives when the starch is hydrolyzed.

maltase (mâl'tās), *n.* [*malt*¹ + *-ase.*] A ferment which causes the cleavage of maltose into two molecules of dextrose. Maltase, like lipase, has been shown to be capable of reversible action in concentrated solutions. It occurs widely distributed in both the animal and the vegetable world.

maltate (mâl'tāt), *n.* [*malt*¹ + *-ate*¹.] A compound of malt with another substance.

Maltee (mâl'tē), *a.* Same as *Maltese* (cat). *Dialect Notes*, III. iii, 193. [Colloq.]

Maltese cross. (*b*) A plant, *Lychnis Chalcedonica.* Also called *cross-of-Jerusalem.*—**Maltese lace.** See ★*lace.*

maltesite (mâl-tēs'īt), *n.* [*Maltese* (see def.) + *-ite*².] A variety of chiastolite or macle (andalusite) which is found in the crystalline schists of eastern Finland. It occurs in large nodules that exhibit a Maltese cross of the pure mineral separated by areas of impure material. See cut under *chiastolite.*

malt-grist (mâlt'grist), *n.* See the extract.

When wanted the malt is again scoured, and is ground or rather crushed in specially-constructed malt mills, which press the grains so that the hulls remain intact while the interior starch body is finely powdered. It is now termed "*malt-grist*," and it is stored in grist hoppers, where it is kept in readiness for the mash-tub underneath. *Sci. Amer.*, June 18, 1904, p. 480.

maltha, *n.* **2.** Haeckel's term for the gelatinous ground-substance or mesoglœa and contained cells of various kinds, which forms the skeletogenous layer in sponges.

malthacite (mal'thä̤-sīt), *n.* [Gr. *μαλθακός*, soft (a variant of *μαλακός*, soft), + *-ite*².] A white or yellowish clay which occurs in scales, also massive. It is related to fullers' earth.

malthite (mal'thīt), *n.* [*maltha* + *-ite*².] A general term sometimes used to embrace the viscous bitumens of varying consistency, namely, maltha, mineral tar, brea, and chapapote.

Malthusianize (mal-thū'si-a̤n-īz), *v. i.*; pret. and pp. *Malthusianized*, ppr. *Malthusianizing.* [*Malthusian* + *-ize.*] To become a supporter of the doctrines of Malthus. [Rare.]

malt-jelly (mâlt'jel″i), *n.* The trade-name of an extract of malt to which isinglass, gelatin, or agar-agar has been added at a boiling temperature and the liquid gelatinized by cooling.

malto-. A combining form used in organic chemistry to designate a relation to maltose.

maltodextrine (mâl-tọ-deks'trin), *n.* A variety of dextrine or starch-gum, produced, in 'mashing' brewers' malt, as an intermediate product between starch and fermentable glucose. Its claim to be considered a distinct substance is not clearly established.

maltol (mâl'tol), *n.* [*malt*¹ + *-ol.*] A colorless compound,  $\mathrm{CH}\left\langle\begin{array}{c}\mathrm{C(OH):CH}\\ \mathrm{O}\\ \mathrm{CH:C(OH)}\end{array}\right\rangle\mathrm{CH}$ (?), formed during the roasting of malt. It crystallizes in long needles and gives a violet color with ferric chlorid.

maltometer (mâl-tom'e-ter), *n.* [*malt*¹ + Gr. *μέτρον*, measure.] A hydrometer with a special scale, used to determine the strength of brewers' wort or extract of malt.

maltonic (mâl-ton'ik), *a.* [*malt*¹ + *-on* + *-ic.*] Pertaining ultimately to malt.—**Maltonic acid.** Same as ★*gluconic acid.*

maltosazone (mâl-tōs-az'ōn), *n.* [*maltose* + *azone.*] A crystalline compound, $C_{12}H_{24}O_9(N.NH_2)_2$, prepared by the action of maltose on hydrazine acetate. The name is also used, less correctly, for *phenyl maltosazone.*

maltoside (mâl'tọ-sid), *n.* [*maltose* + *-ide*¹.] In *organic chem.*, the name of a class of compounds which are both intramolecular anhydrids and ethers. They are formed from alcohols and maltose by the action of hydrochloric acid, closely resemble the corresponding glucosides from glucose, and are hydrolyzed by certain enzyms.

malt-screen, *n.*—**Waterfall malt-screen**, a sieve or screen placed in a sloping position and having several strips of wood crossing it horizontally, by passing over which malt is cleansed from dust, rootlets, and plumules, preparatory to its use by the brewer.

maltzyme (mâlt'zim), *n.* [*malt*¹ + Gr. *ζύμη*, ferment.] A specially prepared form of diastase or malt extract.

malu (mä'lö), *n.* [*Melanesian.*] The initiation ceremonies of the Melanesians performed at the time of puberty of boys.

malum, *n.* **2.** In *pathol.*, a disease.—**Malum coxæ**, hip-disease.—**Malum perforans**, perforating ulcer of the foot.—**Malum senile.** (*a*) Arteriosclerosis. (*b*) Inflammation of the sclera in the aged. (*c*) A chronic destructive disease of one of the larger joints, usually the hip, which occurs in advanced life.

malunion (mal-ū'nyo̤n), *n.* [*mal-* + *union.*] Union of the fragments of bone in a faulty position after a fracture.

Malvaviscus (mal-va̤-vis'kus), *n.* [NL. (Adanson, 1763, adopted from Dillenius, 1732), < L. *Malva*, mallow, + *viscum*, bird-lime, in allusion to the mucilaginous or fleshy fruit.] A genus of plants of the family *Malvaceæ.* They are shrubs closely allied to *Abutilon*, from which they differ in having a 10- to 12-bracted involucre. There are from twenty to thirty species, native to warm parts of America. *M. arboreus*, known to gardeners as *Achania Malvaviscus*, is a window-garden or greenhouse plant, with alternate, shallowly 3-lobed leaves and scarlet flowers which remain nearly or quite closed and bear a projecting column of stamens.

Malvern quartzite. See ★*quartzite.*

malwa (mäl'wä), *n.* An intoxicating liquor made from ripe bananas and fermented millet. [Africa.]

mam. An abbreviation of *mammalogy.*

mamaki (mạ-mä'kē), *n.* [Hawaiian.] 1. A name in Hawaii of a shrub of the nettle family, *Pipturus albidus*, found on all the islands of the group, and one of the two principal plants from which kapa is prepared.—2. The kapa or cloth made from this plant.

mamaloi (mä-mä-lō'i), *n.* [Also *maman-loi*, < *mama*, mother, + Bantu *loi*, sorcerer.] The priestess in voodoo ceremonies. [Haiti.]

Mamamouchi (mȧ-mȧ-mö-shē'), *n.* [F., a factitious word.] A pompous title, from that supposed to have been conferred by the Sultan on M. Jourdain in Molière's play, 'Le Bourgeois Gentilhomme'; hence, one who takes such a title; an ostentatious, self-important, and ridiculous pretender.

mamane (mä-mä'nạ), *n.* [Native name.] A leguminous tree, *Sophora chrysophylla*, growing at great elevations in the Hawaiian Islands, which has pinnate leaves, racemes of pale-yellow flowers, and fruit in the form of a four-winged pod deeply constricted between the seeds. The wood is hard and durable, and is suitable for posts in building. It was used by the ancient Hawaiians for making their *oo*, or digging implements, and the *holua*, or sleds, in which they coasted down the mountain sides.

mamanite (mā'ma̤-nit), *n.* [*Maman* (see def.) + *-ite*².] A mineral closely related to polyhalite in aspect and characters, but stated to differ in the proportion of the bases. It occurs with carnallite at the salt-mine of Maman in Persia.

mamelonated (mam'ẹ-lọn-ā-ted), *a.* [*mamelon.*] Having rounded, nipple-shaped elevations on the surface.

Mameluke bit, a heavy iron bit used by the Brazilian mamelucos.—**Mameluke point,** the double-edged cutting-point of the Mameluke saber.—**Mameluke sleeve,** a fashion of sleeve worn by women in Paris under the First Empire. *N. E. D.*

mamillariform (mam-i-lā'ri-fôrm), *a.* Same as *mammilliform.*

mamma², *n.*—**Supernumerary mammæ,** breasts in excess of the normal number. They may be situated near the natural ones, or may be found in the axilla, groin, or abdominal wall. Also called *accessory mammæ.*

mammæform, *a.* An erroneous form for *mammiform.*

mammalgia (ma-mal'ji-a̤), *n.* [L. *mamma*, breast, + Gr. *ἄλγος*, pain.] Neuralgic pain in the breast.

mammality (ma-mal'i-ti), *n.* The state or condition of being a mammal. *J. Fiske.*

Mammary arteries, three main trunks which supply the breast, the *internal* arising from the subclavian artery, and the *superior* and *inferior external* derived from the axillary artery.

mamma-shrimp (mam'a̤-shrimp), *n.* A West Indian crab, probably of the family *Homolidæ.*

mammato-cumulus, *n.* 2. Same as *mammiform cloud* (which see, under ★*cloud*¹).

mammilla, *n.*—**Spinning mammilla,** one of the mammilliform spinnerets of a spider.

mammillaplasty (ma-mil'ạ-plas-ti), *n.* [L. *mammilla*, nipple, + Gr. *πλαστός*, < *πλάσσειν*, form.] A surgical operation for restoring a defective nipple or raising a depressed one.

mammoid (mam'oid), *a.* [*mamm*(*a*)² + *-oid.*] Pertaining to or resembling a mamma in character or shape: as, the *mammoid* process of the temporal bone of man. [Rare.]

mammoniacal (mam-ọ-nī'a̤-ka̤l), *a.* Same as ★*mammonic.*

mammonic (ma-mon'ik), *a.* [*Mammon* + *-ic.*] Related to or influenced by Mammon or worldliness. [Rare.]

mammonitish (mam'ọn-ī-tish), *a.* Resembling Mammon; worldly; avaricious. *N. E. D.*

mammular (mam'ụ-la̤r), *a.* [*mammula* + *-ar*³.] Having or consisting of mammulæ.

mammulose (mam'ụ-lōs), *a.* [*mammula* + *-ose.*] Same as ★*mammular.*

mammy, *n.* 3. Same as *stone-lugger*, 2.

mamo (mä'mō), *n.* [Hawaiian.] 1. The sickle-billed sunbird, *Drepanis pacifica*, one of the honey-suckers of Hawaii: exterminated for the sake of its yellow feathers, which were used in making feather cloaks worn by the chiefs. It was black with golden-yellow rump and lower back. See cut under *Drepanis.*—2. A cloak made wholly or partly from the feathers of this bird.

mamsell, mamselle (mam-zel'), *n.* [F. *mamselle, mamzelle*, short for *mademoiselle.*] Mademoiselle. [Colloq.]

> Put on Miss Maria's bonnet this instant, *Mamsell.* . . . I shall take care, *Mamsell*, that you return to Switzerland to-morrow. *Thackeray*, Fitz-Boodle Papers, Pref., p. 170.

man¹, *n.* 14. In Cumberland, Westmoreland, and Lonsdale, a cairn or pile of stones marking a summit or prominent point of a mountain. Compare *Low Man, High Man*, as local names for particular cairns, also applied to portions of the mountains themselves. *N. E. D.*—**Blue-sky man.** See ★*sky*¹.—**Corner man.** (*a*) One of the two end-men of a company of negro minstrels. (*b*) A loafer who hangs about street-corners. [Eng. in both uses.] (*c*) In building a camp or barn of logs, one who notches the logs so that they will fit closely and make a square corner. (*d*) One who makes a corner in stocks or commodities.—**Second man.** (*b*) In *domestic service*, a butler's first assistant, to whom, among other duties, the care of the silver is intrusted.—**The man in the street,** the ordinary man; one who takes the commonplace view of things; the type of commonplaceness.

> *The man in the street*, finding no worth in himself which corresponds to the force which built a tower or sculptured a marble god, feels poor when he looks on these. *Emerson*, Self-Reliance, Essays, 1st ser., p. 62.
>
> A Greenwich nautical almanac he has, and so being sure of the information when he wants it, *the man in the street* does not know a star in the sky.
>
> *Emerson*, Self-Reliance, Essays, 1st ser., p. 83.

Third man, in *cricket.* (*a*) A fielder who stands beyond point, but farther from the wicket, and more behind it. (*b*) His position in the field.—**Ward man,** a police officer detailed as a detective in the service of his captain. The office was abolished in New York in 1894. [U. S.]—**White man.** (*a*) A man of the Caucasian race. (*b*) An honest, upright man. [Slang, U. S.]

man² (mân), *n.* [Per. *mān*, Hind. *mān*, usually *man*, Skt. *māna*, a measure, a weight, < √*mā*, measure: hence E. *maund.*] A measure of weight in Persia, varying in value, in different localities, from about 6 to about 25 pounds.

Man., Manit. Abbreviations of *Manitoba.*

mana¹ (mä'nä), *n.* [Jap. *mana*, the true or real characters, from *ma*, just, true, perfectly, exactly, + *na*, name.] The Chinese characters as used by the Japanese.

> Chinese characters have been adopted by only one people with an agglutinative language, the Japanese, who along with these characters (*Mana*) use another method of writing (Kana), which is syllabic.
>
> *Deniker*, Races of Man, p. 141.

mana² (mä'nä), *n.* [Maori and Tahitian *mana*, authority, influence; Samoan and Hawaiian *mana*, supernatural power, etc.: a word common to many Polynesian and Melanesian languages.] 1. Power in general; authority; influence. [New Zealand.]—2. Magical or supernatural power.

> A degraded and conventionalised representation of a bird, probably of the sacred bird of the West Pacific, the frigate bird, which possesses *mana* (spiritual or magical power) in an eminent degree.
>
> *Nature*, May 14, 1903, p. 36.

manaca, or **manacaa** (mä'na̤-kä'), *n.* [Tupi.] In Brazil, the name of a shrub belonging to the solanum family, *Brunfelsia Hopeana*, the tough woody root of which is used as a remedy for rheumatism and syphilis. See ★*Brunfelsia.*

manada (mä-nä'dä), *n.* [Sp.] A Spanish term for a herd of cattle or drove of sheep; adopted to some extent in California and southern Texas.

managemental (man-ạj-men'ta̤l), *a.* [*management* + *-al*¹.] Relating to management or to the management; of the nature of management. [Rare.]

managerially (man-ạ-jē'ri-a̤l-i), *adv.* In the manner of a manager; in the capacity of a manager.

manal (mā'na̤l), *a.* [L. *man*(*us*), hand, + *-al*¹.] Of or pertaining to the manus or hand.—**Manal formula,** in *zoöl.*, a statement of the distance between the distal ends of the second to fifth metacarpals of a bat, measured when the wing is extended as in flight.

mañana (män-yä'na̤), *n.* and *adv.* [Sp., the morning, the morrow; < L. *mane*, the morning.] I. *n.* To-morrow: used as a synonym of easy-going procrastination.

> Six hours [to wait]! What difference did it make? There was a flavor of the *mañana por la mañana* of the Spaniards . . . in the acceptance of the situation that appealed to me.
>
> *F. Hopkinson Smith*, A Pot of Jam, in At Close Range, [p. 243.

Land of Mañana, the land of To-morrow: applied to any region characterized by the easy-going procrastination of its inhabitants; a land where the Spanish disregard of the value of time prevails.

> A lethargic sloth beyond that of sluggish ox or somnolent swine, which was an irritating marvel to the patient padres of the eighteenth century, and is to-day a byword in the even-tempered *land of Mañana.*
>
> *Pop. Sci. Mo.*, March, 1902, p. 421.

II. *adv.* On the morrow; to-morrow; on any future day; by and by.

> "Lazzarillo," despairingly, "order the horses, it is time to go."
>
> "Oh! *mañana*, señora; we go *mañana.*"
>
> "But the luggage?"
>
> "Oh! aie, *mañana*," murmured Lazzarillo, provokingly, putting off the evil day.
>
> *S. J. Cunningham*, Through the Byways of Andalusia, v.

mananguete (mä-nän-gā'tā), *n.* [Philippine Sp.] A person who sells tuba, a drink made of palm-sap. [Philippine Is.]

mananosay (man-a-nō'sā), *n.* Same as *maninose.*

manarvel (mạ-när'vẹl), *v. t.* Same as *manavel.*

Manasquan formation. See ★*formation.*

manazo (mä-nä'zō), *n.* The Japanese name of a small shark, *Mustelus manazo*, of the family *Carchanidæ.*

man-breasted (man'bres″ted), *a.* Presenting a human appearance as far as the breast or upper part of the body is concerned, as the merman.

> And in the light the white mermaiden swam,
> And strong *man-breasted* things stood from the sea,
> And sent a deep sea-voice thro' all the land.
>
> *Tennyson*, Guinevere, l. 244.

man-broker (man'brō″kėr), *n.* A sailors' boarding-house keeper; a sailors' shipping-agent.

mancala (män'ka̤-lä), *n.* [Ar. *manqala*, a game played with 72 small shells on a board of 12 holes, lit. 'place of transferring or moving' (compare the meaning of *draughts*, lit. 'moves'), < *ma-*, a prefix forming nouns of place and time, + *naqala*, transfer, remove.] A game played on a board containing two or more rows of cup-shaped holes in which pebbles are placed and transferred from hole to hole according to certain rules. The game has been carried by the Arabs over the greater part of Africa and eastward to the Malay Archipelago. It is known locally as *naranj* (Maldive Islands); *chanka* (Ceylon); *chongkak* (Malay Peninsula); *poo* (Liberia); *chuncajon* (Philippine Islands); *gabatta* (Abyssinia); *abangah* (Niam Niam); *wawe* (West Indies); *chuba* (as published and played in the United States).

Mancalias (man-kā'li-as), *n.* [NL., irreg. < L. *mancus*, defective, + *-alias*, "a quasi-diminutive termination to correspond with *Ceratias.*"] A genus of fishes of the family *Ceratiidæ*, inhabiting the open seas, usually at considerable depths.

Manchester cotton. See *Kendal* ★*cotton.*

Manchesterism (man'ches-tėr-izm), *n.* The economic philosophy and policy of the so-called *Manchester school*; especially, the principles of free trade and *laissez-faire.* *Kidd*, Western Civilization, p. 23.

Manchurian subregion. See ★*subregion.*

mancinism (man'si-nizm), *n.* [It. *mancinismo*, < *mancino*, left-handed, < *manco*; left-handed, maimed, defective, < L. *mancus*, defective.] Left-handedness or left-sidedness.

> It seems that sufficient care has not yet been taken to determine what constitutes left-handedness. The relative strength of the two hands is not enough to decide this, for *mancinism*, or left-sidedness, is a matter of relative skill as well as of relative strength.
>
> *H. H. Ellis*, The Criminal, p. 110.

mancipant (man'si-pant), *n.* [L. *mancipans* (*-ant-*), < *mancipare*, deliver. See *mancipate* and *mancipation.*] One who disposes of property by mancipation; a mancipator.

mancipatio (man-si-pā'shi-ō), *n.* [L.] Same as *mancipation*, 1.

mancipative (man'si-pā-tiv), *a.* [*mancipate* + *-ive.*] In *Rom. law*, having the character of mancipation (which see); mancipatory.

> A *mancipative* will was executed by the same process.
>
> *Poste*, Gaius, II. § 103.

mancipator (man'si-pā-tọr), *n.* [L. *mancipator*, < *mancipare*, deliver. See *mancipate* and *mancipation.*] In *Rom. law*, one who disposed of property by mancipation; a mancipant.

> Mancipation . . . is an imaginary sale which is only within the competence of Roman citizens, and consists in the following process: in the presence of not fewer than five witnesses, citizens of Rome above the age of puberty, and another person of the same condition, who holds a bronze balance in his hands and is called the balance holder, the alienee holding a bronze ingot in his hand, pronounces the following words: This man I claim as belonging to me by right quiritary and be he purchased to me by this ingot and this scale of bronze. He then strikes the scale with the ingot, which he delivers to the *mancipator* as by way of purchase money.
>
> *Poste*, Gaius, I. § 119.

mancipee (man-si-pē'), *n.* [Irreg. *mancip*(*ate*)

+ *-ee*1.] The purchaser of property by mancipation, or the executor of a mancipatory will.

mancipium (man-sip′i-um), *n.* [L. See *mancipate.*] In *Rom. law*, the power over a freeman acquired by mancipation, that is, exercise of the paternal power to sell a son. The son then came into a condition similar to that of a slave, but to the purchaser alone. The transaction could be only among Roman citizens.

Bondage was an institute of the Civil law, slavery of the law of nations. [The custom did not exist in Justinian's time.] *Poste*, Gaius, pp. 30, 85.

Mandaic (man-dā′ik), *a.* Same as *Mandæan.*

mandant, *n.* **II.** *a*†. Commanding; ordering: chiefly in the phrase *member mandant*, the brain, as the controller of the body.

mandarah (man′dạ-rä̤), *n.* [Ar. *mandarah*, place of seeing, ‹ *nadara*, see.] In some Oriental countries, a reception-room.

mandarin, *n.* **6.** Same as *mandarin orange* (which see, under *orange*1).

mandarinize (man′dạ-rin-īz), *v. t.*; pret. and pp. *mandarinized*, ppr. *mandarinizing.* [*mandarin* + *-ize.*] To raise to the position of mandarin; make a mandarin of. [Rare.]

mandarinship (man′da-rin-ship), *n.* [*mandarin* + *-ship.*] The office, authority, or rank of mandarin.

mandate (man′dāt), *v. t.*; pret. and pp. *mandated*, ppr. *mandating.* [L. *mandare*, pp. *mandatus*, commit, enjoin, command. See *mandate, n.*] **1**†. To command.—**2.** To commit (a sermon, speech, etc.) to memory by repeating (it) aloud to one's self before delivery. [Scotch.]

My father . . . flung away his life without stint every Sabbath-day, his sermons being laboriously prepared, loudly *mandated*, and at great expense of body and mind, and then delivered with the utmost vehemence and rapidity.
J. Brown, Letter to J. Cairns, 1860, in Horæ Subsecivæ, [p. 97.

mandatee (man-dạ-tē′), *n.* One to whom a mandate is given; a mandatary.

mandation (man-dā′shọn), *n.* [*mandate, v.*, + *-ion.*] The act of committing (a sermon, or speech, etc.) to memory. See ★*mandate*, 2.

mandative (man′dạ-tiv), *a.* [ML. *mandativus*, ‹ L. *mandare*, command.] **1.** Relating to or of the nature of command.—**2.** In *gram.*, noting the imperative use of the future.

mandelic (man-del′ik), *a.* [G. *mandel*, almond, + *-ic.*] Noting an acid, a colorless compound, $C_6H_5CH(OH)COOH$, prepared by the hydrolysis of bitter-almond oil or by the action of hydrochloric acid on a mixture of benzaldehyde and hydrocyanic acid. It forms large rhombic crystals, melts at 118° C., and may be resolved into its optical isomers. Also called *phenylglycolic acid* or *paramandelic acid.*

mandible1, *n.* (*e*) In polyzoans, an operculum.

mandibled (man′di-bld), *a.* Provided with a mandible or operculum, as the avicularia of certain *Polyzoa.*

An acute *mandibled* avicularium.
Annals and Mag. Nat. Hist., June, 1903, p. 591.

mandibula (man-dib′ụ̄-lạ̈), *n.* In *ichthyol.*, same as *dentary.*

Mandibular condyle, fenestra, fontanelle, foot, goniometer, index. See ★*condyle*, etc.

mandibularis (man-dib-ụ̄-lā′ris), *n.* [NL. See *mandibular.*] The masseter muscle.

mandilion2 (man-dil′yọn), *n.* [NGr. *μανδήλιον*, *μανδίλιον*, a handkerchief, *τὸ ἅγιον μανδήλιον*, 'the sacred handkerchief' of the legend; orig. identical with *mandilion*1, a garment.] A handkerchief on which, according to an ecclesiastical legend, a portrait of Jesus was painted, and which was sent by him to Abgarus, prince of Edessa. In the earliest version of the legend, that of Eusebius, the portrait is not mentioned. Three churches claim to possess the original relic, the Sainte-Chapelle at Paris, the church of San Silvestro in Capite in Rome, whence the relic was transferred to the Vatican in 1870, and the church of S. Bartolommeo in Genoa. The mandilion is not to be confused with the sudarium of St. Veronica.

man-door (man′dōr), *n.* In *mining*, a small trap-door on a traveling road.

mandragorine (man-drag′ọ̄-rin), *n.* [*mandragora* + *-ine*2.] A hydroscopic resinous alkaloid, $C_{17}H_{23}NO_3$, contained in the root of *Mandragora autumnalis* and *M. vernalis.* It melts at 77–79° C., and its salts are mydriatics.

mandragorite (man-drag′ọ̄-rīt), *n.* [*mandragora* + *-ite*2.] One who consumes mandragora as a narcotic. [Rare.]

mandrake, *n.*—**Wild mandrake.** (*a*) See *wild*1. (*b*) The enchanter's nightshade, *Circæa Lutetiana.*

mandram (man′dram), *n.* [West Indian.] A mixture, used in the West Indies as an appetizer, consisting of sliced cucumbers, chopped shallots, lime-juice, wine, and peppers. Also *mandrang.*

mandrel-press (man′drel-pres), *n.* A hand-press used to push a mandrel into a metal object for the purpose of holding it in a lathe or other machine-tool: also used to push the mandrel out again when the work is done. It is usually made as an attachment to a lathe and is sometimes a separate machine. Also called an *arbor-press.*

mandriarch (man′dri-ärk), *n.* [LGr. *μανδριάρχης*, ‹ Gr. *μάνδρα*, monastery.] The founder or head of a monastic order. *N. E. D.* [Rare.]

mandrin (man′drin), *n.* [F. *mandrin*, a mandrel, former, strike, etc.: see *mandrel.*] A stiff wire used to give shape and rigidity to a soft catheter during its introduction.

mandruka (man-drö′kạ̈), *n.* A trade-name of a kind of honeycomb-sponge of fine quality.

Honeycomb sponges are various in quality, these being known as *Mandruka*, and found in deep water, are perfect forms, and have a close fiber and no horny fibers protruding from the surface, and are characteristic for their small root. *Sci. Amer. Sup.*, Feb. 14, 1903, p. 22670.

manflight (man′flīt), *n.* The flight of a human being through the air by means of a flying- or a gliding-machine. *Aeronautic Annual*, 1895, p. 145.

manga, *n.* **2.** A cone-shaped bag for the filtration of amalgam. *Phillips and Bauerman*, Elem. of Metallurgy, p. 746.

mangan (mang′gạ̈n), *n.* [Gr. *μάγγανον*, a machine, war-engine: see *mangonel.*] Same as *mangonel.*

mangan-, mangano-. A prefix used with mineral names to indicate the presence of manganese: as, *manganapatite*, *manganosiderite*, etc.

manganandalusite (mang″gạ̈n-an-dạ̈-lū′sīt), *n.* A variety of andalusite of a grass-green color, which contains considerable manganese: found in muscovite-quartzite at Vestanå, Sweden.

manganberzeliite (mang″gan-bėr-zē′li-īt), *n.* A variety of berzeliite from Långban, Sweden, peculiar in containing both manganese and sodium.

manganblende (mang′gạ̈n-blend), *n.* Same as *alabandine.*

manganbrucite (mang-gan-brö′sīt), *n.* A massive variety of brucite which contains considerable manganese: found at Jakobsberg, Sweden.

Manganese bronze. (*b*) Same as *manganese brown.* See *brown.*—**Manganese dioxid,** the common black oxid of manganese, found in nature as the mineral pyrolusite: valuable in the manufacture of glass, steel, bleaching-powder, and in other industries. Its composition is represented by the formula MnO_2.—**Manganese peroxid,** manganese dioxid, MnO_2, also known as black oxid of manganese. As found in nature it constitutes the mineral pyrolusite. See *manganese.*—**Manganese silicate,** a compound which occurs in nature in several minerals (as rhodonite, tephroite, and bementite) and as a constituent of many more complex silicates.—**Red manganese.** (*b*) Rhodonite.

manganesious (mang-gạ̈-nē′shius), *a.* [*manganese* + *-i-ous.*] Same as *manganous.*

manganic2 (mang-gan′ik), *a.* [Gr. *μαγγανικός* (used in reference to charms), adj., ‹ *μάγγανον*, a machine: see ★*mangan.*] Relating to the form of civilization in which machinery is used: opposed to ★*naturistic*, 2.

Professor Rouleau, of Berlin, divides culture into phases which he calls '*manganic*' and 'naturistic'; the former term applies to the use of machinery and the domestication of nature's forces, the latter to that condition of culture in which the hand was aided by the simplest appliances. *Pop. Sci. Mo.*, Feb., 1902, p. 338.

manganin (mang′gạ̈-nin), *n.* [*mangan*(*ese*) + *-in*2.] An alloy of 84 per cent. copper, 12 per cent. nickel, and 4 per cent. manganese, used, generally in the form of wire, to make electrical resistance-coils, since its resistance varies little with changes of temperature.

manganite, *n.* **2.** A substance which may be viewed as a compound of manganese dioxid with the monoxid of a more basic or electropositive metal.—**Calcium manganites,** compounds which represent the product of the union of lime and manganese dioxid in different proportions. They constitute the 'Weldon mud' obtained in the process, patented by W. Weldon, for recovering manganese in available form from the still liquor of the manufacture of chlorid of lime.

manganitic (man-ga-nit′ik), *a.* Pertaining to or containing manganite.

manganocolumbite (mang″gạ̈-nọ̄-kọ̄-lum′bīt), *n.* Same as *mangancolumbite.*

manganosphærite (mang″gạ̈-nọ̄-sfē′rīt), *n.* An iron-manganese carbonate occurring in globular aggregations: found at the Louise Mine near Horhausen, Germany.

Manganous acid, a hypothetical acid, H_2MnO_3, corresponding to the manganites. It is not known as an actually obtainable substance.—**Manganous oxid,** manganese monoxid or protoxid, MnO.

manganpectolite (mang-gan-pek′tọ̄-līt), *n.* A variety of pectolite containing several per cent. of manganese protoxid: found at Magnet Cove, Arkansas.

mange2, *n.*—**Texas mange.** Same as *winter itch.*

mangel, *n.* An abbreviation of *mangel-wurzel.*

mangle2, *n.* **2.** See *plate-straightening* ★*rolls.*

mangle-padded (mang′gl-pad″ed), *a.* In *calico-printing*, noting cloth which has been saturated, or padded, with a mordant or color in a mangle.

man-god (man′god), *n.* A deity regarded as being in form or origin or in other respects a man.

The old tradition of the fish-headed *man-god* Oannes, who taught men to read and to write, and to sow, and to reap, and to build. *Nature*, Feb. 11, 1904, p. 338.

mango-fish, *n.* **2.** *Polynemus paradoxus*, a fish found in the East Indies.

mango-fool (mang′gō-föl), *n.* Mangos beaten to a pulp and mixed with cream or milk. *N. E. D.*

mangostin (mang′gọ̄-stin), *n.* [*mangost*(*een*) + *-in*2.] A tasteless golden-colored compound, $C_{20}H_{22}O_5$, contained in the husk of the fruit of *Garcinia mangostana* from India. It crystallizes in thin plates melting at 190° C.

mangrove, *n.*—**Black mangrove.** Same as ★*courida.*—**Button mangrove,** *Conocarpus erecta*: same as *buttonwood*, 1.—**Five-petaled mangrove,** *Ceriops Candolleana*, a tree which yields a medicinal bark. See *Tengah* ★*bark.*—**Four-petaled mangrove,** *Rhizophora mucronata* and *R. Mangle.* See *Rhizophora* and *mangrove*, 1.—**Mangrove grouper.** See ★*grouper.*—**Many-petaled mangrove,** *Bruguiera gymnorhiza.*—**Milky mangrove.** Same as ★*blinding-tree.*—**Native mangrove,** in Tasmania, a variety of *Acacia longifolia*, abundant on the sea-coast and an excellent tree for binding coast sands.—**Red-flowered mangrove,** *Lumnitzera littorea.*—**Red mangrove.** (*b*) In Australia: (1) *Bruguiera Rheedii*, a small tree which yields a good tan-bark and a hard, durable, yellowish-brown wood; (2) *Heritiera littoralis*, a tree of the family *Sterculiaceæ.* See *Heritiera* and *sundari.*—**River-mangrove,** *Ægiceras majus*, a small tree of the family *Myrsinaceæ*, which grows on swampy shores from India and Ceylon to China, the Philippine Islands, and northern Australia. It forms impenetrable thickets like the common mangrove.

mangrove-fly (mang′grōv-flī), *n.* A West African fly of the genus *Glossina*, a tsetse-fly.

The genus Tabanidæ, to which "hippo" and "*mangrove*" *flies* belong, has a wide distribution, which extends all over the country and along the Nile, and in no way agrees with that of sleeping sickness. The bite of these flies is, however, severe, and they may be regarded as possible carriers of disease.
Jour. Trop. Med., Nov. 2, 1903, p. 343.

mangrove-minnow (mang′grōv-min″ō), *n.* See ★*minnow.*

Manhattanese (man-hat-ạ̈n-ēs′), *a.* and *n.* [*Manhattan* + *-ese.*] **I.** *a.* Of or pertaining to the island of Manhattan (New York) or to its inhabitants.

Unlike most "stellar vehicles," however, "Her Own Way" is very far from being a one-part piece. It brings together a number of highly piquant *Manhattanese* types of to-day, sketched with captivating drollery.
The Forum, Jan.–March, 1904, p. 410.

II. *n.* **1.** One who lives upon the island of Manhattan.—**2.** The characteristic phraseology of a New-Yorker.

manhole (man′hōl), *v. i.*; pret. and pp. *manholed*, ppr. *manholing.* To enter or use a manhole, as for the purpose of examining or repairing machinery. [Nonce-word.]

"Mister McAndrews, dont you think steam spoils romance at sea?"
Damned ijjit! I 'd been doon that morn to see what ailed the throws,
Manholin', on my back—the cranks three inches from my nose. *R. Kipling*, McAndrew's Hymn, l. 147.

manhole-plate (man′hōl-plāt), *n.* The cover of a manhole.

manhole-ring (man′hōl-ring), *n.* A ring, usually of steel or wrought-iron, riveted to a boiler-shell around a manhole to strengthen and stiffen the shell at that point and form a flat surface for the joint with the lid.

mania, *n.*—**Alcoholic mania,** delirium tremens.—**Mania mitis,** delirium.—**Reasoning mania,** paranœa.

manic (mā′nik), *a.* [Gr. *μανικός*, mad, insane, ‹ *μανία*, madness: see *mania.*] Relating to or affected with mania. *Buck*, Med. Handbook, V. 120.

Manicaria (man-i-kā'ri-ạ̈), *n.* [NL. (Gaertner, 1791), < L. *manicæ*, sleeve, glove, gauntlet; from the appearance of the spathes.] A genus of palms. It contains but one species, *M. saccifera*, the bussu of the Brazilian natives, which is found from the Amazon region to Central America. See *bussu-palm*.

manic-depressive (mā″nik-dẹ̄-pres'iv), *a.* Both manic and melancholic: noting a form of insanity in which mania and melancholia alternate. *Baldwin*, Dict. of Philos. and Psychol., II. 393.

manicurist (man'i-kūr-ist), *n.* [*manicure* + *-ist.*] One who practises manicure; a manicure.

> The surgeons, though they had ceased to rank with *manicurists* and barbers, were often little better than bone-setters. *Nature*, July 26, 1900, p. 294.

manifest, *n.*—**Master's manifest** (*naut.*), the document, signed by the master and submitted to the customs authorities, showing to what port the cargo is destined, and giving an itemized account of it, and the names of the shippers and consignees.

manifestational (man″i-fes-tā'shọn-ạl), *a.* Of, pertaining to, or of the nature of manifestation.

manifold¹, *n.* **5.** In *math.*, given a general conception capable of various determinations or determination-modes, the totality of the determinable particulars is a *manifold*, of which each is an element. The manifold is continuous or discrete, according as the passage from one determination to another is continuous or discrete.

> Now since every point of the colour *manifold* is completely determined by three magnitudes which are given in fact and cannot be arbitrarily chosen, it is plain that measurement by superposition—involving, as it does, motion, and therefore change in these determining magnitudes—is totally out of the question. *B. A. W. Russell*, Foundations of Geom., p. 67.

6. Same as ★*manifold-valve.*—**Algebraic manifold,** one whose elements combine by an addition which is associative and commutative.—**Infinite manifold,** one that is equivalent to a part of itself.—**Numerable manifold,** a manifold between which and the whole or a part of the scale of natural numbers a one-to-one correspondence can be established.—**Ordered manifold,** a manifold arranged in order by a definite criterion.—**Progressive manifold,** an ordered manifold in which (1) there is one element anterior to all the rest; and (2) every element x is followed by a definite next element x', so that $x < x'$ and no element falls within the interval (x, x').—**Self-constituted manifold,** a manifold wherein only the properties which the elements represent are used to define the relations between elements. The manifold of integral numbers is self-constituted, since all relations of such numbers can be defined in terms of them.—**Uniform manifold,** one in which each element bears the same relation as any other element to the manifold considered as a whole. The perimeter of a circle, the points being elements, forms a uniform manifold, but not the surface of a circle.

manifold² (man'i-fōld), *n.* [Also *mannifold*, *manifolds*; *many* + *fold*¹, *n.*] The third stomach of a ruminant; the manyplies; the intestines generally. [Eng. dial.]

manifolder (man'i-fōl-dėr), *n.* Any contrivance, such as a manifold-writer, for making a number of facsimile copies of a document, a sketch, or the like, at one time; also, the person who uses such a contrivance for this purpose.

manifold-valve (man'i-fōld-valv″), *n.* A number of valves combined in one valve-body or -chamber. Each valve has a separate opening below it to which a pipe can be connected, but the chamber above the valves is common to all. Usually called *manifold*.

manigraphy (ma-nig'rạ-fi), *n.* [Gr. *μανία*, madness, + *-γραφια*, < *γράφειν*, write.] The description of the various forms of insanity.

man-in-the-ground (man'in-thẹ̈-ground″), *n.* Same as *wild* ★*gourd* (*b*).

maniple, *n.* **5.** In the middle ages, a garment worn under the armor.

manism (mā'nizm), *n.* [L. *man*(*es*) (see *manes*, 1) + *-ism.*] The worship of the manes or shades of the dead. *G. S. Hall*, Adolescence, II. 179.

Manisuris (man-i-sö'ris), *n.* [NL. (Linnæus, 1771), < Gr. *μανός*, loose, scanty, + *οὐρά*, tail. The allusion is to the character of the inflorescence.] A genus of grasses. See *Rottbœllia*.

Manitoban (man-i-tō'bạn), *a.* and *n.* **I.** *a.* Of or pertaining to Manitoba.

II. *n.* An inhabitant of Manitoba.

manitoism, manitouism (man'i-tō-izm, -tö-izm), *n.* Same as ★*demonism*, 2.

manitology (man-i-tol'ọ̄-ji), *n.* [*manit*(*o*) + *-ology.*] The study of manitos.

> We should do great injustice to the Indian character, not to mention by far the most prominent of their beliefs, so far as they govern his daily practices. We allude to the doctrine of Manitoes, or what may be denominated *Manitology*. *Schoolcraft*, Ind. Tribes of U. S., I. 36.

manjairah (man-jī'rạ̈), *n.* [Syrian.] A Syrian direct flute with six holes.

Manjairah.

manjak (man'jak), *n.* [West Indian.] A variety of bitumen found in Uvalde county, Texas, and in Barbados. *Smithsonian Rep.*, 1889, p. 445.

manjee (man'jē), *n.* [Also *manjie*, *mangee*, *maungee*; < Hind. *mānjhī*, Beng. *mājī*, *māghī*, lit. 'one who stands in the middle,' < Skt. *madhya*, middle. See *mid*¹.] The master, or steersman, of a boat or any native river-craft; also a title borne by the head men among the Paharis or Hill-people of Rajmahal. *Yule and Burnell*, Hobson-Jobson.

> The principal Gaut *mangies* of Calcutta have entered into engagements at the Police Office to supply all persons that apply there with boats. *India Gazette*, Feb. 17, 1781.

manjua (män-hö'ä), *n.* [Cuban, of native origin.] Same as *striped* ★*anchovy*.

manjuari (män-hö-ä-rē'), *n.* [Cuban, of native origin.] Same as *alligator-gar* (which see, under *gar*¹).

mankalah, *n.* See ★*mancala*.

manlid (man'lid), *n.* The cover of a manhole of a steam-boiler. [British.]

manlihood (man'li-hụd), *n.* Manliness. *N. E. D.* [Rare.]

Mannaheim (män'ạ̈-hīm), *n.* [Icel. **Manna heim*, 'home of men,' *Mannheimar*, pl. 'homes of men.'] In *Norse myth.*, the earth.

manna-insect (man'ạ̈-in″sekt), *n.* A scale-insect, *Gossyparia mannifera* (formerly known as *Coccus manniparus*), which lives on the tamarisk and has been fancied to have produced the manna of the children of Israel.

mannan (man'ạ̈n), *n.* [*manna* + *-an.*] A colorless compound, or mixture of compounds, found in the seeds of certain leguminous and other plants and in the tubers of several orchids. It constitutes a reserve food of the plant, and is readily converted into mannose by the action of soluble ferments.

mannane (man'ān), *n.* [*manna* + *-ane.*] Same as ★*mannan*.

manna-oak (man'ạ̈-ōk), *n.* See ★*oak*.

manneotetrose (man″ẹ̄-ọ̄-tet'rōs), *n.* [*manna* + Gr. *τέτρα-*, four, + *-ose.*] A sugar, $C_{24}H_{42}O_{21}$, obtained from manna. It forms small monoclinic crystals. Also called *stachyose*.

manneristic (man-ėr-is'tik), *a.* [*mannerist* + *-ic.*] Characterized by mannerism.

> I have much to say on the danger which (I think) at present besets the Apostolical movement of getting peculiar in externals, i.e. formal, *manneristic*. *J. H. Newman*, Letters, II. 237.

mannersome (man'ėr-sum), *a.* Mannerly. [Eng. dial.]

> Mary was obliged to bite her tongue to keep it in any way *mannersome*; when the door was thrown open, and in came her mother. *R. D. Blackmore*, Cripps, xxviii.

mannid (man'id), *n.* [Also *mannide*; *manna* + *-id*¹.] One of a class of organic substances which occur widely distributed in the vegetable world and on decomposition yield mannite, $C_6H_{14}O_6$.

mannie (man'i), *n.* [Dimin. of *man.*] A little man; a boy. [Scotch.]

> "Well, *mannie*," he added, "it's nane of my affairs; but ye seem a decent-spoken lad." *R. L. Stevenson*, Kidnapped, ii.

mannitan (man'i-tạn), *n.* [*mannite* + *-an.*] The name of two compounds, $C_6H_{12}O_5$. They are formed by prolonged boiling of mannite with concentrated hydrochloric acid, and are distinguished as *amorphous* and *crystalline*. The former is semisolid and feebly dextrorotatory; the latter forms monoclinic tables and is strongly levorotatory.

mannitic, *a.* **2.** Pertaining to mannitic acid or manna.—**Mannitic acid,** a strongly acid syrupy compound, $C_6H_{12}O_7$, prepared by the oxidation of mannite. It reduces silver and copper salts in alkaline solution when warmed.

mannitine (man'i-tin), *n.* [*mannite* + *-ine*².] A colorless liquid, $C_6H_8N_2$, prepared by the distillation of a mixture of mannite and ammonium chlorid. It boils at 170° C.

mannoheptite (man-ọ̄-hep'tīt), *n.* [*manna* + Gr. *ἑπτά*, seven, + *-ite*².] Same as ★*perseite*.

mannoheptose (man-ọ̄-hep'tōs), *n.* [*manna* + Gr. *ἑπτά*, seven, + *-ose.*] The name of three stereomeric compounds. The i-derivative is a colorless syrup, $C_7H_{14}O_7$, prepared from the corresponding mannoheptonic anhydrid. It is not fermentable with beer-yeast.

mannonic (ma-non'ik), *a.* [*manna* + *-one* + *-ic.*] Noting an acid, a hypothetical compound, $C_6H_{12}O_7$, known only in the form of its anhydrid and salts. Three stereomeric substances with this name are known. The d-derivative, which is the most important, is prepared by the oxidation of mannose.

mannononose (man-ọ̄-non'ōs), *n.* [*manna* + *-one* + *-ose.*] A colorless dextrorotatory carbohydrate, $C_9H_{18}O_9$, prepared by the reduction of mannonic anhydrid. It forms small crystals melting at about 130° C.

manno-octose (man-ọ̄-ok'tōs), *n.* [*manna* + Gr. *ὀκτώ*, eight, + *-ose.*] A colorless syrupy carbohydrate, $C_8H_{16}O_8$, prepared by the reduction of manno-octoic anhydrid.

mannose (man'ōs), *n.* [*manna* + *-ose.*] The name of three stereomeric compounds, C_6H_{1}-O_6. The dextro-derivative is found in groundnuts and is prepared by the oxidation of mannite.

mano (mä'nō), *n.* [Sp., lit. 'the hand,' < L. *manus*, the hand.] A cylindrical stone, slightly tapering to each end, used for grinding grain or cocoa. See also ★*metate*.

> The grinding-stone concordantly changes from a simple roller or crusher to a *mano* (or muller), and finally to a pestle, at first broad and short, but afterwards long and slender. *Smithsonian Rep.*, 1899, p. 37.

manoao (mä-nō-ä'ō), *n.* [Maori.] A small tree of the yew family, *Dacrydium Colensoi*, yielding a hard, close-grained yellowish-brown wood. Called also *New Zealand yellow pine* and *tarwood*.

manœuver, *n.*—**Gridiron manœuver** (*naval*), a British tactical manœuver of a fleet in double column, in which the ships in each column turn inward simultaneously and pass through the intervals between the ships of the other column, then again turn simultaneously, thus forming double column in the inverse order.

manograph (man'ọ̄-gráf), *n.* [Gr. *μανός*, rare, thin (see *manometer*), + *γράφειν*, write.] A device in which a beam of light, moving over a ground-glass screen, shows the pressure in the cylinder at any point of the stroke for a given engine: used on high-speed engines, as of motor-cars, which are too small for ordinary indicators.

Manometabola (man″ọ̄-me-tab'ọ̄-lạ̈), *n. pl.* [NL., < Gr. *μανός*, thin, + *μεταβολή*, change.] In *entom.*, a division of Packard's *Heterometabola* including those insects which undergo a slight or gradual metamorphosis but which are active in all stages. It includes the *Orthoptera*, *Dermaptera*, *Platyptera*, *Thysanoptera*, and *Hemiptera* (the *Coccidæ* excepted).

manometer, *n.* **2.** In *physiol.*, an instrument used for determining blood-pressure.

> Hürthle's differential *manometer* has proved to be an instrument of great value and precision. A double-bored tube cannula is introduced so that one tube reaches the right auricle and the other the right ventricle. In observations on the left side of the heart, one tube is placed in the left ventricle and the other in the aorta, and each of these tubes is brought in connexion with a tambour. *Encyc. Brit.*, XXXI. 733.

Regnault manometer, a form of manometer in which any desired adjustment of the mercury is effected by means of a three-way cock.

Manometric unit. See ★*unit*.

manorrin (ma-nor'in), *n.* [Ojibway name.] The wild rice, *Zizania aquatica*.

manostat (man'ọ̄-stat), *n.* [Gr. *μανός*, rare, thin, + *στατός*, verbal adj. of *ἱστάναι*, stand. See *static*.] A device for keeping constant the pressure of the gas in some apparatus; a pressure regulator. *Jour. Phys. Chem.*, Feb., 1907, p. 107.

manque (mańk), *n.* [F., a lack.] In *roulette*, one of the numbers from 1 to 18.

> If he places his money on *Manque*, he is considered to wager that the ball will fall into one of the numbers from 1 to 18 inclusive. *Amer. Hoyle*, p. 376.

manquea (män-kā'ä), *n.* [Sp., < *manquear*, pretend to be maimed.] An infectious disease of young cattle existing enzoötically throughout tropical and subtropical South America. It is characterized by the formation of abscesses of the size of a walnut or a hen's egg upon the legs. The cause is a minute oval bacterium which closely resembles the bacillus of fowl-cholera.

> To Mr. O. Voges, of Buenos Ayres, is due the credit of having discovered the smallest bacillus which has yet been identified. It is much smaller than the influenza bacillus, and is only just discernible when magnified about 1500 times. These very minute rods were obtained from abscesses which cattle suffer from in South America, producing a disease known as *manquea* amongst other names. It is usually found in quite young cattle, and is easily recognisable by the characteristic lameness of one leg which it produces.
> *Nature*, March 13, 1902, p. 445.

manqueta (män-kā′tä), *n.* [Also *maquata*; W. African.] The native name for a fossil gum-resin found in Angola. It resembles copal gum.

Man-rope stanchion. See ★*stanchion.*

M. A. N. S. An abbreviation of *Member of the Academy of Natural Sciences.*

mansard, mansarde (man-särd′), *n.* [F.: see *Mansard roof.*] In French, a mansard roof; a dormer-window; hence, a chamber lighted by such a window; a chamber in the roof: in English used in all these senses. See *Mansard roof*, under *roof*^{1}.

man's-motherwort (manz′muᴛʜ″ėr-wėrt), *n.* The castor-oil bean, *Ricinus communis.*

mant (mant), *v. i.* and *t.* [Origin obscure.] To stammer. [Scotch.]

manta, *n.* 5. A wrap of black cloth, cashmere, or silk extensively worn by women on the west coast of South America, especially in the forenoons and to church and funerals. It is worn less now than formerly, when it was in general use on the streets.

Mantchu, *n.* and *a.* See *Manchu*^{1}.

mantel, *n.* 4. In *geom.*, lateral surface: as, the *mantel* of a frustum.—**Mantel figures**, statuettes or figurines for the decoration of mantels or small apartments; commonplace and commercial sculpture.

manteltree, *n.* 2. Same as *mantelpiece. N. E. D.*

mantic, *a.*—**Mantic bees**, bees supposed to have prophetic power. Bees played an important part in Greek mythology and in the oracles.

> In the Homeric Hymn to Hermes we get a seeming personification of *mantic bees* in the neighborhood of Delphi. *A. B. Cook*, in Jour. Hellenic Studies, XV. 7.

II. *n.* Divination; an object used in divination.

> In these eight lectures are discussed, first, the methods of religious psychology and various views concerning the essence of religion, its development and diverse forms, subjective faith and the specific utterances of faith, offerings, vows, castigations, sacramental acts and objects, *mantics*, revelations, prayer, symbols and symbolic acts, religious art, presentations in words, doctrine, dogma and free knowledge, religious ethics and religious communities.
> *Amer. Jour. Relig. Psychol. and Education*, May, 1904, [p. 107.

manticoceran (man-ti-kos′ẹ-ran), *a.* Relating or belonging to the genus *Manticoceras.*

Manticoceras (man-ti-kos′ẹ-ras), *n.* [NL., < Gr. μαντικός, prophetic, + κέρας, horn.] A genus of nautiloid cephalopods or goniatites with broad lateral sutural saddles which cover the principal part of the lateral surface of the whorl: characteristic of the lower Upper Devonian (zone of *Manticoceras intumescens*) and equivalent to *Gephyroceras.*

mantid (man′tid), *n.* and *a.* **I.** *n.* A member of the family *Mantidæ.*

II. *a.* Having the characters of or belonging to the orthopterous family *Mantidæ.*

mantispid (man-tis′pid), *n.* and *a.* **I.** *n.* A member of the family *Mantispidæ.*

II. *a.* Having the characters of, or belonging to, the neuropterous family *Mantispidæ.*

mantle, *n.* 2. (*d*) (3) Also, the plumage of the back and upper parts of the closed wings, which, as in gulls and terns, is often quite distinct in color from the rest of the plumage and suggests a mantle.

> Great Black-backed Gull. *Mantle* intense slate-color nearly black, with a purplish reflection.
> *Coues*, Key to North Amer. Birds, p. 743.

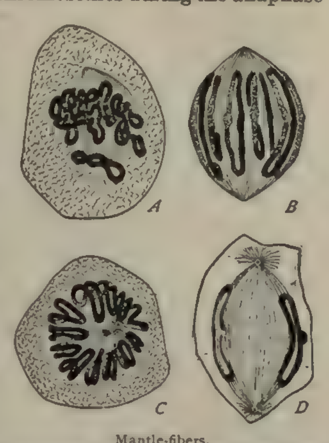
Incandescent mantle, a mantle consisting of refractory earths possessing high radiating power, rendered luminous by heating to incandescence in the flame of a Bunsen burner, as in the Welsbach light. As now made, these mantles consist of more than 99 per cent. of thorium oxid mixed with less than 1 per cent. of cerium oxid; without this admixture they would give but little light.

mantle-cavity (man′tl-kav″ị-ti), *n.* In a bivalve, the whole space included between the pallial lobes, containing the gills, visceral mass, and foot.

mantle-fibers (man′tl-fī″bėrz), *n. pl.* In *cytol.*, a bundle of delicate achromatic fibers which connect the chromosomes during the anaphase stages of karyokinetic cell-division. See *interzonal* ★*fibers.*

mantle-fusion (man′-tl-fū″zhọn), *n.* In bivalves, union of the edges of the mantle-lobes. As the result of such fusions the anal and branchial siphons and the opening for the protrusion of the foot are formed.

mantle-line (man′tl-līn), *n.* Same as *pallial line.*



Mantle-fibers.
Heterotypical Mitosis in Spermatocytes of the Salamander. (Flemming.)

A, prophase: chromosomes in the form of scattered rings, each of which represents two daughter-chromosomes joined end to end. *B*, the rings, ranged about the equator of the spindle and dividing; the swellings indicate the ends of the chromosomes. *C*, the same, viewed from the spindle-pole. *D*, diagram (Hermann) showing the central spindle, asters, and centrosomes, and the contractile mantle-fibers attached to the rings (one of the latter dividing).
(From Wilson's "The Cell.")

mantle-lobe (man′tl-lōb), *n.* In brachiopods, either the dorsal or the ventral reduplication of the body-wall, closely applied to the internal surface of the corresponding valve and containing a prolongation of the cœloma. *Parker and Haswell*, Textbook of Zool., I. 333.

mantle-rock (man′tl-rok), *n.* Residual deposits, consisting of the insoluble portions of rocks which have been exposed to the atmospheric agencies. The layer covers the more solid and unaltered rock like a mantle. Compare *laterite*, ★*regolith*, ★*saprolite.*

> It is not to be inferred, however, that any part of the *mantle rock* (soil and subsoil) now remaining in this area is necessarily millions of years old. It is possible that all products of decay in the distant past have been carried away by erosion, and that all which now remain are the product of decay within relatively recent times.
> *R. D. Salisbury*, in Geol. Surv. of New Jersey, 1897, p. 7.

manual. I. *a.*—**Manual stop.** See ★*stop*^{1}.—**Manual training-school**, a school where the pupils are taught various crafts by actual practice; also, a class or school in which the manual methods of instruction are taught.

II. *n.*—**Manual of arms.** See ★*arm*^{2}.

manualist, *n.* 2. One who teaches the deaf and dumb by means of the manual alphabet or method.

manubalist (man′ụ-bạ-list), *n.* [F. *manubaliste*, < ML. **manubalista*, < L. *manus*, hand, + *ballista, balista.* See *ballista.*] In medieval armor, a hand-weapon by which projectiles were thrown. The term includes the arbalist.

manuf. An abbreviation (*a*) of *manufacture*; (*b*) of *manufacturer*; (*c*) of *manufacturing*; (*d*) of *manufactory.*

manuka (mä-nö′kä or män′ö-kä), *n.* [Maori.] Either *Leptospermum scoparium*, a low shrub, called *white* or *scrub manuka*, or *L. ericoides*, a tree, called *red manuka.* The wood of the latter is very hard and durable and is a favorite with the natives for making spears, paddles, fishing-rods, etc. The leaves of *L. scoparium* are sometimes used as a substitute for tea, whence it is called *tea-tree.*

manul^2 (mä′nọl), *n.* [Origin obscure.] In the pearl-fisheries of Ceylon, a pearl-oyster bank which consists of soft or loose sand, as distinguished from a *paar*, which consists of rock or hard bottom. See ★*paar.*

manumitter (man-ụ-mit′ėr), *n.* One who manumits or frees; an emancipator.

> The Church was the great *manumitter* and improver of the condition of the serf in the middle ages; and in the present age religious feeling has been at the bottom of the great movement against slavery.
> *J. B. Mozley*, Eight Lectures on Miracles, vii.

manure, *n.* The advent of commercial fertilizers has made it necessary to distinguish *farm* or *natural manures* and *artificial manures.* Recent usage tends to restrict the term *manure* to the former. In scientific agriculture, only those applications are properly manures which directly supply plant-food, and those which serve mainly to improve the soil physically (as gypsum, lime, marl) are distinguished as *soil amendments* or *improvers.* This distinction affects also, to some extent, the term *fertilizer.* See *artificial* ★*manure.*—**Artificial manure**, manure provided by manufacture (as superphosphates), or by mining (as kainite), or at least requiring transportation from points where found (as guano). Chemical fertilizers are here included and materials of organic origin, such as ground bone, tankage, etc. In America these are usually termed *commercial fertilizers*, soil amendments being often included.—**Barn-yard manure.** See *farm-yard* ★*manure.*—**Chemical manure**, an inorganic fertilizer which consists of one or more chemical compounds (muriate of potash, nitrate of soda, etc.) containing a manurial ingredient.—**Cold manure**, an animal manure which ferments slowly, as that of cattle and hogs.—**Complete, normal**, or **general manure**, a fertilizer which supplies all the elements of plant-food in which soils are liable to be deficient, namely, nitrogen, phosphorus, and potassium. See ★*manurial ingredient.*—**Farm-yard, barn-yard**, or **stable manure**, the solid and liquid excrements of stock kept in and about stables, more often mixed with litter. This is a complete manure, but the ingredients are not in due proportion. The urine is more valuable than the solids.—**Fresh manure.** Same as *green* ★*manure* (*b*).—**Green manure.** (*a*) Any fresh vegetable substance, as weeds, prunings, seaweed, etc., used as a fertilizer; in recent use, chiefly, a standing crop plowed under for fertilizing. See *green* ★*manuring.* (*b*) Unfermented dung. Also called *fresh* or *long manure.*—**Liquid manure.** See *manure.*—**Long manure**, barn-yard manure which contains unrotted litter; hence, fresh manure.—**Short manure**, well-rotted barn-yard manure.—**Stable manure.** See *farm-yard* ★*manure.*

manure-fly (mạ-nūr′flī), *n.* See ★*mushroom-gnat.*

manure-sick (mạ-nūr′sik), *a.* In such a state as to receive no benefit from manuring: said of land. Apparent cases of this kind are probably due to the lack of some essential ingredient in the application. *Storer*, Agriculture, p. 47.

Manurial ingredient, constituent, or **element**, one of the substances required in a complete manure.

manuring (mạ-nūr′ing), *n.* [Verbal n. of *manure, v. t.*] The addition of any substance to the soil to increase its fertility; fertilizing.—**Green manuring**, the plowing under of a green crop, usually one sown for the purpose, to serve as a manure. Legumes (clover, cow-pea, etc.) are chiefly used, owing particularly to their nitrogen-gathering capacity; but buckwheat, rye, etc., are useful on poor soils. It is often better to harvest the legume, the root growth still enriching the soil; but this is not usually called green manure. See *ameliorating, renovating*, and *nitrogen-fixing* ★*crop.*

Manus cava, a deformity of the hand marked by a deep hollow of the palm.—**Manus valga**, a form of club-hand in which the hand is deflected to the ulnar side.—**Manus vara**, a form of club-hand in which the hand is deflected to the radial side.

manutype (man′ū-tīp), *n.* [L. *manus*, hand, + Gr. τύπος, type.] Printed matter made with letters separately impressed or formed by hand.

manutype (man′ụ-tīp), *v. t.*; pret. and pp. *manutyped*, ppr. *manutyping.* To make by hand from types, or with pen or pencil, isolated letters in imitation of print: erroneously applied to type-writing.

manward (man′wạ̈rd), *adv.* and *a.* Toward man; with regard to man.

> The correlative change in the conception of His *manward* activities and relations.
> *A. M. Fairbairn*, Philos. Chris. Relig., p. 543.

man-wise (man′wīz), *adv.* and *a.* Pertaining to or in the manner of any relation of individual to individual, rather than of group to group. *E. A. Ross*, Social Control, p. 29.

Manx penny. See ★*penny.*

many-minded (men′i-mīn″ded), *a.* Having many successive states of mind in regard to some matter, but unable to come to a decision about them; lacking in decision; vacillating.

manywhere (men′i-hwãr), *adv.* [Also formerly *maniquare, many wheres*; < *many* + *where.*] In many places. [Rare.]

> This kind of Praier . . . was *many wheres* received.
> *Jewell*, Repl. Harding, p. 483. *N. E. D.*

> Smoothed and polished rocks occur also "*manywhere*," if I may coin the word, in our northern districts, where the rocks are hard enough to receive and retain their characteristic marks.
> *Sir J. Lubbock*, Scenery of England, p. 52.

manzai (män-zī′), *n. pl.* [Jap.] Strolling ballet-singers and -dancers who go about at the beginning of the new year. *Hepburn*, Jap.-Eng. Dict.

manzana (män-thä′nạ̈), *n.* [Sp., a block of houses, a square measure.] 1. A group of houses surrounded on every side by streets; a square or block.—2. A unit, equivalent to about 1¾ acres, employed in Central America for measuring land.

manzanillo (man-zạ-nil′ō; Sp. pron. män-thä-nēl′yō), *n.* [Sp. See *manchineel.*] The common manchineel, *Hippomane Mancinella.* *C. Lumholtz*, Unknown Mexico, II. 64.

maomao (mä-ō-mä′ō), *n.* The Maori name of a New Zealand sea-fish, *Neptotichthys violaceus*, one of the *Stromateidæ.* *E. E. Morris*, Austral English.

maon, *n.* See *mahone.*

Maori. I. *n.*—**Pakeha Maori** ('foreign Maori'), a white man who lives among the Maoris and has adopted their customs.—**White Maori**, a local name for calcium tungstate or scheelite. [New Zealand.]

II. *a.*—**Maori chief.** See ★*chief.*—**Maori hen,** the weka rail, or wood-hen, a large New Zealand land-rail of the genus *Ocydromus.*

Maorian (mä-ō′ri-an̤, or mou′ri-an̤), *a.* Same as *Maori.* -**Maorian subregion.** See ★*subregion.*

Maorilander (mä′ō̤-ri-lan″dėr, or mou′ri-lan″dėr), *n.* [*Maoriland* (New Zealand) + *-er*^{2}.] A native or an inhabitant of New Zealand.

map^1, *n.*—**Cultural map.** See ★*cultural.*—**T-O map,** a map issued by the topographical office of the ordnance survey of England: a purely topographical map, containing nothing relating to land divisions. *Geog. Jour.* (R. G. S.), XV. 379.

mapau (mä′pou), *n.* [Maori.] Any one of several New Zealand trees resembling one another in foliage, especially *Myrsine Urvillei.* The name, with a descriptive adjective prefixed, is usually applied by the settlers to other trees, and is frequently corrupted into *maple.*—**Black mapau,** the tawhiri, *Pittosporum tenuifolium:* so named from the color of the bark.—**Red mapau,** the settlers' name for the mapau of the natives, *Myrsine Urvillei,* on account of the dark-red wood.—**White mapau.** (*a*) *Carpodetus serratus,* an ornamental shrub or small tree of the saxifrage family, with mottled green leaves and large panicles of white flowers. (*b*) The tarata, *Pittosporum eugenioides.* See ★*tarata.*

maple^1, *n.* 3. In New Zealand, a common settlers' corruption of ★*mapau.*—4. In Australia, *Chariessa Moorei,* the scrub silky oak (which see, under ★*oak*).—**Black maple.** (*a*) Same as *black sugar-maple.* (*b*) The sugar-maple.—**California maple,** the broad-leaved maple.—**Creek maple,** the silver maple, *Acer saccharinum.*—**Cut-leaved maple.** (*a*) Any horticultural form of the silver maple, or other species of maple with dissected leaves. (*b*) The box-elder, *Acer Negundo.*—**Drummond's maple,** *Acer Drummondii,* of the coast region from New Jersey to Texas: by some regarded as a subspecies of *A. rubrum.*—**European maple** or **field-maple,** the common European maple, *Acer campestre.*—**Ground maple,** *Heuchera villosa,* an herb of the eastern United States which has hairy stems and leaves shaped like those of the maple. Also called *American sanicle.*—**Guelder-rose maple,** the maple-leaved arrow-wood, *Viburnum acerifolium.*—**Hard maple.** (*b*) The black sugar-maple.—**Low maple,** the mountain-maple.—**Maple-leaf-cutter.** See ★*leaf-cutter.*—**Moose-maple,** the mountain-maple.—**Northern maple,** the dwarf maple.—**Oregon maple,** the broad-leaved maple.—**Red River maple.** (*a*) The silver maple. (*b*) The box-elder.—**River-maple,** the silver maple.—**Rocky Mountain maple,** the dwarf maple.—**Shoe-peg maple,** the red maple: so called from the use of its wood for shoe-pegs.—**Sugar-maple.** (*b*) A local name in some places for the box-elder.—**Swamp-maple.** (*b*) The silver maple. (*c*) The mountain-maple.—**Vine-maple.** (*b*) The Canada moonseed, *Menispermum Canadense.*—**Water-maple.** (*a*) See *water-maple.* (*b*) The silver maple. (*c*) The mountain-maple.—**White maple.** (*a*) See *white*^{1}. (*b*) The red maple: so called from its white wood. Compare *shoe-peg* ★*maple.*

maple-aphis (mā′pl-ā″fis), *n.* One of several species of plant-lice, as *Pemphigus acerifolii,* which infest the leaves of the maple.

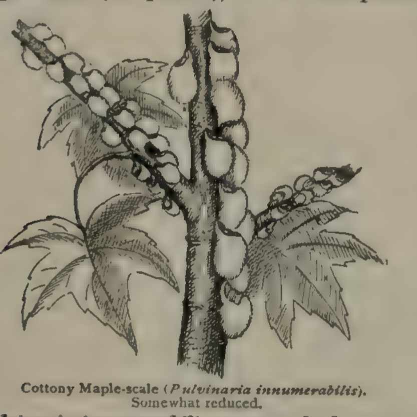
maple-ash (mā′pl-ash), *n.* The ash-leafed maple, *Acer Negundo.*

maple-blight, *n.* See ★*blight.*

maple-borer, *n.* Besides the species mentioned are the following: (*a*) A cerambycid beetle, *Glycobius speciosus.* (*b*) Any one of several horntail borers of the family *Uroceridæ,* as *Xiphydria albicornis* and *Oryssus sayi.* (*c*) The larva of a buprestid beetle, *Dicerca divaricata.* (*d*) Any one of several scolytid beetles, as *Xyloterus politus* and *Corthylus punctatissimus.* (*e*) A calandrid beetle, *Stenoscelis brevis.* (*f*) A ptinid beetle, *Xestobium affine.* (*g*) The larva of the leopard-moth, *Zeuzera pyrina.*—**Beautiful maple-borer,** an American cerambycid beetle, *Plagionotus speciosus,* black in color and banded with yellow. Its larvæ bore in the trunk of the sugar-maple.

maple-louse (mā′pl-lous), *n.* A plant-louse that infests the maple.—**Woolly maple-louse,** an American aphidid, *Pemphigus acerifolii,* occurring abundantly on the leaves of the maple and secreting an abundance of white wool-like wax.

maple-scale (mā′pl-skāl), *n.* 1. The species, *Pulvinaria innumerabilis,* commonly known as the *cottony maple-scale.*—2. *Aspidiotus tenebricosus,* a destructive diaspine coccid.



Cottony Maple-scale (*Pulvinaria innumerabilis*).
Somewhat reduced.

maple-worm (mā′pl-wėrm), *n.* Any one of several lepidopterous larvæ which defoliate maple-trees.—**Green-striped maple-worm,** the larva of an American ceratocampid moth, *Anisota rubicunda,* occurring abundantly in the northern Mississippi valley and the eastern United States, where it feeds on the leaves of species of maple. See *Anisota,* with cut.

mapo (mä′pō), *n.* [Cuban Sp.] Same as *sleeper*^{1}, 8 (*c*).

mappy (map′i), *a.* [*map*^{1} + *-y*^{3}.] Having the appearance of a map; in *pathol.,* noting the condition called *geographical tongue.*

maquahuitl (mä-kwä-hwē′tl), *n.* [Nahuatl *maitl,* hand, + *quauitl,* stick, tree.] A sword-like weapon of wood the edges of which are set with sharp flakes of obsidian.

maquata, *n.* [W. African.] Same as ★*manqueta.*

maquette (mä-ket′), *n.* [F., < It. *macchietta,* dim. of *macchia,* a spot, < L. *macula,* a spot: see *macula.*] The first sketch, in wax or clay, from which a work in sculpture is elaborated. Wax maquettes are often employed by painters in arranging compositions.

> M. J. B. E. Detaille has, after a long delay, executed four *maquettes,* each comprehending three large panels.
> *Athenæum,* Jan. 24, 1903, p. 122.

maqui^2 (mä′kwē), *n.* [It. dial.] A tract of land on the shores of the Mediterranean, especially in Corsica, characterized by a silicious soil and occupied by a sclerophyllous vegetation more luxuriant and taller than that of the garrigues, but mainly bush, with a few trees, in France chiefly *Pinus Pinaster* and *Quercus Suber.* See ★*garrigue.*

> Only in the Mediterranean countries, in the so-called *Maquis,* do we find anything similar.
> *Bot. Gazette,* XXVII. 14.

> The macchie or *maquis* of Algeria in no way differs from that of Corsica, Sardinia, and other places; it consists of lentisk, arbutus, myrtle, cistus, tree-heath, and other Mediterranean shrubs. *Smithsonian Rep.,* 1890, p. 260.

Mar. An abbreviation (*a*) of *March;* (*b*) [*l. c.* or *cap.*] of *maritime.*

M. Ar. An abbreviation of *Master of Architecture.*

Mara^2 (mär′ä̤), *n.* [Skt. *māra,* death, plague, god of love, tempter, as adj. killing, cf. *mara,* death, < √ *mṛ,* die. See *mortal.*] In *Hind. myth.,* the tempter; the spirit of evil.

marabotin (mä-rä-bọ-tēn′), *n.* [Sp., related to *morabitino.* See *maravedi.*] 1. A coin struck by the Almoravides and Almohades in the eleventh and twelfth centuries.—2. A name given to the Arabic derham, or dinar, which circulated in the south of France as late as the eleventh and twelfth centuries.

marabunta (mar-a̤-bun′tä̤), *n.* [Negro-Eng. (in Dutch Guiana) *marabonsoe;* also cited as Pg., *marabonda,* a social wasp; prob. a native W. Ind. or Guiana name.] In British Guiana and the West Indies, a common name for various species of bees and wasps.

maracock† (mar′a̤-kok), *n.* [Also *maricock, amaracoc, maracot,* etc.; Algonkin.] The fruit of certain American passion-flowers, especially of the 'may-pop,' *Passiflora incarnata,* native of Virginia, and the granadilla, *P. quadrangularis,* of Brazil and the West Indies; also the plant itself. *N. E. D.*

maral (mä-räl′), *n.* [Pers. *marāl.*] The red deer of Persia and the Caucasus, *Cervus maral.*

marami (ma-rä′mi), *n.* [Aboriginal Australian.] A crawfish-like crustacean of the genus *Astacopsis,* found in Australia.

marantic (ma-ran′tik), *a.* [Gr. *μαραντικός,* wasting, withering, < *μαραίνειν,* waste, wither.] Wasting: same as *marasmic.*

> A general *marantic* condition with chronic pulmonary tuberculosis and chronic nephritis.
> *Jour. Exper. Med.,* Jan. 15, 1901, p. 344.

marare (mä-rä′rā̤), *n.* [Maori.] A labroid fish, *Coridodax pullus,* of New Zealand.

Marasmic thrombus. See ★*thrombus.*

marasmolite (ma-raz′mọ-līt), *n.* [Gr. *μαρασμός,* decay, + *λίθος,* stone.] A partially decomposed sphalerite, or zinc-blende, containing free sulphur.

Marasmus infantilis or **lactantium,** the wasting of young infants without evident cause: often due to insufficient nourishment.

marattiaceous (ma-rat-i-ā′shius), *a.* Belonging to or having the characters of the *Marattiaceæ,* a family of ferns.

marble, *n.*—**Bird's-eye marble,** a name for an ornamental stone, consisting of the fossil coral *Acervularia davidsoni,* which in Iowa is carved into small objects. Sections of the coralline cells suggest eyes.—**Calico marble,** a trade-name for the mottled Triassic marble quarried near the Potomac at the Point of Rocks, Maryland: used in the Capitol at Washington.—**Egyptian marble,** a black marble veined with yellow.—**Florentine marble.** Same as ★*landscape-marble.*—**Mandelato marble,** a light-red marble with white spots.—**Melbury marble,** a name for septaria of the Melbury district, in west Dorset, England.—**Mozambique marbles,** a trade-name for a variety of crude india-rubber in small balls, black or brown on the outside, lighter in color within, the product of several speices of *Landolphia* from Mozambique.—**Palombino marble,** a compact, fine-grained white marble found in ancient monuments.—**Peacock marble,** a green marble.—**Stalagmite marble.** Same as *onyx marble.*

marble-band (mär′bl-band), *n.* Mussel-band limestone.

marbled, *a.* 3. Having the lean and fat properly blended: applied by butchers to meat.

> Hereford meat, in the technique of the trade, is always 'beautifully *marbled,*' or, in other words, its lean and its fat are very evenly blended.
> *Rep. Kan. State Board Agr.,* 1901–02, p. 248.

Marbled luster. See ★*luster*^{2}.—**Marbled white.** Same as ★*half-mourner.*

marble-fish (mär′bl-fish), *n.* In Geelong, a name of the tupong. *E. E. Morris,* Austral English.

marble-flower (mär′bl-flou″ėr), *n.* The poppy, *Papaver somniferum.*

marble-gall (mär′bl-gâl), *n.* A gall made by *Cynips Kollari.*

marbleization (mär″bl-i-zā′sho̤n), *n.* [*marbleize* + *-ation.*] The state of being marbled or marked by veins and cloudings. Also called *marmoration.*

> A secondary œdema, . . . accompanied with a more or less distinct *marbleization* of the superficial veins.
> *Buck,* Med. Handbook, I. 463.

marble-paper (mär′bl-pā′pėr), *n.* Paper printed in colors and designs imitating marble.

Marble-rag (mär′bl-rag″), *n.* In *Eng. geol.,* a division of the Upper Purbeckian or Portland Oölites, lying at the summit of the Jurassic series and consisting of limestone with fresh-water fossils (*Unio*) overlain by clays and shales.

marble-seal (mär′bl-sēl), *n.* The seal *Phoca fetida.*

marble-veal (mär′bl-vēl), *n.* Potted veal interspersed with lumps of tongue, having a mottled surface when cut. *N. E. D.*

marblewood, *n.* 2. In Australia, the whitish, mottled heart-wood of the Queensland olive, *Olea paniculata.* It is hard, tough, close-grained, and durable, and when newly cut has a rose-like fragrance.

Marc brandy-oil. Same as *fusel-oil.*

marcal (mär′ka̤l), *n.* [Also *mercal, merkal,* < Tamil *marakkāl.*] A measure of capacity used in the Madras Presidency, equal, at Madras, to 2.70 gallons.

Marcan (mär′ka̤n), *a.* [L. *Marc*(*us*), Mark, + *-an.*] Of or pertaining to St. Mark or to the Gospel attributed to him.

> The *Marcan* tradition.
> *H. B. Swete,* in Exposition, June, 1903, 415.

marcella (mär-chel′lä̤), *n.* [It.] The Venetian silver lira: so called on the accession of Nicolo Marcello (1473).

marcello (mär-chel′lō), *n.* [It.] A silver coin of Francesco III., Gonzaga, Duke of Mantua (1540–50).

Marcellus shale. See ★*shale*^{2}.

marcescence (mär-ses′e̤ns), *n.* The character or state of being marcescent.

marcgraviaceous (märk-grā-vi-ā′shius), *a.* Belonging to the plant family *Marcgraviaceæ.*

march^1, *n.*—**Approver in the marches,** in *Eng. criminal law,* an approver who had a license to sell and purchase beasts in the marches. See *march*^{1}.—**March place,** in *mining,* the room or drift next the march or property line. [Scotch.]—**March stones,** in *mining,* stones set at intervals on the surface to indicate the line of march; boundary stones. [Scotch.]

march^2, *v. i.*—**Time and marching,** in *topog.,* the name applied to a method of determining linear distances by observing the time required by a person marching or walking at a regular rate of speed over the distance to be measured.

> The position of intermediate points other than points of triangulation has been fixed by "*time and marching*" observations. *Geog. Jour.* (R. G. S.), XV. 620.

march^2, *n.*—**Route march,** a march of troops in which the first consideration is the health and comfort of the soldiers. It is the ordinary march of an army when distant from the enemy.

march^4† (märch), *n.* The celery plant, *Apium graveolens,* and parsley, *Petroselinum Petroselinum.* Also *merch.*

March. An abbreviation of *Marchioness.*

M. Arch. An abbreviation of *Master of Architecture.*

Marchand's adrenals. See ★*adrenal.*

marchantiaceous (mär-kan-ti-ā′shius), *a.* Belonging or related to the family of liverworts, *Marchantiaceæ.*

Marchantiales (mär-kan-ti-ā′lēz), *n. pl.* [NL. (Engler, 1892), < *Marchantia* + *-ales.*] An order of cryptogamic plants of the class *Hepaticæ*, characterized by a thalloid, dorsiventral proembryonal generation, the antheridia and archegonia borne in groups on the surface of the thallus or on stalked receptacles, the sporogonia consisting of a spherical capsule with or without a short stalk. It embraces the two families *Marchantiaceæ* and *Ricciaceæ* (which see), and is coördinate with the *Jungermanniales* and *Anthocerotales*, the three orders constituting the class *Hepaticæ*, or liverworts. See ★*Jungermanniales* and ★*Anthocerotales.*

marchasite, marchesite, *n.* Same as *marcasite.*

marchesa (mär-kā′zä), *n.*; pl. *marchese* (-zā). [It.] An Italian marchioness; a lady having the rank of marchioness.

marchese (mär-kā′ze), *n.*; pl. *marchesi* (mär-kā′zē). [It.] An Italian nobleman ranking between a duke and a count; a marquis.

March-fly (märch′flī), *n.* Any member of the dipterous family *Bibionidæ.*

Marchi's tract. See ★*tract*^{1}.

marcia (mär′chē-ä), *n.* [It., a march. See *march*^{2}, *n.*] In *music*, same as *march*^{2}, 5: as, *tempo di marcia*, in march rhythm and time; *marcia funebre*, a funeral march, etc.

marciale (mär-chē-ä′le), *a.* [It., < *marcia*, a march.] In *music*, like a march in rhythm and style.

Marcite (mär′sīt), *n.* [L. *Marcus*, Gr. Μάρκος, + *-ite*^{2}.] Same as *Marcosian.*

marco (mär′kō), *n.* [Sp. See *mark*^{2}.] A Spanish and Spanish-American unit of weight for gold and silver, equal to half a libra. It is commonly equal to about .507 of a pound avoirdupois.

marconigram (mär-kō′ni-gram), *n.* [*Marconi* (see def.) + Gr. γράμμα, anything written.] A message by wireless telegraph sent by the Marconi system.

The British battleship Revenge . . . received a number of private *Marconigrams.*
Ithaca Jour., March 18, 1902, quoted in Dialect Notes, [II. vi.

marconigraph (mär-kō′ni-gráf), *n.* [*Marconi* + Gr. γράφειν, write.] The wireless telegraph of Marconi.

A school for *Marconigraph* operators.
Daily Chron., March 21, 1903. *N. E. D.*

marconigraph (mär-kō′ni-gráf), *v.* [*marconigraph*, *n.*] I. *intrans.* To send messages by means of Marconi's system of wireless telegraphy.

II. *trans.* To transmit by wireless telegraphy.

marconigraphy (mär-kō′ni-gráf-i), *n.* [*marconigraph* + *-y.*] The system of wireless telegraphy developed by Marconi.

The history of the series of inventions and discoveries which have culminated in Transatlantic *Marconigraphy.* *Nature*, April 23, 1903, p. 583.

marconism (mär-kō′nizm), *n.* [*Marcon*(*i*) + *-ism.*] The art of wireless telegraphy according to the Marconi system. *N. E. D.*

marconist (mär-kō′nist), *a.* and *n.* I. *a.* Of or pertaining to the Marconi system of wireless telegraphy. *Encyc. Dict.*

II. *n.* A telegraphic operator who uses the Marconi system of wireless telegraphy. *Encyc. Dict.*

marcuccio (mär-kö′chē-ō), *n.* [It., aug. of *marco*: see *mark*^{2}.] A Venetian copper coin struck under the Doge Bertuccio Valieri (1656–58).

marcylite (mär′si-līt), *n.* [For R. B. *Marcy* (1812–87).] A name given by C. U. Shepard to an impure copper ore of uncertain character, probably in part an impure atacamite, in part a decomposed chalcopyrite containing oxid of copper and water: from a locality in Arkansas.

mardling (märd′ling), *n.* Duckweed; especially, the lesser duckweed, *Lemna minor.*

mare^1, *n.*—**Flying mare,** a trick in wrestling, consisting in seizing the opponent's wrist, turning it back, and working the arm palm down over the shoulder, thus using the arm for a lever, throwing him over the shoulder.

mare^4 (mā′rē), *n.*; pl. *maria* (-ri-ä). [L., a sea: see *mere*^{1} and *marine.*] A sea; specifically, in *astron.*, a name for certain dark regions on the surface of the moon which were supposed by Galileo and other early observers to be seas or oceans, and are now regarded as plains; also a name for certain dark regions on the planet Mars.

The craters are so different in size from those of the earth, many being over a hundred miles in diameter, and so numerous, overlapping and irregularly distributed that the causes leading to their formation must be very different from those of volcanoes upon the earth, and for these forms Shaler proposes the name of vulcanoids. The *maria*, or great plains, evidently belong to a category distinct from the vulcanoids, being characterized by their larger size, smoother and darker floors.
Amer. Jour. Sci., Oct. 1904, p. 314.

Mare liberum [L.], a free sea; an open sea: distinguished from *mare clausum* (which see).

maregram, maregraph. See ★*marigram, marigraph.*

maremma (mä-rem′ä), *n.*; pl. *maremme* (-ā). [It.] A marshy and unhealthy region lying along the sea-shore.

mareograph (mā′rē-ō-gráf), *n.* Same as *marigraph.*

mareometer (mā-rē-om′e-tėr), *n.* Same as *marigraph.*

mare-ridden (mãr′rid″n), *p. a.* Nightmare-ridden; witch-ridden.

Between his neck and his collar was a large live shore-crab, holding on tight with both hands.
"Gentles! good Christians! Save me! I am *mare-rode!*"
Kingsley, Westward Ho! ii.

mare's-tail, *n.* 1. (*c*) The horseweed, *Leptilon Canadense.* (*d*) The heath-aster, *Aster ericoides.*

marg. An abbreviation (*a*) of *margin*; (*b*) of *marginal.*

margarimeter (mär-ga-rim′e-tėr), *n.* [Irreg. < *margari*(*n*) + Gr. μέτρον, measure.] An apparatus for determining, by observation of the density at 100° C., the proportion of oleomargarin in adulterated butter.

margarodid (mär-ga-rod′id), *a.* and *n.* Having the characters of or belonging to the lepidopterous family *Margarodidæ*; a member of the *Margarodidæ.*

margarous (mär′ga-rus), *a.* [*margar*(*ic*) + *-ous.*] Noting an acid, a substance resembling margaric acid, now known to be a mixture.

Margate chalk. See ★*chalk.*

Margelidæ (mär-jel′i-dē), *n. pl.* [NL., < *Margelis* (*-lid-*) + *-idæ.*] A family of *Anthomedusæ*, having 4 or more simple or branched tentacles, with 4 or 8 separate manubrial gonads. The simple unbranched tentacles may be uniformly distributed or grouped in 4 or 8 sets. It contains several genera, among which are *Margelis, Lizzia, Cytæis, Limnorea*, and *Hippocrene.*

Margelis (mär-jē′lis), *n.* [NL., < Gr. μαργηλίς, a pearl.] The typical genus of the family *Margelidæ.* *Steenstrup*, 1849.

margin, *n.*—**Anal margin.** See ★*anal.*—**Margin of cultivation.** See ★*cultivation.*—**Margin of power,** surplus of power; a margin over and above that required under normal conditions.—**Margin of safety.** Same as ★*factor of safety.*

marginal, *a.*—**Marginal anchor,** in some *Lucernaridæ*, as *Haliclystes*, a peculiar form of marginal body.—**Marginal contrast, eye.** See ★*contrast*, ★*eye*^{1}.—**Marginal funnel,** in medusoids, one of the conical prominences on the subumbral surface above the velum, having an excretory pore at the apex.—**Marginal moraine, plate, tubercle.** See ★*moraine*, etc.—**Marginal utility.** See ★*utility.*

II. *n.* 1. One of the bones which form the border of the carapace in turtles, except in the *Trionychoidea*, in which they are lacking: same as *marginal* ★*plate.* See cut under *carapace*, 1.—2. In the ammonoid cephalopods, or ammonites, one of the small inflections which sometimes develop on the sides of the antisiphonal lobe of the sutures.—3. In *conch.*, one of the outermost teeth on the radula of gastropods; one of the uncini.—4. In asteroid echinoderms, one of the series of thick plates round the margin of the arms and disk.

marginal-pygal (mär″ji-nal-pī′gal), *a.* Noting the posterior median bony plate in the carapace of a turtle.

margination (mär-ji-nā′shon), *n.* The act of marginating or the condition of having a margin; a marginated appearance.

No statement in a properly-edited historical source ought to appear without its being at once obvious, either from the nature of the print or from distinctly-marked *margination.* *Archaeol. Inst. Jour.*, LV. 128.

marginoplasty (mar′jin-ō-plas″ti), *n.* [L. *margo* (*margin-*), edge, margin, + Gr. πλαστός, formed, + *-y*^{3}.] A surgical operation for restoring an edge or border, as of the lip or eyelid.

margin-plate (mär′jin-plāt), *n.* In *iron shipbuilding*, a longitudinal plate which limits the double bottom at the turn of the bilge. The lower edge is connected to the outside plating by an angle-bar, and the upper edge is flanged over horizontally, and the inner-bottom plating riveted to it. See cuts at *double* ★*bottom* and ★*bracket*^{1}, 9 (*b*).—**Margin-plate bracket,** the triangular plate fitted on the margin-plate to give a connection for the foot of the frame angle-bar above the inner bottom.

margin-stop (mär′jin-stop), *n.* In a typewriter, an adjustable stop-motion which controls the traverse of the carriage in one or both directions. It consists of a stop supported by a graduated margin-stop bar and fitted with a locking device to hold it in any desired position. It is so named because, through the limiting of the traverse of the carriage and the leaving of a portion of the paper held by the carriage outside the feeding distance of the carriage, that part or edge is left blank and forms the margin of the printed sheet.

marg. trans. An abbreviation of *marginal translation.*

marguerite, *n.* 3. In decorative design, a small flat rosette which resembles the common daisy.

The daisies or *marguerites* of the outer border had central bosses consisting of convex disks of rock crystal, set probably on a blue paste background.
A. J. Evans, in Annual of Brit. School at Athens, [VII. 78.

marguerite-fly (mär′ge-rēt-flī″), *n.* A phytomyzid fly, *Phytomyza chrysanthemi*, the larva of which mines the leaves of composite plants in greenhouses.

maria, *n. pl.* See ★*mare*^{4}.

mariamolle (mä-rē-ä-mol′e), *n.* [Prop. as in Sp., *maria mole, Maria mole*: *Maria*, Mary; *molle, mole*, < L. *mollis*, soft.] A pomacentroid fish, *Eupomacentrus fuscus*, found about coral reefs from the West Indies to Brazil.

marian^4 (mä-rē-än′), *n.* [W. Ind. Sp., given as "a negro word meaning tough and lean."] *Holocentrus marinus*, a chætodontoid fish found in the West Indies.

Mariana (mā-ri-ā′nä), *n.* [NL. (Hill, 1762), from *Carduus Marianus*, the Linnæan name of the milk-thistle, or Virgin Mary's thistle.] A genus of dicotyledonous plants of the family *Asteraceæ.* See *Silybum.*

Marianist (mā′ri-an-ist), *n.* [*Marian*^{2} + *-ist.*] A member of a now extinct religious association of knights, founded in the thirteenth century at Bologna to succor and protect the unfortunates who suffered from the strife between the Guelfs and Ghibellines.

maricao (mä-rē-kä′ō), *n.* [Porto Rican.] The surette, *Byrsonima spicata.* Also called *doncella.* See *surette.*

maricultural (mā-ri-kul′tūr-al), *a.* Of or relating to mariculture.

Such maps would be purely agricultural and *maricultural*, dependant upon the harvests of the land and sea.
Science, Oct. 9, 1903, p. 461.

mariculture (mā′ri-kul-tūr), *n.* [L. *mare*, sea, + *cultura*, culture.] The development of the resources of the sea, especially with respect to food-fish: coined in distinction from *agriculture.*

Marienglas (mä-rē′en-gläs), *n.* [G., 'Mary's glass.'] A German name applied to plates of selenite (gypsum) and also to muscovite. Sometimes called *Fraueneis* ('[Our] Lady's ice').

Marie's disease. See ★*disease.*

marigot (mar′i-got), *n.* [F.] A branch or side channel in a river. [West Africa.]

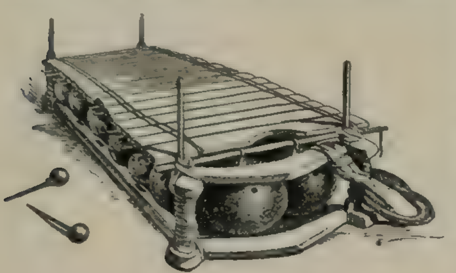
Passing up a *marigot* or branch channel, worn down by porters' feet to a deep wet ditch, we soon reached the half-way place, a second sandy oasis, the site of the village of Zumgboji. *R. F. Burton*, Mission to Gelele, I. 35.

marigram (mar′i-gram), *n.* [Also *maregram, mareogram*; < L. *mare*, sea, + Gr. γράμμα, a writing, γραμμή, a line.] The line traced by the marigraph as a record of fluctuations of sea-level.

mariguana (mä-rē-gwä′nä), *n.* Same as ★*marihuana.*

marihuana (mä-rē-hwä′nä), *n.* [Mex.] In Mexico, any one of several plants having narcotic properties; in many localities, *Cannabis Indica*, and in the state of Sonora, *Nicotiana glauca.*

marimba (ma-rim′bä), *n.* [Also *merimba*; W. African: Kimbundu (Angola) *marimba.*] 1. An African musical instrument formed of a number of strips of wood of various sizes yielding different notes when struck by a hammer. The sound is often reinforced by resonators formed from calabashes placed underneath.



Marimba.

Instruments of the bar type are found frequently in our orchestras and bands under various names, as xylophone; they are familiar in children's toys and are widely distributed in savage and half-civilized lands under the names of *marimba*, balafong, harmonicon, etc.
Smithsonian Rep. (Nat. Mus.), 1900, p. 436.

2. In the Kongo region and Angola, a name of a musical instrument with iron keys; the [illegible].

marimonda (mar-i-mon'dạ̈), *n.* [Amer. Sp.] A name applied to various spider-monkeys, particularly to the white-bellied species, *Ateles beelzebuth*.

marina (mä-rē'nạ̈), *n.* [It., fem. of *marino*. See *marine*.] An esplanade or promenade by the sea. *N. E. D.*

marine. I. *a.*—**Marine band, blue, chorology.** See ★*band*3, etc.—**Marine interest.** Same as *maritime interest.*—**Marine laboratory, metal, salt.** See ★*laboratory*, etc.

II. *n.*—**Dead marine.** Same as *marine*, 5.—**Mercantile marine,** the merchant service; the vessels, officers, and crews belonging to the merchant-marine.—**Merchant marine.** Same as *mercantile* ★*marine.*

mariner, *n.* 2. A Tasmanian name for the bronze-colored shell of any one of several species of the marine gastropod *Elenchus*, especially *E. bellulus*. Also called *warrener*, and *pearly necklace shell*. *E. E. Morris.*

marinist2 (ma-rē'nist), *n.* [*marin(e)* + *-ist.*] One who attributes various changes on the earth's surface, such as the formation of terraces, planes, etc., to marine action: opposed to ★*subaërialist.*

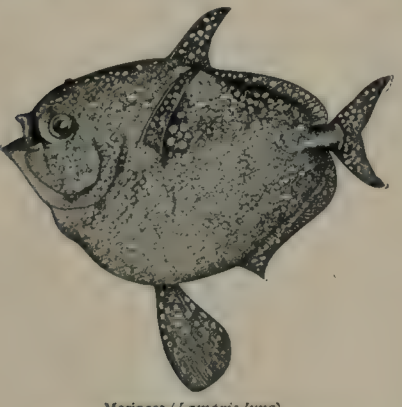
Mariolatrous (mā-ri-ol'a̤-trus), *a.* Characterized by Mariolatry; of the nature of Mariolatry.

Mariology (mā-ri-ol'ọ̄-ji), *n.* [*Mary* + *-ology.*] The doctrines and opinions of the various Christian sects with regard to the Virgin Mary.

Mariology is exhaustively treated in the four hundred and fifty pages which are here devoted to it. The work is divided into three parts.
Dublin Rev., Jan., 1903, p. 211.

Mariotte's spot. Same as *blind spot.*

mariposa (mar-i-pō'sạ̈), *n.* [Sp.] 1. A butterfly.—2. A beautiful fish, *Lampris luna*, of large size, found in the open Atlantic and Pacific.—3. The mariposa-lily.



Mariposa (*Lampris luna*).
(From Jordan's "Guide to the Study of Fishes.")

mariposite (mar-i-pō'sīt), *n.* [*Mariposa* + *-ite*2.] A micaceous mineral, varying from soft green to white, observed with pyrite in the gold ore of the Mariposa region, California.

marisca (ma-ris'kạ̈), *n.* [NL., < L. *marisca*, a fig, pl. *mariscæ*, piles.] One of the excrescences in hemorrhoids.

mariscal (ma-ris'ka̤l), *a.* [*marisca* + *-al*1.] Hemorrhoidal.

Maritime cause, in *law*, an action arising from the commercial relation of persons on navigable waters.—**Maritime exchange,** a meeting-place for ship-brokers and others interested in ships and shipping, where business of a marine nature is transacted.—**Maritime jurisdiction,** the jurisdiction of courts of admiralty.—**Maritime loan.** See ★*loan*1.—**Maritime service,** in *law*, a service rendered upon public navigable waters and having relation to commerce or navigation.

mariupolite (mar″i-ö-pō'līt), *n.* [*Mariupol*, on the Sea of Azov, Russia, + *-ite*2.] In *petrog.*, a nephelite-syenite composed of albite, ægirite, and nephelite, with a small amount of lepidomelane and zircon. It is free from potash feldspar. *Morozewicz.*

marivaudage (mar″i-vō-däzh'), *n.* [*Marivaux*, a French writer of the 18th century.] In *lit.*, a style resembling that of Marivaux, whose writings were a mixture of subtle metaphysics and bizarre trivialities, with over-refined sentiments which were mingled with the most ordinary colloquialisms: the word has come to note an affected attempt at refinement.

Characteristic of *sensibilité* in sense and of *marivaudage* in manner.
Saintsbury.

mark1, *n.* 17. In *ordnance* (followed by a Roman numeral), an expression used to distinguish different designs of the same size and type of gun or mount: as, 6-inch B. L. R., *mark* II (a 6-inch caliber breech-loading rifle-gun of a design indicated as marked two).—**Black mark, china mark.** See ★*black*, ★*china*1.—**By the mark** (*naut.*), the cry of the leadsman when he obtains soundings of 2, 3, 5, 7, 10, 13, 15, 17, or 20 fathoms. On the hand lead-line there are 9 marks and 11 deeps, the latter being the unmarked fathoms of the line, namely, the 1, 4, 6, 8, 9, 11, 12, 14, 16, 18, and 19.—**Easy mark,** one who from his simplicity of character or unsuspecting nature is easily imposed upon. [Slang, U. S.]—**Good mark.** (*a*) A mark placed in a school- or class-register against the name of a pupil for being 'good' in behavior or diligent in study. (*b*) In Australia, a person, conspicuous in the community for his integrity and high business standing, who would rather allow himself to be imposed upon than seem to impose upon another; an 'easy mark' for the unscrupulous. [Slang.]—**Lead-line mark** (*naut.*), one of the nine markings on the hand lead-line, or one of the knots on the deep-sea lead-line, which is continued from 20 to 100 fathoms.—**Marks and deeps** (*naut.*), the fathoms of the lead-line from 1 to 20; the 9 marks and 11 deeps of the hand lead-line. See *lead-line*, 1.—**Port-wine mark.** Same as *capillary* ★*nævus.*—**Sharp-up mark.** Same as ★*square-mark.*

mark2, *n.* 5. [Finnish *markka.*] A current silver coin of Finland, equal to 100 pennia (see ★*penni*), and equivalent to $19\frac{30}{100}$ cents.—6. A silver coin of Schleswig-Holstein, equal to 16 skillings, and equivalent to 24 cents.

mark5, *n.* Same as *marc*2.

markasol (mär'ka̤-sol), *n.* [Trade-name.] Bismuth borophenate, an antiseptic powder used in surgery for dusting purposes.

mark-buoy (märk'boi), *n.* In submarine-cable work, a buoy anchored to mark any desired position or point.

mark-caller (märk'kâl″ėr), *n.* In sorting logs, one who stands at the lower end of the sorting-jack and calls the different marks so that the logs may be guided into the proper channels or pockets.

marker, *n.* 1. (*e*) In *archery*, a person stationed near the target, especially in clout-shooting, to signal to the archers the result of each shot.

2. (*b*) Specifically, a counter (an oblong piece of bone) used in faro. One marker is placed on a player's bet, and another on a card so far removed from it that he cannot take in both bets by any of the usual ways of placing bets on the lay-out. From the fact that the marker is not a chip, and has no value except to point out the superior value elsewhere, arose the colloquial expression: "he is not a *marker* to so-and-so."

7. At *poker*, any object placed upon the table to show that a player who has no chips is still in the pool: sometimes used in table-stakes to indicate that the player is supposed to have as much money in front of him as any other person at the table.—8. In *railroading*, a flag, lamp, or other signal placed upon an engine or train, or upon an electric car, to indicate its character, destination, etc. The green flag at the end of a train is a marker, as is also a red tail-light, or an extra light upon a locomotive.—**Deprez marker** or **signal,** a delicate form of electromagnetic time-marker, capable of recording five-hundredths of a second.—**Magnetic marker,** in *physiol.* and *exper. psychol.*, a time-marker consisting essentially of a writing-lever actuated by an electromagnet which is in circuit with an electric fork. The Deprez and Pfeil time-markers are typical magnetic markers. *Scripture*, Exper. Phonet., p. 91.—**Pfeil's marker,** in *physiol.* and *exper. psychol.*, an electromagnetic time-marker used in connection with an electric fork to trace a time-line upon the smoked surface of a kymograph drum. See *Deprez* ★*marker.* *Scripture*, Exper. Phonet., p. 91.

market, *n.* 7. On the *stock-exchange*, one of the classes into which the business of the exchange is divided; a group of jobbers engaged in a particular kind of business. [Eng.]

Every great *market* is organized with a view not merely to the purchase and sale of a commodity at once, or "on the spot," but also with a view to the future requirements of buyers and sellers.
Encyc. Brit., XXX. 540.

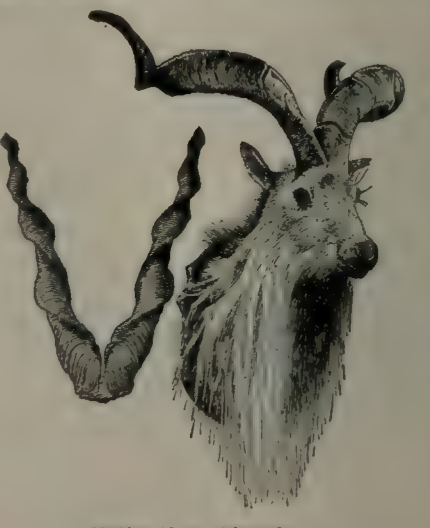
market-boat (mär'ket-bōt), *n.* A dinghy or other small boat used by the stewards to bring off marketing for the various messes.

market-gardening (mär'ket-gär″dn-ing), *n.* The occupation of raising vegetables for sale, particularly when conducted on such a scale as to constitute a business; truck-gardening.

market-scales (mär'ket-skālz), *n.* A counter-scale adapted to the weighing of meat and fish.

market-wire (mär'ket-wīr), *n.* Soft steel and brass wire in small sizes, suitable for the retail hardware trade.

markhor, *n.* Four subspecies are recognized, the extremes being represented by the Astor and the Suliman markhor. In the first, named from the village of Astor in northwestern Kashmir, the horns are long, massive, and form an open spiral. In the Suliman variety, found in the Suliman range, the horns are comparatively short and straight, with the keel running around them like the thread of a screw.



Markhor (*Capra falconeri*).
Head of Astor Markhor.
Horns of Suliman Markhor (larger scale).

marking, *n.*—**Lapham** or **Laphamite markings,** a peculiar form of the Widmannstättian figures, first observed by I. A. Lapham in the meteoric iron of Trenton, Wisconsin, and called Lapham or Laphamite markings by J. Lawrence Smith. In this form of the figures there are broad bands of kamacite inclosing areas of plessite.

marking-bowl (mär'king-bōl), *n.* A roller provided with coloring-matter for marking off warps into lengths or sections for the loom.

marking-cross (mär'king-krôs), *n.* A cross placed upon church vestments or furniture to mark them as exclusively devoted to sacred uses. Altar-cloths and corporals usually have five, in reference to the wounds of Christ.

marking-disk (mär'king-disk), *n.* In a Morse ink-writer (a machine for taking telegraph messages), the rotating disk which carries the letters and signs and marks the signals.

marking-hammer (mär'king-ham″ėr), *n.* A hammer bearing a raised device used to stamp logs, to indicate ownership. Also called *marking-iron.*

marking-hatchet (mär'king-hach″et), *n.* A hatchet for marking trees. A raised die is cut on the head for stamping the face of the blaze.

marking-iron, *n.* 2. Same as ★*marking-hammer.*

marking-plate (mär'king-plāt), *n.* A three-cornered metal plate with a small spike, used to mark an angle of a tennis-court.

marking-plow, *n.* 2. An ice-plow fitted with a guide, used to mark ice for cutting.

marking-tape (mär'king-tāp), *n.* In *tennis*, a tape used to outline and mark the various divisions of a tennis-court.

markland (märk'land), *n.* [*mark*2 + *land*1.] A division of land, originally of the annual value of a mark. *N. E. D.*

marksman, *n.* 1. (*b*) A soldier who makes 60 per cent. at target practice at ranges up to 600 yards.

mark-weed (märk'wēd), *n.* The poison-ivy, *Rhus radicans.*

marl1, *n.*—**Chloritic marl.** See ★*chloritic.*—**Etruria marl,** a subdivision of the Carboniferous system in

England. It is regarded by British geologists as a part of the Upper series of the coal-measures, attains a thickness of 1,100 feet, is underlain by the Blackband group and overlain by the Newcastle-under-Lyme group. Its bottom and top are characterized by *Spirorbis* beds.—**Gainfahren marl,** a phase of the Miocene series of Austria. It is considered by Austrian geologists as a part of the second substage of the Mediterranean or marine stage and is characterized by an abundance of lamellibranchs and gastropods.—**Gargas marl,** a subdivision of the Cretaceous system in Vaucluse, France. It is the lowest member of the Aptian or upper division of the Lower Cretaceous. It is also well developed in northwestern Germany.—**Grinzing marl,** a phase of the Miocene Tertiary in Austria. It is considered by Austrian geologists to be a part of the second substage of the Mediterranean or marine stage.—**Salt marl,** the lowest division of the Cambrian rocks in the Salt Range of India. It is 1,500 feet thick and without fossils.—**Swamp marl,** beds of fresh-water shells found beneath swamps and left by the *Mollusca* which inhabited the lake or pond which has given rise to the swamp. They are sought as a source of lime in making hydraulic cement.

Marlburian (märl-bu'ri-an), *n.* [Erroneously ‹ *Marlborough.*] A graduate of Marlborough College.

> I will read you the last letter received from a nephew of mine, aged twenty-one, a *Marlburian*, who . . . is settled on a Texan ranche.
> *T. Hughes*, Rugby, Tennessee, III. iii.

marmairolite (mär-mī'rọ-līt), *n.* [Gr. *μαρμαίρειν*, glisten, + *-lite.*] A mineral from Sweden, occurring in fine crystalline needles of a pale yellow color: probably a variety of the amphibole called *richterite.*

marmarize (mär'ma̤-rīz), *v. t.*; pret. and pp. *marmarized*, ppr. *marmarizing.* [Gr. *μάρμαρος*, marble, + *-ize.* See *marmarosis.*] To convert (limestone) into marble by metamorphism; subject to marmarosis.

> On the east side of the great intrusive mass of Fair Head the chalk is likewise *marmarised.* Another smaller . . . illustration of the same change occurs at Camps Quarry near Edinburgh.
> *Geikie*, Text-book of Geol., p. 603.

marmelos (mär'mẹ-los), *n.* [NL., ‹ Pg. *marmelo*, quince.] The Bengal quince, *Ægle marmelos.*

marmit (mär'mit), *n.* [F. *marmite*, pot or kettle.] A pot fitted with a hook by which it may be hung; a kettle; a soup-kettle.

marmite (mär-mēt'), *n.* [F.] A pot; a kettle; specifically, an earthenware pot in which soup is made and served.—**La petite marmite,** a soup made of strong stock and vegetables.

marmoration, *n.* **3.** Same as ★*marmorization.*

marmorization (mär'mọ-ri-zā'sho̤n), *n.* [*marmorize* + *-ation.*] In *geol.*, the process of recrystallization during metamorphism, whereby sedimentary limestones become marble.

> *Marmorization* of the limestone is abundant in the region and by no means confined to the contact belt, but, as Mr. King observes, spreads out over large areas in the limestone beds that have no definite relation to any known outcrop of eruptive rock.
> *Amer. Jour. Sci.*, Aug., 1903, p. 144.

marmorize (mär'mọ-rīz), *v. t.*; pret. and pp. *marmorized*, ppr. *marmorizing.* [L. *marmor*, marble, + *-ize.* Compare ★*marmarize.*] To change from a sedimentary limestone to crystalline marble, more especially under the influence of an intrusive dike or other mass of eruptive rock. *Geikie*, Text-book of Geol., p. 772.

marmorosis (mär-mọ-rō'sis), *n.* [L. *marmor*, marble + *-osis.*] Same as *marmarosis.*

maro (mä'rō), *n.* Same as ★*malo.*

maroon¹. **I.** *a.*—**Maroon formation.** See ★*formation.*

II. *n.*—**Acid maroon.** See ★*acid-maroon.*—**Alizarin maroon,** a mordant dyestuff derived from anthracene. It is a mixture of *a*- and *β*-amidoalizarin and amidopurpurin. With a chromium mordant it produces a maroon color. It is not as fast as alizarin red.—**Maroon S,** an impure acid-magenta.

maror (mä-rōr'), *n.*; pl. *merorim* (me-rō'rim). [Heb. *marōr*, ‹ *marar*, bitter.] A bitter herb, eaten at the seder meal on the first two evenings of Passover.

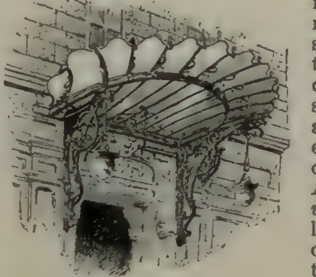
marouflage (mä-rö-fläzh'), *n.* [F., ‹ *maroufler*, back (a painting) with a back lining glued on, ‹ *maroufle*, a tenacious paste.] The process or the act of applying a mural painting to a wall by coating the back of the canvas with a strongly adhesive paste and applying it. This device allows mural paintings to be in oil colors, and also allows the work to be done at a distance from the building for which it is intended.

Marq. An abbreviation of *Marquis.*

Marquette (mär-ket'), *n.* In *geol.*, that section of the Huronian system which is found in the Marquette iron range in the northern peninsula of Michigan and west of the city of Marquette. It consists of metamorphosed sedimentary rocks, and of eruptives of several kinds, and is separated by an unconformity into three well-marked divisions, a lower, a middle, and an upper. *Geikie*, Text-book of Geol., p. 628.

Marquettian (mär-ket'i-a̤n), *a.* In *geol.*, noting a group of rocks carrying the Marquette iron ores: a name given by Alexander Winchell. The group is placed by him below the true Huronian. See ★*Marquette.*

marquise, *n.* **3.** In *gem-cutting*, an ellipsoidal double-pointed form of cut which has been used extensively for diamonds and the more brilliant stones, although many of the common stones, such as amethysts, etc., are now cut in this way. Also called *navette.*—**4.** A light shelter over an entrance doorway: usually carried on brackets or cantalivers, more rarely on slender posts. The roofing itself is often of glass.—**5.** Same as *marquee.*—**Marquise ring,** a finger-ring in which is set a cluster of gems having the form of a pointed oval.



Marquise.

marral, *n.* See ★*murral.*

marram-grass (mar'a̤m-grȧs), *n.* Same as *marram.*

marriage, *n.*—**Class-marriage.** See ★*class-marriage.*—**Common-law marriage,** a marriage not solemnized by any form or ceremony, but created by an actual and consummated agreement between the parties. It may be evidenced by their conduct and reputation. Such a marriage is valid in the United States, except in those states where statutes have abolished it. See *marriage*, 2.—**Detinue of goods in frank marriage.** See ★*detinue.*—**Marriage officer,** a diplomatic or consular agent, or other duly authorized person, before whom marriage between British subjects in a foreign land may be solemnized and be valid.

> Under it [the Foreign Marriage Act, 1892] a marriage between British subjects on land is as valid as a marriage duly solemnized in England, . . . if celebrated in accordance with the local law or in the presence of a "*marriage officer.*"
> *Encyc. Brit.*, XXX. 548.

Restraint of marriage, a legal term used with reference to conditions attached to bequests, gifts, etc., in which the beneficiary, in order to obtain the bequest or gift, is limited in the free choice of marriage. Conditions in restraint of marriage are, if general, usually void.—**Royal marriage,** in such games as penuchle and bezique, the king and queen of the trump suit.

marriageability (mar″āj-a̤-bil'i̤-ti), *n.* The state of being marriageable, or the degree to which a person may be considered marriageable.

marriage-flight (mar'ạj-flīt), *n.* Same as *nuptial* ★*flight.*

marrite (mär'īt), *n.* [For Dr. John Edward *Marr*, of Cambridge, England.] A lead-gray to steel-gray mineral which occurs very sparingly in highly modified monoclinic crystals in the dolomite of the Binnenthal in Switzerland: the chemical composition has not been determined.

marron¹, *n.*—**Marrons glacés,** French or Italian chestnuts boiled in a syrup of sugar and water and flavored with vanilla and a few drops of lemon-juice. They are softened and sweetened all through, not having a glaze of sugar like glacé oranges, etc.

marrow¹, *n.*—**Oblongate marrow,** the medulla oblongata.

marrubiin (ma-rö'bi-in), *n.* [*Marrubi-um* + *-in*².] A neutral compound contained in *Marrubium vulgare.* It crystallizes in large plates or needles melting at 106° C.

marry¹, *v. i.*—**To marry over the broomstick.** See ★*broomstick.*

Mars, *n.* **2.** The question of the planet's climate hinges upon its temperature. It is undeniable that the white caps which alternately form and disappear about its poles behave with respect to the planet's seasons exactly as snow caps would. This strongly suggests conditions of temperature resembling our own, and a corresponding climate. On the other hand, the rarity of the planet's atmosphere, the infrequency of clouds, its smallness, and its distance from the sun (reducing its supply of solar heat to less than half of ours) seem to require a temperature far below the melting-point of ice, and suggest that the white caps may be due to the precipitation of some substance with a much lower freezing-point than water. The question can hardly be settled until our heat-measuring instruments become sensitive enough to determine the planet's temperature by direct observation.—**Canals of Mars.** See ★*canal*¹.

Marseilles pottery. See ★*pottery.*

marsh, *n.* **2.** In Australia, a drained meadow. See the extract.

> A '*marsh*' here is what would in England be called a meadow, with this difference, that in our *marshes*, until partially drained, a growth of tea-trees (Leptospermum) and rushes in some measure encumbers them; but, after a short time, these die off, and are trampled down, and a thick sward of verdant grass covers the whole extent.
> *Mrs. Meredith*, My Home in Tasmania, I. 163, quoted in [E. E. Morris, Austral English.

marshallik (mär'sha̤-lik), *n.* [Yiddish.] A professional merrymaker. Also *marshalok.* See ★*badhan.*

marsh-bass (märsh'bȧs), *n.* The large-mouthed black-bass, *Micropterus salmoides.*

marsh-berry (märsh'ber″i), *n.* The Old World cranberry, *Oxycoccus Oxycoccus.* Also *bogberry*, *fenberry*, and *marshwort.*

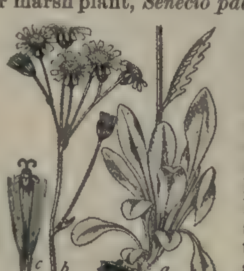
marsh-clover (märsh'klō″vėr), *n.* The bog-bean, *Menyanthes trifoliata.*

marsh-cow (märsh'kou), *n.* A name given by Rütimeyer to a race of cattle of small size the remains of which were found in Swiss lake-villages. *Lyell*, Antiq. of Man, p. 24.

marsh-crocodile (märsh'krok″ọ-dīl), *n.* A common species of southern Asia, *Crocodilus palustris*, somewhat smaller and less dangerous than the muggar, or salt-water crocodile, *C. porosus.*

marsh-deer (märsh'dēr), *n.* The larger South American deer, *Cervus* or *Odocoileus palustris.*

marsh-fleawort (märsh'flē″wėrt), *n.* A swamp or marsh plant, *Senecio palustris*, found in high northern latitudes in North America, Greenland, Europe, and Asia, extending southward in the western hemisphere to Iowa and Wisconsin. It has spatulate, entire, radical leaves, those of the stem being few and toothed. The heads are numerous, mostly in a terminal corymb, the rays pale yellow but showy.



Marsh-fleawort (*Senecio palustris*).
a, lower part of stem with leaves; *b*, upper part of stem with flowers; *c*, floret. (From Britton and Brown's "Illustrated Flora of the Northern States and Canada.")

marshite (märsh'īt), *n.* [Named after C. W. *Marsh.*] Cuprous iodide (Cu_2I_2) occurring in oil-brown tetrahedral crystals at the Broken Hill mines, New South Wales.

marshman (märsh'ma̤n), *n.*; pl. *marshmen* (-men). A person living in the marshes: used in Yorkshire to designate a particular group of people.

> Apparently the bird was well known to the Yorkshire "carr-men" and "*marsh-men*" half a century ago, but no examples are known to science save the type and the one procured by Mr. Coburn. *Nature*, Jan. 15, 1903, p. 252.

marsh-orchis (märsh'ôr″kis), *n.* See ★*orchis*².

Marsh's arsenic apparatus, test. See ★*apparatus*, ★*test*¹.

marsh-treader (märsh'tred″ėr), *n.* Any bug of the heteropterous family *Hydrometridæ* or *Limnobatidæ.* *L. O. Howard*, Insect Book, p. 282.

marsileaceous (mär-sil-ẹ-ā'shius), *a.* Belonging to the *Marsileaceæ*, a family of cryptogamic plants.

marsipobranchian (mär″si-pọ-brang'ki-a̤n), *n.* A member of the order *Marsipobranchii*, a group of vertebrates containing the lampreys and hagfishes.

Marsupial plate. See ★*plate.*

Marsupialida (mär-sū-pi-al'i-da̤), *n. pl.* The *Cubomedusæ.*

marsupialization (mär-sū″pi-a̤l-i-zā'sho̤n), *n.* [*marsupial* + *-ize* + *-ation.*] The formation of a pouch in a membrane, such as the peritoneum.

marsupialize (mär-sū'pi-a̤l-īz), *v. t.*; pret. and pp. *marsupialized*, ppr. *marsupializing.* [*marsupial* + *-ize.*] To render marsupial in character; provide with a pouch.

marsupite (mär-sū'pīt), *n.* [NL. *Marsupites.*] A member of the genus *Marsupites.*

Marsupites (mär-sū-pī'tēz), *n.* [Gr. *μάρσιπος*, a pouch, + *-ιτης*, E. *-ite*².] The only genus of the family *Marsupitidæ*, including flexible crinoids of free-swimming habit having no column and few and large calyx plates. It occurs in the Upper Cretaceous of Europe.

mart⁵ (märt), *n.* [See *marten*¹.] The marten. [Eng. dial.]

martaban (mär'ta̤-ban), *n.* [Ar. *martabāni.*] Old celadon porcelain, popularly supposed to have been made at Martaban in Pegu. Sometimes called *green porcelain.* Large jars of this kind are mentioned by Ibn Batuta, the Algerian traveler, in the fourteenth century.

The Arabs and Persians call this peculiar porcelain *martabani*, and value it very highly from its fancied property of detecting poisoned food by changing color.
S. W. Bushell, Oriental Ceram. Art, p. 148.

martelé (mär-te-lā′), *a.* [F., pp. of *marteler*, hammer, strike: see *martel, v.*] **1.** Hammered; produced by hammering: applied to metal work.—**2.** In *music*, same as *martellato.*

martensite (mär′ten-sīt), *n.* [From a personal name.] A very hard carbide of iron, approximately of the composition Fe$_{24}$C, formed in the recalescence of steel at 850° C. in cooling from a temperature of 1,000° C. or over. It remains unchanged if the metal is then suddenly cooled, as by plunging it into cold water, but on slow cooling is decomposed into iron and the carbide Fe$_3$C. On the other hand, it appears that this latter compound, known as *cementite*, may split into martensite and carbon in the form of graphite.

martensitic (mär-ten-sit′ik), *a.* [*martensite* + *-ic.*] Pertaining to, or characterized by martensite: designating the state of steel when its iron and carbon are combined to form martensite.

Martha Washington china. See ★*china*^{1}.

Martian, *a.* **II.** *n.* An (imaginary or possible) inhabitant of Mars.

These exemplary *Martians* wear no clothes but the exquisite fur with which nature has endowed them, and which constitutes a part of their immense beauty.
Du Maurier, The Martian, viii.

martin^3 (mär′tin), *n.* A shortened form of *freemartin.*

Purebred steer, spayed or *martin* heifer, two years old and under three.
Rep. Kan. State Board Agr., 1901–02, p. 211.

martingale, *n.* **4.** In *fencing*, a bit of twine, fastened to the hilt of a foil, which is caught round one finger of the sword hand to prevent the foil from falling to the ground in case of disarmament.—**Standing martingale,** a long martingale connected to the girth and collar of a harness, with branched ends which are attached to the rings of the bridle-bit.

martinoe (mär′ti-nō), *n.* [Probably a corruption of *Martynia.*] The unicorn-plant, *Martynia Louisiana.*

Martin's albumin negative process. See ★*process.*

martiology (mär-ti-ol′ọ̄-ji), *n.* [L. *Mars* (*Mart-*), Mars, + Gr. *-λογια*, < *λέγειν*, speak.] The study of the planet Mars: same as *areography*, which is the accepted term. [Rare.] *L. F. Ward*, Pure Sociol., p. 69.

martyrium (mär-tir′i-um), *n.*; pl. *martyria* (-ä̤). [LGr. *μαρτύριον*, a martyr's shrine, < *μάρτυρ*, martyr: see *martyr.*] A place in which the relics of martyrs are preserved, usually a crypt or underground chapel like the famous one of the church of Saint-Denis, France, which still retains much of the original Roman construction.

martyrolatry (mär-tė-rol′a̤-tri), *n.* [*martyr* + *-olatry.* See *idolatry.*] Worship of the Christian martyrs.

The Christianity which he despised—the only Christianity which he knew—was mainly associated with a superstitious *martyrolatry* and a grovelling relic-worship. The Galileans, he said, "abandon the worship of the gods to worship the mouldering remains of the dead."
Farrar, Lives of the Fathers, I. 702.

marum, *n.* **2.** Same as *herb mastic* (which see, under *herb*).

marut (mä-rụt′), *n.* [Skt. *marút*, wind, wind-god.] In *Hindu myth.*, a wind-god; a storm-god.

Marxian (märk′si-a̤n), *a.* Pertaining to the socialistic or the historical views formulated by Karl Marx. *Kidd*, Western Civilization.

Marxist (märks′ist), *n.* A socialist of the school which accepts the views of Karl Marx, or a historian or sociologist who accepts Marx's economic interpretation of history. *Kidd*, Western Civilization.

marzacotto (märt-sä-kot′ō), *n.* [It. *marzacotto*, formerly a sort of ointment, also a potters' tool (Florio, 1598).] In *ceram.*, a thin coating of transparent glaze, made of oxid of lead, potash, and sand: used by Italian potters on their painted stanniferous enamel to increase the brilliancy of the colors. See ★*coperta.*

mas. An abbreviation of *masculine.*

M. A. S. An abbreviation of *Master of Applied Science.*

masamacush (mas′a̤-ma̤-kush″), *n.* [Prob. North Amer. Indian.] A common name of the Great Lake trout, *Cristivomer namaycush*, found in the Great Lakes, and widely distributed over northern North America.

masar, *n.* See ★*mazar.*

masarid (mas′a̤-rid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Masaridæ.*

II. *a.* Having the characters of or belonging to the family *Masaridæ.*

mascagnite (mas-kän′yīt), *n.* [*Mascagni* + *-ite*^{2}.] Same as *mascagnin.*

mascaret (mȧs-kä-rā′), *n.* [F. *mascaret*, < Gascon *mascaret*, of unknown origin.] A tidal bore.

The tide begins to make itself felt at Poses, 11 miles above Elbeuf, and between Caudebec and Villequier the *mascaret*, or bore, has its greatest development.
Encyc. Brit., XXXII. 508.

Maschil (mäs-kēl′), *n.* [Heb.] An epithet prefixed to thirteen psalms (32, 42, 44, 45, 52–55, 74, 78, 88, 89, and 142). It probably means 'a contemplative composition,' but the true significance is not certainly known.

mascot, *n.* **II.** *a.* Of the nature of a mascot; having luck-bringing qualities; lucky: as, *mascot* snakes; a *mascot* dog or goat.

mascularity (mas-kụ̄-lar′i-ti), *n.* [L. *mascul(us)*, male, + *-ar* + *-ity.*] Masculinity.

To some the unmentionables might savor of *mascularity.*
Kane, Grinnell Exp., xlvi. 425. *N. E. D.*

mash^1, *n.*—**Sour mash,** mash in which fermentation is begun by having put back into it some of a mash in which fermentation has already been going on.—**Sweet mash,** in *brewing*, mash in which fermentation has been started with yeast.—**Thick-mash process,** a method of preparing wort in brewing, chiefly employed in Bavaria, other parts of Germany, and Bohemia. It involves the removal of portions of the malt from the mash-tub to be boiled and returned to the mash-tub, so that much of the diastase is rendered inactive, while the starch of the boiled portion is brought to the condition of starch-paste and thus is more readily acted on, the production of glucose is regulated, and the amount of malt-extract in the wort is increased.—**Thin-mash process,** the method of preparing wort in brewing most common in France and England. It involves simple infusion of malt with water at 60° to 70° C., with continuous stirring in a mash-tub with a false bottom, the clear infusion being drawn off after a time from beneath this, and more water at the same temperature as before run on upon the malt for a second mashing. None of the malt is heated to the boiling-point of water.

mashed (masht), *p. a.* In *geol.*, noting rocks which are dynamically crushed and granulated.

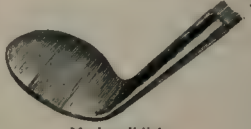
Also, northwest of Cranberry the gangue minerals and even magnetite are developed in the mass of the red granite along more or less *mashed* zones.
Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 245.

mashie, *n.* Same as ★*mashy*^{2}.

mashing, *n.* **4.** In *geol.*, the granulation of a rock in dynamic metamorphism. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. 762.

mashrebeeyah, meshrebeeyah (mash-, mesh-rẹ-bē′yä̤), *n.* [Ar. *mashrabīya.*] A window with openwork of light wooden bars, leaving free access to the air, and used as a place where a porous water-bottle may be put for cooling: usually, in Cairo and other Levantine cities, a projecting bay-window or oriole window, fitted on three sides with such openwork.

mashy^2, **mashie** (mash′i), *n.* In *golf*, a club with an iron head and a more or less lofted face.



Mashy-niblick.

mashy-niblick (mash′i-nib″lik), *n.* A golf-club with a small, deep iron head, lofted: used for approaching and playing out of hazards and bad lies.

mask^3, *n.* **9.** In *zoöl.*: (*c*) The skin of the forehead and upper part of the face of any quadruped, taken off at about the level of the eyes.—**10.** In *base-ball*, a protection for the face worn by the catcher. See ★*cage*, 8.—**Brewer's mask,** an apparatus used to facilitate inhalation of ethyl chlorid in the induction of surgical anæsthesia.—**Uterine mask,** chloasma occurring during pregnancy, or in certain cases of disease of the womb.

maskalonge, *n.*—**Chautauqua maskalonge,** a great pike or maskalonge, *Esox ohiensis*, found in Chautauqua Lake and in the Ohio Basin.

masked, *p. a.* **5.** In *pathol.*, same as ★*larval*, 2.

masking, *n.* **2.** In *photog.*, a device adopted in printing from an imperfect negative, consisting in pasting tissue-paper on the reverse side of the negative over the portions of the picture which print too deeply. *Woodbury*, Encyc. Dict. of Photog., p. 276.

masochism (maz′ọk-izm), *n.* [From Leopold von Sacher-*Masoch*, an Austrian novelist, who described the perversion.] A form of sexual perversion in which the victim craves, and takes pleasure in, physical abuse from one of the other sex: the opposite of *sadism.*

masochistic (maz-ọ̄-kis′tik), *a.* Characterized by or of the nature of masochism. *G. S. Hall*, Adolescence, II. 127.

mason-ant (mā′sn-ȧnt), *n.* Any ant which makes habitations of mud, such as *Lasius brunneus* or *Formica fusca* of Europe. *Kirby and Spence*, Entomology, p. 271.

Masonic china. See ★*china*^{1}.

masonry, *n.*—**Dry masonry,** work done without the use of mortar of any kind, especially where the stones are closely fitted and leave only fine joints between them.—**Polygonal masonry,** masonry which shows on the face of a wall many-sided blocks, the face being smooth, but the joints at irregular angles with each other. Thus five-sided and six-sided stones, and even more complicated pieces, are set in a wall by patient fitting of one to another, while very small splinters are used to make the surface more uniform.—**Trapezoidal masonry,** masonry in which the faces of the outer stones are four-sided but not rectangular. They may even have the top and bottom beds horizontal and parallel.

masonwork (mā′sn-wėrk), *n.* Masonry. [Colloq.]

masopin (mas′ọ̄-pin), *n.* A colorless compound, C$_{22}$H$_{36}$O, contained in the resin from a Mexican tree. It crystallizes in needles melting at 155° C. Also called *masopin resin.*

masrite (mas′rīt), *n.* [See ★*masrium.*] A fibrous alum from Egypt, supposed to contain a new element called *masrium.*

masrium (mas′ri-um), *n.* [NL., < Ar. *Masr*, Egypt, + *-ium.*] The name given to a supposed new chemical element of the same family with barium, strontium, and calcium, occurring as sulphate in the mineral masrite from Egypt. There has been no confirmation of its existence. The place to which the approximate atomic weight reported would assign it in the periodic classification of the elements seems to belong to the more recently discovered radium.

mass^1, *n*.—**Nuptial mass,** a mass celebrated at a church wedding, with special prayers and blessings for the couple married.

mass^2, *n.* **8.** In *phar.*, a preparation of thick, pasty consistency with which is incorporated some active medicinal substance: the mass is made up into pills of definite size and weight for administration.—**9.** In the *fine arts*, any large and simple expanse of form, light, shade, or color, in which the details of a composition arrange themselves.—**Achromatic mass.** See ★*achromatic.*—**Active mass.** (*a*) In *phys. chem.*, the amount of the active substance contained in the unit volume; the concentration of the active substance, or the number of gram-molecules (or gram-equivalents) contained in one cubic centimeter or one liter, as the case may be. (*b*) In *electrochem.*, the concentration of that fraction of the electrolyte which, at the given dilution, is dissociated into ions, and is therefore capable of carrying the electric current.—**Apparent mass,** the mass of a moving particle due to its electrostatic charge and to its velocity. It differs from the ordinary mass dealt with in mechanics, which is independent of the velocity.—**Electromagnetic mass,** mass due to the electric charge of a moving particle.

The *electromagnetic mass* is a vector quantity of the nature of a tensor, with the same kind of symmetry as an ellipsoid of rotation. *Science Abstracts*, VI., Sec. A, 238.

Gravitational mass, mass in the sense in which the term is used in ordinary mechanics: so called to distinguish it from the electromagnetic mass of a moving electron or charged particle.—**In mass** (*milit.*), in compact formation, as a close column.—**Lateral masses of the sacrum.** See ★*sacrum.*—**Law of conservation of mass.** See ★*conservation.*—**Law of mass action.** See ★*action.*—**Linear mass of points,** a mass not discrete: a term used by Hankel.—**Longitudinal mass,** in the dynamics of an electrically charged particle, mass which opposes acceleration in the line of motion.—**Mass resistivity.** See ★*resistivity.*—**Tigroid masses.** Same as *Nissl* ★*bodies.*—**Transverse mass,** in the dynamics of an electrically charged particle, mass which affects acceleration perpendicular to the line of motion.—**Vallet's mass,** a mixture of ferrous carbonate with sugar and honey brought by evaporation of water to a thick, pasty condition, used in medicine in the form of Vallet's pills. The sugar protects the iron from the action of the air tending to form ferric oxid or hydroxid.

Mass. An abbreviation of *Massachusetts.*

massa^2 (mas′ä̤), *n.* A copper coin of Ceylon.

massage^2, *n.*—**Douche massage,** massage combined with the application of a douche to the same part.—**Vibratory massage,** rapid and light percussion of a part, for therapeutic purposes, made by means of a special instrument.

Massaria (ma-sā′ri-ä̤), *n.* [NL. (De Notaris, 1844), named for Giuseppe Filippo *Massara* (1792–1839), an Italian botanist.] A genus of pyrenomycetous fungi having the perithecia separate and imbedded in the host. The spores are large, several-septate, brown, and usually surrounded by a conspicuous hyaline envelop. Many species have been described. They occur on dead trunks and branches. *M. inquinans* is a common species in Europe and America, found on the maple and other trees.

Massariaceæ (ma-sā-ri-ā'sẹ-ē), *n. pl.* [NL., < *Massaria* + *-aceæ.*] A family of pyrenomycetous fungi named from the genus *Massaria* and having the same general characters.

massecuite (mȧs-kwēt'), *n.* [F., 'baked mass.'] In the manufacture of sugar and in sugar-refining, the semi-fluid mixture of separating sugar crystals and residual syrup, produced by completed evaporation, from which, after cooling, the syrup is to be removed by drainage or by the use of the centrifugal machine.

masser^{3} (mas'ėr), *n.* [F. *masser.*] A masseur. [Great Britain.]

> A single *masser* should have strength enough to do the work without too obvious exhaustion, which gives the patient an unpleasant impression.
> *Encyc. Brit.*, XXX. 573.

masseur, *n.* **2.** An instrument designed for mechanical massage of the tissues.

massing^{1} (mȧs'ing), *n.* [*mass*^{1}, *v.*] The act denoted by the verb *mass*^{1}.

massing^{2} (mȧs'ing), *n.* [*mass*^{2}, *v.*] The act denoted by the verb *mass*^{2}.

massing^{3} (mas'ing), *n.* Same as *massage.* [Rare.]

> Without going so far as to make *massing* a closed profession, it is obviously desirable to have some guarantee of competency. *Encyc. Brit.*, XXX. 573.

massive, *a.* **6.** In *zoöl.*: (*b*) Noting a compact sponge of any kind which grows more or less equally in all directions: contrasted with *incrusting, dendritic, flabellate,* etc.—**7.** In *pathol.*, extensive; involving a large mass of tissue.

II. *n.* Same as *massif.*

> Mount Cochrane, . . . which rises 12,140 feet above sea-level. This powerful *massive* competes with Mounts San Valentin and San Clemente as to which is the highest of Patagonia. *Geog. Jour.* (R. G. S.), XVI. 206.

massive-solid (mȧs'iv-sol'id), *a.* Having the quality of being both solid and homogeneous.

> Judging from the heated conditions of the material extruded during a *massive-solid* eruption at the time it rises into the air, and reasoning also from the known variations in the physical and mineralogical features of the igneous rocks which depend on the conditions under which they solidify, we should expect the lavas extruded in a *massive-solid* condition to present at least three leading physical characteristics.
> *Amer. Jour. Sci.*, April, 1904, p. 263.

massless (mȧs'les), *a.* [*mass*^{2} + *-less.*] In *physics*, devoid of mass.

masson (mȧ-soṅ'), *n.* A silver coin of Lorraine in the eighteenth century. It was struck under Leopold I. (1690–1729), and was named from Masson, the director of the mint.

Masson's disk. See ★*disk.*

massotherapeutics (mas″ọ-ther-ạ-pū'tiks), *n.* [*mass(age)* + *therapeutics.*] Treatment of disease by means of massage. Also *massotherapy.*

massoy (mas'oi), *n.* [Also *massay, massoi, mussoi*; Malay *masui.*] The bark of an East Indian tree, *Cinnamomum Kiamis.* *N. E. D.*

mast^{1}, *n.*—**Bonaventure mast** (*naut.*), the after-mast of a four-masted vessel of the Elizabethan period, which corresponded to the jigger-mast of to-day.—**Fore-trysail mast.** Same as ★*fore-spencer mast.*—**Lower-mast,** the first mast above the deck; the mast that steps in the keelson and passes through the deck.—**Mast-and-guy system,** a method of providing longitudinal strength in wooden river-steamers having shallow hulls. Strong keelsons in the bottom support a series of vertical poles or masts on each side of the vessel, which are tied and braced together with iron rods or chains, thus forming a structure analogous to a bridge-girder. **Mast-yard plates,** the iron plates of which the yards of some vessels are constructed.

mastaba (mas'tạ-bạ̈), *n.* [Ar. *mastaba* or *mastaba*, a stone or mud bench.] The earliest form of Egyptian tomb, a building oblong or square in plan and having sloping sides and a flat roof. It covers the sepulchral pit.

mastaxed (mas'takst), *p. a.* Possessing a mastax, or chitinous gizzard, as rotifers.

> He also describes a new *mastaxed* male.
> *Nature*, Feb. 5, 1903, p. 327.

mast-cell (mȧst'sel), *n.* A name given to certain large wandering cells of the leucocyte type, found in the blood and connective tissues under normal but more especially under pathological conditions, such as those of leucemia, chronic inflammation, etc. See cut under ★*lymphocyte.* *Buck*, Med. Handbook, I. 75.

mast-cloth (mȧst'klôth), *n.* The middle breadth of canvas in a square sail, which receives the chafing of the mast; also, a covering of canvas sometimes laced on the after-mast of a steamship, so as to receive the soot and smoke from the stack when at sea.

master^{1}. **I.** *n.*, **9.** (*e*) In medieval musical gilds, especially those of the mastersingers, one who had attained the highest rank of proficiency.—**Master of misrule** (*naut.*), the title given by his messmates to the elected master of ceremonies during the recreation-hour obtained from the captain for the purpose of indulging in all kinds of pranks and absurdities. It was a well-known custom on old-time vessels to grant this privilege to the crew as a mark of appreciation for some good work done by them.—**Master of the Crown Office.** See ★*crown.*—**Small master,** a painter of small easel-pictures.

> The great majority of pieces due to the brush of this most exquisite of all '*small masters*' [Watteau] were no doubt engraved.
> *Claude Phillips*, in Burlington Mag., V. 235.

II. *a.*—**Master card.** See ★*card*^{1}.—**Master controller.** See ★*controller.*—**Master record.** See ★*record.*

master-general (mȧs'tėr-jen″ẹ-rạl), *n.* An officer of the British Army from 1483 to the Crimean war, who was charged with the supply and transportation of the army and in the early days controlled the artillery and engineers. Also called *master-general of ordnance.*

master-keyed (mȧs'tėr-kēd), *a.* Fitted to a master-key.

> A series of locks is said to be "*master-keyed*" when so constructed that each lock can be operated by its own key, which fits it but no other lock in the series, and also by another key which will operate every lock in the series, this latter being designated as a "master-key" or "pass-key."
> *H. R. Towne*, Locks and Builders' Hardware, p. 121.

master-mechanic (mȧs″tėr-mẹ̄-kan'ik), *n.* A chief mechanic; one who has charge of the machinery, etc., of shops.

master-song (mȧs'tėr-sông), *n.* The art in general, or some accredited composition, of the mastersingers or meistersänger. See *mastersinger.*

master-strap (mȧs'tėr-strap), *n.* A heavy steel strap used in wood-bending machines to insure smooth bending of the wood.

master-tap (mȧs'tėr-tap), *n.* A tap used to cut a die for any screw, but not used in cutting threads in the nuts, a larger tap being used for that purpose to afford a slight clearance.

Masthead compass. See ★*compass.*

mast-hinge (mȧst'hinj), *n.* *Naut.*, a kind of socket for quickly stepping and unstepping the mast of a small sail-boat.

mast-hole (mȧst'hōl), *n.* In *ship-building*, the hole through the partners of a deck to receive the mast. See *partner*, 3.

mastic, *n.*—**Oil of mastic.** See ★*oil.*

masticator, *n.* (*d*) An attachment to a feed-cutter. It crushes, shreds, and mixes hay, corn, or other material cut in the feed-cutter, and is designed to render the feed more digestible and palatable.

mastigobranch (mas'ti-gọ-brȧngk), *n.* Same as ★*mastigobranchia.* *Annals and Mag. Nat. Hist.*, Nov., 1903, p. 536.

mastigobranchia (mas″ti-gọ̄-brang'ki-ạ̈), *n.*; pl. *mastigobranchiæ* (-ē). [NL., < Gr. *μάστιξ* (*μαστιγ-*), whip, + *βράγχια*, gills.] A bush-like or plumose epipodial appendage of the throacic limbs of decapod crustaceans, serving to clean the gills.

> First maxillipeds with a 2-lobed *mastigobranchia.* . . . The *mastigobranchiæ* are extremely rudimentary, consisting of a minute tubercle with a mere trace of a plume.
> *Trans. Linnean Soc. London*, Zool., Feb., 1903, p. 440.

mastigobranchial (mas″ti-gọ̄-brang'ki-ạl), *a.* [*mastigobranchia* + *-al*^{1}.] Pertaining to or characteristic of a mastigobranchia.

> First maxillæ 2-branched; second pair 3-branched, with wide *mastigobranchial* plate.
> *Trans. Linnean Soc. London*, Zool., Feb., 1903, p. 440.

mastigophoran (mas-ti-gof'ọ-rạn), *a.* and *n.* **I.** *a.* Relating or pertaining to the *Mastigophora.*

II. *n.* Any one of the *Mastigophora.*

Mastigopus (mas-tig'ọ-pus), *n.* [NL., < Gr. *μάστιξ* (*μαστιγ-*), a whip, + *πούς*, foot.] The final stage in the development from the larval to the adult condition of certain decapod crustaceans, as the *Sergestidæ.* The external changes involved consist largely in modifications of the appendages of the antennary and mouth parts and of the ambulatory limbs. *Proc. Zool. Soc. London*, 1896, p. 944.

mastigosis (mas-ti-gō'sis), *n.* [Gr. *μαστίγωσις*, < *μαστιγοῦν*, whip, flog, < *μάστιξ*, a whip, a scourge.] Whipping; flagellation.

mastigospore (mas'ti-gọ-spōr), *n.* [Gr. *μάστιξ* (*μαστιγ-*), a whip, + *σπορά*, seed.] In *phytogeog.*, a plant which distributes itself by means of ciliate or flagellate propagative cells, as in *Protococcus*, etc., or by plant-bodies similarly motile, as in *Bacteriaceæ* and *Volvocaceæ.* *F. E. Clements.*

masting (mȧst'ing), *n.* On a sailing-vessel, the arrangement of the masts and their supports.

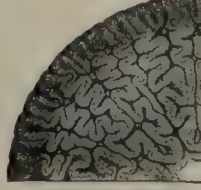
> This method of procedure has long been followed in the Royal Navy, where the data as to *masting*, etc., obtained and tabulated long ago for the now obsolete classes of sailing ships, have furnished rules for practice up to the present time, and have made serious accidents, such as dismasting, almost unknown.
> *White*, Manual of Naval Arch., p. 343.

mastodonic (mas-tọ-don'ik), *a.* [*mastodon* + *-ic.* The regular type is *mastodontic.*] Relating to or having the characters of a mastodon; mastodontic; gigantic. *Kane*, Grinnell Exp., xxxi. 269. *N. E. D.*

mastodonsaurian (mas″tọ-don-sâ'ri-ạn), *a.* and *n.* **I.** *a.* Pertaining to, resembling, or having the characters of *Mastodonsaurus.*

II. *n.* A member of the labyrinthodont genus *Mastodonsaurus.*

Mastodonsaurus (mas″tọ-don-sâ'rus), *n.* [NL., < Gr. *μαστός*, teat, + *ὀδούς* (*ὀδοντ-*), tooth, + *σαῦρος*, lizard.] A genus of very large labyrinthodont amphibia having a skull one and one quarter meters in length, the outer surface of which is highly sculptured, the premaxillæ pierced for the passage of two tusks of the lower jaw, and the teeth of very complicated structure. The body skeleton is known only in part. It occurs in the Triassic of Europe and India.



Section of a tooth of a *Mastodonsaurus.*

mastoid. I. *a.*—**Mastoid antrum,** the mastoid cells taken collectively.—**Mastoid disease.** Same as *mastoiditis.*—**Mastoid empyemia.** See ★*empyemia.*—**Mastoid sinus.** See ★*sinus.*

II. *n.* **3.** Same as *pterotic.* *Starks*, Synonymy of the Fish Skeleton, p. 510.

mastoidale (mas″toi-dā'lē), *n.* [NL., neut. of **mastoidalis*, < *mastoides*, mastoid.] In *craniom.*, the lowest point of the mastoid process. *Von Török.*

mastoidectomy (mas-toi-dek'tọ-mi), *n.* [NL. *mastoides*, mastoid, + Gr. *ἐκτομή*, excision.] A surgical operation for the excavation of the mastoid process. *Lancet*, April 4, 1903, p. 957.

mastoideum, *n.* **2.** Same as *opisthotic.* *Starks*, Synonymy of the Fish Skeleton, p. 511.

mastoiditis, *n.*—**Sclerosing mastoiditis,** chronic mastoiditis in which the walls of the cells become thickened, almost or quite obliterating the latter.

mastoidotomy (mas-toi-dot'ọ-mi), *n.* [NL. *mastoides*, mastoid, + Gr. *τομή*, a cutting.] A surgical operation for opening into the mastoid cells in cases of mastoiditis, in order to provide for drainage and free exit of the pus.

mastomenia (mas-tọ-mē'ni-ạ̈), *n.* [NL., < *μαστός*, breast, + *μῆνες*, menses.] A form of vicarious menstruation in which there is bleeding from the breasts.

mastoncus (mas-tong'kus), *n.*; pl. *mastonci* (-ton'sī). [Gr. *μαστός*, breast, + *ὄγκος*, mass.] A mammary tumor.

mastopexy (mas'tọ-pek-si), *n.* [Gr. *μαστός*, breast, + *πῆξις*, fastening.] A surgical operation for raising and supporting pendulous breasts.

mastorrhagia (mas-tọ-rā'ji-ạ̈), *n.* [NL., < Gr. *μαστός*, breast, + *-ραγια*, < *ῥηγνῦναι*, break.] Hemorrhage from the breast.

mast-partners (mȧst'pärt″nėrz), *n. pl.* Same as *partners.* See *partner*, 3.

mast-plate (mȧst'plāt), *n.* In *iron ship-building*, one of the plates of which an iron mast is constructed.

mastrous, *a.* **2.** Great; remarkable. Also used adverbially: as, a *mastrous* large school. [Prov. Eng.]

M. Ast. S. An abbreviation of *Member of the Astronomical Society.*

mast-step (mȧst'step), *n.* In *ship-building*, a support above the keel or on a deck on which the heel of the mast rests and by which it is prevented from moving sideways. In racing-yachts, the step is built up into a structure of cross girders to distribute the load over a large area of the lightly constructed bottom.

mast-tackle (mȧst'tak″l), *n.* A purchase for hoisting or lowering a mast; a purchase secured to the masthead for the purpose of handling heavy weights.

masut (mä-söt′), *n.* [Said to be Russian; cf. Russ. *maslo*, oil, butter.] The Russian name for crude petroleum from the Caucasus, which has lost the more volatile hydrocarbons by exposure to the air. The name is also applied, but less properly, to the residue from the distillation of such petroleum after all illuminating oil has been driven off. This residue is properly called ★*astatki* (which see).

mat^1, *n.* 9. In *phytogeog.*, a mat-like aggregation of tufts from basal branches. Compare ★*mat-plant*. *Pound and Clements.*—**Abdominal mat.** See ★*abdominal.*—**Chafing-mat** (*naut.*), a mat-like binding wound around a hawser or rope, or laid under the end of a plank or spar, to prevent chafing or wear.—**Chinese mat**, a particular style of package in which the poorest grades of cassia-bark are marketed. It consists of two small rolls sewn into a mat; in the center are heavy foreign materials, outside of that cinnamon-chips of very inferior quality, and on the extreme outside neatly arranged quills of fair size and quality.—**Cork-mat** (*naut.*), a bag filled with granulated cork, used to prevent chafing; a cork fender.—**Dock-mat**, a rope fender used in a dock to protect the side of a vessel.

Matabele (mä-tä-bā′le), *n.* [From a tribe name.] A name given in South Africa to a large predatory true ant which is said to capture white ants and keep them as slaves in its own colonies.

matador, *n.* 4. In *skat*, every trump in unbroken sequence with the highest trump, if in the same player's hand or on the same side as the highest trump. See ★*skat*^{2}.

Matagne schists. See ★*schist*.

matalan (mä′tä-län), *n.* [E. Ind.] A small Hindu flute used with bayadere dances.

matama (mä-tä′mä), *n.* [East African.] A native name for a kind of millet, *Sorghum vulgare*, much cultivated by the natives of Africa. Also called *Kafir-corn* and *durra*.

> The native food resources are *matama*, maize, manioc, and in some parts bananas. *Nature*, May 7, 1903, p. 15.

matanza (mä-tän′thä), *n.* [Sp., < *matar*, kill.] 1. The act of butchering or slaughtering.—2. The place where cattle are slaughtered.

Matawan formation. See ★*formation*.

match^1, *n.*—**Three-ball match.** See ★*ball*^{1}.

match^1, *v. t.* 5. In *building*, to bring to a uniform width or thickness by any process, either by sorting and arranging the material or by cutting down some pieces to correspond with others: thus, planks are said to be of *matched* width.—6. In *logging*. See ★*mate*^{1}, *v. t.*, 3.

match^2, *n.*—**Parlor-match**, the trade-name for a friction-match made without sulphur, or with so little that the disagreeable suffocating smell from its combustion is practically avoided.—**Settlers' matches**, the long pendulous strips of bark which hang from eucalypts and other trees during decortication, and which, when thoroughly dry, are used for torches and kindling. [Australia.]

Match-makers' disease. See ★*disease*.

match-play (mach′plā), *n.* [*match*^{1}, *n.*, + *play*^{1}, *n.*] In *golf*, play in which the score is reckoned by counting the holes lost or won on either side.

mate^1, *n.* 6. In *geom.*, the element that is paired with a given element in a correlation.—**Chief mate** (*naut.*), the deck-officer next below the master in rank; the one upon whom the command of the vessel would fall in the event of the death or disability of the captain.—**Extra second mate.** Same as *navigating* ★*mate*.—**Junior mate** (*naut.*), any of the mates lower in rank than the chief mate.—**Machinist's mate**, a chief petty officer of a man-of-war, who stands watch in the engine- and fire-rooms when the vessel is under way.—**Mate of the deck** (*naut.*), the officer of the watch.—**Mate of the hold** (*naut.*), the officer who has charge of, and is responsible for, the condition of the hold.—**Mate of the hull** (*naut.*), an old-fashioned rating for the officer specially assigned to the work on the hull, spars, and the standing and running rigging in the fitting out or repairing of a vessel. This officer was generally the chief mate, although a junior mate was sometimes selected.—**Mate of the watch** (*naut.*), the officer in charge of the deck; the mate on watch who has charge of the ship.—**Navigating mate** (*naut.*), the mate assigned to duty in the chart-room. On some steamships a navigating mate called an *extra second mate* is carried, whose specific duty it is to look after the navigation of the ship as an aid to the captain. This officer stands no regular bridge watch, but is supposed to be on the alert day and night to ascertain the ship's place in latitude and longitude, to lay out the ship's course, and to determine the deviation of the compass by azimuths of the sun, moon, and stars.—**Senior mate** (*naut.*), the chief mate.

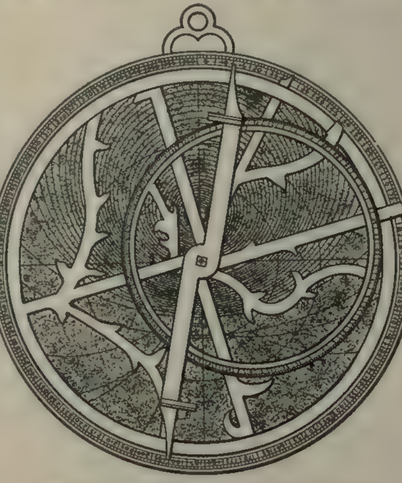
mate^1, *v. t.* 3. In *logging*, to place together in a raft (logs of similar size); match.

mate^3, *n.*—**Forced mate**, in *chess*, a mate at a certain stage of the game, which cannot be avoided even by the best possible rejoinders.

mate^4, *n.* 2. Same as ★*congonha*.

mateceric (mä-te-ser′ik), *a.* [*mate*^{4} + L. *cera*, wax, + *-ic*.] Noting an acid, a colorless compound, obtained from the wax of *yerba-maté*.

mater^2, *n.* 3. The large metallic disk which forms the foundation of an astrolabe, and carries at its circumference the graduation upon which the indications of the alidade or index are read. *Sci. Amer.*, Aug. 12, 1905, p. 120.



Astrolabe of Regiomontanus, showing the Mater.

Material point, placenta. See ★*point*^{1}, ★*placenta*.

materialism, *n.*—**Psychophysical materialism**, the doctrine that the problem of psychology is to determine the dependence of immediate experience upon the body. *W. Wundt* (trans.), Outlines of Psychol., p. 17.

material-man (mā-tē′ri-al-man), *n.* One who keeps for sale the materials used in some trade, especially those used by builders.

materteral (mā-tėr′te-ral), *a.* [L. *matertera*, maternal aunt.] Characteristic of a maternal aunt. *W. Taylor*, Monthly Rev., CII. 447. *N. E. D.*

matezite (mat′ē-zīt), *n.* 1. A carbohydrate which occurs in crude india-rubber from Madagascar. It is the mono-methyl ether of optically inactive inosite.—2. Same as ★*pinite*.

matezo-dambose (mat′ē-zō-dam′bōs), *n.* A name given to d-inosite obtained by treating pinite (matezite) with hydriodic acid.

mat-grass, *n.* 3. In Australia, *Manisuris compressa*, a grass with creeping or ascending flattened stems, esteemed for pasturage and said to keep green the whole year in dry climates.—4. Same as *tussock-grass*, 2. *Hannan*, Textile Fibres of Commerce, p. 139.

math. An abbreviation (*c*) of *mathematician*.

Mathematical induction. (*b*) See ★*induction*.

mathematicophysical (math-ē-mat″i-kō-fiz′i-kal), *a.* Of or pertaining to mathematical physics; noting the study of physics by mathematical methods.

mathematics, *n.*—**Mixed mathematics**, mathematics into which the consideration of the properties of matter enters.—**Pure mathematics**, mathematics apart from its applications. Compare *applied mathematics*.—**Qualitative mathematics**, mathematics rigorously kept free from every quantitative idea, being neither positively nor negatively quantitative: for instance, pure projective geometry as founded and expounded by von Staudt (1847).

mathetic (ma-thet′ik), *a.* [Gr. *μαθητικός*, relating to learning. See *mathesis*.] Of or pertaining to mathesis or learning. *Bentham*.

Matico camphor. See ★*camphor*.

matildite (ma-til′dīt), *n.* [*Matilda* (see def.) + *-ite*^{2}.] A sulphobismutite of silver ($AgBiS_2$), occurring in gray prismatic crystals, also massive: from the Matilda mine, near Morococha, Peru. Also found in Colorado.

mâtin^2 (mä-taṅ′), *n.* [F.] A French breed of large dogs, somewhat resembling the great Dane, but rough-coated; also used to some extent for sheep-dogs. Also *mâtin-dog*.

mâtin-dog, *n.* See ★*mâtin*^{2}.

mating, *n.*—**Apolegamic mating**, preferential mating; conscious and intentional sexual selection.—**Assortative mating, assortive mating, homogamous mating**, the pairing or mating of animals, or of human beings, with some common distinctive characteristic, considered apart from the question whether the mating is due to conscious selection of or preference for this characteristic or is unintentional or unconscious; sexual selection in its widest sense.

> We could hardly want stronger evidence of the existence of *assortative mating* in man, i.e. of the actuality of sexual selection. *Biometrika*, Nov., 1903, p. 373.

Autogamic mating, the pairing or mating of like with like.

> Pearson adds, "Variations do not occur accidentally, or in isolated instances; *autogamic* and assortive mating are realities." *T. H. Morgan*, Evol. and Adapt., p. 269.

Endogamic mating or **breeding**, mating or breeding within the limits of the tribe or family.—**Heterogamous mating**, the pairing or mating or marriage of unlike individuals, as contrasted with *homogamous* ★*mating*.—**Homogamous mating.** Same as *assortative* ★*mating*.—**Pangamic mating**, marriage or mating or pairing at random within the limits of the race, without conscious or unconscious preference or selection.—**Preferential mating**, marriage or pairing or mating with one individual of the opposite sex rather than another, as the result of preference or selection; sexual selection as commonly understood.—**Selective mating**, homogamous or assortative mating with or without conscious preference.

matipo (mä′tē-pō), *n.* [Maori.] A name for several of the New Zealand trees also called *mapau*, particularly for those better known as *tarata* and *tawhiri*. See ★*mapau*, ★*tarata*, and ★*tawhiri*.

matka (mat′kä), *n.* [Russ. *matka*, mother, dim. of *mati*, mother.] A Russian name of the mother fur-seal, used on the Pribilof Islands.

matlow (mat′lō), *n.* A corruption of French *matelot*, sailor.

> They get into her an' bale out another young Christmas-treeful of small reckonin's—brass mostly. Simultaneous it hits the Pusser that 'e 'd better serve out mess pork for the poor *matlow*.
> *R. Kipling*, Traffics and Discoveries, p. 54.

mato (mä′tō), *n.* [Porto Rican.] 1. A hard, round seed of any one of several leguminous plants, used by children for playing marbles; especially, a seed of *Guilandina Crista*, *G. major*, *Ormosia monosperma*, or *Stizolobium urens*, or one of the plants itself. They are usually distinguished from each other, as *mato azul*, *mato amarillo*, etc.—2. A game of marbles played with these seeds.

Matonia (ma-tō′ni-ä), *n.* [NL. (Robert Brown, 1830), named for Dr. *Maton*, a London physician.] A small genus of peculiar Malaysian ferns, the only living representatives of the family *Matoniaceæ*. The best-known species, *M. pectinata*, which occurs also as a fossil, has rigid fan-shaped fronds, from 1 to 2 feet wide and palmately divided, the divisions pectinately pinnatifid, and the sori, which are borne singly at the confluence of several veinlets toward the base of the segment, large, globose, with a peltate stipitate superior indusium inclosing six sessile radial sporangia which are laterally connate. A second, rare species, *M. sarmentosa*, is of very different habit but of like fructification.

Matoniaceæ (ma-tō-ni-ā′sē-ē), *n. pl.* [NL., < *Matonia* + *-aceæ*.] One of the eight families of ferns comprising the *Eufilicineæ*, or homosporous leptosporangiate *Filicales*, and typified by the genus *Matonia*. There are, besides, some half-dozen genera of fossil plants placed in this family. See ★*Matonia*.

mat-plant (mat′plant), *n.* A plant of a prostrate radiating habit.

> The *mat-plant*, such as a purslane or carpet-weed, adapted to life on a flat plane.
> *C. MacMillan*, Minnesota Plant Life, ii.

matranee (ma-trä′nē), *n.* [Also *metrahnee*; Hind. *mehtarānē*, fem. of *mehtar*, a sweeper, or scavenger.] A female sweeper or scavenger.

matrical (mat′ri-kal), *a.* [L. *matrix* (*matric-*) + *-al*^{1}.] In *histol.*, of or pertaining to a matrix, like the matrix of a tissue such as cartilage.

> The nutrition of the cartilage is probably effected by impenetration of fluids along the fine bundles of fibers, which in this way come to stand out clearly amid the *matrical* substance.
> *Jour. Roy. Micros. Soc.*, April, 1903, p. 163.

matrimony, *n.* 4. It is played with a lay-out on which bets are placed, the players winning the counters in each division according to the combinations held. These are: *matrimony*, any king and queen; *intrigue*, any queen and jack; *confederacy*, any king and jack; a *pair*, any two cards of the same denomination, and *best*, the ace of diamonds. Two cards are given to each player.

matrine (mā′trin), *n.* A crystalline dextrorotatory alkaloid, $C_{15}H_{24}ON_2$, contained in the roots of *Sophora angustifolia*. It melts at 80° C.

matriotism (mā′tri-ot-izm), *n.* [L. *mater*, mother: on the analogy of *patriotism.*] Loyalty to one's mother country. [Rare.]

> I am delighted with your *matriotism.* "Rome, Venice, Cambridge!" I take it for an ascending scale, Rome being the first step and Cambridge the glowing apex.
> *Lowell*, Letters, I. 270.

matrix, *n.*—**Rank of a matrix.** See ★*rank*^{2}.

matrix-bar (mā'triks-bär), *n.* A combination of matrices, usually 12 in number, on one plate or bar of metal, as arranged for typemaking on the monoline machine.

matrix-gem (mā'triks-jem), *n.* An opal, turquoise, ruby, or other gem intimately mixed with the matrix material and cut with it.

mat-rush (mat'rush), *n.* The great bulrush, *Scirpus lacustris.*

matsa (mä'tsä), *n.*; pl. *matsoth* (mät-sōt'). [Also *mazza*, pl. *mazzoth*; Heb. √*matsats*, suck, taste.] Unleavened bread. See *Passover.*

matted^{2} (mat'ed), *p. a.* Dull; lusterless; covered with a mat glaze: as, *matted* steel; *matted* glass; *matted* pottery.

matter, *n.*—**Bredichin's matter**, matter of which comets' tails are formed, according to the hypothesis of Bredichin.

> He [Bredichin] has found that it is merely necessary to postulate three kinds of matter, issuing from the nucleus with three initial velocities, and subject to repulsion from the sun with three sets of forces of repulsion—i.e., as compared with ordinary gravitative attraction for the whole of the phenomena of all sorts of comets to be very completely accounted for. . . . With the comparatively slow separation of the atoms of *Bredichin's matter* from the nucleus, each one describing its own hyperbola convex to the sun, the tail at any moment represents the then position of any number of atoms which left the nucleus for some distance back.
> *Nature*, Sept. 10, 1903, p. 450.

Fourth state of matter, a term proposed by Crookes for the condition in which gases exist when the pressure is so low that the particles have a mean free path greater than the dimensions of the containing vessel. A gas under such pressures is also called a *hypergas* or *radiant matter.* See *radiant matter.*—**Gray matter** or **substance.** See ★*gray.*—**Law of conservation of matter.** See ★*conservation.*—**Matter in pais**, in *law*, in the country; not in court.

Matteuccia (ma-tū'chiạ̈), *n.* [NL. (Todaro, 1866), named in honor of Carlo *Matteucci*, an Italian physicist and statesman.] A small genus of dimorphous polypodiaceous ferns, having the fronds borne in a close, upright crown from an ascending rhizome. In the single American species, the ostrich-fern, *M. Struthiopteris* (*Onoclea Struthiopteris*, *Struthiopteris Germanica*), which occurs also in Europe, the bright-green sterile fronds are broadly lanceolate and bipinnatifid, from 3 to 6 feet high, with the lower pinnæ reduced in size. The sterile fronds, which appear late in the season, are much smaller and usually devoid of leafy tissue, with the crowded sori wholly concealed beneath the strongly revolute margins of the contracted, bead-like pinnate divisions. There is, besides, an Asiatic species, in most respects similar.

Matthean (ma-thē'ạ̈n), *a.* [L. *Matthæ*(*us*) + *-an.*] Of or pertaining to St. Matthew or to the Gospel attributed to him.

matting^{2}, *n.* **3.** In stained glass, color laid on to deaden a surface or to render glass less transparent.

mattoid (mat'oid), *n.* [It. *mattoide*, madman, < *matto*, < ML. *mattus*, stupid, dull, + *-oide*, E. *-oid.*] One who exhibits symptoms of mental degeneration but is not positively insane; a semi-insane person; a crank: a term used by Lombroso to designate a semi-insane person whose ideas and aims (often of a literary or artistic character), while they may simulate those of talent and even of genius, are marked by radical absurdities which the patient is unable, through mental weakness, to perceive.

mattowacca (ma-tō-wak'ạ̈), *n.* [Appar. an Amerindian name.] Same as *gizzard-shad.*

mattras, *n.* Same as *matrass.*

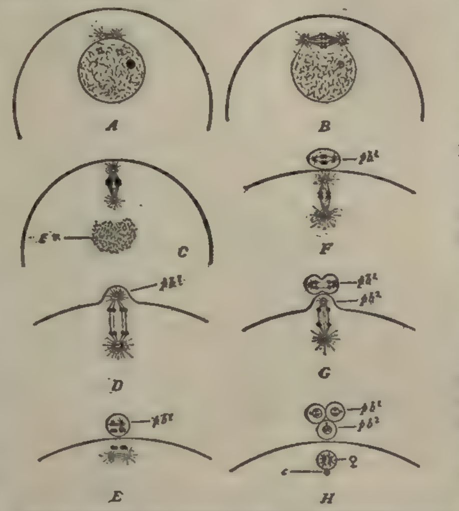
Mattress blanket. See ★*blanket.*

mattress-wire (mat'res-wīr), *n.* Fine steel wire used for making wire mattresses.

matura (mā-tū'rạ̈), *n.* Same as *imago.* [Rare.]

> Exception is taken to the use of the words "imago" and "imagine," introduced by Linnæus, as representing the final stage of insect metamorphosis, and "*matura*" (maturo = to ripen) is suggested and employed as a substitute, conforming conveniently with the accepted terms for the earlier stages—larva and pupa.
> *Nature*, March 30, 1905, p. 521.

maturation, *n.* **3.** In *cytol.* and *embryol.*, the final stage in the development of the germ-cells (ovum and spermatozoön). This stage is characterized by certain changes in the chromosomes, especially a reduction in their number to one half of that of the chromosomes in the somatic or body cells. *Parker and Haswell*, Zoology, I. 18.



Diagrams showing the essential facts in the maturation of the egg. The somatic number of chromosomes is supposed to be four. *A*, initial phase, two tetrads have been formed in the germinal vesicle; *B*, the two tetrads have been drawn up about the spindle to form the equatorial plate of the first polar mitotic figure; *C*, the mitotic figure has rotated into position, leaving the remains of the germinal vesicle at *g.v.*; *D*, formation of the first polar body, each tetrad divides into two dyads; *E*, first polar body formed, two dyads in it and in the egg; *F*, preparation for the second division; *G*, second polar body forming and the first dividing, each dyad divides into two single chromosomes; *H*, final result, three polar bodies and the egg-nucleus, ♀, each containing two single chromosomes (half the somatic number); *c*, the egg-centrosome which now degenerates and is lost. (From Wilson's "The Cell.")

mature, *a.* **5.** In *phys. geog.* and *geol.*, noting the stage of maximum development; specifically, noting a stage in the cycle of erosion when the fullest development of variety in forms and of activity in processes is attained.

> The usual outlines of a *mature* lake-shore in consequence of wave-action. *Geog. Jour.* (R. G. S.), XVI. 447.

Mature river, topography. See ★*river*2, ★*topography.*

maturer (mạ̄-tūr'ėr), *n.* One who, or that which, matures; whatever serves to ripen or bring to maturity; something added, as to ale, to ripen or mature it: as "sorrow is a great *maturer* of judgment," *Addison.*

maturescence (mat-ụ̄-res'ẹns), *n.* [See *maturescent.*] The process of becoming mature; maturation.

maturity, *n.* **4.** In *phys. geog.*, that stage in the geographical cycle or cycle of erosion when the fullest development of variety in forms and of activity in processes is attained. It lies between the uncarved forms of youth and the worn-down forms of old age.

Matuta (mā-tū'tạ̈), *n.* [NL., < L. *Matuta*, a surname of Ino, a sea-deity.] The typical genus of the family *Matutidæ.* It is noted for its powers of swimming and burrowing. *Fabricius*, 1798.

Matutidæ (mā-tū'ti-dē), *n. pl.* [NL., < *Matuta* + *-idæ.*] A family of oxystomatous brachyurous crustaceans, having much the same characters as the *Calappidæ* except that the third maxillipeds have the three terminal joints concealed beneath the triangular acute fourth joint. It includes the genera *Matuta* and *Hepatus.*

matutinary (mạ̄-tū'ti-nạ̄-ri), *a.* [L. *matutin*(*us*) + *-ary.* See **matutinal.**] Same as *matutinal.* [Rare.]

> We were aroused at four o'clock this morning; had some eggs and coffee, and were ready to start between five and six; being thus *matutinary*, in order to get to Terni in time to see the falls.
> *Hawthorne*, Fr. and Ital. Note-books, I. 239.

maty^{3} (mā'ti), *n.*; pl. *maties* (-tiz). [Dim. of *mate*^{1}.] **1.** A mate; a companion.—**2.** A dockyard carpenter, shipwright, or artificer. [Eng.]

mau (mou), *n.* A tsetse-fly.

maud^{2} (mâd), *n.* [Origin obscure.] A salmon-net stretched around four stakes in the form of a square.

maudlinize (mâd'lin-īz), *v. t.*; pret. and pp. *maudlinized*, ppr. *maudlinizing.* To make maudlin-drunk. [Rare.]

> *Mi.* Pledge her, good brother.
> *Gab.* I do—
> *Mi.* I hope 't will *maudlenize* him.
> *R. Brome*, Covent-Garden Weeded, iv. 1.

Maugrabee (mâ' gra-bee), *n.* Same as *Mograbin.*

Maugrabin, *n.* Same as *Mograbin.*

maul^{1}, *n.* Specifically—2. In *well-boring*, a heavy block of wood used like the ram of a pile-driver to drive pipe into the ground for water or preliminary to boring in the rock below.—**Double-headed maul**, a large iron hammer the two ends of which are equal in size, both of them steel-faced, and which is used for driving bolts.—**Single-headed maul**, a large iron hammer having a flat head, steel-faced at one end and with a point at the other.

maul^{5} (mâl), *n.* Same as *mold*^{2}, *n.* [Prov.]—**Black mauls**, a fungous disease of willows, in Ireland, attributed to a pyrenomycetous fungus, *Physalospora gregaria.*

maulavi, *n.* Same as ★*maulvi.*

maulvi (moul'vi), *n.* [Also *moulvi*, *maulavi*, *molavee*, etc. Hind. *maulavī*, *maulvī*, in popular speech *mulvī*, also *maulī*, *maulbī*, < Ar. *maulawī* (*maulavī*, *maulvī*): see *molla.*] In Hindu Mohammedan use, a judge; a doctor (of the law): a common title of learned men, professors of the law and literature.

maungee, *n.* See ★*manjee.*

mauve, *n.*—**Acid mauve.** See ★*acid-mauve.*

maux (mâks), *n.* [See *mawk*^{2}.] A slattern; a woman of low character; a prostitute. [Obs. or dial.]

mauzeliite (mou-zā'li-īt), *n.* [Named after R. *Mauzelius*, a Swedish chemist, who analyzed it.] A titano-antimonate of lead and calcium occurring in dark-brown octahedrons at Jakobsberg, Sweden.

mavourneen (mạ-vör'nēn), *n.* [Ir. *mo*, my; *mūirnīn*, darling, dim. *muirn*, joy, affection.] My darling; darling: an Irish term of endearment.

> Kathleen *mavourneen!* the grey dawn is breaking.
> *Annie Barry Crawford.*

maw-bound, *a.* **II.** *n.* Same as ★*grain-sick.*

Mawworm^{2} (mâ'wėrm), *n.* A man who resembles Mawworm, a character in Bickerstaffe's play "The Hypocrite," 1769; a hypocritical pretender to sanctity. *N. E. D.*

> A man naturally likes to look forward to having the best. He would be the very *Mawworm* of bachelors who pretended not to expect it.
> *George Eliot*, Middlemarch, I. ii.

Mawwormish (mâ'wėrm-ish), *a.* Characteristic of Mawworm. See *Mawworm*^{2}.

> He [Luther] was no sour Sabbatarian, no *mawwormish* mar-joy. He had music in his soul.
> *Karl Blind*, in Gentleman's Mag., CCLV. 488.

max^{2} (mäks), *n.* [A native name in Yucatan.] A Central American curculionid beetle whose larva burrows into the sisal plant in Yucatan.

> Next to fire, a large, long-nosed black beetle is the greatest enemy of the cultivated sisal. It is known to the natives as the "*max.*"
> *Sci. Amer. Sup.*, May 9, 1903, p. 22869.

maxillary. **I.** *a.*—**Maxillary index.** See ★*index.*—**Maxillary neuralgia.** Same as *facial* ★*neuralgia.*

II. *n.* **2.** The posterior of the two bones which border the upper jaw in osseous fishes. It usually bears teeth in the soft-rayed fishes, but in the spiny-rayed fishes the teeth are confined to the premaxillary.—**Supplemental maxillary**, an auxiliary bone found on the upper or posterior edge of the maxillary of some species of fishes.

maxillitis (mak-si-lī'tis), *n.* [NL., < *maxilla* + *-itis.*] Inflammation of the maxilla or jaw.

maxillolabial (mak-sil-ō-lā'bi-ạl), *a.* [L. *maxilla*, jaw, + *labium*, lip, + *-al*^{1}.] Pertaining to both the maxilla and the labium. *Buck*, Med. Handbook, I. 435.

Maximianist (mak-sim'i-ạ̈n-ist), *n.* [*Maximianus* + *-ist.*] An adherent of one of the extreme sects of the Donatist heresy in the fourth century: so called from its leader Maximianus, bishop of Carthage.

Maximilianea (mak-si-mil-i-ā'nẹ̄-ạ̈), *n.* [NL. (Martius, 1819), named in honor of *Maximilian* I. (1756–1825), King of Bavaria, who supported Martius in his earlier botanical exploration of Brazil.] A genus of plants of the family *Cochlospermaceæ.* They are trees or shrubs, with palmately lobed leaves preceded by the conspicuous yellow flowers, which are borne in small racemes or panicles. There are about 13 species, widely distributed in the tropics, but confined to arid habitats. *M. Gossypium*, of India, is a small tree which produces kuteera gum, a substitute for gum tragacanth. In *M. nilotica*, an African species, the permanent stem from which the flower and leaf shoots spring is almost subterranean. The thickened underground portion of the West African *M. tinctoria* produces a yellow dye. See *Cochlospermum.*

maximite (mak'sim-īt), *n.* [Named from its inventor, Hudson *Maxim.*] An explosive, invented by Hudson Maxim, consisting largely of picric acid: used as a bursting-charge for large projectiles.

> *Maximite*, the new high explosive which has been adopted by the United States Government as a bursting

> charge for shell, is one of the most powerful high explosive compounds known to science, being about fifty per cent. more powerful than pure nitro-glycerine. Among commercial high explosives, it is equalled only in shattering force by nitro-gelatine and pure picric acid. . . . The experiments at Sandy Hook which finally resulted in the adoption of *Maximite* were very thorough and exhaustive.
>
> *H. Maxim*, in Jour. Mil. Serv. Institution U. S., Nov., [1901, pp. 347, 348.

maximum, *a.*—**Maximum stress.** See ★*stress*^{1}.—**Principle of maximum work.** See ★*work.*

maxtle (mäsh′tle), *n.* [Mex. Sp., ‹ Nahuatl (of Mexico) *maxtlatl.*] The popular name in Mexico, New Mexico, and Central America for the breech-clout.

maxwell (maks′wel), *n.* [Named for J. Clerk *Maxwell*, an eminent mathematician and physicist.] The c. g. s. unit of magnetic flux; the flux which, acting upon a unit magnet-pole, will repel it with a force of one dyne; the flux per square centimeter of cross-section in a field of unit flux density.

mayacaceous (mā-ya-kā′shius), *a.* Belonging to the plant family *Mayacaceæ.*

Mayad clover. See *Trifolium.*

Mayall's albumin negative process. See ★*process.*

Mayan (mī′a̤n or mä′ya̤n), *a.* and *n.* [*Maya* + *-an.*] **I.** *a.* Of or pertaining to the Mayas.

II. *n.* A linguistic family of North America including numerous languages spoken in southern Mexico and Central America.

maycock^2 (mā′kok), *n.* [Also *macock*; formerly also *macokos*; from one or more Indian forms corresponding to Virginian (Powhatan?) *mahawk*, gourd, Delaware (Lenâpé) *machgachk*, pumpkin.] A species of squash or pumpkin. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 247. [Now local in Virginia.]

May-dewing (mā′dū″ing), *n.* The custom of washing the face in dew on May-day, or on the first Sunday in May, to secure lasting beauty of complexion. The custom still exists in some places in England. See *May-dew, n.*

> The quaint old custom of *May-dewing*, or washing the face in dew, on the first Sunday in May . . . was observed yesterday by a large number of Blackburn girls and women. *Standard* (London), May 8, 1905.

Mayepea (mā-ep′ẹ̄-a̤), *n.* [NL. (Aublet, 1775), prob. from a native Guiana name of the type species, *Mayepea Guianensis.*] A genus of dicotyledonous trees or shrubs belonging to the family *Oleaceæ.* See *Linociera.*

Mayfield (mā′fēld), *n.* Same as *placitum.*

> The frequent popular assemblies, whereof under the names of the Mallum, the Placitum, the *Mayfield*, we hear so much under Clovis and Charles were now never summoned. *J. Bryce*, Holy Roman Empire, p. 126.

May-gowan (mā′gou″a̤n), *n.* The common daisy. Also *ewe-gowan.*

May-haw, *n.* This species has the largest flowers and the largest and best-flavored fruit of the genus. In southwestern Louisiana the fruit is largely gathered for the market, being utilized for jellies, etc. Also called *summer haw.*

May Hill sandstone. See ★*sandstone.*

mayoral^2 (mä-yō-räl′), *n.* [Sp., ‹ *mayor*, greater. See *major.*] A head shepherd; an overseer; a leader of a pack-train.

> Our mules toiled along slowly and painfully, urged by the incessant cries of the *mayoral*, or conductor, and his mozo. As the *mayoral's* whip could only reach the second span, the business of the latter was to jump down every ten minutes, run ahead and belabor the flanks of the foremost mules, uttering at the same time a series of sharp howls, which seemed to strike the poor beasts with quite as much severity as his whip.
>
> *B. Taylor*, Lands of the Saracens, p. 406.
>
> Here our conversation was cut short by the *Mayoral* of the diligence, who came to tell us that the mules were waiting; and before many hours had elapsed, we were scrambling through the square of the ancient city of Burgos. *Longfellow*, Outre-Mer, p. 173.

mayorazgo (mä-yō-räth′gō), *n.* [Sp., ‹ *mayor*, ‹ L. *major*, elder. See *major.*] In *Sp. law*, same as *majorat*, 1.

maysin (mā′zin), *n.* [NL. *mays, maïs*, maize, + *-in*^{2}.] See ★*maisin.*

may-star (mā′stär), *n.* Same as *star-flower* (*a*).

Maytenus (mā′te-nus), *n.* [NL. (Molina, 1782), from *mayten*, the Chilean name of *Maytenus Boaria.*] A genus of plants of the family *Celastraceæ.* They are upright trees or shrubs with alternate evergreen leaves and small white, yellow, or reddish flowers, either single in the axils of the leaves or in axillary, often clustered, cymes. There are about 70 species, natives of tropical and subtropical America. One, *M. phyllanthoides*, grows wild as far north as southern Florida. *M. Boaria*, a Chilean species, is planted as an ornamental tree in California as far north as San Francisco. It has pendulous branches, small ovate-lanceolate, glandular-serrate, thin leaves, and inconspicuous flowers followed by fruit with scarlet arils.

May-term (mā′tėrm), *n.* The Easter-term at the University of Cambridge, England. [Eng. colloq.]

May-week (mā′wēk), *n.* The week of the May races at Cambridge, England. *N. E. D.*

May-wine (mā′wīn), *n.* Same as *May-drink.*

may-wings (mā′wingz), *n.* Same as ★*gay-wings.*

mazagran (mä-zä-grän′), *n.* [*Mazagran*, a village of Algeria.] Black coffee sweetened and served with cracked ice in a long, slender glass.

mazamorra (mä-thä-mor′a̤), *n.* [Sp. *mazamorra.*] **1.** In Spanish use, breadcrumbs used in a soup or mush.—**2.** In Peru, a dish consisting of a sweet mush made of various fruits; also, a kind of custard.—**3.** In Bolivia, a mud-flow or mud-slide. Such slides occur frequently in the gorges around La Paz, the capital of Bolivia, during the rainy season, and are very dangerous for inexperienced travelers. The mud, however, soon hardens and forms a deep and sterile crust. Portions of the once fertile gorge of the La Paz river have been completely ruined by mud-flows which, in places, attained a thickness of ten to twenty feet.

mazar (mä-zär′), *n.* [Also *masar*, ‹ Ar. *mazār*, a shrine visited by pilgrims, ‹ *zār*, he visited, *ziyārah*, a visit.] A tomb of a saint regarded as a shrine. Also *masar.*

Mazeutoxeron (maz-ụ̄-tok′sẹ-ron), *n.* [NL. (Labillardière, 1798).] A genus of plants of the family *Rutaceæ.* They are shrubs or small trees, usually clothed with stellate hairs, and have ovate or lanceolate opposite entire leaves, and rather large pendent white, green, yellow, or red flowers, with the four petals connate at the base or nearly to the apex into a bell-shaped or tubular corolla, and 8 usually exserted stamens. There are 6 or more species, natives of Australia. *M. speciosum* (*Correa speciosa* of Aiton), the native fuchsia of Australia, and other species are sometimes cultivated in greenhouses.

mazic (mā′zik), *a.* [Gr. μᾶζα, a cake (representing NL. *placenta* in its L. sense, a cake), + *-ic.*] Of or pertaining to the placenta; placental.

mazolysis (mạ-zol′i-sis), *n.* [NL., ‹ Gr. μᾶζα, a cake (representing NL. *placenta*), + λύσις, a loosening.] Separation of the placenta.

mazopathia (maz-ọ̄-path′i-a̤), *n.* [NL., ‹ Gr. μᾶζα, a cake (representing NL. *placenta*), + πάθος, disease.] Any placental disease.

mazuca (ma-zö′ka̤), *n.* [Also *masooka*; appar. an aboriginal name.] A sciænoid fish, *Leiostomus xanthurus*, found on the Atlantic and Gulf coasts of the United States.

mazun (mä-tsön′), *n.* See the extract.

> Lastly, mention should be made of the "*mazun*" of the Armenians from the milk of the bison or goat, but is also prepared from the milk of cows, and possesses a pleasant acid taste similar to that of kefir. It serves as acidifying material in the case of churning wherewith the butter assumes a pleasant aroma. Moreover, it serves as a beverage, and also for the production of various milk foods. The preparation is carried on in a way similar to that of kefir and koumiss, the lactic acid and alcohol fermentation probably takes place here also in a symbiotic manner. *Sci. Amer. Sup.*, Jan. 25, 1908, p. 63.

M. B. An abbreviation (*a*) of the Latin *Medicinæ Baccalaureus*, Bachelor of Medicine; (*b*) of the Latin *Musicæ Baccalaureus*, Bachelor of Music; (*c*) of "mark of the beast," in allusion to the popular belief that the garment described below smacked of popery.—**M. B. waistcoat**, a kind of waistcoat with no opening in front, worn by Anglican clergymen (originally, about 1840, only by adherents of the Tractarian party, but afterwards by many belonging to other schools). *N. E. D.*

mbalolo (mbä′lō-lō), *n.* The native name in Samoa and Fiji for the palolo worm, *Palolo viridis.* An indication of the relative abundance of these worms is the fact that October is called *mbalolo lailai* (little), and November, *mbalolo levu* (large).

mbco. A contraction of *marks banco.*

M. B. F. & H. An abbreviation of the Latin *Magna Britannia, Francia et Hibernia*, Great Britain, France and Ireland.

mbira (mbē′ra̤), *n.* [S. African.] A South African musical instrument allied to the zanze.

M. B. Sc. An abbreviation of *Master of Business Science.*

M. C. An abbreviation (*b*) of the Latin *Magister Chirurgiæ*, Master of Surgery; (*c*) of *Master of Ceremonies.*

M/c. An abbreviation of *metallic currency.*

McBurney's point. See ★*appendicitis.*

McCay's circles. See ★*circle.*

M. C. E. An abbreviation of *Master of Civil Engineering.*

Mch. A contraction of *March.*

M. C. L. An abbreviation of *Master of Civil Law.*

M. C. P. An abbreviation of *Member of the College of Preceptors.*

M. C. S. An abbreviation of *Madras Civil Service.*

M. D. An abbreviation (*c*) of *Middle Dutch*; (*d*) [*l. c.*] of *months* (*after*) *date.*

Md. A contraction of *Maryland.*

m/d. An abbreviation of *month's date.*

M. D. E. An abbreviation of *Master of Domestic Economy.*

Mdlle. A contraction of the French *Mademoiselle*, Miss.

Mdm. A contraction of *Madam.*

M. D. S. An abbreviation of *Master of Dental Surgery.*

M. D. V. Same as ★*V. D. M.*

mdse. A contraction of *merchandise.*

M. E. An abbreviation (*d*) of *Master of Engineering*; (*e*) of *Mechanical Engineer*; (*f*) of *Military Engineer*; (*g*) of *Most Excellent.*

Me. A contraction of *Maine.*

meadow, *n.*—**Mountain meadow**, an open grassy valley-floor or basin among mountains.

> The *mountain meadows* and deer parks, which constitute a feature of considerable importance because of their area in the mountain regions of both the eastern and the western portions of the United States.
>
> *Yearbook of U. S. Dept. Agr.*, 1900, p. 585.

meadow-bell (med′ō-bel), *n.* The harebell.

meadow-grass, *n.*—**Alkali meadow-grass.** See ★*alkali-grass*, 2.—**Pungent meadow-grass.** Same as ★*stink-grass.*

meadow-lily (med′ō-lil″i), *n.* Same as *Canada* ★*lily.*

meadow-parsnip, *n.*—**Golden meadow-parsnip**, *Zizia aurea*, an umbelliferous plant which closely resembles the meadow-parsnip and has bright yellow flowers: found throughout North America east of the Great Plains.

meadow-shoe (med′ō-shö), *n.* A flat iron disk or sole designed to be attached to a horseshoe to prevent the horse from sinking in soft or wet ground.

meadow-wink (med′ō-wingk), *n.* A name sometimes given to the bobolink.

meakin (mē′kin), *n.* The spiked water-milfoil, *Myriophyllum spicatum*, found throughout most of the northern hemisphere.

meaking (mē′king), *n.* *Naut.*, the act of running old oakum out of the deck or bottom seams of a vessel, preparatory to recalking.

meal^1, *n.*—**Germ-oil meal**, a trade-name of the ground cake left after expressing oil from the germs of the kernels of maize or Indian corn. It is used as food for cattle.—**Whole meal**, meal or flour from which the bran has not been removed by bolting.

meal-hour (mēl′our), *n.* The hour or time at which a meal is or should be served; specifically (*naut.*), the interval during which the meal-pennant is displayed. The term has no reference to length of time.

mealiness, *n.* **3.** In *photog.*, a defect in silver-printing, in which the surface of the print presents a peculiar mottled appearance, due generally to a too weak sensitizing-bath. *Woodbury*, Encyc. Dict. of Photog., p. 277.

mealing (mē′ling), *a.* Pertaining to the reduction of some substance, as a cereal, to meal by grinding.

> A very interesting *mealing* outfit was encountered on the hillside above the dwelling and near the margin of the mine. *Rep. U. S. Nat. Mus.*, 1900, p. 169.

mealing-plate (mē′ling-plāt), *n.* A plate having teeth for grinding materials, such as acorns, to meal.

> Plates 10 and 11 serve to illustrate two of the first steps in the acorn industry, the carrying and hulling of the acorns, and the use of the *mealing plate* in grinding.
>
> *Rep. U. S. Nat. Mus.*, 1900, p. 172.

mealing-trough (mē′ling-trôf), *n.* A trough or box of wood or stones about 2 feet wide, 8 inches high, and several feet long, separated by partitions into several compartments (usually three), each of which contains a metate or slab for grinding corn: used by the Indians of the Southwest and Mexico.

meal-moth, *n.*—**Indian meal-moth.** See ★*moth.*

meal-tree (mēl′trē), *n.* The wayfaring-tree, *Viburnum Lantana.*

meal-worm, *n.* **2.** In *angling*, a worm bred in meal or flour, used for bait in fishing.

> The *meal-worm*, which is perhaps the least troublesome, breeds amongst the refuse sweepings of flour mills.
>
> *H. Cholmondeley-Pennell*, Mod. Pract. Angler, p. 229.

mealy, *a.* **6.** Starchy; farinaceous. See ★*starchy*^{2}, 2.

mealy-back (mē′li-bak), *n.* A local name for a grasshopper. [Australia.]

mealy-wing (mē′li-wing), *n.* Any member of the homopterous family *Aleurodidæ*; a white fly.

mean³. **I.** *a.*—**Mean longitude.** (*b*) The middle longitude; the point half-way between two longitudes; the meridian equidistant between two other meridians.—**Mean point,** of a polygon or polyhedron, the mass-center of a system of equal particles situated at the vertexes or summits.—**Mean sphere, spheroid.** See ★*sphere*, ★*spheroid*.

II. *n.* **10.** The abscissa of the center of gravity of the variates or of the frequency polygon. It is found by the formula $M=\frac{\Sigma(V.f)}{n}$ where V is the magnitude of any class, *f* its frequency, and *n* the number of variates. —**Mean of the altitudes,** in *nav.*, the average obtained in a series of altitudes by dividing the aggregate of the degrees, minutes, and seconds of an arc by the figure which represents the number of altitudes taken.—**Mean of the latitudes,** in *nav.*, the middle latitude (which see, under *latitude*).—**Mean of the tides,** the average high- or low-water mark.—**Weighted mean,** the mean value of a series of observations, obtained by assigning to each its proper weight or importance, instead of assuming all to be of equal significance in the computation of the result.

meander, *n.* **4.** In *phys. geog.*, a self-developed river-curve suitable to the volume of the stream.

> The terms "*meander*" and "shut in," and the like, have a definite enough geomorphological meaning, as appears clearly from Mr. Marbut's use of them, but we cannot help feeling that they sound crude and angular, more conformable in style to the German language than to our own. *Geog. Jour.* (R. G. S.), IX. 666.

meandriform (mẹ-an′dri-fôrm), *a.* Meandrine: labyrinthine.

meandriniform, *a.* Same as *mæandriniform*.

meanness, *n.* **4.** A mean, vindictive spirit. [Dialectal, southern U. S.]

> He say he gwine lef he mark on you, marster, and Marse Bruce, an' on dat ole man . . . and de young lady over dyah. . . . Dat man 's got *meanness* in him!
> *Thomas Nelson Page*, On Newfound River, xvi.

meas. An abbreviation of *measure*.

measles, *n.* **5.** In *photog.*, a defect in silver-printing consisting in semi-opaque blotches caused by imperfect fixation by the insoluble silver hyposulphite visible when the prints are held to the light. In time these spots become yellow.—**Bastard measles,** rubella.—**Black measles,** a malignant form of measles formerly of not infrequent occurrence, perhaps the result of the method of treatment adopted. *Syd. Soc. Lex.*—**Confluent measles.** (*a*) A form of measles in which the eruption is so thick that the separate lesions coalesce. (*b*) Same as *scarlet fever*.—**Hemorrhagic measles.** Same as *black measles*.—**Pork measles,** an infection of pork with the bladder-worm stage (*Cysticercus cellulosæ*) of *Tænia solium*, the 'armed' tapeworm of man. See also ★*cysticercosis*.—**Spanish measles.** Same as *anthracnose*.

measure, *n.* **12** (*c*) Specifically, in *organ-building*, the proportion of the diameter of flue-pipes, or of a stop of such pipes, to their length: as, a diapason pipe is made on a wider or larger *measure* than a gamba pipe. —**Double measure,** in *carp.*, molded or having moldings on both sides: said of a door, a casement-window, a screen of joiner's work, and the like. [Eng.]—**Measure-and-a-half,** having moldings and sunken panels on one side: said of a door. Compare *single* ★*measure* and *double* ★*measure*. [Eng.]—**Measure of a dihedral,** the angle of two perpendiculars to the edge of a dihedral, one in each face.—**Measure of an arc,** the sect connected with an arc such that if the arc is cut into two arcs, this sect is the sum of their sects and is not less than the chord of the arc nor, if the arc is minor, greater than the sum of the sects on the tangents from the extremities of the arc to their intersection.—**Measure of an area,** the sum of the measures of the areas of all the triangles into which an area is cut in any given partition, the measure of the area of a triangle being half the product of a base and its corresponding altitude.—**Measure of length,** in terms of a given unit, the number specifying how often the unit is contained in the length.—**Measure of time,** in *astrol.*, the method of ascertaining the periods of events by converting the arc of direction into time. See *equation of arcs of* ★*direction*.—**Measure of volume,** the sum of the measures of volume of all the tetrahedra in any given partition, the measure of the volume of a tetrahedron being one third the product of the area of a face and its corresponding altitude.—**Paris measure,** the system of measures employed in France previous to the adoption of the metric system. The term is applied most frequently to measures of length, such as the Paris foot (pied), Paris inch (pouce), and Paris line (ligne).—**Riemann's measure of curvature.** When the infinite number of two-dimensional ordinary measures of curvature at a point are constant and equal to all the measures of curvature at any other point, there exists what Riemann calls a manifold of constant curvature.—**Single measure,** having no moldings or relief, as a panel framed on either side: said of a door. Compare *double* ★*measure* and ★*measure-and-a-half*. [Eng.]—**Surveyors' measure,** the system of denominate multiple units for linear measurements in land-surveying, in which the primary unit is the surveyors' chain of 4 rods or 66 feet, divided into 100 smaller units called 'links.' See *chain*, 3.

measure-bar (mezh′ṳ̄r-bär), *n.* In *musical notation*, same as *bar*¹, 11: used only when it is necessary to distinguish an ordinary bar from a ★*line-bar* (which see).

measure-sign (mezh′ṳ̄r-sīn), *n.* In *musical notation*, same as *rhythmical signature* (which see, under *rhythmical*).

measuring-day (mezh′ṳ̄r-ing-dā), *n.* In *mining*, the day when the mine foreman or other official measures the work done by the contract miners. [Scotch.]

measuring-motion (mezh′ṳ̄r-ing-mō″shọn), *n.* A mechanism for measuring the size or amount of the product of a machine: as, for example, the size of a full lap on a ribbon lap-machine, in cotton-manufacturing. *Thornley*, Cotton Combing Machines, p. 17.

measuring-roller (mezh′ṳ̄r-ing-rō″lėr), *n.* A roller, or small beam, as part of the warp-delivering mechanism of a loom for measuring the amount of yarn woven. *T. W. Fox*, Mechanism of Weaving, p. 443.

measuring-spout (mezh′ṳ̄r-ing-spout), *n.* In a boiler-room where the coal is stored in overhead bunkers, a chute for delivering the coal to the floor in front of the fire-doors of a battery of boilers. It consists of a sheet-metal chute which has gates above and below, and is controlled by a locking-rod so that the upper gate cannot be opened to admit the coal to the chute until the lower gate is closed. When the chute is full and the supply is cut off, the chute contains a fixed weight of coal. When the coal is discharged below, a counting device registers the weight delivered. The spout swings about a fixed center to distribute the coal to two or more boilers.

measuring-weir (mezh′ṳ̄r-ing-wēr), *n.* A low, small, submerged dam, or obstruction of wood, metal, or masonry which affords a method of measuring water, particularly that used in irrigation and in water-power.

measuring-wheel, *n.* **2.** Same as ★*curvometer*. *Geog. Jour.* (R. G. S.), XVIII. 442.

measuring-worm, *n.*—**Pine measuring-worm.** See *pine* ★*span-worm*.

meat¹, *n.* **8.** *pl.* The trade-name for cotton-seed from which the remains of fiber ('lint') and husk ('hulls') have been removed and which is ready for crushing.

meat-crusher (mēt′krush″ėr), *n.* A small machine having two corrugated rollers between which steaks are passed to make them tender.

meat-flour (mēt′flour), *n.* Meat dried at a low temperature and ground to a powder. *Syd. Soc. Lex.*

meat-fruit (mēt′fröt), *n.* The fruit of *Artocarpus incisa*. *Syd. Soc. Lex.*

meat-man (mēt′man), *n.* A butcher; a man who sells meat. *Dialect Notes*, III. iii. 194. [U. S.]

meatoscope (mẹ-ā′tọ-skōp), *n.* [L. *meatus*, meatus, + Gr. *σκοπεῖν*, view.] A form of speculum employed in examining the anterior extremity of the urethra.

meatoscopy (mē-a̤-tos′kọ-pi), *n.* [*meatoscope* + *-y*³.] The inspection, especially by instrumental means, of any meatus, such as the anterior extremity of the urethra or the vesical orifices of the ureters.

meatotome (mẹ-ā′tọ-tōm), *n.* [NL. *meatus*, meatus, + Gr. *-τομος*, < *ταμεῖν*, cut.] A knife employed in the operation for enlargement of a meatus.

meatotomy (mē-a̤-tot′ọ-mi), *n.* [*meatotome* + *-y*³.] Division of the rim of a meatus, usually of the urethra, in order to enlarge it.

meat-rocker (mēt′rok″ėr), *n.* A meat-mincing knife which has a curved blade and a handle at each end: used with a rocking motion.

M. E. C. An abbreviation of *Member of Executive Council*.

mecenic (mẹ-sen′ik), *a.* [*mec*(*onic*) + *-ene* + *-ic.*] Noting an acid, a colorless compound, $HOC_5HO(COOH)_2$, prepared from meconic acid. It crystallizes in prisms and melts at 146° C.

M. E. Ch. An abbreviation of *Methodist Episcopal Church*.

mechanic, *n.* **5.** A professional card-shuffler usually employed to deal faro in brace games. [Slang.]

mechanical. I. *a.*—**Mechanical arithmetic, effect, equivalent of light, momentum, sense.** See ★*arithmetic*, etc.

II. *n.* **2.** *pl.* The trade-name for common articles, such as overshoes, of vulcanized india-rubber, made by molding, and often of old reworked material.

mechanical-esthetic (mẹ-kan″i-kal-es-thet′-ik), *a.* In *psychol.*, noting T. Lipps's theory of the geometrical-optical illusions. See *law of mechanical-esthetic* ★*unity*.—**Mechanical-esthetic theory.** See ★*theory*.

mechanicalism (mē-kan′i-ka̤l-izm), *n.* [*mechanical* + *-ism.*] The character of being mechanical; mechanical action or procedure; specifically, in *philos.*, the mechanical interpretation of the universe.

> Yet, admitting what that patient *mechanicalism* may have done for modern civilization, one must not . . . under-estimate the force of personality.
> *Athenæum*, May 6, 1905, p. 558.

mechanicophysical (mẹ kan″i-kō-fiz′i-ka̤l), *a.* Pertaining to, or dependent on, both mechanics and physics.—**Mechanicophysical theory of evolution.** See ★*evolution*.

mechanicotherapeutics (mẹ-kan″i-kō-ther-a̤-pū′tiks), *n.* The treatment of disease by mechanical means, such as gymnastics, massage, vibration, etc.

mechanicotherapy (mẹ-kan″i-kō-ther′a̤-pi), *n.* Same as ★*mechanicotherapeutics*.

mechanics, *n.*—**Abstract mechanics.** Same as *rational* ★*mechanics*.—**Animal mechanics,** the science of mechanics as applied to the human body or to the body of any animal.—**Applied mechanics,** the statical and dynamical investigation of machines and engineering construction.—**Celestial mechanics,** that portion of astronomy which deals with the motions of the heavenly-bodies.—**Developmental mechanics.** See ★*developmental*.—**Non-Euclidean mechanics,** rational mechanics in which the geometry interwoven is non-Euclidean.—**Pure mechanics.** Same as *rational* ★*mechanics*.—**Rational mechanics.** (*a*) See *rational*. (*b*) The science which explains natural phenomena by depicting them with mathematical precision as dependent solely upon relations of motion.—**Social mechanics,** that part of sociology which treats of social forces and their operation in so far as they act mechanically and according to the laws of motion. *L. F. Ward*, Dynamic Sociol., 503.—**Statistical mechanics,** that portion of mechanics which deals with a great number of systems of the same nature differing in configuration and velocities, not merely infinitesimally, but also in such a way as to embrace every conceivable combination of configuration and velocities.

> The laws of *statistical mechanics* apply to conservative systems of any number of degrees of freedom, and are exact. *J. W. Gibbs*, Statistical Mech., Pref., p. viii.

Technical mechanics, the mechanics of construction and manufacture.—**Theoretical mechanics.** Same as *rational* ★*mechanics*.

mechanotherapy (mek″a̤-nọ-ther′a-pi), *n.* [Gr. *μηχανή*, a machine, + *θεραπεία*, healing.] Cure by mechanical means; mechanicotherapeutics.

mechloic (mẹ-klō′ik), *a.* [*me*(*conin*) + *chlo*(*rin*) + *-ic.*] Noting an acid, a colorless compound, said to be formed by the action of chlorin on meconin. It crystallizes in quadratic prisms and melts at 150° C. It does not contain chlorin.

mecistocephali (mẹ-sis-tọ-sef′a̤-lī), *n. pl.* In *anthrop.*, persons having a cephalic index less than 71. *Huxley*, Scientific Memoirs, III. 215.

mecistocephalic (mẹ-sis″tọ-se-fal′ik), *a.* Same as ★*mecistocephalous*. *Jour. Anthrop. Inst.*, 1872, p. 314.

mecistocephalous (mẹ-sis-tọ-sef′a̤-lus), *a.* [Gr. *μήκιστος*, longest, tallest, greatest, + *κεφαλή*, head, + *-ous.*] In *anthrop.*, having a cephalic index less than 71.

mecistocephaly (mẹ-sis-tọ-sef′a̤-li), *n.* [See ★*mecistocephalous*.] The character of being mecistocephalous.

> While A is the widest, B is the narrowest normal skull I have met with, its index being only 629. It is, therefore, an extremely marked example of *mecistocephaly*.
> *Huxley*, Scientific Memoirs, III. 218.

meck (mek), *n.* [D. *mik*, a forked stick.] A notched piece of wood in a whale-boat, upon which to rest the harpoons.

Meckelectomy (mek-e-lek′tọ-mi), *n.* [*Meckel*(*'s ganglion*) + Gr. *ἐκτομή*, excision.] Excision of Meckel's ganglion.

Meckelian bar. Same as *Meckelian rod*. See *rod*¹.

Meckel's diverticulum. See ★*diverticulum*.

Mecklenburgian epoch. See ★*epoch*.

mecocephalic (mē″kō-se-fal′ik), *a.* [Gr. *μῆκος*, length, + *κεφαλή*, head, + *-ic.*] Same as *dolichocephalic*. *Huxley*.

mecodont (mē′kọ-dont), *a.* Pertaining to or having the characters of the *Mecodonta*.

Mecodonta (mē-kọ-don′ta̤), *n. pl.* [NL., < Gr. *μῆκος*, length, + *ὀδούς*, tooth.] A division of the *Salamandridæ*, having the palatal teeth situated on the inner sides of the palatal processes, forming two parallel rows diverging behind.

meconial (mẹ-kō′ni-a̤l), *a.* [L. *meconi*(*um*) + *-al*¹.] Of or pertaining to meconium, in any sense.

meconinic (mek-ọ-nin′ik), *a.* [*meconin* + *-ic.*] Pertaining to meconinic acid or meconin. —**Meconinic acid,** a hypothetical compound, $C_{10}H_{12}O_5$, known only in the form of its salts and of its anhydrid meconin.

meconism (mek′ǫ-nizm), *n.* [Gr. *μήκων*, poppy, + *-ism.*] Chronic opium poisoning in those addicted to the use of that drug.

meconoisin (mē-kǫ-noi′sin), *n.* A neutral principle, $C_8H_{10}O_2$, contained in opium.

mecopter (mḗ-kop′tėr), *n.* A member of the order *Mecoptera*: a scorpion-fly.

med. An abbreviation (*c*) of *medieval;* (*d*) of *medicinal.*

M. E. D. An abbreviation of *Master of Elementary Didactics.*

medaddy-bush (mḗ-dad′i-bůsh), *n.* The American fly-honeysuckle, *Lonicera ciliata.*

medal, *n.* 2. A small metal badge, usually with a ribbon attached, presented for distinguished service.

He [Lord Roberts] was created K. C. B., G. C. B., and a baronet, received the *medal* with four clasps, and the bronze star, and was given the command of the Madras army. *Encyc. Brit.*, XXXII. 264.

medalary, medallary (med′ąl-ą̄-ri), *n.* [*medal* + *-ary*^{1}.] A collection of medals. [Rare.]

These gentlemen [Visconde de Castilhos and Councillor A. J Viale] kindly showed me the *medallary* struck for the tercentenary festival. The collection is remarkable only for portraying as many men as there are medals.
R. F. Burton, in Athenæum, Jan. 28, 1882, p. 125.

medalize, medallize (med′ąl-īz), *v. t.*; pret. and pp. *medalized*, ppr. *medalizing.* [*medal, n.*, + *-ize.*] To portray on a medal.

Not less remarkable for their technical merit are two medals in which Mr. Legros has transformed two of his models into "personages" of the fifteenth or sixteenth century. . . . Mr. Legros has also *medallised* Mr. Constantine Ionides. *Mag. of Art*, V xvii.

medallionist (mḗ-dal′yǫn-ist), *n.* A worker of medallions. *N. E. D.*

medal-play (med′ąl-plā), *n.* In *golf*, play in which the score is reckoned by counting the total number of strokes taken to complete the round.

medano (mā′dä-nō), *n.* [Sp. *médano, mégano*, a heap of sand, = Pg. *medão*, a heap (*de areia*, of sand), < Sp. Pg. *meda* = OF. *moie* = It. *meta*, Lombard *meda*, a heap, < L. *meta*, a conic post, goal-post, also a conic hill, etc.] A crescentic sand-dune; a barchan.

The dunes called barchanes usually have their greatest extension in a longitudinal direction. This form occurs in the Sahara, in Central Asia, in Peru (where they are called *medanos*), and probably in other localities also.
Geog. Jour. (R. G. S.), IX. 290.

Med. Dir. An abbreviation of *Medical Director.*

medesimo tempo (mą-dā′si-mō tem′pō). Same as ★*istesso.*

medial, *n.* 2. In *entom.*, same as *median vein* (*b*) (which see, under *median*^{1}).—3. In *geom.*, same as ★*median*^{1}, 1.

medialization (mē″di-ąl-i-zā′shǫn), *n.* [*medialize* + *-ation.*] The making of a consonant medial (sonant).

A similar *medialization* is found with ch, s, which in Abenaki are often heard after vowels as j and z respectively. . . . The tendency to *medialization* in ancient times, however, must have been very slight, if it existed at all. *Amer. Anthropologist*, Jan.–March, 1902, p. 24.

medialize (mē′di-ą-līz), *v. t.*; pret. and pp. *medialized*, ppr. *medializing.* [*medial* + *-ize.*] To render medial.

It is quite possible that the earlier Abenakis may have only partially *medialized* their consonants after vowels.
Amer. Anthropologist, Jan.–March, 1902, p. 25.

median^1, *a.* 2. Noting the middle number of a series; having as many before as behind (or above as below) a certain number: distinguished from *average:* as, the *median* age of the population was found to be 21 (that is, there were as many persons above 21 as below it), while the *average* age was found to be 25.—**Median line.** (*d*) A straight through a vertex of a triangle and the mid-point of the opposite side.—**Median magnitude.** See ★*magnitude.*—**Median point.** (*a*) In *geom.*, the cointersection point of a triangle's medians; its centroid. (*b*) Such a point on the x-axis of the frequency polygon that the ordinate from it bisects the polygon of rectangles or the continuous curve.—**Median section.** Same as *golden section* (which see, under *golden*).

II. *n.* 1. In *geom.*: (*a*) A sect whose end-points are the bisection-points of opposite sides of a quadrilateral. (*b*) A sect from a vertex of a triangle to the bisection-point of the opposite side.—2. The measure or observation which has as many of the separate measures or observations above as below it.

This principle may be applied to other kinds of means besides the arithmetic, in particular the *median* (that point which has as many of the given observations above as below it). . . . If the observations do not obey the normal law—especially if the extremities are abnormally divergent—the precision of the *median* may be greater than that of the arithmetic mean.
Encyc. Brit., XXVIII. 287.

3. In *entom.*, the median vein of an insect's wing.

mediaometer (mē″di-ą-om′e-tėr), *n.* [L. *media*, pl. of *medium*, + Gr. *μέτρον*, measure.] An instrument for measuring the amount of refractive errors of the various media of the eye.

mediastinal, *a.* **II.** *n.* In *entom.*, the submarginal vein of the wing of a cockroach. *Amer. Jour. Sci.*, Aug., 1904, p. 118.

mediastino-pericarditis (mē″di-as-tī″nǫ-per″i-kär-dī′tis), *n.* [NL.] Inflammation of the pericardium and of the adjacent mediastinal structures.

Mediastino-pericarditis seemed not to be so rare as had been supposed. Since attention had been directed to it four cases had been discovered by the physicians of the Heidelberg medical clinic; three of them were operated on successfully and one died from influenza.
Lancet, July 18, 1903, p. 188.

mediastinotomy (mē″di-as-ti-not′ǫ-mi), *n.* [NL. *mediastinum* + Gr. *-τομια*, < *ταμεῖν*, cut.] Incision into the cavity of the mediastinum. *Therapeutic Gazette*, Jan., 1903, p. 59.

Mediastinum cerebelli. Same as *falx cerebelli.*—**Mediastinum cerebri.** Same as *falx cerebri.*

medic^3, *n.*—**Toothed medic,** *Medicago denticulata.* See ★*bur-clover.*

Medical botany. See ★*botany.*—**Medical corps,** the surgeon officers of the navy, consisting of a surgeon-general, medical directors, medical inspectors, surgeons, passed assistant surgeons, and assistant surgeons.

medicamentary (med″i-kạ-men′tạ̄-ri), *a.* [*medicament* + *-ary*^{1}.] Medicamental; medicinal.

medicamentation (med″i-kạ-men-tā′shǫn), *n.* [*medicament* + *-ation.*] Same as *medication.*

medication, *n.*—**Cataphoretic medication.** See ★*cataphoretic.*—**Epidermic medication.** See *epidermic method*, under *epidermic.*

medicator (med′i-kā-tǫr), *n.* [*medicate* + *-or*^{1}.] 1. One who medicates; one who prescribes or prepares medicines.

The art of a *medicator* of poisons.
Scott, Demonol., I. 67. *N. E. D.*

2. An instrument for carrying remedies into a cavity of the body, as the larynx; an applicator.

medicatory (med′i-kạ̄-tō-ri), *a.* [*medicat*(*e*) + *-ory.*] Medicative; medicinal.

medicin, *n.* and *v. t.* A simplified spelling of *medicine.*

medicine, *n.*—**Bureau of Medicine and Surgery.** See ★*bureau.*—**Compound medicines,** remedies which contain a mixture of several drugs. -**Preventive medicine,** that branch of medical science which has to do with the prevention of disease by means of personal and public hygiene.—**Psychological medicine** medical science in its relation to mental diseases.—**Rational medicine,** the practice of the healing art based upon actual knowledge, and reasoning from the known to the unknown: opposed to *empiricism.*—**Statical medicine,** the treatment of disease governed by observation of the varying relations of ingestion, excretion, and body weight.—**Suggestive medicine,** the treatment of disease by means of (hypnotic) suggestion.

medicine-ball (med′i-sin-bâl), *n.* A large ball, of considerable weight, used in exercising. It is thrown from one player to another.

medicine-bowl (med′i-sin-bōl), *n.* A bowl which contains sacrifices or sacred objects, used in the religious ceremonials of the North American Indians. *Amer. Anthropologist*, 1901, p. 215.

medicine-lodge (med′i-sin-loj), *n.* A lodge used for the performance of religious ceremonials among North American Indians. *Giddings*, Inductive Sociol., p. 207.

medicine-spoon (med′i-sin-spön), *n.* A spoon, usually of porcelain, the bowl of which is partially decked over but which has an aperture at the tip through which a fluid may be poured, without spilling, into the mouth.

medicine-tree (med′i-sin-trē″), *n.* Same as ★*horseradish-tree*, 2.

medicisterna (mē″di-sis-tėr′nạ̈), *n.* [NL., < L. *medius*, middle, + *cisterna*, cistern.] The arachnoid canal (which see, under *canal*^{1}).

medico, *n.* 2. A name, among Spanish-speaking people of America, for *Teuthis cæruleus* and other species of the same genus, fishes found in warm seas and called *surgeon-* and *doctor-fish*, in English. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 486.

medicomechanical (med″i-kō-mḗ-kan′i-kąl), *a.* Of or pertaining to mechanicotherapy. *Buck*, Med. Handbook, I. 1.

medicommissure (mē-di-kom′i-şūr), *n.* [L. *medi*(*us*) + E. *commissure.*] The middle or soft commissure of the brain. *Wilder* and *Gage.*

medicophysical (med″i-kō-fiz′i-kąl), *a.* Both medical and physical; relating both to the state of health or disease of the body and its parts and to the physical condition; specifically, noting the examination required of recruits in the army and navy, engineers, applicants for life-insurance, etc. *Buck*, Med. Handbook, VI. 180.

medicopsychological (med″i-kō-sī″kǫ-loj′i-kąl), *a.* Of or pertaining to medicopsychology. *Nature*, July 6, 1905, p. 227.

medicopsychology (med″i-kō-sī-kol′ǫ-ji), *n.* The science of the mind in relation to the science of medicine; the medical or pathological study of mental conditions.

medicotopographical (med″i-kō-top-ǫ-graf′i-kąl), *a.* Of or pertaining to topography in its relation to disease or health; noting the medical study of the relation of the topography of a locality to health.

A *medicotopographical* and general account of Marwar, Sirohi, Jaisalmir. *Geog. Jour.* (R. G. S.), XV. 192.

medicozoölogical (med″i-kō-zō-ǫ-loj′i-kąl), *a.* Of or pertaining to the science of zoölogy in its relation to the study of medicine; noting the study of zoölogy in its bearing upon the study of diseases in man. *Science*, Jan. 30, 1903, p. 198.

medidural (mē-di-dū′rąl), *a.* [*medi*(*an*) + *dural.*] Relating to the central part of the dura mater.

medifrontal (mē-di-fron′tąl), *a.* Same as ★*mediofrontal.* *Amer. Anthropologist*, Oct.–Dec., 1903, p. 631.

medilateral (mē-di-lat′ẹ-rąl), *a.* [L. *medius*, middle, + *latus* (*later-*), side, + *-al*^{1}.] On or near the middle of the side; half-way between back and belly. *Trans. Linnean Soc. London*, Zool., Feb., 1903, p. 409.

medio (mā′di-ō), *n.* [Sp. *medio*, middle, < L. *medius*, middle.] A silver coin of Mexico and the Spanish American states, equal to one half a real.

medio-anterior (mē″di-ō-an-tē′ri-ǫr), *a.* In or toward the anterior and median region of the animal body. Same as ★*anteromedial.* *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 140.

mediocarpal (mē″di-ō-kär′pąl), *a.* [L. *medius*, middle, + NL. *carpus* + *-al*^{1}.] Situated in the middle of the carpus or wrist: as, the *mediocarpal* articulation.

mediocenter (mē″di-ō-sen′tėr), *n.* [L. *medius*, middle, + *centrum*, center.] The center of the nine-point circle.

mediocircle (mē″di-ō-sėr′kl), *n.* [L. *medius*, middle, + *circulus*, circle.] The circle determined by the mid-points of the sides of a triangle.

mediocolic (mē″di-ō-kol′ik), *a.* [L. *medius*, middle, + NL. *colon* + *-ic.*] Relating to the middle portion of the colon.

mediofrontal (mē″di-ō-fron′tąl), *a.* [L. *medius*, middle, + *frons* (*front-*), front, + *-al*^{1}.] Situated in the middle line of the frontal region.

mediolingual (mē″di-ō-ling′gwąl), *a.* [L. *medius*, middle, + *lingua*, tongue, + *-al*^{1}.] Relating to the median portion of the tongue. *Scripture*, Exper. Phonetics, p. 395.

medio-occipital (mē″di-ō-ok-sip′i-tąl), *a.* [L. *medius*, middle, + *occiput* (*occipit-*) + *-al*^{1}.] Situated in the middle line of the occipital region.

mediopalatal (mē″di-ō-pal′ą̄-tąl), *a.* [L. *medius*, middle, + *palatum*, palate, + *-al*^{1}.] 1. Relating to the central portion of the palate. *Scripture*, Exper. Phonetics, p. 297.—2. Same as ★*mesuranic.* *Turner.*

mediopontine (mē″di-ō-pon′tin), *a.* [L. *medius*, middle, + *pons* (*pont-*) (see def.) + *-ine*^{1}.] Situated in the middle portion of the pons Varolii.

medioposterior (mē″di-ō-pos-tē′ri-ǫr), *a.* [L. *medius*, middle, + *posterior*, hinder.] In or toward the posterior and median region of the animal body. Same as ★*posteromedian.* *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 141.

medioprepalatal (mē″di-ō-prē-pal′ą̄-tąl), *a.* [L. *medius*, middle, + *præ*, before, + *palatum*, palate, + *-al*^{1}.] Relating to the center of the anterior portion of the palate. *Scripture*, Exper. Phonetics, p. 436.

medioseptum (mē″di-ō-sep′tum), *n.*; pl. *mediosepta* (-tạ̈). In *ornith.*, a vertical division between the two narial chambers.

Adventitious ossicles occurring in the soft membranous *medio-septa* of these vertebrates.
Proc. Zool. Soc. London, 1891, p. 124.

mediostapedial (mē″di-ō-stạ-pē′di-ạl), *n.* The median portion of the columella in birds and reptiles. In birds, its inner end is fused with the stapedial plate that fits into the fenestra ovalis. *W. K. Parker.*

Medism (mē′dizm), *n.* [Gr. Μηδισμός, < Μηδίζειν, Medize.] **1.** In *Gr. hist.*, the favoring of the principles or the furtherance of the interests of the Medes or Persians; in a rhetorical use, an unpatriotic sympathy with or tolerance of any foreigners.

An analogy may be found in the *medism* of the Delphic oracle, which yet, by a species of national self-deception, did not forfeit its claim to Hellenic respect, in spite of its failure in the hour of trial.
W. T. Woodhouse, in Jour. Hellenic Studies, XVIII. 46.

2. A Median or Persian idiom.

medisylvian (mē-di-sil′vi-ạn), *a.* [L. *medius*, middle, + *Sylvius* (see def.) + *-an.*] Relating to or situated in the middle portion of the fissure of Sylvius. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 621.

Medit. An abbreviation of *Mediterranean.*

meditemporal (mē-di-tem′pọ-rạl), *a.* [L. *medius*, middle, + *tempus* (*tempor-*), temple, + *-al*^{1}.] Relating to or situated in the middle portion of the temporal lobe of the brain. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 627.

mediterranean, *a.* **3.** [*cap.*] (*b*) Same as ★*Iberian*^{1}, 3.—**Mediterranean class**, a group of domesticated fowls which comprises breeds derived from southern Europe, including the Andalusian, Leghorn, Minorca, and Spanish breeds.—**Mediterranean passports, stage.** See ★*passport*, ★*stage*.—**Mediterranean province.** See ★*province*.

medithoracic (mē″di-thọ-ras′ik), *a.* Same as *mesothoracic.*

medithorax (mē-di-thō′raks), *n.* [L. *medius*, middle, + NL. *thorax.*] Same as *mesothorax.*

medium, *n.*—**Löffler's medium**, a nutritive medium which is extensively used in the cultivation of the diphtheria organism. It is composed of three parts of calves' or lambs' blood-serum, with one part of ordinary bouillon, made from veal, plus one per cent. of glucose, the whole being solidified and sterilized.—**Passive medium**, a liquid or solution in which living cells or tissues, taken from the body, can be examined without undergoing any, or but very little, change in their microscopic structure: opposed to *active medium.*

mediumization (mē″di-um-i-zā′shọn), *n.* The process of mediumizing or transforming into a spiritualistic medium.

Till we can do this, we must feel the effects of the acidity, as I may call it, which characterizes the crude and unsettled spiritual existence reached by our present system of *mediumization.*
W. D. Howells, Undiscovered Country, ii.

mediumize (mē′di-um-īz), *v. t.*; pret. and pp. *mediumized*, ppr. *mediumizing.* [*medium* + *-ize.*] To make a spiritualistic medium of; render a medium. [Rare.] *N. E. D.*

Medize (mē′dīz), *v. i.*; pret. and pp. *Medized*, ppr. *Medizing.* [Gr. μηδίζειν, < Μῆδοι, the Medes.] In *Gr. hist.*, to be unduly partial to the Medes or Persians or to imitate them; be unpatriotically or disloyally subservient to the Persians.

The leading men of Thebes . . . decidedly *medised* or espoused the Persian interest.
Grote, Greece, II. xi. v. 101. *N. E. D.*

medlar, *n.* **Rock-medlar.** Same as *Savoy medlar.* See ★*Amelanchier.* **Savoy medlar.** See *Savoy medlar.*

Medo-Persian (mē′dō-pėr′shan), *a.* and *n.* **I.** *a.* Pertaining to or including both Medes and Persians.

II. *n.* One of the Medo-Persian people or nation.

medow, *n.* A simplified spelling of *meadow.*

medulla, *n.* **1.** (*g*) The semi-fluid endosarc of a protozoön.

The protoplasm is differentiated into a firmer superficial layer, the cortex, . . . and a semi-fluid central mass, the *medulla*, . . . and is covered superficially by a thin cuticle. *Parker and Haswell*, Zoology, p. 45.

Medulla dorsalis, the spinal cord.

Medullary canal. Same as *medullary cavity* (*b*).—**Medullary fold, narcosis, nucleus, sheath.** See ★*fold*^{1}, etc.—**Medullary streak.** Same as *medullary furrow.*

medullate (med′u-lāt), *v. i.*; pret. and pp. *medullated*, ppr. *medullating.* To produce the white substance of Schwann around the axis-cylinder of a nerve-fiber; form a medullated nerve.

The tract which ascends from the internal geniculate body *medullates* separately from the other intracerebral systems.
Philos. Trans. Roy. Soc. (London), 1898, ser. B, p. 2.

medullation (med-u-lā′shọn), *n.* [*medulla* + *-ation.*] The formation or acquisition of a medulla or marrow or pith. *Buck*, Med. Handbook. II. 319.

medullic (mẹ-dul′ik), *a.* [L. *medulla*, marrow, + *-ic.*] Noting an acid, a colorless compound, $C_{20}H_{41}COOH$, found, in combination with glycerol, in beef-suet and beef-marrow.

medullization (med″u-li-zā′shọn), *n.* [L. *medulla*, marrow, + *-ize* + *-ation.*] Inflammatory softening of the substance of bone.

medullo-encephalic (med″u-lō-en″se-fal′ik), *a.* Same as *cerebrospinal.*

medusid (mẹ-dū′sid), *n.* A jelly-fish of the family *Medusidæ.*

medusome (mẹ-dū′sōm), *n.* [*Medusa* + *-ome.*] In siphonophores, a modified medusoid person.

Free-swimming colonies of modified medusoid persons (*medusomes*).
J. A. Thomson, Outlines of Zoology, p. 143. *N. E. D.*

meet^1, *v. t.*—**To meet her** (*naut.*), to put the rudder so as to check the swing of the vessel's head.

meet^1, *n.* **3.** In *geom.*: (*a*) The straight line common to two planes. (*b*) A point which is on each of two straights: also called their *cross.*

meeting, *n.* **5.** *pl.* In *mining*, the point in a mine-shaft where the ascending and descending cages meet. When the coal was raised in creels or corves the shaft was bulged at the meetings. *Barrowman*, Glossary.

mefitic, mefitis. Amended spellings of *mephitic, mephitis.*

megabar (meg′ạ-bär), *n.* [Gr. μέγα, great, + βάρ(ος), weight.] A proposed unit of atmospheric pressure; a gaseous pressure such that the force on each centimeter of surface is one megadyne. The megabar is equivalent to the pressure exerted by 75.015 centimeters of mercury. It is 10^6 c. g. s. units of pressure.

megabarie (meg-ȧ-bä-rē′), *n.* [Also *megabary*, *megabarye*; F. *megabarie*, < *megabar* + *-ie*^{3}, *-y*^{3}.] A unit of atmospheric pressure recommended by the International Physical Congress in Paris (1900). Same as ★*megabar.*

The *megabary*, equal to 10^6 C.G.S. units, may, for practical purposes, be considered equal to the pressure of a column of mercury 75 cm. high at 0°. C. under normal conditions of gravity. *Science*, Jan. 18, 1901, p. 101.

megabary (meg′ạ-bär-i), *n.* Same as ★*megabarie.*

megacaryocyte (meg-ạ-kar′i-ọ-sīt), *n.* [Gr. μέγα, great, large, + κάρυον, nut, nucleus, + κύτος, a hollow (a cell).] A large cell with lobulated nucleus found in the spleen of the human embryo and of young animals.

megacephaly (meg-ạ-sef′ạ-li), *n.* [*megacephalous.*] The condition of being megacephalous, either normally or pathologically.

megacerotine (meg-ạ-ser′ọ-tin), *n.* [*Megaceros* (*-cerot-*) + *-ine*^{1}.] Relating to or having the characters of *Megaceros* or *Cervus giganteus*, the extinct Irish deer.

megachilous (meg-ạ-kī′lus), *a.* [Gr. μέγας, great, + χεῖλος, lip.] **1.** In *entom.*, having a large lip.—**2.** Of or pertaining to the genus *Megachile.*

megaclon (meg′ạ-klon), *n.* [Gr. μέγας, large, + κλών, twig (see ★*clon*).] In the nomenclature of the sponge-spicules, a large-sized rhabdoclon. See ★*rhabdoclon.*

megacoulomb (meg′ạ-kö-lom′), *n.* [*mega-* + *coulomb.*] A practical unit of electric charge or quantity equal to a million coulombs.

megacranous (meg-ạ-krā′nus), *a.* [Gr. μέγας, great, + κρανίον, cranium, + *-ous.*] In *craniom.*, having a skull of large volume—2,120–2,270 cubic centimeters in males and 1,850–1,950 cubic centimeters in females.

megadont, *a.* **2.** In *craniom.*, having a dental index of more than 44.

megadynamics (meg″ạ-dī-nam′iks), *n.* [Gr. μέγας, great, + E. *dynamics.*] In *geol.*, the dynamics of the earth, viewed in their large relations, as connected with great upheavals or subsidences of the crust.

Without the postulate of pervasive rigidity, conditioned by modifications due to molecular change, and to local solution-fusion, I am unable to find agencies competent to satisfy the demands of the *megadynamics* of the earth.
T. C. Chamberlin, in Econ. Geol., Oct.–Nov., p. 721.

megafrustule (meg-ạ-frus′tūl), *n.* [Gr. μέγας, great, + E. *frustule.*] In *biol.*, a frustule of large size.

megagamete (meg-ạ-gam′ēt), *n.* [Gr. μέγας, great, + E. *gamete.*] A large gamete or germ-cell, as distinguished from a microgamete; a macrogamete. The ovum is a megagamete, the spermatozoön a microgamete; the two unite to form a zygote.

It is obvious that the *megagamete* corresponds with the ovum of the higher animals, the microgamete with the sperm, and the zygote with the oosperm or impregnated egg. *Parker and Haswell*, Zoology, I. 72.

megagnathous (me-gag′nā-thus), *a.* [Gr. μέγας, great, + γνάθος, jaw.] In *anthrop.*, having large jaws.

Megaladapidæ (meg″ạ-lạ-dap′i-dē), *n. pl.* [*Megaladapis*, the type genus, + *-idæ.*] A family of lemurs which contains extinct species of comparatively great size: based on bones from Pleistocene and cave deposits of Madagascar. *Megaladapis insignis* was as large as a donkey, and is surmised by A. S. Woodward to have been aquatic in its habits. *Forsyth Major*, 1893.

megalencephalic (meg-ạ-len-se-fal′ik), *a.* [Gr. μέγας (μεγαλ-), great, + E. *encephalic.*] Characterized by hypertrophy of the encephalon.

megalo-. [Gr. μεγαλο-, combining form of μέγας, great: see *meg-*, *mega-*.] A prefix, meaning 'great' or 'large'; specifically, in *phys.*, a prefix sometimes used in place of the shorter forms *meg-* and *mega-* to denote that a unit is multiplied by one million.

megaloblast (meg′ạ-lọ-blȧst), *n.* [Gr. μέγας (μεγαλ-), great, + βλαστός, germ.] A large nucleate cell found in the bone-marrow in the embryo: also a megalocyte, or large red blood-corpuscle occurring in certain forms of anemia in extra-uterine life. *R. C. Cabot*, Clinical Exam. of the Blood, p. 89.

megaloblastic (meg″ạ-lọ-blas′tik), *a.* [*megaloblast* + *-ic.*] Of or pertaining to megaloblasts; of the nature of a megaloblast.

The presence of the nucleated erythrocytes of the *megaloblastic* type was evidence of a severe, though not necessarily fatal, anæmia.
Med. Record, Jan. 31, 1903, p. 196.

megalocardia (meg″ạ-lọ-kär′di-ạ̈), *n.* [NL., < Gr. μέγας (μεγαλ-), great, large, + καρδία, heart.] The condition of having an abnormally large heart.

megalocephalia (meg″ạ-lọ-se-fā′li-ạ̈), *n.* Same as ★*macrocephalia.*

megalocephalic (meg″ạ-lọ-se-fal′ik), *a.* [Gr. μεγαλοκέφαλος, < μέγας (μεγαλ-), great, large, + κεφαλή, head, + *-ic.*] Same as *megacephalic.*

megalocephaly (meg″ạ-lọ-sef′ạ-li), *n.* [*megalocephal*(*ic*) + *-y*^{3}.] Same as ★*macrocephaly.*

megalochirous (meg″ạ-lọ-kī′rus), *a.* [Gr. μέγας (μεγαλ-), great, + χείρ, hand.] Characterized by large hands or prehensile organs.

megaloconidium (meg″a-lọ-kō-nid′i-um), *n.*; pl. *megaloconidia* (-ạ̈). [NL., < Gr. μέγας (μεγαλ-), great, large, + NL. *conidium.*] Same as *macroconidium.*

megalocornea (meg″ạ-lọ-kôr′nẹ-ạ̈), *n.* [NL., < Gr. μέγας (μεγαλ-), great, large, + NL. *cornea.*] Abnormally large size of the cornea.

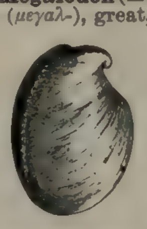
Megalocottus (meg″ạ-lọ-kot′us), *n.* [NL., < Gr. μέγας (μεγαλ-), great, large, + NL. *Cottus.*] A genus of cottoid fishes found in the North Pacific.

megalocytosis (meg″ạ-lō-sī-tō′sis), *n.* [*megalocyte* + *-osis.*] The production or formation of megalocytes, or very large red blood-corpuscles.

megalodactylia (meg″ạ-lọ-dak-til′i-ạ̈), *n.* [NL., < Gr. μέγας (μεγαλ-), great, large, + δάκτυλος, finger.] Same as ★*macrodactylia.*

megalodactylism (meg″ạ-lō-dak′ti-lizm), *n.* [Gr. μέγας (μεγαλ-), great, large, + δάκτυλος, finger, + *-ism.*] Same as ★*macrodactylism.*

Megalodon (meg′ạ-lọ-don), *n.* [NL., < Gr. μέγας (μεγαλ-), great, large, + ὀδούς (ὀδοντ-), tooth.] An extinct genus of *Pelecypoda* typifying the family *Megalodontidæ.* It is characterized by ponderous heart-shaped shells with amphidetic area, opisthodetic ligament, and large and heavy cardinal teeth. The earliest species are Devonian, but the shells are most abundant in the Triassic rocks. Properly *Megalodus.*



Megalodon (*Eumegalodon*) *cucullatus*, Goldf. Devonian; Paffrath, near Cologne. One half natural size. (From Zittel's "Palæontology.")

megalodont (meg′ạ-lọ-dont), *a.* [Gr. μεγαλόδους (-οδοντ-), < μέγας (μεγαλ-), great, large, + ὀδούς (ὀδοντ-), tooth.] Having large teeth; megadont.

megalodontous (meg″a-lọ-don′tus), *a.* [Gr. μέγας (μεγαλ-), great, + ὀδούς (ὀδοντ-), tooth.] Characterized by large teeth.

megalogastria (meg″ạ-lọ-gas′tri-ạ̈), *n.* [NL., < Gr. μέγας (μεγαλ-), great, large, + γαστήρ, stomach.] The condition in which the stomach is abnormally large.

megaloglossia (meg″ạ-lọ-glos′i-ạ̈), *n.* [Gr. μέγας (μεγαλ-), great, large, + γλῶσσα, tongue.] Same as *macroglossia.*

megalomaniac (meg″ạ-lọ-mā′ni-ak), *a.* and *n.*

[*megalomania* + *-ac.*] I. *a.* Pertaining to or characterized by megalomania.

> But in that courteous, cultured throng I doubt whether one-fifth felt sympathy with the *megalomaniac* ideals paraded before their eyes. *Nation*, May 11, 1899.

II. *n.* One who suffers from megalomania.

megalomaniacal (meg″a̤-lọ-mā̤-nī′a̤-ka̤l), *a.* Relating to or suffering from megalomania. *G. S. Hall*, Adolescence, II. 536.

megalomartyr (meg″a̤-lọ-mär′tėr), *n.* [Gr. *μέγας* (*μεγαλ-*), great, + *μάρτυρ*, witness.] A great or eminent martyr.

> Among those holy martyrs whom the Greeks honour with the title of *Megalomartyrs* (i.e. = Great Martyrs) as St. George, St. Pantaleon, &c. four are distinguished by them above the rest as principal patrons.
> *Butler*, Lives of the Primitive Fathers, II. 93.

> It was the Chief of the "*Megalomartyrs*," or Dii Selecti, who had convoked this crowd of christian people.
> *Is. Taylor*, Anc. Chr., II. 186.

Megalonychidæ (me-gal-ọ-nik′i-dē), *n. pl.* [NL., < *Megalonyx* (*-onych-*) + *-idæ.*] The great ground-sloths of the genus *Megalonyx* considered as sufficiently distinct from those represented by *Megatherium* to warrant their separation as a distinct family. *Zittel*, 1892.

megalopa, *n.* 2. Same as ★*megalopa stage.* — **Megalopa stage**, in the development of crabs, an advanced larval stage in which the animal has large eyes, an extended abdomen, and well-developed pleopods.

> It is therefore interesting to find that in the zoea and through the larval and post-larval (*megalopa*) *stages*, the shore-crab possesses a primary and a secondary chromatophore system of a very clearly defined character.
> *Philos. Trans. Roy. Soc.* (London), 1902, ser. B, p. 318.

megalophonic (meg″a̤-lọ-fon′ik), *a.* Same as *megalophonous.*

megalophthalmus (meg″a̤-lof-thal′mus), *n.* [NL., < Gr. *μεγαλόφθαλμος*, large-eyed, < *μέγας* (*μεγαλ-*), great, large, + *ὀφθαλμός*, eye.] A condition in which the eyes are of abnormally great size. *Buck*, Med. Handbook, II. 9.

megalopia (meg-a̤-lō′pi-ä̤), *n.* [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + *ὤψ* (*ὠπ-*), eye.] Same as *megalopsia.*

megalopod (meg′a̤-lọ-pod), *a.* and *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + *πούς* (*ποδ-*), foot.] Having large feet; megalopodous; macropod.

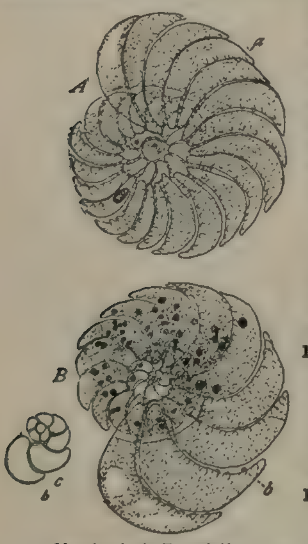
megalopodous (meg-a̤-lop′ọ-dus), *a.* [Gr. *μέγας* (*μεγαλ-*), great, + *πούς* (*ποδ-*), foot.] Characterized by large feet.

megalopore (meg′a̤-lō-pōr), *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + *πόρος*, pore.] A large pit or pore in the shell of a chitinoid mollusk, containing a sense-organ: opposed to ★*micropore.*

megaloscope (meg′a̤-lọ-skōp), *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + *σκοπεῖν*, view.] A form of endoscope in which the part brought into view is magnified.

megalosphere (meg′a̤-lọ-sfēr), *n.* [Gr. *μέγας* (*μεγαλ-*), great, large, + E. *sphere.*] The large original or central chamber of a megalospheric foraminifer. Compare ★*microsphere.* *Nature*, April 6, 1905, p. 550.

megalospheric (meg″a̤-lọ-sfer′ik), *a.* [*megalospher*(*e*) + *-ic.*] Having a single large nucleus and a large central chamber, as certain foraminifers in which the species consists of two kinds of individuals. Compare ★*microspheric.* *Knowledge and Sci. News*, March, 1904, p. 48.



Megalospheric Foraminifer.

Polystomella crispa. *A*, the megalospheric, *B*, the microspheric forms, decalcified. *a*, communication between the chambers; *b*, retral processes; *c*, the central chambers of the microspheric forms more highly magnified. The canal system is omitted in these figures for the sake of clearness. (From Lankester's "Zoology.")

megamaxwell (meg-a̤-maks′-wel), *n.* A unit of magnetic flux equal to 1,000,000 maxwells.

megamere (meg′a̤-mēr), *n.* [Gr. *μέγας*, great, large, + *μέρος*, part.] One of the large blastomeres of the segmenting ovum in certain animals, as opposed to the micromeres. See *macromere.*

megameter (meg′a̤-mē-tėr), *n.* [*mega-* + *meter.*] A unit of length equal to one million meters.

megamho (meg′a̤-mō), *n.* [*mega-* + *mho.*] A practical unit of electric conductance equal to 1,000,000 mhos or 1×10^{-3} c. g. s. units.

megamil (meg′a̤-mil), *n.* [*mega-* + *mil.*] A proposed practical unit of length, equal to one million mils or one thousand inches. [Rare.]

megampere (meg-am-pãr′), *n.* [*mega-* + *ampere.*] A practical unit of electric current equal to a million amperes.

meganephric (meg-a̤-nef′rik), *a.* [Gr. *μέγας*, large, + *νεφρός*, kidney, + *-ic.*] Characterized by the possession of large nephridia: as, a *meganephric* worm.— **Meganephric nephridia.** See ★*nephridium.*

meganucleus (meg-a̤-nū′klẹ̄-us), *n.*; pl. *meganuclei* (-ī). [NL., < Gr. *μέγας*, great, + E. *nucleus.*] Same as *macronucleus.*

megaphone, *n.* 2. A large speaking-trumpet of a conical form.

megaphonic (meg-a̤-fon′ik), *a.* [*megaphon*(*e*) + *-ic.*] Of or pertaining to a megaphone; of the nature of a megaphone; transmitted by means of a megaphone: as, a *megaphonic* message.

> Several individuals can be examined at once by duplicating the ear tubes or by substituting a *megaphonic* horn for the tubes. *Science*, June 24, 1904, p. 960.

megaphotographic (meg″a̤-fō-tọ-graf′ik), *a.* Pertaining to or produced by megaphotography.

megaphotography (meg″a̤-fọ-tog′ra-fi), *n.* [Gr. *μέγας*, great, + E. *photography.*] The photography of the heavenly bodies and of celestial phenomena. *Nature*, May 24, 1900, p. 79.

megaphyllous (meg-a̤-fil′us), *a.* [Gr. *μέγας*, large, + *φύλλον*, leaf, + *-ous.*] In *bot.*, large-leaved.

> It is natural to look to the pteridophytes for guidance as to the origin of foliar development in the sporophyte, for they are the most primitive plants with leafy sporophytes. They may be disposed according to the prevalent size of their leaves in a series, leading from microphyllous to *megaphyllous* types. *Science*, Oct. 21, 1904, p. 529.

megaprosopous (meg-a̤-pro-sō′pus), *a.* [Gr. *μέγας*, great, large, + *πρόσωπον*, face, + *-ous.*] In *craniom.*, said of a skull having a large face, the volume of which is 720–780 cubic centimeters in males and 580–625 cubic centimeters in females.

megapul (meg′a̤-pul), *n.* [*mega-* + *pul.*] In *physics*, a proposed unit of measurement of the time-integral of forces; one million dynes acting for one second.

megarrhine, megarhine (meg′a̤-rīn), *a.* [Gr. *μέγας*, great, + *ῥίς* (*ῥιν-*), nose.] Characterized by a large nose, as *Rhinoceros megarhinus*, an extinct species of rhinoceros.

megascleric (meg-a̤-sklē′rik), *a.* [*megasclere* + *-ic.*] Pertaining to or characteristic of a megasclere.

megascleron (meg-a̤-sklē′ron), *n.*; pl. *megasclera* (-rä̤). [NL.] In sponge-spicules, a megasclere.

megasclerum (meg-a̤-sklē′rum), *n.*; pl. *megasclera* (-rä̤). [NL.] Same as *megasclere.*

megasphere (meg′a̤-sfēr), *n.* [Gr. *μέγας*, great, large, + *σφαῖρα*, sphere.] The large primordial chamber in the shells of some *Foraminifera:* contrasted with ★*microsphere.* See ★*megalosphere.*

megasporophyl, megasporophyll (meg-a̤-spō′rō-fil), *n.* [Gr. *μέγας*, great, large, + *σπορά*, seed (spore), + *φύλλον*, leaf.] 1. In the *Spermatophyta*, a carpel.—2. In the *Pteridophyta*, a sporophyl which bears megaspores (macrospores).

megastome (meg′a̤-stōm), *n.* [Gr. *μέγας*, great, large, + *στόμα*, mouth.] A univalve shell having a large aperture or mouth.

megatherial (meg-a̤-thē′ri-a̤l), *a.* [NL. *megatherium* + *-al*[1].] Pertaining to or resembling the megatherium; huge; unwieldy.

> Beautiful problems of the past of our island and the evolution of life were defaced by the disorderly offspring of a quite *megatherial* wit—if one may coin such an antithesis to "etherial." *Nature*, July 26, 1894, p. 301.

megathermic (meg-a̤-thėr′mik), *a.* [*megatherm* + *-ic.*] Having the character of a megatherm; composed of or characterized by megatherms.

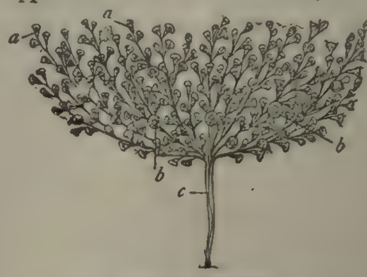
> Yet in these latter extensions [Southern Florida and Southern Brazil] the *megathermic* flora is already perceptibly impoverished.
> *A. F. W. Schimper* (trans.), Plant Geog., p. 226.

megatorque (meg′a̤-tôrk), *n.* [*mega-* + *torque.*] A proposed practical unit for the measurement of the moments of forces; one million torques or one million times the moment of a dyne acting with a lever-arm of one centimeter.

megatypy (meg′a̤-tī-pi), *n.* [*megatyp*(*e*) + *-y*[3].] In *photog.*, the process of making megatypes or enlargements.

megawatt (meg′a̤-wot), *n.* [*mega-* + *watt.*] A unit of power or activity equal to 1,000,000 watts.

megazoöid (meg-a̤-zō′oid), *n.* [Gr. *μέγας*, great, large, + E. *zoöid.*] A large zoöid, or animal, as opposed to a small individual, or microzoöid, of the same species. Such mega- and microzoöids occur, for example, in the bell-animalcule, *Vorticella.* In this animal the microzoöids are formed as free-swimming buds by the large, pedunculate, and sessile megazoöids.



Colony of Megazoöids.

a, nutritive zoöid; *b*, reproductive zoöid; *c*, axial fiber. (From Parker's "Biology," after Saville Kent.) (From Lankester's "Zoology.")

megillah (me-gil′ä̤), *n.*; pl. *megilloth* (-ōt). [Heb., < *gâlāl*, roll.] One of five books in the Old Testament (namely, Canticles, Ruth, Lamentations, Ecclesiastes, and Esther) which are recited in the synagogue in the following order: Canticles on Passover, Ruth on the feast of Weeks, Ecclesiastes on the feast of Tabernacles, and Esther on Purim; Lamentations is given on the fast of the ninth of Ab. They derive their name from the fact that they are written on parchment rolls or scrolls.

megilloth, *n.* Plural of ★*megillah.*

megistocephalous (me-gis-tọ-sef′a̤-lus), *a.* [Gr. *μέγιστος*, superl. of *μέγας*, great, large, + *κεφαλή*, head.] Having a very large head.

megohmmeter (me-gōm′e-tėr), *n.* An instrument similar in type to an ohmmeter but suitable for the measurement of very high electric resistances.

megosmatic (meg-os-mat′ik), *a.* [Gr. *μέγας*, great, + E. *osmatic.*] Same as ★*macrosmatic.*

megoxycyte (me-gok′si-sīt), *n.* [Gr. *μέγας*, great, + *ὀξύς*, sharp, + *κύτος*, hollow (cell).] A coarsely granular oxyphil or eosinophil blood-corpuscle, or leucocyte. *Durham*, 1897.

mehari (mā-hä′rē), *n.* One of a race of swift Arabian camels taking name from Mehara, a region in Arabia where it is raised, and of great value in campaigning and in exploring expeditions.

> His little troop was mounted on *meharis*, used by the Touaregs—rapid camels, which are to the ordinary camels of the caravan what race-horses are to cart horses. Thanks to the mobility of his caravan, M. Foureau could perform long raids without being attacked by the Touaregs.
> *Nat. Geog. Mag.*, Feb., 1905, p. 77.

meharist (mā-hä′rist), *n.* [F. *mehariste*, < *mehari* + *-ist.*] A trooper mounted on a mehari.

> A new and decisive operation was undertaken. At the commencement of February, 1904, Major Laperrine, quitting In-Sala at the head of a troop of "*meharistes*" and taking his route south, succeeded in traversing the Sahara and meeting a second troop of "*meharistes*" which had set out from Timbuctoo.
> *Nat. Geog. Mag.*, Feb., 1905, p. 79.

mehmandar (mā′man-där), *n.* [Pers.] In Persia and India, an official appointed to act as courier to a traveler of distinction. *N. E. D.*

mehtar (mā′tä̤r), *n.* [Also *mater*; < Hind. *mehtar*, a sweeper (ironically a 'prince'), < Pers. *mihtar*, a great personage, a prince.] A sweeper; a scavenger.

> Among the more minute of his elaborate recommendations is one that in campaigns in warm countries where dust storms and flies are always prevalent a "*mehtar*" establishment from India should be attached to each unit with the duty to cover up the excreta immediately after the latrine has been used. *Lancet*, Aug. 29, 1903, p. 627.

Meibomia (mī-bō′mi-ä̤), *n.* [NL. (proposed by Heister, established by Adanson in 1763), named after B. *Meibom* (1678–1740), a German botanist.] A genus of dicotyledonous plants of the family *Fabaceæ*. See *Desmodium*.

Meibomian cyst. Same as *chalazion*.

meiler (mē′lėr), *n.* [G. *meiler*, MHG. *mīler*; origin obscure. The corresponding Bohem. *milėr*, Pol. *millerz*, are from the G.] A pile of wood to be burned into charcoal, irrespective of the shape; also, specifically, a rectangular pile about 25–30 feet in length, 8 feet wide, and sloping from a height of 2 feet at one end to 7 or 8 feet at the other, this upward slope tending to develop a draft in the direction of the length of the pile and so to secure uniform progress in the burning. *Groves and Thorp*, Chem. Technol., I. 105.

meiobar (mī′ọ-bär), *n.* [Gr. *μείων*, less, + *βάρος*, weight.] An area of low barometric pressure on the daily weather-map: a term introduced by Prestel in 1870.

meiotic, *a.* See ⋆*miotic*. *Nature*, Sept. 26, 1907, p. 556.

Meissner's bodies. Same as *Meissner's corpuscles*.

Meister (mīs′tėr), *n.* [G.] Master.

Mejidieh, *n.* Same as *Medjidie*.

Mekong yellow. See ⋆*yellow G* and *R*.

M. E. L. An abbreviation of *Master* (or *Mistress*) *of English Literature*.

Melæna neonatorum, hemorrhage from the stomach or bowels in the new-born infant, denoted by the passage of altered blood in the stools.—**Melæna spuria,** simulation of melæna neonatorum, in which the blood comes from a fissured nipple of the nurse, not originally from the intestinal tract of the child.

melænic (me-lē′nik), *a.* [*melæna* + *-ic.*] Relating to or marked by melæna.

melalgia (mel-al′ji-ä), *n.* [NL., < Gr. *μέλος*, limb, + *ἄλγος*, pain.] Neuralgic pain in one or more of the limbs.

melam (mel′am), *n.* [Gr. *μέλι*, honey, + E. *am(monia)*.] A colorless granular, pulverulent, indifferent compound, $C_6H_9N_{11}$, formed by the rapid heating of ammonium thiocyanate at 300° C.

melamdim, *n.* Plural of ⋆*melammad*.

melamine (mel′am-in), *n.* [*melam* + *-ine*2.] A colorless compound, $H_2NC<{N.C(NH_2) \atop N:C(NH_2)}>N$, formed, together with melam, by heating ammonium cyanate. It crystallizes in monoclinic prisms. Also called *cyanuramide*, *triguanide*, and *triurethriamidin*.

melammad (me-lam′ad), *n.*; pl. *melamdim* (-dēm). [Heb. (Yiddish *m'lamed*), < *lamad*, learn, teach.] A teacher in a rabbinical school; especially, the teacher of a *heder*, or elementary Jewish school.

Melampsora (mel-amp-sō′rä), *n.* [NL. (Castagne, 1843), < Gr. *μέλας* (*μελαν-*), black, + *ψώρα*, scab, scale.] A genus of uredineous fungi having 4 spore forms (spermagonia, æcidia, uredo- and teleutospores), all produced on the same host. The æcidia are without peridia and paraphyses, and the teleutospores form a dark crust on the surface of the host. The species are numerous and common, causing rusts of various plants. *M. farinosa* is usually abundant on the leaves of various willows.

Melampsoraceæ (mel″amp-sọ-rā′sē-ē), *n. pl.* [NL., < *Melampsora* + *-aceæ.*] A family of uredineous fungi named from the genus *Melampsora*. The teleutospores are sessile and usually form flattened masses in the tissue of the host.

melancholia, *n.*—**Involution melancholia,** melancholia occurring in advanced life, during the period of senile involution. *Jour. Philos. Psychol. and Sci. Methods*, Dec. 5, 1907, p. 698.—**Melancholia attonita,** a form of melancholia in which the sufferer shows absolute indifference to all his surroundings.

melanconiaceæ (mel-an-kō-ni-ā′sẹ-ē), *n. pl.* [NL., < *Melanconium* + *-aceæ.*] A family of *Fungi Imperfecti* named from the genus *Melanconium*. Also written *Melanconieæ*.

melanconiaceous (mel-an-kō-ni-ā′shius), *a.* Pertaining to or belonging to the fungous family *Melanconiaceæ*.

Melanconiales (mel-an-kō-ni-ā′lēz), *n. pl.* [NL., < *Melanconium* + *-ales.*] An order of *Fungi Imperfecti* containing the single family *Melanconiaceæ*. The spores are usually borne in superficial cavities without the formation of a special wall or pycnidium. See ⋆*Glœosporium* and *Melanconium*.

Melanconidaceæ (mel-an-kō-ni-dā′sẹ-ē), *n. pl.* [NL., < *Melanconis* (*Melanconid-*) + *-aceæ.*] A family of pyrenomycetous fungi named from the genus *Melanconis* and containing 9 genera.

Melanconis (mel′an-kō-nis), *n.* [NL. (Tulasne, 1863), referring to the black spores, < Gr. *μέλας* (*μελαν-*), black, + *κόνις* (*κονιδ-*), dust.] A genus of pyrenomycetous fungi, type of the family *Melanconidaceæ*. It has the perithecia arranged in a valsoid stroma and producing elongate necks which break through the surface of the bark. The spores are ellipsoid or elongate and uniseptate. *M. modonia* is a common species occurring on dead branches of chestnut.

melanephidrosis (mel-a̤-nef-i-drō′sis), *n.* [Gr. *μέλας* (*μελαν-*), black, + NL. *ephidrosis*.] A form of sweating-sickness marked by dark perspiration.

mélangeur (me-loṅ-zhėr′), *n.* [F. **mélangeur*, m., *mélangeuse*, f., < *mélanger*, mix, < *mélange*, a mixture.] In *candy-making*, a mill for grinding and mixing cocoa. One type consists of a granite roller (sometimes two) traveling in a pan or metal bed. In another the bed revolves, and the rollers, held in one position, revolve by friction with the bed. It is used in mixing cocoa and sugar in making chocolate.

melanian2 (me-lā′ni-a̤n), *a.* [F. *mélanien*, < Gr. *μέλας* (*μελαν-*), black.] In *anthropol.*, used as the equivalent of ⋆*Negrito* and also of *Negroid*. *Owen*.

melanidrosis (mel″an-i-drō′sis), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *ἱδρ(ώς)*, sweat, + *-osis.*] The sweating of a dark-colored fluid.

melanize (mel′a̤-nīz), *v. t.*; pret. and pp. *melanized*, ppr. *melanizing*. [Gr. *μέλας* (*μελαν-*), black, + *-ize.*] To render melanistic; produce melanism in.

melano (mel′a̤-nō), *n.* [Gr. *μέλας* (*μελαν-*), black.] An abnormally black or melanistic animal; a black animal that would normally be colored.

> The small specimen is a *melano*, but shows indications of the normal spotted condition.
> *Annals and Mag. Nat. Hist.*, 1902, p. 59.

melanocancroid (mel″a̤-nọ-kang′kroid), *n.* [Gr. *μέλας* (*μελαν-*), black, + E. *cancroid*.] An epithelial tumor containing much pigment matter.

melanocerite (mel″a̤-nọ-sē′rīt), *n.* [Gr. *μέλας* (*μελαν-*), black, + E. *cer(ium)* + *-ite*2.] A fluosilicate of the cerium and yttrium metals, calcium, and other elements. It occurs in brown to black rhombohedral crystals, and is found sparingly in southern Norway.

melanochalcite (mel″a̤-nọ-kal′sīt), *n.* [Gr. *μέλας* (*μελαν-*), black, + *χαλκός*, copper, + *-ite.*] A pitch-black massive mineral substance forming a thin zone about a kernel of cuprite in nodules the exterior zones of which are made up of malachite and chrysocolla. In composition it is a silicocarbonate of copper with copper hydroxid. It is found near Bisbee, Arizona.

melanochlorous (mel″a̤-nọ-klō′rus), *a.* [Gr. *μέλας* (*μελαν-*), black, + *χλωρός*, yellow.] Variegated with black and yellow. *Mayne*.

melanochroid (mel″a̤-nọ-krō′id), *a.* [*melanochro(ic)* + *-id*2.] Same as *melanochroic*. *Keane*, Ethnology, p. 167.

melanocratic (mel″a̤-nọ-krat′ik), *a.* [Gr. *μέλας* (*μελαν-*), black, + *κρατεῖν*, rule, + *-ic.*] In *petrog.*, noting igneous rocks characterized by a preponderance of dark-colored minerals, or rather of minerals, chiefly ferromagnesian, that are normally dark-colored: contrasted with ⋆*leucocratic* rocks. *Brögger*, 1896.

melanocyte (mel′a̤-nọ-sīt), *n.* [Gr. *μέλας* (*μελαν-*), black, + *κύτος*, a hollow (a cell).] In *pathol.*, a lymphocyte, or wandering amœboid cell, containing dark pigment-granules.

melanoderma (mel″a̤-nọ-dėr′mä), *n.* [Gr. *μέλας* (*μελαν-*), black, + *δέρμα*, skin.] Dark discoloration of the skin; melasma.

melanodermic (mel″a̤-nọ-dėr′mik), *a.* [*melanoderm(a)* + *-ic.*] Having a dark-colored skin. *Buck*, Med. Handbook, I. 110.

melanogallic (mel″a̤-nọ-gal′ik), *a.* [Gr. *μέλας* (*μελαν-*), black, + E. *gallic*2.] Noting an acid, an amorphous, odorless, tasteless compound, $C_6H_4O_2$, formed by heating gallic or tannic acid. Also called *gallhuminic acid* and *metagallic acid*.

melanogen (me-lan′ọ-jen), *n.* [Gr. *μέλας* (*μελαν-*), black, + *-gen*, -producing.] The colorless mother substance, or chromogen, of urinary melanin.

Melanogrammus (mel″a̤-nọ-gram′us), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *γραμμή*, line.] A genus of gadoid fishes, known as haddock, found on both coasts of the North Atlantic.

melanoid, *a.* **II.** *n.* A pigment resembling or belonging to the melanins.

melanoidin (mel-a̤-noi′din), *n.* [*melanoid* + *-in*2.] A melanin derived from the albumins: a term introduced by Schmiedeberg.

Melano-Papuan (mel″a̤-nọ-pap′ụ-a̤n), *a.* Connected with the black races and the Papuan race (which is itself one of the black races of Melanesia). *Keane*, Ethnology, p. 288.

melanophore (mel′a̤-nọ-fōr), *n.* [Gr. *μέλας* (*μελαν-*), black, + *-φορος*, bearing, < *φέρειν*, bear.] 1. A large cell which contains dark pigment-granules. Typical examples occur in the common fence-lizard, *Anolis*, which turns from green to brown. *Nature*, Jan. 28, 1904, p. 304.—2. The dark-brown chromatophore of the algæ.

melanophyl, melanophyll (mel′a̤-nọ-fil), *n.* [Gr. *μέλας* (*μελαν-*), black, + *φύλλον*, leaf.] The yellow-brown coloring-matter of the diatoms, composed of diatomin and chlorophyl, and supposed to be similar to the phæophyl of the brown algæ.

melanoplakia (mel″a̤-nọ-plā′ki-ä), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *πλάξ* (*πλακ-*), a flat thing.] The formation of dark patches on the tongue.

melanose2 (mel′a̤-nōs), *a.* [*melanosis*.] Characteristic of or affected with melanosis.

melanosed (mel′a̤-nōst), *p. a.* Affected with melanosis.

melanostibian (mel″a̤-nọ-stib′i-a̤n), *n.* [Gr. *μέλας* (*μελαν-*), black, + NL. *stibi(um)* + *-an.*] An antimonate of iron and manganese occurring in black foliated masses: found in Sweden.

Melanostigma (mel″a̤-nọ-stig′mä), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *στίγμα*, point.]

Melanostigma pammelas.
(From Bulletin 47, U. S. Nat. Museum.)

A genus of fishes, belonging to the family *Zoarcidæ*, found in the deep sea off both coasts of North America.

melanotrichous (mel-a̤-not′ri-kus), *a.* [Gr. *μελανόθριξ* (*τριχ-*,) black-haired, < Gr. *μέλας* (*μελαν-*), black, + *θρίξ* (*τριχ-*), hair.] Having black hair; black-haired.

melanotype, *n.* **2.** A glass negative mounted on black and used as a positive.—**3.** A black print.

Melanthiaceæ (me-lan-thi-ā′sẹ-ē), *n. pl.* [NL. (Lindley, 1830), earlier *Melanthaceæ* (Robert Brown, 1810), < *Melanthium* + *-aceæ.*] A family of monocotyledonous plants of the order *Liliales*, the bunch-flower family, typified by the genus *Melanthium* (which see). It is included by many authors in the *Liliaceæ*, but is distinguished from it mainly by the septicidal capsule and the absence of bulbs. The family includes the hellebore, the bellwort, the bog-asphodel, and the blazing-star or devil's-bit.

melanthiaceous (me-lan-thi-ā′shius), *a.* Belonging to the plant family *Melanthiaceæ*.

melanthin (mel′an-thin), *n.* [Gr. *μέλας* (*μελαν-*), black, + *ἄνθος*, flower, + *-in*2.] A glucoside, $C_{20}H_{33}O_7$(?), contained in the seeds of *Nigella sativa*.

melanure (mel′a̤-nūr), *n.* [NL. *melanura* (see def.), < Gr. *μελάνουρος*, black-tailed, < *μέλας* (*μελαν-*), black, + *οὐρά*, tail.] A sparoid fish, *Oblada melanura*, found in the Mediterranean.

melanurenic (mel″a̤-nụ-ren′ik), *a.* [*melanur(ic)* + *-en-* + *-ic.*] Noting an acid, the same as ⋆*ammelide*.

melanuresis (mel″a̤-nụ-rē′sis), *n.* [NL., < Gr. *μέλας* (*μελαν-*), black, + *οὔρησις*, urination.] The passage of dark-colored urine, usually containing melanin.

melaphyre, *n.* It is proposed, in the field classification accompanying the quantitative system of classification of igneous rocks (see ⋆*rock*1), to restore the term *melaphyre* to its early significance and apply it to all dark-colored porphyries, of any composition.

Melasma gravidarum, discoloration of the skin occurring in pregnant women.—**Melasma universale,** a discoloration of almost the entire surface of the body, occurring in the aged.

Melasmia (me-las′mi-ä), *n.* [NL. (Léveillé, 1846), < Gr. *μέλασμα*, a black spot, black color.] A genus of *Fungi Imperfecti*, of the family *Leptostromataceæ*, having dimidiate pycnidia in a black scutellate stroma. The species are mostly stages in the development of *Rhytisma*.

M. acerina is the pycnidial condition of *Rhytisma acerinum.* See ★*Rhytisma.*

melassic, *a.* 2. Noting an acid, a colorless compound, $C_6H_6O_3$ (?), formed by the action of alkali on glucose.

melassigenic (me-las-i-jen′ik), *a.* [*melasses* (F. *mélasse*), molasses, + *-genic.*] Producing molasses, or tending to increase the proportion of molasses to crystallized sugar obtained in sugar-making. A large amount of mineral salts in beet-juice or cane-juice and the '*inversion*' of much of the sucrose present are melassigenic in effect.

Melbourn rock. See ★*rock*¹.

Melbury marble. See ★*marble.*

Melchizedekian (mel-kiz-e̤-dek′i-a̤n), *n.* [LL. **Melchisedecianus*, MGr. Μελχισεδεκιανοί, < Μελχισεδέκ, Melchizedek.] One of a sect which was founded about 210 A.D. as a branch of the Theodotians. The sect affirmed that Melchizedek was not a man, but a divine power, without father or mother, the true priest, who was intercessor not only for men but for angels and thus superior to Christ.

Melchizedekite (mel-kiz′e̤-dek-īt), *n.* [MGr. Μελχισεδεκῖται, pl.] Same as ★*Melchizedekian.*

meld (meld), *v. t.* [G. *melden*, mention, announce.] In *penuchle*, to announce (any counting combination in the hand), such as sequence in trumps, 150; in card-games in general, to declare.

> When a player *melds* any combination, he must lay down the cards of which his meld consists face upwards on the table beside him; he can make use of any of these exposed cards to play to a trick, but the remainder (if any) must remain exposed until the talon is exhausted.
> *Amer. Hoyle*, p. 204.

meld (meld), *n.* [*meld*, *v.*] In *penuchle*, the announcement of any counting combination in the hand: as, a *meld* of 60 queens; in card-games in general, a declaration. *Amer. Hoyle*, p. 202.

Meldola's blue. Same as *new blue.*

mêlée, *n.* 2. That part of the game of halma in which the pieces of the two players occupy the same part of the board.

melem (mel′em), *n.* [*mel*(*am*) + *-em* (a mere substitution).] A white amorphous compound, $C_6H_6N_{10}$(?), left undissolved when melam is digested with potassium hydroxid.

melene (mel′ēn), *n.* [Gr. μέλι, honey, + *-ene.*] A colorless, crystalline, olefinic hydrocarbon, $C_{30}H_{60}$, prepared by the distillation of beeswax. It melts at 62° C.

meletin (mel′e̤-tin), *n.* [*mel*(*in*) + *-et* + *-in*².] A decomposition-product of melin, probably identical with quercitin.

melezibiose (mel-ē̤-zib′i-ōs), *n.* [*melezi*(*tose*) + *biose.*] A disallowed form for ★*melezitose.*

melezitose (mē-lez′i-tōs), *n.* [F. *mélézitose*; cf. ★*melizitose.*] A colorless dextrorotatory carbohydrate, $C_{18}H_{32}O_{16}+2H_2O$, obtained in southern France from the sweet exudation of the young twigs and needles of the larch, *Abies Larix*, and from *Alhagi Camelorum* from Asia. It forms small, lustrous, hard, monoclinic crystals, and melts at 140° C. In France it is sometimes used in place of sugar. In India it is employed as an aperient. Also called *melezitriose.*

melezitriose (mel-ē̤-zit′ri-ōs), *n.* Same as ★*melezitose.*

Melian (mē′li-a̤n), *a.* Of or pertaining to the Island of Melos (one of the Cyclades) or to its productions.

> Of the last kind is the most of the Rhodian ware, and that which lay thickly just below the surface at Phylakopi, and is not of *Melian* manufacture.
> *Encyc. Brit.*, XXXI. 57.

melianthaceous (mel″i-an-thā′shius), *a.* Belonging to the plant family *Melianthaceæ.*

melibiase (me-lib′i-ās), *n.* [Gr. μέλι, honey, + *biase* (?).] Same as ★*raffinase.*

melibiose (me-lib′i-ōs), *n.* [Gr. μέλι, honey, + E. *biose.*] A colorless pulverulent dextrorotatory carbohydrate, $C_{12}H_{22}O_{11}$, prepared by the action of dilute acids on melitriose (raffinose).

melic² (mel′ik), *n.* [L. *melic*(*a*).] A plant of the genus *Melica.*

melicera (mel-i-sē′rä̤), *n.* [NL., < Gr. μέλι, honey, + κηρός, wax.] Same as *meliceris*; also, same as *porrigo*, and *favus*, 2.

meliceria (mel-i-sē′ri-ä̤), *n.* Same as ★*melicera.*

meliceroma (mē̤-lis-ē̤-rō′mä̤), *n.*; pl. *meliceromata* (-ma̤-tä̤). [NL., as *melicer*(*is*) + *-oma.*] Same as *meliceris.*

Melicerta (mel-i-sėr′tä̤), *n.* [NL., < L. *Melicerta*, Gr. Μελικέρτης, name of a sea-god.] The typical genus of the family *Melicertidæ.* *Schrank*, 1803.

Melicertidæ (mel-i-sėr′ti-dē), *n. pl.* [*Melicerta* + *-idæ.*] A family of social rotifers, of the order *Rhizota*, having a corona without setigerous lobes, the mouth lateral, the velum in the form of a continuous marginal band bent upon itself at the dorsal surface in such a manner as to encircle the corona twice, and the trophi malleoramate. It includes the genera *Melicerta*, *Lacinularia*, *Megalotrocha*, *Trochosphæra*, *Conochilus*, *Limnias*, *Cephalosiphon*, and *Œcistes.*

melicha, *n.* See ★*meliha.*

melichroous (me-lik′rō̤-us), *a.* [Gr. μελίχροος, honey-colored, < μέλι, honey, + χροά, color.] Having the color of honey.

Melichthys (me-lik′this), *n.* [Gr. μέλ(ας), black, + ἰχθύς, a fish.] A genus of balistoid fishes found in tropical seas.

meliha, melicha (mel′i-ċhä̤), *n.* [Heb., < *mālaḥ*, *v.*, salt, *melaḥ*, *n.*, salt.] The Jewish process of salting meat in preparing it for kosher food. See ★*kashern.*

melilite-basalt (mel′i-līt-ba̤-sâlt″), *n.* See ★*basalt.*

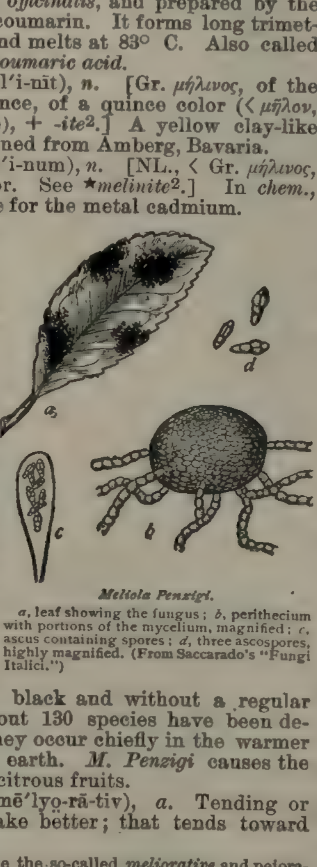
melilot, *n.*—**Blue melilot**, the Swiss melilot or old sow, *Trigonella cærulea.* It is a native of southeastern Europe and has blue flowers collected into heads.

melilotic (mel-i-lot′ik), *a.* [*Melilotus* + *-ic.*] Noting an acid, a colorless compound, $HO.\overset{2}{C}_6H_4CH_2CH_2\overset{1}{C}OOH$, found in yellow melilot, *Melilotus officinalis*, and prepared by the reduction of coumarin. It forms long trimetric crystals and melts at 83° C. Also called *orthohydroxycoumaric acid.*

melinite² (mel′i-nīt), *n.* [Gr. μήλινος, of the apple or quince, of a quince color (< μῆλον, apple, quince), + *-ite*².] A yellow clay-like mineral obtained from Amberg, Bavaria.

melinum (mel′i-num), *n.* [NL., < Gr. μήλινος, of quince color. See ★*melinite*².] In *chem.*, an early name for the metal cadmium.

Meliola (mel-i-ō′lä̤), *n.* [NL. (Fries, 1825), in allusion to the shape of the perithecia, dim. < Gr. μῆλον, apple.] A genus of ascomycetous fungi of somewhat doubtful relationship, placed by some authors in the order *Perisporiales.* The mycelium forms a sooty layer on the surface of the leaves. The perithecia are black and without a regular opening. About 130 species have been described, and they occur chiefly in the warmer regions of the earth. *M. Penzigi* causes the sooty mold of citrous fruits.



Meliola Penzigi.

a, leaf showing the fungus; *b*, perithecium with portions of the mycelium, magnified; *c*, ascus containing spores; *d*, three ascospores, highly magnified. (From Saccarado's "Fungi Italici.")

meliorative (mē′lyo̤-rā-tiv), *a.* Tending or serving to make better; that tends toward betterment.

> Here would come the so-called *meliorative* and pejorative developments in word-meaning, whereby, e.g., steward, "the sty-ward," becomes the title of a great officer of the realm and the name of a line of kings; or, on the other side, sou (Lat. solidus) passes from the name of a gold coin to that of one of proverbially insignificant value.
> *Encyc. Brit.*, XXXI. 678.

melis (mel′is), *n.* [G., < Gr. μέλι, honey.] A kind of lump-sugar made in Germany by warming up the 'massecuite' from the vacuum-pan until most of the small crystals which have begun to form are redissolved, filling into molds and allowing the whole to solidify.

melissic (mē̤-lis′ik), *a.* [Gr. μέλισσα, honey, + *-ic.*] Of or pertaining to honey.—**Melissic acid**, a colorless compound, $C_{29}H_{59}COOH$, prepared by heating melissyl alcohol with calcium and potassium hydroxids at 220° C. It crystallizes in silky, lustrous plates and melts at 90° C. It is the highest known member of the series of normal aliphatic acids. **Melissyl alcohol**, a substance found in beeswax.

melissylene (mē̤-lis′i-lēn), *n.* [Gr. μέλισσα, honey, + *-yl* + *-ene.*] Same as ★*melene.*

melitagra (mel-i-tag′rä̤), *n.* [NL., < Gr. μέλι, (μελιτ-), honey, + ἄγρα, a catching.] Same as *impetigo.*—**Melitagra florescens**, eczema of the face, with yellow, honeycomb-like crusts. *Dunglison.*

melitagria (mel-i-tag′ri-ä̤), *n.* Same as ★*melitagra.*

melitagrous (mel-i-tā̤g′rus), *a.* [*melitagra* + *-ous.*] Pertaining to, of the nature of, or suffering from, melitagra or impetigo.

melitis (mē-lī′tis), *n.* [NL., < Gr. μῆλον, cheek, + *-itis.*] Inflammation of the cheek.

Melitodes (mel-i-tō′dēz), *n.* [NL., < Gr. μελιτώδης, like honey, < μέλι(τ-), honey, + εἶδος, form.] The typical genus of the family *Melitodidæ.* *Verrill*, 1864.

Melitodidæ (mel-i-tō′di-dē), *n. pl.* [NL., < *Melitodes* + *-idæ.*] A family of gorgonacean *Alcyonaria*, having the axis jointed and consisting of alternate portions of calcareous and soft horny substance, and without an epithelial layer around the central rod. It contains several genera, among them being *Melitodes*, *Mopsella*, *Clathraria*, and *Parisis.*

melitriose (me-lit′ri-ōs), *n.* Same as *melitose*, or ★*raffinose.*

melizitase (mel-i-zī′tās), *n.* [*melizit*(*ose*) + *-ase.*] A ferment which causes the inversion of melizitose (a higher polysaccharide).

melizitose (mel-i-zī′tōs), *n.* [Varied from *melezitose.* Cf. *melitose.*] A carbohydrate, of the composition $C_{18}H_{32}O_{16}$, found in various kinds of manna.

mellaginous (me-laj′i-nus), *a.* [NL. *mellago* (*mellagin-*), a substance like honey, + *-ous.*] Of the nature of or resembling honey.

Melletes (me-lē′tēz), *n.* [NL., < Gr. μελλητής, loiterer. The fish remains in shallow pools as the tide recedes.] A genus of cottoid fishes known from Alaska.

melligenous (me-lij′e-nus), *a.* [L. *mel* (*mell-*), honey, + -γενης, -producing.] Honey-producing; that yields honey. [Rare.]

mellogen (mel′ō̤-jen), *n.* [L. *mel* (*mell-*), honey, + *-gen*, -producing.] A black, brittle, amorphous compound, $C_{11}H_2O_4.1\frac{1}{2}H_2O$, prepared by the electrolysis of acidified water with gas-carbon electrodes. It does not melt.

Mellone hydrid. Same as ★*cyamellone.*

mellonide (mel′ō̤-nid), *n.* [*mellone* + *-ide*¹.] The general name, in organic chemistry, of salts of mellone.

mellophanic (mel-ō̤-fan′ik), *a.* [L. *mel* (*mell-*), honey, + Gr. -φανης, < φαίνεσθαι, appear.] Noting an acid, a colorless compound, $C_6H_2(\overset{1.2.3.5}{COOH})_4$, prepared by the oxidation of the corresponding tetramethyl-benzene. It forms small, ill-defined crystals and melts at 238° C. Also 1, 2, 3, 5-*benzene-tetra-carboxylic acid.*

melodial (me-lō′di-a̤l), *a.* [*melody* + *-al*¹.] Pertaining to melody; melodic.

melodramatize (mel-ō̤-dram′a̤-tīz), *v. t.*; pret. and pp. *melodramatized*, ppr. *melodramatizing.* [*melodrama* (*t-*) + *-ize.*] To make a melodrama of; render melodramatic.

melody, *n.*—**Melody curve**, in *phonetics*, a curve or graphic tracing which represents the melodic course (changes of tonal pitch) of a spoken word or sentence. *Scripture*, Exper. Phonetics, p. 479.

melody-organ (mel′ō̤-di-ôr″ga̤n), *n.* An organ so constructed that the highest tone of chords can be made louder or more emphatic than the other tones.

melody-string (mel′ō̤-di-string″), *n.* Same as *chanterelle*, 1.

Melogramma (mel-ō̤-gram′ä̤), *n.* [NL. (Fries, 1849), < Gr. μέλας, black, + γράμμα, anything written.] A genus of pyrenomycetous fungi of the family *Melogrammataceæ.* It has the perithecia more or less buried in a black somewhat cushion-shaped or elevated stroma. The spores are elongate, brown, and several-septate. *M. vagans* is a common species on dead branches of *Carpinus* in Europe and America.

Melogrammataceæ (mel″ō̤-gram-a̤-tā′sē̤-ē), *n. pl.* [NL., < *Melogramma* (*Melogrammat-*) + *-aceæ.*] A family of pyrenomycetous fungi named from the genus *Melogramma* and containing 8 genera.

melolonthin (mel-ō̤-lon′thin), *n.* [*Melolonth*(*a*) + *-in*².] A colorless compound, $C_5H_{12}O_3N_2S$, contained in the cockchafer, *Melolontha vulgaris.* It crystallizes in silky, lustrous plates, and decomposes without melting.

melon¹, *n.*—**Bacteriosis of the melon.** See ★*bacteriosis.*—**Indian melon**, the barrel-cactus, *Echinocactus.* *Jour. Amer. Folk-lore*, April–June, 1902, p. 109. [Colorado.]—**Melon vine-borer.** Same as *squash* ★*vine-borer.*

melon-beetle (mel′on-bē″tl), *n.* Any one of several beetles infesting melon plants, notably the chrysomelids *Diabrotica vittata*, *D. duodecimpunctata*, and, in the western United States, *D. trivittata*. See ★*cucumber-beetle.*

meloncus (mẹ̄-long′kus), *n.*; pl. ***melonci*** (-lon′sī). [Gr. *μῆλον*, cheek, + *ὄγκος*, a mass.] Tumor of the cheek.

melon-fly (mel′on-flī), *n.* A trypetid fly, *Dacus cucurbitæ*, whose larvæ bore into melons, cucumbers, and other cucurbitaceous fruit in Hawaii.

melon-fruit (mel′on-fröt), *n.* The papaw. *Bartlett.*

melongena (mel-on-jē′nạ̈), *n.* [Also *melinzane*, *melangeno*; < It. *melanzana*.] The egg-plant, *Solanum Melongena*.

melon-hood (mel′on-hůd), *n.* A kind of fungus, *Hygrophorus pratensis*. *N. E. D.*

melonist (mel′on-ist), *n.* [*melon*^{1} + *-ist.*] One who cultivates melons. *N. E. D.*

melonite (mel′ọ̄-nīt), *n.* [Named from the *Melonese* mine, in Calaveras county, California.] A nickel telluride (perhaps Ni_2Te_3), which occurs in reddish-white granular forms with metallic luster: found in California and also in Colorado.

melon-louse (mel′on-lous), *n.* An American plant-louse, *Aphis gossypii*, which damages the leaves and young shoots of melons, as well as of cotton, orange, and many other trees and plants. See cut under ★*cotton-aphis.*

melon-moth (mel′on-môth), *n.* The adult of the melon-caterpillar (which see).

melonry (mel′on-ri), *n.* [*melon*^{1} + *-ry.*] A place where melons are grown.

melon-ware (mel′on-wãr), *n.* Pottery made in the form and coloring of a small melon. Melon-ware was made extensively in the eighteenth century by Whieldon, Wedgwood, and other English potters.

melon-wood (mel′on-wůd), *n.* A yellow Mexican wood resembling sandalwood, used for furniture. *Treas. Bot.*

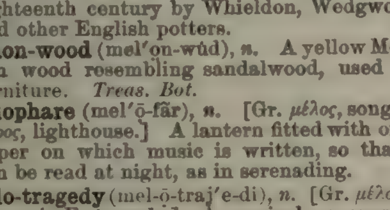
melophare (mel′ọ̄-fãr), *n.* [Gr. *μέλος*, song, + *φάρος*, lighthouse.] A lantern fitted with oiled paper on which music is written, so that it can be read at night, as in serenading.

melo-tragedy (mel-ọ̄-traj′e-di), *n.* [Gr. *μέλο(ς)*, song, + E. *tragedy.*] A musical or operatic tragedy.

> He [Alfiere] composed a sort of drama, altogether new, which he called a *melo-tragedy*. His object here was to unite the music . . . with the grandeur and pathos of tragedy. *J. Hobhouse*, Hist. Illustr. Ch. Har., p. 402.

melotype (mel′ọ̄-tīp), *n.* [Appar. irreg. < Gr. *μέλας*, black, + *τύπος*, type. The name would allude confusedly to the dark room that is not required.] 1. In *photog.*, a photographic process which permits development at any time and does not require a dark room.—2. A picture made by this process.

melting-furnace, *n.* 2. A gas-furnace used to melt gold, silver, copper, nickel, or other hard metals placed within it in a crucible. For melting lead, type-metal, and other soft metals an iron pot is used instead of a crucible.—**Rotary melting-furnace**, an oil- or gas-furnace having two cylindrical steel chambers lined with fire-clay and placed end to end on rollers for convenience in rotating one or the other, independently, in charging and pouring out the melted metal. The cut shows a lengthwise section through the furnace. The pipes at the ends are for the oil and the air-blast, and the hand-wheels are used to rotate each chamber. The furnace-chambers are divided into halves for convenience in putting in the lining, and in operation are closed air-tight. Each chamber has an opening at the top, one being shown open and the other closed, and there is an opening from one chamber to the other for the passage of the flames. In operation each chamber is charged with metal, and oil or gas turned on at one end. The flame of the burning gas melts the metal in the first chamber, and the waste heat passes through to the second chamber, heating the metal in part and escaping at the top. The illustration shows two chambers at this point of the operation. The gas is then turned off, the cover of the first chamber is removed, and the chamber is turned over until the liquid metal pours out into the ladle on the floor. The chamber is turned back and recharged, the top being left open. The top of the second chamber is then closed and the gas is turned on at that end, when the whole process is reversed and, by thus alternating the two chambers, the work of the furnace becomes practically continuous.



Section of Rotary Melting-furnace.

a, furnace; *b*, fire-clay lining; *c*, gas or oil and air inlet; *d*, frame supporting furnace; *e*, rollers on which furnace rotates; *f*, hand-wheel for rotating furnace; *g*, *g*, outlets for products of combustion, one closed, one open; *h*, *h*, controls of fuel and air supply, one open, one closed; *i*, ladle ready to receive liquid metal when furnace is turned over.

melting-hole (mel′ting-hōl), *n.* A furnace for melting steel in the crucible process. *Phillips and Bauerman*, Elements of Metallurgy, p. 348.

mem (mām), *n.* [Heb. *mēm* (*mäyim*, waters), Samaritan *mēm*, Syr. Ar. *mīm*, etc.; in Gr. *μῶ*, later *μῦ*. See *M.*] The thirteenth letter (מ) in the Hebrew alphabet, corresponding to the English *m*. Its numerical value is XL.

mem. An abbreviation (*b*) [*cap.*] of *member*; (*c*) of the Latin *memento*, remember; (*d*) of *memoir*.

member, *n.* 4. (*f*) In the classification of the sedimentary rocks adopted by the United States Geological Survey, one of the component elements of a formation.

5. In *Eng. law*, a place where a custom-house has been kept of old time, with officers or deputies in attendance. Such localities were lawful places of exportation or importation. *Bouvier*, Law Dict.

memberment (mem′bėr-mẹnt), *n.* [*member* + *-ment.*] The manner of arrangement of parts in a complex body. *Buck*, Med. Handbook, VII. 313.

membrana (mem-brā′nạ̈), *n.*; pl. *membranæ* (-nē). [L.] Same as *membrane.*—**Membrana flaccida**, the tympanic membrane where it passes over the notch of Rivini.—**Membrana granulosa**, a layer of yellow granules lining the Graafian follicle.—**Membrana propria**, one of various membranes which cover or line organs or cavities, such as the pia mater, the membrane covering the cartilage of the Eustachian tube, a fibrous addition to the periosteum of the sternum, etc.—**Membrana putaminis**, the membrane lining the inner surface of the shell of a bird's egg.—**Membrana reticulata**, a finely reticulate membrane which covers the organ of Corti in the ear.—**Membrana serosa.** (*a*) Same as *serous membrane.* (*b*) Same as *false amnion.*—**Membrana tympani.** Same as *tympanic membrane* (which see, under *membrane*).

membranate (mem′brạ̄-nāt), *a.* [NL. *membranatus*, < *membrana*. See *membrane.*] Having a membrane or membranes; covered with membranes. *Robson*, Brit. Flora, iii. 7.

membranated (mem′brạ̄-nā-ted), *a.* Same as ★*membranate.*

membrane, *n.*—**Acherson's membrane**, a sheath of casein which incloses the milk-globules, preventing their coalescence.—**Alar membrane.** See ★*alar.* **Basilar membrane of the eye.** See ★*basilar.*—**Bowman's membrane.** Same as *Bowman's* ★*layer.*—**Cargile membrane**, a thin animal membrane, such as gold-beaters' skin, employed to prevent adhesions of opposed raw surfaces after an operation. *Med. Record*, March 7, 1903, p. 387.—**Dermal membrane**, in sponges, the outer porous skin.—**Descemet's membrane.** Same as *membrane of Demours.*—**Drum membrane.** Same as *tympanic membrane.*—**Huxley's membrane** or **layer**, a portion of the inner root-sheath of the mammalian hair which consists of polygonal cells with clearly defined nuclei.—**Membrane of Duddell.** Same as *membrane of Demours.*—**Osborne membrane**, in lepidopterous larvæ, the stretched part of the membrane around the rectum and in the anal legs. It is shed with the last larval skin in the transformation to pupa. Also called *retaining membrane.*—**Peripodal membrane**, in *entom.*, that portion of the hypodermis of holometabolic insects which lines the peripodal cavity.—**Peritoneal membrane**, in tracheate arthropods, the epithelial layer of the tracheæ. Also called *ectotrachea.*—**Peritrophic membrane**, a chitinous tube within the alimentary canal of many insects which eat solid indigestible food: probably a secretion of the chylific stomach.—**Reissner's membrane.** See *membrane of Reissner.*—**Retaining membrane.** Same as *Osborne* ★*membrane.*—**Reticulate membrane**, the net-like membrane covering the organ of Corti in the ear.—**Shrapnell's membrane.** Same as ★*membrana flaccida.*—**Tympaniform membrane**, the membrana tympaniformis, which takes part in the formation of the syrinx in birds and is stretched between the lower bronchial half-rings. It is described as *membrana interna* and *membrana externa*, according to its position on the internal or external side of the bronchus.—**Virginal membrane.** Same as *hymen*^{2}.—**Vitreous membrane.** Same as *membrane of Bruch.*

membrane-pipe (mem′brān-pīp), *n.* In *phonet.*, a pipe with membranous reeds; a tube across the end of which membranes are stretched: used to illustrate the action of the vocal cords.

> *Membrane pipes* . . . form convenient instruments for illustrating the effect of tension on the pitch of the membrane, but are decidedly liable to mislead in implying that the vocal bands vibrate like membranes and that the tension is obtained wholly by bringing the points of support further apart. *Scripture*, Exper. Phonetics, p. 257.

membranin (mem′brạ̄-nin), *n.* [*membrane* + *-in*^{2}.] A hyalogen (possibly a glucoalbumin) found in Descemet's membrane and the capsule of the crystalline lens.

Membranipora (mem-brạ̄-nip′ọ̄-rạ̈), *n.* [NL., < L. *membrana*, membrane, + Gr. *πόρος*, pore.] The typical genus of the family *Membraniporidæ*. *Blainville.*

Membraniporidæ (mem″brạ̄-ni-pō′ri-dē), *n. pl.* [*Membranipor(a)* + *-idæ.*] A family of chilostomatous ectoproctous polyzoans, having the zoarium calcareous or membranocalcareous, the zoœcia forming an irregular continuous expansion, or in linear series with raised margins, and more or less membranous in front. It contains the genera *Membranipora*, *Electra*, *Biflustra*, *Amphiblestrum*, *Megapora*, and *Foveolaria*.

membranoid (mem′brạ̄-noid), *a.* [*membran(e)* + *-oid.*] Resembling a membrane; membraniform.

membrette (mem-bret′), *n.* [F., < *membre*, member.] An alette; also, less accurately, any small shallow pilaster.

Memorandum clause. See ★*clause.*

memory, *n.*—**Affective memory.** See ★*affective.*—**Associative memory**, in *physiol.*, that capacity of the organism in virtue of which a given stimulus produces not only the effects to which it is adequate, but also the effects of other stimuli which formerly affected the organism coincidentally with the given stimulus: sometimes regarded as a criterion of the existence of mind in the organism stimulated.—**Emotional memory**, affective memory.—**Functional memory**, in *psychol.*, a memory connected always with the exercise of some bodily function and not meditated by free ideas. See the extract.

> The second category contains those animals possessing primitive instincts . . . and *functional memory*, i. e., memory connected always with some bodily function. The animal perceives, in the external world, the conditions of satisfying the primary instincts; but this consciousness is strictly connected with the return of functional need, and leaves no independent image in the nervous organism. *Amer. Jour. Psychol.*, XII. 264.

Intellectual memory, in *psychol.*, memory of sensations and of their derivatives: opposed to ★*affective memory.* *T. Ribot* (trans.), Psychol. of Emotions, p. 163.—**Kinesthetic memory**, in *psychol.*: (*a*) Memory of bodily movement. Such memory may be mediated by images of sight, hearing, etc., or by kinesthetic images. *Baldwin*, Dict. of Philos. and Psychol., I. 599. (*b*) Memory as mediated by kinesthetic images in the narrower sense.—**Mediate memory.** Same as *mediate* ★*association.* *W. Wundt* (trans.), Outlines of Psychol., p. 243.—**Memory apparatus**, in *psychol.*, an apparatus for the study of memory and association which consists, in principle, of a screen with a window, behind which pass at regular intervals series of words, pictures, nonsense-syllables, etc.—**Memory-consciousness**, in *psychol.*, mind as it is when we are remembering something; the disposition or arrangement of mind during an act or process of recall. *E. B. Titchener*, Exper. Psychol., I. i. 1.—**Motor memory**, in *psychol.*, memory by means or in terms of motor or kinesthetic images. *Amer. Jour. Psychol.*, XI. 7.—**Muscular memory.** Same as *motor* ★*memory.* *F. Galton*, Human Faculty, p. 106.—**Pitch memory**, in *psychol.*, memory of tonal pitch; specifically, the ability accurately to recall the pitch of a tone or clang, or the key of a melody. *Amer. Jour. Psychol.*, XII. 409.

memory-cell (mem′ọ̄-ri-sel), *n.* A special cortical cell supposed to be the seat of the memory-image of a sensation: opposed to *sensory cell*.

> We assume, therefore, that the sensation of the rose is produced in certain ganglion-cells, and that these numerous sensory cells transmit their excitation further to one other ganglion-cell, a *memory-cell*.
> *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 156.

memory-idea (mem′ọ̄-ri-ī-dē″ạ̈), *n.* In *psychol.*, a reproduced idea; an idea of a remembered object or event.

> *Memory-ideas* are aroused by sense-perceptions, and again interrupted by new impressions.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 282.

memory-image (mem′ọ̄-ri-im″ạ̄j), *n.* In *psychol.*, the reproduction in kind of a sensation or sense-perception; the sensation or sense-perception as it is pictured in memory.

> *Memory-images*, it is true, cannot be directly aroused through external sense impressions, but follow them after a longer or shorter interval.
> *W. Wundt* (trans.), Outlines of Psychol., p. 22.

Memphite, *n.* 2. The language now spoken in the neighborhood of ancient Memphis, and forming one of the main divisions of Coptic; also, formerly, the adjacent Coptic dialect now called *Bohairic*.

Memphitic empire, the ancient empire or earliest period of Egyptian history, from the first to the tenth dynasties inclusive: characterized, especially in the fourth and fifth dynasties, by the realism and dignity of its sculpture and the importance of its monuments, such as the Great Sphinx and the great pyramids of Gizeh.

menachite (men′ạ-kīt), *n.* [*Menachan*, prop. *Menaccan*, a locality in Cornwall, + *-ite*^{2}.] An imperfectly examined ingredient in black magnetic sand, later identified by Klaproth with the metal titanium which he discovered.

menagerist (me-naj′ẹ-rist), *n.* One who forms, owns, or exhibits a menagerie, or collection of wild animals.

Menandrian (me-nan′dri-a̤n), *n.* A member of one of the most ancient branches of the Gnostics, so called from the leader, Menander, thought to have been a disciple of Simon Magus. He asserted that he was the Messiah, offering salvation through baptism in his name, and promising immortality to his followers.

mend, *v. t.*—**To mend the furl.** Same as *to mend* ★*sail.*

mendee (men′dē), n. [Also *mindy*, *mendy*; Hind. *mendhi.*] The plant *Lawsonia alba*, a variety of henna. It affords the henna dye extensively used in Mohammedan countries for dyeing the hands and the hair. *Yule and Burnell.*

Mendelian (men-dē′li-a̤n), *a.* [*Mendel* (see def.) + *-ian.*] Of or pertaining to Gregor Johann Mendel (1822–84), an Austrian naturalist and ecclesiastic, or to the theoretical interpretations of his experiments in heredity or of others of like character: as, the *Mendelian* law of heredity. See *ancestral* ★*inheritance.*

With the discovery of the *Mendelian* principle the problem of evolution passes into a new phase.
Bateson and Saunders, Rep. Evol. Com. Roy. Soc., 1902, [I. 125.

Mendelian hybrid. See ★*hybrid.*

Mendelianism (men-dē′li-a̤n-izm), *n.* Same as ★*Mendelism.*

The "purity of the germ ' idea applies quite as well to the law of ancestral inheritance as to *Mendelianism* and is in harmony with it. *Science*, Feb. 5, 1904, p. 214.

Mendelism (men′del-izm), *n.* [*Mendel* + *-ism.*] The theory of hybridity and heredity proposed by Gregor Johann Mendel (1822–84) and revived in later years by De Vries, Bateson, and others. See *ancestral* ★*inheritance.*

The breeder wants to preserve the desirable characters or traits and eliminate the undesirable ones, but under the strict interpretation of *Mendelism* this is difficult.
Science, March 20, 1903, p. 451.

Mendelize (men′del-īz), *v. i.*; pret. and pp. *Mendelized*, ppr. *Mendelizing.* To conform to Mendel's law of ancestral inheritance. See *ancestral* ★*inheritance.*

We do not know what plants will *Mendelize* until we try. *L. H. Bailey*, Plant Breeding, p. 171.

Mendelssohnian (men-del-sō′ni-a̤n), *a.* In *music*, pertaining to or in the style of the German composer Felix Mendelssohn-Bartholdy (1809–47).

mendole (mañ-dōl′), *n.* [F. *mendole*, It. *mendole.*] A small Mediterranean fish, *Smaris gagarella*, or some similar species: formerly called *cackerel.*

meneclinoid (men-e-klin′oid), *n.* [Gr. *μήνη*, the moon, + *κλίνειν*, bend, + *-oid.*] In *math.*, a catenary.

Menelaion (men-e-lā′yon), *n.* [Gr. *Μενελάϊον*, *Μενελάειον*, < *Μενέλαος*, Menelaus.] A temenos or shrine in honor of Menelaus, the Homeric hero. The Menelaion at Sparta was excavated in 1889–90.

menelcosis (men-el-kō′sis), *n.* [NL., < Gr. *μῆνες*, menses, + *ἕλκωσις*, ulceration.] Bleeding from an ulcer as a form of vicarious menstruation.

Menevian (me-nē′vi-a̤n), *a.* [*Menevia*, the medieval Latin name of St. David's.] Of or pertaining to St. David's, in Wales.—**Menevian group.** See ★*group*^{1}.

M. Eng. An abbreviation of *Master of Engineering.*

menhidrosis (men-hi-drō′sis), *n.* Same as ★*menidrosis.*

Menidia (mẹ̄-nid′i-ä̤), *n.* [NL., < Gr. *μήν*, moon, + dim. *-ιδιον.*] A genus of atherinoid fishes, of numerous species, all American, some of them entering or inhabiting fresh water: known as *silversides.*

menidrosis (men-i-drō′sis), *n.* [NL., < Gr. *μῆνες*, menses, + *ἱδρώς*, sweat.] Sweating of blood as a form of vicarious menstruation.

meningic (mẹ̄-nin′jik), *a.* Same as *meningeal.*

meningina (men-in-jī′nä̤), *n.* [NL., < Gr. *μῆνιγξ*, membrane, pia mater.] The pia mater and cerebral layer of the arachnoid regarded as one membrane.

meninginitis (mẹ̄-nin-ji-nī′tis), *n.* [NL., < *meningina* + *-itis.*] Inflammation of the meningina; leptomeningitis.

meningism (mẹ̄-nin′jizm), *n.* [Gr. *μῆνιγξ*, membrane, + *-ism.*] A morbid condition marked by the symptoms of meningitis, but without the actual presence of that disease; pseudomeningitis.

Meningitic streaks. Same as *taches cérébrales*, which see under *tache*^{4}.

meningitis, *n.*—**Basilar meningitis**, inflammation of the membranes covering the base of the brain: usually of tuberculous origin.—**Cerebral meningitis**, inflammation of the membranes of the brain.—**Cerebrospinal meningitis.** (*a*) See *cerebrospinal* and *meningitis*: also see *epidemic cerebrospinal* ★*meningitis.* (*b*) See ★*forage-poisoning.*—**Epidemic cerebrospinal meningitis.** See *meningitis.* It was first described in 1805, since which time several severe epidemics of the disease have occurred in various parts of the world. The disease is caused by a micro-organism, *Diplococcus intracellularis meningitidis*, or Weichselbaum's diplococcus, present in the cerebrospinal fluid. The death-rate from the disease is high, and even if recovery takes place incurable deafness, blindness, paralysis, or mental feebleness may be left behind. The treatment that has given the best results is by means of hot baths and the administration of large doses of sodium salicylate. Good results have been obtained by the injection of an antitoxic serum. Benefit often follows the withdrawal of a portion of the cerebrospinal fluid through a puncture in the lumbar region of the spine.—**Otitic meningitis**, involvement of the membranes of the brain in an inflammatory process arising in the middle ear.—**Spinal meningitis**, inflammation of the membranes of the spinal cord.

meningocephalitis (mẹ̄-ning″gọ̄-sef-a̤-lī′tis), *n.* [NL., < Gr. *μῆνιγξ*, membrane, + *κεφαλή*, head, + *-itis.*] Inflammation of the cerebral membranes and adjacent portion of the brain.

meningocerebritis (mẹ̄-ning″gọ̄-ser-ẹ̄-brī′tis), *n.* [NL., < Gr. *μῆνιγξ*, membrane, + L. *cerebrum*, brain, + *-itis.*] Same as ★*meningocephalitis.*

meningococcic (mẹ̄-ning″gō-kok′sik), *a.* [NL. *meningococc*(*us*) + *-ic.*] Pertaining to or derived from meningococci.

In the foregoing table there are given the results of the tests with seven different antigonococcic serums and a *meningococcic* serum in conjunction with the various homologous extracts and two control extracts.
Jour. Med. Research, Dec., 1907, p. 229.

meningococcus, *n.* See ★*diplococcus intracellularis meningitidis* (with cut).

meningo-encephalitis (mẹ̄-ning″gọ̄-en-sef-a̤-lī′tis), *n.* Same as ★*meningocephalitis. Jour. Trop. Med.*, July, 1903, p. 202.

meningo-encephalocele (mẹ̄-ning″gọ̄-en-sef′-a-lō-sēl), *n.* [Gr. *μῆνιγξ*, membrane, + *ἐγκέφαλος*, brain, + *κήλη*, tumor.] Hernia of the brain with its membranes.

meningo-encephalomyelitis (mẹ̄-ning″gọ̄-en-sef″a̤-lọ̄-mī-e-lī′tis), *n.* [NL., < Gr. *μῆνιγξ*, membrane, + *ἐγκέφαλος*, brain, + *μυελός*, marrow, + *-itis.*] Inflammation of the brain and spinal cord with their membranes.

meningomalacia (mẹ̄-ning″gọ̄-ma-lā′si-ä̤), *n.* [NL., < Gr. *μῆνιγξ*, membrane, + *μαλακία*, softness.] Softening of any membrane.

meningomyelitis (mẹ̄-ning″gọ̄-mī-e-lī′tis), *n.* [NL., < Gr. *μῆνιγξ*, membrane, + *μυελός*, marrow, + *-itis.*] Inflammation of the spinal membranes and more or less of the substance of the spinal cord.

meningomyelocele (mẹ̄-ning-gọ̄-mī′e-lọ̄-sēl), *n.* [Gr. *μῆνιγξ*, membrane, + *μυελός*, marrow, + *κήλη*, tumor.] Spina bifida in which the tumor consists of both membranes and nervous substance.

meningorrhagia (mẹ̄-ning-gọ̄-rā′ji-ä̤), *n.* [NL., < Gr. *μῆνιγξ*, membrane, + *-ραγια*, < *ῥηγνύναι*, break.] Hemorrhage from the membranes of the brain or spinal cord.

meningorrhea (mẹ̄-ning-gọ̄-rē′ä̤), *n.* [NL. *meningorrhoea*, < Gr. *μῆνιγξ*, membrane, + *ῥοία*, a flow.] Same as ★*meningorrhagia.*

menischesis (mẹ̄-nis′kẹ̄-sis), *n.* [NL., < Gr. *μῆνες*, menses, + *σχέσις*, retention.] Failure of menstruation to establish itself at puberty.

Meniscium (mẹ̄-nis′i-um), *n.* [NL. (Schreber, 1791), < Gr. *μηνίσκος*, a crescent, alluding to the arcuate connecting veins.] A genus of coarse polypodiaceous ferns resembling various species of *Goniopteris* and *Dryopteris* and having fronds 1–7 feet high, usually once pinnate. The primary pinnate veins of the pinnæ are uniformly connected by opposing veinlets arcuately joined in pairs, each with an excurrent free veinlet, the elliptical or somewhat curved sori being borne at the point of union. The species, about 10 in number, are mostly tropical, one (*M. reticulatum*) occurring in subtropical Florida.

Meniscotheriidæ (mẹ̄-nis″kọ̄-thẹ̄-rī′i-dē), *n. pl.* [*Meniscotherium*, the type genus, + *-idæ.*] A family of ungulate mammals, belonging to the suborder *Condylarthra*, which comprises species of small size with lophodont molars. All are extinct, and their remains are found in the Lower Eocene. *Cope*, 1882.

meno (mā′nō), *adv.* [It., < L. *minus*, less: see *minus.*] In *music*, less: as, *meno* allegro, less quick; *meno* forte, less loud; *meno* mosso, slower; etc.

Menognatha (mẹ̄-nog′na̤-thä̤), *n. pl.* [NL., irreg. < Gr. *μένειν*, remain, + *γνάθος*, jaw.] In Brauer's classification of insects, a group of superordinal rank which includes those forms which feed by means of jaws both as young and as adults.

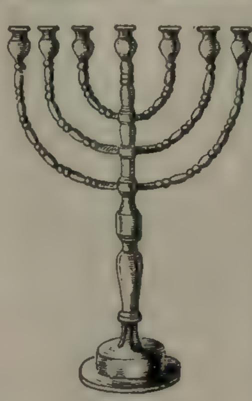
menognathous (mẹ̄-nog′na̤-thus), *a.* Pertaining to, or having the characters of, the *Menognatha.*

Menominee (me-nom′i-nē), *n.* [From a local name, one of many derived from the name of the *Menominee* Indians of the region mentioned.] 1. That section of the Huronian system which constitutes the Menominee iron range along the river of this name and on the border of Michigan and Wisconsin. It consists of metamorphosed sedimentary and eruptive rocks, and is separable into a lower and an upper portion.—2. *Coregonus quadrilateralis*, one of the whitefishes found in the Great Lakes and north to Alaska.

Other important items [of fishes taken from Lake Michigan] were "*Menominee*" worth $14,307, and bluefin worth $12,794, all other products being represented by lower values. *Rep. U. S. Fish Com.*, 1902, p. 597.

menophania (men-ọ̄-fā′ni-ä̤), *n.* [NL., < Gr. *μῆνες*, menses, + *-φανια*, < *φαίνεσθαι*, appear.] The appearance of menstruation at puberty.

menorah (me-nō′rä̤), *n.* [Heb. *menōrāh*, < *nūr*, light.] A candlestick: specially applied to the seven-branched candlestick in the synagogue.—**Menorath ha-zahab**, the golden candlestick in the Tabernacle (Ex. xxv. 31).



Menorah.

Menorhyncha (men-ọ̄-ring′kä̤), *n. pl.* [NL., irreg. < Gr. *μένειν*, remain, + *ῥύγχος*, snout, bill.] In Brauer's classification of insects, a group of superordinal rank which includes those forms which take food by suction both as young and as adults.

menorhynchous (men-ọ̄-ring′kus), *a.* Of or pertaining to the *Menorhyncha.*

menoschesis (mẹ̄-nos′kẹ̄-sis), *n.* Same as ★*menischesis.*

menosepsis (men-ọ̄-sep′sis), *n.* [NL., < Gr. *μῆνες*, menses, + *σῆψις*, putrefaction.] Decomposition of retained menstrual discharges; also, blood-poisoning resulting therefrom.

menoseptic (men-ọ̄-sep′tik), *a.* Pertaining to or affected with menosepsis.

Menospora (mẹ̄-nos′pọ̄-rä̤), *n.* [NL., < Gr. *μήνη*, moon, + *σπορά*, seed (spore).] The typical genus of the family *Menosporidæ. Léger*, 1892.

Menosporidæ (men-ọ̄-spor′i-dē), *n. pl.* [NL., < *Menospora* + *-idæ.*] A family of gregarines which consists of solitary forms having the epimerite on a long neck and crescent-shaped spores. It contains the genera *Menospora* and *Hoplorhynchus.*

menostasia (men-os-tā′si-ä̤), *n.* [NL.] Same as *menostasis.*

menostatic (men-os-tat′ik), *a.* [*menostasis.*] Pertaining to or marked by menostasis, or retention of the menses.

mensur. An abbreviation of *mensuration.*

mensuralist (men′sṳ̄-ra̤l-ist), *n.* [*mensural* + *-ist.*] A composer of measurable music.

The figures adopted by earlier *mensuralists.*
Woodbridge, Oxf. Hist., I. 132. *N. E. D.*

mental^{1}, *a.*—**Law of mental growth**, in Wundt's psychology, one of the three laws of mental development, coördinate with the laws of heterogony of ends and of development toward opposites.

The *law of mental growth* is an application, to more comprehensive mental syntheses, of the law of psychical resultants, which declares that every psychical compound shows attributes which, while intelligible from the attributes of its elements, are by no means the mere sum of the attributes of these elements.
W. Wundt (trans.), Outlines of Psychol., p. 369.

Mental physiology, physiological psychology; psychology approached by way of physiology, or developed in connection with physiological facts and laws. W. B.

Carpenter wrote a "Principles of Mental Physiology, with their applications to the training and discipline of the mind, and the study of its morbid conditions," which reached its sixth edition in 1888. The phrase has now fallen into disuse.—**Mental science.** See ★*science.*

mentalism (men′tạl-izm), *n.* [*mental*¹ + *-ism.*] 1. Mental activity or process.

> Deranged nervous function—a deranged *mentalism*, if I may be permitted to coin such a word—of an epileptic or allied nature.
> *Maudsley*, Mental Dis., vii. 243. *N. E. D.*

2. The metaphysical opinion that matter is a mode of mind or consciousness; the opposite of materialism.

> It may be held broadly that 'matter in ultimate analysis is a mode of mind or consciousness,' without raising the question of a conscious self or subject. . . . Such view I think is often called Idealism. I propose to label it '*Mentalism*' in broad antithesis to 'Materialism.' If, again, the Mentalist's ontology expressly excludes the notion of self or subject . . . then perhaps we may designate him as an atomistic *Mentalist*.
> *Sidgwick*, in Mind, Jan., 1900, p. 20. *N. E. D.*

Menthaceæ (men-thā′sẹ-ē), *n. pl.* [NL. (Ward, 1905), < *Mentha* + *-aceæ.*] A great family of dicotyledonous sympetalous plants of the order *Polemoniales*, the mint family, typified by the genus *Mentha*, the mint genus. It is characterized primarily by a labiate corolla, whence it was called *Labiatæ* by Bernard Jussieu in laying out the garden of the Trianon—a name which has been generally adopted and is still widely used, although not based on that of any genus of the family. See *Labiatæ.*

menthenol (men′thẹ-nol), *n.* Same as ★*terpineol.*

menthenone (men′the-nōn), *n.* [*Mentha* + *-en* + *-one.*] A colorless ketonic compound, $C_{10}H_{16}O$, contained in peppermint-oil and prepared by the action of dilute hydrochloric acid on nitrosomenthene. It boils at 206.3° C. and has a well-marked odor of peppermint.

menthiodol (men-thī′ọ-dol), *n.* [*menth(ol)* + *iodol.*] Iodol containing one per cent. of menthol.

menthophenol (men-thọ-fē′nol), *n.* [*menth(ol)* + *phenol.*] An antiseptic and anesthetic fluid made by melting together 3 parts of menthol and 1 part of phenol: generally used very much diluted with water.

menticulture (men′ti-kul-tụ̈r), *n.* [L. *mens* (*ment-*), mind, + *cultura*, culture. See *culture.*] The cultivation or training of the mind.

mento-anterior (men″tō-an-tē′ri-ọr), *a.* [L. *mentum*, chin, + *anterior*, before.] Noting a position of the fetus, during labor, in which its chin points anteriorly in relation to the body of the mother.

mento-iliac (men-tō-il′i-ak), *a.* [L. *mentum*, chin, + E. *iliac.*] Noting a position of the fetus, during labor, in which its chin points to one or the other iliac fossa of the mother.

mentolabial (men-tō-lā′bi-ạl), *a.* [L. *mentum*, chin, + *labium*, lip, + *-al*¹.] Relating to both the chin and the lips.—**Mentolabial furrow**, the hollow just above the chin.

mentoposterior (men″tō-pos-tē′ri-ọr), *a.* [L. *mentum*, chin, + *posterior*, behind.] Noting a position of the fetus, during labor, in which its chin is directed posteriorly in relation to the body of the mother.

menyanthaceous (men″i-an-thā′shius), *a.* Belonging to the plant family *Menyanthaceæ.*

menyanthol (men-i-an′thol), *n.* [*menyanth(in)* + *-ol.*] A colorless volatile oily compound, C_8H_8O, prepared by the hydrolysis of the glucoside menyanthin. It has an odor like that of oil of bitter almonds.

M. E. P. An abbreviation of *mean effective pressure.*

Mephistophelic (mef″is-tọ-fel′ik), *a.* Same as *Mephistophelian.*

Mephitic air. See ★*air*¹.

mer. An abbreviation of *meridian.*

meralgia (mẹ-ral′jiạ̈), *n.* [NL., < Gr. *μηρός*, the thigh, + *ἄλγος*, pain.] Pain in the thigh.—**Meralgia paræsthetica**, various disagreeable and painful sensations in the skin of the thigh.

Meramec (mer′ạ-mek), *n.* A name suggested by E. O. Ulrich, from the Meramec river in Missouri, where these strata outcrop, for a group of Lower Carboniferous limestones of the upper Mississippi valley, embracing the St. Louis, Spergen Hill, and Warsaw of earlier writers.

merc. An abbreviation (*a*) of *mercurial*; (*b*) of *mercury.*

mercantil, *a.* A simplified spelling of *mercantile.*

Mercantile agency. See ★*agency.*

mercaptal (mėr-kap′tạl), *n.* [*mercapt(an)* + *al(dehyde).*] The name of a class of compounds containing the group $\genfrac{}{}{0pt}{}{R}{H}{>}C(SAlk)_2$, where R is any hydrocarbon radical and Alk is an alkyl-group such as methyl or ethyl. The compounds are oils with a highly offensive smell, and are also called *thioacetals.* They are related to mercaptan in the same way that the acetals are to alcohol.

mercapto-. A combining form used in organic chemistry to denote a derivative of a mercaptan, that is, a compound containing the group R S, where R is an alkyl radical such as methyl or ethyl.

mercaptol (mėr-kap′tol), *n.* [*mercapt(an)* + *-ol.*] The name in organic chemistry of a class of compounds containing the group $\genfrac{}{}{0pt}{}{R}{R}{>}C(SAlk)_2$, where R is any hydrocarbon radical and Alk is an alkyl-group such as methyl or ethyl. The compounds are prepared by the action of ketones on mercaptans and are related to the mercaptols in the same way that acetals are to acetoles or as aldehydes are to ketones.

mercapturic (mėr-kap-tū′rik), *a.* [*mercapt(an)* + *-uric.*] Used only in the following phrase.—**Mercapturic acid**, a name (introduced by Baumann) of certain complex substances which appear in the urine of dogs after they are fed with hyalogen substitution-products of benzol, the aromatic radical appearing in combination with a sulphur-group of the nature of cystein.

mercatorial¹ (mėr-kạ-tō′ri-ạl), *a.* [L. *mercatorius*, mercantile.] Mercantile; of or pertaining to merchants or commerce. [Now rare.]

Mercatorial² (mėr-kạ-tō′ri-ạl), *a.* [From *Mercator* (Lat. for Gerhard *Kremer*, 1512–1594), a Flemish geographer, and the inventor of a system of map-projection extensively used by navigators.] Of or pertaining to Mercator's projection (which see, under *projection*) or to Mercator's chart (which see, under *chart*).

> The *Mercatorial* bearing between two stations is the mean of their reciprocal true bearings.
> *Encyc. Brit.*, XXXIII. 99.

Merced series. See ★*series.*

mercenaria (mėr-se-nā′ri-ạ̈), *n.* The specific name of the quahog, or hard-shell clam, adopted to some extent as a book-name.

mercerization, *n.* The most valuable application of mercerization at the present time is the lustering of cotton yarn, which is accomplished by subjecting the yarn under tension to the action of caustic-soda solution and then thoroughly removing the caustic soda by washing before the tension is relieved. Egyptian or sea-island cotton is best suited for the purpose, and with yarns of these cottons a high silky luster may be obtained. Two-ply yarn is commonly used, and the nature of the twist of the yarn has been found to have more or less influence upon the result.

merch (mėrch), *n.* Same as ★*march*⁴.

merchandizable (mėr′chạn-dīz-ạ-bl), *a.* Suited for being classed as merchandise; marketable.

Merchant mill. See ★*mill*¹.

Merchantable volume. See ★*volume.*

merchanteer (mėr-chạn-tēr′), *n.* A merchant vessel: a merchantman. [Rare.]

merchanter† (mėr′chạn-tėr), *n.* A merchantman.

merchet, *n.* Same as *marchet.*

Mercurean, *a.* and *n.* Same as *Mercurian.*

Mercurian, *a.* II. *n.* 1. In *astrol.*, one born under the influence of the planet Mercury. *N. E. D.*—2. An (imaginary) inhabitant of the planet Mercury.

Mercuric iodide. See ★*iodide.*—**Mercuric oxid**, red oxid of mercury (H_gO), the substance, early known as calx of mercury, from which Priestley, in 1774, first obtained oxygen in separate form.

mercurius (mėr-kū′ri-us), *n.* [ML. See *Mercury.*] The metal mercury.—**Mercurius philosophorum** (Mercury of the philosophers, that is alchemists), a name used in the fourteenth and fifteenth centuries to denote the essence of metallic character, or that which should have the power of imparting metallic character in the highest degree to base metals.

Mercury, *n.*—**Black mercury**, the poison-ivy, *Rhus radicans.*—**Black oxid of mercury**, mercurous oxid, Hg_2O.—**Green iodide of mercury.** See ★*iodide.*—**Inch of mercury.** See ★*inch*¹.—**Maiden's mercury**, the girl's mercury.—**Mercury arc.** See *electric* ★*arc.*—**Mercury-arc rectifier.** Same as *mercury-vapor* ★*rectifier.*—**Mercury lamp**, a lamp the light of which is derived from an electric discharge through mercury vapor *in vacuo.* In its original form the mercury lamp was devised by Professor Arons of Berlin (1892). The Arons lamp consists of a vacuum-tube with mercury terminals, of the form shown in Fig. 1. When the tube is carefully pumped out and an arc is established in the vacuum between the terminals *a* and *b*, a strong light of characteristic greenish color is emitted. To establish the arc the lamp is tipped until the mercury flows through the bend of the tube from one leg to the other, thus forming a temporary bridge for the path of the current, which is immediately broken upon restoring the lamp to its vertical position. Much heat is developed by the electric arc in such lamps, particularly at the cathode, the surface of which emits more light than any other portion of the arc, and on this account it is difficult to maintain such lamps in long-continued operation without breaking the glass. To overcome this difficulty, and to render the mercury lamp more suitable for certain spectroscopic work requiring great intensity of light, Lummer modified the form of the tube as shown in Fig. 2 and surrounded the entire tube, with the exception of the flattened ends, *w*, *w′*, which serve as windows, with a metallic case through which a flow of cold water is maintained. Another mercury lamp was devised by Abbe of Jena, for the special purpose of testing lenses, the form being such as to throw the light of the arc vertically upwards. An interesting and useful modification is that of Fabry and Perot, Fig. 3, in which the cathode consists of mercury contained in an inner tube, *c*. The mercury of the anode fills the annular space between this tube and the exterior of the lamp. The Cooper-Hewitt lamp, a form of mercury arc-lamp for commercial lighting, consists essentially of a straight tube of glass about 5 centimeters in diameter and 40 centimeters long. One terminal is formed by mercury contained in the bottom of the tube and the other terminal, in the top of the tube, is of iron. The arc is established by tipping the lamp, until the mercury flows from the bulb in a thin stream the entire length of the tube, and then restoring it to its vertical position. The light, which fills the entire tube, is greenish in color, as in all mercury lamps, but possesses an actinic intensity of great value for photographic purposes. In some commercial mercury lamps an attempt has been made to remedy the lack of red in the light of the mercury arc by placing in the same circuit incandescent lamps with carbon filaments. The light of all mercury arc-lamps differs from that commonly used for purposes of illumination in having a bright-line spectrum, that of mercury vapor. The strongest line in this spectrum is the green line of wave-length 5461, to which the characteristic color of the light is due. The only other visible lines are a yellow pair at 5770–90 and violet lines of wave-lengths 4358 and 4047. (See Fig. 4.) There is also a strong ultra-violet triplet, 3650–55–63, and to this, together with the violet lines, the extraordinary actinic intensity of the mercury lamp is due. The infra-red spectrum of the mercury arc consists of a group of lines lying between 1 μ and 2 μ and another group between 4 μ and 6 μ. The intensity of this region as compared with that of the visible spectrum is, however, much smaller than in the case of the continuous spectra of sources of light usually employed for illumination and the radiant efficiency of the mercury lamp is therefore comparatively high, probably about 20 per cent. By substituting for the glass vacuum-tube a tube of fused quartz, Hereaus has succeeded in producing a mercury lamp capable of sustaining very high temperatures and of furnishing light the intrinsic brightness of which far exceeds that of the other forms. This lamp, on account of the greater transparency for ultra-violet rays of the quartz tube, is especially valuable in certain lines of work in which an intense ultra-violet spectrum is demanded. **Mercury perchlorid.** Same as *corrosive sublimate.*—**Mercury-vapor rectifier.** See ★*rectifier.*—**Scotch mercury**, the foxglove.—**Siemens mercury unit.** See ★*unit.*

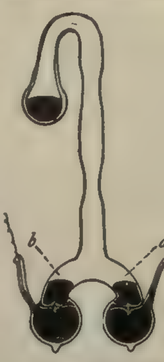


Fig. 1. Arons Lamp.

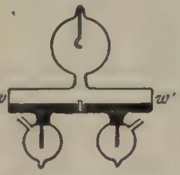

Fig. 2. Lummer Lamp.

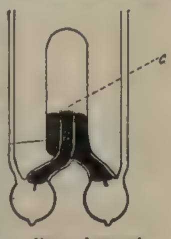

Fig. 3. Lamp of Fabry and Perot.

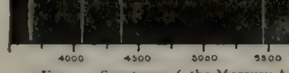

Fig. 4. Spectrum of the Mercury Arc.

mercury-break (mėr′kụ-ri-brāk″), *n.* An interrupter for induction-coils, in which mercury is used. See *interrupter* (*a*).

mercury-spark (mėr′kụ-ri-spärk″), *n.* See ★*spark*¹.

mercury-switch (mėr′kụ-ri-swich″), *n.* See ★*switch.*

mercury-trough (mėr′kụ-ri-trôf″), *n.* In *chem.*, a trough (generally of porcelain, cast-iron, or wood) used to hold mercury over which, in glass jars or tubes, gases are collected which, on account of their solubility, can not well be collected over water: essentially, a pneumatic trough containing mercury instead of water.

mercury-tube (mėr′kụ̄-ri-tūb″), *n.* See ★*tube.*

mercury-valve (mėr′kụ̄-ri-valv″), *n.* A valve in which mercury is used as a seal between the parts.

mercury-weed (mėr′kụ̄-ri-wēd), *n.* The three-seeded mercury, *Acalypha Virginica.*

mercy, *n.* **5.** In *criminal law,* partial remission of a punishment to which a convict is subject, as distinguished from pardon, or total remission.—**To be in mercy,** said of a convict who is liable to punishment at the discretion of the judge.

merdurinous†, *a.* [L. *merda,* dung, + E. *urinous.*] Consisting of both dung and urine. *B. Jonson.*

mere⁶ (mēr), *n.* [Gr. μέρος, a share, part.] In the reticulum or supporting skeleton of the extinct silicious sponges of the family *Dictyospongidæ,* one of the divisions or meshes produced by the intersection of the primary vertical and horizontal spicular bundles. It is subdivided by the spicules of subordinate rank into lesser areas or quadrangles — dimeres, tetrameres, hexameres.

mere⁷ (mer′e), *n.* [Maori.] A Maori war-club; a *casse-tête,* or war-ax, from 12 to 18 inches in length, made of any suitable hard material, as stone, hard wood, or whalebone. Outside of New Zealand the word is only known as the name of a little trinket of greenstone made in imitation of the New Zealand weapon in miniature, mounted in gold or silver, and used as a brooch, locket, ear-ring, or other article of jewelry. *E. E. Morris,* Austral English.

Merevale shales. See ★*shale*².

merganser, *n.*—**White merganser,** the smew, *Merganser albellus,* the smallest and whitest of the mergansers. See *smew* (with cut).

mergence (mėr′jens), *n.* The act of merging or sinking into something else, with consequent loss of original identity or form; the state of being merged.

> A gradation between a "bird-like canoe-charm," through a "human-headed bird canoe-charm," to a "canoe fetich," the latter having a very prognathous human head. The *mergence* of a frigate-bird's into a human head may be due . . . to one design acting upon the other.
> *Haddon,* Evolution in Art, 266.

merger², *n.* **3.** A merging of the interests and control of two or more corporations, engaged in the same line, or in allied lines, of business, into a single corporation which exchanges its stock for that of the merging corporations, which however preserve, nominally at least, their separate identity.

> So too, who shall doubt but that the present monopolistic movements, the trusts and the *mergers,* when we shall have learned to guard that which is good and prevent that which is bad, will result in greater benefits to mankind and a higher civilization?
> *Science,* July 31, 1903, p. 129.

meridian. I. *a.*—**Meridian furrow.** See ★*furrow.*—**Meridian zenith distance,** the complement of the meridian altitude, or what that altitude lacks of 90° 00′ 00″.

II. *n.* **6.** In ctenophorans, a costa or *meridional* row of swimming-plates.

> It possesses eight *meridians* (costæ) of iridescent paddles in constant vibration, which run from near one pole towards the other. *Encyc. Brit.,* XXVII. 300.

Astronomic meridian, on the celestial sphere, a great circle which passes through the poles of the earth's axis and the zenith of the spectator.—**Brass meridian.** See *meridian of a globe.*—**Celestial meridians,** hour-circles; great circles of the celestial sphere which pass through its poles and correspond exactly to the meridians on the earth.—**Gnomonic meridian,** a meridian in gnomonic projection.—**National meridian,** the meridian which passes through the national observatory of a country; the prime or first meridian of a nation; the zero-point in longitude for that nation, and from which calculations are made.—**Principal meridian.** (*a*) A first or prime meridian. (*b*) The meridian from which the meridians bounding townships are measured.—**Terrestrial meridian,** a geographic meridian.—**Zero meridian,** the meridian from which longitude east or west is reckoned.

> The International Congress at Washington in October, 1894, which adopted for the nations represented the uniform *zero-meridian* of Greenwich for maritime purposes.
> *Science,* June 21, 1901, p. 979.

Meridiana (mẹ̄-rid-i-ā′nạ̈), *n.* [NL. (Hill, proposed in 1761, established in 1768), < L. *meridianus,* pertaining to midday. See *meridian.* The name alludes to the habitual opening of the flowers at noon.] A genus of dicotyledonous herbs of the family *Asteraceæ.* See *Gazania* and *treasure-flower.*

meridianal (mẹ̄-rid′i-a-nạl), *a.* [*meridian* + *-al*¹.] Lying in the direction of a meridian; meridional.

> The great *meridianal* systems, e. g. the Urals and the Rocky mountains. *Geog. Jour.* (R. G. S.), XV. 540.

meridian-passage (mẹ̄-rid′i-ạn-pas″ạ̄j), *n.* The crossing of a heavenly body over the meridian of the observer.

meridional, *a.* **II.** *n.* One who dwells in the south; specifically, an inhabitant of the south of France.

> Daudet was able to paint a real sober picture of the *Meridional* in Numa Roumestan.
> *M. V. Crawford,* Stud. For. Lit., p. 50. *N. E. D.*

meriedric (mer-i-ē′drik), *a.* Same as *merihedric.*

merihedral (mer-i-hē′drạl), *a.* Same as ★*merihedric.*

merihedric, *a.* **2.** In *group-theory,* designating isomorphism in which two groups are multiply isomorphic.—**3.** In *crystal.,* same as *hemihedral.*

merihedrism (mer-i-hē′drizm), *n.* [*merihedr(ic)* + *-ism.*] Merihedric isomorphism. See ★*merihedric,* 2.

merimba (me-rēm′bạ̈), *n.* See ★*marimba.*

merino, *n.*—**Pure merinos,** in Australia, and especially in New South Wales, the very first families (socially): from the fact that the pure merinos are the most valuable sheep. [Slang.]

> The *pure merinos* . . . pride themselves on being of the purest blood in the colony.
> *P. Cunningham,* Two Years in New South Wales, II. [116.

merise† (me-rēs′), *n.* [F.] A kind of small black cherry. *N. E. D.*

merism (mer′izm), *n.* [Gr. μερισμός, division into parts, < μερίζειν, divide into parts, < μέρος, a part.] The repetition of parts in an organism in such a way as to form a regular pattern, as in radial and bilateral symmetry, serial homology, etc. *W. Bateson,* Study of Variation, p. 23.

merismoid (me-ris′moid), *a.* [Gr. μέρισμα, a part, + *-oid.*] Characterized by a branched or laciniate cap: said of sporophores.

Merismopedia (mer″is-mọ̄-pē′di-ạ̈), *n.* [NL. (Meyen, 1839), < Gr. μέρισμα, a part, + πεδίον, a plain (taken in the sense of πούς, foot).] **1.** A genus of unicellular fresh-water blue-green algæ, characterized by spherical cells which divide regularly in two directions, thus having the cells arranged in groups of fours.—**2.** [*l. c.*] In *bacteriol.,* a name applied to cocci arranged in large rectangular plates.

merist (mer′ist), *n.* [Gr. μεριστής, < μερίζειν, divide.] One who divides. [Rare.]

> The administrators of the three great divisions of law are severally Archons, *Merists,* and Dicasts. . . . The *Merists* are properly the Domini, or Lords of houses and nations. *Ruskin,* Munera Pulveris, p. 117, note.

meristic (me-ris′tik), *a.* [Gr. μεριστικός, < μεριστός, divided, < μερίζειν, divide. See ★*merism.*] Pertaining to or exhibiting merism. *W. Bateson,* Study of Variation, p. 22.—**Meristic homology, variation.** See ★*homology,* ★*variation.*

meristically (me-ris′ti-kạl-i), *adv.* By means of merism, or in a meristic manner. *W. Bateson,* Study of Variation, p. 26.

merit, *n.*—**Certificate of merit.** See ★*certificate.*—**Order of merit.** See ★*order.*

merle¹, *n.* **2.** A West Indian name for orioles of the genus *Cassicus.*

merluce (mėr′lūs), *n.* [NL. *merlucius, merluccius:* said to be formed (irregularly) from F. *mer,* L. *mare,* sea, + L. *lucius,* pike.] The European hake, *Merlucius merluccius,* belonging to the family *Merluciidæ.*

mero (mā′rō), *n.* [Sp. Pg. *mero.*] The spotted jewfish, *Epinephelus guaza,* found off the coasts of southern Europe and western Africa.

merocarpal (mer-ọ̄-kär′pạl), *a.* [*merus* + *carpus* + *-al*¹.] Pertaining to the merus and the carpus, or to the fourth and fifth joints of a malacostracan trunk-leg; as, the *merocarpal* joint. *Proc. Zool. Soc. London,* May–Dec., 1901, II. 555.

merocrystalline (mer-ọ̄-kris′tạ-lin), *a.* [Gr. μέρος, part, + E. *crystalline.*] In *petrog.,* partly crystalline. *Fletcher,* 1895. Also *semi-crystalline, hypocrystalline, hypohyaline.*

merocyte (mer′ọ̄-sīt), *n.* [Gr. μέρος, part, + κύτος, a hollow (a cell).] In *embryol.,* one of the nucleate masses of protoplasm lying in the unsegmented yolk of a meroblastic ovum, such as the ovum of sharks, birds, etc.

merognathite (mẹ̄-rog′nạ-thīt), *n.* [Gr. μέρος, part, + E. *gnathite.*] In crustaceans, the fourth joint of a gnathite.

merogonic (mer-ọ̄-gon′ik), *a.* [*merogon(y)* + *-ic.*] Of or pertaining to merogony, or the development of fertilized fragments of eggs. *E. B. Wilson,* in *Biol. Bulletin,* April 5, 1903, p. 218.

merogony (me-rog′ọ̄-ni), *n.* [Gr. μέρος, part, + -γονια, < -γονος, -born.] The development, partial or perfect, of an organism from part of an egg or part of an embryo. If the two blastomeres of the two-celled stage of the segmenting egg of a ctenophore are isolated, each forms a half-embryo. In *Amphioxus* each forms a perfect embryo of half the normal size.

merohedric (mer-ọ̄-hē′drik), *a.* Same as *merihedric.*

merology (me-rol′ọ̄-ji), *n.* [Gr. μέρος, part, + -λογια, < λέγειν, speak.] Same as *histology.*

meromorph, *a.* **II.** *n.* A change in one or more of a number of parts in series, such as the change of the appendages of the antennary somite of a crustacean into eyes.

meromorphosis (mer-ọ̄-môr′fọ̄-sis), *n.* [Gr. μέρος, part, + μόρφωσις, forming.] In *biol.,* the incomplete replacement of a lost part. See ★*holomorphosis.*

meront (mer′ont), *n.* [Gr. μέρος, part, + ὤν (οντ-), being.] In certain sporozoans, as *Thelohania,* a form of trophozoite which multiplies by simple schizogony, a second division sometimes taking place before the first is finished, so that three or four individuals may be connected in a group or chain.

meroplankton (mer-ọ̄-plangk′tọn), *n.* [NL., < Gr. μέρος, part, + NL. *plankton.*] The organisms, considered collectively, that pass part of their lives in the depths of the ocean and part at or near the surface.

meroplanktonic (mer″ọ̄-plangk-ton′ik), *a.* [Gr. μέρος, part, + E. *planktonic.*] Swimming in the ocean at one stage of life and passing the rest of life vagrant or sessile on the sea-bottom, as part of the diatoms and *Oscellaria,* the planktonic fucoids, the metagenetic medusæ, some *Turbellaria* and annelids, the pelagic larvæ of hydroids and corals, and many helminths, echinoderms, *Acalepha,* and gastropods. *Haeckel* (trans.), Planktonic Studies, p. 583.

> Thus the *meroplanktonic* stage, which we may assume existed in the ancestors of Fulgur and Sycotypus, was apparently suppressed even in the earliest species of Fulgur, as otherwise the distribution would be more world-wide. *Amer. Nat.,* Aug., 1903, p. 516.

merorachischisis (mer″ọ̄-rā-kis′ki-sis), *n.* [Gr. μέρος, part, + ῥάχις, spine, + σχίσις, cleaving.] Partial fissure of the spinal cord. Also *merorrhachischisis.*

merosthenic (mē-ros-then′ik), *a.* [Gr. μηρός, thigh, + σθένος, strength, + *-ic.*] Strong in the hinder parts; having the hinder parts more developed and stronger than the fore parts: opposed to *prosthenic.*

merosymmetrical (mer″ọ̄-si-met′ri-kạl), *a.* [*merosymmetr(y)* + *-ical.*] In *crystal.,* exhibiting partial symmetry. See ★*symmetry,* 6.

merosymmetry (mer-ọ̄-sim′e-tri), *n.* [Gr. μέρος, part, + E. *symmetry.*] In *crystal.,* partial symmetry; a lower grade of symmetry than that exhibited in holosymmetrical forms. See ★*symmetry,* 6.

merotomy (me-rot′ọ̄-mi), *n.* [Gr. μέρος, part, + -τομια, < ταμεῖν, cut.] In *histology,* a dividing into several parts or segments.

> The experiments of "*merotomy,*" that is to say of amputation, tried by Waller on nerves, on infusoria by Brandt, etc., teach us the necessity of the presence of the cellular body and the nucleus.
> *Smithsonian Rep.,* 1902, p. 404.

merotropy (me-rot′rọ̄-pi), *n.* [Gr. μέρος, part, + -τροπια, < τρέπειν, turn.] A name which has been suggested for a phenomenon, generally termed *desmotropy,* which is exhibited by certain organic chemical compounds. See ★*desmotropy.*

Merozoa (mer-ọ̄-zō′ạ̈), *n. pl.* [NL., < Gr. μέρος, part, + ζῷον, animal.] A grade of *Cestoidea* in which the adult worm consists of two distinct parts, the head or scolex, and the genital region or body. It contains the *Dibothridiata* and the *Tetrabothridiata,* in which groups are included nearly all cestoid worms: contrasted with *Monozoa.*

merozoite (mer-ọ̄-zō′īt), *n.* [Gr. μέρος, part, < ζῷον, animal, + *-ite*².] In the life-cycle of a sporozoön, one of the cells to which a dividing spore gives rise. They appear as buds radiating from the parent cell and afterward become free.

> When fully developed, the spores, or, as they are technically known, the *merozoites,* drop off the parent cell and work their way through the fluids of the digestive tract until they come to the cells lining it, and then, like the

> sporozoites, they penetrate the cells, grow at their expense, and again reproduce spores as before.
> *Pop. Sci. Mo.*, June, 1901, p. 192.

Mersey jolly-tail. See ★*jollytail.*

Mertensidæ (mėr-ten′si-dē), *n. pl.* [NL., < *Mertensia*, the typical genus, + *-idæ.*] A family of tentaculate ctenophorans which have the body compressed in the stomachal plane, the subtentacular ribs longer than the substomachal, and no wing-like appendages at the sensory pole. It contains the genera *Euchlora* and *Charistephane.*

merulioid (me-rö′li-oid), *a.* [*Merulius* + *-oid.*] Resembling or pertaining to the genus *Merulius.*

Merulius (me-rö′li-us), *n.* [NL. (Haller, 1768), < L. *merula*, a blackbird: see *merle*¹. The name alludes to the black color of the fungus, especially in its later stages.] A genus of hymenomycetous fungi of the family *Polyporaceæ*. They have a soft, waxy, usually resupinate hymenium, with reticulate or sinuous folds forming shallow pits. *M. lacrymans*, sometimes called the *house-fungus*, is the cause of a destructive dry-rot of coniferous wood. See cut under *dry-rot.*

merycole (mer′i-kōl), *n.* [Irreg. < *merycol*(*ogy*), or < *mery*(*cism*) + L. *colere*, cultivate.] One who practises merycism.

merycology (mer-i-kol′ō̤-ji), *n.* [*meryc*(*ism*) + Gr. *-λογια*, < *λέγειν*, speak.] The study of the causes, nature, and treatment of rumination in man.

mesaconic (mes-a̤-kon′ik), *a.* [Gr. *μέσος*, middle, + E. *aconic.*] Noting an acid, a colorless compound,  $\begin{array}{c}HOCO.CCH_3\\ \|\\ HCCOOH\end{array}$, prepared by boiling citraconic acid with dilute nitric acid. It crystallizes in slender needles, melting at 202° C.

Mesadenia (mes-a̤-dē′ni-ä̤), *n.* [NL. (Rafinesque, 1832), < Gr. *μέσος*, middle, + *ἀδήν*, gland; in allusion to the central projection of the receptacle.] A genus of plants of the family *Asteraceæ*. They are tall perennial, mostly smooth, often milky-juiced herbs with terminal corymbs of small, few-flowered, inconspicuous heads, the flowers all tubular and perfect. There are about 16 species, natives of North and Central America, of which 11 occur within the United States. They are commonly called *Indian plantain.*

mesa-dwelling (mā′sä̤-dwel′ing), *n.* A house, usually a communal dwelling, built upon a mesa or limited table-land with steep sides, as in the western part of the United States.

mesaortitis (mes″ā-ôr-tī′tis), *n.* [NL., < Gr. *μέσος*, middle, + *ἀορτή*, aorta, + *-itis.*] Inflammation of the middle coat of the aorta.

mesaræum (mes-a-rē′um), *n.*; pl. *mesaræa* (-ä̤). [NL., < Gr. *μεσάραιον*, mesentery, < *μέσος*, middle, + *ἀραιά*, belly, flank, fem. of *ἀραιός*, porous.] Same as *mesentery.*

mesaticephalism (mes″a̤-ti-sef′a̤-lizm), *n.* The condition of being mesaticephalic.

mesaticephalous (mes″a̤-ti-sef′a̤-lus), *a.* Same as *mesaticephalic.*

mesaticephaly (mes″a̤-ti-sef′a̤-li), *n.* [*mesaticephal-ic* + *-y*³.] In *anthrop.*, the condition of being mesaticephalic; mesaticephalism.

> We place systematically after the Tibetans and the Indo-Chinese, who are subbrachycephalous, the Chukluks, whose average indication, 79.9, stands at the extreme limit of *mesaticephaly*, and not far from them, the Tungus-Manchu (300,000 individuals), another breaking up of Prichard's "Allophylians," with their clearly mesaticephalous skull, which is at the same time excessively flattened. *Smithsonian Rep.*, 1895, p. 514.

mesaticercic (mes″a̤-ti-sėr′sik), *a.* [Also *mesatikerkic*; < Gr. *μέσατος*, midmost, + *κερκίς*, radius of the arm.] Having the forearm of average length in proportion to the length of the arm; neither brachycercic nor dolichocercic; having a radiohumeral index between 75 and 80. *Turner.*

mesatikerkic (mes″a̤-ti-kėr′kik), *a.* See ★*mesaticercic.*

mesatilekanic (mes″a̤-ti-le-kan′ik), *a.* [Gr. *μέσατος*, midmost, + *λεκάνη*, dish, bowl (pelvis).] Same as ★*mesatipellic. Turner.*

mesatipellic (mes″a̤-ti-pel′ik), *a.* [Gr. *μέσατος*, midmost, + *πέλλα*, dish (pelvis).] In *anthrop.*, said of a male who has an index of the pelvic brim between 90 and 95. Also *mesopellic. Jour. Anthrop. Inst.*, 1900, p. 149.

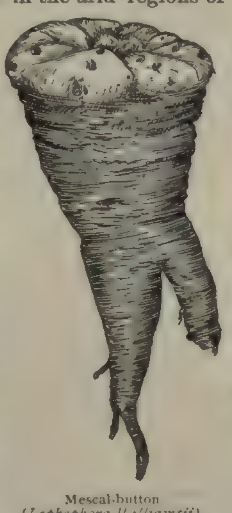
mesatipelvic (mes″a̤-ti-pel′vik), *a.* [Gr. *μέσατος*, midmost, + L. *pelvis*, bowl (pelvis).] Same as ★*mesatipellic.*

Mesatlantis (mes-at-lan′tis), *n.* [Gr. *μέσος*, middle, + *Ἀτλαντίς*, Atlantic.] The mid-Atlantic or tropical Atlantic sea-region of Sclater, which comprises the Atlantic ocean from a little north of the tropic of Cancer down to about the tropic of Capricorn. *Geog. Jour.* (R. G. S.), X. 219.

mesaxonic (mes-ak-son′ik), *a.* [Gr. *μέσος*, middle, + *ἄξων*, axis, + *-ic.*] Having the third digit of the foot the largest, thus forming the axis of the foot: contrasted with ★*paraxonic.*

> They (Perissodactya) are all digitigrade quadrupeds, with the axis of both feet passing through the digit No. III (hence *mesaxonic*).
> *A. S. Woodward*, Outlines of Vertebrate Palæontology, [p. 319.

mescal-buttons (mes-käl′but″nz), *n. pl.* [*mescal* (Nahuatl *mexcalli*) + E. *buttons.*] The dried tops of a succulent, spineless, turnip-shaped cactus growing in the arid regions of Texas and northern Mexico, known botanically as *Lophophora Williamsii*, and called by the natives in various localities *peyote*, *hikuli*, and *wokowi*. The plant scarcely rises above the ground: it has a flat top divided into a number of radiating convex ribs bearing low tubercles, each with an areole in the center which bears a tuft of silky hairs from which the pink flowers appear. The tops of the plants are collected by the Indians and dried, forming button-like masses an inch or more in diameter and about a quarter of an inch thick. These buttons have narcotic properties and in Texas are sometimes called *dry whisky*. They are either chewed dry or are added to tizwin, mescal, or other alcoholic drinks. They produce a delirious exhilaration which enables the Indians to perform certain ceremonial dances for many successive hours without fatigue. The effect seems to resemble that of opium, though in some cases a condition of exaltation is induced resembling that produced by Indian hemp. Several alkaloids have been isolated from the plant, some of which resemble morphine, others strychnine, in their effects upon animals. One of them, called *pellotine*, has been introduced as a hypnotic; another, called *mescaline*, seems to be the cause of the exaltation.



Mescal-button
(*Lophophora Williamsii*).
One third natural size.

mescaline (mes-kal′in), *n.* [*mescal* + *-ine*².] Methyl-3, 4, 5-trimethoxybenzylamine, $(CH_3O)_3C_6H_2.CH_2NHCH_3$, an alkaloid found in mescal-buttons. It crystallizes in needles which melt at 151° C.

mescalism (mes-käl′izm), *n.* [*mescal* + *-ism.*] The habit of using mescal or mescal-buttons. *Amer. Anthropologist*, Oct.–Dec., 1902, p. 789.

mescal-pit (mes-käl′pit), *n.* A pit filled with stones on which mescal roots are roasted.

mescroyance†, *n.* [OF. See *miscreant.*] Unbelief. [Rare.]

> There may be any quantity of intermediate mind, in various conditions of bog, . . . but the elements of Croyance and *Mescroyance* are always chemically separable out of the putrescent mess.
> *Ruskin*, Fors Clavigera, lxxii. 383.

mescroyant†, *n.* [OF. See *miscreant.*] An unbeliever.

mesdem (mes-dem′), *n.* [Egyptain ?] A substance used in ancient Egypt as a cosmetic and a medicine. It seems to have been either antimony sulphid or lead sulphid, more probably the latter. *E. von Meyer* (trans.), Hist. Chem., p. 18.

mese⁴ (mes′ē), *n.* [Gr. *μέση*, the middle string or note.] In *Gr. music*, the middle or central tone of the system. See cut under *tetrachord.*

mesectoblast (me-sek′tō̤-blȧst), *n.* [Gr. *μέσος*, middle, + E. *ectoblast.*] Same as ★*ectomesoblast.*

> This mass of *mesectoblast*, with enclosed auditory pit, bears a considerable resemblance to the common anlage of auditory pit and lateral line system referred to above. It subsequently extends into the adjacent gill arches, where its further history was not followed.
> *Science*, April 11, 1902, p. 575.

mesembryo, *n.* **2.** The blastula stage of a polyzoan. *Cumings*, 1904.

Mesencephalic flexure, fossa. See ★*flexure*, ★*fossa*¹.

mesencephalospinal (mes-en-sef″a̤-lō̤-spī′na̤l), *a.* Of or pertaining to both the mesencephalon, or mid-brain, and the spinal chord.

mesenchymatal (mes-eng-kī′ma-ta̤l), *a.* Same as *mesenchymal*. *L. O. Howard*, in Science, Dec. 21, 1906, p. 812.

mesenchyme, *n.* **2.** In *embryol.*, the whole or a portion of the middle germ-layer, or mesoblast, when this layer is not epithelial, but consists of stellate, loosely interconnected, or even disconnected cells like those seen in primitive forms of connective tissue.

> About the proton of the liver and the vascular spaces surrounding it there is considerable *mesenchyme.*
> *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 58.

mesenchymic (mes-eng-kim′ik), *a.* Of or pertaining to mesenchyme.

mesenteriform (mez-en-ter′i-fôrm), *a.* Resembling a mesentery.

> Deep carmine, *mesenteriform*, consisting of suberect plicately aggregated laminæ; the margin minutely ragged or crispate, and furnished with a few scattered pores of irregular shape. *Dana*, Zooph., p. 708.

mesenteritic (mes″en-te̤-rit′ik), *a.* [*mesenterite* + *-ic.*] Relating to or affected with mesenteritis.

mesenteroblast (mes-en′te̤-rō̤-blȧst), *n.* [*mesenteron* + Gr. *βλαστός*, germ.] In *embryol.*, the mesenteron; the middle portion of the intestine or alimentary tract, arising from the entoderm, as distinguished from the stomodeal and proctodeal portions of the embryonic gut, which are of ectodermal origin.

mesenteron, *n.* **2.** In sea-anemones and similar polyps, the main digestive cavity or stomach; in *Mollusca*, the stomach and intestine. Compare *stomodæum* and *proctodæum.*

mesenterophthisis (mes-en-te̤-rof′thi-sis), *n.* [NL., < *mesenteron* + Gr. *φθίσις*, consumption.] Tuberculosis of the mesenteric glands.

mesentery, *n.*—**Directive mesenteries**, in the *Hexacoralla*, the mesenteries which correspond to the extremities of the longitudinal mouth. They are distinguished from the other mesenteries of the animal by the fact that the muscular thickenings on the walls of the pairs do not face each other, as they do in all other pairs of the body. —**Edwardsian mesentery**, in anthozoans, one of the eight mesenteries first formed: so called because exhibited typically by the adult stage of *Edwardsia*.—**Uterine mesentery.** Same as *mesometry.*

mesentoderm (mes-en′tō̤-dėrm), *n.* [Gr. *μέσος*, middle, + E. *entoderm.*] In *embryol.*, a cell-layer or single blastomere not yet differentiated into mesoderm and entoderm proper, but exhibiting peculiarities of both of these germ-layers.

mesentomere (mes-en′tō̤-mēr), *n.* [*mes*(*omere*) + *entomere.*] In *embryol.*, a blastomere which has not yet divided into mesomeres and entomeres.

> The cleavage of the egg of the nudibranch, Fiona marina, is of the spiral type well known for molluscs. From the *mesentomere* . . . arises the primary mesoblast and also enteroblasts, these latter being concerned in the formation of the intestine.
> *Amer. Nat.*, July–Aug., 1904, p. 505.

mesepisternal (mes-ep-i-stėr′na̤l), *a.* Of or pertaining to the mesepisternum.

mesepithelium (mes-ep-i-thē′li-um), *n.* [Gr. *μέσος*, middle, + NL. *epithelium.*] Same as *mesothelium.*

mesh¹, *n.* **6.** One of the subdivisons of a head or ear of wheat; a wheat spikelet.

> The spikelets (*meshes*) are two to four grained.
> *U. S. Dept. Agr.*, Bur. Plant Industry, 1901, Bulletin 3, [p. 10.

meshorer (me-shō′rėr), *n.* [Heb. *meshōrēr*, < *shīr*, sing.] A singer who assists the cantor or hazzan in the synagogue.

mesh-pin (mesh′pin), *n.* An oval piece of wood over which the mesh of nets is formed, the loops being knotted on its edge.

meshummad (me-shö′mad), *n.* [Heb., < *shamad*, destroy.] Literally, one who is destroyed: a term of disdain and hatred applied to one who abandons Judaism for another faith; a pervert.

mesh-winding (mesh′wīn″ding), *n.* See ★*winding*¹.

mesiad (mes′i-ad or mē′zi-ad), *adv.* [*mesi*(*al*) + *-ad*³.] In *zoöl.*, to or toward the middle line or plane of the body.

> When the bones of the shoulder-girdle in a grebe are articulated as in life, there is quite an interval between their sternal ends, *mesiad*. *Amer. Nat.*, Jan., 1904, p. 22.

Mesial length. See ★*length.*

mesicerin (mes-i-sē′rin), *n.* [*mesi*(*tine*) + Gr. *κηρός*, wax, + *-in*².] A colorless crystalline compound, $C_6H_3(\overset{1.\,3.}{C}H_2\overset{5}{O}H)_3$, prepared by boiling the corresponding bromide with water and lead carbonate. Also called 1′, 3′, 5′-*trihydroxymethylbenzene.*

mesidine (mes'i-din), *n.* [*mesi*(*tine*) + *-id* + *-ine*2.] A colorless liquid, $H_2\overset{2}{N}C_6H_2(\overset{1\ 3\ 5}{CH_3})_3$, prepared by the reduction of nitromesitylene. It boils at 229–230° C. Also called *amino*-1, 3, 5-*trimethylbenzene.*

mesilla (mạ-sēl'yä), *n.* [Sp., dim. of *mesa*: see *mesa.*] A small mesa.

mesiocaudad (mes″i-ọ̄-kâ'dad), *adv.* [*mesi*(*al*) + *caudad.*] In the median line and toward the tail. *Proc. Zool. Soc. London*, 1899, p. 1024.

Mesirenia (mes-i-rē'ni-ạ̈), *n.* [Gr. *μέσος*, middle, + NL. *Irenia*, the Pacific region.] The mid-Pacific sea-region of Sclater, consisting of that part of the Pacific which lies between the tropics of Cancer and Capricorn.

mesite (mes'īt), *n.* [Gr. *μεσίτης*, being in the middle. See *Mesites, mesitine*(*-spar*).] An old name for a mixture of methyl acetate and mesityl oxid, prepared by distilling crude wood-alcohol or crude acetic acid from wood with sulphuric acid.

mesitene (mes'i-tēn), *n.* [*mesite* + *-ene.*] Same as ★*mesite.*

mesitine (mes'i-tin), *n.* Same as *mesitine-spar.*

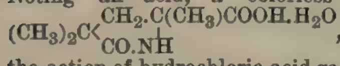
mesitol (mes'i-tol), *n.* [*mesit*(*ine*) + *-ol.*] A colorless crystalline compound, $H\overset{2}{O}C_6H_2$-$(\overset{1,3,5}{CH_3})_3$, prepared by the action of nitrous acid on mesidine. It melts at 65–69° C. Also called 1, 3, 5-*trimethylphenol.*

mesitonic (mes-i-ton'ik), *a.* [*mesit*(*ine*) + *-one* + *-ic.*] Noting an acid, a colorless compound, $(CH_3)_2C(COOH)CH_2COCH_3$, prepared by the action of hydrochloric-acid gas, potassium cyanide, and alcohol on acetone. It crystallizes in small prisms or large plates, melts at 74° C., and boils at 138° C. under 15 millimeters pressure.

Mesityl oxid, a colorless liquid olefinic ketone, $(CH_3)_2$-$C{:}CHCOCH_3$, prepared by the action of hydrochloric-acid gas, sulphuric acid, or zinc chlorid on acetone. It has an odor of peppermint and boils at 129.5–130° C. Also called *isopropylidine-acetone* and 2-*methyl*-2-*pentenone.*

mesitylenic (mes″i-ti-lē'nik), *a.* [*mesitylene* + *-ic.*] Of or pertaining to mesitylene.—**Mesitylenic acid**, a colorless compound, $(\overset{1.\ 3}{CH_3})_2C_6H_3\overset{5}{C}OOH$, prepared by the action of dilute nitric acid on mesitylene. It forms monoclinic crystals and melts at 166° C. Also called 1, 3-*dimethylbenzoic acid* (5).

mesitylic (mes-i-til'ik), *a.* [*mesityl* + *-ic.*] Noting an acid, a colorless compound,



$$(CH_3)_2C{<}\begin{matrix}CH_2.C(CH_3)COOH.H_2O\\ CO.NH\end{matrix}$$

, prepared by the action of hydrochloric-acid gas, potassium cyanide, and alcohol on acetone. It crystallizes in long prismatic needles, melts, when anhydrous, at 174° C., and may be distilled.

meso-. [Gr. *μέσο-ς*, middle.] A combining form used in organic chemistry to indicate optical inactivity through internal compensation. See ★*mesoform.*

mesoappendix (mes″ọ̄-a-pen'diks), *n.* [*mes*(*entery*) + *appendix.*] The mesentery of the vermiform appendix. *Buck*, Med. Handbook, I. 421.

mesobacteria (mes″ọ̄-bak-tē'ri-ạ̈), *n. pl.* [Gr. *μέσος*, middle, + NL. *bacteria*, pl. of *bacterium.*] Medium-sized rod-shaped bacteria. *Billroth.*

mesobenthic (mes-ọ̄-ben'thik), *a.* [*mesobenthos* + *-ic.*] Of or pertaining to the mesobenthos; living upon or in the bottom between the outer edge of the continental slope and the bottom of the deep ocean. *Encyc. Brit.*, XXXIII. 934.

mesobenthos (mes-ọ̄-ben'thos), *n.* [NL., < Gr. *μέσος*, middle, + *βένθος*, depth: see ★*benthos.*] The animals and plants which live upon or in the bottom between the outer edge of the continental slope and the bottom of the deep ocean, considered collectively and in contrast with the dwellers in or upon the bottom of the continental slope and those that live upon or in the bottom of the deep ocean. See ★*benthos*, ★*epibenthos*, and ★*hypobenthos.*

> The mud-line is the real upper limit of this zone [continental slope]: it typically begins at about 100 fathoms, but may begin at 5 to 20 fathoms in deep sheltered firths, or be pushed down to 300 fathoms where currents are strong. The fauna of this zone may be termed the *mesobenthos*; it is not so abundant, nor so sharply characterized, as the epibenthos and yet is sufficiently distinct to deserve at any rate a provisional name.
> *Encyc. Brit.*, XXXIII. 933.

mesoblast, *n.* 2. In *cytol.*, the middle one of three concentric protoplasmic layers supposed to surround the cell-nucleus.

> The normal and developed cell has three concentric envelopes which may be called blasts, the whole enclosing a nucleus, so that the structure which we found in the earth as spheres is repeated here as blasts. These are the exoblast, *mesoblast*, and endoblast.
> *J. W. Powell*, Truth and Error, p. 69.

Sporadic mesoblast, mesoblast in the form of disconnected cells or cell-clusters, as distinguished from typical mesoblast in a continuous cell-layer or epithelium. *Philos. Trans. Roy. Soc.* (London), 1894, Ser. B, p. 313.

mesobregmate (mes-ọ̄-breg'māt), *a.* [Gr. *μέσος*, middle, + *βρέγμα*, sinciput.] In *craniom.*, having a moderately rounded vertex. *J. C. Prichard.*

mesobronchium (mes-ọ̄-brong'ki-um), *n.*; pl. *mesobronchia* (-ạ̈). In *ornith.*, a tube or prolongation of the bronchus running backward into one of the abdominal air-sacs.

Mesocambrian (mes-ọ̄-kam'bri-ạn), *n.* In *geol.*, the middle Cambrian.

Mesocampyli (mes-ọ̄-kam'pi-lī), *n. pl.* [NL., < Gr. *μέσος*, middle, + *καμπύλος*, curved.] In Hyatt's classification of the cephalopods, a suborder of the *Ammonoidea* of uncertain value, comprising certain Devonian goniatites or forms intermediate in structure between the *Microcampyli* and *Eurycampyli.*

meso-Carboniferous (mes″ọ̄-kär-bọ-nif'ẹ-rus), *a.* Middle Carboniferous.

> Title: 'The *Meso-Carboniferous* Age of the Union and Riversdale formations in Nova Scotia.'
> *Science*, March 7, 1902, p. 392.

mesocardium (mes-ọ̄-kär'di-um), *n.*; pl. *mesocardia* (-ä). [NL., < Gr. *μέσος*, middle, + *καρδία*, heart.] In *embryol.*, the membrane which connects the developing heart with the anterior body-wall on the ventral side and with the intestine on the dorsal side.

mesocarpaceous (mes″ọ̄-kär-pā'shius), *a.* Belonging or pertaining to the *Mesocarpaceæ*, a family of algæ.

mesocephal (mes-ọ̄-sef'al), *n.* [Gr. *μέσος*, middle, + *κεφαλή*, head.] In *anthrop.*, a mesocephalic individual. *Deniker*, Races of Man, p. 316.

mesocephali (mes-ọ̄-sef'a-lī), *n. pl.* [NL.] In *anthrop.*, mesocephalic individuals. *Keane*, Ethnology, p. 328.

mesocephalic, *a.* 3. Of or relating to the mesencephalon.

Mesocestoides (mes″ọ̄-ses-toi'dēz), *n.* [NL., < Gr. *μέσος*, middle, + NL. *Cestoides.*] The typical genus of the family *Mesocestoididæ.* *Vaillant*, 1863.

Mesocestoididæ (mes'ọ̄-ses-toi'di-dē), *n. pl.* [NL., < *Mesocestoides* + *-idæ.*] A family of tapeworms, of the order *Tetracotylea*, having the head unarmed but provided with four terminal suckers, and the genital pores separate on the ventral surface. It contains the genus *Mesocestoides*, parasitic in the dog and cat, especially in Iceland.

mesochondrium (mes-ọ̄-kon'dri-um), *n.*; pl. *mesochondria* (-ạ̈). [NL., < Gr. *μέσος*, middle, + *χόνδρος*, cartilage.] The transparent matrix or intercellular substance in which the cellular elements of hyaline cartilage are embedded.

mesochroi (me-sok'rọ̄-ī), *n. pl.* [NL., < Gr. *μέσος*, middle, + *χρόα*, color.] In *anthrop.*, individuals or races of a medial (namely, a yellow) color. See the extract under ★*leucochroi.*

mesochroic (mes-ọ̄-krō'ik), *a.* [*mesochroi* + *-ic.*] In *anthrop.*, of or pertaining to the mesochroi; having a medial (namely, a yellow) color: contrasted with ★*leucochroic* and *æthochroic.*

mesochrone (mes'ọ̄-krōn), *n.* [Gr. *μέσος*, middle, + *χρόνος*, time.] A mean-time curve. *P. Serret*, 1855.

mesococcus (mes-ọ̄-kok'us), *n.*; pl. *mesococci* (-sī). [NL., also *mesococcos*, < Gr. *μέσος*, middle, + NL. *coccus.*] A medium-sized coccus: applied to such forms of bacteria. *Billroth.*

mesoconch (mes'ọ̄-kongk), *a.* [Gr. *μέσος*, middle, + *κόγχη*, shell.] Same as ★*mesoconchous.*

mesoconchic (mes-ọ̄-kong'kik), *a.* Same as ★*mesoconchous.*

mesoconchous (mes-ọ̄-kong'kus), *a.* [Gr. *μέσος*, middle, + *κόγχη*, shell, + *-ous.*] In *craniom.*, having an orbital index of middle value, that is, of from 80.1 to 85.0: a term used by German anthropologists.

mesoconchy (mes'ọ̄-kong-ki), *n.* [*mesoconch* + *-y*3.] In *craniom.*, the condition or character of being mesoconchous. *Biometrika*, March–July, 1904, p. 214.

Mesocoracoid arch. See *precoracoid* ★*arch.*

mesocotyl (mes-ọ̄-kot'il), *n.* [Gr. *μέσος*, middle, + E. *cotyl*(*edon*).] An intercalary internode developed between the cotyledons in certain plants, which renders them alternate instead of opposite.

> A further irregularity in the case of Klugia Zeylanica and some species of Streptocarpus is the displacement of the cotyledons from the opposite to an alternate position; this is attributed to the intercalary development of an internode between the cotyledons, to which the name of *mesocotyl* is given. *Nature*, Sept. 8, 1904, p. 453.

mesocracy (me-sok'ra-si), *n.* [Gr. *μέσος*, middle, + *-κρατια*, rule, < *κρατεῖν*, be strong, rule.] Government by the middle class. *N. E. D.*

mesocratic (mes-ọ̄-krat'ik), *a.* [Gr. *μέσος*, middle, + *κρατεῖν*, rule. See ★*mesocracy.*] 1. Pertaining to, or characterized by, mesocracy.—2. In *geol.*, having light and dark minerals in about equal amounts: contrasted with ★*leucocratic* and ★*melanocratic.*

> The main body of the boss is made up of a coarsely crystalline, *mesocratic*, hornblende gabbro.
> *Amer. Geol.*, Sept., 1904, p. 134.

mesocribrum (mes-ọ̄-krib'rum), *n.* [Gr. *μέσος*, middle, + L. *cribrum*, a sieve.] The median one of three main side sacs arising from the embryonic cribrum.

> The mammalian cribrum.—W. Blendinger has investigated this structure in a series of mammals. In origin it consists of lateral, more or less vertical, folds, the cribral sacs. On the embryonic cribrum there arise three main side sacs, pro-, *meso*-, and meta*cribrum*, the entrance to which is perpendicular to the main axis of the nasal canal.
> *Jour. Roy. Micros. Soc.*, Feb., 1905, p. 42.

mesocyst (mes'ọ̄-sist), *n.* [Gr. *μέσος*, middle, + *κύστις*, a bag. See *cyst.*] The double layer of peritoneum attaching the gall-bladder to the liver when the former is completely surrounded by serous membrane. *Syd. Soc. Lex.*

Mesoderm band, one of the strands of mesodermal cells which arise from the germinal groove of the embryo of an insect.

mesodesm (mes'ọ̄-desm), *n.* [See *Mesodesma.*] In *bot.*, the layer of undifferentiated parenchyma lying between the several strands of a polystele. *Encyc. Brit.*, XXV. 416.

Mesodesma, *n.* 2. [*l. c.*] A fold of peritoneum which subtends one of the uterine ligaments.

mesodesmic (mes-ọ̄-des'mik), *a.* Of or pertaining to a mesodesm.

mesodiastolic (mes-ọ̄-dī-as-tol'ik), *a.* [Gr. *μέσος*, middle, + E. *diastolic.*] Occurring in the middle of the diastole. *N. E. D.*

Mesodon (mes'ọ̄-don), *n.* [NL., < Gr. *μέσος*, middle, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of Jurassic fishes, similar to *Microdon* (which see), but having teeth on the vomero-palatine in five rows and three or four irregular small rows on the splenial.

mesodont, *a.* 3. In *craniom.*, having a dental index between 42 and 44.

II. *n.* In *entom.*, one of a group of stag-beetles which have, like the amphiodonts, a mandibular development intermediate between the teleodont and priodont types.

mesodorsal (mes-ọ̄-dôr'sal), *a.* [Gr. *μέσος*, middle, + E. *dorsal.*] Situated in the middle of the dorsal region or back.

meso-epididymis (mes-ọ̄-ep-i-did'i-mis), *n.* [NL., < Gr. *μέσος*, middle, + NL. *epididymis.*] A double layer of the tunica vaginalis, resembling the mesentery, that unites the epididymis to the scrotum.

mesoform (mes'ọ̄-fôrm), *n.* [Gr. *μέσος*, middle, + E. *form.*] In *organic chem.*, a compound which contains two or more asymmetric (optically active) carbon atoms in the molecule, but which has its optical activity diminished or extinguished because one or more of the carbon atoms has the dextrorotatory and one or more the levorotatory configuration, thus more or less completely neutralizing each other's optical effect. Such compounds are also said to be internally compensated, in contradistinction from the racemic or externally compensated isomers. The two forms are distinguished, in practice, by the fact that the racemic isomer is capable of resolution into two optically active substances, which is not the case with the meso-compound.

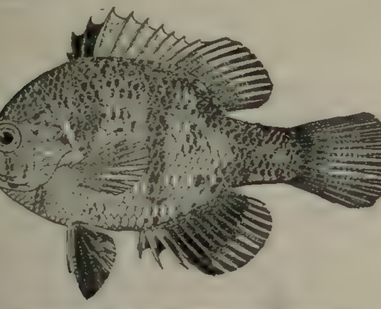
mesognathia (mes-og-nath'i-ạ̈), *n.* [NL., < Gr. *μέσος*, middle, + *γνάθος*, jaw.] In *anthrop.*, the condition of having middle-sized jaws.

mesognathion (mes-og-nath'i-on), *n.*; pl. *mesognathia* (-ạ̈). [Gr. *μέσος*, middle, + *γνάθος*, jaw.] An external premaxillary bone.

mesognathism (me-sog'nā-thizm), *n.* [*mesognath-ic* + *-ism.*] In *anthrop.*, the condition or character of being mesognathous.

mesogonion (mes-ọ̄-gō'ni-on), *n.*; pl. *mesogonia* (-ạ̈). [NL.] See ★*mesogonium.*

Mesogonistius (mes″ọ-gọ-nis′ti-us), *n.* [Gr. *μέσος*, middle, + *γωνία*, angle, + *ἱστίον*, sail.] A genus of fresh-water sunfishes, of the family *Centrarchidæ*, found in the eastern United States.



Black-banded Sunfish (*Mesogonistius chætodon*).
From Bulletin 47, U. S. Nat. Museum.)

mesogonium (mes-ọ-gō′ni-um), *n.*; pl. *mesogonia* (-ä). [NL., < Gr. *μέσος*, middle, + *γόνος*, generation.] In *Trachomedusæ*, one of the thin vertical laminæ of the subumbrella which pass across the bell-cavity from the manubrium to the radial canals, underlying the generative sacs and dividing each into two. Also *mesogonion*.

mesogyrate (mes-ọ-jī′rāt), *a.* [Gr. *μέσος*, middle, + L. *gyratus*, pp. of *gyrare*, turn.] Twisted toward the middle, as the beaks of some pelecypod mollusks: contrasted with ★*prosogyrate* and ★*opisthogyrate*.

mesogyrous (mes-ọ-jī′rus), *a.* [Gr. *μέσος*, middle, + *γῦρος*, a turn, gyre, + *-ous*.] In *ornith.*, having the second or middle loop of the intestine arranged in the form of a spiral, as in all *Passeres*.

mesohepar (mes-ọ-hē′pär), *n.* [Gr. *μέσος*, middle, + NL. *hepar*. See *hepar*.] A fold of peritoneum attached to the free edge of the right lobe of the liver in many animals. *Syd. Soc. Lex.*

mesohypoblast (mes-ọ-hī′pọ-blȧst), *n.* Gr. *μέσος*, middle, + *ὑπό*, under, + *βλαστός*, germ.] Same as ★*mesentoderm*.

mesohypsicephalic (mes-ọ-hip″si-se-fal′ik), *a.* [*meso(cephalic)* + *hypsicephalic*.] In *craniom.*, being both mesocephalic and hypsicephalic. *Man*, 1901, p. 190.

mesolecithal (mes-ọ-les′i-thal), *a.* [Gr. *μέσος*, middle, + *λέκιθος*, yolk, + *-al*¹.] In *embryol.*, a term applied to certain eggs, like those of most arthropods, in which the yolk in an early developmental stage lies in the center and is enveloped by a layer of blastodermic cells: same as *centrolecithal* and ★*perilecithal*.

Mesolithic (mes-ọ-lith′ik), *a.* [Gr. *μέσος*, middle, + *λίθος*, a stone, + *-ic*.] In *prehistoric archæol.*, relating to the period intermediate between the Paleolithic and Neolithic periods: a term employed in the classification of post-glacial deposits which contain human relics, or of such relics themselves, and referring to the relative character and degree of workmanship displayed therein. Contrasted with *Eolithic*, *Paleolithic*, and *Neolithic*. *Deniker*, Races of Man, p. 308.

mesologic (mes-ọ-loj′ik), *a.* Same as *mesological*.

mesomegacranious (mes-ọ-meg-ạ-krā′ni-us), *a.* [Gr. *μέσος*, middle, + *μέγα*, great, + *κρανίον*, skull.] In *craniom.*, having a skull of medium volume, that is, measuring from 1,810 to 1,950 cubic centimeters in males and from 1,610 to 1,730 cubic centimeters in females.

mesomegaprosopous (mes-ọ-meg-ạ-pros′ọ-pus), *a.* [Gr. *μέσος*, middle, + *μέγα*, great, + *πρόσωπον*, face.] In *craniom.*, said of a skull which has a face of middle size, the volume of which is from 580 to 640 cubic centimeters in males and from 480 to 530 cubic centimeters in females.

mesomental (mes-ọ-men′tạl), *a.* [Gr. *μέσος*, middle, + L. *omentum* + *-al*¹.] Relating to the central portion of the omentum.

mesomere (mes′ọ-mēr), *n.* [Gr. *μέσος*, middle, + *μέρος*, part.] In *embryol.*: (*a*) In the segmenting egg, a blastomere, or cell which gives rise to the mesoblast. (*b*) In the vertebrate embryo, a mesoblastic somite, or protovertebra.

mesometatarse (mes-ọ-met′ạ-tärs), *n.* Same as ★*mesometatarsus*.

mesometatarsus (mes-ọ-met-ạ-tär′sus), *n.*; pl. *mesometatarsi* (-sī). [Gr. *μέσος*, middle, + NL. *metatarsus*.] The middle metatarsal bone.

mesomula (me-som′ụ-lạ̈), *n.*; pl. *mesomulæ* (-lē). [Gr. *μέ(σος)*, middle, + (?) *σῶμα*, body, + dim. *-ula*.] A young embryo which consists of an epithelial mesoderm and entoderm separated by a mass of mesenchyme.

Mesomycetes (mes-ọ-mī-sē′tēz), *n. pl.* [NL., < Gr. *μέσος*, intermediate, + NL. *Mycetes*.] A group of fungi including the *Hemiascales* and the *Hemibasidiales*, regarded by some authors as intermediate between the *Phycomycetes* and the higher fungi, *Ascomycetes* and *Basidiomycetes*. *Brefeld*.

mesomycetous (mes″ọ-mī-sē′tus), *a.* Of or pertaining to the *Mesomycetes*, a group of fungi.

mesonasal (mes-ọ-nā′zạl), *a.* [Gr. *μέσος*, middle, + E. *nasal*.] Relating to or situated in the middle of the nose.

Mesonemertini (mes″ọ-nē-mėr-tī′nī), *n. pl.* [NL., < Gr. *μέσος*, middle, + NL. *Nemertini*.] A group or order of nemerteans having the lateral nerves in the dermal muscular layer; the body-wall consisting of ectoderm, dermis, an external circular, an internal longitudinal, and usually an intermediate diagonal layer of muscles; the mouth behind the brain; no cæcum; and the proboscis without stylets. It includes the family *Cephalothricidæ*. Compare ★*Protonemertini*, ★*Metanemertini*, and ★*Heteronemertini*.

mesonephridium (mes″ọ-ne-frid′i-um), *n.*; pl. *mesonephridia* (-ạ̈). [NL., < Gr. *μέσος*, middle, + NL. *nephridium*.] A nephridium of mesodermal origin.

mesopatagium (mes-ọ-pat-ạ̄-jī′um), *n.*; pl. *mesopatagia* (-ạ̈). [Gr. *μέσος*, middle, + NL. *patagium*. See *patagium*.] That part of the wing-membrane of a bat lying between the fifth digit of the hand and a line drawn from the center of the posterior margin to the elbow.

> Within the *mesopatagium* the subordinate lines incline either toward the forearm or the manus.
> *Harrison Allen*, Monograph of the Bats of North America, p. 3.

mesopectus (mes-ọ-pek′tus), *n.* [Gr. *μέσος*, middle, + L. *pectus*, breast.] Same as *mesosternum*, 2.

mesopellic (mes-ọ-pel′ik), *a.* [Gr. *μέσος*, middle, + *πέλλα*, dish (pelvis), + *-ic*.] Same as ★*mesatipellic*. *Brinton*, Races and Peoples, p. 49.

mesophile (mes′ọ-fil), *a.* [G. *mesophil* (Warming, 1895), < Gr. *μέσος*, middle, + *φίλος*, loving.] Same as ★*mesophilous*. *C. Mohr*.

mesophilic (mes-ọ-fil′ik), *a.* [Gr. *μέσος*, middle, + *φίλος*, loving.] Preferring, or adapted to live under, a condition of medium temperature or moisture; mesophilous: noting especially bacteria which grow best in cultures which are maintained at a medium temperature (15–45° C.). *Buck*, Med. Handbook, I. 686.—**Mesophilic bacteria.** See ★*bacterium*.

mesophilous (me-sof′i-lus), *a.* Mesophilic; in *phytogeog.*, mesophytic.

mesophryon (me-sof′ri-on), *n.* [NL., < Gr. *μεσόφρυον*, < *μέσος*, middle, + *ὀφρύς*, eyebrow.] The region between the eyebrows.

mesophyte (mes′ọ-fit), *n.* [Gr. *μέσος*, middle, + *φυτόν*, plant.] 1. A plant which is adapted to live under conditions of medium moisture and dryness; a plant intermediate between the hydrophytes and the xerophytes.—2. Same as *mesophytum*.

mesophytic (mes-ọ-fit′ik), *a.* [*mesophyte* + *-ic*.] Of the nature of or pertaining to mesophytes.

mesoplankton (mes-ọ-plangk′ton), *n.* [Gr. *μέσος*, middle, + NL. *plankton*.] The animals that float or swim in the water below the 100-fathom line and above the 500-fathom line, considered collectively and in contrast with the fauna of the deep ocean and the fauna and flora of the surface. See ★*hypoplankton* and ★*epiplankton*.

> A. [Arachmactio] albida . . . occurred in over 61 per cent. of epiplankton hauls, never in a *mesoplankton* haul, and may fairly be taken to be a purely epiplankton form.
> *Proc. Zool. Soc. London*, 1903, I. 117.

mesoplanktonic (mes″ọ-plangk-ton′ik), *a.* [*mesoplankton* + *-ic*.] Pertaining to or of the nature of mesoplankton. *Nature*, Nov. 5, 1903, p. 23.

mesoplasm (mes′ọ-plazm), *n.* [Gr. *μέσος*, middle, + *πλάσμα*, anything formed.] An intermediate layer between the ectoplasm and the endoplasm of some sporozoans. *Cohn*.

mesoplastral, *a.* II. *n.* Same as *mesoplastron*.

mesoplax (mes′ọ-plaks), *n.* [NL., < Gr. *μέσος*, middle, + *πλάξ*, anything flat.] In the *Pholadidæ*, a family of teleodesmaceous *Pelecypoda*, one of the accessory shelly plates, thus termed when situated above the beaks of the two valves. See also ★*prosoplax*, ★*metaplax*, and ★*hypoplax*.

mesopod (mes′ọ-pod), *n.* Same as *mesopodium*.

mesopore (mes′ọ-pōr), *n.* [Gr. *μέσος*, middle, + *πόρος*, pore.] In the *Bryozoa*, the angular or irregular cells which occupy interzoœcial spaces in some of the paleozoic genera (*Monticulipora*).

mesopotamic (mes″ọ-pọ-tam′ik), *a.* [See *Mesopotamian*.] Situated between two rivers: as, a *mesopotamic* region.

mesopsychic (mes-ọ-sī′kik), *a.* [Gr. *μέσος*, middle, + *ψυχή*, mind, + *-ic*.] In *psychol.*, belonging to the mid-period of mental development: opposed, on geologic analogy, to ★*paleopsychic* and ★*cenopsychic*. *G. S. Hall*, Adolescence, II. 358.

mesopterygoid, *n.* 2. In *ichth.*, a bone between the pterygoid and metapterygoid which usually helps to wall in the orbital cavity behind and below. It is not infrequently absent.

mesoptile (mes′op-til), *n.* [Gr. *μέσος*, middle, + *πτίλον*, feather.] A feather of the plumage of nestling birds, intermediate between the down and the mature feather: it bears on its tip the down and is in turn attached at its base to the neossoptile: correlative with ★*teleoptile* and ★*neossoptile*.

> This so-called nestling plumage, which is always intermediate in point of time and position between the other two named, may be called the *mesoptile*.
> *Rep. Fur Seal Investigations*, III. 424.

mesoptychial (mes-op-tik′i-ạl), *a.* [Gr. *μέσος*, middle, + *πτύξ* (*πτυχ-*), fold, + *-ial*.] Relating to the anterior middle part of the chest: as, the *mesoptychial* scales of lizards.

mesorchis (mes-ôr′kis), *n.* [NL.] Same as *mesorchium*.

mesorchium, *n.* 2. In *ichth.*, the tissue which suspends the genital gland from the dorsal wall of the abdominal cavity in the males.

mesorcinol (mes-ôr′si-nol), *n.* [Gr. *μέσος*, middle, + E. *orcinol* (?).] A colorless compound, $(HO)_2C_6H(\overset{1.\ 3.\ 5}{CH_3})_3$, prepared by the action of nitrous acid on aminomesitol. It sublimes in small lustrous plates, melts at 149–150° C. and boils at 274.5–275.5° C. Also called 1, 3, 5-*trimethylphendiol*.

mesorhinian, *a.* II. *n.* In *anthrop.*, a mesorhinian individual or type.

mesorhiny (mes′ọ-rin-i), *n.* [*mesorhine* + *-y*³.] In *anthrop.*, the condition or character of being mesorhine.

mesorostral (mes-ọ-ros′trạl), *a.* [Gr. *μέσος*, middle, + L. *rostrum*, beak, + *-al*¹.] Pertaining to or situated upon the median line of the beak: specifically, referring to the beak or prolongation of the head of such a cetacean as a dolphin.

mesosalpinx (mes-ọ-sal′pingks), *n.* [Gr. *μέσος*, middle, + *σάλπιγξ*, trumpet.] The upper part of the broad ligament between the Fallopian tube and the ovary.

Mesosauri (mes-ọ-sâ′rī), *n. pl.* [NL., < Gr. *μέσος*, middle, + *σαῦρος*, lizard.] An order of plesiosaurs established by Boulenger to contain species having vertebræ with a persistent notochord, four sacral vertebræ, and paddles with five fingers of not more than five phalanges each. The type genus, *Mesosaurus*, is from the Trias of South Africa.

mesoscelocele (mes-ọ-sel′ọ-sēl), *n.* [Gr. *μέσος*, middle, + *σκέλος*, leg, + *κήλη*, tumor.] Perineal hernia.

mesosclerometer (mes″ọ-sklẹ-rom′e-tėr), *n.* [Gr. *μέσος*, middle, + *σκληρός*, hard, + *μέτρον*, measure.] An instrument for testing the hardness of minerals by the rotation of a weighted needle pressed against the surface. See *sclerometer*.

mesoseismal (mes-ọ-sīs′mạl), *a.* [Gr. *μέσος*, middle, + *σεισμός*, earthquake.] Pertaining to or situated in the center of intensity of an earthquake: as, the *mesoseismal* area.

mesoseme, *a.* II. *n.* In *craniom.*, a skull which exhibits mesoseme measurements.

mesosome (mes'ọ-sōm), *n.* [*mesosoma.*] 1. In crustaceans, the pereion or thorax. Compare ★*metasome* and *urosome.*—2. Same as *mesosoma.*

mesospore, *n.* 2. A unicellular teleutospore which occurs in certain species of *Puccinia*, as *P. obscura, P. Scirpi*, etc., associated with the ordinary two-celled form.

mesostasis (me-sos'tạ-sis), *n.* [Gr. *μέσος*, middle, + *στάσις*, a placing.] 1. In *petrog.*, same as *base*^{2}, 8.

> These rocks [dolerites of the Western Isles of Scotland and of Iceland] . . . are described as possessing "intersertal structure," a structure characterized, according to the definition . . . by the presence of a hypocrystalline interstitial substance (*mesostasis*) wedged in between the feldspars. *Nature*, March 15, 1888, p. 459.

2. In *phytogeog.*, the condition of being mesostatic.

mesostatic (mes-ọ-stat'ik), *a.* [Gr. *μέσος*, middle, + *στατικός*, causing to stand.] 1. In *petrog.*, of or pertaining to mesostasis.—2. In *phytogeog.*, having place under essentially uniform conditions of medium moisture: said of a succession of vegetations. *F. E. Clements.*

mesosternite (mes-ọ-stėr'nīt), *n.* [Gr. *μέσος*, middle, + E. *sternite.*] Same as *mesosternal sternite.* See *mesosternal.*

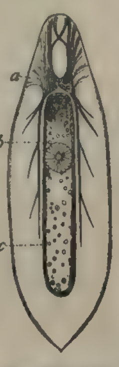
mesosthenic (mes-os-then'ik), *a.* [Gr. *μέσος*, middle, + *σθένος*, strength, + *-ic.*] 1. Of ordinary or medium strength.—2. Strong in the median or middle part.

Mesostoma (me-sos'tọ-mạ̈), *n.* [NL.] Same as ★*Mesostomum.*

Mesostomatidæ (mes″ọ-stọ-mat'i-dē), *n. pl.* Same as ★*Mesostomidæ.*

Mesostomidæ (mes-ọ-stom'i-dē), *n. pl.* [NL., < *Mesostomum* + *-idæ.*] A family of fresh-water and marine rhabdocœlous turbellarians, having one or two generative openings and a rosette-shaped, ventrally placed pharynx. It includes several genera, among them being *Mesostomum, Castrada*, and *Promesostomum.*

Mesostomum (me-sos'tọ-mum), *n.* [NL., < Gr. *μέσος*, middle, + *στόμα*, mouth.] The typical genus of the family *Mesostomidæ.* Also *Mesostoma. Dugés.*



Alimentary Canal and Nervous System of *Mesostomum ehrenbergii* (after Graff).

a, the two cerebral ganglia with two eye-spots; *b*, two lateral nerve-trunks; *c*, alimentary canal with mouth and pharynx.

mesostyle (mes'ọ-stīl), *n.* [Gr. *μέσος*, middle, + *στῦλος*, pillar.] 1. In *bot.*, a style of intermediate length, as in trimorphic plants. Compare ★*metastyle* and ★*parastyle.*—2. In *anat.*, the median one of the three enamel-covered ridges on the outer side of the molar tooth of a horse: correlated with ★*parastyle* and ★*metastyle.*

> Microchœrus in all probability comes in the same group, and when more fully known should furnish a closer approximation to the Indrisinæ than Necrolemur, on account of the development of a *mesostyle* in the upper molars. *Amer. Jour. Sci.*, March, 1904, p. 214.

mesosystolic (mes″ọ-sis-tol'ik), *a.* [Gr. *μέσος*, middle, + E. *systolic.*] Occurring in the middle of the systole. *N. E. D.*

mesotarsal (mes-ọ-tär'sal), *a.* [NL. *mesotars*(*us*) + *-al*^{1}.] Relating to the median horizontal line of the tarsus; pertaining to the metatarsus. *Parker and Haswell*, Zoology, II. 366.—**Mesotarsal joint,** a joint or articulation in the median horizontal plane of the tarsus, such as the ankle-joint of birds and reptiles, in which the joint is between the bones of the tarsus and not between the tibia and the tarsus.

mesotartaric (mes″ọ-tär-tar'ik), *a.* [Gr. *μέσος*, middle, + E. *tartaric*^{1}.] Noting an acid, a colorless optically inactive compound, $HOOC\text{-}CH(OH).CH(OH)COOH.H_2O$, prepared by the prolonged boiling of d-tartaric acid with water or hydrochloric acid. It crystallizes in rectangular plates and melts at 140–143° C. The compound can not be resolved into optically active isomers, and its lack of activity is consequently regarded as being intramolecular, the one asymmetric carbon atom exactly neutralizing the other. See ★*mesoform.*

mesotendon (mes-ọ-ten'dọn), *n.* [Gr. *μέσος*, middle, + L. *tendo*, tendon.] The synovial fold which connects a tendon and its sheath.

mesotheca (mes-ọ-thē'kạ̈), *n.*; pl. *mesothecæ* (-sē). [Gr. *μέσος*, middle, + *θήκη*, case.] The middle one of the three laminæ of the perigonium in *Hydrozoa. N. E. D.*

mesothecium (mes-ọ-thē'si-um), *n.*; pl. *mesothecia* (-ạ̈). [Gr. *μέσος*, middle, + NL. *thecium.*] 1. The middle layer of cells in the wall of an anther.—2. The thecium of lichens. *Jackson*, Gloss. Bot. Terms.

mesothermal (mes-ọ-thėr'mạl), *a.* [Gr. *μέσος*, middle, + *θέρμη*, heat, + *-al*^{1}.] Relating to or exhibiting a moderate temperature or quantity of heat.

mesothermic (mes-ọ-thėr'mik), *a.* [*mesotherm* + *-ic.*] Having the character of a mesotherm; composed of or characterized by mesotherms

> The most important family of the north temperate zone among the Polycarpicae, that of the Ranunculaceæ, is *mesothermic* and microthermic. *A. F. W. Schimper* (trans.), Plant-Geog., p. 236.

mesothet (mes'ọ-thet), *n.* [Gr. *μέσος*, middle, + *θετόν* (neuter), placed. See *thesis.*] A middle or intermediate term or thing. See *mesothesis.* [Rare.]

> Mackaye sat in his usual place . . . while opposite to him was Farmer Porter. . . . A curious pair of 'poles' the two made; the *mesothet* whereof, by no means a 'punctum indifferens,' but a true connecting spiritual idea, stood on the table—in the whisky bottle. *Kingsley*, Alton Locke, xxi.

mesothetic (mes-ọ-thet'ik), *a.* [*mesothesis.*] Of the nature of mesothesis; intermediate; serving to connect extremes or opposites. [Rare.]

> An honest development of the true idea of Protestantism, which is paving the way to the *mesothetic* art of the future. *Kingsley*, Yeast, xv. *N. E. D.*

mesothorium (mes-ọ-thō'ri-um), *n.* [Gr. *μέσος*, middle, + NL. *thorium.*] A disintegration-product of thorium, intermediate between thorium and radiothorium.

> These preparations must contain the intermediate product between thorium and radiothorium. He [Dr. Otto Hahn] therefore reaches the conclusion that it is this intermediate product, for which he suggests the name "*mesothorium*," and not the radiothorium, which is separated from the thorium in the technical process of preparing pure thorium nitrate. *B. B. Boltwood*, in Amer. Jour. Sci., Aug., 1907, p. 96.

mesotonic (mes-ọ-ton'ik), *a.* [Gr. *μέσος*, middle, + E. *tonic.* See *tone*^{1}.] Of the nature of or characterized by middle or mean tones. See *mean* ★*tone* and *temperament*, 5.

> This is known as the System of Mean Tones, or the *Mesotonic* System, as it will be here termed. It was the earliest system of temperament, and is claimed by Zarlino and Salinas. *A. J. Ellis*, in Proc. Roy. Soc. (London), XIII. 408.

mesotriæne (mes-ọ-trī'ēn), *n.* [Gr. *μέσος*, middle, + *τρίαινα*, trident.] In the nomenclature of the spicular elements of sponges, a triæne in which the rhabdome is produced, leaving the three cladisks near the middle of the shaft. See *triæne.*

mesotroch (mes'ọ-trok), *n.* [Gr. *μέσος*, equal, + *τροχός*, a wheel.] A band of cells bearing cilia and encircling the middle of the body in the larvæ of certain marine worms (annelids). Compare ★*prototroch*, ★*paratroch*, etc.

mesotropic (mes-ọ-trop'ik), *a.* [Gr. *μέσος*, middle, + *-τροπος*, < *τρέπειν*, turn, + *-ic.*] In *phytogeog.*, controlled by conditions changing from wet or dry to medium: said of a succession of vegetations. *F. E. Clements.*

mesotropy (me-sot'rọ-pi), *n.* [*mesotrop*(*ic*) + *-y*^{3}.] The character or condition of being mesotropic.

mesoturbinal (mes-ọ-tėr'bi-nạl), *n.* [Gr. *μέσος*, middle, + E. *turbinal.*] The middle turbinate bone.

meso-uterine (mes-ọ-ū'tẹ-rin), *a.* [Gr. *μέσος*, middle, + E. *uterine.*] Pertaining to the middle of the uterus: applied to the fold of peritoneum which supports the uterus.

mesoxalyl (mes-ok'sạ-lil), *n.* [*mesoxal*(*ic*) + *-yl.*] In *organic chem.*, the bivalent radical $-COCO.CO-$ or its hydrated form $-COC(OH)_2\text{-}CO-$. It is the radical of mesoxalic acid.

mesquite^{2}, *n.*—**Bristly mesquite,** one of the black gramas, *Bouteloua hirsuta*, ranging from Illinois and Wisconsin to the Rocky Mountains. It is a tufted perennial, from 6 to 16 inches high, named from its hairy spikes. It is valuable chiefly because it will produce feed on very poor soils.—**Curly** or **creeping mesquite,** *Hilaria cenchroides*, a delicate perennial grass with slender, creeping stems and upright shoots a few inches to nearly a foot high. It is one of the most valuable grasses for grazing on the dry plains and mesas in the southwestern United States. It forms a close mat in summer, cures on the roots, and when not rotted by late rains affords excellent pasture in the fall and winter. During severe drought it appears dead, but quickly revives throughout upon the advent of warm rains.—**Early mesquite,** the true buffalo-grass, *Bulbilis dactyloides.*—**Grape-vine mesquite.** Same as *vine-*★*mesquite.*—**Hairy mesquite.** Same as ★*side-oats.*—**Running mesquite.** Same as *curly* ★*mesquite.*—**Seed-mesquite,** *Bouteloua Texana*, a small, densely tufted grass found in Texas, Oklahoma, and Arkansas. It is an important grass in stock-ranges, chiefly along the Rio Grande. Also called *Texas grama.*—**Velvet-mesquite.** Same as *velvet-grass.* See *Holcus.*—**Vine-mesquite,** *Panicum obtusum*, a stoloniferous panic-grass with upright stems 1–2 feet high and runners often 8 or 10 feet long. It ranges from Colorado and Texas into Mexico, being found chiefly on irrigated ground or on damp soil, most often in shade. Its character indicates agricultural value. Sometimes called *grape-vine mesquite* or *grass*, and in New Mexico *wire-grass.*

mess^{1}, *n.*—**Chief Master-at-arms' mess,** the chief petty officers' mess, presided over by the master-at-arms, the highest chief petty officer of a naval vessel.—**Orderly sergeants' mess,** the marines' mess for the sergeants and other non-commissioned officers of the marine guard.—**Steerage mess,** the midshipmen's mess.—**Ward-room mess,** the commissioned officers' mess: generally for those above the rank of ensign.—**Warrant-officers' mess,** the mess of the boatswain, gunner, carpenter, sail-maker, and warrant machinists.

message-hook (mes'ạ̄j-hůk), *n.* A wire hook upon which are filed the sheets of paper on which telegraphic messages have been written.

message-rate (mes'ạ̄j-rāt), *n.* A fixed rate of payment per message sent by telephone, as distinguished from a subscription entitling to unlimited service. *N. E. D.*

message-stick (mes'ạ̄j-stik), *n.* A stick bearing carved marks, carried by a messenger. The marks serve as reminders and are a device for securing the accurate delivery of the message. Message-sticks are used particularly in Australia.

message-string (mes'ạ̄j-string), *n.* A knotted string to which a number of symbolic objects are attached: used to convey messages from one person or tribe to another, and found, for instance, among the Jebu tribe in Africa. See also ★*knot-writing. Ratzel* (trans.), Hist. of Mankind, II. 406.

mess-beef (mes'bēf), *n.* Beef packed in barrels for use on board ship.

mess-boy (mes'boi), *n.* *Naut.*, the one who waits on the officers' table on a merchant steamer.

messel^{3} (mes'el), *n.* In *Arabic music*, a method or system of fixing and measuring intervals which involves their description in terms derived by dividing the vibration-number of the lower tone by that of the higher: thus, the *messel* of an octave was 2, of a fifth 1½, etc. It is supposed that the messel theorists, by at least the fourteenth century, had established the modern thirds and sixths as distinguished from those of the Pythagorean system.

messenger, *n.*—**To fleet the messenger.** See ★*fleet*^{1}.

messenger-rope (mes'en-jėr-rōp), *n.* 1. In power-transmission, a rope-drive for operating a drum or machine.—2. A rope used to support guide-sheaves.

messenger-strand (mes'en-jėr-strand), *n.* A strand in a messenger-wire or a single wire used to support a cable.

messenger-wire (mes'en-jėr-wīr), *n.* A wire or wire rope used to support an aërial cable. The cable is attached to the messenger-wire at frequent intervals by cable-clips.

Messianism (me-sī'ạn-izm), *n.* [*Messian*(*ic*) + *-ism.*] Belief in a Messiah.

messieurs. Plural of *monsieur.*

Messinese (mes-i-nēs'), *a.* and *n.* [*Messina*, a city in Italy, + *-ese.*] I. *a.* Of or pertaining to Messina.

II. *n.* An inhabitant of Messina.

Messinian (me-sin'i-ạn), *a.* and *n.* [*Messina*, a city in Italy, + *-ian.*] I. *a.* Of or pertaining to Messina; in *geol.*, noting a division of the Tertiary in Italy commonly regarded as appertaining to the base of the Pliocene, though by some authors considered as the top of the Miocene. It is constituted of deposits indicating alternations of marine and brackish-water conditions.

II. *n.* 1. An inhabitant of Messina.—2. In *geol.*, the Messinian formation.

messire (me-sēr'), *n.* [F., < L. *meus senior.* See *monsieur.*] Sir: a French title of honor prefixed originally to the names of persons of high rank, but later used more loosely as a form of address.

mess-kid (mes'kid), *n.* Same as *kid*^{3}, 1.

mess-man (mes'mạn), *n.* Same as ★*mess-boy.*

Messrs. An abbreviation of the French *Messieurs.*

mess-whistle (mes'hwis″l), *n.* *Naut.*, the pipe to meals; the winding of the boatswain's call as a summons to meals.

mestiza (mes-tē'zạ̈), *n.* Feminine of *mestizo.*

Mestizo wool. See ★*wool.*

mesto (mā̤s'tọ̄), *a.* [It., < L. *mæstus*, sad, < *mærere*, be sad.] In *music*, sad, gloomy.

mesuranema (mes-ụ̄-ran'ẹ̄-mạ̈), *n.* [NL., also *mesouranema*, < Gr. *μέσος*, middle, + *οὐρανός*, heaven.] In *astrol.*, mid-heaven; the tenth house of the heavens, being the maternal house, or house of dignities.

mesuranic (mes-ụ̄-ran'ik), *a.* [Gr. *μέσος*, middle, + *οὐρανός*, palate, + *-ic.*] In *craniom.*, having a palatomaxillary index between 110 and 115. *Turner.*

met. An abbreviation (*a*) of *metaphor*, *metaphorical*, *metaphorically*; (*b*) of *metaphysical*, *metaphysically*, *metaphysics*; (*c*) of *metropolitan*.

met-. A combining form sometimes used in organic chemistry in place of *meta-*.

meta-. (*d*) In *inorganic chem.*, among the different types of periodic, phosphoric, arsenious, arsenic, boracic, and silicic acids, a prefix used in the name of that which contains the least proportion of hydrogen. (*e*) As a prefix to the names of benzene derivations, it signifies that atoms or radicals substituting two, three, or four of the hydrogen atoms of benzene have the positions (if all six hydrogen atoms of the original benzene be numbered consecutively from 1 to 6) 1 and 3, 1, 2, and 4, or 1, 2, 3, and 5, respectively. This arrangement is spoken of as *asymmetric*. In *geol.*, it is used to denote change, transformation, or metamorphism, but differently in different instances. In one case the rock-name to which it is prefixed accords with the present character of the rock, and the prefix *meta-* indicates that it has been developed by processes of metamorphism: as, *meta-diorite*, a diorite which has resulted from metamorphism, possibly of a gabbro. In another case the rock name describes the rock as it was before metamorphism: as, *meta-diabase*, for an altered diabase.

meta-andesite (met-ạ-an'dẹ̄-zīt), *n.* An altered or partly metamorphosed andesite.

> Much of the lava contains porphyritic quartz, and in general may be designated metarhyolite, but a large part, being without free quartz and less siliceous, has the appearance of *metaandesite*. A peculiarity of many of these rocks is that they are rich in soda.
> *Contrib. to Econ. Geol.*, U. S. Geol. Surv., 1902, p. 124.

meta-arthritic (met''ạ-är-thrit'ik), *a.* [Gr. *μετά*, after, + E. *arthritic*.] Consequent upon arthritis as an effect.

metabasalt (met'ạ-bạ-sâlt'), *n.* An altered or partly metamorphosed basalt. *Amer. Jour. Sci.*, Feb., 1904, p. 145.

metabelian (met-ạ-bē'li-ạn), *a.* [Gr. *μετά*, with, + E. *Abelian*^{2}.] In *math.*, noting a group whose cogredient group of isomorphisms is Abelian.

metabiosis (met''ạ-bī-ō'sis), *n.* [NL., < Gr. *μετά*, with, + *βίωσις*, a way of life.] The dependence of an organism upon another which furnishes something that is necessary for its existence.

metabiotic (met''ạ-bī-ot'ik), *a.* [*metabiosis* (*-ot-*) + *-ic.*] In *biol.*, dependent upon another for some condition of existence. See ★*metabiosis*.

metabole (me-tab'ō-lē), *n.* [Gr. *μεταβολή*, changing, change, < *μεταβάλλειν*, turn about, change.] Development with metamorphosis, such as characterizes many insects: contrasted with ★*ametabole*, or development without metamorphosis.

metabolin (me-tab'ọ-lin), *n.* [*metabol(ic)* + *-in*^{2}.] Same as *metabolite*.

metabolizable (me-tab'ọ-lī-zạ-bl), *a.* [*metabolize* + *-able*.] Capable of metabolic transformation: said of foods received into the animal system. See *metabolism*.

metabolon (me-tab'ọ-lon), *n.*; pl. *metabola* (-lạ̈). [Gr. *μεταβόλον*, neut. of *μεταβόλος*, changeable, < *μεταβάλλειν*, turn about, change.] A temporary and transitional form of matter produced by the disintegration of radioactive substances such as thorium or radium. The metabolon differs from a chemical element in having only a temporary existence.

> The various *metabolons* from the radio-elements are distinguished from ordinary matter by their great instability and consequent rapid rate of change.
> *E. Rutherford*, Radio-activity, p. 324.

metacanthid (met-ạ-kan'thid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Metacanthidæ*.

II. *a.* Having the characters of, or belonging to, the family *Metacanthidæ*.

metacarpal. **I.** *a.*—**Metacarpal ligament, phalanx.** See ★*ligament*, ★*phalanx*.

II. *n.* **2.** One of the six primary feathers of a bird's wing which are attached to the metacarpal bones.

metacarpodigital (met-ạ-kär-pọ-dij'i-tạl), *n.* One of the primaries of a bird's wing: the term was devised by Wray, who divided the primaries into digitals, those attached directly to the digits, and metacarpals, those joined to the metacarpus.

metacarpophalanx (met-ạ-kär-pọ-fā'langks), *n.*; pl. *metacarpophalanges* (-fạ-lan'jēz). [NL., < *metacarpus*, 2, + *phalanx*.] A pectoral ray; one of the rays of the pectoral fin in fishes. *Starks*, Synonymy of the Fish Skeleton, p. 523.

metacarpus, *n.* **2.** Same as *actinost*. *Starks*, Synonymy of the Fish Skeleton, p. 523.

metacasein (met-ạ-kā'sẹ̄-in), *n.* [*meta-* + *casein*.] A certain phase in the rennin reaction (coagulation of milk), during which the paracasein is precipitated only by higher temperatures.

metacenter, *n.* **2.** In *biol.*, an organism or an organ which, while one of the descendants from an archetype, itself becomes a new archetype around which new divergent or apocentric modifications are produced.

> With reference to any particular group of forms such a new centre of modification may be termed a *metacentre*.
> *Encyc. Brit.*, XXVIII. 343.

Curve of metacenters or **transverse metacenters.** See ★*curves of ship calculations*.

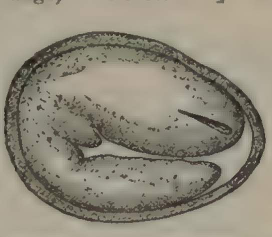
metacentral (met-ạ-sen'trạl), *a.* Same as *metacentric*. *Trans. Linnean Soc. London*, Zool., Oct., 1901, p. 229.

metacentric, *a.* **2.** In *biol.*, pertaining to a new center around which new diverging modifications are produced. *P. C. Mitchell.*—**Metacentric diagram,** in *naval arch.*, a diagram showing the curves of metacenters and of centers of buoyancy in a conventional method. See cut and description under ★*curves of ship calculations*.—**Metacentric height.** See ★*height*.

metacentricity (met''ạ-sen-tris'ị-ti), *n.* [*metacentric* + *-ity*.] The property of being metacentric, in either sense of that word.

metacerium (met-ạ-sē'ri-um), *n.* [NL., < Gr. *μετά*, with, + NL. *cerium*.] A supposed new chemical element announced by Brauner as probably present as an oxid mixed with oxid of cerium. No confirmation of its existence has been had.

metacestode (met-ạ-ses'tōd), *n.* [Gr. *μετά*, after, implying change, + E. *cestode*.] A sexless, encysted stage of certain tapeworms, as *Bothriocephalus*. If imperfectly cooked fish infested with the parasite in this stage is eaten by man, the metacestode develops into the mature tapeworm. Also called *plerocestode*.



Metacestode of *Bothriocephalus* encysted in the smelt (after Leuckart). (From Lankester's "Zoology.")

metachemic (met-ạ-kem'ik), *a.* [Gr. *μετά*, beyond, + E. *chemic*.] **1.** Of or pertaining to metachemistry; metachemical.—**2.** In *petrog.*, noting changes in the chemical constitution of rocks; metasomatic. *Dana*, 1886.

> In none of the specimens studied was there any schistosity, so that the alteration has been *metachemic*.
> *22d An. Rep. U. S. Geol. Surv.*, ii. 793.

metachemical (met-ạ-kem'i-kạl), *a.* [Gr. *μετά*, after, + E. *chemical*.] Transcending chemistry; standing beyond the bounds of true chemistry: metachemic.

> What Mendeléef denominates the *metachemical* and vague ('verschwommene') theory of electrons.
> *Science*, March 4, 1904, p. 395.

Metachlamydeæ (met''ạ-kla-mid'ē-ē), *n. pl.* [NL. (Engler, 1898), < Gr. *μετά*, after, + *χλαμύς* (*χλαμυδ-*), cloak, envelop, + *-eæ*.] A series of dicotyledonous plants, embracing all those having a double floral envelop (calyx and corolla), with the parts of the inner envelop (corolla) coherent. Although coextensive with the ★*Sympetalæ* (which see), it is not to be confounded with that (which is a division) and is coördinate with the series ★*Archichlamydeæ* (which see). The plants of this series appeared later in the geological history of plants and possess a higher organization than those of the *Archichlamydeæ*.

metachlamydeous (met''ạ-kla-mid'ẹ̄-us), *a.* [*Metachlamydeæ* + *-ous*.] Belonging to the plant series *Metachlamydeæ*; having the divisions of the corolla coherent.

metachlorite (met-ạ-klō'rīt), *n.* [*meta-* + *chlorite*.] A dull leek-green chloritic mineral, related to daphnite.

metachromasy (met-ạ-krō'mạ-si), *n.* [Gr. *μετά*, with, after, + *χρῶμα*, color.] An anomalous manner of staining, whereby a single stain will color different tissue elements in different tints or in altogether different colors: a term introduced by Ehrlich. Not all dyes have metachromatic properties. The most notable ones are methyl-violet, thionin, methylene-azure, cresyl violet RR, and toluidin blue.

> The cells which contain granules contain also a store of ferment (zymogen), whilst the cells that are destitute of granules exhibit the reaction of mucin (*metachromasy*).
> *Lancet*, July 18, 1903, p. 177.

metachromatic (met''ạ-krọ-mat'ik), *a.* [Gr. *μετά*, beyond, + *χρῶμα* (*χρωματ-*), color, + *-ic*.] **1.** Pertaining to or characterized by metachromatism or color-change.—**2.** Pertaining to or exhibiting metachromasy; metachromic.—**Metachromatic bodies,** granules in the interior of certain bacteria which take on a different stain from the rest of the cell; metachromic granules.

metachromatism (met-ạ-krō'mạ-tizm), *n.* [Gr. *μετά*, after, + *χρῶμα(τ-)*, color, + *-ism*.] Change of color; specifically, variation of color due to changes in the temperature of a body; change of color by change of physical conditions, as in the case of a double salt consisting of silver chlorid and mercuric iodide, which changes from yellow to red on being heated and returns to yellow after cooling.

metachromatosis (met-ạ-krō-mạ-tō'sis), *n.* [Gr. *μετά*, after, + *χρῶμα(τ-)*, color, + *-osis*.] An alteration in color.

metachrome (met'ạ-krōm), *n.* [See ★*metachromatic*.] A body or substance that changes color.

metachromic (met-ạ-krō'mik), *a.* [Gr. *μετά*, after, + *χρῶμα*, color, + *-ic*.] **1.** Staining in a color different from that of the dye used—for example, red with a blue or violet dye; metachromatic.—**2.** Differentiated by means of special stains: applied to granules and other contents of the cell.—**Metachromic granules,** in *bacteriol.*, minute bodies within the protoplasm of bacteria which are brought out by special staining methods; metachromatic bodies.

metachromism (met-ạ-krō'mizm), *n.* **1.** Same as ★*metachromatism*.—**2.** Same as ★*metachromasy*.

Metacineta (met''ạ-si-nē'tạ̈), *n.* [NL., < Gr. *μετά*, after, + *κινητός*, < *κινεῖν*, move.] The typical and only genus of the family *Metacinetidæ*. *Bütschli*, 1888.

Metacinetidæ (met''ạ-si-net'i-dē), *n. pl.* [*Metacineta* + *-idæ*.] A family of *Suctoria*, consisting of thecate forms having the base of the cup drawn out into a long stalk and the walls perforated for the exit of the tentacles. It contains the single genus *Metacineta*.

metacinnamene (met-ạ-sin'ạ-mēn), *n.* [*meta-* + *cinnamene*.] Same as ★*metastyrolene*.

metacneme (met'ak-nēm), *n.* [Gr. *μετά*, after, + *κνήμη*, tibia.] In anthozoans, one of the later mesenteries which appear after the twelve primary mesenteries. Compare ★*protocneme*.

metacnemic (met-ak-nē'mik), *a.* [*metacneme* + *-ic*.] Resembling, or pertaining to, a metacneme. *Annals and Mag. Nat. Hist.*, May, 1902, p. 397.

metacœle, *n.* **2.** The trunk-cavity formed as a pair of entodermal outgrowths in the *Hemichorda*.

> And a *metacœle* (trunk cavity), formed as a pair of endodermal outgrowths, which may possibly have been originally archenteric diverticula.
> *Encyc. Brit.*, XXIX. 249.

metacœloma (met-ạ-sẹ̄-lō'mạ̈), *n.*; pl. *metacœlomata* (-mạ-tạ̈). [NL., < Gr. *μετά*, after, + *κοίλωμα*, a hollow.] In *embryol.*, that portion of the true body-cavity, or cœloma, which becomes the pleuroperitoneal cavity of the adult.

metaconal (met-ạ-kō'nạl), *a.* [*metacone* + *-al*^{1}.] Of or pertaining to the metacone. *Proc. Zool. Soc. London*, 1896, p. 570.

metacone (met'ạ-kōn), *n.* [Gr. *μετά*, after, + *κῶνος*, cone.] The outer, hindmost cusp on the upper molar of such a tooth as that of a horse or horse-like mammal. See cut under ★*tooth*, 1. *Parker and Haswell*, Zoology, II. 529.

metaconid (met-ạ-kon'id), *n.* [*metacone* + *-id*.] The anterior or intermediate cusp on the inner side of a lower molar of a mammal: typically present in the teeth of the extinct *Hyracotherium* and in existing monkeys.

> Treating them for the present as subspecies, the animal I should call H. a. leucurus has the tooth small and narrow . . ., low . . ., and simple, the antero-internal cusp not or scarcely divided into its constituent paraconid and *metaconid*, . . . and with but one low cusp on the centre of the talon.
> *Annals and Mag. Nat. Hist.*, June, 1904, p. 409.

metaconule (met-a̤-kon′ụl), *n.* [Gr. *μετά*, with, + E. *conule.*] The posterior smaller or intermediate cusp on the upper molar tooth of a mammal. See cut under ★*tooth*, 1. *Amer. Geol.*, April, 1905, p. 244.

metacopaivic (met-a̤-kọ-pā′vik), *a.* [Gr. *μετά*, with, + E. *copaiva* + *-ic.*] Noting a crystalline acid, $C_{22}H_{34}O_4$, contained in Maracaibo copaiva balsam. It is possibly identical with gurjunic acid.

metacoracoid (met-a̤-kor′a-koid), *n.* [Gr. *μετά*, with, + E. *coracoid.*] The coracoid proper, as distinguished from the epicoracoid.

> Similarly the doubly ossified condition of the coracoid may now be held diagnostic, for it is known that the epicoracoidal element, originally thought to characterize the monotremes alone, is always present, and that reduction to a varying degree characterizes the *metacoracoid*, which retires, as in man, as the so-called coracoid epiphysis.
> *Smithsonian Rep.*, 1902, p. 588.

metacrasis (met-a̤-krā′sis), *n.* [Gr. *μετά*, after, + *κρᾶσις*, mingling.] **1.** Kinetic metabolism; transmutation of energy. *Jackson*, Gloss. Bot. Terms.—**2.** In *geol.*, that variety of metamorphism which involves the recrystallization of old materials into new compounds without the necessary addition of new matter: thus, shales may be changed to mica schists. *Geikie*, Text-book of Geol., p. 765.

metacresol-anytol (met-a̤-krē′sol-an″i-tol), *n.* A 40-per-cent. solution of metacresol in anytol: used in erisypelas.

metacribrum (met-a̤-krib′rum), *n.* [Gr. *μετά*, with, + L. *cribrum*, a sieve.] The outermost of the three main side sacs arising from the embryonic cribrum. See ★*mesocribrum. Jour. Roy. Micros. Soc.*, Feb., 1905, p. 42.

metacrisis (me-tak′ri-sis), *n.* [Gr. *μετά*, after, + *κρίσις*, a separating.] In *petrog.*, a term introduced by Bonney (1886) to signify recombination or a change, such as the conversion of a mud into a mass of quartz with mica and other silicates.

metacrolein (met-a-krō′lẹ-in), *n.* [*meta-* + *acrolein.*] A colorless crystalline compound, $(C_3H_4O)_3$, prepared by the action of sodium hydroxid on β-chlorpropionic aldehyde. It has a highly offensive odor and melts at 50° C.

metacrystal (met-a-kris′tal), *n.* [Gr. *μετά*, after, + E. *crystal.*] A relatively large crystal, simulating the phenocrysts of eruptive rocks, but formed in both sediments and eruptives during metamorphism. Examples are garnets and staurolite in schists; andalusite in contact-zones; etc. *A. C. Lane*, in Bulletin Geol. Soc. Amer., XIV. 388.

metacyclic, *a.* **2.** Solvable by radicals: as, a *metacyclic* equation. See ★*equation.*

metacyesis (met″a̤-sī-ē′sis), *n.* [Gr. *μετά*, after, + *κύησις*, gestation.] Ectopic gestation in which the embryo, at first in the uterus, is carried to some outside part where it undergoes further development.

metadesmine (met-a̤-des′min), *n.* [*meta-* + *desmine.*] A more or less completely dehydrated stilbite (desmine).

metadiabase (met-a̤-dī′a̤-bās), *n.* [*meta-* + *diabase.*] Same as *epidiorite.*

metadiazin (met″a̤-dī-az′in), *n.* [*meta-* + *diazin.*] Same as ★*pyrimidine.*

metadiorite (met-a̤-dī′ọ-rīt), *n.* [*meta-* + *diorite.*] In *petrog.*, a phaneric rock, having the composition of diorite, which has been produced by the alteration or metamorphism of another rock, most frequently by the alteration of pyroxene to hornblende. *Dana.*

metadiscoidal (met″a̤-dis-koi′da̤l), *a.* [Gr. *μετά*, after, + E. *discoid* + *-al*^{1}.] In *embryol.*, noting the placenta of certain mammals such as the primates (man and apes), in which the villi are restricted to a disk-shaped chorionic area on the ventral side of the embryo. *Parker and Haswell*, Zoology, II. 562.

meta-element (met′a̤-el″ẹ-ment), *n.* [Gr. *μετά*, after, + E. *element.*] In *chem.*, a term suggested by Sir William Crookes for the very similar but in some respects different components into which crude yttrium seems to split up on oft-repeated fractional crystallization of its salts. He connected these supposed analogues of closely related organic radicals with his ideas as to the genesis of the generally recognized elements of chemistry from a single primitive form of matter.

metafysics, *n.* An amended spelling of *metaphysics.*

metagabbro (met-a̤-gab′rō), *n.* [Gr. *μετά*, after, + E. *gabbro.*] An altered or partly metamorphosed gabbro. *Amer. Jour. Sci.*, Feb., 1904, p. 145.

metagadolinite (met-a̤-gad′ọ-lin-īt), *n.* [Gr. *μετά*, after, + E. *gadolinite.*] An uncertain alteration-product of gadolinite.

metagallic (met-a̤-gal′ik), *a.* [*meta-* + *gallic*^{2}.] Same as ★*melanogallic.*

Metagene (met′a̤-jēn), *a.* and *n.* [Gr. *μετά*, after, + *-γενης*, -producing.] In *geol.*, a term suggested by Heilprin (1887) as an equivalent of *Miocene.*

metageometer (met″a̤-jẹ-om′e-tėr), *n.* [*metageometry*, after *geometer.*] One who is skilled in metageometry.

metageometrical (met″a̤-jē-ọ-met′ri-ka̤l), *a.* [*metageometry* + *-ic-al.*] Of or pertaining to metageometry.

metageometrician (met″a̤-jẹ-om-e-trish′a̤n), *n.* [*metageometric* + *-ian.*] Same as ★*metageometer.*

> Our *metageometricians* tried to derive the basic geometrical principles from pure reason but failed.
> *Science*, Jan. 16, 1903, p. 106.

metageometry (met″a̤-gẹ-om′e-tri), *n.* [Gr. *μετά*, after, + E. *geometry.* Compare *metaphysics.*] A system of geometry which omits or reverses some one or more of the explicit or implicit postulates of ordinary geometry, such as that space has but three dimensions, that all points of space have like neighboring places, that every pair of unbounded straight lines which are in one plane and do not cut one another at a finite distance cut one another at infinity, etc. See ★*non-Euclidean.*

> The fifth book of *Metageometry.* . . . M. Barbarin calls fifth book of '*Metageometry*' that which corresponds to the fifth book of the 'Elements of Legendre' or to the eleventh of Euclid. *Science*, Sept. 16, 1904, p. 364.

metaglobulin (met-a̤-glob′ụ-lin), *n.* [*meta-* + *globulin.*] Same as *fibrinogen.*

Metagnatha (me-tag′na̤-thạ̈), *n. pl.* [NL., < Gr. *μετά*, after, + *γνάθος*, jaw.] In Brauer's classification of insects, a group of superordinal rank including those forms which take their food by means of jaws when young, but by suction when adult.

metagnathous, *a.* **2.** Of or pertaining to the *Metagnatha.*

metagram (met′a̤-gram), *n.* [Gr. *μετά*, over, + *γράμμα*, a letter.] A word altered by removing some of its letters and substituting others.

metagraph (met′a̤-gråf), *n.* [Gr. *μετά*, between, + *γράφειν*, write.] In *craniom.*, an instrument used for drawing diagrams of the inner form of the skull.

metagraphic (met-a̤-graf′ik), *a.* [*metagraph*(*y*) + *-ic.*] **1.** Of the nature of metagraphy; transliterative.—**2.** Pertaining to, or drawn by means of, the metagraph.

metagrobolism (met-a̤-grob′ọ-lizm), *n.* [*metagrobol*(*ize*) + *-ism*).] The act of puzzling; mystification. [Humorous.]

> By whose [the mendicant friars' and Jacobins'] gyronomomic circumbilivaginations, as by two celivagous filopendulums, all the autonomatic *metagrobolism* of the Romish church, when tottering and emblustricated with the gibble gabble gibberish of this odious error and heresy, is homocentrically poised.
> *Rabelais* (trans.), iii. 38.

metagrobolize (met-a̤-grob′ọ-līz), *v. t.*; pret. and pp. *metagrobolized*, ppr. *metagrobolizing.* [F. *metagraboulizer* (Rabelais), to puzzle (Cotgrave).] To puzzle; puzzle out. [Humorous.]

> Ha, ha, a pair of breeches is not so easily got; I have experience of it myself. Consider, Domine, I have been these eighteen days in *matagrabolising* this brave speech.
> *Rabelais* (trans.), i. 158.

> I find my brains altogether *metagrabolized* and confounded, and my spirits in a most dunsical puzzle.
> *Rabelais* (trans.), iii. 59.

> "You see," quoth Stalky, as they strolled up to prep. with the ignoble herd, "if you get the houses well mixed up an' scufflin', it 's even bettin' that some ass will start a real row. Hullo, Orrin, you look rather *metagrobolized.*"
> *R. Kipling*, Stalky & Co., p. 124.

metakinesis (met″a̤-ki-nē′sis), *n.* [NL., < Gr. *μετά*, after, + *κίνησις*, motion.] **1.** Same as *metaphase.*

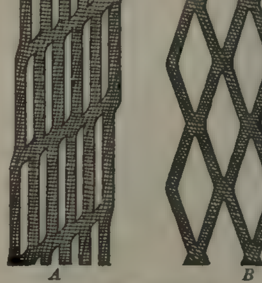
> Heuser ('84) seems to have been the first to call attention to the double character of the daughter chromosomes in the diaster stage of Tradescantia virginica, but he interpreted the separation of the daughter segments during *metakinesis* of the first mitosis as a transverse division.
> *Bot. Gazette*, April, 1903, p. 251.

2. Any mental process or manifestation of consciousness. See the extract.

> We call manifestations of energy 'kinetic' manifestations, and we use the term 'kinesis' for physical manifestations of this order. Similarly, we may call concomitant manifestations of the mental or conscious order 'metakinetic,' and may use the term '*metakinesis*' for all manifestations belonging to this phenomenal order. According to the monistic hypothesis, every mode of kinesis has its concomitant mode of *metakinesis*, and when the kinetic manifestations assume the form of the molecular processes in the human brain, the metakinetic manifestations assume the form of human consciousness.
> *C. L. Morgan*, Animal Life and Intelligence, p. 467.

metakinetic (met″a̤-ki-net′ik), *a.* [*metakinesis.*] Of or pertaining to metakinesis, in either sense of that word; specifically, pertaining to mind or consciousness or to a manifestation of mind or consciousness. See ★*metakinesis*, 2. *L. F. Ward*, Pure Sociol., p. 156.

metal, *n.* **11.** In *mining:* (*a*) Cast-iron. (*b*) Hard rock; whin or igneous rock. (*c*) *pl.* A general name for coal-bearing strata. *Barrowman*, Glossary.—**Albata metal,** an alloy composed of 40 parts of copper, 32 of zinc, and 8 of nickel.—**Alfenid metal,** an alloy composed of 60 parts of copper, 30 of zinc, and 10 of nickel, with traces of iron. It is a kind of German silver.—**Alger metal,** an alloy composed of 90 parts of tin and 10 of antimony. It is suitable as a protector from corrosion.—**Argusoid metal,** an alloy composed of 55.5 per cent. of copper, 23.2 of zinc, 13.4 of nickel, 3.5 of lead, and 4 of tin, with traces of iron.—**Ashberry metal,** an alloy somewhat resembling Britannia metal (which see, under *metal*). It is composed of 78–82 parts of tin, 14–20 of antimony, 2–8 of copper, 1–2 of zinc, 1–2 of nickel, and 1 part of aluminium. It is harder than Britannia metal and is used chiefly for the manufacturing of forks, spoons, coffee-pots, tea-pots, etc., for which Britannia metal is generally employed.—**Baudoin metal,** an alloy composed of 72 parts of copper, 16.6 of nickel, 1.8 of cobalt, 2.5 of tin, and 7.1 of zinc. About ½ per cent. of aluminium may also be added.—**Bobierre metal,** an alloy of 66 parts of copper and 34 of zinc. It is used for sheathing ships.—**Bourbon metal,** an alloy composed of equal parts of aluminium and tin. It solders readily.—**Coarse metal,** the impure metal obtained in one of the intermediary processes of extraction.—**Colloidal metals.** See ★*colloidal.*—**Delta metal,** an alloy consisting chiefly of brass or bronze with a small proportion of iron, and sometimes containing also manganese or lead. The iron is chemically dissolved in the brass or the bronze, and the alloy is characterized by great strength and toughness, durability, and resistance to corrosion. It is especially valuable for ship-building, massive engineering, sanitary work, etc.—**Direct metal,** molten cast-iron taken directly from the blast-furnace and used in the subsequent metallurgical processes before it has solidified.—**Dull metal,** molten metal which has stood in a ladle until it thickens, or into which pieces of solid metal have been thrown to cool it. Dull metal is preferable for heavy castings because it shrinks less, crystallizes more closely, and is less liable to blow-holes and spongy places than hot metal.—**Expanded metal,** sheet-metal lathing and lattice for use in making screens and lockers and for reinforcing concrete. It is made by cutting in sheet-metal a series of short slits arranged in parallel lines, one line breaking joint with the next, and then pulling the sheet out sidewise until the slits are drawn open and form a diamond-mesh net. It is extensively used in fireproof and steel-concrete construction. See *reinforced* ★*concrete.*—**Fine metal,** the regulus or matte, containing from 60 to 80 per cent. of copper, obtained in the fourth stage of the Welsh method of copper-smelting (which see, under ★*method*). The name serves to distinguish it from the regulus obtained in the second stage of the process, which is known as *coarse metal.* See *white metal*, under *metal.*—**French metal,** metallic antimony of a marketable degree of purity. Also called *star metal.*—**Hercules metal,** a trade-name of an alloy of copper and a little aluminium.—**Karmarsch metal,** an alloy composed of tin, copper, and antimony in varying proportions. It is used as a bearing-metal.—**Magnolia metal,** a trade-name of an anti-friction alloy, used for the bearings of machinery, etc., consisting of about 78 per cent. of lead, 18 of antimony, and 4 of tin.—**Perforated metal,** a trade-name of iron, brass, copper, or other sheet-metal perforated in a perforating-press, with square, round, or oblong holes arranged in various patterns: used for screens, riddles, sieves, lamp-fixtures, and other purposes. Compare *expanded* ★*metal.*—**Platinum metals,** a natural group of elements of metallic character, found associated in the mineral kingdom, and having close relations with one another as to chemical behavior. There are six in all, forming two subgroups of three each, platinum, iridium, and osmium in the one, palladium, rhodium, and ruthenium in the other.—**Rare-earth metals.** See ★*earth*^{1}.—**Ruoltz metal,** an alloy which contains from 20 to 30 per cent. of silver, 25 to 30 per cent. of nickel, and 35 to 50 per cent. of copper: used for manufacturing jewelry.—**Spence's metal,** a compound obtained by dissolving metallic sulphids (mostly those of iron, lead, and zinc in varying proportions) in melted sulphur. It melts at 160° C., takes perfect impressions, and is at-



Expanded Metal.
A, lathing; B, net.

tacked by few acids. It is used for soldering gas-pipes, and is especially valuable for making air-tight connections between glass tubes.—**Star metal**, a trade-name of refined metallic antimony showing on the surface the star-like crystalline markings which indicate a near approach to purity.—**White metal.** (*b*) A metallic alloy used for the bearings of machinery, usually consisting of tin and lead hardened by antimony, zinc, or copper, and distinguished by greater fusibility and the absence of yellow color from the bronzes used for the same purpose. (*c*) A metallic alloy used for the production, by casting in iron or brass molds, of cheap ornamental articles to be electroplated, usually consisting of lead and tin hardened by antimony, with occasional addition of other metals.

Metal-ammonia compounds. See ★*ammonia.*

Metal-ammonium compounds. See ★*ammonium.*

metalbumin (met-al-bū′min), *n.* [*meta-* + *albumin.*] Same as ★*pseudomucin* (which see).

metalepsis, *n.* 2. In *chem.*, same as *metalepsy.*

metalik (me-tal′ik), *n.* [Turk.] A Turkish coin worth ten paras or about one cent.

metaline, *n.* 3. A trade-name of a non-rusting antifriction alloy, intended to be used as a lubricant in bearing surfaces. It is inserted as plugs or short pencil-like rods radially in holes in the bearing.

metallaceous (met-a̤-lā′shius), *a.* [*metal* + *-aceous.*] Resembling or analogous in character to the metals.

metalleity (met-a̤-lē′i-ti), *n.* [F. *métalléité*, < L. *metalleus*, metallic.] The property of being metallic; metallic character. *Coleridge.*

Metallic acid, an acid of which the radical consists of a metal in combination with oxygen, as chromic acid (H_2CrO_4). The term is frequently but incorrectly applied to an acid oxid of a metal or a metallic anhydrid, as chromium trioxid (CrO_3). **Metallic return.** See ★*return*1.

metallician (met-a̤-lish′a̤n), *n.* [*metallic* + *-i-* + *-an.*] A racing book-maker: from the fact that book-makers used metallic books and pencils. *Hotten*, Slang Dict.

metallocyanide (met″a̤-lō̤-sī′a̤-nīd), *n.* [L. *metallum*, metal, + E. *cyanide.*] Any cyanide of a metal.

metallogenetic (met″a̤-lō̤-jē̤-net′ik), *a.* [Gr. *μέταλλον*, metal, + E. *genetic.*] Producing metals.—**Metallogenetic province**, a region of similar or related ore-deposits. *L. de Launay*, Compte rendu, 10th Int. Geol. Congr., 1906, I. 555.

metallogeny (met-a̤-loj′e-ni), *n.* [Gr. *μέταλλον*, metal, *-γενης*, -producing.] That special branch of geology which treats of the genesis of the metalliferous deposits.

> On the possible rôle of slipping in *metallogeny.*
> *Nature*, April 13, 1905, p. 576.

metallograph (me-tal′ō̤-gräf), *n.* [See *metallography.*] A print produced by metallography. See *metallography*, 3.

metallographer (met-a̤-log′ra̤-fėr), *n.* [*metallograph*(*y*) + *-er*2.] A metallographist; a metallurgist. *Athenæum*, April 1, 1905, p. 406.

Metallographic province, a mining region in which the ore-deposits possess a general similarity of type. Compare ★*metallogenetic*, which is to be preferred because not already established in a totally different sense. *J. E. Spurr*, in U. S. Geol. Surv., Prof. Paper 42, p. 276.

metallographical (met″a̤-lō̤-graf′i-ka̤l), *a.* [*metallograph*(*y*) + *-ical.*] Relating to or connected with metallography.

metalloptric (met-a̤-lop′trik), *a.* [Gr. *μέταλλον*, taken in sense of L. *metallum*, metal, + Gr. *-οπτρον*, < *ὀπ-*, see.] Relating to the minute structure of metals and their alloys as studied with the aid of the microscope.

> The report takes up the work done by the different departments, these covering heat and mechanics, optical research, electric thermometers, pressure indicators, photometry, saccharimetry, *metalloptric* researches and chemistry. *Elect. Rev.*, Sept. 10, 1904, p. 400.

metalloscope (me-tal′ō̤-skōp), *n.* [Gr. *μέταλλον*, taken in sense of L. *metallum*, metal, + Gr. *σκοπεῖν*, view.] An instrument for investigating microscopically the structure of metals. The metal under examination is polished and then etched, this process disclosing its crystalline structure. *Science*, Oct. 30, 1903, p. 575.

metallotechny (met′a̤-lō̤-tek-ni), *n.* [Gr. *μέταλλον*, metal, + *τέχνη*, art.] The art of working in metals. *N. E. D.*

metallurgy, *n.*—**Physical metallurgy**, the study of the physical properties of metals and alloys. This branch of metallurgy is occupying a large share of the attention of scientists at the present time. *Electrochem. and Metal. Industry*, July, 1905, p. 248.

metal-mark (met′a̤l-märk), *n.* Any butterfly of the family *Riodinidæ.*—**Large metal-mark**, an American riodinid butterfly, *Calephelis borealis.*—**Small metal-mark**, an American riodinid butterfly, *Calephelis cænius*, which occurs in the southern United States. Its early stages are unknown.

metalogisis (met-a̤-loj′i-sis), *n.* [Gr. *μετά*, after, + *λόγισις*, numeration, calculation.] A changing of numerical status or relations. [Rare.]

> At the upper surface the disintegrated rocks form an overplacement of soils which undergo such chemical reaction that the substances of vegetal life are produced. This material, exposed for longer or shorter periods, is transported by streams to lakes or to the sea and sinks to the bottom, where it is recombined into various substances, especially as carbonate of lime, chloride of sodium, other salts, clay, and coal. All of this transmutation is a numerical change in the relation of the atoms to the molecules of the substances developed. Let us call it *metalogisis.*
> *J. W. Powell*, Truth and Error, p. 55.

metaloph (met′a̤-lof), *n.* [Gr. *μετά*, after, + *λόφος*, crest.] A crest, or fold of enamel, developed on the postero-internal angle of such an upper molar as that of a horse. *Amer. Museum Jour. Sup.*, Jan., 1903, Guide Leaflet No. 9, p. 20.

metalorganic (met″a̤l-ôr-gan′ik), *a.* [Prop. *metallorganic*, < *metal* (L. *metallum*) + *organic.*] Pertaining to a compound consisting of a metal in combination with one or more organic radicals, such as zinc methyl, $Zn(CH_3)_2$, or magnesium ethyl iodide, $MgIC_2H_5$.

metal-spinning (met′a̤l-spin″ing), *n.* In *sheet-metal work*, the forming of brass, copper, and other vessels on a spinning-lathe. A flat disk is placed in the lathe and made to revolve at a high speed in a vertical plane. A suitable tool is then held in the hand, supported on the tool-rest, and pressed against the disk, causing it to bend into the desired form. Vases, bowls, plates, jars, pans, and other vessels are in this way pressed or spun directly from flat disks of sheet-metal. See ★*spinning-lathe.*

metamathematical (met-a̤-math-ē̤-mat′i-ka̤l), *a.* [*metamathematic*(*s*) + *-al*1.] Pertaining to or of the nature of metamathematics.

metamerical (met-a̤-mer′i-ka̤l), *a.* [*metamere* + *-ical.*] Of or pertaining to metameres, or segments of the body; metameric.

metameride (me-tam′e̤-rid), *n.* [*metamer* + *-ide.*] Same as *metamer.*

metamorfose, metamorfosis. Simplified spellings of *metamorphose, metamorphosis.*

metamorphic, *a.* 3. Noting races formed by intercrossing of archimorphic races in those parts of the world where distinct archimorphic races come into contact. Examples of metamorphic races are the Malay, Ethiopians, and Hottentots. *G. T. Fritsch.*

metamorphism, *n.*—**Contact metamorphism**, in *petrog.*, the metamorphism developed in rock in the immediate neighborhood of igneous rocks. See *metamorphism.*—**Macrostructural metamorphism**, metamorphism which produces changes of structure sufficiently coarse to be easily discernible with the unassisted eye. *Geikie*, Text-book of Geol. (4th ed.), p. 765.—**Microstructural metamorphism**, changes in the microscopic structure of rocks which may not be visible without magnification. *Geikie*, Text-book of Geol. (4th ed.), p. 765.

metamorphist (met-a̤-môr′fist), *n.* [*metamorph*(*ism*) + *-ist.*] In *geol.*, an advocate of the theory of metamorphism.

metamorphopsy (met″a̤-môr-fop′si), *n.* Same as *metamorphopsia.*

metamorphosis, *n.* 5. In *music*, either the same as *variation* (see *variation*, 9), or that extension or transformation of a theme or subject which often appears in modern music in the progress or development of an extended movement. From Beethoven onward the recognition of the essentially plastic nature of musical ideas (see *idea*, 9) has steadily advanced and constitutes one of the salient characteristics of recent composition.—**Stadia of metamorphosis**, instars. See ★*instar*2.

metamorphous (met-a̤-môr′fus), *a.* Same as *metamorphic.*

metamorphy, *n.* 2. In *biol.*, the abnormal replacement of a part of the body of an organism by another part, as in a flower in which the pistil is replaced by a leaf-shoot.

Metamynodon (met-a̤-min′ō̤-don), *n.* [NL., irreg. < Gr. *μετά*, after, + *ἀμύνειν*, ward off, defend, + *ὀδούς*, tooth.] A genus of aquatic, hornless rhinoceroses occurring in the White River Oligocene deposits of North America. It is characterized by formidable canine tusks, small but prominent eye-sockets, a broad, flat skull, and the presence of four completely functional digits in the manus. The latter character widely separates this animal from the true rhinoceroses.

Metanemertini (met″a̤-nē-mėr-tī′nī), *n. pl.* [NL., < Gr. *μετά*, after, + NL. *Nemertini.*] A group or order of nemerteans having the brain and lateral nerves lying within the dermal muscles of the body-parenchyma, the body-wall as in the *Mesonemertini*, the mouth in front of the brain, the proboscis usually with stylets, and a cæcum generally present. It includes several families, among which are the *Eunemertidæ, Amphiporidæ, Tetrastemmidæ*, and *Malacobdellidæ.*

metanephric (met-a̤-nef′rik), *a.* [*metanephr*(*on*) + *-ic.*] Of or pertaining to the *metanephron.*

> Another organ which, though not peculiar to the Mammalia, is yet a diagnostic feature of terrestrial vertebrates, is the *metanephric* kidney, and that there is possibly a relationship between terrestrial modes of locomotion and the evolution of this organ I will now endeavor to show. *Proc. Zool. Soc. London*, 1903, I. 338.

Metanephric duct, a duct that in higher vertebrates becomes the ureter. *Parker and Haswell*, Zoology, II. 110.

metanephros (met-a̤-nef′ros), *n.* Same as *metanephron.*

metanepionic (met-a̤-nep-i-on′ik), *a.* [Gr. *μετά*, between, + *νήπιος*, an infant.] In the nomenclature of the stages of growth and decline (auxology), noting a substage of the nepionic condition intermediate between the ananepionic and the paranepionic conditions. See ★*nepionic.*

> For about half a volution or less, the shell is smooth, although lines of growth become more pronounced. At more or less regular intervals stronger lines of growth appear (ananepionic). In the later portion of the nepionic stage (*metanepionic*) longitudinal wrinkles or ribs appear which characterize the ambital portion of the whorl, and may be traced upward to the suture between the two whorls. *Amer. Nat.*, Aug., 1903, p. 518.

metantimonate (met-an′ti-mō̤-nāt), *n.* [*meta-* + *antimonate.*] A salt of antimonic acid, as sodium antimonate, the production of which by precipitation, owing to its slight solubility, is sometimes used as a test for sodium in its compounds.

metantimonic (met-an-ti-mon′ik), *a.* [*meta-* + *antimonic.*] Noting an acid, $HSbO_3$, obtained by heating ortho-antimonic acid to 175° C. The metantimonic acid of Frémy ($H_4Sb_2O_7$) is now called *pyro-antimonic* acid, thus preserving analogy with the different phosphoric acids.

metanucleolus (met″a̤-nṳ̄-klē′ō̤-lus), *n.* [NL.] Same as ★*metanucleus.*

> After a time the chromatin emerges and is re-distributed in the nuclear framework, or it postpones its emergence until the formation of the directive spindle where it takes the form of chromosomes. In both cases there is a residue (Häcker's "*metanucleolus*"), which is either a product of metabolism or superfluous chromatin.
> *Jour. Roy. Micros. Soc.*, April, 1904, p. 187.

metanucleus (met-a-nū′klē̤-us), *n.* [NL., < Gr. *μετά*, after, + NL. *nucleus.*] The nucleolus of the ovum after its extrusion into the cytoplasm from the nucleus or germinal vesicle. *V. Haecker*, 1892.

meta-organism (met-a̤-ôr′ga̤n-izm), *n.* [Gr. *μετά*, after, + E. *organism.*] See the extract.

> That this body of ours . . . is interpenetrated with a '*meta-organism*' of identical shape and structure, and capable sometimes of detaching itself from the solid flesh. *Myers*, Phantasms of Living, II. 278. *N. E. D.*

metapectin (met-a̤-pek′tin), *n.* [*meta-* + *pectin.*] A colorless amorphous-acid compound, $C_{32}H_{48}O_{32}$(?), prepared by boiling parapectin with dilute acid.

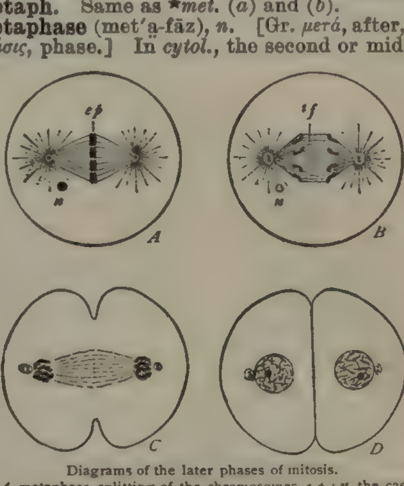
metapectus (met-a̤-pek′tus), *n.* [NL., < Gr. *μετά*, after, + L. *pectus*, breast.] Same as *metasternum*, 2.

> Meso- and *Metapectus* with a double row of dark green nodules placed on transverse spots of the same color; metapleura with a row of spines.
> *Annals and Mag. Nat. Hist.*, June, 1904, p. 440.

metapeptic (met-a̤-pep′tik), *a.* [*metapepsis.*] Pertaining to, or characterized by, metapepsis.

metaph. Same as ★*met.* (*a*) and (*b*).

metaphase (met′a̤-fāz), *n.* [Gr. *μετά*, after, + *φάσις*, phase.] In *cytol.*, the second or middle



Diagrams of the later phases of mitosis.

A, metaphase, splitting of the chromosomes, *e.p.*; *n*, the cast-off nucleolus; *B*, anaphase, the daughter-chromosomes diverging, between them the interzonal fibers, *i.f.*, or central spindle': centrosomes already doubled in anticipation of the ensuing division: *C*, late anaphase or telophase, showing division of the cell-body, midbody at the equator of the spindle and beginning reconstruction of the daughter-nuclei; *D*, division completed. (From Wilson's "The Cell.")

stage of karyokinetic cell-division, or mitosis, in which the chromosomes are collected to form the equatorial plate of the spindle and undergo longitudinal fission. Compare ★*anaphase* and ★*telophase*. *Strasburger*, 1884.

metaphasis (me-taf'ā̤-sis), *n.* [NL.] Same as ★*metaphase*.

metaphenylene (met-a̤-fē'nil-ēn), *n.* [*meta-* + *phenylene*.] The phenylene radical in which the two valence bonds extend from carbon atoms that are in the meta position. See ★*meta-* (*e*).—**Metaphenylene blue.** See ★*blue*.

metaphonical (met-a̤-fon'i-ka̤l), *a.* Pertaining to, or of the nature of, metaphony or umlaut.

metaphony (me-taf'ọ-ni), *n.* [F. *métaphonie*, < Gr. μετά, over, + φωνή, sound.] Umlaut. [Rare.]

> Since the usual term 'mutation' is altogether vague, designating any kind of vowel-shifting whatever, I have ventured to introduce into the English terminology the word '*metaphony*' for German 'Umlaut,' as al eady in my French edition.
> *V. Henry*, Comp. Grammar of Eng. and German, p. 43.

metaphragmal (met-a̤-frag'ma̤l), *a.* [*metaphragma* + *-al*1.] Of or pertaining to the metaphragm or metaphragma.

metaphysicize (met-a̤-fiz'i-sīz), *v. i.*; pret. and pp. *metaphysicized*, ppr. *metaphysicizing*. [*metaphysic* + *-ize*.] To engage in metaphysical reflection or argument; think metaphysically.

> He [Walking Stewart] had also this singularity about him—that he was everlastingly *metaphysicizing* against metaphysics.
> *De Quincey*, Note Book of an English Opium-eater, p. 243.

metaphysiologist (met-a̤-fiz-i-ol'ọ-jist), *n.* [*metaphysiolog*(*y*) + *-ist*.] A student of metaphysiology.

> Modern metaphysicians and *metaphysiologists* have been staggered by the impropriety of assigning Secretion, Digestion, &c., to the spiritual agent active in Thought and Will.
> *G. H. Lewes*, in Fortnightly Rev., April, 1876, p. 486.

metaphysiology (met-a̤-fiz-i-ol'ọ-ji), *n.* [Gr. μετά, after, + E. *physiology*.] A science or theory of life transcending physiology.

> There is still the radical separation between the conceptions of Creation and Evolution in the explanation of the Cosmos; and between the conceptions of *metaphysiology*, and physiology in the explanation of Life and Mind.
> *G. H. Lewes*, in Fortnightly Rev., April, 1876, p. 479.

Metaphyta (met-a-fī'tä̤), *n. pl.* [NL. (Haeckel, 1889), < Gr. μετά, beyond, + φυτόν, pl. φυτά, plant.] A great division of the vegetable kingdom including all multicellular plants, or plants possessing tissues, that is, all except the *Protophyta* (which see). It corresponds in plant life to the *Metazoa* in animal life.

metaphyte (met'a̤-fīt), *n.* [Gr. μετά, after, + φυτόν, plant.] In *bot.*, a multicellular plant: corresponding to *metazoön* in zoölogy. See ★*Metaphyta*.

metaphytic (met-a̤-fit'ik), *a.* [*metaphyt*(*e*) + *-ic*.] Pertaining to metaphytes, or of the nature of a metaphyte.

metaplasm2, *n.* **2.** In *cytol.*, a collective term applied to lifeless or non-living substances or inclusions such as yolk-bodies, starch, pigment, etc., in the cell-protoplasm, as distinguished from the living substances. *Hanstein*, 1868.

> These non-living substances altogether belong to the group known as *metaplasm* or paraplasm, in contradistinction to the substance which is the real living element of the cell—the protoplasm.
> *S. Watase*, Biol. Lectures, 1893, p. 85.

metaplasmic (met-a̤-plaz'mik), *a.* [*metaplasm* + *-ic*.] Consisting of, or pertaining to, metaplasm.

> After the formation of the daughter nuclei, they again begin to fill with the linin granules or reticulum (the so-called *metaplasmic* substance of Strasburger) until, at the time of maturity, they are so dense as to make any distinction between the granular material and chromatin reticulum very difficult. *Bot. Gazette*, July, 1903, p. 11.

metaplasmosism (met-a̤-plas'mọ-sizm), *n.* [NL., < Gr. μετά, after, implying change, + πλάσμα, anything formed, + *-os*(*is*) + *-ism*.] A pathological change in a cell or its constituents. *Haeckel*. [Rare.]

metaplax (met'a̤-plaks), *n.* [NL., < Gr. μετά, after, + πλάξ, a plate.] In the *Pholadidæ* (a family of teleodesmaceous *Pelecypoda*), one of the accessory shelly plates, thus termed when situated behind the beaks of the two valves. See also ★*prosoplax*, ★*mesoplax*, and ★*hypoplax*.

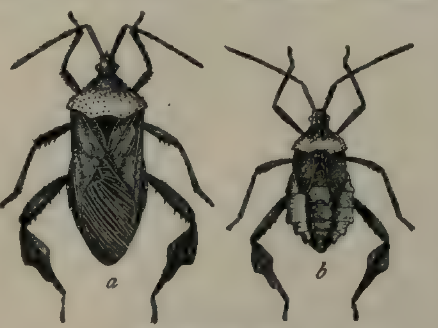
metaplexus (met-a̤-plek'sus), *n.* [NL., < Gr. μετά, after, + NL. *plexus*.] The choroid plexus in the fourth ventricle of the brain.

metapneumonic (met″a̤-nụ̄-mon'ik), *a.* [Gr. μετά, after, + NL. *pneumonia* + *-ic*.] Following upon pneumonia; occurring as a sequel of pneumonia.

metapod (met'a̤-pod), *n.* [Also *metapode*; < NL. *metapodium*.] Same as *metapodium*.

metapodion (met-a̤-pō'di-on), *n.*; pl. *metapodia* (-ä̤). [NL., < Gr. μετά, after, + πόδιον, dim. of πούς, foot.] In hymenopterous insects with a petiolated abdomen, the part of the abdomen situated behind the petiole.

metapodius (met-a-pō'di-us), *n.*; pl. *metapodii* (-ī). [NL., < Gr. μετά, after, + πούς (ποδ-), foot.] A large American coreid bug, *Metapodius femoratus*, the thick-thighed metapodius, occurring abundantly in the southern United States. It is both carnivorous and phytophagous, and is an important enemy of the cotton-caterpillar and army-worm.



Metapodius femoratus.
a, adult; *b*, nymph. Enlarged one fourth.

metapole (met'a̤-pōl), *n.* [Gr. μετά, after, + πόλος, pole.] If BCX, ACY, and ABZ are triangles constructed externally on the sides of ABC, and BCX′, ACY′, and ABZ′ triangles constructed internally, and all six are similar to Δ T, the straights AX, BY, and CZ cointersect in T_1, prime metapole of ABC and T; the straights AX′, BY′, and CZ′ in T_2, second metapole of ABC and T.

metapolitical (met″a-pọ-lit'i-ka̤l), *a.* [*metapolitic*(*s*) + *-al*1.] Of or pertaining to metapolitics.

> The metaphysical, or as I have proposed to call them, *metapolitical* reasonings hitherto discussed, belong to government in the abstract. But there is a second class of reasoners who argue for a change in our government from former usage. *Coleridge*, The Friend, II. iv.

metapolitician (met″a̤-pol-i-tish'a̤n), *n.* [*metapolitics*.] One who indulges in metapolitics or abstract political theorizing.

> The *metapoliticians*, as they have aptly been called, who bewilder themselves with abstractions.
> *Southey*, Ess., I. 390. *N. E. D.*

metaprotaspis (met″a-prọ-tas'pis), *n.* [NL., < Gr. μετά, after, + NL. *protaspis*.] A subdivision of the protaspis or larval stage in the trilobites intermediate between the anaprotaspis and paraprotaspis conditions. See ★*protaspis*.

metaprotein (met-a̤-prō'tẹ-in), *n.* [*meta-* + *protein*.] A protein derivative which results from the action of acids or alkalies upon albumins. The group includes the acid albumins and alkaline albuminates.

metapsychical (met-a-sī'ki-ka̤l), *a.* A term formed on the analogy of *metaphysical* to denote phenomena beyond the range of ordinary consciousness; occult or transcendental: applied to the phenomena of psychical research. *Athenæum*, April 22, 1905.

metapsychology (met-a̤-sī-kol'ọ-ji), *n.* A term formed on the analogy of *metaphysics* to denote philosophical speculation regarding the mind, its origin, functions, etc., which is beyond the reach of verification by mental experience; metempirical psychology.

metapterygoid, *n.* **2.** In *ichth.*, the posterior of the three pterygoid elements, the mesopterygoid and the pterygoid being anterior to it. It is articulated behind with the hyomandibular.

metapyric (met-a̤-pir'ik), *a.* [Gr. μετά, after (signifying change), + πῦρ, fire, + *-ic*.] In *petrog.*, noting a metamorphosed igneous rock: thus, a *metapyric* gneiss is one derived from a granite. *Gregory*, 1894.

metaquinite (met-a̤-kwin'īt), *n.* [Gr. μετά, after, + E. *quina* + *-ite*2.] Dihydroxyhexahydrodiphenyl, $C_6H_5C_6H_9(OH)_2$: made by reducing phenyldiketohexamethylene with sodium and alcohol. It melts at 157° C.

metarachidial (met″a̤-rā̤-kid'i-a̤l), *a.* [*metarachis* (assumed stem *-rachid-*) + *-ial*.] Of or pertaining to a metarachis: as, the *metarachidial* aspect of a sea-pen.

metarachis (me-tar'a-kis), *n.*; pl. *metaraches* (-kēz). [Gr. μετά, after, + ῥάχις, spine.] In *Pennatulacea*, that face of the rachis on which the zoöids are borne: opposed to ★*prorachis*.

metargon (met-är'gon), *n.* [Gr. μετά, beyond, + E. *argon*.] A supposed element found in atmospheric air: afterward found to be merely carbon monoxid.

metarhyolite (met-a-rī'ọ-līt), *n.* [Gr. μετά, after, + E. *rhyolite*.] An altered or partly metamorphosed rhyolite.

> Much of the lava contains porphyritic quartz, and in general may be designated *metarhyolite*, but a large part, being without free quartz and less siliceous, has the appearance of metaandesite. A peculiarity of many of these rocks is that they are rich in soda.
> *Contrib. to Econ. Geol.*, U. S. Geol. Surv., 1902, p. 124.

metaschematism (met-a-skē'ma̤-tizm), *n.* [NL. *metaschematismus*, < Gr. μετασχηματισμός, < μετασχηματίξειν, to transform.] A change in the form of a disease, as when hemoptysis follows suppression of the menses. *Syd. Soc. Lex.*

metascolecite (met-a̤-skol'ẹ-sīt), *n.* [*meta-* + *scolecite*.] A partly dehydrated scolecite, differing from the original mineral in physical characters.

metaseptum (met-a̤-sep'tum), *n.*; pl. *metasepta* (-tä̤). [NL., < Gr. μετά, after, + NL. *septum*, partition.] In corals. See the extract.

> In recent corals the septa beyond the primary septa—*metasepta*—are found to appear bilaterally, in a dorso-ventral sequence, within each of the six primary systems, the adult radial symmetry being secondary. In certain Palæozoic corals the *metasepta* arise in a regular dorso-ventral succession within only four of the six primary systems. *Science*, March 6, 1903, p. 388.

metasitism (met'a̤-sī-tizm), *n.* [Gr. μετά, after, implying change, + σῖτος, food (σιτεῖν, eat), + *-ism*.] **1.** Change from the method of nutrition which is characteristic of plants to that which is characteristic of animals. [Rare.]

> In the same way we can derive the phycomycetes by *metasitism* from the siphonea, the fungi from the algæ.
> *Haeckel* (trans.), Wonders of Life, p. 616.

2. Cannibalism, especially among protozoans. *Haeckel*.

metasocial (met-a̤-sō'sha̤l), *a.* [Gr. μετά, after, + E. *social*.] Pertaining to the stage of social evolution which begins with the conquest and subjugation of one group or race by another, and continues through fusion or amalgamation. *L. F. Ward*, Pure Sociol., p. 274.

metasomatic, *a.* **3.** Relating to the alternations of air and water within the earth, which are suggestive of breathing, and eventually produce important geological changes.

metasomatism, *n.* **2.** Chemical change occurring in a body of ore or in a rock-mass at a considerable depth in the earth's crust: distinguished from *weathering*, which occurs at or near the surface.

metasomatist (met-a-sō'ma̤-tist), *n.* [Gr. μετά, over, + σῶμα (σωματ-), body, + *-ist*.] One who believes in the lithological theory of metasomatosis.

metasomatome (met-a̤-sō'ma̤-tōm), *n.* [Gr. μετά, after, + σῶμα(τ-), body, + *-ome*.] One of the constrictions or spaces between successive mesoplastic somites, or protovertebræ, in vertebrate embryos.

metasome, *n.* **2.** In some crustaceans, as the amphipods, the first three segments of the pleon or abdomen. Compare ★*mesosome* and *urosome*.

metasperm (met'a̤-spėrm), *n.* [Gr. μετά, over, + σπέρμα, seed.] A member of the *Metaspermæ*; an angiosperm.

Metaspermæ (met-a̤-spėr'mē), *n. pl.* [NL. (Strasburger, 1872), < Gr. μετά, after, + σπέρμα, seed.] Same as *Angiospermæ* (which see) and ★*Archispermæ*. The term is designed to emphasize the fact that these plants appeared later in the geological series, none being certainly known earlier than the Lower Cretaceous. See ★*Metachlamydeæ*.

metaspermic (met-a̤-spėr′mik), *a.* [*Metasperm*(*æ*) + *-ic.*] Of, or consisting of, *Metaspermæ*.

metastability (met″a̤-stā̤-bil′i̤-ti), *n.* [*meta-* + *stability*.] The character of being metastable; specifically, in *thermodynam.*, equilibrium of the type, neither strictly stable nor unstable, possessed by a medium under certain conditions such as those which exist in the case of an under-cooled liquid.

metastable (met-a̤-stā′bl), *a.* [*meta-* + *stable*^{2}.] **1.** In *phys. chem.*, having a stability of such sort that a minute impressed change of conditions may produce a disturbance not proportional to the impressed change. Pure water in a smooth vessel may be cooled a few degrees below the freezing-point without the formation of ice. The water is then in a metastable condition. If a hundredth of a grain of ice at the temperature of the freezing-point be brought in contact with the water, a certain fraction of it becomes ice, while the temperature of the whole rises to the freezing-point; and if ten or a thousand grains of ice be used, the fraction frozen and the final temperature are precisely the same. A somewhat closely analogous condition in mechanics is called an unstable equilibrium; but the word equilibrium, in chemistry, has been applied to the permanence of a given relation between *two* or more substances and cannot consistently be applied to the stability of a single substance.

> Among supersaturated solutions there are some which under definite conditions can be kept indefinitely, if germs are excluded, without formation of the solid phase. Such solutions are called *Metastable*.
> *H. W. Morse and G. W. Pierce*, in Proc. Amer. Acad. of [Arts and Sciences, May, 1903.

2. In *thermodynam.*, in a state intermediate between stable equilibrium and unstable equilibrium, but approaching stability as nearly as the conditions will permit.

metastasis, *n.* **4.** In *petrog.*, a change within a rock or mineral in the nature of recrystallization or molecular rearrangement, without the addition or subtraction of material: as the crystallization of a limestone, or the devitrification of glass.

metastasize (me-tas′ta̤-sīz), *v. i.*; pret. and pp. *metastasized*, ppr. *metastasizing*. [*metastasis* + *-ize.*] In *pathol.*, to produce new foci of disease in more or less distant parts by means of metastasis: referring usually to malignant growths.

> As might be expected the tendency to *metastasize* is much greater in certain tumors than in others.
> *Jour. Med. Research*, Nov., 1907, p. 187.

metastatic, *a.* **2.** Relating to or characteristic of the *Metastatica* or *Holostomatidæ*; involving a change of host but no alternation of generations: as, the *metastatic* mode of development of certain trematodes.

Metastatica (met-a̤-stat′i-kā̤), *n. pl.* The *Holostomatidæ*. *Leuckart.*

Metastigmata (met-a̤-stig′ma̤-tā̤), *n. pl.* [NL., < Gr. μετά, after, + στίγμα, point, mark.] In Canestrini's classification of the *Acarina*, a group corresponding to the superfamily *Ixodoidea*, or ticks.

metastigmate (met-a̤-stig′māt), *a.* and *n.* **I.** *a.* Having the characters of or belonging to the *Metastigmata*.

II. *n.* A member of the *Metastigmata*.

metastome (met′a̤-stōm), *n.* Same as *metastoma*.

metastomial (met-a̤-stō′mi-a̤l), *a.* [*metastomium* + *-al*^{1}.] Of or pertaining to the metastomium.

metastomium (met-a̤-stō′mi-um), *n.* [NL., < Gr. μετά, behind, + στόμα, mouth.] The region of the body behind the mouth; the metastoma.

metastrophe (me-tas′trọ-fẹ), *n.* [Gr. μετά, after, + στροφή, a turning.] Change or interchange; specifically, in *crystallog.* See the extract.

> A solid figure is symmetrical to an axis when every radius vector moving in a plane perpendicular to the axis and meeting a point of the figure would also meet corresponding points at the same distances from the axis at each revolution through an arc-angle of $\frac{2\pi}{n}$.
>
> The aspect of such a solid figure will not therefore be changed by a revolution of the solid round this axis through the angle $\frac{2\pi}{n}$, and any portion of its surface so revolving will move into a position in which it will be congruent with another portion of the surface entirely corresponding to it.
>
> Def.—Congruence of this kind will be termed *metastrophe*, and such corresponding parts will be said to be metastrophic to each other.
> *N. Story-Maskelyne*, Crystallography, p. 99.

metastrophic (met-a̤-strof′ik), *a.* [Gr. μετά, after, + στροφή, a turning, + *-ic.*] Of, characterized by, or of the nature of, metastrophe; interchangeable: said specifically of the faces, edges, and solid angles of a crystal with reference to rotation about an axis of symmetry. See ★*symmetry*, 6.

metastyle (met′a̤-stīl), *n.* [Gr. μετά, after, + E. *style*^{2}.] 1. In *bot.*, an unusually long style: said chiefly of trimorphic plants. Compare ★*mesostyle* and ★*parastyle*.—2. The posterior enamel-covered ridge on the outer side of such a molar as that of a horse: correlative with ★*parastyle* and ★*mesostyle*.

> Rudimentary conules, and para-, meso-, and *metastyles*.
> *H. F. Osborn*, in Bulletin Amer. Mus. Nat. Hist., 1902, [p. 210.

metastyrene (met-a̤-stī′rēn), *n.* Same as ★*metastyrolene*.

metastyrol (met-a̤-stī′rol), *n.* [*meta-* + *styrol*.] See ★*metastyrolene*.

metastyrolene (met-a̤-stī′rọ-lēn), *n.* [*meta-* + *styrolene*.] A transparent, highly refractive, solid polymer of styrolene, $(C_8H_8)_n$, contained in liquid storax and formed spontaneously from styrolene, into which it is retransformed by distillation. Also called *metastyrene*, *metacinnamene*, and, incorrectly, *metastyrol*.

metasyncrisis (met-a̤-sin′kri-sis), *n.* [Gr. μετασύγκρισις, < μετασυγκρίνειν, use diaphoretics.] In *med.*, the elimination of morbid matter, particularly through the pores of the skin. *N. E. D.*

metasyphilis (met-a̤-sif′i-lis), *n.* [*meta-* + *syphilis*.] Hereditary syphilis.

metasyphilitic (met-a̤-sif-i-lit′ik), *a.* 1. Relating to or of the nature of hereditary syphilis.—2. Occurring as a sequel of syphilis.

metatactic (met-a̤-tak′tik), *a.* [*metataxis*.] Pertaining to, or of the nature of, metataxis.

Metatarsal artery, phalanx. See ★*artery*, ★*phalanx*.

metatarsale, *n.* **2.** *pl.* The bones of the metatarsus considered collectively.

metataxic (met-a̤-tak′sik), *a.* Same as ★*metatactic*.—**Metataxic change.** See ★*change*.

metataxis (met-a̤-tak′sis), *n.* [Gr. μετά, after (indicating change), + τάξις, arrangement.] In *petrog.*, mechanical modification such as transverse cleavage, produced in a rock by metamorphism. *Irving*, 1889.

metate (me-tä′te), *n.* [Mex. Sp. *metate*, < Nahuatl *metatl*, *metlatl*.] A primitive hand-mill of stone, usually on three, formerly also on four, legs of the same block. In ancient times the Mexican metate was often elaborately carved, whereas the Peruvian batan is a rude slab. The metate is in common use in the North American Southwest.

Metate from Pueblo Viejo.
(From 22nd An. Rep. Bureau Amer. Ethnol.)

> Thus it is found that the nether millstone, which may be either a ledge or other mass in place of a portable bowlder, is, in the early stage of use, a flat or slightly concave *metate*, which after more extended use becomes a deeply concave *metate*, still later a shallow mortar, and at length a deep mortar which may eventually be worn through, if the original mass is not more than 9 to 15 inches in thickness. *Smithsonian Rep.*, 1899, p. 37.

metathetical, *a.* **2.** In *chem.*, involving transposition of constituents between two compounds which interact chemically with each other.

> In order that water may act hydrolytically upon barium chloride, for example, with liberation of hydrogen chloride and substitution of oxygen for chlorine, the temperature of the system must approach low redness, while magnesium chloride is attacked at a much lower temperature, and aluminum chloride is extremely sensitive to the *metathetical* action of water.
> *Amer. Jour. Sci.*, May, 1904, p. 365.

metatitanic (met″a̤-tī-tan′ik), *a.* [*meta-* + *titanic*.] Noting an acid, a substance thrown down as a white precipitate on boiling a solution of orthotitanic acid in aqueous hydrochloric acid. Its formula is H_2TiO_3, analogous to that of metasilicic acid.

metatrophia (met-a̤-trō′fi-ä̤), *n.* [NL., < Gr. μετά, with, + ἀτροφία, atrophy.] The atrophy of malnutrition. Also *metatrophy*.

metatrophic (met-a̤-trof′ik), *a.* [Gr. μετά, after, + τροφή, nourishment, + *-ic.*] Dependent upon organic matter, both nitrogenous and carbonaceous: applied to bacteria which are thus dependent for their existence. They are the most numerous and widely distributed of the micro-organisms. See ★*prototrophic* and ★*paratrophic*.

metatropic (met-a̤-trop′ik), *a.* [*metatrop*(*y*) + *-ic.*] Pertaining to, or characterized by, metatropy.

metatropy (me-tat′rọ-pi), *n.* [Gr. μετά, after (indicating change), + τροπή, a turning.] In *petrog.*, metamorphic processes consisting in physical changes, into which chemical action does not enter or enters only to a slight extent. *Irving*, 1889.

metatungstate (met-a̤-tung′stāt), *n.* [*meta-* + *tungstate*.] A salt of metatungstic acid. The metatungstates are not precipitated by the addition of an acid unless the solution is boiled for some time, when ordinary tungstic acid is thrown down.

metatungstic (met-a̤-tung′stik), *a.* [*metatungst*(*ate*) + *-ic.*] Noting a metallic acid, forming small yellow crystals of the composition $H_2W_4O_{13}.7H_2O$, obtained by decomposing barium metatungstate by dilute sulphuric acid. It differs from ordinary or normal tungstic acid in being soluble in water.

metatype (met′a̤-tīp), *n.* [Gr. μετά, after, + τύπος, type.] 1. A tabulation of the normal or average individuals of a race, in respect to any characteristic, as a basis for statistical comparison with exceptional or aberrant individuals. See the extract under ★*metatypic*.

> It is these *metatypes* that we should compare anatomically with the criminals if we would make comparison between the anatomic characters of the two classes.
> *Smithsonian Rep.*, 1890, p. 630.

2. In the nomenclature of types in natural history, a topotype identified by the nomenclator himself.

metatypic (met-a̤-tip′ik), *a.* [*metatype* + *-ic.*] Pertaining to, or of the nature of, a metatype.

> In order to characterize criminals in general, it is necessary to obtain the averages, which can be compared with the averages of other individuals of the same race, the same sex, the same social class, etc. These latter individuals must themselves be the average of their respective race, sex, or class, and their averages thus taken should become the type or standard. Honest or virtuous men (a category not less vague than that of criminals) will then be without doubt the *metatypic*.
> *Smithsonian Rep.*, 1890, p. 631.

metavanadate (met-a̤-van′a̤-dāt), *n.* [*metavanad*(*ic*) + *-ate*^{1}.] A salt of metavanadic acid, as sodium metavanadate, $NaVO_3$, and ammonium metavanadate, NH_4VO_3. The latter of these gives a deep-black color with tincture of galls which has been proposed for use as writing-ink; it has also been used in the development of aniline black on cotton cloth.

metavanadic (met″a̤-vā̤-nad′ik), *a.* [*meta-* + *vanadic*.] Noting an acid, a substance obtained in brilliant scales of a golden color by prolonged boiling of cupric metavanadate with sulphurous acid. Its formula is HVO_3. It has been used as a golden bronzing-powder.

metavoltaite (met-a̤-vol′tä̤-īt), *n.* Same as ★*metavoltine*.

metavoltine (met-a̤-vol′tin), *n.* [Gr. μετά, after, + E. *voltine*.] A hydrous sulphate of potassium, sodium, and ferric iron which occurs in minute yellow hexagonal scales. It is related in composition to voltaite.

metazone (met′a̤-zōn), *n.* [Gr. μετά, behind, + E. *zone*.] The posterior of the three zones into which the pronotum of the *Acridiidæ*, *Locustidæ*, and *Gryllidæ* is divided.

> Melanoplus decoratus sp. nov. Related to decorus. Vertex rather strongly protuberant, especially in female. Pronotum with mid-carina strong on *metazone*, weak or indistinct on prozone. *Psyche* (Boston), XI. 12.

Met. E. An abbreviation of *Metallurgical Engineer*.

metel^2 (mē′tel), *n.* [Ar.] 1†. The thorn-apple, *Datura Stramonium*.—2. The specific name given by Linnæus to the hairy thorn-apple, *Datura Metel*.

metembryo, *n.* **2.** The gastrula stage of a polyzoan. *Cumings*, 1904.

metempsychosist (me-temp-si-kō′sist), *n.* [*metempsychos*(*is*) + *-ist.*] One who believes in metempsychosis. *N. E. D.*

Metencephalic fossa. See ★*fossa*^{1}.

metencephalospinal (met-en-sef″a̤-lọ-spī′na̤l), *a.* In *neurol.*, of or pertaining to both the metencephalon, or cerebellum, and the spinal cord.

metensarcosis (met″en-sär-kō′sis), *n.* [Gr.

μετά, over, + *ἐνσάρκωσις*, < *ἐν*, in, + *σάρξ*, flesh.] The transference of the flesh of one body to another. *N. E. D.* [Rare.]

> See especially the conclusion of the 'great scene (iii. 6) [of Congreve's "Mourning Bride"]; and Almeria's offer (iv. 7) to clothe the rotten bones of her (supposedly) dead lover with her own flesh – a species of *metensarcosis* altogether original. The bathos of the concluding lines equals that of the moral of Buckingham's Julius Caesar.
> *A. W. Ward*, A Hist. of English Dramatic Literature, [II. 589, note.

metenteron, *n.* 2. In sea-anemones and polyps, one of the radially arranged cavities given off from the stomach or mesenteron; an intermesenteric chamber.

meteorgraph (mē′tē̦-or-gråf), *n.* [*meteor* + Gr. *γράφειν*, write.] 1. A device for quickly recording the exact location of the path of a shooting star. Neumayer's arrangement consisted of a plate supported at any angle on the ordinary equatorial mounting of a telescope. The records were made by hand-drawn pencil lines on this plate.—2. A meteorograph.

Meteoric paper. See ★*paper*.

meteorics (mē-tē̦-or′iks), *n.* The study of the atmosphere; meteorology.

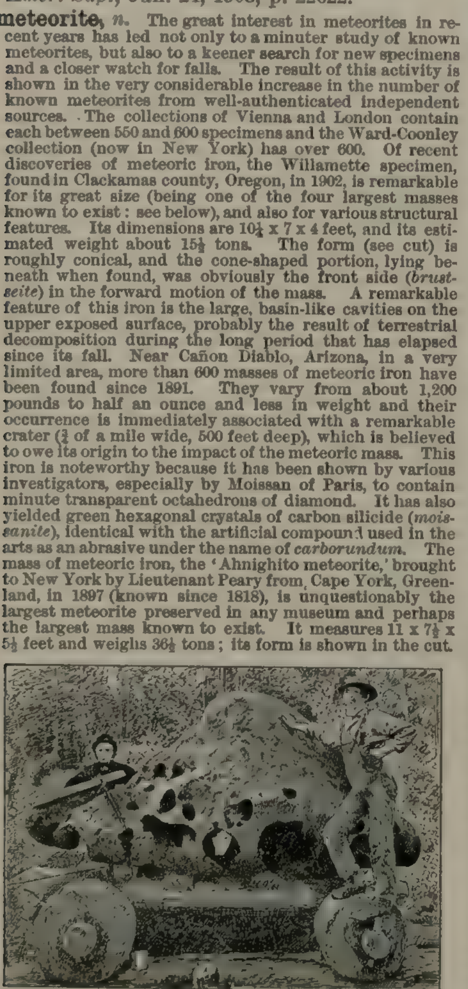
meteorin (mē′tē̦-ō̦-rin), *n.* [*meteor* + *-in*².] A supposed new metal reported by A. T. Abel as separated from the Cranbourne (Australia) meteoric iron. It was later shown by Flight to be identical with Reichenbach's tænite, and was named by him edmondsonite (after George Edmondson, Director of Queenwood College, Hampshire).

meteorist (mē′tē̦-ō̦-rist), *n.* [*meteor* + *-ist*.] One who is versed in the study of meteors. *N. E. D.*

meteoristic (mē″tē̦-ō̦-ris′tik), *a.* [*meteorism*.] Pertaining to or affected with meteorism.

meteorit (mē′tē̦-ō̦-rit), *n.* [G. (?): see *meteorite*.] An alloy of aluminium and phosphorus. It is a chemical mixture and can be melted and cast. It has a comparatively high tensile strength and can be worked like brass. *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22622.

meteorite, *n.* The great interest in meteorites in recent years has led not only to a minuter study of known meteorites, but also to a keener search for new specimens and a closer watch for falls. The result of this activity is shown in the very considerable increase in the number of known meteorites from well-authenticated independent sources. The collections of Vienna and London contain each between 550 and 600 specimens and the Ward-Coonley collection (now in New York) has over 600. Of recent discoveries of meteoric iron, the Willamette specimen, found in Clackamas county, Oregon, in 1902, is remarkable for its great size (being one of the four largest masses known to exist: see below), and also for various structural features. Its dimensions are 10½ x 7 x 4 feet, and its estimated weight about 15½ tons. The form (see cut) is roughly conical, and the cone-shaped portion, lying beneath when found, was obviously the front side (*brustseite*) in the forward motion of the mass. A remarkable feature of this iron is the large, basin-like cavities on the upper exposed surface, probably the result of terrestrial decomposition during the long period that has elapsed since its fall. Near Cañon Diablo, Arizona, in a very limited area, more than 600 masses of meteoric iron have been found since 1891. They vary from about 1,200 pounds to half an ounce and less in weight and their occurrence is immediately associated with a remarkable crater (¾ of a mile wide, 500 feet deep), which is believed to owe its origin to the impact of the meteoric mass. This iron is noteworthy because it has been shown by various investigators, especially by Moissan of Paris, to contain minute transparent octahedrons of diamond. It has also yielded green hexagonal crystals of carbon silicide (*moissanite*), identical with the artificial compound used in the arts as an abrasive under the name of *carborundum*. The mass of meteoric iron, the 'Ahnighito meteorite,' brought to New York by Lieutenant Peary from Cape York, Greenland, in 1897 (known since 1818), is unquestionably the largest meteorite preserved in any museum and perhaps the largest mass known to exist. It measures 11 x 7½ x 5½ feet and weighs 36½ tons; its form is shown in the cut. A somewhat higher weight (estimated as 46 tons) is given for the iron of Bacubirito, Sinaloa, Mexico (known since 1871), while that of Chupadero, Chihuahua, Mexico (1852), weighs about 16 tons. The meteoric origin of the Ahnighito iron is well established, although the iron of Disko Island and those of some other localities on the west coast of Greenland are certainly terrestrial. The great mass of Santa Catharina, Brazil, remarkable for its high percentage of nickel (34 per cent.), is now generally regarded as terrestrial; this type is called *catarinite* by Meunier. Some doubt also has been cast upon the meteoric origin of the iron from Oktibbeha county, Mississippi, which contains 60 per cent. of nickel (*oktibbehite* type, Meunier). The meteorites which have been seen to fall between 1890 and 1906 number about 30. These include three irons, those of Quesa, Spain (1898), of Bugaldi, New South Wales (1900), and of Ngoureyma, in Northwest Africa (1900); the latter-named mass weighed 37½ kilograms, and its remarkable appearance is shown in the adjoining cut. The minute microscopic and chemical examination of meteoric irons has led to more definite knowledge of the composition of the various iron-nickel alloys, *kamacite*, *tænite*, and *plessite* forming the triad (or trias) of Reichenbach (see *Widmannstättian figures*, under *Widmannstättian*); of these, kamacite contains from 4.8 to 7.4 per cent. of nickel, tænite from 16.7 to 38.1 per cent., and plessite is regarded as a eutectic mixture of the two species. Reichenbach's *lamprite* (*glanzeisen*) has been shown, however, to be not nickel-iron, but in part iron carbide (including *cohenite* (Fe, Ni)$_3$C), and in part *schreibersite*. The *edmondsonite* of Flight (*meteorin* of Abel) is only tænite. The *wickelkamacite* of Brezina (*hülleisen* of Reichenbach) is kamacite, not in regular form as usual, but of irregular outline inclosing accessory constituents, sulphids, graphite, silicates, etc. The iron sulphid of meteoric irons is now conceded to be troilite (FeS), not pyrrhotine (Fe_7S_8). The list of chemical elements identified in meteorites has been increased by the following, several of them detected in traces only and a few perhaps needing confirmation: gold, silver, platinum, iridium, palladium, lead, gallium, selenium; the stone of Saline township, Kansas, contains free phosphorus. The identification of leucite, a mineral of rather rare occurrence in terrestrial igneous rocks, as an essential constituent of the meteoric stone of Schafstädt is an interesting point; it is probably also present in the Pavlovka stone (1882). The classification of meteorites now generally adopted is essentially that of Gustav Rose (Berlin, 1863) as extended and elaborated by later writers, particularly A. Brezina of Vienna. The fundamental division is that between the *meteoric irons*, or *siderites*, consisting essentially of metallic iron (probably in all cases nickel-iron), and the *meteoric stones*, or *aërolites*, in which silicates predominate, the metallic nickel-iron sometimes (though rarely) entirely absent. As a transition-group between the irons and stones belong those meteorites in which the iron forms a continuous, sponge-like mass inclosing silicates (chiefly olivin and bronzite); these are often embraced under the general name of *siderolites*, and sometimes (as below, Brezina) divided into *siderolites* and *lithosiderites*, according as the iron, on a cross-section, appears as separate grains or forms a continuous web. The system of Brezina (catalogue of the Ward-Coonley collection, 1904) recognizes further the following prominent divisions: I. STONES: (*a*) *achondrites*, chondri generally absent, metallic iron absent or only sparingly present; (*b*) *chondrites*, chondri prominent, bronzite, olivin, and iron essential; (*c*) *chondrites*, with enstatite, anorthite, and iron essential; (*d*) *siderolites*, iron inclosing silicates, iron in separate grains in section. II. IRONS: (*e*) *lithosiderites*, iron and silicates, the iron continuous in section; (*f*) *octahedrites*, irons with octahedral structure as shown in Widmannstättian figures; (*g*) *hexahedrites*, irons with cubic structure and cleavage; (*h*) *ataxites*, structure interrupted or indistinct. These divisions are further separated into groups or types briefly characterized as follows: (*a*) ACHONDRITES: (1) *chladnite* (abbreviated Chl), consisting chiefly of bronzite (named, like the mineral chladnite (=enstatite), after the physicist Chladni (1756–1827), who wrote about meteors); (2) *chladnite* with bronzite, black or metallic veined (Chla); (3) *angrite* (A), chiefly augite (named after the meteorite of Angra dos Reys, Brazil; date of fall, 1869); (4) *chassignite* (Cha), chiefly olivin (Chassigny, France, 1815); (5) *bustite* (Bu), bronzite and augite (Busti, India, 1852); (6) *amphoterite* (Am), bronzite and olivin (named by Tschermak); (7) *rodite* (Ro), bronzite and olivin, brecciated or breccia-like (La Roda, Spain, 1871); (8) *eucrite* (Eu), augite with anorthite (named by Rose in 1863; also used for a terrestrial rock: see *eucrite*); (9) *shergottite* (She), augite with maskelynite (Sherghotty, India, 1865); (10) *howardite* (Ho), bronzite, olivin, augite, and anorthite (named by Rose after Edward Howard, who first determined the true nature of meteoric iron: Philos. Trans. Roy. Soc., 1802); (11) *howardite*, brecciated (Hob); (12) *leucituranolite* (L), leucite, anorthite, augite, and glass (named by C. Klein, 1904). (*b*) CHONDRITES: (1) howarditic chondrite (Cho); (2) the same, veined (Choa); (3) chondrite, white and friable (Cw); (4) the same, veined (Cwa); (5) the same, brecciated (Cwb); (6) intermediate chondrite (Ci), firm, with white and gray chondri; (7) the same, veined (Cia); (8) the same, brecciated (Cib); (9) gray chondrite (Cg), firm gray mass with chondri; (10) the same, veined (Cga); (11) the same, brecciated (Cgb); (12) *orvinite* (Co), black, infiltrated mass, discontinuous crust (Orvinio, Italy, 1872); (13) *tadjerite* (Ct), black, semiglassy, without crust (Tadjéra, Africa, 1867); (14) black chondrite (Cs), dark or black mass; chondri of various colors; (15) the same, veined (Csa); (16) *ureilite* (U), black mass, chondritic or granular, iron in veins, etc. (Novo Urei, Russia, 1886); (17) carbonaceous chondrite (K), dull-black friable chondri with free carbon and little or no iron; (18) the same, spherulitic (Kc); (19) the same, spherulitic, veined (Kca); (20) spherulitic chondrite (Cc), mass friable, chondri not breaking with matrix; (21) the same, veined (Cca); (22) the same, brecciated (Ccb); (23) *ornansite* (Cco), friable mass of chondri (Ornans, France, 1868); (24) *ngawite* (Ccn), friable, brecciated mass of chondri (Ngawi, Java, 1883); (25) spherulitic chondrite, crystalline (Cck); (26) the same, veined (Ccka); (27) the same, brecciated (Cckb); (28) crystalline chondrite (Ck); (29) the same, veined (Cka); (30) the same, brecciated (Ckb). (*c*) ENSTATITE-ANORTHITE CHONDRITES: crystalline chondrite (Cck), enstatite, anorthite, and iron with round chondri. (*d*) SIDEROLITES: (1) *mesosiderite* (M), sponge-like mass of iron inclosing crystalline olivin and bronzite (name given by G. Rose, 1862: see *mesosiderite*); (2) *grahamite* (Mg), the same, with also plagioclase (J. Lorimer Graham of New York city); (3) *lodhranite* (Lo), granular crystalline olivin and bronzite in iron (Lodhran, India, 1868). (*e*) LITHOSIDERITES: (1) *siderophyre* (S), bronzite grains with accessory asmanite in iron (named by Tschermak); (2)–(5) groups of *pallasites*, iron inclosing olivin (Pk), (Pr), (Pi), (Pa), differing chiefly in relation to the olivin (named from Pallas iron, Krasnoyarsk, Siberia, 1749). (*f*) OCTAHEDRITES: groups (1)–(3), fine octahedrites (Off), (Ofv), (Of), showing thin lamellæ of varying types, widths 0.3–0.4 millimeters; (4) medium octahedrite (Om), lamellæ 0.5–0.10 millimeters; (5) broad octahedrite (Og), lamellæ 1.5–2.0 millimeters; (6) broadest octahedrite (Ogg); (7)–(11) brecciated octahedrites, fine, medium, etc., different types (Obk), (Obn), (Obz), (Obzg), (Obc); (12) octahedrite, Hammond group (Oh). (*g*) HEXAHEDRITES: (1) normal, not granular (H); (2) granular (Ha); (3) brecciated (Hb). (*h*) ATAXITES: groups (1)–(8) (respectively designated as Dc, Dsh, Db, Dl, Dn, Ds, Dp, and Dm), differing chiefly either in amount of nickel or in structure; the Siratic group (Ds, and named from a place in Senegal) is poor in nickel, but contains rhabdite. Daubrée divided all meteorites into four grand divisions, according to the amount of iron present, namely: *holosiderites*, containing no silicates; *syssiderites*, an iron mass inclosing silicates; *sporadosiderites*, stones with disseminated grains of iron; *asiderites*, stones containing



Willamette Meteorite.

no metallic iron. He further divided the sporadosiderites into *polysiderites*, iron abundant; *oligosiderites*, iron less abundant; and *cryptosiderites*, iron not visible to the eye. This classification was further developed by Meunier, who distinguished fifty-three groups, named in most cases after some typical meteorite; these begin with the highly nickeliferous irons *oktibbehite* and *catarinite* (see above), also *tazewellite*, *nelsonite*, *braunite*, etc., and end with *orgueillite* and *bokkewellite*.

Meteoritic hypothesis. See ★*hypothesis.*

meteorogram (mē´tẹ-ọ-rọ-gram), *n.* [Gr. *μετέωρον*, a meteor, + *γράμμα*, a writing.] The record of atmospheric conditions made by a meteorograph.

> Six possible sources of constant error have been recognized as influencing the records. These are (1) instrumental errors, (2) errors in exposure of instruments when comparing with standards, (3) errors in reading from *meteorograms*, etc.
>
> *U. S. Monthly Weather Rev.*, March, 1904, p. 121.

meteorograph, *n.*—**Aërial meteorograph,** a very light form of meteorograph, designed to be raised to a great height by means of kites or a sounding-balloon.

Meteoroidal hypothesis. Same as *meteoritic* ★*hypothesis.* *Amer. Geol.*, July, 1903, p. 14.

meteorol. An abbreviation of *meteorological.*

Meteorological chart. See *weather-map.*—**Meteorological equator, photography.** See ★*equator*, ★*photography.*

meteorology, *n.*—**Cosmical meteorology,** the general relation of the earth's atmosphere to cosmical processes, more especially to the radiation from the sun to the earth, or the radiation of the earth into space.—**Dynamic meteorology,** the study of the forces that produce the motions of the atmosphere; the combined thermodynamics, hydrodynamics, and aërodynamics of the atmosphere; the physics of the atmosphere; theoretical meteorology.—**Planetary meteorology,** the study of the relations between atmospheric phenomena and the motions or positions of the moon and planets. Since no such relations are accepted by the best authorities, this study is also spoken of as a *false* or *pseudo-meteorology.*—**Statical meteorology,** that branch of meteorology which treats of the condition and the phenomena of the atmosphere at any moment, without much regard to the underlying causes; statistical meteorology: climatology.

meteoroscope, *n.* **2.** An instrument for observing and registering the apparent path of a meteor.

meter[1], *n.* **4.** In *photog.*, an instrument for determining the time of exposure.

> Exposure *Meters.* When gelatine dry plates came into general use, and were made of many different degrees of sensitiveness, the want of a guide to the proper exposure for the various makes of plates under different conditions of lighting began to be felt, and several methods were devised for meeting the want. *Encyc. Brit.*, XXXI. 701.

Meter of water, a unit of gaseous pressure; the pressure exerted by a vertical column of water one meter in height. A meter of water exerts a pressure of 1000 kilograms, or a metric ton, on a square meter of surface, hence its numerical convenience as a unit. Also called *meter of water column.*—**Pendulum meter,** an electric meter which has an oscillatory instead of a rotatory motion.—**Power-factor meter,** a recording instrument for indicating the power factor of an alternating-current circuit.—**Quantity meter,** an integrating meter for electric circuits which usually reads or records in ampere-hours or coulombs.

meter-angle (mē´tėr-ang″gl), *n.* In *optics*, the unit of convergence corresponding to one diopter of accommodation.

meter-bridge (mē´tėr-brij), *n.* A slide-wire bridge the calibrated wire of which is one meter long. See ★*slide-wire bridge.*

meter-candle (mē´tėr-kan″dl), *n.* Same as ★*candle-meter.*

meter-gram (mē´tėr-gram), *n.* A practical unit used in describing or specifying the properties of wire or other electrical conductors; a wire one meter long and weighing one gram.

meter-lens (mē´tėr-lenz), *n.* A lens having a focal distance of one meter.

meter-millimeter (mē″tėr-mil´i-mē-tėr), *n.* A practical unit used in describing or specifying the properties, especially the resistance, of wires; a wire one meter long and one millimeter in diameter.

meter-pump (mē´tėr-pump), *n.* A device for obtaining samples of air for analysis. *Buck*, Med. Handbook, II. 567.

metethereal (met-ẹ̄-thē´rẹ-al), *a.* [Gr. *μετά*, after, + E. *ethereal.*] Existing beyond the ether. See the extract. [Rare.]

> Metetherial.—That which appears to lie after or beyond the ether; the *metetherial* environment denotes the spiritual or transcendental world in which the soul exists.
>
> *F. W. H. Myers*, Human Personality, I. Gloss. p. xix. [*N. E. D.*

meth-. A combining form sometimes used in organic chemistry in place of *methyl.*

Meth. An abbreviation of *Methodist.*

methacetin (meth-as´e-tin), *n.* [*meth(yl)* + *acetin.*] A trade-name of para-oxymethylacetanilide, a white crystaliine powder, for use as an antipyretic and antiseptic remedy.

methaform (meth´ạ-fôrm), *n.* Same as ★*chloretone*, or ★*acetone chloroform.*

methanal (meth´a-nal), *n.* [*methane* + *-al*[3].] Same as *formaldehyde.*

Methane type, the constitution of those organic compounds which may be considered as being derived from methane (CH_4), by the replacement of one or more of the hydrogen atoms by radicals or elements.

methanol (meth´ạ-nol), *n.* [*methane* + *-ol.*] The official, scientific name for methyl alcohol, CH_3OH.

methazonic (meth-a-zon´ik), *a.* [*meth(yl)* + *azone* + *-ic.*] Noting an acid, a colorless, unstable, explosive compound, $CH_2N_2O_3$, prepared by the action of alcohol and sodium hydroxid on nitromethane. It crystallizes in needles and melts at 58–60° C.

methenyl (meth´ẹ-nil), *n.* [*meth(yl)* + *-ene* + *-yl.*] The trivalent organic radical $\geqslant$CH. Also called *methine.*

methide (meth´id), *n.* [*meth(yl)* + *-ide*[1].] A class-name applied in organic chemistry to compounds of the univalent radical methyl, $-CH_3$. It is chiefly used in the case of metallic derivatives.

methilepsia (meth-i-lep´si-ạ̈), *n.* [NL., < Gr. *μέθυ*, wine, + *λῆψις*, taking, seizure.] Same as *methomania.*

methionic (meth-i-on´ik), *a.* [*me(thyl)* + *thionic.*] Noting an acid, a colorless crystalline deliquescent, very stable compound, $CH_2(SO_3H)_2$, prepared by the action of fuming sulphuric acid on lactic acid, and formed, in small quantity, by the action of sulphuric acid on ether.

method, *n.*—**Apagogic method,** reductio ad absurdum.—**Apostoli method,** in *med.*, the treatment of fibroid tumors of the uterus by means of electrolysis.—**Argelander's method,** in *astron.*, a method of observing the light-fluctuations of a variable star by visual comparison with neighboring stars of nearly the same brightness.—**Bradley's method,** in *optics*, a method of determining the velocity of light from the aberration of the fixed stars and the velocity of the earth in its orbit, due to the astronomer Bradley (1727). See *velocity of* ★*light.*—**Brand's method,** in *med.*, the treatment of typhoid and other fevers by means of cool baths.—**Brandt's method,** in *med.*, manual pressure through the abdominal walls upon the Fallopian tubes, designed to force out contained pus or other fluid.—**Bravais's method,** in *meteor.*, a method of determining the true altitude and motion of a cloud. It consists in observing the images of a cloud as seen in one mirror far below the observer and in another mirror near him. The two mirrors may be turned so that the two images perfectly overlap or coincide. The lower mirror may be always horizontal and may be the smooth surface of a lake. The angle between the two mirrors and their distance apart enable the observer to compute the altitude of the cloud.—**Cascade method.** See ★*cascade*1.—**Collodion sac method.** See ★*collodion.*—**Credé's method,** in *med.*: (*a*) The instillation of a solution of nitrate of silver into the eyes of a new-born child, as a preventive of gonorrheal ophthalmia. (*b*) Compression of the uterus made by the hand of the accoucheur in order to squeeze out the placenta after the birth of the child.—**Deslandre's spectrographic method.** See ★*spectrographic.*—**Double-slit method,** the method of the ★spectroheliograph (which see).—**Dry method.** Same as *dry way* (which see, under *dry*).—**Dumas's method,** in *phys.*, a process for the determination of vapor-densities invented by the chemist Dumas. It consists in heating the liquid to be vaporized in a glass bulb of known volume. When the liquid has entirely disappeared, the neck of the bulb is sealed and the bulb is weighed. From the mass of the vapor, thus determined, and its volume, the vapor-density is computed.—**Error methods,** in *psychophys.*, a name introduced by Wundt in 1883 to include average error and right and wrong cases. See *gradation* ★*methods.*—**Fizeau-Cornu method,** in *optics*, the method employed by Fizeau and subsequently by Cornu for measuring the velocity of light. See *velocity of* ★*light.*—**Flechsig's myelination method.** See ★*myelination.*—**Foucault's method,** in *optics*, the method employed by Foucault for measuring the velocity of light. See *velocity of* ★*light.*—**Frobenius's method,** in *math.*, a method of integrating linear differential equations in series. It has the advantage of exhibiting the connection between the two solutions found by it.—**Galton's method,** in *psychol.*, a name sometimes applied to the questionary method, which, though not invented by Galton, was used by him with conspicuous success in the study of visualization. Tables of questions (questionaries) dealing with some psychological topic are prepared and sent to a large number of persons. The replies are collated with a view to the induction of psychological uniformities, the determination of the range of mental variation, etc.—**Gibbs's vector method.** See ★*vector.*—**Golgi method,** in *histol.*, a method of distinguishing the nerve-cells and their branches by staining them with silver nitrate.

> The *Golgi method* of differentiating the nervous elements has so revolutionized our knowledge of the structure of the nervous system that no text-book on that subject ten years old is of any value except as history.
>
> *Amer. Inventor*, Dec. 15, 1903, p. 298.

Gradation methods, in *psychophys.*, a name introduced by Wundt in 1883 to include minimal changes and mean gradations. *E. B. Titchener*, Exper. Psychol., II. ii. 316.—**Graffin method,** in *photog.*, a process, especially adapted to the photographing of manuscripts, invented by Mgr. Graffin of Paris. See the extract.

> The apparatus for the *méthode Graffin* consists essentially of a prism, or mirror, inclined at an angle of 45 degrees, in front of the object glass of the camera, in order to reverse the image before its passage into the object glass, in such a way that, twice reversed, it is reproduced as a positive on the sensitive paper. The proof will be negative; the black letters of the manuscript or book copied will appear in white against a black or dark background. The order of the letters and their position will be normal, by reason of the double reversal. The plate-holder contains sheets of bromide paper, preferably rapid. One great advantage of the method is that the manuscript or book to be photographed may be placed horizontally on the table or chair, or on the floor. The work is done with rapidity, almost as fast as one can turn the pages. Only one copy can be made by this process, which cannot therefore serve for the production of a large number of copies. *The Nation*, March 5, 1908.

Gram's method, in *bacteriol.*, a method of staining based upon the principle that certain bacteria after being stained with aniline dyes retain the color on subsequent treatment with a solution of iodopotassic iodide, while others are decolorized.—**Hampe's method,** in *chem.*, a method for the determination of oxygen which consists in reducing the oxid of finely divided copper (brought to a bright-red heat) in a current of hydrogen, the loss in weight giving a measure of the amount of oxygen.—**Hehner method,** in *chem.*, an analytical process applied to butter, and to other fats and oils, which determines the percentage of insoluble fatty acids which can be obtained from the particular fat.—**Inverse method of fluxions.** See *fluxion.*—**Isthmus method,** a method of testing the magnetic permeability of iron under great magnetizing force, in which the sample, in the form of a short bobbin, is so placed between the poles of an electromagnet as to form part of a closed magnetic circuit.

> In applying the *isthmus method* it is desirable to be able to turn the bobbin round suddenly between the magnet poles.
>
> *J. A. Ewing*, Magnetic Induction in Iron and other [Metals, p. 150.

Keeler's spectrographic method. See ★*spectrographic.*—**Kjeldahl method,** in *chem.*, a method of determining nitrogen in organic compounds, suggested by Kjeldahl. It consists in boiling the substance with concentrated sulphuric acid, with or without the addition of a little copper or potassium sulphate or mercuric oxid: this oxidizes the carbon to carbon dioxid, and the hydrogen to water, and converts the nitrogen into ammonia. The liquid is then made alkaline and the ammonia boiled off. The method is used chiefly for the examination of fertilizers, foodstuffs, etc.—**Laborde's method,** in *med.*, a method of inducing respiration in cases of threatening asphyxiation, as in drowning, by means of rhythmical tractions on the tongue.—**Littrow's method** (*naut.*), a navigation rule, named after its author, by which to determine the ship's longitude from the employment of circum-meridian altitudes.—**Measurement methods,** metric methods; psychophysical metric methods; in *psychophys.*, methods for the determination of the stimulus and differential limen, and of subjectively equivalent stimuli and stimulus-differences: typified by the four classical methods of just noticeable differences, mean gradations, average error, and right and wrong cases.—**Method of average error,** one of the four classical methods of psychophysics, in which a variable stimulus is equated for sensation to a constant stimulus and the errors of adjustment are combined to furnish a representative or average error. The method was introduced into psychophysics by Fechner. *E. B. Titchener*, Exper. Psychol., II. i. 70.—**Method of characteristics,** a geometric method at the basis of enumerative geometry, founded by Chasles on his correspondence-principle (1864).—**Method of Clément and Desormes,** in *phys.*, a method for the determination of the ratio of the two specific heats of a gas. The gas, contained in a closed receptacle, is suddenly compressed by means of a piston, and the change of pressure due to this approximately adiabatic change of volume is immediately noted. The pressure is read again after the gas has cooled. This gives the result of an isothermal change of volume. The ratio of these two changes is the ratio of the specific heats.—**Method of complete series,** in *psychophys.*, a mode of the method of just noticeable differences (which see, under ★*difference*) which combines into one the partial series required for the determination of the upper and lower differential limens.—**Method of constant stimuli,** in *psychophys.*, the method of right and wrong cases as employed with a number of stimuli for the determination of the stimulus limen.—**Method of constant stimulus-differences,** in *psychophys.*, the method of right and wrong cases as employed with a number of stimuli, above and below the standard stimulus, for the determination of the differential limen.—**Method of doubled stimuli,** in *psychophys.*, a method, proposed by J. Merkel, the object of which is the determination of a stimulus that is subjectively the double of the given stimulus.—**Method of equal and unequal cases,** in *psychophys.*, a modification of the method of right and wrong cases, proposed in 1888 by J. Merkel.—**Method of equal-appearing intervals, of equal sense-distances, of mean gradations, of supraliminal differences,** in *psychophys.*, a method the object of which is the equation of two supraliminal sense-distances. In the usual form of the method, the two extreme stimuli are given, and the third, intermediate stimulus is varied up and down by small steps until it appears to divide the total sense-distance into halves. Other forms of the method are, however, possible; and the principle may also be employed for the just noticeable differentiation of supraliminal sense-distances.—**Method of equivalents,** in *psychophys.*, a form of the Fechnerian method of average error in which the stimuli or stimulus-differences to be equated are applied to different parts of the sense-organ.—**Method of infinitesimals,** the method of Leibnitz for the calculus.—**Method of just noticeable differences, method of least differences, method of minimal differences.** See ★*difference.*—**Method of limits.** (*b*) In *psychophys.*, a form or mode of the method of just noticeable differences (which see, under ★*difference*), developed by G. E. Mueller. It is characterized by rules of procedure which make its results comparable with the results of the method of constant stimulus-differences (method of right and wrong cases).—**Method of minimal changes,** in *psychophys.*, a form or mode of the method of just noticeable differences (which see, under ★*difference*), developed by Wundt. It is characterized by the attention paid to the psychological variable errors, especially to expectation and practice. —**Method of multiple reproduction, method of single reproduction,** in *psychophys.*, forms of the Fechnerian method of average error employed in work upon the estimation of time-intervals. In the former, a standard or normal interval is given, and the observer reproduces this interval (say, by tapping on a key) three, five, ten, or so many times, the length of the normal and of the reproduced intervals being graphically recorded; in the latter, the normal interval is bounded by two clicks or strokes, and the observer is required to make a third stroke as soon as a time has elapsed which he judges to be equal to the normal. The length of the two intervals is recorded as before.—**Method of paired comparisons.** See ★*comparison.*—**Method of passage,** in *bacteriol.*, a method of increasing the virulence of pathogenic bacteria by inoculating a number of animals one from the other in a series.—**Method of reactions,** in *metal.*, a method of double decomposition, in which to a molten bath or to a solution of a combination of bases and acids a reagent is added which is itself a salt or compound of base and acid; the acid of the metallic solution goes to the base of the reagent, and the acid of the reagent unites with the bases in the solution. Such double decompositions are usual with the silicates and carbonates in reduction processes.—**Method of reciprocal polars,** in *geom.*, a method of duplicating or dualizing all descriptive and many metric properties of curves and surfaces by consideration of polar reciprocals. It was first systematically employed by Poncelet.—**Method of right and wrong answers,** in *psychophys.*, a simplified form of the method of right and wrong cases, introduced by J. Jastrow and E. Kraepelin, in which the judgment 'doubtful' is forbidden and all judgments have accordingly the form 'greater' or 'less.'—**Method of right and wrong cases,** in *psychophys.*, a method in which a single slight stimulus-difference, or a number of stimulus-differences ranging from small to large above and below the standard stimulus, is presented to the observer, who is required to judge in each case of the relation of the component stimuli (as second stimulus greater, less, much greater, relation doubtful, etc.). From the distribution of the judgments in accordance with the theory of probabilities a differential limen and its measure of precision may be determined. Like the method of constant stimuli (which see, above), the method is available for the determination of a stimulus limen. It is evidently, in a way, the counterpart and supplement of such methods as that of minimal changes. There, stimuli are varied until a required judgment has been passed; here, stimuli are constant and the observer's judgments are variable.—**Method of Roy and Ramsden,** in *phys.*, a method for the measurement of the linear expansion of bars, in which the elongation is observed directly through microscopes focused upon cross-lines ruled upon the specimen. See ★*dilatometer.*—**Method of substitutions,** in *alg.*, a method based upon replacing a quantity by another or by a function of several others. —**Method of two, three, five,** etc., **cases,** in *psychophys.*, Wundt's names for various forms of the method of right and wrong cases. In the first, there are two possibilities of judgment (equal and unequal, or positive and negative); in the second, three (greater, doubtful, less); in the third, five (much greater, greater, etc.).—**Methods of adjustment.** See ★*adjustment.*—**Methods of difference,** in *psychophys.*, a name proposed in 1891 by E. Kraepelin to include right and wrong cases, right and wrong answers, and equal and unequal cases. See ★*methods of limits.*—**Methods of enumeration,** in *psychophys.*, a term introduced by Wundt in 1895 to include the methods of two, three, five, etc., cases, and extended in 1902 to average error: opposed in the first case to *methods of* ★*adjustment*, and in the second to *gradation* ★*methods.*—**Methods of limits,** in *psychophys.*, a name proposed in 1891 by E. Kraepelin to include minimal changes, mean gradations, and average error.—**Mixed method,** the combination upon one printing-plate of the different processes of line-engraving, etching, mezzotint, with rouletting.

> Line-engraving has been killed by etching, mezzotint, and that bastard form of line-engraving known as the "*mixed method*"—a combination of etching, graving, and machine-ruling, such as is seen in Thomas Landseer's "Stag at Bay." *Encyc. Brit.*, XXVIII. 267.

Napier's method (*naut.*), a graphic representation of the deviation. The margin of a compass card is shown as cut out at the N-point and straightened into a vertical line, divided into 32 equal parts which correspond to the 32 points of the compass, and into 360 degrees of its circumference. Also called *Napier's card*, *compass-error card*, *curve*, *diagram*, and *deviation diagram.*—**Newton's method of approximation,** in *alg.*, a method for obtaining the roots of equations.—**O'Dwyer's method,** in *med.*, a method of relieving obstructive dyspnœa by intubation of the larynx.—**Ogata's method,** in *med.* (*a*) A method of resuscitation of an asphyxiated new-born infant by alternately approximating the feet and the head and letting the body fall, holding the infant by the feet only. (*b*) A method of resuscitation, in cases of asphyxia from chloroform or ether, by stroking the lower portion of the chest with the fingers in order to stimulate respiration and the action of the heart.—**Open method,** in *med.*, the treatment of wounds by free exposure to the air, as contrasted with the use of air-tight antiseptic dressings.—**Patch method.** See ★*patch.*—**Point-to-point method,** a method of determining wave-forms of alter- ating currents, in which each point upon the curve dicating the wave is found separately. Also called *step- tep method.*

> ther places there is an apparent want of knowledge nt progress, as, for example, where the oscillograph n of as an instrument of little value, the *point-to- hod* being described as more practical. *Nature*, May 14, 1903, p. 31.

method, in topographical surveying of an a or territory, the traverse method of de- relative positions of several points by sur- of consecutive lines joining those points: ative to the method of triangulation, in veyed form the sides of contiguous tri- of whose sides are determined by trig-

for the iron of Bacub.

> On the other side, the *polygonal method* permitted, as has already been stated, the carrying on of the operations of the survey along the route of each expedition. *Geog. Jour.* (R. G. S.), XVI. 331.

Questionary method. See *Galton's* ★*method.*—**Reckoning method,** in *psychophys.*, a method of enumeration (Germ. Abzählungsmethode) typified by the method of right and wrong cases. *W. Wundt* (trans.), Outlines of Psychol., p. 257.—**Reserve-seed method.** See ★*seed.* —**Reserve-sprout method.** See ★*sprout.*—**Römer's method,** in *optics*, the method employed by Romer (1675) for computing the velocity of light from observations upon the eclipses of Jupiter's moons, made when the earth and that planet were in conjunction and when they were in opposition. See *velocity of* ★*light.*—**Rousseau's method,** in *photom.*, a graphic method devised by Rousseau for finding the mean spherical intensity of a source of light. See *Rousseau's* ★*figure.*—**Sayre's method,** in *surg.*, the treatment of lateral curvature of the spine, or of Pott's disease, by means of a corset of plaster of Paris applied while the patient is suspended by bands under the arms.—**Scattered-seed method.** See ★*seed.*—**Schleich method,** in *med.*: (*a*) Induction of local anæsthesia by distention of the tissues with a weak cocaine solution subcutaneously injected. (*b*) Induction of general anæsthesia by a mixture of chloroform, ether, and petroleum ether administered by inhalation.—**Schott method,** in *med.*, the treatment of heart-disease by baths in effervescent water and by special exercises.—**Seebeck's and Holmgren's method,** in *exper. psychol.*, a rough method of testing partial color-blindness. Colored cards or worsteds are given to the subject, who is required to sort and match them without naming the colors.—**Serial method,** in *psychophys.*, any method which implies the presentation to the observer of a graded series of stimuli; specifically, in the sphere of sensation, a gradation method; in the sphere of affection, a form of the method of impression. As applied to affective processes, the serial method requires that a series of stimuli be presented to the observer one at a time, and be referred by him to one or other of certain prearranged categories of affective intensity, as very pleasant, moderately pleasant, indifferent, moderately unpleasant, very unpleasant. The results are recorded in graphic form.—**Single-tree method,** that method of conservative lumbering in which reproduction from self-sown seed under the shelter of the old stand is invited by the cutting of single trees. This cutting may be made throughout the forest, as in some wood-lots, or in definite portions of the forest in turn. Also called *selection system, selection method, shelter-wood selection system.* —**Stand method,** that method of conservative lumbering in which reproduction is secured from self-sown seed by means of successive cuttings made throughout the mature stand, thus leading to the production of a new stand approximately even aged. These successive cuttings encourage seed production, create conditions favorable to the growth of seedlings, and gradually remove the remaining trees of the mature stand as the young growth develops. The series of cuttings, which vary in number and duration according to the degree of difficulty with which reproduction is effected, is divided into the following four kinds: (1) *Preparatory cuttings* fit the stand for its reproduction by the removal of dead, dying, or defective trees, and prepare the ground for the germination of seeds. A stand in which one or more preparatory cuttings have been made is in the *preparatory stage.* (2) *Seed cuttings* encourage seed production by the further opening of the stand, and admit light in quantity favorable for the development of young growth. A forest in which one or more seed cuttings have been made is in the *seedling stage.* (3) *Removal cuttings* gradually remove the mature stand which would otherwise retard the development of the young trees. A stand in which one or more removal cuttings have been made is in the *removal stage.* (4) The *final cutting* is the last of the removal cuttings, in which all of the old stand still remaining is cut. Also called *shelter-wood compartment system, method of successive thinnings, compartment system*, and *high forest compartment system.*—**Statistical method.** (*a*) See *statistical method*, under *statistical.* (*b*) In *phys.*, the method of statistical mechanics in which a great number of systems, similar in nature but differing as to configurations and velocities, are simultaneously considered.—**Step-by-step method.** Same as *point-to-point* ★*method.* —**Sturm's method,** in *alg.*, a method for ascertaining how many real roots of an equation lie between any given limits.—**Sylvester's dialytic method,** in *alg.*, a method of elimination. See *dialytic*, 3.—**Sylvester's method,** in *med.*, a method of artificial respiration for the resuscitation of a drowning person. Inspiration is effected by drawing the arms up over the head, the subject lying on the back, and expiration by folding the arms over the chest and producing pressure.—**Tentative method,** specifically, a procedure followed by skilled experts in opening locks of either the tumbler, pin, or combination keyless type, in which advantage is taken of possible lost motion due to poor mechanical construction, to detect, by feeling the yielding of the bolt, the position of pins or tumblers. This element of weakness has been reduced or eliminated in the more modern constructions, such as the so-called "paracentric" or deeply corrugated section of the key-way in flat-key types, and by the timelock combinations.—**Thiersch's method of skin-grafting.** See ★*skin-grafting.*—**Unitary method of chemistry.** See *unitary* ★*theory.*—**Welsh method of copper-smelting,** a process of smelting copper in reverberatory furnaces, employed largely in South Wales. It is conducted in six stages. In the first stage the pyritic ore (the ore usually employed) is roasted in a reverberatory furnace to expel the arsenic and a part of the sulphur, and a large proportion of the sulphid of iron present in the pyrites is changed into oxid of iron, while the copper oxid is converted into sulphid. In the second stage of the process the oxid of iron is removed by melting and by causing it to combine with silica: this part of the process is also carried out in a reverberatory furnace, and a coarse metal is obtained containing about 33 per cent. of copper. In the third stage the granulated coarse metal is calcined again for the purpose of oxidizing more of the sulphid of iron. In the fourth stage the calcined coarse metal is fused together with some slag containing silica and ores containing oxid and carbonate of copper. The fused mass separates by gravity into the matte or regulus, containing from 60 to 80 per cent. of copper, and a metallic slag consisting chiefly of silicate of iron, but containing also some copper. The regulus, which is called, according to its appearance, either *cake blue metal*, *cake white metal*, or *pimple metal*, is placed again in the reverberatory furnace. This constitutes the fifth stage of the process, in which the sulphur is partly removed and blister-copper obtained. In the sixth and last stage the metal is refined and toughened by being subjected to oxidizing agencies while molten, during which the arsenic escapes as vapor, while the other metals are converted to oxids.—**Wet method.** Same as *wet way.*—**Will and Varrentrapp's method,** in *chem.*, a process, devised by the two chemists named, for determining quantitatively the nitrogen of organic substances submitted to analysis. It consists essentially in heating, in a tube of hard glass, a weighed portion of the substance mixed with a large excess of soda-lime (a mixture of sodium and calcium hydroxids), thus converting the nitrogen present into ammonia, which is carried as gas into an excess of hydrochloric acid and so fixed as ammonium chlorid. In the ammonium chlorid the ammonia, and from it by calculation the nitrogen, may be determined either by the gravimetric or the volumetric method. This process has for a number of years been in most cases replaced by that of Kjeldahl.—**Zero method.** Same as *null-method* (which see, under *method*).

methodaster (meth′ọ-das-tėr), *n.* [Irreg. < *method* + *-aster*. The formation does not express the meaning intended.] One who makes an ignorant use of scientific methods, or magnifies unduly the importance of methods.

> The *methodaster* and macerator blunts the intuitions, the best thing in youth, drags down thoughts that fly and makes them crawl at a slow, senescent pace. More yet, it tends to pedantry that shields ignorance from exposure, teaches the art of seeming wise with empty minds, . . . and whips up a modicum of knowledge to deceptive proportions. *G. S. Hall*, Adolescence, II. 496.

Methodist. I. *n.*—**Calvinistic Methodists,** Methodists who accept the Calvinistic teachings of Whitefield, in the controversy of 1740, as opposed to the Arminian doctrine of John Wesley. They are found chiefly in Wales.

II. *a.*—**Reformed Methodist Church.** See ★*church.*

Methodological parallelism, physiologico-psychological parallelism; a methodological form of the doctrine of psychophysical parallelism. See the quotation.

> From this [psychoneural parallelism] we must distinguish a second sense of parallelism founded on the disparity just mentioned as also pertaining to the psychical and neural correlates. We may call this physiologico-psychological, or, more briefly, *methodological parallelism*. It rejects, as illogical, the attempt to penetrate to psychical facts from the standpoint of physiology. . . . It also forbids the psychologist to piece out his own shortcomings with tags borrowed from the physiologist. The conceptions of the two sciences are to be kept distinct as the facts themselves to which they relate are distinct. . . . This methodological convention, as we may call it, implies a more stringent interpretation of causation than that expounded by J. S. Mill. *Encyc. Brit.*, XXXII. 66.

Methody (meth′ọ-di), *n.* Same as *Methodist.* [Vulgar or dial.]

methol (meth′ol), *n.* [*meth*(*yl*) + *-ol.*] 1. Same as ★*carbinol*, ★*methanol*, or *methyl alcohol* (which see, under *alcohol*).—2. A colorless hydrocarbon, said to be found in crude wood-alcohol. It is probably a mixture.

methonal (meth′ọ-nal), *n.* [*meth*(*yl*) + *-one* + *-al*³.] A synthetic organic compound, $(CH_3)_2C(SO_2CH_3)_2$, similar in composition and action to sulphonal; dimethylsulphone-dimethylmethane. It is hypnotic.

methose (meth′ōs), *n.* [*meth*(*yl*) + *-ose.*] A colorless, sweet, syrupy carbohydrate, $C_6H_{12}O_6$, prepared by the condensation of formaldehyde under the influence of magnesium hydroxid. It is probably a mixture.

methoxy-group (me-thok′si-gröp), *n.* [*meth*(*yl*) + *oxy-* + *group*¹.] The monovalent organic radical $-OCH_3$, derived from methyl alcohol.

methoxyl (meth-ok′sil), *n.* Same as ★*methoxy-group.*

Methven screen. See ★*light standard.*

Methyl acetanilide, a coal-tar product with properties similar to acetanilide, sold under the trade-name *exalgin*: principally used as an analgesic.—**Methyl aldehyde.** Same as *formaldehyde.*—**Methyl alkali blue.** See ★*blue.*—**Methyl blue.** See *methyl-blue.*—**Methyl chlorid,** a colorless gas, CH_3Cl, prepared by the action of sodium chlorid and sulphuric acid on methyl alcohol, and formed by treating methane with chlorin. It has an ethereal odor and boils at −23.73° C. It is sometimes used, mixed with ethyl chlorid, to produce anæsthesia. Also called *chlormethane.*—**Methyl eosin, orange.** See ★*eosin*, ★*orange*¹.—**Methyl violet.** See ★*methyl-violet.*

methylate, *v. t.* 2. To substitute in (a compound) the methyl radical $-CH_3$, for an equivalent of some other radical or element. —**Methylated spirit.** Alcohol thus denaturized or rendered unfit for drinking (with the addition of one half of one per cent. of benzene) is by law exempt from the internal revenue tax in the United States, and therefore becomes available for manufacturing uses at much reduced cost. Similar regulations have been adopted in other countries, and other materials than crude wood-spirit have been employed to denaturize the common or ethyl alcohol.

methylate (meth′i-lāt), *n.* [*methyl* + *-ate*¹.] A derivative of methyl alcohol.—**Sodium methylate,** a colorless compound, CH_3ONa, prepared by the action of sodium on methyl alcohol.

methylation (meth-i-lā′shọn), *n.* [*methylate* + *-ion.*] The act of methylating. See ★*methylate.*

Methylene acetylenazin. Same as ★*glyoxaline.* —**Methylene benzoate,** a crystalline compound, $(C_6H_5CO_2)_2CH_2$, prepared indirectly from formaldehyde and benzoic acid. It melts at 99° C. and boils at 255° C. —**Methylene blue.** See *methylene-blue.*—**Methylene dibenzamide,** a crystalline compound, $(C_6H_5CONH)_2CH_2$, formed by the action of ammonia on methylene benzoate. It melts at 118° C.—**Methylene gray, green, violet.** See ★*gray,* etc.—**New methylene-blue.** (*a*) A basic coal-tar color of the thiazin type. It dyes tannin-mordanted cotton a fuller and redder blue than methylene-blue. (*b*) A basic color of the oxazin type, distinguished as *new methylene-blue GG.*

methylenitan (meth-il-en′i-tan), *n.* [*methylene* + *-ite*² + *-an.*] A yellow syrupy or amorphous carbohydrate, $C_6H_{10}O_5$, prepared by boiling trioxymethylene with lime-water. It is not fermentable and is probably a mixture.

methylglycine (meth-il-glī′sin), *n.* Same as ★*sarcosine.* Also *methylglycosine.*

methylguanidin (meth-il-gwä′ni-din), *n.* A poisonous substance, of the nature of a ptomaïne, which has been found in decomposing cadavers.

methylindol (meth-il-in′dol), *n.* Same as *skatol.*

methylmethane (meth-il-meth′ān), *n.* Same as ★*ethane.*

methylosis (meth-i-lō′sis), *n.* [Gr. μετά, after, + ὕλη, matter, + *-osis.*] In *geol.,* that variety of metamorphism which involves change of chemical substance. *Geikie,* Text-book of Geol., p. 765.

methylpelletierine (meth″il-pel-e-tēr′in), *n.* A colorless, hygroscopic, dextrorotatory, liquid alkaloid, $C_9H_{17}ON$, contained chiefly in the root of the pomegranate-tree. It boils at 215° C.

methylpentose (meth-il-pen′tōs), *n.* [*methyl* + *pentose.*] A pentose in which one hydrogen atom has been replaced by the methyl-group: used especially of rhamnose or isodulcite.

methylphenacetin (meth″il-fẹ-nas′e-tin), *n.* [*methyl* + *phenacetin.*] A colorless synthetic compound formed by the action of methyl iodide on phenacetin. It is hypnotic.

methylsalol (meth-il-sal′ol), *n.* [*methyl* + *salol.*] A colorless crystalline synthetic compound, a methyl derivative of salol: used in rheumatism.

methyluramine (meth″il-ūr-am′in), *n.* [*methyl* + *ur*(*ic*) + *amine.*] A methyl derivative of guanidin, $NH:C:(NH_2)(NH.CH_3)$, obtained on oxidation of creatine, to which it is closely related: same as ★*methylguanidin.* It has also been found in putrefying meat.

methylurethane (meth″il-ūr-eth′ān), *n.* [*methyl* + *ur*(*ic*) + *ethane.*] A crystalline synthetic hypnotic obtained by the action of cyanogen chlorid on methyl alcohol.

methyl-violet, *n.* **2.** One of several basic colors of the triphenylmethane group. They consist chiefly of the hydrochlorids of pentamethyl and hexamethyl pararosaniline or their benzyl derivatives.

methyostylic (meth″i-ọ-stil′ik), *a.* Relating to, or having that arrangement of the visceral arches termed, methyostyly.

methyostyly (meth-i-os′ti-li), *n.* [Gr. μετά, after, + E. *hyo*(*id*) + Gr. στῦλος, pillar, + *-y*³.] That condition of the visceral arches in which their component parts are more or less shifted from their primitive conditions, and the metapterygoid, symplectic, and adjacent parts assist the hyomandibular in the support of the lower jaw: a condition found in the *Teleostei,* or bony fishes.

> *Methyostyly,* in allusion either to the prominence of the metapterygoid, or to the fact that *methyostyly* represents a morphological advance upon earlier modes.
> *Biol. Bulletin,* June, 1904, p. 59.

methystic¹ (me-this′tik), *a.* [Gr. μεθυστικός, intoxicating, < μεθύειν, be intoxicated, < μέθυ, strong drink: see *mead*¹. Compare *amethyst.*] That intoxicates; intoxicating.

methystic² (me-this′tik), *n.* [NL. *methyst*(*icum*) + *-ic.*] Noting an acid, a colorless compound,  $CH_2\left\langle\begin{matrix}O\\O\end{matrix}\right\rangle C_6H_3C_4H_4COCH_2COOH$, prepared by the hydrolysis of its methyl ester, methysticin (kawain), derived from kawa-root (*Piper methysticum*). It crystallizes in silky, lustrous, prismatic needles and melts at 180° C.

methysticin (me-this′ti-sin), *n.* [NL. *methystic*(*um*) + *-in*².] Same as ★*kawain.*

métier (mā-tyā′), *n.* [F. *métier,* OF. *mestier, mester,* = It. *mestiero,* < L. *ministerium,* attendance, service, office, occupation, work: see *ministry* and *mystery*².] Trade; profession; with reference to literature or art, one's particular kind or line of ability.

> Messrs. Morris & Co.'s furniture was not of William Morris's own design, flat ornament being essentially his *métier.* *A. Vallance,* William Morris, p. 92.

métissage (mā-tẹ-säzh′), *n.* [F., < *métis,* of mixed race: see *métis.*] Mixture of races.

métisse (mā-tēs′), *n.* [F., fem. of *métis:* see *métis.*] A woman of mixed blood, particularly of mixed Indian and white descent.

Metius's ratio. See ★*ratio.*

metoche (met′ọ-kē), *n.* [Gr. μετοχή, a sharing, < μετέχειν, share in, take part in, < μετά, among, + ἔχειν, have.] In *arch.:* (*a*) The arrangement of a dentil-course or of a Doric frieze with its triglyphs and metopes: a term used by Vitruvius (III. 3) [although some authorities make the term *metatome*]. (*b*) The space between two dentils: used by French writers, by a false analogy with *metope.*

metochy (met′ọ-ki), *n.* [Gr. μετοχή, a sharing.] The relation between ants and those of their guests which are tolerated and not disagreeable to them. *Cambridge Nat. Hist.,* VI. 183.

metodontiasis (met″ọ-don-tī′a-sis), *n.* [NL., < Gr. μετά, after, + ὀδούς (ὀδοντ-), tooth, + *-iasis.*] **1.** Faulty development of the teeth.—**2.** The second dentition.

metœstrous (met-es′trus), *a.* Of or pertaining to the metœstrum. See the extract under ★*metœstrum.*

metœstrum (met-es′trum), *n.*; pl. *metœstra* (-trä̤). [Gr. μετά, after, + οἶστρος, vehement impulse.] The period of decline which follows the height of the period of sexual desire in female mammals.

> *Metœstrum,* or the Metœstrous Period.—If conception does not take place during œstrus the activity of the generative organs gradually subsides during a definite period, which I have called the *metœstrum;* and this is followed . . . by a long period of rest.
> *W. Heape,* in Quart. Jour. Micros. Sci., Nov., 1900, p. 8.

metol (met′ol), *n.* [*met*(*hyl*) + *-ol.*] A trade-name of methyl-*p*-amino-*m*-cresol hydrochlorid, $CH_3\overset{4}{N}HC_6H_3O\overset{1}{H}\overset{3}{C}H_3.HCl$. It is used in photography as a developer.

meton. An abbreviation of *metonymy.*

metonym (met′ọ-nim), *n.* [Gr. μετά, after, + ὄνυμα, a name (see *onym*).] A name given to a group (usually a genus) after a different name had been applied to another member (usually a species) of the same group. According to the American code of botanical nomenclature, a metonym is invalid.

> A name is rejected when there is an older valid name based on another member of the same group (*metonym*).
> *Code of Bot. Nomenclature,* p. 175.

metopantralgia (met″ọ-pan-tral′ji-ä̤), *n.* [NL., < Gr. μέτωπον, forehead, + ἄντρον, cave (cavity), + ἄλγος, pain.] Pain in the frontal sinuses.

metopantritis (met″ọ-pan-trī′tis), *n.* [NL., < Gr. μέτωπον, forehead, + ἄντρον, cave (cavity), + *-itis.*] Inflammation of the frontal sinuses.

Metopias (me-tō′pi-as), *n.* [NL., < Gr. μετωπίας, having a broad forehead, < μέτωπον, forehead.] **1.** A genus of labyrinthodont *Amphibia* from the Keuper of Würtemberg, attaining large size and having a broadly triangular skull with anterior orbits, weak dentition, and slightly infolded dentin: the pectoral plates are large and the ribs very heavy.—**2.** A genus of Silurian trilobites.

metopion (me-tō′pi-on), *n.*; pl. *metopia* (-ä̤). [NL., < Gr. μετώπιον, forehead, prop. neut. adj., < μέτωπον, the forehead.] In *anthrop.,* the point in which a line connecting the tubera of the frontal bone intersects the median line. *Amer. Anthropologist,* Jan.–March, 1901, p. 35.

metopodynia (met″ọ-pọ-din′i-ä̤), *n.* [Gr. μέτωπον, forehead, + ὀδύνη, pain.] Neuralgic pain in the forehead.

metopomancy (met′ọ-pọ-man-si), *n.* [Gr. μέτωπον, the forehead, brow, front, face, + μαντεία, divination.] Divination by means of the characteristics of the face.

metoxenous (mẹ-tok′se-nus), *a.* [Gr. μετά, among, + ξένος, a stranger.] Heterœcious.

metranate (met′ra̤-nāt), *n.* [*metran* + *-ate*³.] The office or jurisdiction of a metran or head of the Abyssinian church.

> The Patriarchate of Alexandria, and *Metranate* of Ethiopia. *J. M. Neale,* Hist. Eastern Church, I. 111. *N. E. D.*

metraneurism (mẹ-tran′ụ-rizm), *n.* [Gr. μήτρα, uterus, + ἀνευρυσμός, dilation (see *aneurism*).] Same as ★*metrectasia.*

metraterm (mē′tra̤-tėrm), *n.* [Gr. μήτρα, uterus, + L. *term*(*inus*), end.] In certain trematodes, the short, thick-walled terminal portion of the uterus.

> The uterus terminates in a short heavy-walled region devoid of eggs, known as the *metraterm.*
> *Buck,* Med. Handbook, VII. 862.

metratonia (mē-tra̤-tō′ni-ä̤), *n.* [NL., < Gr. μήτρα, uterus, + ἀτονία, atony.] Atony of the uterus.

metratrophia (mē-tra̤-trō′fi-ä̤), *n.* [Gr. μήτρα, uterus, + ἀτροφία, atrophy.] Atrophy of the uterus.

metrectasia (mē-trek-tā′si-ä̤), *n.* [NL., < Gr. μήτρα, uterus, + ἔκτασις, extension.] Dilatation of the non-pregnant uterus.

metrectomy (mẹ-trek′tọ-mi), *n.* [Gr. μήτρα, uterus, + ἐκτομή, excision.] Same as *hysterectomy.*

metrelcosis (mē-trel-kō′sis), *n.* [NL., < Gr. μήτρα, uterus, + ἕλκωσις, ulceration.] Ulceration of the uterus, especially of its neck.

metremphysema (mē″trem-fi-sē′mä̤), *n.* [NL., < Gr. μήτρα, uterus, + ἐμφύσημα, inflation.] Same as *physometra.*

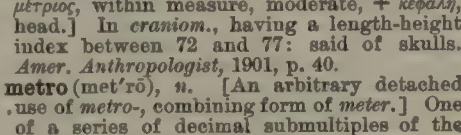
metret (met′ret), *n.* [*meter*³, *metre*², the measure of length, + dim. *-et,* used here with a particular implication.] A decimal submultiple of the meter, in the scheme of magnitudes devised about 1860 by G. J. Stoney. See ★*metro* and ★*uno.*

> We shall use the syllable -et for decimal submultiple. Thus the sixthet will mean the sixth of these -ets, that is, a unit in the sixth place of decimals. In this nomenclature the tenthet of a meter is the same as the tenth-*metret,* i. e., the tenth of the series of *metrets* or decimal submultiples of a meter.
> *G. J. Stoney,* in Smithsonian Rep., 1899, p. 208.

metria (mē′tri-ä̤), *n.* [NL., < Gr. μήτρα, uterus.] Any local inflammatory condition following childbirth.

metric¹, *a.*—**Metric property,** in *geom.,* a property which involves measure or quantity.—**Metric relation,** a relation which involves measure or quantity.

metric², *a.*—**Metric** or **metrical pattern,** in *music,* the scheme of long and short tones, resting upon and conformable to the fundamental rhythm, according to which a particular melody or phrase is laid out. For instance, the *metric pattern* of the first line of "The Bluebells of Scotland," as compared with its *rhythmic pattern,* may be expressed thus:



What is here called a *metric pattern* is, however, often called a *rhythm,* thus reversing the use of the terms. See *meter*², 2, and *rhythm,* 2.

metric³, *a.*—**Metric horse-power.** See ★*horse-power.*

metrics¹, *n.*—**Projective metrics,** in *geom.,* the treatment of metric relations as projective relations to the absolute.

metriocephalic (met″ri-ọ-se-fal′ik), *a.* [Gr. μέτριος, within measure, moderate, + κεφαλή, head.] In *craniom.,* having a length-height index between 72 and 77: said of skulls. *Amer. Anthropologist,* 1901, p. 40.

metro (met′rō), *n.* [An arbitrary detached use of *metro-,* combining form of *meter.*] One of a series of decimal submultiples of the meter: as, *metro*-sixteen, the sixteenth of this series of metros. See the extract and ★*uno.* *G. J. Stoney.*

> A *metro*-ten is the tenth of the *metros* or decimal units of the metre. In other words it is 10^{10} metres.
> *Rep. Brit. Ass'n Advancement of Sci.,* 1901, p. 572, note.

metrocace (mẹ-trok′a̤-sẹ), *n.* [Gr. μήτρα, uterus, + κάκη, bad condition.] Gangrenous inflammation of the uterus.

metrocampsis (mē-trọ-kamp′sis), *n.* [Gr. μήτρα, uterus, + κάμψις, flexion.] Flexion of the uterus.

metrocele (mē′trọ-sēl), *n.* [Gr. μήτρα, uterus, + κήλη, tumor.] Same as *hysterocele.*

metrodynia (mē-trọ-din′i-ä̤), *n.* [NL., < Gr. μήτρα, uterus, + ὀδύνη, pain.] Uterine colic.

metrol. An abbreviation (*a*) of *metrological;* (*b*) of *metrology.*

metroncus (mẹ̄-trong′kus), *n.*; pl. *metronci* (-tron′sī). [NL., < Gr. *μήτρα*, uterus, + *ὄγκος*, mass.] A tumor of the uterus; also, metrophyma.

metroneurosis (mē″trọ-nụ-rō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + NL. *neurosis.*] Any neurosis originating from uterine disease or pregnancy.

metronym (mē′trọ-nim), *n.* [Gr. *μήτηρ*, mother, + *ὄνομα*, *ὄνυμα*, name. Compare *metronymic.*] A personal name derived from the mother or from the maternal family.

> The acceptance of *metronyms* in the genealogies as proofs of female kinship, while patronyms are rejected.
> *Nature*, May 5, 1904, p. xiii.

metronymic, *a.* **2.** In *anthrop.*, relating to that form of society in which the child takes its name from the mother's family, or in which the child is reckoned as a member of the maternal family.

> The older [group] may be named *metronymic.* In a *metronymic* group all the relationships are traced through mothers; relationships on the father's side are ignored.
> *Giddings*, Elem. of Sociol., p. 188.

metronymy (mẹ-tron′i-mi), *n.* [*metronym* + *-y*^{3}.] The system of tracing name and kinship in the female line.

> *Metronymy* and Patronymy.—It is necessary to distinguish between two different types of ethnical organization, one of which is older than the other.
> *Giddings*, Elem. of Sociol., p. 187.

metrop. Same as ★*met.* (*c*).

metropathia (mē-trọ-path′i-ạ̈), *n.* [NL., < Gr. *μήτρα*, uterus, + *πάθος*, disease.] Uterine disease. Also *metropathy.*

metrophlogosis (mē″trọ-flọ-gō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *φλόγωσις*, inflammation.] Severe inflammation of the uterus.

metrophotographic (met″rọ-fō-tọ-graf′ik), *a.* Pertaining to or obtained by means of metrophotography.

> A most useful variation on ordinary *metrophotographic* observations, for it is obvious that the representation of orographic features as effected by this well known process conveys a far more readable impression to the eye of the nature of the country photographed, the rise and fall of undulations, the gradation of slopes, &c., than any flat photograph can possibly convey.
> *Nature*, Oct. 8, 1903, p. 546.

metrophotography (met″rọ-fọ-tog′rạ-fi), *n.* [Gr. *μέτρον*, measure, + E. *photography.*] **1.** The art of making topographic maps from measurements of stereophotographs of great interobjective distance. *Nature*, Aug. 18, 1904, p. 392.—**2.** The taking of stereophotographs for use in map-making.

metrophyma (mē-trō-fī′mạ̈), *n.*; pl. *metrophymata* (-mạ-tạ̈). [NL., < Gr. *μήτρα*, uterus, + *φῦμα*, a swelling.] Same as ★*metroncus.*

metropolitanship (met-rō-pol′i-tạn-ship), *n.* [*metropolitan* + *-ship.*] The office or jurisdiction of a metropolitan.

metropolypus (mē-trọ-pol′i-pus), *n.* [NL., < Gr. *μήτρα*, uterus, + *πολύπους*, polypus.] A polypus of the uterus.

metroproptosis (mē″trọ-prop-tō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *πρόπτωσις*, falling forward, prolapse.] Same as ★*metroptosis.*

metroptosis (mē-trop-tō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *πτῶσις*, falling.] Falling of the uterus. Also *metroproptosis.*

metrorrhagic (mē-trọ-rā′jik), *a.* [*metrorrhagi(a)* + *-ic.*] Pertaining to or suffering from metrorrhagia or uterine hemorrhage.

metrorrhexis (mē-trọ-rek′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *ῥῆξις*, rupture.] Rupture of the uterus during childbirth.

metrosalpingitis (mē-trọ-sal-pin-jī′tis), *n.* [NL., < Gr. *μήτρα*, uterus, + NL. *salpingitis.*] Inflammation of the uterus and Fallopian tubes, or of the latter alone.

metrosalpinx (mē-trọ-sal′pingks), *n.* [NL., < Gr. *μήτρα*, uterus, + *σάλπιγξ*, trumpet.] Same as *Fallopian tube.*

metroscope^2 (met′rọ-skōp), *n.* [Gr. *μέτρον*, measure, + *σκοπεῖν*, view.] A speed-measuring device or tachometer which indicates both speed and distance traveled.

metrostaxis (mē-trọ-stak′sis), *n.* [Gr. *μήτρα*, womb, + *στάξις*, a dropping.] Hemorrhage of the uterus.

metrostenosis (mē″trọ-ste-nō′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *στένωσις*, narrowing.] Abnormal contraction of the cavity of the uterus.

metrosteresis (mē″trọ-ste-rē′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *στέρησις*, deprivation.] **1.** Removal of the uterus.—**2.** Absence of the uterus.

metrostyle (met′rọ-stīl), *n.* [Gr. *μέτρον*, a measure, + E. *style*^{2}.] A speed-controller used in certain mechanical piano-players. It consists of an index that can be moved to right or left to correspond with a line traced on the revolving music-roll, its movement affecting a lever by which the tempo of the music may be increased or diminished.

metrosynizesis (mē″trọ-sin-i-zē′sis), *n.* [NL., < Gr. *μήτρα*, uterus, + *συνίζησις*, collapse, shrinking.] Adhesion of the uterus to neighboring structures, the result of inflammation.

metro-ten (met′rō-ten), *n.* A unit of length equal to 1×10^{10} meters. See ★*metro.*

metrotomy (mẹ-trot′ọ-mi), *n.* [Gr. *μήτρα*, uterus, + *-τομια*, < *ταμεῖν*, cut.] Same as *hysterotomy.*

metuloid (met′ụ-loid), *a.* and *n.* [L. *metula*, a small pyramid, an obelisk, + *-oid.*] **I.** *a.* Resembling a small pyramid or obelisk.

II. *n.* An object that resembles a small pyramid.

> *Metuloids*, modified cystidia, encrusted with lime, which project from the hymenium of Peniophora, giving it a velvety appearance. *Jackson*, Glossary. *N. E. D.*

metzograph (met′zọ-grȧf), *n.* [*Metz*, a surname, + Gr. *γράφειν*, write.] A form of screen, for process-work in photography, in which lines or dots are avoided and an irregularly grained effect is produced by the use of glass with a wavy surface.

meuse, *n.* See *muse*^{3}, *n.*

Mex. An abbreviation (*a*) of *Mexican*; (*b*) of *Mexico.*

mexcal, *n.* Same as *mescal.*

Mexican bead-tree, bean-weevil, boll-weevil, calendar, cherry, chicken-bug. See ★*bead-tree*, ★*bean-weevil*, ★*weevil*, etc.—**Mexican coca.** Same as *Mexican clover.* See *Richardsonia.*—**Mexican coral bean, luster.** See ★*bean*^{1}, ★*luster*^{2}.—**Mexican snapper.** Same as *red snapper.* See *snapper*^{1} (*g*) (3).—**Mexican sole, stinkwood, strips.** See ★*sole*^{2}, ★*stinkwood*, ★*strip*^{2}.—**Mexican walnut.** Same as *rock-walnut* (which see, under *walnut*). See also ★*walnut.*

Mexicana fiber. See ★*fiber*^{1}.

Mexicanize (mek′si-kạn-īz), *v. t.*; pret. and pp. *Mexicanized*, ppr. *Mexicanizing.* [*Mexican* + *-ize.*] To make like the Mexicans; assimilate to the customs and institutions of Mexico.

> These Indians, now practically *Mexicanized.*
> *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. xvi.

meymacite (mā′mạ-sīt), *n.* [*Meymac* (see def.) + *-ite*^{2}.] A hydrated tungstic oxid derived from the alteration of scheelite, found at Meymac, Corrèze, France.

mezure, *n.* and *v.* A simplified spelling of *measure.*

mezzano (med-zä′nō), *a.* [It. *mezzano* (pl. *mezzani*), middle, medium, < L. *medianus*, middle: see *median*^{1}.] Of medium size: applied to a macaroni larger than spaghetti and smaller than the largest macaroni.

> The macaroni called "*Mezzani*," which is a name designating size, not quality, is the preferable kind for macaroni dishes made with cheese.
> *Century Cook Book*, p. 225.

mezzeria (med-ze-rē′ä), *n.* [It., < *mezzo*, middle, half, < L. *medius*, half: see *medium.*] In Italy, a system of halving the produce of the soil between landowner and landholder: same as *metayage.* See the extract.

> A system . . . in certain provinces of Italy and France, where it was once almost universal, and is still very common, is called *mezzeria* and métayage or halving. . . . These expressions . . . merely signify that the produce is divisible in certain definite proportions, which must obviously vary . . . and which do in practice vary so much that the landlord's share is sometimes as much as two-thirds, sometimes as little as one-third.
> *Encyc. Brit.*, I. 415.

mezzograph (mez′ọ or med′zọ-grȧf), *n.* [*mezzo(tint)* + *-graph.*] A photographic print imitating the effect of a mezzotint. *N. E. D.*

mezzotype (mez′ọ- or med′zọ-tīp), *n.* [*mezzo(tint)* + *type.*] A kind of paper for photographic printing. *N. E. D.*

mf. 2. In *elect.*, an abbreviation of *microfarad.*

mfd. An abbreviation (*a*) of *manufactured*; (*b*) in *electrotechnics*, of *microfarad.*

mfg. An abbreviation of *manufacturing.*

mfr. An abbreviation of *manufacturer.*

mg. An abbreviation of *milligram.*

M. G. An abbreviation (*c*) of Latin *Musicæ Graduatus*, Graduate of Music.

M. G., M. Goth. Abbreviations of *Mœsogothic.*

mgm. An abbreviation of *milligram.*

Mgr. An abbreviation (*b*) [*l. c.*] of *milligram*; (*c*) [*l. c.*] of *manager.*

M. Gr. An abbreviation of *Middle Greek.*

M. H. An abbreviation (*a*) of *Master of Horticulture*; (*b*) of *Most Honorable.*

M. Hon. An abbreviation of *Most Honorable.*

mhor (mōr), *n.* An East Indian name of the great whale-shark, *Rhinodon typicus.*

mhorr (môr), *n.* [Ar.] A West African gazel, named by E. T. Bennett *Gazella mhorr*, having horns annulated with ten or twelve prominent rings. *N. E. D.*

M. H. R. An abbreviation of *Member of the House of Representatives.*

M. H. S. An abbreviation (*a*) of *Massachusetts Historical Society*; (*b*) of *Member of the Historical Society.*

mi. An abbreviation (*a*) of *mile*; (*b*) of *mill* or *mills*; (*c*) of *milliampere.*

miam (mī′ạm), *n.* Same as ★*mia-mia.*

mia-mia (mī′mī), *n.* [Also *mi-mi*, *my-my*, *miam*; a native name.] A native hut or shelter of the Australian aborigines.

> The word is aboriginal, and has been spelt variously. *Mia-mia* is the most approved spelling, *mi-mi* the most approved pronunciation. *E. E. Morris*, Austral English.

miasmatology (mī″az-mạ-tol′ọ-ji), *n.* Same as *miasmology.*

miasmic (mī-az′mik), *a.* Same as *miasmatic.*

Miauli, essence of. See ★*essence.*

miazin (mī-az′in), *n.* Same as ★*pyrimidine.*

Mic. An abbreviation of *Micah*, a book of the Old Testament.

mica^2, *n.*—**Water-mica**, a trade-name for clear, colorless muscovite.

> The clear kind is known to the trade as "*water mica*," and this, as a rule, contains no iron, but much of the large-sized muscovite is unfortunately colored to some extent, which detracts greatly from its value.
> *Jour. Franklin Inst.*, Sept., 1905, p. 200.

micacious (mī-kā′shius), *a.* [L. *micare*, shine.] Shining; sparkling; glittering.

> There is the Cyclopean stile, of which Johnson is the great example; the sparkling, or *micacious*, possessed by Hazlitt, and much affected in Reviews and Magazines; the oleaginous, in which Mr. Charles Butler bears the palm, or more appropriately the olive branch.
> *Southey*, Doctor, interchap. xxii.

micacization (mī″kạ-sī-zā′shọn), *n.* [*micacize* + *-ation.*] In *geol.*, the process of becoming charged with mica during metamorphism. *Geikie*, Text-book of Geol., p. 790.

micacize (mī′kạ-sīz), *v. i.*; pret. and pp. *micacized*, ppr. *micacizing.* [Irreg. < *mica*^{2} + *-c-* + *-ize.*] In *geol.*, to become charged with mica, as in the production of mica-schists from shales.

> The Liassic shales by degrees become *micacised.*
> *Geikie*, Text-book of Geol., p. 803.

micanite (mī′kạ-nīt), *n.* [*mica*^{2} + *-n-* + *-ite*^{2}.] A trade-name of mica in sheets of considerable size made by cementing together a number of small clear pieces split very thin: used as an insulating material for electric circuits. *Elect. Rev.*, Oct. 8, 1904, p. 575.

micarelle (mī′kạ-rel), *n.* [*mica*^{2}: from its appearance.] A micaceous mineral which has externally the form of scapolite and results from its alteration. *Chester.*

M. I. C. E. An abbreviation of *Member of the Institute of Civil Engineers.*

Micellian water. See ★*water.*

Mich. An abbreviation (*b*) of *Michigan.*

Michelangelo, bar of. See ★*bar*^{1}.

michron (mī′kron), *n.* [Gr. *μι(κρός)*, small (see *micron*), + *χρόνος*, time.] A unit of time proposed by Lord Kelvin; the time corresponding to the period of vibration of an ether-wave whose length in vacuo is one micron.

Mick (mik), *n.* [An abbreviation of *Michael.*] A slang name for an Irishman. See *micky.*

micr-. In *phys.*, etc., a prefix used instead of *micro-* before a second element beginning with a vowel. See *micro-.*

micracoustic (mik-rạ-kös′tik), *a.* [*micr(o-)* + *acoustic.*] Having the property of rendering faint sounds audible; magnifying weak sounds.

micræsthete, *n.* Same as ★*micresthete.*

micrallantoid (mik-ra-lan′toid), *a.* [*micr(o-)* + *allantoid.*] Characterized by a small allantois. *W. Turner*, Anat., II. 869.

Micrampelis (mi-kram′pe-lis), *n.* [NL. (Rafinesque, 1808), < Gr. *μικρός*, little, + *ἀμπελίς*, dim. of *ἄμπελος*, a vine.] A genus of dicotyledonous plants belonging to the family *Cucurbitaceæ.* (See *Echinocystis.*) *Micrampelis Oregona* is the wild gourd of Oregon, and *M. macrocarpa* and *M. fabacea* are the chilicothe and bitter-root of California. See ★*chilicothe.*

micranatomy (mik-rạ-nat′ọ-mi), *n.* [NL., < Gr. *μικρός*, small, + E. *anatomy.*] Microscopical anatomy.

micrandrous (mik-ran′drus), *a.* [Gr. *μικρός*, small, + *ἀνήρ* (*ἀνδρ-*), male, + *-ous.*] In *bot.*, of or pertaining to the dwarf male plants of the *Œdogoniaceæ.*

Micraster (mik-ras′tėr), *n.* [NL., ‹ Gr. *μικρός*, small, + *ἀστήρ*, star.] A genus of fossil sea-urchins or *Echinoidea* having a heart-shaped tumid test. It is very abundant in the Cretaceous rocks and occurs also in the early Tertiary.

micrencephalic (mik″ren-se-fal′ik), *a.* Same as *micrencephalous.*

micrencephalism (mik-ren-sef′a̤-lizm), *n.* [*micrencephal*(*y*) + *-ism.*] Same as ★*micrencephaly.*

micrencephalus (mik-ren-sef′a̤-lus), *n.*; pl. *micrencephali* (-lī). [NL.] 1. A micrencephalous individual.—2. Same as ★*micrencephaly.*

The conditions known as microcephalus and *micrencephalus.* *Buck*, Med. Handbook, I. 140.

micrencephaly (mik-ren-sef′a̤-li), *n.* [Gr. *μικρός*, small, + *ἐγκέφαλος*, brain, + *-y*³.] In *anthrop.*, the condition or character of being micrencephalous, or small-brained.

micrergate (mī-krėr′gāt), *n.* [Gr. *μικρός*, small, + *ἐργάτης*, worker.] A worker ant of smaller stature than the typical worker form of the species. The workers of the first brood of offspring reared by a young ant-queen are normal micrergates. *Wheeler.*

micresthete (mik′res-thēt), *n.* [Gr. *μικρός*, small, + *αἰσθητός*, ‹ *αἰσθάνεσθαι*, perceive.] In chitons, one of the numerous fine branches given off by a megalesthete. Each branch ends in a swelling which occupies a micropore and carries a small chitinous cap.

micrify (mik′ri-fī), *v. t.* [Gr. *μικρός*, small. See *magnify.*] To make small; minify.

This power which he [the poet] exerts . . . to magnify the small, to *micrify* the great. *Emerson*, Nature, p. 67. *N. E. D.*

Micristodus (mī-kris′tọ̄-dus), *n.* [NL., ‹ Gr. *μικρός*, small, + *ἰστός*, an upright projection, + *ὀδούς*, tooth.] A genus of very large sharks of the family *Rhinodontidæ*, found in the Gulf of California.

micristological (mik″ris-tọ̄-loj′i-ka̤l), *a.* Relating or pertaining to micristology.

micro-aërophile (mī-krọ̄-ā′ẹ-rọ̄-fil), *a.* and *n.* [Gr. *μικρός*, small, + E. *aërophile.*] I. *a.* Same as ★*micro-aërophilous.*

II. *n.* A micro-aërophilous organism.

micro-aërophilic (mī″krọ̄-ā-ẹ-rọ̄-fil′ik), *a.* Same as ★*micro-aërophilous.*

Clostridium Pasteurianum, which Winogradsky found to possess nitrogen-assimilating properties, is an anaerobe, but it also grows in symbiosis with aerobic forms; it is, therefore, *microaerophilic.* *Science*, March 6, 1903, p. 371.

micro-aërophilous (mī″krọ̄-ā-ẹ-rof′i-lus), *a.* [*micro-aërophile* + *-ous.*] Requiring but little free oxygen: a term used to designate bacteria and other organisms. See *anaërobic.*

micro-ampere (mī′krọ̄-am-pãr′), *n.* A unit employed in the measurement of very small electric currents; one millionth of an ampere or 1×10^{-7} c. g. s. units of current.

micro-analysis (mī″krọ̄-a̤-nal′i-sis), *n.* Analysis by means of the microscope.

micro-anemometry (mī″krọ̄-an-e-mom′e-tri), *n.* [Gr. *μικρός*, small, + E. *anemometry.*] The determination of wind-velocity on a very small scale, specifically by Barus's filar micrometer.

microbacillar (mī-krọ̄-bas′i-lär), *a.* [Gr. *μικρός*, small, + E. *bacillus* + *-ar*³.] Same as *bacterial.* *Buck*, Med. Handbook, VII. 88.

microbacillary (mī-krọ̄-bas′i-lạ̄-ri), *a.* Same as *bacterial.*

microbalance (mī′krō-bal-ans), *n.* [Gr. *μικρός*, small, + E. *balance.*] A delicate balance for weighing 1 milligram or less. It consists of a capillary glass tube 30 centimeters long and 0.5 millimeter thick, bent at a right angle so as to make one part a pointer 9 centimeters long. The tube is attached, by water-glass, to a quartz fiber 5 centimeters long and fastened to a pronged support. The instrument is thus built on the principle of the torsion balance. A hooked platinum wire melted into the end of the glass beam carries a platinum basket of 20 milligrams weight which holds the objects to be weighed. The deflection of the pointer is read from a scale, and platinum-wire riders serve as weights. The mechanism was devised by Nernst.

microbarograph (mī-krọ̄-bar′ọ̄-gråf), *n.* [*micro-* + *barograph.*] A barograph designed to record minute and rapid variations in the pressure of the atmosphere. *Nature*, Aug. 18, 1904, p. 368.

microbicidal (mī-krō-bi-sī′da̤l), *a.* [*microbicide* + *-al*¹.] Destructive to microbes.

microbioscope (mī-krọ̄-bī′ọ̄-skōp), *n.* [Gr. *μικρός*, small, + E. *bioscope.*] An apparatus for showing or recording the movements of micro-organisms. *Nature*, Nov. 5, 1903, p. 18.

Microbiotheriidæ (mī″krọ̄-bī-ọ̄-thẹ̄-rī′i-dē), *n. pl.* [*Microbiotherium*, the type genus, + *-idæ.*] A family of small marsupial mammals, containing extinct species from the Miocene of Patagonia. *Ameghino*, 1887.

microbism (mī′krọ̄-bizm), *n.* A condition due to the presence of microbes.

The various explanations of "return" cases were considered, including, besides the ordinary ones of failure of disinfection or a true "return" of infection, the possibility of a relapse of the original disease, of latent *microbism*, or of missed cases. *Lancet*, June 18, 1904, p. 1724.

microblast (mī′krọ̄-blåst), *n.* [Gr. *μικρός*, small, + *βλαστός*, germ.] An unusually small nucleated red blood-corpuscle. See cut under ★*blood*, 1.

microbrachia (mī-krọ̄-brā′ki-a̤), *n.* [NL., ‹ Gr. *μικρός*, small, + *βραχίων* (L. *brachium*), arm.] A condition in which the arms are abnormally small.

microbrachius (mī-krọ̄-brā′ki-us), *n.*; pl. *microbrachii* (-ī). [NL.] One who has abnormally small, but not deformed, arms.

microbranchiate (mī-krọ̄-brang′ki-āt), *a.* [Gr. *μικρός*, small, + *βράγχιον*, gill, + *-ate*¹.] Relating or pertaining to the small gill. Contrasted with ★*macrobranchiate.*

In the body of the animal [Nautilus] two metameres are recognised—the *microbranchiate* segment, containing the smaller gill, the outer osphradium, pericardial gland, kidney, and kidney opening, with the generative opening on the right side and the opening of the pear-shaped body on the left; and the macrobranchiate segment, containing the greater gill and the inner osphradium, pericardial gland, kidney, and renal opening. *Annals and Mag. Nat. Hist.*, Jan., 1903, p. 135.

microcalory (mī-krọ̄-kal′ọ̄-ri), *n.* [Gr. *μικρός*, small, + E. *calory.*] One thousandth of a small calory.

microcaltrop (mī-krō-kal′trop), *n.* [Gr. *μικρός*, small, + E. *caltrop.*] Same as *microcaltrops.*

Microcampyli (mī-krọ̄-kam′pi-lī), *n. pl.* [NL., ‹ Gr. *μικρός*, small, + *καμπύλος*, curved.] In Hyatt's classification of the cephalopods, a suborder of the *Ammonoidea.* It is the primitive suborder of forms which possess a ventral siphuncle and are characterized by undivided ventral lobes and very slightly developed saddles.

microcanonical (mī″krọ̄-ka̤-non′i-ka̤l), *a.* [Gr. *μικρός*, small, + E. *canonical.*] In *statistical mech.*, of or pertaining to a distribution in phase such that all the systems of an ensemble have the same energy. *J. W. Gibbs*, Statistical Mech., p. 114.—**Microcanonical distribution, ensemble.** See ★*distribution*, ★*ensemble.*

microcanonically (mī″krọ̄-ka̤-non′i-ka̤l-i), *adv.* In a microcanonical manner.

microcardia (mī-krọ̄-kär′di-a̤), *n.* [NL., ‹ Gr. *μικρός*, small, + *καρδία*, heart.] A condition in which the heart is abnormally small.

microcardius (mī-krọ̄-kär′di-us), *n.*; pl. *microcardii* (-ī). [NL.] A monster having a very small and imperfect heart.

microcarpous (mī-krọ̄-kär′pus), *a.* [Gr. *μικρός*, small, + *καρπός*, fruit.] In *bot.*: (*a*) Having small fruit. (*b*) Of mosses, having small urns.

microcentrosome (mī-krọ̄-sen′trọ̄-sōm), *n.* [Gr. *μικρός*, small, + *κέντρον*, center, + *σῶμα*, body.] In *cytol.*, the central granule of the astrosphere in the dividing-cell; the centriole of Boveri. *Ziegler*, 1898.

microcentrum (mī-krọ̄-sen′trum), *n.*; pl. *microcentra* (-tra̤). [NL., ‹ Gr. *μικρός*, small, + *κέντρον*, center.] In *cytol.*, the centrosome or cluster of centrosomes united by a primary centrodesmus in the astral system of certain cells. *Heidenhain*, 1894.

microcephal (mī-krọ̄-sef′a̤l), *n.* [*microcephal*(*ous*).] A microcephalous individual. *Jour. Amer. Folk-lore*, April–June, 1902, p. 121.

microceratous (mī-krọ̄-ser′a̤-tus), *a.* [Gr. *μικρός*, small, + *κέρας* (*κερατ-*), horn, + *-ous.*] In *entom.*, having small antennæ.

Microchæta, *n.* 2. [*l. c.*; pl. *microchætæ* (-tē).] One of certain small bristles which occur on the body of a dipterous insect and are used in classification. See ★*chætotaxy.*

The supra-alars are unusual; the cephalic one is small, often so small as to be little or not at all distinguishable from the *microchaetae.* *Kansas Univ. Quarterly*, July, 1900, p. 224.

microchemic (mī-krọ̄-kem′ik), *a.* Same as *microchemical.*

microchiria (mī-krọ̄-kī′ri-a̤), *n.* [NL., ‹ Gr. *μικρός*, small, + *χείρ*, hand.] A condition in which the hands are abnormally small. Also *microcheiria.*

Microchœridæ (mī-krọ̄-kē′ri-dē), *n. pl.* [*Microchœrus*, the type genus (Gr. *μικρός*, small, + *χοῖρος*, hog), + *-idæ.*] A family of small lemur-like animals, comprising extinct species of small size whose remains occur in Eocene strata. *Lydekker*, 1887.

microclase (mī′krọ̄-klās), *n.* [Gr. *μικρός*, small, + *κλάσις*, fracture.] A name given by Wiik to the feldspar usually called *anorthoclase.*

microcnemia (mī-krok-nē′mi-a̤), *n.* [Gr. *μικρός*, small, + *κνήμη*, tibia.] The condition of having the leg short below the knee. See ★*brachycnemic.*

microcnemic (mī-krok-nē′mik), *a.* Same as ★*brachycnemic.*

micrococcal (mī-krọ̄-kok′a̤l), *a.* [*micrococc*(*us*) + *-al*¹.] Pertaining to, or of the nature of, a micrococcus.

Micrococcus lanceolatus. See ★*diplococcus pneumoniæ* (with cut).—**Micrococcus melitensis**, the pathogenic micro-organism of Malta fever.—**Micrococcus neoformans**, an alleged pathogenic micro-organism of cancer: its existence is doubtful.

Microcodon (mī-krō-kō′don), *n.* [Gr. *μικρός*, small, + *κώδων*, bell.] The typical genus of the family *Microcodonidæ.* *Ehrenberg*, 1830.

Microcodonidæ (mī″krọ̄-kọ̄-don′i-dē), *n. pl.* [NL., ‹ *Microcodon* + *-idæ.*] A family of illoricate rotifers, of the order *Ploima*, containing the genera *Microcodon* and *Microcodides.*

Microcotyle (mī-krọ̄-kot′i-lē), *n.* [NL. (Van Beneden and Hesse, 1863), ‹ Gr. *μικρός*, small, + *κοτύλη*, a cup, socket.] The typical genus of the family *Microcotylidæ.*

Microcotylidæ (mī″krọ̄-kọ̄-til′i-dē), *n. pl.* [NL., ‹ *Microcotyle* + *-idæ.*] A family of trematodes, of the order *Heterocotylea*, having two buccal and many small posterior suckers borne on a variously shaped marginal cotylophore. It contains the genera *Microcotyle*, *Gastrocotyle*, and *Axine.*

microcranous (mī-krọ̄-krā′nus), *a.* [Gr. *μικρός*, small, + *κρανίον*, cranium.] In *craniom.*, having a skull of small volume, from 1,540 to 1,630 cubic centimeters in males, and from 1,420 to 1,500 cubic centimeters in females.

microcryptocrystalline (mī″krọ̄-krip-tọ̄-kris′ta̤-lin), *a.* [Gr. *μικρός*, small, + E. *cryptocrystalline.*] In *petrog.*, microscopically cryptocrystalline, that is, composed of crystals so minute that their form cannot be seen with a microscope, their presence being recognized by the phenomenon of aggregate polarization.

The closest approach to typical andesitic microstructure occurs in the dike cutting shales in the ridge south of Winter Creek. . . . The transition from a groundmass of brown *microcryptocrystalline* matrix with distinct lath-shaped feldspar microlites and magnetite grains to one that is gray in thin section with larger feldspar laths and a slightly micropoikilitic structure can be observed in one rock section. *U. S. Geol. Surv.*, Monographs, XXXII. 64.

microcrystal (mī-krọ̄-kris′ta̤l), *n.* [*micro-* + *crystal.*] A microscopic crystal.

microcrystallography (mī-krọ̄-kris-ta̤-log′ra̤-fi), *n.* [*micro-* + *crystallography.*] Microscopic crystallography.

microcytase (mī-krọ̄-sī′tās), *n.* [Gr. *μικρός*, small, + E. *cytase.*] A cytase (complement) in the sense of Metchnikoff, derived from the polymorphonuclear leucocytes.

microdactylism (mī-krọ̄-dak′ti-lizm), *n.* [Gr. *μικρός*, small, + *δάκτυλος*, finger or toe, + *-ism.*] A condition in which the fingers and toes are abnormally short. *Buck*, Med. Handbook, IV. 498.

microdactyly (mī-krọ̄-dak′ti-li), *n.* Same as ★*microdactylism.*

microdentous (mī-krọ̄-den′tus), *a.* [Gr. *μικρός*, small, + L. *dens* (*dent-*), tooth, + *-ous.*] Having abnormally small teeth.

Microdesmus (mī-krọ̄-des′mus), *n.* [NL., ‹ Gr. *μικρός*, small, + *δεσμός*, band.] A genus of small fishes of the family *Cerdalidæ*, found off the Pacific coast of tropical America.

microdiactine (mī″krọ̄-dī-ak′tin), *n.* [Gr. *μικρός*, small, + *δι-*, twice, + *ἀκτίς* (*ἀκτιν-*), ray.] A small diactine sponge-spicule.

microdiæne (mī-krọ̄-dī′ēn), *n.* [Gr. *μικρός*, small, + *δι-*, two-, + *-αινα* as in *τρίαινα*, trident.] In the nomenclature of the sponge-spicules, a triod of minute size having two arms of like curvature.

microdichotriæne (mī-krọ-dī-kọ-trī′ēn), *n.* [Gr. *μικρός*, small, + *δίχα*, in two, + *τρίαινα*, trident.] A small or reduced dichotriæne.

> Spicules calthrops-like microtriænes and spined microxeas; *microdichotriænes* absent.
> *Proc. Zool. Soc. London*, 1902, II. 218.

Microdiscus (mī-krọ-dis′kus), *n.* [Gr. *μικρός*, small, + *δίσκος*, disk.] A primitive Cambrian genus of trilobites of the family *Agnostidæ*, with slightly segmented cephalon and pygidium. See *Agnostus*.

microdont, *a.* **2.** In *craniom.*, having a dental index less than 42.

microdontic (mī-krọ-don′tik), *a.* [*microdont* + *-ic.*] Same as ★*microdont*, 2.

microdontism (mī-krọ-don′tizm), *n.* [*microdont* + *-ism.*] The character or state of being microdont; microdentism.

microdontous (mī-krọ-don′tus), *a.* [*microdont* + *-ous.*] Same as *microdont*.

microdyne (mī′krō-dīn), *n.* [Gr. *μικρός*, small (see *micron*), + E. *dyne.*] A unit of force equal to one millionth of a dyne.

micro-ergate (mī-krọ-ėr′gāt), *n.* See ★*micrergate.*

microfauna (mī-krọ-fâ′nä), *n.*; pl. *microfaunæ* (-nē). [NL., < Gr. *μικρός*, small, + L. *fauna.*] A fauna in which all the animals are of minute or diminutive size; a congeries of microscopic animals, or sometimes a depauperated fauna. *Geog. Jour.* (R. G. S.), X. 323.

microflora (mī-krọ-flō′rä), *n.*; pl. *microfloræ* (-rē). [Gr. *μικρός*, small, + L. *flora.* See *flora.*] A flora in which all the plants are of minute size; a congeries of microscopic plants: opposed to ★*macroflora.* *Smithsonian Rep.*, 1904, p. 351.

microform (mī′krọ-fôrm), *n.* [Gr. *μικρός*, small, + E. *form.*] A microscopic organism, or one that is too small to be studied without a microscope.

microfungus (mī-krō-fung′gus), *n.*; pl. *microfungi* (-fun′jī). [NL., < Gr. *μικρός*, small, + L. *fungus*, fungus.] A minute fungus which must be magnified in order that its gross morphology may be discerned: distinguished from mushrooms and other large forms.

microgamete (mī-krō-gam′ēt), *n.* [Gr. *μικρός*, small, + E. *gamete.*] **1.** The smaller of the two conjugating cells or gametes of a colonial rhizopod. See ★*macrogamete.*—**2.** A male germ-cell; a spermatozoön. *Encyc. Brit.*, XXXII. 209.

> Coccidium differs further from Monocystis in that the conjugating gametes are sexually differentiated, the small, active one, or *microgamete*, functions as the male cell, and the larger quiescent one, or macrogamete, as the female or egg cell, while in the gregarine, on the other hand, the conjugating gametes are of equal size.
> *Pop. Sci. Mo.*, June, 1901, p. 192.

microgametocyte (mī″krọ-gam′e-tọ-sīt), *n.* [Gr. *μικρός*, small, + E. *gametocyte.*] In sporozoans, the mother-cell of a microgamete or male element: contrasted with ★*macrogametocyte.*

> Another interpretation would regard this as the male element (mother-*microgametocyte*), in which the falciform bodies represent the *microgametocytes* and from the latter the microgametes may arise somewhat as described by Siedlecki for Adelea ovata, i. e. after the *microgametocyte* has reached the macrogamete.
> *Jour. Exper. Med.*, March 17, 1902, p. 310.

microgametophyte (mī-krọ-gam′e-tọ-fīt), *n.* [Gr. *μικρός*, small, + E. *gametophyte.*] A male gametophyte when the sexes are diœciously separated.

microgametophytic (mī″krọ-gam-e-tọ-fit′ik), *a.* [Gr. *μικρός*, small, + E. *gametophyt(e)* + *-ic.*] Of the nature of or relating to a microgametophyte.

> The question here arises if we are to regard the rich prothallial endowment of the Podocarpineæ as the retention of a feature possessed by the ancestral Coniferales or as a recent cenogenetic adaptation, which has arisen at a later stage of evolution. This question can only be answered by a consideration of the *microgametophytic* conditions found in the Gymnosperms in general, particularly the more ancient of those still living.
> *Amer. Nat.*, June, 1907, p. 361.

microgauss (mī′krọ-gous), *n.* In *elect.*, one millionth part of a gauss or of a c. g. s. unit: a practical unit of magnetic induction.

microgilbert (mī-krō-gil′bėrt), *n.* In *elect.*, one millionth part of a gilbert or of a c. g. s. unit: a practical unit of magnetomotive force.

micrognathia (mī-krog-nā′thi-ä), *n.* [NL., < Gr. *μικρός*, small, + *γνάθος*, jaw.] In *anthrop.*, the condition of having small jaws.

micrognathic (mī-krog-nath′ik), *a.* Same as ★*micrognathous.*

micrognathism (mī-krog′nạ-thizm), *n.* Same as ★*micrognathia.*

micrognathous (mī-krog′nạ-thus), *a.* [Gr. *μικρός*, small, + *γνάθος*, jaw, + *-ous.*] In *anthrop.*, having small jaws.

Microgobius (mī-krō-gō′bi-us), *n.* [NL., < Gr. *μικρός*, small, + NL. *Gobius.*] A genus of gobioid fishes found on the Atlantic coast of the United States.

microgram, *n.* **2.** A photograph or a drawing of a microscopic object.

microgranitoid (mī-krọ-gran′i-toid), *a.* [*microgranit(e)* + *-oid.*] Resembling microgranite.

micrograph, *n.* **2.** An instrument for photographing microscopic objects.—**3.** Same as ★*microgram*, 2.

> The authors [of "Alloys of Copper and Cuprous Oxide"] studied by metallographical methods the various alloys of copper and cuprous oxide and show that area measurements of enlarged *micrographs* of pure coppers containing less oxygen than the eutectic give good valuations of the oxygen contained.
> *Elect. World and Engin.*, March 12, 1904, p. 532.

micrographical (mī-krọ-graf′i-kạl), *a.* Same as *micrographic.*

micrography, *n.* **2.** The art or process of photographing or depicting microscopic objects; photomicrography.

microgyne (mī′krō-jīn), *n.* [Gr. *μικρός*, small, + *γυνή*, a female.] A female or queen ant of smaller stature than the typical female form of the species. *Wasmann.*

microgyria (mī-krọ-jir′i-ạ), *n.* [NL., < Gr. *μικρός*, small, + *γῦρος*, a turning (see *gyrus*).] A condition in which the cerebral convolutions are abnormally small. *Jour. Med. Research*, March, 1907, p. 104.

microhemozoite, microhæmozoite (mī-krọ-hem-ọ-zō′īt), *n.* [Gr. *μικρός*, small, + *αἷμα*, blood, + *ζῷον*, animal, + *-ite*^{2}.] The smaller form of schizont in the development of the hemogregarine *Drepanidium serpentium.* Compare ★*macrohemozoite.* *Lutz.*

microhenry (mī-krọ-hen′ri), *n.*; pl. *microhenries* (-riz). [Gr. *μικρός*, small, + E. *henry.*] In *elect.*, one millionth part of a henry or one thousand c. g. s. units: a practical unit of inductance.

microhistological (mī″krō-his-tọ-loj′i-kạl), *a.* [*microhistolog(y)* + *-ic.*] Of or pertaining to microhistology.

microhistology (mī″krọ-his-tol′ọ-ji), *n.* [Gr. *μικρός*, small, + E. *histology.*] Microscopic histology; micristology.

microjoule (mī′krọ-joul), *n.* [Gr. *μικρός*, small, + E. *joule.*] A practical unit of work equal to ten ergs.

microkinetic (mī″krọ-ki-net′ik), *a.* [Gr. *μικρός*, small, + E. *kinetic.*] Pertaining to or consisting of minute, continued, and rapid motions or movements, such as those of tremor, titillation, formication, etc. [Rare.]

> The aimless and archaic movements of infancy . . . in the form of isolated automatic tweaks or twinges, and perhaps even the still more *microkinetic* gleanings of fibrillary formications, are . . . by slow processes of combined analysis and synthesis . . . made over into habits and conduct that fit the world of present environment.
> *G. S. Hall*, Adolescence, I. 163.

microlecithal (mī-krọ-les′i-thạl), *a.* [Gr. *μικρός*, small, + *λέκιθος*, yolk of an egg, + *-al*^{1}.] In *embryol.*, having very little food-yolk: applied to certain ova, such as those of sponges, marine worms, echinoderms, etc.: opposed to ★*macrolecithal* or ★*bradylecithal.*

microlepidotous (mī″krọ-lep-i-dō′tus), *a.* [Gr. *μικρός*, small, + *λεπιδωτός*, scaled.] Having minute scales.

Microlepidotus (mī″krọ-lep-i-dō′tus), *n.* [NL., < Gr. *μικρός*, small, + *λεπιδωτός*, scaled, < *λεπίς* (*λεπιδ-*), scale.] A genus of fishes of the family *Hæmulidæ*, found in the Gulf of California.

Microlestes (mī-krọ-les′tēz), *n.* [NL., < Gr. *μικρός*, small, + *λῃστής*, robber.] A genus of small marsupial mammals from the Triassic rocks of England and Germany.

microline (mī′krọ-līn), *n.* [*micro-* + *line*^{2}, *n.*] A proposed unit of measurement of microscopic objects. See the extract.

> The size of microscopic objects could . . . be recorded simply, by saying they were one, two, three, or more *Microlines* in diameter.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1857, p. 115.

micrologic (mī-krọ-loj′ik), *a.* [*microlog(y)* + *-ic.*] **1.** Marked by minute investigation; micrological.—**2.** Of or pertaining to micrology; microscopical.

microlophic (mī-krọ-lof′ik), *a.* [Gr. *μικρός*, small, + *λόφος*, crest, + *-ic.*] In *craniom.*, having a low incisor crest in the anterior nasal aperture and an indistinct alveolar line. *Harrison Allen*, Jour. Acad. Nat. Sci., Phila., N. S., X. 419.

microm (mī′krom), *n.* [An alteration of *micron.*] Same as *micron*: proposed as a substitute for *micron* by Lord Kelvin, to avoid confusion with the unit of time, the *michron*, also suggested by him.

micromagnetometer (mī-krọ-mag-ne-tom′e-tėr), *n.* [Gr. *μικρός*, small, + E. *magnetometer.*] An instrument devised by Pender and Cremieu for the determination of very weak magnetic fields. It consists essentially of a horizontal bar carrying a vertical bar-magnet at one end and suspended by a torsion-fiber. A field of 0.00001 c. g. s. unit gives a large deflection. *Elect. World and Engin.*, April 18, 1903, p. 666.

micromania (mī-krọ-mā′ni-ä), *n.* [Gr. *μικρός*, small, + *μανία*, madness.] **1.** A delusion that objects, especially the parts of one's own body, are growing smaller.—**2.** An insane self-depreciation.

micromaniac (mī-krō-mā′ni-ak), *a.* and *n.* [*micromani(a)* + *-ac.*] **I.** *a.* Pertaining to or suffering from micromania.

II. *n.* **1.** One who is afflicted with micromania.—**2.** One who has a mania for littleness, weakness, or inefficiency. [Rare.]

> Alas, the Unity of Italy is undermined by the *micromaniacs* who aim at shutting Italy in her shell, at isolating her from the great nations, forbidding her to share the active initiatives on whose development her glorious destinies depend.
> *Crispi* (trans.), in The Nation, May 11, 1899, p. 350.

micromanometer (mī″krọ-mạ-nom′e-tėr), *n.* [Gr. *μικρός*, small, + E. *manometer.*] A very small, delicate manometer for measuring minute differences of pressure.

micromazia (mī-krọ-mā′zi-ä), *n.* [NL., < Gr. *μικρός*, small, + *μαζός*, breast.] A condition in which the breasts are abnormally small.

micromelia (mī-krọ-mē′li-ä), *n.* [NL., < Gr. *μικρός*, small, + *μέλος*, limb.] A condition in which the limbs are abnormally small.

micromelic (mī-krọ-mel′ik), *a.* [*micromel(ia)* + *-ic.*] Relating to or characterized by micromelia; having small extremities; dwarfish.

micromembrane (mī-krọ-mem′brān), *n.* [Gr. *μικρός*, small, + E. *membrane.*] A very thin layer of finely porous material, such as is used in experiments on osmose.

micromere, *n.* **2.** One of the small blastomeres, or cells, which result from the early cleavage of the egg: opposed to ★*macromere* or ★*megamere.*

> The eggs undergo a total, but unequal segmentation, with small cells (*micromeres*) at one pole, and larger, yolk-laden cells (macromeres) at the other.
> *J. S. Kingsley*, Vertebrate Zool., p. 222.

micromerism (mī-krom′ẹ-rizm), *n.* [*micromere* + *-ism.*] A collective term for the theories that assume that living protoplasm is made up of a great number of excessively minute units, or biomolecules, each endowed with the peculiar properties of living substance, namely, assimilation, growth, and reproduction.

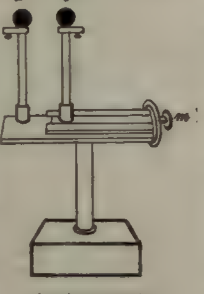
> These [speculative] theories have been ably brought together and discussed by Delage, who has included them all under the term "*micromerism*," since they agree in the assumption that the living substance contains, or consists of, a vast number of excessively minute particles—*i. e.*, aggregates or combinations of molecules, which give to the protoplasm its specific properties and tendencies ("idioplasm" of Nägeli). *Encyc. Brit.*, XXXII. 41.

micromerozoite (mī″krọ-mer-ọ-zō′īt), *n.* [Gr. *μικρός*, small, + *μέρος*, part, + *ζῷον*, animal, + *-ite*^{2}.] In sporozoans, a microsporozoite: contrasted with ★*macromerozoite.*

micromesentery (mī-krọ-mez′en-ter-i), *n.* [Gr. *μικρός*, small, + E. *mesentery.*] In some anthozoans, a small, incomplete mesentery devoid of gonads and filaments. Compare ★*macromesentery.*

micrometallurgy (mī-krō-met′ạl-ėr-ji), *n.* [Gr. *μικρός*, small, + E. *metallurgy.*] The study of metals, particularly as to structure and crystalline form, under the microscope.

micrometer, *n.*—**Dioptric micrometer**, a form of double-image micrometer having the divided lens in the eye-tube.—**Electric micrometer**, a micrometer for the precise measurement of lengths, in which contacts are indicated electrically, thus permitting an accuracy of determination to within less than one micron.—**Micrometer caliper.** See ★*caliper.*—**Micrometer eyepiece.** See *ocular* ★*micrometer.*—**Ocular micrometer**, an eyepiece micrometer which consists usually of a cross-hair or set of cross-hairs mounted upon a slide in the eyepiece of a microscope or other optical instrument, and moved through the field by means of a micrometer-screw.—**Repsold's transiting** or **registering micrometer,** a micrometer fitted to a transit-instrument and so arranged that with it the observer can follow a star with the wire, keeping it continually bisected. The passage of the wire across certain definite points of the field is automatically registered on the chronograph by electricity, and the resulting observation is nearly, if not quite, free from personal equation.—**Ring-micrometer,** an opaque, accurately circular ring, supported by arms, or by being cemented upon a glass plate, in the focal plane of the object-glass of a telescope. It is used to determine the difference of declination and right-ascension between two or more bodies by observations of their transits across the ring. It has the advantage of simplicity and does not require an equatorial mounting, but it is less accurate than the filar micrometer.—**Spark-micrometer,** an instrument devised by Riess for the determination of large differences of electrical potential by means of the length of the spark in air between adjustable knobs of metal. The spark passes between the balls *a* and *b*, the distance between which is varied by means of the micrometer-screw *m*.—**Square-bar micrometer,** an instrument similar to the ring-micrometer, except that the ring is replaced by a square composed of four parallel-sided strips, crossing at right angles and so placed that one of its diagonals is exactly east and west, thus requiring an equatorial mounting of the telescope. It has an advantage over the ring-micrometer in the easier reduction of observations and in the accuracy of results.



Spark-micrometer.

micrometer-cock (mī-krom′e-tėr-kok), *n.* A valve capable of delicate adjustment by means of a micrometer-screw.

micro-microfarad (mī″krọ̄-mī-krọ̄-far′ad), *n.* In *elect.*, a practical unit for the measurement of very small capacities; one millionth of a microfarad, or 1×10^{-21} of a c. g. s. unit of the electromagnetic system.

micromil (mī′krō-mil), *n.* [Gr. *μικρός*, small, + E. *mil(lion).*] A unit of length equal to one millionth of a mil; 1×10^{-9} inches, or about 2.540×10^{-8} millimeters.

micromorph (mī′krọ̄-môrf), *n.* [Gr. *μικρός*, small, + *μορφή*, form.] A specimen of a size smaller than the normal.

> *Micromorphs* . . . occur . . . in many parts of the Inferior Oolite.
>
> *Hudleston*, Gasterop. (Palæont. Soc.), p. 112.

micromotoscope (mī-krọ̄-mō′tọ̄-skōp), *n.* [Gr. *μικρός*, small, + E. *motoscope.*] In *photog.*, an instrument for photographing microscopic organisms in motion.

micromyelia (mī″krọ̄-mī-ē′li-ä̤), *n.* [NL., < Gr. *μικρός*, small, + *μυελός*, marrow.] A condition presented by a small or imperfectly developed spinal cord.

microne (mī′krōn), *n.* Same as *micron.*

micronephric (mī-krọ̄-nef′rik), *a.* [Gr. *μικρός*, small, + *νεφρός*, kidney, + *-ic.*] Pertaining to or characteristic of a micronephridium: as, the *micronephric* type of nephridia in annelids. Compare ⋆*meganephric.*

micronephridium (mī″krọ̄-nef-rid′i-um), *n.*; pl. *micronephridia* (-ä̤). [NL., < Gr. *μικρός*, small, + NL. *nephridium.*] A diplonephridium. Compare ⋆*mesonephridium.*

micronuclear (mī-krọ̄-nū′klẹ̄-ä̤r), *a.* [*micronucleus.*] Pertaining to, or of the nature of, a micronucleus.

micro-organismal (mī″krọ̄-ôr-gạ-niz′mạl), *a.* [*micro-organism* + *-al*^{1}.] Of or pertaining to micro-organisms, such as bacteria and *Protozoa.*

> The *microorganismal* differences between fresh and stale sewage are also dwelt upon.
>
> *Science*, June 26, 1903, p. 1006.

Microperca (mī-krọ̄-pėr′kä̤), *n.* [NL., < Gr. *μικρός*, small, + *πέρκη*, perch.] A genus of percoid fishes confined to the fresh waters of the eastern United States.

microperthite (mī-krọ̄-pėr′thīt), *n.* [Gr. *μικρός*, small, + E. *perthite.*] A perthite in which the interlaminated structure of the orthoclase (or microcline) and albite is only distinctly discernible by aid of the microscope in a thin section. See ⋆*cryptoperthite.*

micropetalous (mī-krọ̄-pet′ạ-lus), *a.* [Gr. *μικρός*, small, + *πέταλος*, a petal.] Having minute petals.

microphag (mī′krọ̄-fag), *n.* Same as ⋆*microphage.*

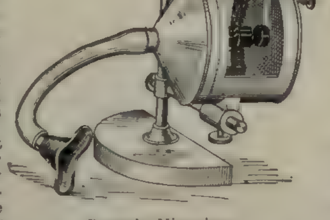
microphage (mī′krọ̄-fāj), *n.* [Gr. *μικρός*, small, + *-φαγος*, < *φαγεῖν*, eat.] A small phagocyte, or wandering leucocyte, which engulfs or devours other cells, bacteria, etc.: opposed to ⋆*macrophage.*

> Metchnikoff has attempted to show that the chief function of the polynuclears or "*microphages*" is to take up bacteria and inert particles, whilst for animal cells they show negative chemiotaxis, remaining inactive; the macrophages doing all the work of phagocytosis when foreign animal cells or fragments of cells are introduced into the peritoneal cavity.
>
> *Jour. Med. Research*, July, 1906, p. 9.

microphagocyte (mī-krọ̄-fag′ọ̄-sīt), *n.* [Gr. *μικρος*, small, + E. *phagocyte.*] Same as ⋆*microphage.*

microphitic (mī-krọ̄-fit′ik), *a.* [Gr. *μικρός*, small, + E. *ophite* + *-ic.*] In *petrog.*, microscopically ophitic; noting a texture of igneous rocks, which have crystals of lime-soda feldspar inclosed in crystals of augite, as some diabases (ophites) or basalts.

microphone, *n.*—**Pencil-microphone,** a microphone the contacts of which are formed between rods or pencils of carbon.—**Rousselot microphone,** in *exper. psychol.* and *phonetics*, a microphone, devised by the Abbé Rousselot, which consists essentially of a metallic mouthpiece connected by rubber tubing to a cylindrical metallic box in which three carbon tips are suspended. The adjustment is effected by means of a screw set in the opposite end of the box. The screw is connected with a metallic spring to which one of the carbon tips is attached, and thus regulates the distance between the tips. The wires by which the carbon tips are included in an electric circuit enter through the top of the box.



Rousselot Microphone.

microphonic, *a.* **2.** Of an intensity so small as to be audible only by the aid of the microphone.

> At a time when Vesuvius became active, Rocca di Papa was agitated by microseisms, and the shocks were found to be accompanied by the very same *microphonic* noises as before. *G. H. Darwin*, The Tides, p. 117.

microphonograph (mī-krọ̄-fō′nọ̄-gråf), *n.* [Gr. *μικρός*, small, + E. *phonograph.*] **1.** A phonograph to the membrane of which a microphone is attached, thus intensifying the sounds.—**2.** See ⋆*telegraphone.*

> The telephonograph, or, as it is sometimes called, the "telegraphone," the "*microphonograph.*"
>
> *W. J. Hammer*, in Smithsonian Rep., 1901, p. 307.

microphony, *n.* **2.** In *physics*, the art of enhancing or magnifying the intensity of sound; the use of the microphone.

microphotogram (mī-krọ̄-fō′tọ̄-gram), *n.* Same as *microphotograph.*

microphotographic (mī-krō-fō-tọ̄-graf′ik), *a.* [*microphotograph(y)* + *-ic.*] Pertaining to, or of the nature of, microphotography.

microphthalmous (mī-krof-thal′mus), *a.* Same as *microphthalmic.*

microphysical (mī-krọ̄-fiz′i-kạl), *a.* [Gr. *μικρός*, small, + E. *physical.*] Of or pertaining to the physics of the ultimate particles of matter: opposed to ⋆*macrophysical.*

microphysics (mī-krọ̄-fiz′iks), *n.* [Gr. *μικρός*, small, + E. *physics.*] The physics of minute masses or of the ultimate particles and structure of matter: opposed to ⋆*macrophysics*, which deals with bodies taken as a whole.

micropia (mī-krō′pi-ä̤), *n.* [NL., < Gr. *μικρός*, small, + *ὤψ* (*ὠπ-*), eye.] Defect of vision in which objects appear of smaller size than they really are.

microplankton (mī-krọ̄-plangk′tọn), *n.* [Gr. *μικρος*, small, + NL. *plankton.*] The microscopic animals and plants that float or swim in the water.

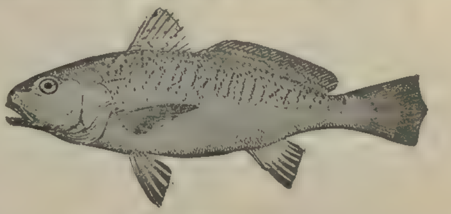
> The *microplankton* of the Sicilian coast has not been included. *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 638.

microplasia (mī-krọ̄-plā′si-ä̤), *n.* [NL., < Gr. *μικρός*, small, + *πλάσις*, formation.] A condition in which the size normal to the species is not attained; dwarfism.

micropodal (mī-krop′ọ̄-dạl), *a.* [Gr. *μικρός*, small, + *πούς* (*ποδ-*), foot, + *-al*^{1}: see *Micropoda.*] Having small—especially abnormally small—feet; micropodous.

micropodous (mī-krop′ọ̄-dus), *a.* [Gr. *μικρός*, small, + *πούς* (*ποδ-*), foot, + *-ous.*] Having small—especially abnormally small—feet; micropodal.

Micropogon (mī-krop′ọ̄-gon), *n.* [NL., < Gr. *μικρός*, small, + *πώγων*, beard.] A genus of sciænoid fishes found in the warmer parts of the Atlantic and Pacific in America.



Micropogon undulatus.
(From Bulletin 47, U. S. Nat. Museum.)

micropoikilitic (mī-krọ̄-poi-ki-lit′ik), *a.* [Gr. *μικρός*, small, + E. *poikilitic.*] In *petrog.*, microscopically poikilitic; noting a texture in igneous rocks produced by the presence in one crystal of many small crystals of other minerals variously oriented.

> The microstructure of the groundmass is "*micropoikilitic,*" with more minute feldspars maintaining a fluidal arrangement. *U. S. Geol. Surv.*, Monographs, XXXII. 63.

micropolariscope (mī″krọ̄-pọ̄-lar′i-skōp), *n.* [Gr. *μικρός*, small, + E. *polariscope.*] A microscope with a polarizing attachment. The polarizer is placed beneath the stage and the analyzer above the objective or at the eyepiece. It is used in the examination of crystals, tissues, and other objects.

Micropora (mī-krop′ọ̄-rä̤), *n.* [NL., < Gr. *μικρός*, small, + *πόρος*, pore.] The typical genus of the family *Microporidæ.* *Gray*, 1848.

micropore (mī′krọ̄-pōr), *n.* [Gr. *μικρός*, small, + *πόρος*, pore.] A small pit or pore in the shell of a chitinoid mollusk containing a microscopic sense-organ: opposed to ⋆*megalopore.*

Microporidæ (mī-krọ̄-por′i-dē), *n. pl.* [NL., < *Micropora* + *-idæ.*] A family of chilostomatous polyzoans, of the order *Gymnolæmata*, having zoœcia in which the front wall is wholly calcareous and the margins elevated. It includes the genera *Micropora*, *Setosella*, *Caleschara*, *Steganoporella*, and *Vincularia.*

microprojection (mī″krọ̄-prọ̄-jek′shọn), *n.* [Gr. *μικρός*, small, + E. *projection.*] In *physics*, the art of projecting upon a screen greatly enlarged images of minute objects by means of a lantern with a microscopic attachment. *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 582.

microprosopous (mī″krọ̄-pro-sō′pus), *a.* [Gr. *μικρός*, small, + *πρόσωπον*, face, + *-ous.*] In *craniom.*, said of a skull which has a small face, with a volume of from 470 to 510 cubic centimeters in males, and from 405 to 435 cubic centimeters in females.

microprosopus, *n.* **2.** In the Cabala, the 'lesser face'; a cabalistic name which includes all the Sephiroth below Kether (crown) and denotes the workings of the Adam Kadmon in the universe: opposed to *macroprosopon*, the name applied to the Kether Sephira.

micropterism (mī-krop′tẹ-rizm), *n.* [*micropter(ous)* + *-ism.*] The character of being micropterous or short-winged or short-finned; specifically, the condition of having the wings reduced in size or vestigial, as in certain dimorphic bugs (*Hemiptera*) and in some insular insects and birds.

micropterygid (mī-krop-ter′i-jid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Micropterygidæ.*

II. *a.* Having the characters of, or belonging to, the family *Micropterygidæ.*

Micropterygidæ (mī-krop-tẹ-rij′i-dē), *n. pl.* [NL., < *Micropteryx* (*-ptеryg-*) + *-idæ.*] A notable family of lepidopterous insects, forming, with the family *Hepialidæ*, Comstock's suborder *Jugatæ.* They are very small moths which resemble the tineids in appearance and habits. Their larvæ are usually leaf-miners. See ⋆*Jugatæ.*

Micropteryx (mī-krop′tẹ-riks), *n.* [NL. (Huebner, 1816, as *Micropterix*; Zeller, 1839, as *Micropteryx*), < Gr. *μικρός*, small, + *πτέρυξ* (*πτερυγ-*), wing.] The type genus of the lepidopterous family *Micropterygidæ.* The species are small, possess no mandibles, have a short tongue, moderate labial palpi, and posterior tibiæ thinly hairy above. The genus has few species and is confined to southern and central Europe.

Micropus, *n.* 4. [*l. c.*] A person with abnormally small, but not necessarily deformed, legs.

micropyle, *n.* 2. In *zoöl.*: (*c*) In certain sporozoans, a minute opening in the oöcyst through which the microgamete enters to fertilize the macrogamete.

microrefractometer (mī-krọ-rē-frak-tom′e-tėr), *n.* [*micro-* + *refractometer.*] A refractometer specially constructed for the detection of differences in the minute structure of blood corpuscles. *N. E. D.*

microrheometer (mī″krọ-rẹ-om′e-tėr), *n.* [Gr. *μικρός*, small, + E. *rheometer.*] A galvanometer for small currents.

micros. An abbreviation (*a*) of *microscopic, microscopical*; (*b*) of *microscopy.*

Microsauri (mī-krọ-sâ′rī), *n. pl.* [NL.] Same as *Microsauria.*

microscelic (mī-krọ-sel′ik), *a.* [Gr. *μικρός*, small, + *σκέλος*, leg.] Having short legs.

> What is more, in a race like the French, there are two distinct types, each having the same measurement, but the one class is long-legged (macroscelic, in the term of the anthropologists), the other short-legged (*microscelic*).
> *Smithsonian Rep.*, 1904, p. 528.

microsclerometer (mī″krọ-sklẹ-rom′e-tėr), *n.* [Gr. *μικρός*, small, + *σκληρός*, hard, + *μέτρον*, measure.] An instrument for measuring the hardness of minerals; a delicate form of sclerometer. *U. S. Geol. Surv.*, 1897–98, p. 511.

microscleron (mī-krọ-sklē′ron), *n.*; pl. *microsclera* (-rä). [NL.] A microsclere.

microscope, *n.*—**Metallographical microscope,** a form of microscope for the investigation of metals and alloys. Light admitted above the objective from the side is reflected down through the objective, which acts as a condenser, to the object which is viewed under this illumination.—**Projection microscope,** a form of magic lantern adapted to the projection of enlarged images of minute objects. The projecting lenses of the lantern are replaced by high-power microscope lenses.—**Reading microscope,** a vernier- or scale-reading microscope: used on instruments of precision.

microscope (mī′krọ-skōp), *v. t.*; pret. and pp. *microscoped*, ppr. *microscoping.* To enlarge with or as with a microscope; examine very minutely as with a microscope: as, to *microscope* one's faults.

microscopize (mī-kros′kọ-pīz), *v. i.*; pret. and pp. *microscopized*, ppr. *microscopizing.* To use the microscope; work with a microscope.

> I may read, draw, or *microscopise* at pleasure, and as to books, I have a carte blanche from the Captain to take as many as I please. *Huxley*, in Life and Let., II. 29.

microsecond (mī-krọ-sek′und), *n.* [Gr. *μικρός*, small, + E. *second.*] One millionth of a second: a unit employed in the measurement of exceedingly small intervals of time.

microseismology (mī″krō-sīs-mol′ọ-ji), *n.* [*microseism* + *-ology.*] The scientific study of microseisms or small earth-tremors.

microseismometer (mī″krọ-sīs-mom′e-tėr), *n.* [Gr. *μικρός*, small, + E. *seismometer.*] An apparatus for detecting slight earth-tremors, and showing their direction, intensity, and duration.

microsiphuncle (mī-krọ-sī′fung-kl), *n.* [*micro-* + *siphuncle.*] Same as *microsiphonula.*

microslide (mī′krọ-slīd), *n.* A glass slide upon which an object for observation under a microscope is mounted.

microsmatic (mī-kros-mat′ik), *a.* [Gr. *μικρός*, small, + *ὀσμή*, smell, + *-atic.*] Having the organs of smell small or feebly developed: opposed to ★*megosmatic* and ★*macrosmatic. Proc. Zool. Soc. London*, 1894, p. 9.

microsmatism (mī-kros′mạ-tizm), *n.* [Gr. *μικρός*, small, + *ὀσμή*, smell, + *-t-* + *-ism.*] The fact or condition of having the organs of smell small or feebly developed: contrasted with ★*macrosmatism.*

microsomatia (mī″krọ-sọ-mā′shiä), *n.* [NL., < Gr. *μικρός*, small, + *σῶμα*(*τ-*), body.] Same as *microsomia.*

microsomatous (mī-krọ-sō′mạ-tus), *a.* [Gr. *μικρός*, small, + *σῶμα* (*σωματ-*), body.] Having a small body; being of minute size.

microsome, *n.* 2. One of the minute granules found in the protoplasm of animal and plant cells and by some biologists regarded as the ultimate units of living matter. The microsomes of the nucleus are known as karyomicrosomes, those of the cytoplasm of the cell as cytomicrosomes. See cut under ★*aster*¹, 7.

Microspathodon (mī-krọ-spath′ọ-don), *n.* [NL., < Gr. *μικρός*, small, + *σπάθη*, sheath, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of fishes of the family *Pomacentridæ*, found about rocky islands of the American tropics.

microspectral (mī-krọ-spek′trạl), *a.* [Gr. *μικρός*, small, + NL. *spectrum* + *-al*¹.] Of or pertaining to the spectra of objects in the field of the microscope, or to microspectroscopy. *Science Abstracts*, VI. Sec. A, p. 110.

microspectroscopic (mī-krọ-spek-trọ-skop′ik), *a.* [*microspectroscop*(*e*) + *-ic.*] Pertaining to, or observed by means of, the microspectroscope.

microspectroscopy (mī″krọ-spek-tros′kọ-pi), *n.* [*microspectroscope* + *-y*³.] The scientific use of the microspectroscope.

microspermous (mī-krọ-spėr′mus), *a.* [See *Microspermæ.*] Having minute seeds; pertaining to or characteristic of the *Microspermæ.*

microsphere (mī′krọ-sfēr), *n.* [Gr. *μικρός*, small, + *σφαῖρα*, sphere.] 1. A microscopic spherical organism: applied by Cohn to the micrococci found in vaccine lymph and in small-pox pustules. *N. E. D.*—2. In the calcareous *Foraminifera*, the small primordial chamber of the test: an index of the dimorphism expressed by these bodies, as with like exteriors some have a microsphere and others a large primordial chamber or megasphere.—3. In *cytol.*, the central portion of the astrosphere in the dividing cell. The center of the microsphere is occupied by the centrosome. *Kostanecki and Siedlecki*, 1896.

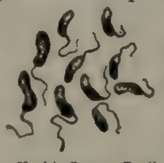
microspheric (mī-krọ-sfer′ik), *a.* [Gr. *μικρός*, small, + *σφαῖρα*, sphere.] Pertaining to or of the nature of a microsphere, in any sense; specifically, having a small central chamber and a large number of small nuclei: as, a *microspheric* individual in some dimorphic foraminifers. Compare ★*megalospheric.*

microspherulitic (mī-krọ-sfer-ọ-lit′ik), *a.* [*micro-* + *spherulitic.*] In *geol.*, minutely spherulitic in structure.

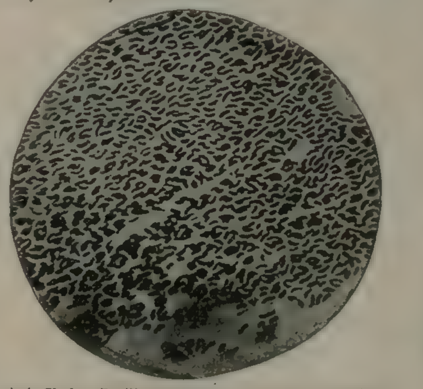
microsphyxia (mī-krọ-sfik′si-ä), *n.* [NL., < Gr. *μικρός*, small, + *σφύξις*, pulsation.] A state in which the pulse is very small.

microspined (mī′krọ-spīnd), *a.* [Gr. *μικρός*, small, + E. *spined.*] Covered with or bearing minute spines or spinules.

Microspira (mī-krọ-spī′rä), *n.* [NL. (Schröter, 1886), < Gr. *μικρός* + *σπεῖρα*, spire.] A genus of bacteria, with cells mostly comma-shaped or short spiral, sometimes united in chains, and usually provided with a single polar flagellum, rarely 2 or 3. *M. comma*, the comma bacillus of Koch, is the most important pathogenic species, being generally accepted as the specific cause of Asiatic cholera. *M. Metschnikovi* is associated with fowl-cholera. Other species occur in sea-water, sewers, and rivers.



Koch's Comma Bacillus (*Microspira comma*). Highly magnified. (After Lehmann-Neumann.) (From Fischer's "Vorlesungen über Bakterien.")



Asiatic Cholera Bacillus (*Microspira comma*). Magnified 1,000 times.
(From Buck's "Reference Handbook of the Medical Sciences.")

microsplenic (mī-krọ-splen′ik), *a.* [*micro-* + *splenic.*] In *pathol.*, not accompanied by enlargement of the spleen. *N. E. D.*

microsporange (mī-krọ-spō′ranj), *n.* Same as *microsporangium.*

Microsporidia (mī″krọ-spō-rid′i-ä), *n. pl.* [NL., < Gr. *μικρός*, small, + *σπόρος*, seed, + dim. *-ιδιον.*] Same as ★*Cryptocystes. Nature*, Aug. 27, 1903, p. 408.

microsporozoite (mī″krō-spō-rọ-zō′īt), *n.* [Gr. *μικρός*, small, + E. *sporozoite.*] In sporozoans, a small endogenous sporozoite; a micromerozoite. Compare ★*macrosporozoite.*

> In 1894, the present writer discovered that in this schizogonic phase (then considered as a separate specific form) there existed cysts with macrosporozoites and others with *microsporozoites*, and he (like Schuberg) propounded the theory of a sexual dimorphism and of a fertilization. *Encyc. Brit.*, XXXII. 815.

microstat (mī′krọ-stat), *n.* [Gr. *μικρός*, small, + *στατός*, < *ἵστασθαι*, stand.] The stage and finder of a microscope.

Microstomatidæ (mī″krọ-stọ-mat′i-dē), *n. pl.* [NL.] Same as *Microstomidæ.*

microstomatous (mī-krọ-stom′ạ-tus), *a.* [Gr. *μικρός*, small, + *στόμα*(*τ-*), mouth, + *-ous.*] Having a small mouth or aperture, as a univalve shell.

microstomia (mī-krẹ-stō′mi-ä), *n.* [NL., < Gr. *μικρός*, small, + *στόμα*, mouth.] Unusually small size of the mouth.

Microstomus (mī-kros′tọ-mus), *n.* [NL., < Gr. *μικρός*, small, + *στόμα*, mouth.] A genus of flounders found in rather deep water in the northern seas.

microstrongyle (mī-krọ-stron′jil), *n.* [Gr. *μικρός*, small, + *στρογγύλος*, round (see *strongyle*).] In sponge-spicules, a small or reduced strongyle.

> The *microstrongyles*, which are 18 x 2 μ in size, are occasionally centrotylote.
> *Proc. Zool. Soc. London*, 1900, p. 131.

microstrongylon (mī-krọ-stron′ji-lon), *n.*; pl. *microstrongyla* (-lä). [NL.] A microstrongyle.

microstructural (mī-krọ-struk′tụ̈-rạl), *a.* [*microstructure* + *-al*¹.] Of minute or microscopical structure; of or pertaining to microstructure.

microstructure, *n.* Applied especially to metals and alloys, the study of the microstructure of which is now a very important department of engineering.

> A brief statement of the effect on the *microstructure* of nickel steels of tempering, annealing, working, chilling, etc. The tempering and working produce very similar results. *Jour. Phys. Chem.*, April, 1904, p. 305.

microstyle (mī′krọ-stīl), *n.* [NL., < Gr. *μικρός*, small, + *στῦλος*, pillar.] A minute monaxial sponge-spicule with sharp ends.

microtechnic (mī-krọ-tek′nik), *n.* [Gr. *μικρός*, small, + E. *technic.*] The handling or construction of the microscope and its accessories; the manipulation of minute objects, as in microscopy.

microtetrod (mī-krọ-tet′rod), *n.* [Gr. *μικρός*, small, + *τετρα-*, four, + *ὁδός*, way.] A small tetraxial sponge-spicule.

microthermic (mī-krọ-thėr′mik), *a.* [*microtherm* + *-ic.*] Having the character of a microtherm; composed of or characterized by microtherms.

Microthoracidæ (mī-krọ-thọ-ras′i-dē), *n. pl.* [NL., < *Microthorax* (*-thorac-*) + *-idæ.*] A family of holotrichous ciliate infusorians, consisting of small asymmetrical forms, with the mouth in the hinder part of the body, the cilia scattered and sometimes limited to the oral region, and sometimes one or two undulating membranes. It contains several genera, among them being *Microthorax*, *Cinetochilum*, and *Ancistrum.*

microthorax (mī-krọ-thō′raks), *n.* [Gr. *μικρός*, small, + *θώραξ*, thorax.] 1. In *entom.*, a fourth thoracic segment anterior to the prothorax, in the *Dermaptera.*—2. [NL.] [*cap.*] The typical genus of the family *Microthoracidæ. Engelmann*, 1862.

Microthyriaceæ (mī-krọ-thir-i-ā′sẹ-ē), *n. pl.* [NL., < *Microthyrium* + *-aceæ.*] A family of ascomycetous fungi of the order *Perisporiales*, named from the genus *Microthyrium.* It contains 21 genera, most of which are tropical or subtropical.

Microthyrium (mī-krọ-thir′i-um), *n.* [NL. (Desmazières, 1840), < Gr. *μικρός*, small, + *θύριον*, door.] A genus of ascomycetous fungi having membranous perithecia, with a shield-like covering on the surface of the host. The spores are elongate, 2-celled, and hyaline. The species are mostly tropical. *M. microscopicum* occurs on leaves of various trees and shrubs in Europe and America.

microtia (mī-krō′ti-ä), *n.* [NL., < Gr. *μικρός*, small, + *οὖς* (*ὠτ-*), ear.] The condition of having abnormally small ears.

Microtinæ (mī-krọ-tī′nē), *n. pl.* [NL., < *Microtus* + *-inæ.*] A subfamily of mouse-like rodents, containing a large number of species and forming one of the most important divisions of the *Muridæ*. By the law of priority this name replaces the familiar *Arvicolinæ*.

microtine^1 (mī′krọ-tin), *n.* [G. *mikrotin*, < Gr. *μικρότης*, littleness, + *-in*^{2}.] A name sometimes given to the glassy forms of the plagioclase feldspars occurring as minute phenocrysts in igneous rocks.

microtine^2 (mi-krō′tin), *a.* [*Microtus* + *-ine*^{1}.] Resembling, or having the characters of, the small rodents of the genus *Microtus*. *Smithsonian Rep.*, 1900, p. 86.

microtome (mī′krọ-tōm), *v. t.*; pret. and pp. *microtomed*, ppr. *microtoming*. [*microtome*, *n.*] To cut (a tissue or organ) into thin sections with the aid of a microtome.

> The following nerves of muscles were *microtomed* for detection of some fibres.
> *Philos. Trans. Roy. Soc.* (London), ser. B, 1898, p. 95.

microtriæne (mī-krọ-trī′ēn), *n.* [Gr. *μικρός*, small, + *τρίαινα*, trident.] In sponge-spicules, a small or reduced triæne.

microtriod (mī-krọ-trī′od), *n.* [Gr. *μικρός*, small, + *τρι-*, three, + *ὁδός*, way.] In the nomenclature of the sponge-spicules, a triod of minute size.

Microtus (mi-krō′tus), *n.* [NL., < Gr. *μικρός*, small, + *οὖς* (*ὠτ-*), ear.] The typical genus of the subfamily *Microtinæ*, containing those species of small rodents long placed in the genus *Arvicola*. There are over 20 synonyms for this genus. See *Arvicola*. *Schrank*, 1798.

microtylostyle (mī-krọ-tī′lọ-stīl), *n.* [Gr. *μικρός*, small, + *τύλος*, knot, knob, + *στῦλος*, pillar.] A minute monaxial sponge-spicule with one knobbed end.

microtylote (mī-krọ-tī′lōt), *n.* [Gr. *μικρός*, small, + E. *tylote*.] A small tylote. *Sollas*, in Encyc. Brit., XXII. 417.

microtypal (mī′krọ-tī-pal), *a.* [*microtype* + *-al*^{1}.] Pertaining to or characteristic of a microtype: as, the *microtypal* arrangement of mesenteries in the *Zoanthidæ*.

microtype (mī′krọ-tīp), *n.* [Gr. *μικρός*, small, + *τύπος*, type.] The normal arrangement of mesenteries in certain *Zoanthidea*, each couple comprising a macromesentery and a micromesentery. Compare ★*macrotype*. *Annals and Mag. Nat. Hist.*, May, 1902, p. 393.

microwatt (mī′krọ-wot), *n.* [Gr. *μικρός*, small, + E. *watt*.] A unit of power or activity equal to ten ergs per second; a millionth of a watt.

microxea (mī-krok-sē′ä), *n.*; pl. *microxeæ* (-ē). [NL., < Gr. *μικρός*, small, + *ὀξεῖα*, fem. of *ὀξύς*, sharp.] In sponge-spicules, a small or reduced oxea. *Proc. Zool. Soc. London*, 1902, II. 218.

microxycyte (mī-krok′si-sīt), *n.* [Gr. *μικρός*, small, + *ὀξύς*, sharp, + *κύτος*, hollow (cell).] A finely granular oxyphil or eosinophil blood-corpuscle, or leucocyte. *Durham*, 1897.

microzoögonidium (mī-krọ-zō″ọ-gọ-nid′i-um), *n.*; pl. *microzoögonidia* (-ä). [*micro-* + *zoögonidium*.] A minute zoögonidium.

microzoöscopic (mī″krọ-zō-ọ-skop′ik), *a.* [Gr. *μικρός*, small, + *ζῷον*, animal, + *σκοπεῖν*, view, + *-ic*.] Of or pertaining to the seeing of microscopic organisms; characterized by the seeing of tiny animals.

> In a recent study of the dreams of hysterics and epileptics De Santis found that those of the former were most frequently of pain, next of fear, and were less often erotic. Dreams of large animals predominate, while in alcoholism those of tiny animals or *microzoöscopic* dreams were most frequent. *G. S. Hall*, Adolescence, I. 276.

microzyma (mī-krọ-zī′mä), *n.*; pl. *microzymæ* (-mē). [NL., < Gr. *μικρός*, small, + *ζύμη*, ferment.] One of the very minute bodies which, according to some biologists, represent the ultimate elements of living substance, or protoplasm, like the pangens, plasomes, gemmules, etc.

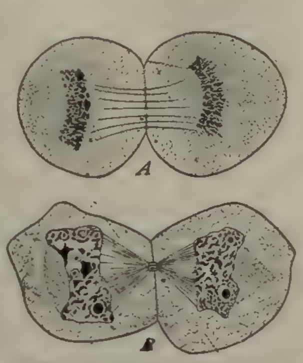
Micruræ (mi-krö′rē), *n. pl.* [NL., < Gr. *μικρός*, small, + *οὐρά*, tail.] A group of *Nemertini*, forming a subdivision of the family *Lineidæ*, characterized by a small filamentous tail. It contains the genera *Micrura*, *Cerebratulus*, and *Langia*. See ★*Amicruræ*.

Mida^2 (mī′dä), *n.* [NL. (Cunningham, 1838), stated to be from a native New Zealand name.] A genus of dicotyledonous trees or shrubs belonging to the family *Santalaceæ*. See *Fusanus*.

midas-fly (mī′das-flī), *n.* Any dipterous insect of the family *Mididæ* or *Midasidæ* or *Midaidæ*, as it is variously spelled. *Comstock*, Manual of Insects, p. 461.

midaxillary (mid-ak′si-lā-ri), *a.* Situated in the center of the axilla. *Buck*, Med. Handbook, I. 452.

midbody, *n.* **2.** The cell-plate; a structure almost invariably found in plant- and often in animal-cells, as a series of deeply staining thickenings or granules in the equatorial plane of the achromatic spindle toward the end of mitotic cell-division.



Midbody in embryonic cells of *Limax*. (Hoffmann.)

A, earlier stage, showing thickenings along the line of cleavage; *B*, later stage, showing spindle-plate and cytoplasmic plate. (From Wilson's "The Cell.")

mid-digital (mid-dij′i-tal), *n.* One of the two primaries attached to the first phalanx of the second digit of a bird's wing. *Parker and Haswell*, Text-book of Zool., II. 356.

middle, *n.*—**Middle of the road**, an epithet applied, especially in the presidential campaign of 1896, to those members of the Populist party who urged the nomination of a Populist by their party convention and opposed the acceptance of the nominee of the Democratic party: said to be derived from the habit, in some parts of the Southwest, of keeping in the middle of the road, the better to protect one's self from enemies lying in ambush. [U. S. political slang.]—**Persian middle**, in the Arab-Persian musical theory of the early Middle Ages, a central tone in the system of tones which served as a point of reference in the calculation of intervals: the ★*mese* of Greek musical theory.—**To break out middles**, to open lengthwise with a double mold-board or a scooter-plow the middle of an existing cotton bed. Also *to burst* or *burst out middles*. Compare ★*middle-buster*. [Southern U. S.]

middle-body (mid′l-bod″i), *n.* In *naval arch.*, the part of a ship's form in the middle of the length where the cross-sections are all of nearly the same size and shape. The *parallel middle-body* is that part in which they are of exactly the same dimensions.

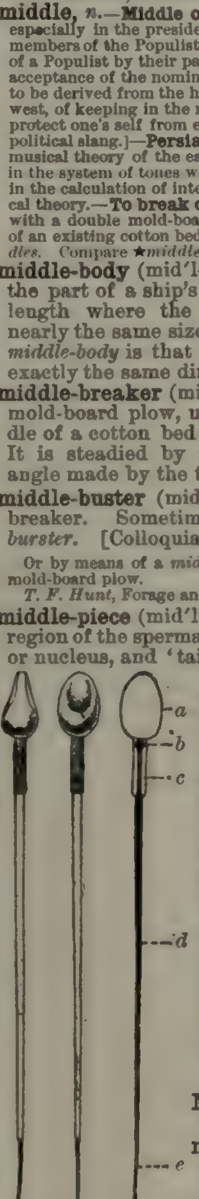
middle-breaker (mid′l-brā″kėr), *n.* A double mold-board plow, used to break out the middle of a cotton bed and for similar purposes. It is steadied by a land-bar bisecting the angle made by the two mold-boards. [U. S.]

middle-buster (mid′l-bus″tėr), *n.* A middle-breaker. Sometimes corrected to *middle-burster*. [Colloquial, Southern U. S.]

> Or by means of a *middle "buster,"* which is a double mold-board plow.
> *T. F. Hunt*, Forage and Fiber Crops in America, p. 362.

middle-piece (mid′l-pēs), *n.* A differentiated region of the spermatozoön between its 'head,' or nucleus, and 'tail,' or flagellum.

> It is clear, however, that the term *middle-piece* has been applied to structures of quite different morphological nature, which agree only in lying behind the nucleus. Thus in the salamander the inner centrosome gives rise to the main body of the *middle-piece*; in the rat or in man it gives rise only to the small disc-shaped body lying in the "neck" in front of the so-called *middle-piece*; while in Helix or the elasmobranch it is transformed into a long filament traversing a cytoplasmic "*middle-piece*" which forms a considerable part of the flagellum. The term *middle-piece* has thus become highly ambiguous and should only be employed, if at all, as a convenient descriptive term which has no definite morphological meaning.
> *E. B. Wilson*, The Cell (ed. 1900), [pp. 170, 171.



Human spermatozoa.

The two at the left after Retzius (81); the one at the extreme left is seen in profile; the other in surface view; the one at the right is drawn as described by Jensen. *a*, head; *b*, terminal nodule; *c*, middle-piece; *d*, tail; *e*, end-piece of Retzius. (From Huber's trans. of Böhm-Davidoff's "Histology.")

Middlesex shale. See ★*shale*^{2}.

middleshot (mid′l-shot), *a.* In *hydraul.*, receiving water at its circumference about opposite the center or middle: said of a water-wheel with a horizontal axis, in which the relation of the diameter of the wheel to the available head makes the type intermediate between the breast-wheel and the under-shot.

middletonite (mid′l-tọn-īt), *n.* [*Middleton* collieries, near Leeds, + *-ite*^{2}.] A hydrocarbon occurring in minute rounded pea-like masses of a yellowish-brown color between layers of coal at the Middleton collieries, near Leeds, England.

middle-watcher (mid′l-woch″ėr), *n.* The lunch served to the officer of the deck during the mid-watch. This is customary in the navy and on board passenger-steamships. [Slang.]

middling, *n.* **5.** *pl.* The finest kind of wheat bran.

> The bran known as "*middlings*" is usually considered the best to use, because it is finer and contains more flour than the coarse grades.
> *Flemming*, Practical Tanning, p. 9.

mid-door (mid′dōr), *n.* In *mining*, the middle one of three landing-places in a shaft. Also called *mid-working*. [Scotch.]

mide (mē′dā), *n.* [Ojibwa *midewin*.] A religious society of the Ojibwa Indians, consisting of a number of persons initiated by supernatural powers. The members are grouped in classes and a record of the initiations of each member is kept by him on birch-bark charts. The traditions of the mide tell of the initiation of the society by the creator or transformer. The ceremonies are performed in a rectangular open lodge. The members of the mide order are believed to possess supernatural powers and to be able to cure disease.

> Among the Indians of North America there are also special healers (medicine-men) who are held in great esteem, and who sometimes form a corporation (*Mide*), into which admission can only be gained after a professional examination in the "doctors' cabin."
> *Deniker*, Races of Man, p. 227.

midewiwin (mẹ-dā′wi-win), *n.* [Ojibwa.] A religious society of the Ojibwa Indians, the members of which are imagined to have the power to converse with spirits and, after death, to reach the land of the spirits. See ★*mide*.

midfacial (mid-fā′shal), *a.* Situated in the middle of the face.

midfilial (mid-fil′yal), *a.* [*mid* + *filial*.] Of or pertaining to a statistical offspring of composite sex which is the statistical mean of the sons and the transmuted daughters.

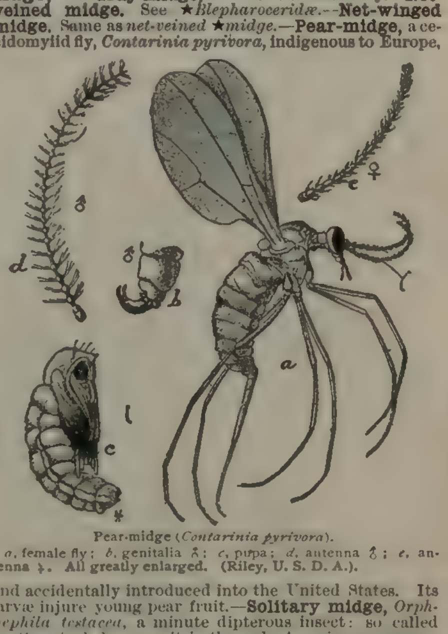
> The proportion between the *Mid-Filial* and the Mid-Parental deviation is constant, whatever the Mid-Parental stature may be.
> *Francis Galton*, Natural Inheritance, p. 97.

Midford sands. See ★*sand*^{1}.

midfrontal (mid-fron′tal), *a.* Situated in the center of the forehead.

mid-galley (mid′gal″i), *n.* The middle of a vessel; the galley or caboose, situated amidships below decks (midway between the upper deck and the hold) in old-time vessels.

midge, *n.*—**Gray midge**, a kind of artificial fly.—**Net-veined midge.** See ★*Blepharoceridæ*.—**Net-winged midge.** Same as *net-veined* ★*midge*.—**Pear-midge**, a cecidomyiid fly, *Contarinia pyrivora*, indigenous to Europe, and accidentally introduced into the United States. Its larvæ injure young pear fruit.—**Solitary midge**, *Orphnephila testacea*, a minute dipterous insect: so called by Comstock because it is the only American representative of its family, the *Orphnephilidæ*.—**Violet-midge**, a cecidomyiid fly, *Contarinia violicola*, whose larvæ fold the leaves of the violet, bringing the upper surfaces of the leaves together so as to form a kind of gall. Also called *violet gall-fly*.—**Winter midge**, a trypetid fly, *Trichocera hiemalis*, occasionally found flying in winter and occurring as far north as Greenland.



Pear-midge (*Contarinia pyrivora*).

a, female fly; *b*, genitalia ♂; *c*, pupa; *d*, antenna ♂; *e*, antenna ♀. All greatly enlarged. (Riley, U. S. D. A.).

mid-gear (mid′gēr), *n.* That position of a Stephenson link where both the eccentrics have the same effect on the valve, that is, where the link-block is at the middle of the link; that position of the valve-gear of an engine in which the engine will run neither forward nor backward.

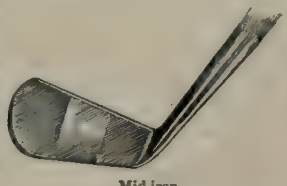
mid-grandparent (mid-grand′pãr-ent), *n.* An ideal person of composite sex who is the algebraical sum of the grandfathers and grandmothers.

It is doubtful . . . whether the parthenogenetic grandmothers ought not to be treated as "*midgrandparents.*" *Biometrika*, April, 1902, p. 364.

mid-heaven, *n.* **3.** In *astrol.*, the degree culminating on the cusp of the tenth house.

mid-intestine (mid-in-tes′tin), *n.* In *entom.*, that portion of the digestive tract of an insect which lies between the proventriculus and the ileum. Also called *chylific stomach* and *ventriculus.*

mid-iron (mid′ī″ėrn), *n.* A golf-club with an iron head, in form between that of a cleik and that of a mashy: used for approaching.



Mid-iron.

mid-kidney (mid-kid′ni), *n.* The Wolffian body; the mesonephros. *Parker and Haswell*, Text-book of Zoology, II. 110.

midnightly (mid′nīt-li), *a.* and *adv.* **I.** *a.* Occurring at midnight or every midnight.

II. *adv.* At midnight; every midnight. *N. E. D.*

mid-orbital (mid-ôr′bi-tal), *a.* Of or relating to the center of the orbit of the eye; relating to the center of the superior boundary of the eye.

From the *mid-orbital* region onward it [the frontal] becomes band-shaped, ultimately being produced into an outwardly directed and blunt angle underlying the nasal. *Proc. Zool. Soc. London*, 1903, I. 270.

mid-parental (mid-pā-ren′tal), *a.* [*mid*^{1} + *parental.*] Of or pertaining to statistical mid-parentage.

This value of two thirds will therefore be accepted as the amount of Regression, on the average of many cases, from the *Mid-Parental* to the Mid-Filial stature, whatever the *Mid-Parental* stature may be. *Francis Galton*, Natural Inheritance, p. 98.

mid-periphery (mid-pe-rif′e-ri), *n.* In *physiol.* and *psychol. optics*, the middle zone of the retina, colors falling upon which are all seen either as blue or as yellow. *Baldwin*, Dict. Philos. and Psychol., II. 791.

mid-product (mid′prod″ukt), *n.* A substance formed in the course of chemical decomposition which stands between the original material and the end-products. Also *intermediary product.*

midriatic, *a.* and *n.* Same as *mydriatic.*

Midship beam, the breadth of a vessel amidships; the horizontal timber at the broadest part of a ship.

midshipman, *n.* **2.** In 1902, Congress abolished the title of naval cadet in the United States navy and restored the title of midshipman. These officers are not commissioned officers, but receive appointments on probation, on the nomination of the President of the United States, of senators, or of congressmen, and the passage of an entrance examination to the Naval Academy. The course of instruction at the Naval Academy lasts four years and is followed by two years at sea, after which midshipmen are promoted to ensigns or second lieutenants of marines upon passing a final examination.—**Midshipman apprentice,** a cadet on board certain merchant and revenue-service vessels; a title given to a midshipman of the East India service who was serving his first year, after which time he became a full midshipman, and after two years as such became eligible for promotion to the office of fourth mate.

midship-section (mid′ship-sek″shon), *n.* In *naval arch.*, the line formed by the intersection of a transverse vertical plane at the middle of the length of a vessel with the surface of the hull; also, a plan of this transverse section on which is delineated the arrangement of the structural parts of the vessel, and on which are marked in great detail the sizes or scantlings of all the structural parts.

mid-shore (mid′shōr), *n.* That strip of a shore which lies between ordinary high-tide mark and the dunes; the middle beach. *A. F. W. Schimper* (trans.), Plant-Geog., p. 180.

mid-spoon (mid′spön), *n.* A wooden golf club, with a lofted face, of which the capacity in distance is between that of a long and that of a short spoon.

mid-stroke (mid′strōk), *n.* In steam-engines, the middle point or position in the stroke or travel of a piston or valve.

mid-tarsal (mid-tär′sal), *a.* Relating to the central portion of the tarsus.

If they act alone they either turn the foot inwards (tibialis posticus), or turn it outwards (peronei), and thus invert or evert the foot at the *mid-tarsal* articulation. *Lancet*, July 4, 1903, p. 56.

mid-ventral (mid-ven′tral), *a.* Situated in the middle of the ventral surface.

The median vein lies along the *mid-ventral* line of the swollen abdomen, scarcely noticeable posteriorly, but increasing anteriorly as it picks up several lateral branches. *Amer. Nat.*, Feb. 1904, p. 123.

mid-ventricle (mid-ven′tri-kl), *n.* The cavity of the midbrain, or mesencephalon, in the embryonic vertebrate. Its medioventral portion becomes the iter, or aqueduct of Sylvius, while its dorsolateral portions become the optic ventricles, or optocœles, of a more advanced stage of development.

midwall (mid′wâl), *a.* and *n.* [*mid*^{1} + *wall*^{1}.] **I.** *a.* In *arch.*, placed in the middle of a wall.—**Midwall shaft,** a shaft or baluster placed in the middle of the thickness of the wall, in an early type of English belfry-windows. *N. E. D.*

II. *n.* In *mining*, a close wooden partition dividing a shaft.

midway, *n.* **3.** A middle way or path: also attributively: as, 'the *Midway* Plaisance,' a part of the exhibition park at the World's Fair in Chicago (1893), projecting from the park at a point midway between the north and south sides.

Considerable areas were devoted to "side-shows," and the *midway* Plaisaunce, as it was termed, resembled a gigantic fair. *Encyc. Brit.*, XXVIII. 351.

Hence—**4.** A place for booths and side-shows at a fair.

midweek (mid′wēk), *n.* and *a.* **I.** *n.* The middle of the week.

II. *a.* Set for or occurring in the middle of the week: as, the *midweek* sailings; a *midweek* holiday.

mid-working (mid′wėr″king), *n.* See ★*mid-door.*

midyear (mid′yēr), *n.* and *a.* **I.** *n.* The middle of the year: as, rents due at the *midyear.*

II. *a.* Set for or occurring in the middle of the year.

To teachers the series of meetings is a series of *midyear* institutes. *Yearbook U. S. Dept. Agr.*, 1901, p. 154.

midzu-ame (mēd′zö-ä′mä), *n.* [Jap. *midzame*, < *midz* (*mi-dz*), water, + *ame*, a kind of jelly made from flour.] A syrup made in Japan by the addition of water to ame. See ★*ame.*

M. I. E. E. An abbreviation of *Member of the Institute of Electrical Engineers.*

miemite (mē′e-mīt), *n.* [*Miemo* (see def.) + *-ite*^{2}.] A variety of the mineral dolomite, of pale asparagus-green color, from Miemo in Tuscany.

Miersiidæ (mēr′si-i-dē), *n. pl.* [NL., < *Miersia*, a genus, + *-idæ.*] See ★*Acanthephyridæ.*

miersite (mī′ėr-zīt), *n.* [Named from Prof. H. A. *Miers* of Oxford, England.] Silver iodide (Ag_2I_2) which occurs in yellow tetrahedral crystals at the Broken Hill mines, New South Wales.

miesite (mē′sīt), *n.* [*Mies* (see def.) + *-ite*^{2}.] A brown variety of pyromorphite containing a small amount of calcium: from Mies, Bohemia.

mièvrerie (myev-re-rē′), *n.* [F., < *mièvre*, arch, roguish (of children). Childish piquancy or prettiness.

The ivory Madonnas of the late thirteenth and early fourteenth centuries gradually lose their austere dignity, relax into elegance and *mièvrerie.* *R. E. Fry*, in Burlington Mag., V. 280.

mignonette, *n.*—**Mignonette-vine.** (*b*) See ★*Boussingaultia.*

mignonette-disease (min-yo-net′di-zēz″), *n.* See ★*leaf-blight of mignonette.*

migraine, *n.*—**Ophthalmic migraine,** severe paroxysmal headache due to eye-strain.

migrainine, *n.* See ★*migranine.*

migrainoid (mi-grā′noid), *a.* Resembling migraine. *Buck*, Med. Handbook, VI. 243.

migranine (mi-grā′nin), *n.* A mixture of 90 parts of antipyrin, 9 parts of caffein, and 6 parts of citric acid: said to be specific in migraine.

migration, *n.* **5.** In *phytogeog.*, the movement of plants from one area into another. According to F. E. Clements this is properly a narrower term than *invasion.* See ★*invasion*, 4.—**Arctic migration,** a supposed migration of animals from the arctic region into Europe.

One of the most important problems, as far as the origin of the European fauna is concerned, is the question whence came the animals which Doctor Scharff has termed the "*Arctic migration.*" He, with many others, contends that until toward the end of the glacial period there existed a continuous land connection between America and Europe, far north between Greenland, Spitzbergen, and Scandinavia, the latter being again connected by a land bridge with Scotland across the North Sea, and England with France. Across this continuous land bridge these animals are supposed by him to have wandered into central Europe. *Smithsonian Rep.*, 1902, p. 255.

Law of migration, segregation or isolation in space brought about by migration, considered as an explanation of the origin of species. *Eimer* (trans.), Organic Evolution, p. 7.—**Ontogenetic migration,** the successive changes of locality that take place in the normal life-history of many fishes before they reach their adult stage. *Nat. Science*, June, 1897, p. 390. [Rare.]

migrational (mī-grā′shon-al), *a.* [*migration* + *-al*^{1}.] Pertaining to or characterized by migration.

In the case of freely moving animals, the psychological guidance is an essential factor in the success of the individual; while in the case of plants and low types of animal life, the suitable situation is reached by a wide distribution of a vast number of seeds, spores, or germs, and the same situation is maintained by a loss of *migrational* power as soon as the germs begin to develop. *J. T. Gulick*, in Linnean Soc. Jour. Zool., XX. 223.

migrative (mī′grā-tiv), *a.* Migratory.

The Blackcap is a *migrative* species, visiting us early in the spring, and retiring in September. *Montagu*, Ornithological Dict. (ed. 1831), p. 42.

migratorial (mī-grā-tō′ri-al), *a.* Same as *migratory.*

mihanere (mē-ha-nā′re), *n.* [A Maori pronunciation of the E. *missionary.*] A convert to Christianity. [New Zealand.]

mijakite, *n.* Same as ★*miyakite.*

mika (mē′kä), *n.* [Aboriginal Australian.] An operation, practised by the natives of Australia, consisting in a partial opening of the lower side of the urethra of the male, resulting in an artificial hypospadia.

Mikado yellow. See ★*yellow.*

mikadoate (mi-kä′dō-āt) *n.* The office of mikado. *N. E. D.*

mikrom, *n.* See ★*microm.*

mikron, *n.* See *micron.*

mikveh (mik′ve), *n.* [Also *mikvah*; Heb. *miqweh, miqwah*, a bath, lit. 'a gathering,' especially of water (Gen. i. 10.).] Among orthodox Jews, a bath for the purpose of ritual purification.

mil^1 (mil), *n.* [L. *mille*, a thousand.] A unit of length used in measuring the diameter of wires, equal to 0.001 of an inch.—**Circular mil,** a unit of area used in measuring the areas of cross-sections of wires, equal to 0.7854 of a square mil.

mil^2 (mil), *n.* [L. *mille*, thousand.] A copper coin of Hongkong, the thousandth part of a dollar, corresponding to a Chinese 'cash.'

mil, *n.* and *v.* A simplified spelling of mill.

miladi (mi-lā′di), *n.* A French or Italian form of the English *my lady*: applied on the continent of Europe to titled Englishwomen. Also spelled *milady.*

Telescopes were being used, and loud statements made that the boat held somebody who had been drowned. One said it was the milord who had gone out in a sailing boat; another maintained that the prostrate figure he discerned was *miladi*; a Frenchman who had no glass would rather say that it was milord who had probably taken his wife out to drown her. *George Eliot*, Daniel Deronda, lv.

milady, *n.* Same as ★*miladi.*

milammeter (mi-lam′e-tėr), *n.* See ★*milliammeter.*

milampere (mil-am-pãr′), *n.* Same as *milliampere.*

milcher (mil′chėr), *n.* An animal that gives milk; a milch animal, as a cow or a goat. More commonly *milker.*

mildew, *n.*—**Beech-seedling mildew,** a fungus, *Phytophthora omnivora*, which attacks the seedlings of beech and other trees.—**Corn-mildew.** See ★*corn-mildew.*—**Cucumber-mildew.** (*a*) A disease of cucumbers, usually confined to greenhouses, due to *Erysiphe Cichoracearum.* (*b*) A disease of cucumbers, melons, pumpkins, and similar plants, caused by *Plasmopara Cubensis.*—**Downy mildew.** See *grape-mildew* and ★*Plasmopara.*—**European surface-mildew,** a disease of various plants due to the fungus *Oïdium Tuckeri.* See *mildew*, 1, and *grape-mildew.*—**Filbert-mildew.** See ★*filbert-mildew.*—**Frosty mildew,** a fungous disease of the peach caused by *Cercosporella persica.*—**Peach-mildew,** a disease of peaches which produces white powdery patches upon the fruit: due to the fungus *Podosphæra Oxyacanthæ.* Compare *cherry-blight.*—**Rose-mildew,** a fungous disease of the rose, due to either *Peronospora sparsa* or *Sphærotheca pannosa.*—**Strawberry-mildew,** a fungous disease which attacks the leaves of strawberries: due to *Sphærotheca Castagnei.*

mile, *n.*—**International geographical mile,** one fifteenth of a degree of the earth's equator, equal to about 4.61 statute miles of 5,280 feet.—**Passenger-mile.** See ★*passenger-mile.*—**Ton-mile.** See ★*ton-mile.*

mile-hunter (mīl'hun″tėr), *n.* A bicycler or automobilist who is eager to increase the distance he has traveled or can travel. [Slang.]

milen (mī'len), *n.* [Origin obscure.] In *glass-manuf.*, the scar left by the pontil, as on the bottom of a blown-glass bottle. Sometimes called *punt.*

miler (mī'lėr), *n.* In *track-athletics*, one who runs the mile distance. Similarly, *half-miler*, *quarter-miler*, and *two-miler*. [Colloq.]

mil-foot (mil'fůt), *n.* A wire one mil (or one thousandth of an inch) in diameter and one foot in length: a practical unit used in describing or specifying the properties of wire or other electric conductors.

milhenry (mil-hen'ri), *n.* See ★*millihenry.*

miliaceous (mil-i-ā'shius), *a.* [L. *milia* + *-aceous.* See *milia* and *Milium.*] Of the nature of, or characteristic of, millet or millet-seed.

miliaria, *n.* 1. (*b*) An eruption of minute vesicles due to obstruction of the sweat-glands. Also called *prickly heat.*

miliary, *a.* II. *n.* In the *Echinoidea*, one of the very small tubercles on the surface of the test which serve as bases for the lesser spines.

milieu (mē̤-yė'), *n.* [F., < *mi* (< L. *medius*), middle, + *lieu* (< L. *locus*), place.] The middle place or point; the mean; a point equally removed from extremes; also, surrounding conditions; social environment.

militaristic (mil″i-tā̤-ris'tik), *a.* [*militarist* + *-ic.*] Of or pertaining to militarists or militarism; military.

> A political organization and a moral tendency that are common to all nascent civilization of the *militaristic* order. *Athenæum*, July 15, 1905, p. 73.

militarize (mil'i-tā̤-rīz), *v. t.*; pret. and pp. *militarized*, ppr. *militarizing.* 1. To render military in character, feeling, bearing, or conduct.

> He was brought up in Germany, becoming more and more *militarised.* *Spectator*, Sept. 1, 1900, p. 266.

2. To place under military control; subject to military methods: as, to *militarize* the government.

Military top. See ★*top*¹.

militia, *n.*—**Naval militia**, State forces in the United States which form a part of, and are on a footing with, the national guard. The general duties of the former are similar to those of the latter, but in addition they are supposed to exercise a special supervision along the water-front, both on shore and afloat, and in time of war to be eligible for absorption into the regular naval forces of the country.

milk, *n.* 5. An emulsion; any liquid which holds small particles of solid matter in suspension. *Phillips and Bauerman*, Elements of Metallurgy, p. 385.—**Bitter milk**, milk which has been made bitter by the growth of bacteria, especially of *Bacillus Weigmanni.*—**Fortified milk**, milk rendered more nutritious by the addition of the white of egg or cream.—**Laboratory milk**, milk in which the essential components, namely, fat, albumins, and lactose, have been added according to a special formula.—**Medicated milk**, milk containing medicinal substances first given to the mother that they might be excreted in the milk, and so exert a therapeutic action on the child.—**Milk of magnesia**, a milk-white aqueous liquid holding magnesium hydrate in permanent suspension: it is antacid.—**Modified milk**, cows' milk the composition of which has been altered by the addition of water, salts, sugar, etc., in fixed proportions, so as to adapt it to the needs of the infant at different ages. Also called *rectified milk.*—**Separated milk**, milk from which the cream has been removed by means of a separator. See ★*centrifugal method* and ★*separator*, 2 (*e*).—**Slimy milk**, milk which has become slimy by the growth of bacteria (*Bacterium subriscosum*).—**Soapy milk**, fermented milk which appears to be frothy and has a soap-like taste.—**Sour milk**, milk containing lactic acid which is produced by the growth of certain bacteria, especially *Bacterium acidi-lactici*, and related forms.—**Starch milk**, water which contains in suspension enough starch granules to give it the appearance of milk.—**Vegetable milk.** See the extract.

> In a recent number of a Japanese journal a Mr. T. Kalajama described a process for the manufacture of a *vegetable milk*, the properties of which would render it highly suitable for use in tropical countries. The preparation is obtained from a well-known member of the leguminous family of plants (namely, the Soja bean), which is a very popular article of food among the Chinese. The beans are first of all softened by soaking, and are then pressed and boiled in water. The resultant liquid is exactly similar to cows' milk in appearance, but it is entirely different in its composition. This Soja bean-milk contains 92.5 per cent water, 3.02 per cent proteine, 2.13 per cent fat, 0.03 per cent fiber, 1.88 per cent non-nitrogenous substances, and 0.41 per cent ash.
> *Sci. Amer.*, Nov. 2, 1907, p. 306.

Witches' milk, a whitish fluid sometimes present in the breasts of new-born infants.

milk, *v. t.*—**To milk the street**, in stock-exchange business, to make a profit out of the smaller traders in stocks (known as 'the street') by first manipulating the market in such a way as to give promise of a rise in prices, thus inducing the smaller traders to purchase the particular stock affected, and after supporting it for a time, depressing the price suddenly before the smaller traders have had time to cover.

milk-brother (milk'bruᴛʜ″ėr), *n.* A foster-brother.

milk-bush (milk'bůsh), *n.* 1. Same as *milk-hedge.*—2. A shrub of the genus *Wrightia*, a native of India.—3. A shrub, *Wrightia saligna*, a native of Queensland. *E. E. Morris*, Austral English.—4. See the extract.

> The common *milkbush* of the karroo and karroid regions of the interior [South Africa], viz. Euphorbia mauritanica. *Nature*, Jan. 17, 1907, p. 288.

milk-cell (milk'sel), *n.* The cell in which the milky juice or latex of plants is contained. *N. E. D.*

milk-escutcheon (milk'es-kuch″o̤n), *n.* Same as *escutcheon*, 2 (*c*).

milk-fish, *n.* 2. An Australian holothurian which emits a whitish, viscid fluid from its skin. Also known as *tit-fish.* *E. E. Morris*, Austral English.

milk-flour (milk'flour), *n.* Skimmed milk transformed by an exsiccator into a highly soluble powder which, when dissolved at a temperature of 60–70° C. above zero in a proper quantity of water, gives a solution with the same taste, smell, and other qualities as common milk. The flour, or powder, can be easily transported, and can be kept a long time without being spoiled. *Sci. Amer. Sup.*, April 18, 1903, p. 22827.

milk-fungus (milk'fung″gus), *n.* Any fungus of the genus *Lactarius.*

milk-gowan (milk'gou″a̤n), *n.* The dandelion.

milk-grass (milk'grȧs), *n.* The corn-salad, *Valerianella olitoria.*

milking, *n.* 4. In *card-playing*, same as ★*fuzzing.*

milk-ipecac (milk'ip″ē̤-kak), *n.* See ★*ipecac.*

milk-knot (milk'not), *n.* A condition in which there are small nodular swellings in the secreting breast, occurring especially where an effort has been made to suppress the secretion; also, one of the nodular swellings.

milk-nucleon (milk'nū″klē̤-on), *n.* A substance of the character of Siegfried's phosphocarnic acid, occurring in milk.

milk-plant (milk'plant), *n.* Same as *milk-pea.* See *Galactia*, 2.

milk-powder (milk'pou″dėr), *n.* A powder prepared from desiccated milk. *Evening Post*, Feb. 10. 1906.

milkpox (milk'poks), *n.* A disease, believed to be a modified form of smallpox, prevalent among the Kafirs in South Africa. Also called *amaas.*

milk-premolar (milk'prē-mō″lä̤r), *n.* Same as *milk-molar.*

> In this communication the author [Oldfield Thomas] suggested the use of the term "*milk-premolars*," in lieu of milk-molars. *Proc. Zool. Soc. London*, 1899, p. 924.

milk-purslane (milk'pėrs″lā̤n), *n.* See *purslane.*

milk-ranch (milk'rȧnch), *n.* A large dairy-farm. [Slang, western U. S.]

milk-route (milk'röt), *n.* The district or the round of customers served by a milkman or his employees, or the business built up by him in this round or route: as, to buy or to establish a *milk-route.*

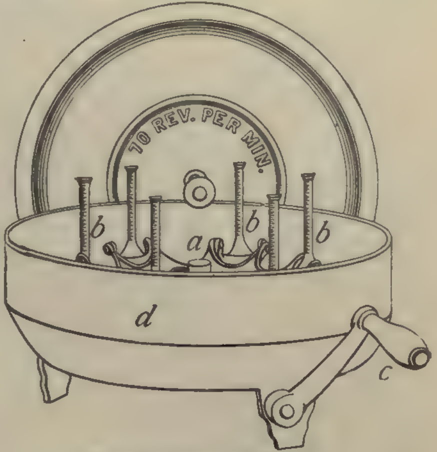
milk-scales (milk'skālz), *n. pl.* A spring-balance for weighing cans of milk. One form employs a case for a card ruled in vertical lines, one of the spaces between the lines being assigned to each cow of a herd. The index travels over the whole front of the case and carries a series of knobs which when pressed record the weights on the card. The card is placed in the case, the milk from a particular cow is weighed, then the attendant presses the button on the index and records the weight in the space assigned to the cow that gave the milk. When all the milk is weighed the card shows the actual and comparative weight of milk for each cow in the herd.

milk-separator (milk'sep″a̤-rā-to̤r), *n.* See ★*separator*, 2 (*e*).

milk-shield (milk'shēld), *n.* Same as *escutcheon*, 2 (*c*).

milk-spot (milk'spot), *n.* In *pathol.*: (*a*) A whitish spot sometimes found on serous membranes, especially on the layer of pericardium attached to the heart. They are occasionally found post mortem in the aged. *Lancet*, April 18, 1903, p. 1075. (*b*) A white mucous patch in secondary syphilis. (*c*) A kind of tooth-rash. *Syd. Soc. Lex.*

milk-tester, *n.* 2. A machine used to ascertain the percentage of fat in a sample of milk. The sample is placed in a standard glass vial which has a long, slender neck graduated on the outside. The vial is then placed in a centrifugal machine and the fat is driven out of the milk, its position in relation to the graduated scale indicating the percentage of it in the milk. Several vials may be tested at once.—**Babcock's centrifugal** or **milk-tester**, an apparatus for determining the percentage of butter-fat in milk, used extensively in creameries. The test is made by adding acid to a weighed quantity of milk and separating the watery portion from the liquid fat by centrifugal force. The percentage of fat is shown by the thickness of the layer of liquid fat as measured in divisions of the graduated neck of the test-bottle.



Babcock Centrifugal or Milk-tester.

a, centrifugal table; *b*, glass jar for milk, cream rising in graduated neck; *c*, handle to operate machine; *d*, casing.

milk-thrombus (milk'throm″bus), *n.*; pl. *milk-thrombi* (-bī). A nodular swelling in the breast arising from obstruction of the flow of milk in the ducts.

milk-train (milk'trān), *n.* In *railroading*, a train which carries milk, and is wholly or in part composed of milk-cars.

Milk-tree wax. See ★*wax*².

milk-vetch, *n.* 2. A plant of any one of the three genera *Phaca*, *Orophaca*, and *Homalobus*, closely related to *Astragalus* and formerly included in that genus.

milkweed, *n.* 3. (*c*) The tall blue lettuce, *Lactuca spicata.*—**Running milkweed**, the hairy angle-pod, *Vincetoxicum hirsutum*, of the eastern United States.—**Wandering milkweed**, the spreading dogbane, *Apocynum androsæmifolium.*

milkweed-beetle (milk'wēd-bē″tl), *n.* A beetle that infests the milkweed.—**Red milkweed-beetle**, any beetle of the lamiid genus *Tetraopes.* They are bright red, usually spotted with black.

milkweed-butterfly (milk'wēd-but″ėr-flī), *n.* 1. See *archippus.*—2. Same as *monarch* ★*butterfly.*

mill¹, *n.* 12. In *leather-manuf.*, an arrangement consisting of one or two large stone rollers which revolve vertically in a pit. *C. T. Davis*, Manuf. of Leather, p. 377.—13. The raised or ridged edge or flange made in milling, stamping, rolling, or pressing anything, as a coin or a screw.—**Bogardus mill**, a machine for grinding materials between two horizontal revolving plates, the upper of which is eccentric to the lower.—**Chaser mill.** Same as *edge-runner mill* (which see, under *mill*¹).—**Cheese-curd mill**, in *dairying*, a small crushing-mill for breaking and grinding cheese-curd; a curd-breaker or -crusher.—**Dry mill**, any machine in which the abradant or cleaning material is dry. It is sometimes steam-heated to keep the abradant hot and to drive off moisture.—**Exhaust mill.** See ★*tumbling-mill.*—**Gastric mill.** See ★*gastric.*—**Glacial mill.** See ★*glacial.*—**Hungarian mill**, a rotating mill for removing small particles of gold from quartz by mixing with mercury; one of the many forms of pan-amalgamators: so called because used in Hungary.—**Huntington mill**, in *mining*, a crushing-machine in the form of a heavy cast-iron pan containing several rollers on vertical shafts hung like pendulums from a revolving frame, and crushing the ore by centrifugal force as they roll on the inside of the rim.—**Lauth's mill**, a three-high rolling-mill in which the middle roll has a diameter only about one half of that of the top and bottom rolls. The middle roll runs loose, being driven by the friction of the piece going through.—**Merchant mill.** (*a*) A rolling-mill for rolling merchant bars, billets, angles, channels, beams, etc. (*b*) The entire plant for producing merchant bars and shapes, including the buildings, boilers, engines, mills, and accessories.—**Pharyngeal mill**, in rotifers. Same as *mastax*, 1.—**Ramsbottom's mill**, a rolling-mill in which the rolls are driven, without the intervention of a fly-wheel, by a pair of direct-acting horizontal engines, which are reversed after each pass of the bloom or ingot, so that the rolling is performed alternately in opposite directions.—**Wagner's mill**, a rolling-mill consisting of two horizontal rolls mounted in the usual way, and a pair of vertical rolls working in bearings. The distance between the vertical rolls can be regulated at will, so that bars and flats of various sizes can be produced with the same rolls. It is a kind of universal mill.—**Wet mill**, a mill in which moist or wet abradants can be used

mill^1, *v. t.* 12. In *sugar-manuf.*, to pass (sugar-cane) through a cane-mill. See *sugar-mill.*

Milla^1 (mil′ä̤), *n.* [NL. (Cavanilles, 1793), named in honor of J. *Milla*, a Spanish court gardener of Madrid.] A genus of plants of the family *Liliaceæ*, closely allied to *Hookera* and *Triteleia*: distinguished by the salver-shaped perianth with 3-nerved, nearly separate segments, 6 nearly sessile stamens, and waxy-white, star-like flowers borne (from 1 to 5) on a slender scape. *M. biflora*, the only species, a native of New Mexico, Arizona, and Mexico, is a choice garden plant. It may be planted in the border in spring and the bulbs removed in autumn, or used as a pot-plant under glass.

milla^2 (mēl′yä), *n.* [Sp.: see *mile.*] In Spain, a mile, especially a nautical mile or knot; the mile of some Spanish-American countries (as the Argentine Republic, Nicaragua, Salvador, and Venezuela), equivalent to 1.15 statute miles.

millage (mil′āj), *n.* Rate (as of taxation) reckoned in mills per dollar.

mill-beetle (mil′bē″tl), *n.* The cockroach.

mill-brow (mil′brou), *n.* Same as ★*mill-run.*

mill-bush (mil′bu̇sh), *n.* The iron lining or bushing placed in the eye of a millstone, where the shaft or arbor comes.

mill-dog (mil′dog), *n.* A dog or clamp used to secure a log in a saw-mill.

mill-dressed (mil′drest), *p. a.* Cut or planed in a mill or by mechanical power: said of stones, marble, etc., but more especially of boards, planks, clapboards, and the like, used for house-building. Also *mill-planed.*

mille (mil), *n.* In certain card games, a counter representing ten 'fishes' or points. *N. E. D.*

milled, *p. a.* 5. Worked in a mill or by machinery: said especially of boards and planks which are cut and then planed by the power-mill.

millefleurs (mēl-flėr′), *n.* [F. *eau de mille-fleurs*, lit. water of a thousand flowers.] Perfume made from several kinds of flowers.

> It was a sad day for you, when you appeared in your neat pulpit with your fragrant pocket-handkerchief (and your sermon likewise all *millefleurs*), in a trim, prim, freshly mangled surplice, which you thought became you.
> *Thackeray*, Newcomes, v.

millefoliate (mil-e-fō′li-ā̤t), *a.* [L. *mille*, thousand, + *foli*(*um*), leaf, + *-ate*^{1}.] Having leaves that are very much incised, so as to resemble many smaller leaves. *Syd. Soc. Lex.*

Millegrana (mil-ẹ̄-grā′nä̤), *n.* [NL. (Adanson, 1763), a name applied to the plant by some of the early botanists, in allusion to the many capsules and seeds produced by it: < L. *mille*, a thousand, + *granum*, a seed.] A genus of dicotyledonous plants of the family *Linaceæ*. See *Radiola.*

millenary, *n.* 4. A thousandth anniversary; a celebration of an event that had happened one thousand years before.

millenniad (mi-len′i-ad), *n.* [L. *millenni*(*um*) + *-ad*^{1}.] A period of a thousand years; a very long period of years.

millennian (mi-len′i-a̤n), *a.* and *n.* [*millennium* + *-an.*] I. *a.* Same as *millennial.*

II. *n.* A millennialist.

millenniary (mi-len′i-ā̤-ri), *a.* Same as *millennial.*

milleograph (mil′ẹ̄-ọ̄-gra̍f), *n.* [Also *milliograph*; irreg. < L. *mille*, thousand, + Gr. *γράφειν*, write.] A modification of Edison's mimeograph used in printing numbers of any special form up to 500. It utilizes a wax stencil-paper, the pressure of a stencil-point, or a type-writer stroke, and an inked pad below the paper when printing directly. The writing may be transferred to a lithographic stone and more copies printed.

milleporous (mil′e-pō-rus), *a.* [See *millepore.*] Having the characters of the millepores; having numerous pores.

miller, *n.* 7. A cicada. [Australia.]—**To drown the miller** (*naut.*), to put a generous quantity of water into the grog to make it go around.

Millerian (mi-lē′ri-a̤n), *a.* Relating or pertaining to the English mineralogist W. H. Miller (1801–80), and specifically noting the system of crystallographic notation introduced by him.—**Millerian axes,** the three equal, obliquely inclined axes to which, following Miller, the forms of rhombohedral crystals are sometimes referred. See ★*system.*—**Millerian indices.** See *index*, 8.—**Millerian notation** or **symbols.** See ★*symbol*^{1}.

millet^1, *n.*—**Ankee-millet.** Same as ★*ankee.*—**Arabian millet.** (*b*) Same as *Johnson* ★*grass.*—**Arizona millet,** *Chætochloa macrostachya*, a native American grass, closely related to the foxtail-millets and making a good hay. It is common in central Texas and ranges to Mexico and South America.—**Australian millet.** Same as *Johnson* ★*grass.*—**Barn-yard millet,** any of the cultivated forms of *Echinochloa Crus-galli*, the barn-yard grass. The best are of an upright habit with a close head, the Japanese barn-yard millet, recently introduced into the United States, being one of the most promising. (Compare ★*ankee.*) The name has been extended to the Shama millet, or jungle-rice, and the Sanwa millet, species of the same genus. See *jungle-*★*rice* and *Sanwa* ★*millet.*—**Broom-corn millet, brown millet,** the true millet, *Panicum miliaceum.*—**Cat-tail millet.** (*b*) Same as *foxtail-*★*millet.*—**Chaparral-millet,** *Panicum Reverchoni*, an excellent pasture-grass of the highlands of central Texas.—**Common millet,** a slender form of foxtail-millet with narrow, nodding heads, affording the best hay. See *foxtail-*★*millet.*—**Ditch-millet.** Same as *millet coda* or *khoda* (which see, under *millet*1). This is cultivated in northern India as a rainy-season crop on poor soil, the grain supplying food chiefly to the poorer classes. A variety is called *hureek* (which see).—**False millet.** Same as *Polish* ★*millet.*—**Foxtail-millet,** any of the varieties of *Chætochloa Italica*, as distinguished from *true* or *broom-corn millet*, the name referring to the cylindrical brushy heads. According to Hackel, the probable original of this cultural species is the common green foxtail. Millets of this class have long been grown as cereals as well as for forage in the Old World, but in America they are sown only for forage. Four standard varieties are known in the United States, namely, *common millet, German millet, golden wonder millet*, and *Hungarian millet.*—**German millet,** a robust broad-leaved form of foxtail-millet, yielding an abundant coarse forage but not bearing drought.—**Giant millet,** a very robust foxtail-grass, *Chætochloa magna*, found in water or wet ground on the Atlantic coast from Delaware to Texas, also in the West Indies and in Central America. It promises to be serviceable in reclaiming swampy lands along the coast.—**Golden millet.** Same as *German* ★*millet.*—**Golden wonder millet,** a stout and tall variety of foxtail-millet with a large head, yielding more seed than others: as forage it is coarse.—**Hog-millet.** Same as *broom-corn* ★*millet.*—**Horse-millet.** Same as *pearl millet* (which see, under *millet*1).—**Hungarian millet,** a foxtail-millet resembling the common millet in size, marked by the prominent brown or purple beards of the heads: it is next to common millet in quality of hay. Known as *Chætochloa Italica Germanica.*—**Indian millet.** (*b*) In the United States, one of the various mountain-rices, *Eriocoma cuspidata.* It is a valued bunch-grass of the Western arid country, thriving in soil too dry and sandy for most other grasses. *Oryzopsis micrantha*, of the Dakotas and Montana, has been called *small Indian millet.*—**Japanese barn-yard millet.** See *barn-yard* ★*millet.*—**Japanese panicle millet.** Same as *broom-corn* ★*millet.*—**Morocco millet.** Same as *Johnson* ★*grass.*—**Polish millet,** the common crab-grass, *Syntherisma sanguinalis.* In Bohemia (presumably also in Poland) this grass is grown as a cereal, the seeds being used for a mush or porridge.—**Ragi millet,** *Eleusine coracana.* See *Eleusine* and *raggee.*—**Russian millet.** Same as *broom-corn* ★*millet.*—**Sanwa millet,** *Echinochloa Crus-galli frumentacea*, a very quick growing millet, in India yielding forage and a cheap food. It has been introduced experimentally into the United States. See *barn-yard* ★*millet.*—**Shama millet.** Same as *jungle-*★*rice.*—**Swamp-millet,** *Isachne globosa*, a slender creeping grass with upright stems and open panicles of very small spikelets, native in southern Asia and in Australia. It grows on the banks of rivers and in swamps, and is well adapted by its running rootstocks to fixing soils exposed to washing; it is also said to be liked by cattle.—**Texas millet,** *Panicum Texanum*, a leafy branching annual grass of much merit as a hay-grass, native and abundant near the Colorado River of Texas. Also called *Colorado grass, Austin grass, concho-grass* (which see), and *bottom-* or *river-grass.*—**Water-millet,** a stout and tall semi-aquatic grass, *Zizaniopsis miliacea*, of the southern United States, allied to the wild rice, *Zizania.* It grows from extensively creeping rootstocks, and inhabits both fresh- and salt-water marshes.—**Wild millet.** (*a*) The millet-grass, *Milium effusum* (see *Milium*, 1). (*b*) The green foxtail, *Chætochloa viridis.* (*c*) Same as *Indian* ★*millet* (*b*).

millet^2 (mil′et), *n.* [Turk. *millet* (< Ar. *millah*), people, community, sect, creed.] A people; a nation.

> All Moslems, to whatever race they may belong, are included in the *millet*, or nation, of Islam. The Rûm, or Roman (*i.e.*, Greek) *millet* comprises all those who acknowledge the authority of the Œcumenical Patriarch.
> *Encyc. Brit.*, XXX. 395.

millet-grass, *n.*—**Many-flowered millet-grass,** a European mountain-rice, *Oryzopsis miliacea*, not highly esteemed at home, but proving to be of value on granitic soils in California.

millet-rice (mil′et-rīs), *n.* Same as *jungle-*★*rice.*

mill-fever (mil′fē″vėr), *n.* A form of low fever prevalent among the young hands in linen-mills. *N. E. D.*

mill-gearing (mil′gēr″ing), *n.* Gears; belts, pulleys, and other forms of transmission machinery.

mill-headed (mil′hed″ed), *a.* Having a milled head.

mill-hole (mil′hōl), *n.* An auxiliary shaft connecting a stope or other excavation with the level below.

mill-house (mil′hous), *n.* A mill; a building for milling or grinding.

milliad (mil′i-ad), *n.* [L. *mille*, thousand. See *myriad.*] A millennium; a period of a thousand years.

milliammeter (mil-i-am′e-tėr), *n.* [L. *mille*, a thousand, + E. *ammeter.*] In *elect.*, an instrument for the measurement of small electric currents, in which the scale is graduated to read in thousandths of an ampere. Also *milammeter.*

milliamperage (mil″i-am-pãr′ā̤j), *n.* [L. *mille*, a thousand, + E. *amperage.*] In *elect.*, current strength expressed in milliamperes, or thousandths of an ampere.

milliamperemeter (mil″i-am-pãr′mē-tėr), *n.* Same as ★*milliammeter.*

millicalory (mil′i-kal″ọ̄-ri), *n.* [L. *mille*, a thousand, + E. *calory.*] The calory; a gram-calory.

millicoulomb (mil′i-kö-lom″), *n.* [L. *mille*, a thousand, + E. *coulomb.*] A thousandth of a coulomb, or 1×10^{-4} c. g. s. units: a practical unit of electrical quantity or charge.

millième (mēl-yām′), *n.* [F., < L. *millesimus*, thousandth.] A current subsidiary coin of Egypt and the Soudan, equal to one tenth of a piaster.

> The subsidiary coinage consists of pieces of 20, 10, 5, 2, and 1 piastres in silver; 5, 2, and 1 *milliemes* in nickel; and ½ and ¼ *millieme* in bronze.
> *Encyc. Brit.*, XXVII. 700.

milligauss (mil′i-gous), *n.* [L. *mille*, a thousand, + E. *gauss.*] In *elect.*, a practical unit of magnetic induction equal to a thousandth of one gauss or of one c. g. s. electromagnetic unit.

milligilbert (mil′i-gil-bėrt), *n.* [L. *mille*, a thousand, + E. *gilbert.*] In *elect.*, a practical unit of magnetomotive force equal to one thousandth of a gilbert or of one c. g. s. unit.

milligrade (mil′i-grăd), *a.* [L. *mille*, a thousand, + *gradus*, step. See *centigrade.*] Divided into a thousand degrees: as, a *milligrade* scale. *Bentham.*

millihenry (mil′i-hen-ri), *n.*; pl. *millihenries* (-riz). [L. *mille*, a thousand, + E. *henry.*] In *elect.*, a practical unit of inductance equal to one thousandth of a henry. Also *milhenry.*

millim (mil′im), *n.* [*millim*(*eter*).] A millimeter; the third metret or decimal submultiple of a meter in the scheme of magnitudes devised (about 1860) by G. J. Stoney, F. R. S. The decim or decimeter is the first metret, the centim the second. See ★*metro* and ★*metret.*

> The third subsection w, from *millims* (millimeters) down to tenths of a micron, covers the entire range of the microscope. *Smithsonian Rep.*, 1899, p. 213.

millimeter, *n.*—**Circular millimeter.** See ★*cross-section units.*

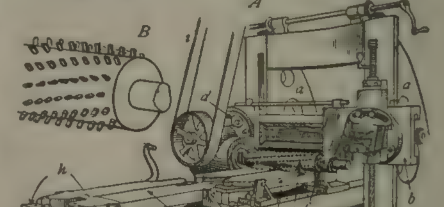
millimicrohm (mil′i-mik-rōm), *n.* [L. *mille*, a thousand, + E. *microhm.*] A c. g. s. unit of resistance: 1×10^{-9} ohms. *H. DuBois*, The Magnetic Circuit, p. 306.

millimicron (mil′i-mī-kron), *n.* [L. *mille*, a thousand, + *μικρός*, small (see *micron*).] A unit of length ($\mu\mu$) equal to 10 Ångström units, .001 microns, or .000001 millimeters: sometimes employed in microscopy or in stating wave-lengths of light. *C. Hering*, Conversion Tables, p. 31.

millimol (mil′i-mol), *n.* [L. *mille*, a thousand, + E. *mol*(*ecule*).] In *phys. chem.*, the one thousandth part of a gram-molecule, an amount of any element or compound whose weight in milligrams is numerically equal to the molecular weight of the substance. *C. Hering*, Conversion Tables, p. 60.

Milling blue, green, orange, red, scarlet, yellow. See ★*blue*, etc.—**Process milling,** milling of wheat to make flour by one of the processes invented for that purpose.

milling-attachment (mil′ing-a̤-tach″ment), *n.* A milling-machine combined with other machine-tools, such as a boring-machine, a drilling-machine, or a planer. The most simple of these



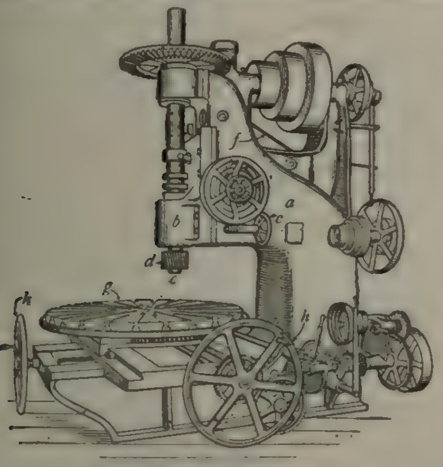
Planer Milling-attachment.

A, planer; *B*, milling-cutter with inserted teeth; *a*, housing of planer; *b*, cross-rail; *c*, traveling-bed; *d*, milling-attachment bolted to tool-saddle of cross-rail; *e*, out-board support for spindle of milling-attachment; *f*, milling-cutter; *g*, work (slabs) in vises secured to traveling-table of planer; *h*, vises; *i*, temporary belt delivering power to milling-attachment.

attachments is a bracket-table fixed to the side of a lathe and next to the live-head. The lathe-spindle, extending over the work on the table, becomes the horizontal spindle of the milling-machine to which any horizontal type of cutter can be fixed. Combined boring-, drilling-, and milling-machines are of many forms, and among them are included many of the largest and most powerful machines used in modern machine-shops.—**Planer milling-attachment,** a small milling-machine attached directly to the planer-rail in place of the usual cutting-tool. The spindle may be horizontal or vertical, and within certain limits any form of cutter may be employed. The traveling-bed of the planer is used as the feed-table, and as it has a very long traverse several pieces of work may be placed upon it in a line to pass in turn under the cutter, with great economy of time and labor. Thin or long and narrow pieces of work can also be clamped together side by side and, with suitable cutters, all may be milled at the same time. These milling-attachments may also be in pairs on the same planer and cut two sides of the work at the same time. See cut.

milling-cutter, *n.* **2.** A cutting-tool adapted for use in a milling-machine. Milling-cutters are made in a great variety of forms and are used for many purposes. Many are in the form of cylinders, with the cutting edges placed in straight or spiral lines along the sides of the cylinder or radially at the end, when they are called *end-mills*. Others are disks, with the blades on the edge and sides of the edge, or, as in circular saws, with the blades on the edge only, as in the screw-slotting cutter. Others, called *face-cutters*, have the blades placed radially at the end of the shank.

milling-machine, *n.* **1.** This name, originally given to a simple form of metal-finishing machine, is now applied to a large and important class of tools ranging in size from a small bench-machine to large and powerful machines employed upon the massive pieces of metal used in constructing motors and machinery. Milling-machines having two spindles are called *duplex millers*. Single-spindle machines may also employ several cutters and are then *gang* or *multiple millers*. Special forms of milling-machines are also made which employ the general form of the lathe and the planer. The milling-machine has largely occupied the field of the planer, shaper, and slotting-machine, and has made it possible to finish or machine metal forms hitherto not attainable at all or only by means of slower and more expensive tools. It has thus greatly modified all machine-shop practice and made it possible to finish the many novel and complicated forms now demanded in the metal industries. See *profiling-machine*.—**Boring-, drilling-, and milling-machine.** See ★*boring-machine*.—**Plain milling-machine,** a milling-machine consisting of a standard which supports a horizontal or vertical spindle (operated by suitable belting or gearing) to which some form of revolving cutter, called a *milling-cutter*, may be attached. Beneath the spindle is a feed-table to which the piece of metal to be milled or machined is fixed. The action of the machine is a combination of the revolution of the cutter and the movement of the feed-table which pushes the work against it. The serrations or teeth of the cutter chip or cut off minute shavings of metal as the work passes under it. Since the cutters have a great variety of forms the machine is adapted to a wide range of work. Such machines are divided into two classes, those having horizontal and those having vertical spindles. See ★*milling-cutter*.—**Universal milling-machine,** a milling-machine fitted with longitudinal, cross, and revolving feeds, in which boring, drilling, gear-cutting, milling, etc., can be done by rotating cutters or mills.



Large Vertical Milling-machine.

a, frame supporting spindle; *b*, vertical sliding support for spindle; *c*, spindle; *d*, milling-cutter; *e*, control of sliding support to adjust cutter to work; *f*, cable to counterweight for sliding support, counterweight inside the frame; *g*, table for work with rotary, cross, and longitudinal feed having hand or power control; *h*, *h*, control of feed.

milling-saw (mil′ing-sâ), *n.* A milling-cutter resembling a large circular saw used in cutting hot or cold metals. Hot iron is cut at a high and cold iron at a low speed.

milliograph (mil′i-ọ̄-gråf), *n.* Same as ★*milleograph*.

millionairedom (mil-yọn-ãr′dum), *n.* Millionaires collectively; the state of being a millionaire; millionairism.

millionairism (mil-yọn-ãr′izm), *n.* The state of being a millionaire.

> Your millionaire, for example,—and *millionairism* is getting so common as to be almost vulgar,—your millionaire never tires of telling you how he worked the multiplication table until cents became dimes.
> *E. Eggleston*, Faith Doctor, v.

millionary, *a.* **2.** Possessing millions (of dollars, or pounds, etc.).

> All this to feed the avidity of a few *millionary* merchants. *Jefferson*, Writings, IV. 284. *N. E. D.*

> He had a dread that these *millionary* people, with wasteful private cars, might take undue interest in his companion. *R. Kipling*, Captains Courageous, ix.

millisavart (mil′i-sa-värt″), *n.* [L. *mille*, a thousand, + E. *savart*.] In *acoustics*, an interval pitch equal to one thousandth of a savart.

> In acoustics it is common to measure large intervals of pitch in octaves and smaller ones in "commas." M. A. Guillemin proposes to adopt instead of these units the savart and the *millisavart*. By the savart is meant an interval of ten to one, which equals three octaves plus a major third. The *millisavart*, which is the thousandth part of the savart, represents the interval between two French standard diapasons giving one beat per second.
> *Nature*, Aug. 21, 1902, p. 398.

millivoltmeter (mil′i-vōlt-mē″tėr), *n.* [L. *mille*, a thousand, + E. *voltmeter*.] In *elect.*, a direct-reading instrument for the measurement of small differences of potential, in which the scale is graduated to read in thousandths of a volt.

milliweber (mil′i-vā″bėr), *n.* [L. *mille*, thousand, + *weber*. See *weber*.] The thousandth part of a weber.

mill-lands (mil′landz), *n. pl.* Certain lands which by legal custom appertained to a cornmill, especially in Scotland. *N. E. D.*

mill-leat (mil′lēt), *n.* An artificial channel for the conveyance of water to a mill. *N. E. D.*

millocracy (mi-lok′rạ-si), *n.* [See *millocrat*.] Mill-owners as a ruling or dominant class.

> In hydra-wrestle, giant '*Millocracy*' so-called, a real giant, though as yet a blind one and but half-awake, wrestles and wrings in choking nightmare.
> *Carlyle*, Past and Present, III. 1.

mill-pick, *n.* **2.** Same as *pickax*.

mill-pile (mil′pīl), *n.* A number of puddling-bars charged together into a reheating- or balling-furnace. They are heated to a welding temperature and then passed through the rolls, by which they are welded together and a new bar is formed from the pile.

mill-planed (mil′plānd), *a.* Planed, as a board or plank, in a power-mill. A mill-planed board is not considered as finished for any purpose requiring smoothness, but should be worked over by hand.

mill-power (mil′pou″ėr), *n.* A unit of water-power the value of which varies in different localities. For example, at Holyoke, Massachusetts, it is equivalent to 38 cubic feet of water per second discharging under a head of 20 feet; at Minneapolis, Minnesota, it is equivalent to 30 cubic feet of water per second discharging under a head of 22 feet. *Trans. Amer. Soc. Mech. Engin.*, XXIV. 983.

mill-run (mil′run), *n.* **1.** The work of an amalgamating-mill between two clean-ups.—**2.** A test of a given quantity of ore by actual treatment in a mill.

mill-saw (mil′sâ), *n.* A straight saw placed in a gate or frame which is given a reciprocating motion; one of the saws in a gang-saw. See cut under *saw*[1], 1.

mill-staff (mil′ståf), *n.* A staff used to test the flatness of the face of a millstone.

millstone-hoist (mil′stōn-hoist), *n.* A hoisting-screw or -jack for lifting and handling millstones.

mill-table (mil′tā″bl), *n.* Same as ★*roller-table*.

mill-worked (mil′wėrkt), *p. a.* Same as ★*mill-dressed*.

milo (mē′lō), *n.* [Hawaiian and Samoan *milo* = Tahitian, Mangarevan, etc., *miro*, name of several trees.] In Polynesia, *Thespesia populnea*, a widely spread tropical tree belonging to the mallow family, with broadly ovate, entire, pointed leaves, and showy yellow hollyhock-like flowers which change to a purplish-pink color on withering. The heart-wood, which is hard, smooth-grained, and durable, is used by the Hawaiians for making bowls, or 'calabashes,' for holding poi. The Samoans use it in boat-building. Also called *Polynesian rosewood*. See *Thespesia* (with cut) and ★*banalo*.

milpa (mil′pạ̈), *n.* [Mex. Sp., < Nahuatl *milpan*, in the country; *milli*, a cultivated field.] **1.** Among the ancient Aztecs, a garden-bed assigned out of the communal land to a particular family. *Ratzel* (trans.), Hist. of Mankind, II. 131.—**2.** A cultivated field, especially a field of maize. [Mexico.]

Miltonism (mil′tọn-izm), *n.* A peculiarity of Milton's style or an imitation of it.

> Cowper's blank verse detains you every step with some heavy *Miltonism*; Chapman gallops off with you his own free pace. *Lamb*, Letters, CXIX. 238.

Miltonist (mil′tọn-ist), *n.* A supporter of John Milton, especially of his views on divorce.

> A party, distinguished by the name of *Miltonists*, attested the power of his pen, and gave consequence to his pleading for divorce. *Symmons*, Life of Milton, p. 250.

Miltonize (mil′tọn-īz), *v. t.* and *i.*; pret. and pp. *Miltonized*, ppr. *Miltonizing*. [*Milton* + *-ize*.] To render Miltonic in character or style; to imitate Milton's style.

> Mr. Johnstone has conscientiously gone to Milton for his model, and *Miltonises* as best he may. The metre is a faint Miltonic echo. *The Academy*, April 4, 1903, p. 336.

miltos (mil′tos), *n.* [Gr. *μίλτος*, red lead, minium.] Minium, a red earth found in the Cyclades, from which the ancients made the red paint so common in their decorations.

milt-pain (milt′pān), *n.* A disease of swine.

milt-sickness (milt′sik″nes), *n.* A disease of the spleen in cattle.

mimaluse (mim′ạ-lös), *a.* and *n.* [Chinook jargon, also *mimaloose*, *memaloose*, dead, to die (*mimaluse illahee*, a cemetery, a sepulcher); < Chinook *imemalus*, a dead person.] **I.** *a.* Dead. [Columbia River, Washington, and British Columbia.]

II. *n.* A dead body.

M. I. M. E. An abbreviation (*a*) of *Member of the Institute of Mechanical Engineers*; (*b*) of *Member of the Institute of Mining Engineers*.

M. I. Mech. E. An abbreviation of *Member of the Institute of Mechanical Engineers*.

mimeograph (mim′ẹ̄-ọ̄-gråf), *v. t.* To multiply (copies of a writing or document) by means of a mimeograph; manifold by the use of a mimeograph.

mimesid (mī-mes′id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Mimesidæ*.

II. *a.* Having the characters of, or belonging to, the family *Mimesidæ*.

mimesis, *n.* **3.** The occurrence of symptoms, without organic basis or in the course of some disease, which simulate those of another disease.

Mimetic resemblance. See ★*resemblance*.

mi-mi (mī′mī), *n.* Same as ★*mia-mia*. [Australia.]

mimiambi (mim-ī-am′bī), *n. pl.* [L., < Gr. *μιμίαμβοι*, pl., < *μῖμος*, mime, + *ἴαμβος*, iambus. See *iambic*.] Mimes composed in iambic verse: as, the *mimiambi* of Herondas.

mimiambic (mim-ī-am′bik), *a.* [*mimiambi*.] Pertaining to or having the characteristics of mimiambi; being a writer of mimiambi: as, a *mimiambic* poet.

mimicry, *n.*—**Aggressive mimicry,** the resemblance of certain predaceous and parasitic insects to the insects on which they prey. Examples are abundant in the tropics, where certain spiders mimic the ants on which they prey. *Volucella* and *Psithyrus* mimic the bees on which their larvæ feed.—**Batesian mimicry.** See ★*Batesian*.—**Müllerian mimicry,** synaposematic resemblance. See ★*resemblance*.

miminy-piminy (mim″i-ni-pim′i-ni), *a.* and *n.* [Arbitrary and imitative.] Absurdly precise, delicate, or over-refined; finicking; niminy-piminy; also, something that exhibits these traits.

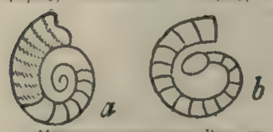
> She went and dropped her curtsey at the parlour door, and in a *miminy piminy* voice said she was come to make her submission, and would he forgive her, and give her another trial? *C. Reade*, Hard Cash, xxx.

> It is a tortuous, tottering, wriggling, fidgetty translation of every thing from the vulgar tongue, into all the tantalizing, teasing, tripping, lisping *mimminee-pimminee* of the highest brilliancy and fashion of poetical diction.
> *Hazlitt*. English Poets, viii.

mimoceracone (mim-ọ̄-ser′ạ-kōn), *n.* [*Mimoceras*, a genus of cephalopods, + Gr. *κῶνος*, a cone.] A cone or shell like that of the cephalopod genus *Mimoceras*, that is, loosely coiled in a spiral and straight for a short distance at the initial end: an elementary expression in the development of genera of the *Ammonoidea*.

mimoceran (mī-mos′ẹ-rạn), *a.* [*Mimoceras* + *-an*.] Pertaining to or having the characters of the genus *Mimoceras*.

Mimoceras (mī-mos′ẹ-ra̤s), *n.* [NL., < Gr. *μῖμος*, imitator, + *κέρας*, horn.] A genus of ammonoid cephalopods regarded as of extremely primitive character. Its shell is coiled in a spiral and the initial whorl is free from the next. It is of Lower Devonian age.



Mimoceras compressus, Beyr. sp. Lower Devonian; Wissenbach, Nassau.
a, natural cast; *b*, nepionic individual enlarged.
(From Zittel's "Palaeontology.")

mimography (mī-mog′ra̤-fi), *n.* [Gr. *μῖμος*, a mimic, + *-γραφια*, < *γράφειν*, write.] 1. The art of writing gesture-language by means of conventional pictorial symbols: designed for recording the gestures used by the deaf and dumb, or of primitive tribes that use gesture-language.—2. Writing which consists of symbols that represent gesture-language.

mimophyre (mim′ọ-fīr), *n.* [Gr. *μῖμος*, a mimic, + E. (*por*)*phyr*(*y*).] In *petrog.*, a name suggested by Brongniart (1813) for porphyritic volcanic tuffs, and for porphyritic metamorphic rocks which resemble porphyries or porphyroids.

Mimosa, *n.* 3. [*l. c.*] Same as *thiazol ★yellow*.

mimosaceous (mī-mō-sā′shius), *a.* Belonging to the plant family *Mimosaceæ*; resembling or having the characters of the mimosa.

Mimosella (mī-mọ-sel′a̤), *n.* [NL., < *Mimosa* + dim. *-ella*.] The typical genus of the family *Mimosellidæ*. *Hincks*, 1851.

Mimosellidæ (mī-mọ-sel′i-dē), *n. pl.* [NL., < *Mimosella* + *-idæ*.] A family of ctenostomatous gymnolæmatous polyzoans, having the movable deciduous zoœcia contracted below, with an aperture on the ventral side. It contains the single genus *Mimosella*.

mimosis (mī-mō′sis), *n.* [NL., < *μῖμος*, a mimic, + *-osis*.] Same as *mimesis*.

mimotannic (mī-mọ-tan′ik), *a.* [*mimo*(*sa*) + *tannic*.] Pertaining to the tannin derived from the mimosa.—**Mimotannic acid**, a variety of tannic acid found in mimosa, acacia, and similar species of plants.

mimsey (mim′zi), *a.* [*mim*, *a.* Cf. *flimsy*.] Prim; prudish; contemptible. *Eng. Dial. Dict.*

mimsy (mim′zi), *a.* [A nonsense-formation, < *mi*(*serable*) + (*fli*)*msy*.] Miserable and flimsy: a ★blend-word, or ★brunch-word (which see). *Lewis Carroll*, Through the Looking-glass, p. 128.

Min. An abbreviation of *minister*.

Mina³ (mī′na̤), *n.* [NL. (Cervantes, 1824), named in honor of Francisco Javier *Mina* (1789–1817), a Spanish soldier, killed in Mexico.] A genus of plants of the family *Convolvulaceæ*, closely related to *Ipomœa* and *Quamoclit*. *Mina lobata* of the gardens, a native of Mexico, is a twining herb with cordate 3-lobed leaves and small flowers in scorpioid clusters, the bag-shaped corolla of which is a rich crimson when it first opens, but changes to yellow.

minacciando (mi-nät-chē-än′dō), *a.* [It., ppr. of *minacciare*, menace: see *menace*, *v.*] In *music*, threatening: noting passages to be so rendered. Also *minaccioso*.

minaccioso (mi-nät-chẹ-ō′sō), *a.* [It., < *minaccio*, a menace: see *menace*, *n.*] In *music*, same as ★*minacciando*.

minage (mẹ-näzh′), *n.* [F. and OF. *minage*, < *mine*, a measure of grain, < L. *hemina*, < Gr. *ἡμίνα*, a Sicilian measure.] In French use, formerly: (*a*) The measurement of grain by the 'mine' (a measure somewhat less than two bushels). (*b*) The selling of grain by the 'mine.' (*c*) A tax exacted from the tenant by his lord upon the amount of grain produced. (*d*) A tribute paid upon grain. *Kidd*, Social Evolution, p. 222, note.

minah (mī′na̤), *n.* [E. Ind.] In the peninsula of India, a stambha, especially one built of masonry. Compare *lat*⁶.

minargent, *n.* 2. A trade-name of several alloys intended for ornamental use. One of them consists of copper alloyed with nickel, aluminium, and tungsten.

minchiate (min-ki-ä′tā), *n.* [It., pl.] A card-game chiefly played in Tuscany, a modification of tarot; also, as plural (the original use), the cards used in the game. *N. E. D.*

mind¹, *n.*—**Social mind**, the concurrent feeling, agreeing thought, and concerted volition of two or more individual minds. *Giddings*, Prin. of Sociol., p. 132.

mind-blindness (mīnd′blīnd″nes), *n.* Inability to recognize the visual impressions of external objects conveyed to the brain by functionally sound organs of vision.

mind-curist (mīnd′kūr″ist), *n.* One who believes in mind-cure; one who holds the doctrine that mental influence is the only or the chief cure for bodily ills.

> A clear and adequate reason may be given to explain why that psycho-physiological transformation and the advent of Faith should be conditioned, or at least greatly facilitated, by self-surrender understood in the sense of a relaxation of the deeper, the unconscious, will—that kind of giving up, of relaxation, which the *Mind-Curist*, the Christian Scientist and the Hypnotizer, wisely attempt to bring about in their subjects by way of preparation.
> *Amer. Jour. Relig. Psychol. and Education*, May, 1904, [p. 80.

mind-deafness (mīnd′def″nes), *n.* Same as *mental ★deafness*.

mindlessness (mīnd′les-nes), *n.* The condition of being devoid of mind or intelligence; absence of mind.

> God created the world. The question between faith and science even now is not whether the universe was created by Mind. If it requires Mind to construe the universe, could *mindlessness* have constructed it?
> *W. Alexander*, Primary Convictions, v. 12.

mine², *n.* 1. Specifically, in *Scotch mining*: (*a*) The underground works of a colliery or metalliferous working. (*b*) A drift or roadway from the surface, either level or on the slope of the seam. (*c*) A mine passage in rock: usually qualified, as stone-*mine*, cross-cut *mine*, etc.—**Back-set mine.** See ★*back-mine*.—**Buoyant mine.** See *submarine ★mine*.—**Contact mine.** See *submarine ★mine*.—**Dormant mine.** See *submarine ★mine*.—**Electro-contact mine.** See *submarine ★mine*.—**Floating mine**, an explosive mine that floats on or near the surface of the water.—**Observation mine.** See *submarine ★mine*.—**Small mine**, the dust and small fragments of iron ore left from calcining iron ore in Staffordshire, England. See *mine*², 6.—**Submarine mine**, in naval warfare, a large charge of explosive in a water-tight casing placed under water at such a depth that, by its explosion, it may sink or seriously damage a vessel passing in its vicinity. Such mines are of two principal classes: *contact mines*, designed to explode by contact with the vessel; and *observation mines*, designed to explode, at the will of an operator on shore, by the closing of an electric circuit connected to the mine when he observes an enemy's vessel passing over it. An *electro-contact mine* is controlled by an electric circuit by which its condition can be tested and by which it can be made temporarily inoperative for the passage of friendly vessels. Mines are also distinguished as *ground-mines*, which rest on the bottom; and *buoyant mines*, which are anchored to the bottom but remain suspended in the water below its surface by their buoyancy. *Dormant mines* are contact mines which are ordinarily held down to the bottom, but which can be released at the will of an operator on shore, and then become buoyant mines. Submarine mines are arranged systematically in groups in harbors and channels, and such a group is called a *mine-field*.—**Submerged mine.** Same as *contact mine* (which see, under ★*mine*²).

mine-car (mīn′kär), *n.* A small car used in mines for bringing ore or coal to the surface.

mine-dust (mīn′dust), *n.* Screenings of calcined ironstone. [Scotch.]

mine-field (mīn′fēld), *n.* A body of navigable water in which submarine mines are anchored for the purpose of preventing an enemy's ships from entering a channel, harbor, or roadstead; also, the group of mines itself. The mines may be so arranged that they can be exploded from a station on shore or may be contact mines which explode on being struck by a vessel. The mines are charged with guncotton or some other very powerful explosive. See *submarine ★mine*.

mine-master (mīn′mȧs″tėr), *n.* 1. One who is charged with the laying of military mines.—2. The superintendent of a mine.

mine-pig (mīn′pig), *n.* Pig-iron made from mine or ore, as distinguished from cinder-pig. *N. E. D.*

miner, *n.* 1. The term is sometimes limited to one who mines for minerals other than coal, a coal-miner being called a *collier* in Great Britain.—**Miners' anemia.** See ★*anemia*¹.—**Miners' asthma, lung, phthisis.** Same as *anthracosis*. **Miners' disease.** Same as ★*ancylostomiasis*.—**Miners' elbow, horn.** See ★*elbow*, ★*horn*.—**Miners' nystagmus.** See *nystagmus*.—**Miners' right.** See ★*right*.—**Miners' worm.** See ★*worm*.—**Miners' worm disease.** See ★*ancylostomiasis*.

mineral. I. *n.* 3. In *mining*, ore.—**Bathgate mineral.** Same as *Boghead coal*.—**Contact mineral**, a mineral characteristically developed along the contact of an igneous intrusion and its walls, such as vesuvianite and garnet in limestones, andalusite in slates.—**Critical mineral**, in *petrog.*, in the quantitative classification of igneous rocks, an abnormative mineral present in a rock in notable amount, that is, in sufficient amount to render the mode of the rock ★abnormative (which see).—**Green mineral**, malachite.—**Orange mineral**, an oxid of lead, of a bright orange color, which has the chemical formula Pb_3O_4. It has the same chemical composition as red lead, but is finer in texture and more brilliant in color. It is made by oxidizing white lead in a reverberatory furnace, while red lead is made by oxidizing metallic lead in a similar way.

II. *a.*—**Mineral jelly**, a hydrocarbon obtained in the distillation of crude petroleum.

> The *mineral jelly* is a hydrocarbon having the formula $C_{16}H_{24}$, and is obtained by the fractional distillation of crude petroleum oil at a temperature of over 200° C.
> *Encyc. Brit.*, XXXII. 23.

mineralize, *v. t.* 2. To impregnate with mineral substances, as metallic salts: thus, the water of a particular spring may be spoken of as more or less strongly *mineralized*.—3. In *mining*, to introduce, in solution or otherwise, a new mineral or ore into (surroundings where it did not previously exist, as, for example, into a fissure or into shattered or porous rock). The rock is then said to be *mineralized*.

> On the other hand, it is certainly most remarkable that so little auriferous quartz has been found; at the time of my visit hundreds of quartz claims had been staked, but very few had been shown to contain any gold whatever; neither do the quartz boulders of the White Channel appear to be auriferous, or even *mineralized*.
> *Pop. Sci. Mo.*, July, 1902, p. 235.

Mineralizing agent, in *petrog.*, a volatile substance, such as water vapor, chlorin, fluorin, or boric acid, which, while not actually entering into the composition of a given mineral, facilitates its crystallization. It is believed by some petrographers, especially the French, that mineralizing agents are necessary to the crystallization of the highly silicious rocks, such as granite. The exact rôle played by the substances in question is not as yet understood.

mineralizer, *n.* 2. In *petrog.*, a dissolved gas in an igneous magma which promotes crystallization, or leads to the production of particular minerals which contain the elements of the gas, such as boron, chlorin, fluorin, hydrogen. Compare ★*crystallizer*, 2.

mine-run (mīn′run), *n.* The entire unscreened output of a coal-mine.

minervite (mi-nėr′vīt), *n.* [*Minerve* (see def.) + *-ite*².] A hydrous aluminium phosphate which occurs in soft plastic masses in the Grotte de Minerve, valley of the Aude, France.

mine-tin (mīn′tin), *n.* Tin ore or tinstone extracted directly from the solid rock: opposed to *stream-tin*, which is obtained by washing the gravel and sand of the beds of streams.

mingles (ming′glz), *n. pl.* In *mining*, iron frames or standards carrying the pillow-blocks of pit-head pulleys. Also *maidens*. *Barrowman.* [Scotch.]

mingo¹ (ming′gō), *n.* [Origin obscure.] A name of various fishes of the family *Monacanthidæ*.—**Long mingo**, a common name of *Alutera punctata*, a fish of the family *Monacanthidæ*, known from the West Indies to Brazil.

mingo² (ming′gō), *n.* [A variant of *mungo*¹.] A kind of shoddy with short fibers. *Encyc. Brit.*, I. 176.

Ming porcelain. See ★*porcelain*¹.

minha (min′hä, min′ċhä), *n.* [Heb., a present, an offering.] The second of the three daily services in the Jewish liturgy; the afternoon prayer.

minhag (min′häg), *n.*; pl. *minhagim* (min-hă′-gēm). [Heb., < *nahag*, drive, go along the road, behave.] Conduct; usage; custom: applied to religious practices and customs which, though not based upon scriptural injunctions, have come to be considered binding.

miniaceous (min-i-ā′shius), *a.* [L. *miniaceus*, cinnabar-red. See *minium* and *miniate*.] Vermilion in color; miniate. *Dana*, Zoöph., p. 643.

miniator (min′i-ạ-tọr), *n.* [*miniate*, *v. t.*] One who miniates or paints with vermilion, as a manuscript; an illuminator; a miniaturist.

minification (min-i-fi-kā′shọn), *n.* [*minify* (*-fic-*) + *-ation*.] The act or result of minifying; reduction in size: opposed to *magnification*.

> In the instrument upon the table the eye-piece has a magnifying power of 10—that is to say, a magnifying power which exactly balances the ten-fold *minification* before spoken of.
> *Jour. Roy. Micros. Soc.*, June, 1904, p. 281.

minimal, *a.* 2. Relating to the minimus or fifth digit of the hind foot.

> The membrane attached to the ankle . . . is disposed to cross it by an oblique, raised fold and be secured to the *minimal*, *i. e.* little toe side.
> *H. Allen*, Bats of North America, p. 2.

Minimal basis, in Kronecter's method of treating the theory of functions, a basis from which all possible factors have been removed so as to reduce it to its lowest possible order.—**Minimal surface.** See *surface*.

minimetric (min-i-met′rik), *a.* [*mini*(*m*) + Gr. *μέτρον*, measure, + *-ic*.] In *analyt. chem.*, relating to, or obtained by means of, the measurement of minims, as by counting the number of drops required to complete a reaction.

> On the estimation of carbon monoxide and carbonic acid in vitiated air, by M. Ferdinand Jean. An application of the *minimetric* method to the examination of air, requiring no skilled manipulation in its use.
> *Nature*, Nov. 13, 1902, p. 47.

minimifidian (min″i-mi-fid′i-a̤n), *a.* and *n.* [L. *minimus*, least, + *fides*, faith.] Exhibiting or requiring the smallest degree of faith: one who has the least faith. [Rare.]

> And as we agree in the opinion that the *Minimi-fidian* party err grievously in the latter point, so I must concede to you, that too many Pædo-baptists (assertors of Infant Baptism) have erred, though less grossly in the former. *Coleridge*, Aids to Reflection, p. 284.

minimism (min'i-mizm), *n.* [L. *minim*(*us*), least, + *-ism.*] In *theol.*, the disposition to minimize the implications of an accepted dogma; the minimizing view of what is involved in a dogma, especially that of papal infallibility. *N. E. D.*

> The doctrine of *Minimism*, adopted by Newman from Bishop Fessler . . . gives liberty to the theologian to examine whether the Papal decree on any given point is or is not infallible.
> *William Palmer*, Narr. Events, Suppl., iv. 278. *N. E. D.*

mining-case (mī'ning-kās), *n.* A frame in a gallery or shaft, made with four planks.

mining-engine (mī'ning-en″jin), *n.* 1. A man-engine.—2. Any engine used about a mine, as a hoisting-engine or mine-locomotive.

mining-locomotive (mī'ning-lō-kọ-mō″tiv), *n.* A small locomotive, built very low, usually operated by compressed air or electricity, and used for hauling cars in underground passages and mines.

mining-machine (mī'ning-ma-shēn″), *n.* A channeler: a machine for cutting coal.

mining-piece (mī'ning-pēs″), *n.* A coin struck from gold, silver, or copper ore worked in France, Germany, Russia, and Sweden. *W. C. Hazlitt.*

mining-pump (mī'ning-pump), *n.* A pump adapted for taking water from deep mines.

Minion chapel. See ★*chapel.*

ministrer (min'is-trėr), *n.* One who ministers or serves. *N. E. D.*

minjak, *n.* See ★*minyak.*

mink-frog (mingk'frog), *n.* A small spotted frog, *Rana septentrionalis*, of eastern North America: so called from its peculiar odor.

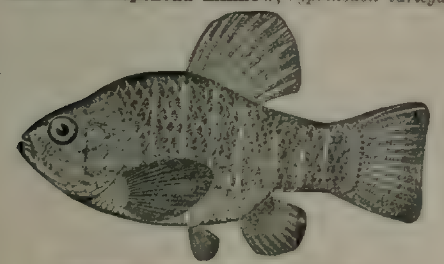
minkle (ming'kl), *n.* [An arbitrary modification of *minnow.*] A minnow. [Rare.]

> The hum-bird shook his sun-touched wings around,
> The bluefinch caroll'd in the still retreat;
> The antic squirrel capered on the ground
> Where lichens made a carpet for his feet:
> Through the transparent waves, the ruddy *minkle*
> Shot up in glimmering sparks his red fin's tiny twinkle.
> *J. R. Drake*, Bronx, st. 4.

Minn. An abbreviation of *Minnesota.*

minnie-bush (min'i-bush), *n.* A shrub, *Menziesia pilosa*, of the heath family, found in mountain woods from Pennsylvania to Georgia. It bears elliptical or obovate leaves, and greenish-purple urn-shaped flowers in terminal drooping umbels.

minnow, *n.* 3. A name sometimes given to a very small fish of New Zealand, *Galaxias attenuatus*, of the family *Galaxidæ*. Also called *whitebait.* The Maori name is *inanga.* *E. E. Morris*, Austral English.—**Eastern mud-minnow**, *Umbra pygmæa* of Atlantic coastwise streams of the United States.—**Leather-sided minnow.** (*a*) *Leuciscus aliciæ* of the Great Basin of Utah. (*b*) See *leatherside.*—**Mangrove minnow**, *Fundulus bermudæ* of the Bermudas.—**Pursy minnows**, species of the genus *Cyprinodon*, small fishes found in brackish waters of America.—**Sheepshead minnow**, *Cyprinodon variegatus*, a pœcilioid fish found in brackish water from Cape Cod to the Rio Grande.—**Silver-sided minnow**, *Leuciscus hydrophlox*, a cyprinoid fish found in the Salt Lake basin.—**Spot-tailed minnow**, the spawn-eater, *Notropis hudsonius.*—**Star-headed minnow**, *Fundulus nottii*, a pœcilioid fish inhabiting swamps and streams in Florida and the neighboring States.



Sheepshead Minnow (*Cyprinodon variegatus*).
(From Bulletin 47, U. S. Nat. Museum.)

Minoan (mi-nō'ạn), *a.* [Gr. *Μινῷος*, of Minos (< *Μίνως*, Minos), + *-an.*] Of or pertaining to Minos, the traditional monarch and lawgiver of Crete, and especially to the palace of Minos, a prehistoric edifice on the site of ancient Cnosus, in Crete, the excavation of which was begun by Arthur J. Evans in 1900.

> Dr. Arthur Evans, F.R.S., explained his preliminary scheme for the classification and approximate chronology of the periods of *Minoan* culture in Crete, from the close of the Neolithic to the early Iron age. To the period as a whole it is proposed definitely to attach the name *Minoan*, as indicating the probable duration of successive dynasties of priest-kings, the tradition of which has taken abiding form in the name of Minos. It is proposed to divide this *Minoan* era into three main periods, early, middle, and late, each with a first, second, and third subperiod.
> *Nature*, Oct. 6, 1904, p. 563.

Minoan period, that period of Cretan history and culture which extended from the close of the Neolithic to the early iron age, or from about 3500 B.C. to 1100 B.C. *A. J. Evans*, in Man, Nov., 1904, p. 172.—**Minoan pottery.** See ★*pottery.*

minor. I. *a.*—**Minor arc**, the arc on the opposite side of its chord from the center of the circle.

II. *n.*—**Complementary minor.** Same as *complementary determinant* (which see, under *determinant*).

minorat (mi-nọ-rä'), *n.* [F., < NL. *minoratus*, < L. *minor*, younger.] The custom that prevailed in some European countries, and still survives in some parts of Germany and Austria, by which the youngest rather than the eldest possible heir had the succession. Compare *majorat.* Similar to *borough-English* (which see).

Minorca (mi-nôr'kạ̈), *n.* [From the island of *Minorca.*] A breed of domesticated fowls of the Mediterranean class, somewhat similar to the Leghorns, but longer-bodied and heavier. They are good table fowls, lay the year around, and are non-sitters.

Minorcan (mi-nôr'kạn), *a.* and *n.* I. *a.* Of or pertaining to Minorca, one of the Balearic islands.

II. *n.* An inhabitant of the island of Minorca.

Min. Plen. An abbreviation of *Minister Plenipotentiary.*

Min. Res. An abbreviation of *Minister Resident.*

M. Inst. C. E. An abbreviation of *Member of the Institute of Civil Engineers.*

minster-house (min'stėr-hous), *n.* The official residence of the canons of a cathedral. *Stand. Dict.*

M. Inst. M. E. An abbreviation (*a*) of *Member of the Institute of Mechanical Engineers;* (*b*) of *Member of the Institute of Mining Engineers.*

mint[1], *n.*—**Keeper of the exchange and mint.** Same as *master of the mint* (which see, under *mint*[1]).

mint[2], *n.*—**Apple mint.** See *apple-mint.*—**Balm-mint.** (*a*) See *balm*, 7. (*b*) The crisped or curled mint, *Mentha crispa.*—**Brandy-mint**, peppermint.—**Brown mint**, spearmint.—**Cross-mint**, the crisped or curled mint.—**Field-mint.** (*a*) The corn-mint. (*b*) The catmint or catnip, *Nepeta Cataria.*—**Fish-mint.** (*a*) The water-mint, *Mentha aquatica.* (*b*) The horsemint, *M. longifolia.* (*c*) The bergamot-mint, *M. citrata.*—**Lamb-mint.** (*a*) Peppermint. (*b*) Spearmint.—**Mountain mint.** (*a*) See *mountain-mint.* (*b*) The Oswego tea, *Monarda didyma.* (*c*) The wood-calamint, *Clinopodium Calamintha.*—**Round-leaved mint.** Same as *round-leaved horsemint.*—**Woolly mint**, *Mentha alopecuroides*, a white-woolly, leafy-stemmed perennial of the Old World, naturalized in the United States.

mintage, *n.* 4. A coin bearing the initial of a particular mint: thus the San Francisco mint is represented by a small S on the reverse.

minting-mill (min'ting-mil), *n.* A press suitable for coining: used in mints to make coins from bullion bars or blanks.

minuscular (mi-nus'kụ-lạ̈r), *a.* Pertaining to, or of the nature of, a minuscule; written in minuscules.

> Alpha . . . Sometimes the two letters, of which the ω is almost always of that uncial form which resembles the *minuscular*, are hung by chains from the arms of the cross. *Schaff-Herzog*, Relig. Encyc. I.

minute[2], *n.* 2. (*b*) In *geom.*: (2) The sixtieth part of a degree of a perigon.—**Centesimal minute.** See *centesimal division*, under *centesimal.*—**Decimal minute.** See ★*decimal.*—**Horse-power minute**, one sixtieth of a horse-power hour.—**Metric horse-power minute**, one metric horse-power exerted for one minute; one sixtieth of a metric horse-power hour.—**Minute of the equator**, the sixtieth part of a degree of longitude measured on the parallel of the equator; the maximum value of a minute of longitude.—**Sidereal minute.** See *sidereal* ★*second.*

Minyadidæ (min-i-ad'i-dē), *n. pl.* [NL., < *Minyas* (*-ad-*) + *-idæ.*] A family of actinarian zoantharians which have the pedal disk transformed into an apparatus for floating. It includes the genera *Minyas*, *Dactylominyas*, *Acerominyas*, and *Phyllominyas.*

minyak (min'yăk), *n.* [Also (in G. or D. spelling) *minjak;* < Malay *minyak*, Dyak *minyak*, oil, balsam, resin.] Oil, fat, or resin: a Malayan word used in several phrase-names in different dialects, as *minyak lagam*, a balsam or oleoresin obtained from an unknown tree in Sumatra, and resembling gurjun balsam in character; *minyak-tengkawang*, a solid vegetable fat (also known as *Borneo tallow*) obtained from the fruit of various species of *Hopea* in Borneo and Sumatra, and used in soap- and candle-making.

minyan (mēn'yan), *n.*; pl. *minyanim* (mēn-yă'-nēm). [Heb., < *manah*, count, reckon.] In Jewish use, count; number; specifically, the number of ten males above thirteen years of age required for public worship and other religious practices in the synagogue.

Minyas (min'i-as), *n.* [NL., < Gr. *Μινύας*, a race of nobles at Orchomenos.] The typical genus of the family *Minyadidæ.* *Cuvier.*

Minytrema (mī-nit'rẹ-mạ̈), *n.* [NL., < Gr. *μινύς*, small, + *τρῆμα*, hole.] A genus of suckers found from the Great Lake region to North Carolina and west to Texas.

Mioclænidæ (mī-ọ-klē'ni-dē), *n. pl.* [NL.] A family of small ungulate mammals, of the suborder *Condylarthra*, containing a few species from the Lower Eocene of New Mexico. *Osborn and Earle*, 1895.

miogyrous (mī-ọ-jī'rus), *a.* [Gr. *μείων*, less, + *γῦρος.* See *gyre.*] In *bot.*, rolled inward a little. *Jackson*, Gloss.

Miolithic (mī-ọ-lith'ik), *a.* [Gr. *μείων*, lesser, + *λίθος*, stone, + *-ic.*] Relating or pertaining to the period intermediate between the Paleolithic and the Neolithic.

Miona bug. See ★*bug*[2].

miophone (mī'ọ-fōn), *n.* [Gr. *μείων*, less, + *φωνή*, sound.] A microphonic instrument for the medical testing of the muscles. *Houston*, Elect. Dict., p. 426.

Miopliocene (mī-ọ-plī'ọ-sēn), *n.* [Gr. *μείων*, lesser, + E. *pliocene.*] In *geol.*, a term at one time applied to the Bolderian and Anversian divisions of the Tertiary system in Belgium, the fauna of which was supposed to indicate a mingling of Miocene and Pliocene forms.

miosis, *n.* (*c*) In *cytol.*, the reduction-process in organisms, including mitapsis (or synapsis) and the subsequent heterotypic and homotypic divisions. This process results in reducing to one half the number of chromosomes in the nuclei. *Farmer* and *Moore.* Improperly spelled *maiosis.* (*d*) Used by error or substitution for *myosis.*

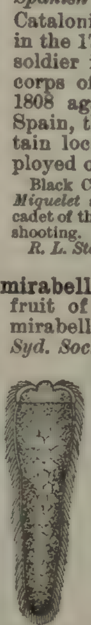
miotherm (mī'ọ-thėrm), *n.* [Gr. *μείων*, less, + *θέρμη*, heat.] A plant which inhabits cool temperate regions.

miotic (mī-ot'ik), *a.* [*miosis* (*miot-*) + *-ic.*] Noting or characterizing the stage in the life-history of an organism at which miosis or reduction occurs. *Farmer* and *Moore.*

miquelet (mik'ẹ-let), *n.* [F. *miquelet*, < Sp. *miquelete*, < *Miquelot*, a bandit chief.] In *Spanish hist.*: (*a*) A member of a body of Catalonian banditti who infested the Pyrenees in the 17th century. (*b*) A Spanish guerrilla soldier in the Peninsular War; also one of a corps of irregulars employed by Napoleon in 1808 against the Spaniards. (*c*) In modern Spain, the designation of the soldiers of certain local regiments of infantry, chiefly employed on escort duties. *N. E. D.*

> Black Camisard and White Camisard, militiaman and *Miquelet* and dragoon, Protestant prophet and Catholic cadet of the White Cross, they had all been sabring and shooting.
> *R. L. Stevenson*, Travels with a Donkey in the Cevennes, [p. 235.

mirabelle (mir-ạ-bel'), *n.* [F.] A plum, the fruit of *Prunus armenoides.* The Corsican mirabelle is the fruit of *Physalis alkekengi.* *Syd. Soc. Lex.*



Miracidium. Highly magnified.

miracidium (mī-ra-sid'i-um), *n.*; pl. *miracidia* (-ạ̈). [NL., < Gr. *μειρακίδιον*, a little boy, dim. of *μειράκιον*, a boy (*μεῖραξ*, a girl).] The free-swimming larva of the liver-fluke. The body is ciliated and the larva swims about seeking for a definite mollusk, its future host, into which it bores its way by means of the snout, which, in certain species, is armed with a stylet.

> The embryo . . ., which is designated a *miracidium*, is somewhat elongated in form, with a conical tip, and sometimes also a sharp boring spine at the anterior end.
> *Buck*, Med. Handbook, VII. 863.

Miraculous berry. See ★*berry*[1].

miramolin (mi-ram'ọ-lin), *n.* [Sp. *miramamolín*, a corruption of Ar. *amiru'l muminin*, 'Commander of the Faithful.'] The Emperor of Morocco. [Obsolete or archaic.]

> Surely that grape-juice, bubbling at the stalk,
> Is some gray scorching Saracenic wine
> The Kaiser quaffs with the *Miramoline.*
> *Browning*, Sordello, iii. 212.

mire-blob (mīr'blob), *n.* The marsh-marigold, *Caltha palustris.* Also *May-blob, horse-blob, water-blob.*

miric (mir'ik), *a.* [*m*(*agnesium*) + *ir*(*on*) + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*¹), a term indicating that a rock magma is characterized by the presence of magnesia and ferrous oxid.

mirid (mir'id), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Miridæ.*

II. *a.* Having the characters of or belonging to the family *Miridæ.*

miriki (mē-rẹ-kē'), *n.* [Tupi *mirikí, murikí.*] A woolly monkey, *Eriodes arachnoides,* of eastern Brazil, having the thumb absent or imperfectly developed.

mirlic (mėr'lik), *a.* [*m*(*agnesia*), + *ir*(*on*) + *l*(*ime*) + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*¹), a term indicating that a rock magma is characterized by the presence of magnesia, ferrous oxid, and lime.

mirliton (mēr-lẹ-toṅ'), *n.* [F.; origin obscure.] 1. A kind of toy flute. See *kazoo.*—2. The chayote, *Chayota edulis.* [Louisiana.]

mirnyong (mėrn'yong), *n.* [Also *mirrnyong;* aboriginal Australian.] A shell-mound or shell-heap of the natives of Australia and Tasmania. *E. E. Morris,* Austral English.

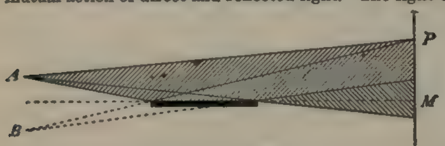
> Australia: numerous *mirrnyongs* (ash-heaps, shell-mounds, &c.) mainly confined to the eastern and southern regions. *Keane,* Ethnology, p. 94.

miro² (mē'rō), *n.* [Maori *miro.*] A bird of the genus *Miro,* two or three species of which are found on Chatham Island and in New Zealand, where they are called *robins.* Also called *miro-miro.*

mirobia (mẹ-rō'bi-ạ̈), *n.* The local name in the harbor of Valetta, Malta, for an oscillation with a period of 20 minutes and an amplitude of 14 meters: probably a tidal seiche controlled by the average depth of the Mediterranean Sea off the harbor.

mirograph (mir'ō-grȧf), *n.* [Irreg. < L. *mirari,* admire, + Gr. γράφειν, write.] In *photog.*, a form of cinematograph in which the intermittent movement of the film is effected by means of a disk provided with an eccentric flange which engages a notch in the film. Rotation of the disk is secured by a crank and gearing.

mirror, *n.*—**Achromatic mirror stereoscope.** See ★*stereoscope.*—**Dentists' mirror,** a small looking-glass with a long handle for insertion into a patient's mouth in the examination of the teeth.—**Fresnel's mirrors,** mirrors for the production of interference of light by reflection. The usual arrangement consists of two plane mirrors, set at an angle with each other slightly less than 180°, which reflect overlapping beams of light to a screen with such difference of path as to give interference fringes. Three mirrors, known as *Fresnel's three mirrors,* are also used.—**Laryngeal mirror,** in *phonetics,* a small circular mirror set upon a light wooden handle, used for observation of the larynx during action of the vocal cords.—**Lloyd's single mirror,** a mirror of polished metal, or of black glass, for displaying interference bands by the mutual action of direct and reflected light. The light is reflected at a nearly grazing incidence. *T. Preston,* Theory of Light, p. 122.—**Mercury mirror.** (*a*) A level surface of mercury: used as a mirror in astronomical observations. (*b*) A glass backed with an amalgam of tin or silver.—**Revolving mirror,** a device extensively used in the study of periodic phenomena of high frequency, such as the oscillations of an electric spark, the fluctuations in brightness of an alternating-current arc, or the changes of pressure at the node of a set of standing sound-waves. It consists of a plane mirror or symmetrically arranged set of such mirrors capable of revolving about a central axis parallel to the faces of the mirrors. The method depends upon persistence of vision.—**Rüdorff mirrors,** two small mirrors placed on either side of the screen in the sight-box of a photometer, at an angle to each other of 120–140°, and presenting the two sides of the screen simultaneously to the eye. Erroneously attributed to Rüdorff.

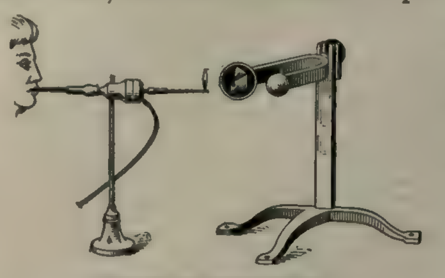


Lloyd's Single Mirror.
A, direct light; *B*, reflected light; *M*, plane of mirror; *P*, interference band.
(From Preston's "Theory of Light.")

mirror-barometer (mir″o̤r-bạ-rom'e-tėr), *n.* A mercurial barometer with a small mirror which is moved by the mercury and indicates the height of the column by reflected light.

mirror-box (mir'o̤r-boks), *n.* A device used in testing many grass seeds, consisting of a box open on one side and fitted with an adjustable mirror which throws the light upward through a pane of glass upon which the seeds are placed. This makes it possible to discern the presence or absence of seeds within the glumes.

mirror-fork (mir'o̤r-fôrk), *n.* A tuning-fork having a small mirror attached to one or both of the tines, used for the observation or projection of Lissajous's curves, for the observation of the flame of a manometric capsule, etc. *Scripture,* Exper. Phonetics, p. 270.



Mirror-fork and manometric flame.

mirror-glass (mir'o̤r-glȧs), *n.* Glass suitable for mirrors. See ★*mirror-plate.*

mirrorize (mir'o̤r-īz), *v. t.*; pret. and pp. *mirrorized,* ppr. *mirrorizing.* To reflect in, or as in, a mirror. [Rare.]

mirror-knob (mir'o̤r-nob), *n.* A head or disk of glass, metal, or pottery attached to a long screw or spike, formerly inserted into a wall to form a rest for a mirror or picture-frame. The metal knobs were frequently embellished with painted or enameled medallions, while those of glass were usually pressed into decorative patterns.

mirror-photography (mir'o̤r-fọ-tog″rạ-fi), *n.* Same as ★*multiphotography.*

mirror-plate (mir'o̤r-plāt″), *n.* Plate-glass of fine quality suitable for mirrors.

mirror-pseudoscope (mir'o̤r-sū″dọ-skōp), *n.* In *exper. psychol.*, an instrument in which the pseudoscopic effect is produced, not by prisms or lenses, but by an arrangement of plane mirrors. *E. B. Titchener,* Exper. Psychol., I. ii. 296.

mirror-scale (mir'o̤r-skāl), *n.* A scale etched in millimeters on the surface of a strip of glass about 5 millimeters in thickness, which is then silvered on the second surface: used in reading barometers, manometers, etc. See *Jolly's* ★*balance.* *M. W. Travers,* Exper. Study of Gases, p. 56.

mirror-speech (mir'o̤r-spēch), *n.* Pronunciation of words as if the syllables or letters were reversed: as '*lamina*' or '*malian*' for '*animal.*'

mirror-thermometer (mir'o̤r-thėr-mom″e-tėr), *n.* A thermometer constructed on the same principle as the ★*mirror-barometer* (which see).

mirror-velvet (mir'o̤r-vel″vẹt), *n.* A soft, pliable velvet with the pile pressed down, giving the surface a high gloss.

mirror-writing (mir'o̤r-rī″ting), *n.* Same as *mirror-script.*

mirthsome (mėrth'sum), *a.* Mirthful; joyous.

Mis. An abbreviation of *Missouri.*

misandry (mis'an-dri), *n.* Man-hatred; a bad opinion of man, as being unfair or oppressive toward women.

misanthropia (mis-a̤n-thrō'pi-ạ̈), *n.* Same as *misanthropy.*

misarchism (mis'ä̤r-kizm), *n.* [Gr. μισεῖν, hate, + ἀρχή, rule, + *-ism.*] Hatred of or opposition to government in any form; the doctrine that government as such is evil or an evil.

misarchist (mis'ä̤r-kist), *n.* [*misarch*(*ism*) + *-ist.*] One who regards government as inherently evil, or at best a necessary evil, yet without going to the extreme position of the anarchist.

> These *misarchists* see the beneficent influence of natural law in the industrial world interfered with by what seems to them an extraneous power. *L. F. Ward,* Outlines of Sociol., p. 228.

misbecum, *v. t.* An amended spelling of *misbecome.*

misc. An abbreviation (*a*) of *miscellaneous;* (*b*) of *miscellany.*

miscegenate (mis'ẹ̄-je-nāt), *v. i.*; pret. and pp. *miscegenated,* ppr. *miscegenating.* [*miscegenation.*] To enter into sexual relations with an individual of another race, especially of a race of another color (black or white).

miscegenate (mis'ẹ̄-je-nāt), *n.* A person begotten by miscegenation.

miscegenationist (mis″ẹ̄-je-nā'sho̤n-ist), *n.* One who favors miscegenation, particularly the union of whites and blacks.

miscegenator (mis'ẹ̄-je-nā-to̤r), *n.* One who miscegenates or unites sexually with an individual of another race.

miscegenesis (mis-ẹ̄-jen'e-sis), *n.* [L. *miscere,* mix, + *genesis.* See *genesis.*] Same as *miscegenation.*

miscegenetic (mis″ẹ̄-jẹ̄-net'ik), *a.* [*miscegenesis.*] Pertaining to, or of the nature of, miscegenesis or miscegenation; produced by miscegenation.

mischarge, *n.* **2.** A mixture of gas and air in an internal-combustion engine, introduced into the cylinder, but not ignited. The charge may fail of ignition either as the result of a governing action, because the speed is too high, or because the mixture was not of the normal proportion of fuel and air. Such mischarges often ignite after leaving the cylinder either in exhaust-passages or -pipes, or beyond.

> The devices for changing the motor speed by varying the charge or by *mischarge,* work well above the minimum speed at which the motor will run, say about 200 revolutions per minute. *Hiscox,* Horseless Vehicles, p. 24.

mischief, *n.*—**Painted mischief,** the devil's picture-books; playing-cards. *Farmer.*

> There are plenty of ways of gambling . . . without recourse to the '*painted mischief.*'
> *Daily News* (London), March 18, 1879. *N. E. D.*

misconjunction (mis-ko̤n-jungk'sho̤n), *n.* [*mis-*¹ + *conjunction.*] A false or erroneous conjunction.

> There is no *misconjunction* so absurd as that of safety and wrong, because it is a moral *misconjunction,* showing our mortal state itself to be out of joint, even down to its lowest foundations.
> *Bushnell,* Moral Uses of Dark Things, p. 128.

misconvey (mis-ko̤n-vā'), *v. t.* [*mis-*¹ + *convey.*] To convey a meaning other than that intended: used reflexively.

> I hope he has *misconveyed* himself to H. E. Manning, for Manning identifies him in some very painful points with the Rationalism of Germany.
> *E. S. Purcell,* Life Card. Manning, I. xiii.

miscook (mis-kůk'), *v. t.* [*mis-*¹ + *cook.*] To cook badly; spoil in cooking; also, figuratively, to mismanage. *N. E. D.* [Chiefly Scotch.]

miscorrection (mis-ko̤-rek'sho̤n), *n.* [*mis-*¹ + *correction.*] A false or erroneous correction.

miscreate (mis-krẹ̄-āt'), *v. t.*; pret. and pp. *miscreated,* ppr. *miscreating.* [*mis-*¹ + *create.*] To create faultily; create erroneously; mar or render monstrous in the making.

> The lesson is forcibly taught . . . that our life might be much easier and simpler than we make it . . . that we *miscreate* our own evils. *Emerson,* Essays, Ser. I. iv.

> Seeing superb manly beauty in the place of the thick-featured sodden satyr of her *miscreating* fancy, the irresistible was revealed to her on its divinest whirlwind.
> *G. Meredith,* Tragic Comedians, iv.

miscue (mis-kū'), *v. i.*; pret. and pp. *miscued,* ppr. *miscuing.* [*miscue, n.*] **1.** In *billiards,* to make a miscue.—**2.** In *theat.*, to miss one's cue or answer a wrong cue.

misdateful (mis-dāt'fůl), *a.* [*misdate* + *-ful.*] Full of misdates; very inaccurate in chronology. [Rare.]

> Poor Bielfield being in this Chapter very fantastic, *misdateful* to a mad extent, and otherwise, except as to general effect, worth little serious belief.
> *Carlyle,* Frederick the Great, XIII. ix.

misdemeanant, *n.*—**First-class misdemeanant.** In *Eng. law,* prisoners convicted of misdemeanor and not sentenced to hard labor are, by the Prisons Act (28 and 29 Vict. c. 126, s. 67), divided into two classes, one of which is called the first division. In the discretion of the court a convict can be placed in this division, and he is then not regarded as a criminal convict, but is known as a *first-class misdemeanant,* or a *misdemeanant of the first division.*

misdescriptive (mis-des-krip'tiv), *a.* [*mis-*¹ + *descriptive.*] That describes erroneously.

misenglish † (mis-ing'glish), *v. t.* [*mis-*¹ + *English.*] To mistranslate into English. *N. E. D.*

miserabilism (miz'ẹ̈-rạ-bil-izm), *n.* [*miserable* + *-ism.*] The state of being miserable; miserablism; specifically, a complainingly pessimistic view of, or attitude towards, life. See the extract.

> The third . . . of these unscientific species combines the characteristic evils of both wrathful and quietistic pessimism. It has been aptly termed *Miserabilism* (Miserabilismus). The miserabilistic pessimist spends his life in sulky grumbling at his lot, without making the slightest effort to improve it. He is not active, nor has the grace to be resigned.
> *J. W. Barlow,* Ultim. Pessimism, p. 8. *N. E. D.*

miserabilistic (miz″ẹ̈-rạ-bi-lis'tik), *a.* Pertaining to, characteristic of, or practising miserabilism. [Rare.]

miserablism (miz′ẹ-rạ-bl-izm), *n.* [*miserable* + *-ism.*] The state of being miserable; miserabilism.

> What was the mental state of Jesus's followers when he died and while he yet lay in the tomb? . . . The truth they relied on was branded as folly and crime. . . . Dispersion, denial, *miserablism*, and absolute despair must have followed, and the teachings of Jesus might have been forgotten. *G. S. Hall*, Adolescence, II. 335.

misère (mi-zãr′), *n.* [F., lit. 'misery.'] In *card-playing*, as in solo whist, boston, etc., a declaration to lose tricks instead of to win them. *Amer. Hoyle*, p. 248.—**Open misère** or **misère ouverte**, in *card-playing*, a declaration to lose a certain number of tricks with the cards exposed on the table. *Amer. Hoyle*, p. 248.—**Petite misère ouverte**, in *boston*, the declaration to lose 12 tricks, after having discarded a card which is not shown, the single player's remaining twelve cards being exposed on the table, but not liable to be called.

misericorde, *n.* **4.** Relaxation of monastic rule; indulgence.

> "As we have," he said, "in the course of this our toilsome journey, lost our meridian, indulgence shall be given to those of our attendants who shall, from very weariness, be unable to attend the duty at prime, and this by way of *misericord* or indulgentia." *Scott*, Monastery, II. ii.

5. An apartment in a monastery in which certain relaxations of the rule were permitted; especially, one in which those monks ate to whom special allowances were made in food and drink. *N. E. D.*

misericordious † (miz″ẹ-ri-kôr′di-us), *a.* [OF. *misericordieux.* See *misericorde.*] Merciful; compassionate.

misery, *n.* **6.** See ★*misère.*

misexpressive (mis-eks-pres′iv), *a.* [*mis-*^{1} + *expressive.*] Expressing a meaning other than that intended.

> Law made by the supreme legislature is called promulged law, and law emanating immediately from a subordinate source is called unpromulged law. But the terms promulged and unpromulged, as thus applied, are not less *misexpressive* than written and unwritten. *J. Austin*, Lect. on Jurisprudence, II. 542.

misfeature (mis-fē′ṭūr), *n.* [*mis-*^{1} + *feature, n.*] A distorted feature; a bad feature or trait. *N. E. D.*

> He [man] has his Winter too of pale *misfeature*,
> Or else he would forego his mortal nature.
> *Keats*, Sonnet, Human Seasons.

misfeature (mis-fē′ṭūr), *v. t.*; pret. and pp. *misfeatured*, ppr. *misfeaturing.* [*mis-*^{1} + *feature, v.*] To mar the features of; distort or misrepresent the features of.

> The strange *misfeaturing* mask that I saw so amazed me, that I
> Stumbled on deck, half mad.
> *Tennyson*, The Wreck, ix.

misfere †, *v. i.* [See *misfare, v. i.*] **1.** To do wrong; misbehave.—**2.** To be unfortunate; fare ill.

misfigure (mis-fig′ūr), *v. t.*; pret. and pp. *misfigured*, ppr. *misfiguring.* [*mis-*^{1} + *figure, v.*] To disfigure. [Obs. or dial.]

misfire (mis-fīr′), *v. i.*; pret. and pp. *misfired*, ppr. *misfiring.* [*mis-*^{1} + *fire, v.*] To miss fire: said of a firearm.

> The weapons were all exceedingly clumsy and unwieldy, tiresome to charge and discharge, and continually *missfiring.* *W. W. Greener*, The Gun, p. 43.

misgiv, *v.* A simplified spelling of *misgive.*

mishcup (mish-kup′), *n.* [Narragansett.] Same as ★*scup*^{2}.

mishcuppauog (mish-ku-pâ′og), *n. pl.* [Narragansett *mishkuppaúog*, plural: see ★*mishcup*, *scup*^{2}, and *scuppaug.*] A plural of ★*mishcup.*

mishwap (mish′wäp), *n.* [Algonkin (of Labrador).] An Indian lodge. [Labrador.]

misidentification (mis-ī-den″ti-fi-kā′shọn), *n.* False or inaccurate identification.

> The chief defects in practice were (1) frequent failure to identify, (2) liability to *mis-identification.* *Encyc. Brit.*, XXV. 468.

misimpression (mis-im-presh′ọn), *n.* [*mis-*^{1} + *impression.*] An erroneous impression or idea.

misinclined (mis-in-klīnd′), *p. a.* [*misincline, v.*] **1.** Wrongly inclined.—**2.** Disinclined.

misintelligence, *n.* **3.** Ignorance; faulty intelligence or knowledge. [Rare.]

> The whole condition of things at the South is shameful, and I am ready for a movement now to emancipate the whites. No doubt the government is bound to protect the *misintelligence* of the blacks, but surely not at the expense of the intelligence of the men of our own blood. *Lowell*, Letters, II. 174.

mislocate (mis-lō′kāt), *v. t.*; pret. and pp. *mislocated*, ppr. *mislocating.* [*mis-*^{1} + *locate.*] To locate or place wrongly.

mismay (mis-mā′), *v. t.* [*mis-* for *dis-may.*] To dismay. [Obs. or Scotch.]

mismove (mis-möv′), *n.* [*mis-*^{1} + *move, n.*] A mistaken move; a false move.

misnome (mis-nōm′), *v. t.*; pret. and pp. *misnomed*, ppr. *misnoming.* [*misnome(r).*] To misname. [Rare.]

> This My Novel, or Varieties in English Life was *misnomed* and insulted as "a Continuation of the Caxtons," with which biographical work it has no more to do . . . than I with Hecuba. *Bulwer*, in Blackwood's Mag., LXXI. 86.

misocapnic (mis-ọ-kap′nik), *a.* [Gr. *μισεῖν*, hate, + *καπνός*, smoke, + *-ic.*] Smoke-hating; disliking tobacco-smoke.

> Not having . . . before his eyes the fear of that *misocapnic* Solomon James I. or of any other lying Stuart, that not to . . . Sir Walter Raleigh, but to Sir Amyas Leigh; . . . does Europe owe . . . that age of smoke. *Kingsley*, Westward Ho! vii.

misocapnist (mis-ō-kap′nist), *n.* [*misocapn(ic)* + *-ist.*] One who dislikes tobacco-smoke. [Rare.]

misocatholic (mis-ọ-kath′ọ-lik), *a.* [Gr. *μισεῖν*, to hate, + E. *Catholic.*] Hating Roman Catholicism. [Rare.]

misogallic (mis-ọ-gal′ik), *a.* [Gr. *μισεῖν*, to hate, + E. *Gallic.*] Disliking the French; hostile to the French. [Rare.]

misogamic (mis-ọ-gam′ik), *a.* [*misogam(y)* + *-ic.*] Pertaining to or exhibiting misogamy or hatred of marriage. [Rare.]

misogynic (mis-ọ-jin′ik), *a.* [*misogyn(ous)* + *-ic.*] Woman-hating; misogynous.

> In the Works and Days . . . we glean indications of Hesiod's rank and condition in life, that of a stay-at-home farmer . . . and an old-fashioned bachelor whose *misogynic* views and prejudice against matrimony have been conjecturally traced to his brother Perses having a wife as extravagant as himself. *Encyc. Brit.*, XI. 777.

misogynism (mi-soj′i-nizm), *n.* Same as *misogyny.*

misomath (mis′ọ-math), *n.* [Gr. *μισεῖν*, to hate, + E. *math(ematics).*] One who dislikes mathematics. [Rare.]

misoneist (mis-ọ-nē′ist), *n.* [*misone(ism)* + *-ist.*] One who hates or dislikes novelty. [Rare.]

misoneistic (mis″ọ-nẹ-is′tik), *a.* [*misoneist* + *-ic.*] Averse to change or novelty; disliking innovation.

> Women have often stood in the way of progressive movements. Like children, they are notoriously *misoneistic*; they preserve ancient habits and customs and religions. *C. Lombroso* (trans.), Man of Genius, p. 139.

misopedia, misopædia (mis-ọ-pē′di-ạ̈), *n.* [Gr. *μισεῖν*, hate, + *παῖς* (*παιδ-*), child.] Extreme dislike of, or aversion for, children.

misopedism, misopædism (mi-sop′ẹ-dizm), *n.* [*misoped(y)* + *-ism.*] Same as ★*misopedia.*

misopedist, misopædist (mis-ọ-pē′dist), *n.* [Gr. *μισόπαις* (*μισοπαιδ-*), a child-hater, + *-ist.*] One who dislikes children; a child-hater. [Rare.]

misopedy (mi-sop′ẹ-di), *n.* Same as ★*misopedia.*

misopogonistically (mis-ō-pō-gọ-nis′ti-kạl-i), *adv.* [Gr. *μισοπώγων*, beard-hater, < *μισεῖν*, to hate, + *πώγων*, beard, + *-istically.*] Like a beard-hater; with dislike of beards. [Rare.]

> He and Basil read together poems and. philosophies, and holier things, or talked low and *misopogonistically* of their fellow-student Julian's bearded boding smile. *Mrs. Browning*, Greek Christian Poets, p. 236.

misosophist (mi-sos′ọ-fist), *n.* [Gr. *μισόσοφος*, < *μισεῖν*, to hate, + *σοφία*, wisdom, + *-ist.*] A hater of wisdom. [Rare.]

misosophy (mi-sos′ọ-fi), *n.* [Gr. *μισεῖν*, hate, + *σοφία*, wisdom.] Hatred of wisdom. *Coleridge.* [Rare.]

misotheist (mis′ō-thē-ist), *n.* [*misothe(ism)* + *-ist.*] One who hates God. [Rare.]

mispick (mis-pik′), *n.* [*mis-*^{1} + *pick*^{1}, *n.*] The omission of a weft-thread in weaving.

misprizal (mis-prī′zạl), *n.* [*misprize*^{2}, *v.*, + *-al*^{1}.] The act of misprizing or undervaluing; contempt; scorn.

misreflection (mis-rẹ-flek′shọn), *n.* An illusory reflection. See the extract.

> Fallacies of reflection are fallacies of time and cause, and they may be classed as *misreflections* and myths. The *misreflections* are a fourth group of illusions and the myths a fourth group of delusions. *J. W. Powell*, Truth and Error, p. 374.

misrendering (mis-ren′dėr-ing), *n.* A faulty or erroneous rendering.

> Retranslation into Greek is frequently necessary in order to correct the *misrenderings* of the translator. *Encyc. Brit.*, XXV. 492.

Miss. An abbreviation (*a*) of *Mississippi*; (*b*) of *mission, missionary.*

missal, *n.*—**Mozarabic missal**, the missal which contains the order of the Mass according to the Mozarabic rite, the use of which is now confined to a chapel of the Cathedral of Toledo endowed by Cardinal Jiménez for the maintenance of that rite.

miss-and-out (mis′ạnd-out′), *n.* In *trap-shooting*, a competition from which a contestant retires upon missing a target.

> The races were each at 10 birds per man, there being three of these, and finally a *miss-and-out* between the last two men up. *Forest and Stream*, Feb. 21, 1903, p. 159.

missary † (mis′ạ-ri), *n.* [LL. *missarius*, < *missa*, mass.] A Roman Catholic or a Roman Catholic priest. [Rare.]

missatical † (mi-sat′i-kạl), *a.* [LL. *missaticus*, < *missa*, mass.] Of or pertaining to the mass; Roman Catholic.

missensation (mis-sen-sā′shọn), *n.* Lack of perception due to diversion of attention. See the extract. [Rare.]

> I do not hear the speaker because I am attending to a sight, or I do not see a sight because I am listening to what another person is saying. All of such *missensations* are easily corrected by ordinary methods of verification. . . . I shall call all such errors of judgment *missensations*, and group them in a higher class which I shall call illusions. *J. W. Powell*, Truth and Error, p. 309.

missey-moosey (mis′i-mö-zi), *n.* [English corruption of Amerindian *mozemize.*] The American mountain-ash, *Sorbus Americana.* See *Indian* ★*mozemize.*

missible (mis′i-bl), *a.* [L. *miss(us)*, pp. of *mittere*, send, + *-ible.* See *missile.*] That may be sent or transmitted.

> This Custom-and-Duty Age would have made the Preacher on the Mount take out a licence, and St. Paul's Epistles would not have been *missible* without a stamp. O that you may find means to go on! *Lamb*, Letters, CLXIII. 310.

missil, *a.* and *n.* A simplified spelling of *missile.*

mission, *n.*—**Military mission**, an apparently diplomatic and ostensibly friendly mission, accompanied by a large military force, sent by one country, usually a very powerful one, to a less powerful one.

> Persia had no regular army until 1807, when some regiments of regular infantry (*sarbáz*) were embodied and drilled by the first French *military mission* to Persia under General Gardane. Since then seven other *military missions* (two British, two French, two Austrian, and one Russian) have come to Persia at the request of the Persian Government, and many officers and non-commissioned officers, and even civilians, of various nationalities, . . . have been engaged as army instructors. *Encyc. Brit.*, XXXI. 621.

Mission furniture, a trade-name for a kind of dark stained furniture, usually of ashwood, characterized by great plainness and solidity and the prevalence of straight lines. It was originated in 1894 by a furniture-maker of New York and is said to have been patterned closely after the general style of certain chairs from one of the Spanish missions in California.

mission-bells (mish′ọn-belz), *n.* In California, *Fritillaria mutica*, a species bearing a raceme of from 3 to 17 dark purple or greenish, spotted or checkered, bell-shaped flowers. Also called *rice-root lily.* Also, the related *F. lanceolata* or any Californian species. See ★*Fritillaria*, 1.

mission-grass (mish′ọn-grȧs), *n.* See *St. Augustine* ★*grass.*

Mississippian, *n.* **2.** In the scheme of classification and nomenclature of the rocks adopted by the United States Geological Survey, the purely marine sedimentation of the early or Lower Carboniferous rocks of the interior or Mississippi basin.

missiv, *a.* and *n.* A simplified spelling of *missive.*

missourite (mi-zö′rīt), *n.* [*Missouri* (river) + *-ite*^{2}.] In *petrog.*, a phaneric igneous rock composed of leucite, augite, and olivin, with smaller amounts of biotite, iron oxids, and apatite, occurring in the Highwood mountains, Montana. *Weed and Pirsson*, 1896.

mistify (mis′ti-fī), *v. t.*; pret. and pp. *mistified*, ppr. *mistifying.* [*mist*^{1} + *-i-fy.*] To convert into a mist or a very fine spray, as by a fine spray-nozle. [Rare.]

> The nozzles for "*mistifying*" the wash most in use are known as the Vermorel and Riley's, which can be fitted to any length of tubing, so as to reach any height, and can be turned in any direction. *Encyc. Brit.*, XXVII. 635.

mistpouffer (mist′pöf-ėr), *n.* [Also *mistpoeffer*; < D. **mist-poffer*, 'fog pistol,' < *mist*, = E. *mist*^{1}, + *poffer*, pistol, < *poffen*, puff.] A mysterious noise heard over the ocean in quiet, foggy weather off the coast of Belgium and Holland. See *Barisal* ★*gun.*

> In the Monthly Weather Review for September, 1897, page 393, we have given some account of the "barisal guns," the "*mistpouffers*," and similar phenomena whose origin is as yet not certainly understood. . . . It may be that the barisal guns have their origin in the escape of bubbles of gas just as do the "guns" of Seneca Lake. *U. S. Monthly Weather Rev.*, July, 1903, p. 336.

mistress, *n.* 7. In *mining*, a cover for sinkers in a wet shaft; a cover for a sinker's lamp. [Scotch.]

mistura (mis-tū'rä), *n.* [L.: see *mixture.*] In *phar.*, same as *mixture*, 2.

misurato (mē-sö-rä'tō), *a.* [It.] Measured; hence, as a direction in *music*, in a measured manner.

misuze, *v. t.* and *n.* An amended spelling of *misuse.*

mitapsis (mi-tap'sis), *n.* [Gr. *μίτος*, a thread, + *ἅψις*, a joining.] The process of fusion of chromatin, the final stage in the reproductive process of cell-conjugation: essentially the same in meaning as ★*synapsis.* The name *mitapsis* refers to the fact that at the time of fusion the chromatin granules are strung out on long, slender threads. *Cook and Swingle.*

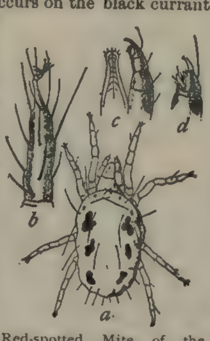
mitchel (mich'el), *n.* [Perhaps from *Mitchel*, a surname.] See the extract. [Eng.]

> *Mitchel*, a name given by workmen to Purbeck stones of twenty-four inches by fifteen when squared for building. *Gwilt*, Encyc. Archit., p. 1318. *N. E. D.*

mitchellite (mich'el-īt), *n.* [Named from Professor Elisha *Mitchell*, an American geologist.] A magnesian variety of chromite from North Carolina. See ★*magnochromite.*

Mitchillina (mich-i-lī'nä), *n.* [NL., named after Samuel Latham *Mitchill*, United States senator from the State of New York, 1804–09, the first to study systematically the fishes of New York harbor.] A genus of deep-sea fishes of the family *Alepocephalidæ.*

mite^1, *n.*—**Black-currant mite**, a European eriophyid mite, *Eriophyes ribis*, which occurs on the black currant and is an especial pest in England.—**Brown mite**, an American acarid, *Bryobia pratensis*, which occurs in enormous numbers in orchards in the Western States. Also called ★*clover-mite* (which see, with cut).—**Red mite**, a small reddish mite of the family *Tetranychidæ*, *Tetranychus telarius*, found commonly in hothouses and also commonly called *red spider.*—**Red-spotted mite**, one of the leaf-mites or 'red spiders' of the family *Tetranychidæ*, *Tetranychus sexmaculatus*, found commonly on the orange in Florida and California.—**Six-spotted mite of orange.** Same as *red-spotted* ★*mite* or *California* ★*spider.*



Red-spotted Mite of the Orange (*Tetranychus sexmaculatus*).

a, adult mite, much enlarged; *b*, greater enlargement of foot; *c*, *d*, mouth parts. (From "Insect Life," U. S. D. A.)

mite^2, *n.* 5. A copper or billon coin of very small value, current in Brabant and Holland.

miter, *v. t.* 6. In *organ-building*, to introduce one or more miter-joints into (a pipe), so as to adapt it to a contracted space: such a pipe is said to be *mitered* or *mitered over.*

miter-arch (mī'tėr-ärch), *n.* The arch or angle formed by mitering, as in groining.

miter-bevel (mī'tėr-bev"el), *n.* Same as *miter-square.*

miter-bracket (mī'tėr-brak"et), *n.* An angle-bracket in the bracketing of a molded cornice. *N. E. D.*

miter-gear (mī'tėr-gēr), *n.* A bevel-gear having an angle of 90° at the apex of its pitch-cone; a bevel-gear whose teeth make an angle of 45° with the axis; one of a pair of equal bevel-gears whose axes form a right angle.

miter-snake (mī'tėr-snāk), *n.* A small serpent of western Texas, *Contia episcopa*, the markings of which are suppposed to suggest a bishop's miter.

miter-wheel, *n.* 1. (*b*) A friction-gearing or -wheel of which the working face is at an angle of 45° to the axis.

Mithratic (mith-rat'ik), *a.* [*Mithra(s)* + *-atic*^{2}.] Pertaining to or concerned with the worship of Mithras; Mithraic.

mithridatism (mith-ri-dāt'izm), *n.* [*Mithridates* (see *mithridate*) + *-ism.*] Immunity against the action of a poison acquired by taking the drug in constantly increasing doses: a method said to have been conceived by Mithridates to protect himself against palace intrigues.

mithridatize (mith'ri-dā-tīz), *v. t.*; pret. and pp. *mithridatized*, ppr. *mithridatizing.* [*mithridat(e)* + *-ize.*] To induce the condition of mithridatism in. See ★*mithridatism.*

mitic (mit'ik), *a.* [*m(agnetite)*, + *i(lmenite)* + *t(itanite)* + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*^{1}), a term indicating the presence of one or more of the normative minerals in the second subgroup of femic minerals.

mitis-metal (mī'tis-met"al), *n.* [L. *mitis*, soft, + E. *metal.*] 1. A malleable cast-steel slightly alloyed with aluminium, chiefly used, on account of its high magnetic permeability, for field-magnets in generators and motors.—2. A commercial product consisting of wrought-iron which is fusible enough to cast in molds. The fluidity results from the presence of aluminium in the bath of metal.

mitochondria (mit-ō-kon'dri-ä), *n.* [Gr. *μίτος*, thread, + *χόνδρος*, cartilage.] A body of unknown significance, consisting of coiled filaments, found outside of the nucleus in the cytoplasm of certain cells. *Benda.*

> Follicular Epithelium in Birds.—Marie Loyez finds that in some birds all the cells of the follicular epithelium exhibit, outside the nucleus, an almost spherical body of considerable size, composed apparently of coiled filaments. It stains strongly with iron-hæmatoxylin, and is analogous to the ergastoplasm of Garnier, the *mitochondria* of Benda, and the pseudochromes of Heidenhain.
> *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 594.

mitokinetic (mit"ō-kī-net'ik), *a.* [*mito(sis)* + *kinetic.*] Noting the force which has its seat in the kinoplasm of the cell and is supposed to produce the achromatic spindle during karyokinetic cell-division. *Hartog.*

> Third, there is the force which has its seat in the kinoplasm, and which produces the chains of force which Hartog calls "*mitokinetic*" because of their analogies with magnetism.
> *Jour. Roy. Micros. Soc.*, Dec., 1904, p. 637.

mitom (mī'tom), *n.* [Also *mitome*; < NL. *mitoma.*] A term used by Flemming to designate the reticulum of cell-protoplasm. Also *mitome.*

mitoma (mi-tō'mä), *n.* [NL., < Gr. *μίτος*, a thread, a web, + *-oma.*] The minute mesh composing the more solid part of the protoplasm and inclosing the more fluid portion. Same as ★*mitom.*

mitome (mī'tōm), *n.* See ★*mitom.*

mitoschisis (mi-tos'ki-sis), *n.* [NL., < Gr. *μίτος*, thread, + *σχίσις*, splitting, cleaving.] Mitosis, or karyokinetic cell-division: so-called from the longitudinal splitting of the thread-like chromosomes peculiar to this form of division, as distinguished from amitosis, or akinesis. *Flemming*, 1882.

mitosis, *n.*—**Heterotypical mitosis.** See ★*heterotype division.*—**Homotypical mitosis**, a form of karyokinetic or mitotic cell-division occurring in the secondary spermatocytes of certain animals, such as the salamander. It differs from the common form in the shortness of the chromosomes and their irregular arrangement after division into the daughter-chromosomes. *Flemming*, 1887.—**Somatic mitosis**, the form of mitosis, or indirect cell-division, found in the cells of the soma, or body, as distinguished from that which occurs in the germ-cells, or during spermatogenesis and oögenesis.

mitosome (mī'tō-sōm), *n.* [Gr. *μίτος*, thread, + *σῶμα*, body.] In *cytol.*, a body formed from the spindle-fibers of the secondary spermatocytes, said to give rise to the middle-piece and tail envelop of the spermatozoön: probably equivalent to the '*Nebenkern*' of La Valette St. George. *Platner*, 1889.

Mitra, *n.* 3. [*l. c.*] In *Gr. antiq.*, a long band of stuff, leather, or metal, bound about the head or loins: much used by women. It is mentioned in the Iliad and has been found on archaic statuettes discovered in excavations at Delphi, Olympia, and elsewhere. Although often made of metal not a single example has come down to us complete.

Mitral insufficiency. See *valvular* ★*insufficiency.*

Mitraster (mi-tras'tėr), *n.* [NL., < Gr. *μίτρα*, girdle, head-band, + *ἀστήρ*, star.] A genus of fossil starfishes or a subgenus of *Goniaster* (which see), from the Cretaceous rocks.

mitsumata (mit"sö-mä'tä), *n.* [Jap. *mitsumata*, *mitsz-mata*, < *mitsu*, *mitsz*, three, + *mata*, a fork or crotch.] A low shrub, *Edgeworthia papyrifera*, of the family *Daphnaceæ*, native to China and Japan, and cultivated in the latter country for its bark. The bark is used in the manufacture of the best grades of paper, especially when mixed with the fiber of the kozo and the ganpi. Compare ★*ganpi.*

mitsvah (mitz'vä), *n.*; pl. *mitsvoth* (-vōt). [Heb. *mitsvah* (*mitswah*), < *tsavah*, command, charge, order.] Among the Jews, a precept. According to Rabbi Simlai, there were revealed to Moses no less than 613 precepts, namely 365 prohibitions, corresponding to the number of the days in the year, and 248 mandates, corresponding to the number of 'members' (bones) in the human body. Upon this basis various lists of commandments, great and small, have been compiled from the Hebrew scriptures to make up the mysterious number.

mitsvoth, *n.* Plural of ★*mitsvah.*

mittelhand (mit'el-hänt), *n.* [G. 'middle hand.'] In *skat*, the second player on the first trick; the one who bids first.

mittimus, *n.* 1. (*c*) In *old Eng. law*, a writ by which the sheriff of a county palatine was required to summon a jury from the county for the trial of a cause, the record of which was inclosed or sent (hence the name) with the writ.

mixed^1, *p. a.* 4. In *geol.*, technically applied to those igneous rocks which under the microscope are found to consist of both crystalline and glassy matter, the two being intimately involved. *Geikie*, Text-book of Geol., p. 152, note.—**Mixed curve.** *See* ★*curve.*

mixer, *n.* 3. A receptacle for diluting a drop of blood with a definite quantity of artificial serum preliminary to counting the blood-corpuscles.—4. A person of a social temperament; one who makes acquaintances readily and somewhat indiscriminately: as, he is a good *mixer.* [U. S. slang.]

mixer-valve (mik'sėr-valv), *n.* A valve by which the proportions of the fluids or gases in a mixture are regulated; specifically, a valve used to regulate the amount of external or unheated air supplied to a hot-blast in a blast-furnace, or to regulate the proportions of fuel and air in an internal-combustion motor. *Elect. World and Engin.*, Jan. 2, 1904, p. 22.

mixing-chamber (mik'sing-chām"bėr), *n.* 1. A volume or space within which a mingling of substances may occur; specifically, a vessel, stationary or revolving, in which the stone, cement, and sand which together form concrete for building purposes may be intimately compounded.—2. The chamber, space, or passage in a gas-engine or other internal-combustion motor in which the fuel, in atomized or vaporized form, is intimately mixed with the air which is to support its combustion.

mixing-picker (mik'sing-pik"ėr), *n.* A machine for opening and mixing wool preparatory to carding.

mixing-stack (mik'sing-stak), *n.* A pile, as of cotton, made up of layers of the material from different packages, as bales, so as to insure a uniform blend in length and quality of staple. *Taggart*, Cotton Spinning, I. 50.

mixing-syrup (mik'sing-sir"up), *n.* A trade-name for a thick solution of glucose-sugar, made from starch, sold to be mixed with, and so to cheapen, table syrup made from cane-sugar.

mixing-valve (mik'sing-valv), *n.* Same as ★*mixer-valve.*

mixipterygium (mik"sip-te-rij'i-um), *n.*; pl. *mixipterygia* (-ä). [NL., < Gr. *μίξυς*, mingling, copulation, + *πτέρυξ*, wing, fin.] Gegenbaur's term for the claspers of male elasmobranchs, the long, cartilaginous projections from the base of the ventral fins. The forward shifting of the fin is partially arrested in the male owing to the development of the mixipterygium.

Mixochoanites (mik-sō-kō-a-nī'tēz), *n.* [NL., < Gr. *μῖξις*, a mixing, + *χόανος*, a funnel.] In Hyatt's classification of the cephalopods, a suborder of the *Nautiloidea* comprising straight or slightly curved shells in which the older septa are curved orad or toward the apertures, and the siphuncle is highly modified. In specialized forms like *Ascoceras* the siphuncles have short funnels and collars and the gerontic living-chambers are contracted by the formation of large septa developed on one side only. The group is wholly Silurian.

Mixonus (mik'sō-nus), *n.* [NL.] A genus of brotuloid fishes found in the deep sea, one specimen being taken in the mid-Atlantic at the depth of 2,500 fathoms.

mixoscope (mik'sō-skōp), *n.* [Gr. *μιξο-*, mixed, + *σκοπεῖν*, view. See *scope*^{3}.] An apparatus for mixing colors.

mixoscopia (mik-sō-skō'pi-ä), *n.* [Gr. *μιξο-*, mixed, + *σκοπεῖν*, view.] A form of sexual perversion in which libidinous pleasure is excited by the sight, or mental picture, of the cohabitation of the desired one with another.

mixoscopic (mik-sō-scop'ik), *a.* [*mixoscop(ia)* + *-ic.*] Of the nature of, or affected with, mixoscopia. *Alien. and Neurol.*, May, 1903, p. 167.

mixotrophic (mik-sọ̄-trof′ik), *a.* [Gr. *μιξο-*, mixed, + *τροφή*, nourishment. See *trophic.*] Imperfectly trophic: applied to chlorophyl-bearing plankton which, because of abundant organic matter in the water, has begun to lose chlorophyl and consequently the power of manufacturing food from inorganic substances.

mixtion, *n.* 3. In *law*, confusion of goods, that is, such an admixture of the property of two or more persons that it is impossible to determine the precise property of each.

mixture, *n.* 9. The material for the charge of an internal-combustion engine. It usually consists of fuel, in a vaporized or finely pulverized condition, mixed with air.—**A. c. e. mixture,** a mixture of alcohol, chloroform, and ether, in 1, 2, and 3 parts respectively: used to produce anæsthesia by inhalation.—**Basham's mixture,** a transparent reddish aromatic solution of iron and ammonium acetate.—**Bordeaux mixture,** a material largely used to destroy parasitic fungi, especially on fruit-trees and grape-vines, and applied in the form of spray. It is made in the proportion of 4 pounds of crystallized copper sulphate and 5 pounds of quick-lime to 45 gallons of water.—**Copper mixture of Gironde.** See ★*copper*^{1}.—**Cornell mixture,** a fungicide and insecticide preparation, made from Bordeaux mixture, kerosene emulsion, and an arsenite.—**Johnson's mixture,** a fungicide preparation, consisting of cupric sulphate, ammonium carbonate, and a large proportion of water, intended for application to plants by spraying.—**Neutral mixture,** a greenish-yellow solution obtained by neutralizing fresh lemon-juice with bicarbonate of potassium: it is diaphoretic and sedative.—**Schleich's anesthetic mixture.** See ★*anesthetic.*—**Single-tree mixture,** in *forestry*, a mixture in which trees of different species occur singly.—**Thilorier's mixture,** a mixture of liquid ether with carbon dioxid in the solid state. By the rapid evaporation of this mixture under reduced pressure, as produced by an air-pump, a temperature of −110° C. may be obtained.

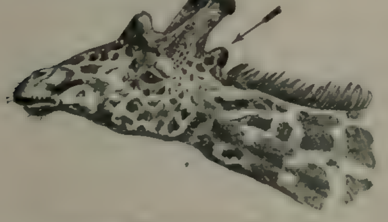
miya (mē′yä), *n.* [Jap.] 1. A Japanese Shinto temple or shrine.—2. [*cap.*] The residence of the Mikado of Japan.—3. [*cap.*] The title of the Mikado's children.

miyakite (mē′yä-kīt), *n.* [*Miyakojima*, an island of Japan, + *-ite*^{2}.] In *petrog.*, pyroxene-andesite occurring on Miyakojima, in which the pyroxene is a manganiferous babingtonite. *Petersen*, 1891.

mizdeh (miz′de), *n.* [Ar. ?] A fish, *Mormyrus oxyrhynchus*, of the family *Mormyridæ*, found in the Nile. It was an object of veneration to the ancient Egyptians and therefore frequently occurs in their emblematic inscriptions.

mizzen, *n.*—**Mizzen clue-lines,** the purchases for hauling up the clues of the mizzen-topsail, topgallantsail, and royal.

II. *a.* Noting the hindmost pair of horns in a five-horned giraffe, a small pair of projections arising from the lambdoid crest, back of the larger frontal horns.



Five-horned Giraffe showing Mizzen Horns.

> These structures, on the analogy of the masts of a ship, it may be convenient to speak of as "*mizzen*" horns.
> *Proc. Zool. Soc. London*, 1901, 477.

mizzen-backstays (miz′n-bak″stāz), *n. pl.* The backstays of the mizzen-topmast and mizzen-topgallantmast; also the backstays of the mizzen-royalmast.

mizzen-braces (miz′n-brā″sez), *n. pl.* The braces on the yards belonging to the mizzenmast; the braces of the cross-jack, topsail-, topgallant-, and royal-yards; also the skysail-yard, if that spar is carried.

mizzen-buntlines (miz′n-bunt″linz), *n. pl.* The buntlines belonging to the squaresails on the mizzen.

mizzen-chains (miz′n-chānz), *n. pl.* Plates of iron bolted to a ship's sides abreast the mizzenmast for securing the shrouds and backstays of that mast.

mizzen-crosstrees (miz′n-krôs″trēz), *n. pl.* The crosstrees on the mizzenmast, situated at the meeting of the head of the topmast and the foot of the topgallantmast.

mizzenmast, *n.* 2. *pl.* The lower-mast, topmast, and topgallantmast of the mast next abaft the mainmast.

mizzenmast-man (miz′n-mast-man), *n.* *Naut.*, one of the crew stationed to attend to the gear of the mizzenmast.

mizzen-parrels (miz′n-par″elz), *n. pl.* *Naut.*, the iron collars which confine the hoisting mizzen-yards to the masts. See *main* ★*parrels.*

mizzen-sail, *n.* 2. *pl.* The squaresails on the mizzenmast, namely, the cross-jack (not always carried) or mizzen-course, the lower and upper topsails, topgallantsail, royal, and sometimes a skysail. See ★*mainsail*, 2.

mizzen-sheets (miz′n-shēts), *n. pl.* *Naut.*, the sheets of the squaresails on the mizzenmast.

mizzen-stays (miz′n-stāz), *n. pl.* *Naut.*, all the stays which give support to the mizzen lower mast, topmast, and topgallantmast.

mizzen-staysails (miz′n-stā″sālz), *n. pl.* *Naut.*, the fore-and-aft sails which set between the mizzenmast and mainmasts.

mizzen-trusses (miz′n-trus″ez), *n. pl.* *Naut.*, the iron shapes which confine the mizzen lower yard and the mizzen lower topsail-yard to the mast, and upon which the yards revolve or pivot.

mizzen-yards (miz′n-yärdz), *n. pl.* *Naut.*, all the yards belonging to the mizzenmast.

M. L. S. B. An abbreviation of *Member of the London School Board.*

M. L. W. An abbreviation of *Mean Low Water.* *Amer. Jour. Sci.*, May, 1904, p. 335.

MM. An abbreviation (*b*) of *their Majesties;* (*c*) of *Martyrs.*

mm^1. An abbreviation (*b*) of the plural of Latin words commonly abbreviated *m.*, as *magistri;* (*c*) of the Latin *matrimonium;* (*d*) of the Latin *meritissimus.*

mm^2. An abbreviation of *square millimeter.*

mm^3. An abbreviation of *cubic millimeter.*

μμ. A symbol used to denote a thousandth of a micron or a millionth of a millimeter.

MM. A. An abbreviation of the Latin *Magistri Artium*, Masters of Arts.

M. M. E. An abbreviation of *Master of Mechanical Engineering.*

m. m. f. An abbreviation of *magnetomotive force.*

M. Mus. An abbreviation of *Master of Music.*

M. N. A. S. An abbreviation of *Member of the National Academy of Sciences.*

Mnemia (nē′mi-ä), *n.* [NL. (Eschscholtz, 1829), appar. < Gr. *Μνήμη*, Memory, one of the Muses.] The typical genus of the family *Mnemiidæ.*

Mnemiidæ (nẹ̄-mī′i-dē), *n. pl.* [NL., < *Mnemia* + *-idæ.*] A family of lobate ctenophorans in which the lobes are very large, the auricles are long and ribbon-shaped, and the origin of the auricles and lobes is placed almost at the same height as the funnel. It contains the genera *Mnemia, Alcinoë,* and *Mnemiopsis.*

mnemism (nē′mizm), *n.* [Gr. *μνήμη*, memory, + *-ism.*] The 'memory' which has been attributed to cells and organic molecules, and has been held to be an explanation of inheritance. *Hyatt*, Biol. Lectures, 1899, p. 153. [Rare.]

mnemogenesis (nē-mọ̄-jen′e-sis), *n.* [Gr. *μνήμη*, memory, + *γένεσις*, generation.] The generation of new organisms by means of the organic 'memory' or mnemism of parents. Those who hold the opinion that inheritance is memory attribute the building of an embryo to mnemogenesis, or the unfolding of a record of a memory which, having been stored up in the central nervous system of the parent, is impressed upon the developing germ in the order in which it was stored. [Rare.]

> The premature development of characteristics and some other rare phenomena . . . can only be explained by assuming an irregularity in the action of *mnemogenesis.*
> *Hyatt*, Biol. Lectures, 1899, p. 156.

mnemogenic (nē-mọ̄-jen′ik), *a.* Of or pertaining to mnemogenesis. [Rare.]

> When special tendencies or structures have arisen, their reappearance in descendants at the same time, or earlier, . . . becomes one of the strongest confirmations of the *mnemogenic* hypothesis.
> *Hyatt*, Biol. Lectures, 1899, p. 155.

mnemonicon (nẹ̄-mon′i-kon), *n.*; pl. *mnemonica* (-kä̤). [See *mnemonics.*] An aid to the memory; a mnemonic device.

mnemonize (nē′mọ̄-nīz), *v. t.*; pret. and pp. *mnemonized*, ppr. *mnemonizing.* [*mnemon*(*ic*) + *-ize.*] To associate (in memory) with a system of mnemonics; remember by means of mnemonics.

> Each lecture is . . . separately dedicated to two persons, twelve fortunate individuals being thus *mnemonized* into immortality.
> *N. A. Rev.*, July, 1845, p. 263.

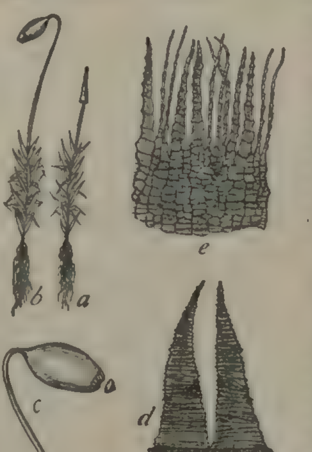
mnemotechnist (nē-mọ̄-tek′nist), *n.* [*mnemotechn*(*y*) + *-ist.*] One who is skilled in mnemotechnics.

Mnestra (nes′trä), *n.* [NL., < Gr. *Μνήστρα*, a daughter of Danaus.] A genus of hydromedusans. *M. parasitica*, found on a pelagic snail, *Phyllirrhoë bucephala*, is one of the very small number of parasitic medusæ.

Mniaceæ (nī-ā′sẹ̄-ē), *n. pl.* [NL. (Brotherus, 1901), < *Mnium* + *-aceæ.*] A family of acrocarpous mosses of the order *Bryales*, typified by the genus *Mnium*, and distinguished from the *Bryaceæ*, to which it was formerly referred, by the club-shaped (instead of filiform) paraphyses of the male organs, and by the hexagonal (not rhombic) parenchymatous cells of the upper surface of the leaves. There are 4 genera and 79 species, of which latter 72 belong to the genus *Mnium*. They grow in moist, shady places, on the ground, on the bark of trees, or on rocks, and are found in nearly all parts of the world, but chiefly in temperate regions.

mniotiltine (nī-ọ̄-til′tin), *a.* Relating to or having the characteristics of the *Mniotiltidæ*, a family containing the small North American warblers.

Mnium (nī′um), *n.* [NL. (Linnæus, 1753, adopted from Dillenius, 1741), < Gr. *μνίον*, also *μνῖον*, a moss.] A large genus of acrocarpous mosses, now made the type of the family *Mniaceæ*. It is characterized by synœcious flowers, erect stems, covered below with scale-like leaves becoming broader and toothed above and on the branches, and bearing at the summit one to several nodding or declined capsules on more or less elongated setæ. There are 72 species of wide distribution, 30 occurring in America, growing in swampy or moist ground, on rocks, or on trees.



Mnium hornum.

a, plant with sporogonium, still bearing a calyptra; *b*, plant with ripe sporogonium; *c*, mature capsule with operculum removed; *d*, two peristome teeth of the outer row; *e*, part of inner peristome. *a* and *b*, two thirds natural size; *c*, twice natural size; *d* and *e*, greatly enlarged. (From Strasburger's "Text-book of Botany.")

M. N. S. An abbreviation (*a*) of *Master of Natural Science;* (*b*) of *Member of the Numismatical Society.*

Mo. An abbreviation (*b*) of *Missouri;* (*c*) of *Monday.*

M. O. An abbreviation of *Master of Oratory.*

Moab (mō′ab), *n.* [See *Moabite.*] See the extract.

> *Moab*, a name applied to the turban-shaped hat which was some few years back fashionable among ladies, and ladylike swells of the other sex. From the Scripture phrase, "*Moab* is my washpot' (Ps. lx. 8), which latter article the hat in question was supposed to resemble.
> *Slang Dict.*

Moabitish (mō′a̤-bī-tish), *a.* [*Moabite* + *-ish*^{1}.] Of or pertaining to the Moabites; Moabite.

moafza (mọ-äf′zä̤), *n.* [Ar. *muḥāfza*, governorship, guardianship, < *ḥafaz*, keep, learn.] An administrative division of modern Egypt.

moa-hunter (mō′a̤-hun″tėr), *n.* A hunter of the moa: a poetical name applied, in the plural, to an extinct people, probably of Papuan relationship, supposed to have inhabited New Zealand before the advent of the Maoris.

moat^1, *v. t.* **2.** In *mining*, to puddle; cover with earth so as to exclude air, as a mine shaft in case of an underground fire. [Scotch.]

moating (mō′ting), *n.* The puddling beaten in behind the stonework of a mining-shaft built up through a bed of quicksand. *N. E. D.*

mobile^1, *n.* **3.** A name proposed as a substitute for *motor-vehicle*, or *automobile*.

Mobilian, *n.* **2.** The trade language formerly spoken in the Gulf States, a jargon originating in the intercourse between whites and Indians. It contained many Choctaw words.

mobiliary (mọ-bil′i-ā-ri), *a.* [F. *mobiliaire*, < L. *mobilis*, movable. See *mobile*^{1}.] **1.** In the Channel Islands, relating to movable property; also the distinctive epithet of a court that deals with 'mobiliary' questions. *N. E. D.* —**2.** Of or pertaining to household furniture. —**3.** In *mil.*, of or pertaining to mobilization.

mobility, *n.* **4.** In *phytogeog.*, the inherent capacity of a plant for migration. *F. E. Clements.*

mobilizable (mō′bi-lī-za̤-bl), *a.* [*mobilize* + *-able*.] Capable of being made or of becoming mobile or movable; that may be mobilized.

> The hæmal and other mobile or *mobilizable* cells of the body. *Buck*, Med. Handbook, I. 44.

mobilization, *n.* **2.** The act or process of rendering mobile or movable: as, the *mobilization* of a stiff joint.

Möbius's surface. See ⋆*surface*.

mob-madness (mob′mad″nes), *n.* The uncontrolled emotionalism or frenzy of an excited crowd: a phenomenon particularly described by Le Bon in his study, "The Psychology of the Crowd." *E. A. Ross*, Social Control, p. 147.

moca (mō′kä̤), *n.* [Porto Rican.] In Porto Rico, the cabbage-tree, *Vouacapoua Americana*. See *cabbage-tree*, 2, and *wacapou*.

moccasined^2 (mok′a̤-sind), *p. a.* [Lit., 'bitten by a moccasin,' that is, 'poisoned.'] Intoxicated. [Slang, southern U. S.]

> In some parts of the Southern States *moccasined* = "intoxicated" was common as a slang term. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 248.

mocha, *n.* **4.** In *glove-making*: (*a*) A soft leather made from Arabian goatskins, nominally from Mocha. (*b*) Generally, a very soft sheepskin, tanned principally with oil.

Mocha ware. See ⋆*ware*^{2}.

mochila (mọ-chē′lä̤), *n.* [Sp., a caparison, knapsack, etc., prob. from *mocho*, cut short, lopped, cropped, < L. *mutilus*, lopped: see *mutilate*.] The leather flap which covers a saddletree.

mochylic (mọ-kil′ik), *a.* Noting an alcohol, a colorless compound, $C_{26}H_{46}O$, found, probably in combination with palmitic acid, in bird-lime, and obtained by boiling the inner bark of *Ilex integra* with water. It crystallizes in small lustrous prisms melting at 234° C.

Mock bishop's weed, *Ptilimnium capillaceum*, an umbelliferous plant of the United States, ranging from Massachusetts to Florida and west to Texas.

mock-acacia (mok′a̤-kā″shiä̤), *n.* The locust-tree, *Robinia Pseud-acacia*.

mock-bird, *n.* **2.** A bird that imitates; a parrot. [Rare.]

> The king would dress an ape up in his crown
> And robes, and seat him on his glorious seat,
> And on the right hand of the sunlike throne
> Would place a gaudy *mock-bird* to repeat
> The chatterings of the monkey.
> *Shelley*, Witch of Atlas, lxxiv.

mock-chervil (mok′chėr″vil), *n.* **1.** Cow-parsley.—**2.** Shepherd's-needle.

mocking-bird, *n.* **2.** In Demerara, a name applied to orioles of the genus *Cassicus*, and especially to *C. icteronotus*, which is often kept as a cage-bird on account of its pleasant note.—**3.** In Australia, the lyre-bird, *Menura superba*: so called on account of its remarkable power of song.

mocking-thrush (mok′ing-thrush), *n.* Any one of the *Miminæ*, a group of North American birds including the mocking-bird and catbird.

mock-knee (mok′nē), *n.* A large tumor-like swelling appearing on the knee of horses and cattle, due in most cases to repeated bruising and injury to the soft tissues, and sometimes resulting in the formation of hard epidermal scales.

mock-orange, *n.* **3.** Same as *calabazilla*.—**4.** The Victorian laurel, *Pittosporum undulatum*, a small tree yielding a hard, close-grained whitish wood. In the Azores it is used for protecting orange-trees from the wind. Called also *native laurel*. See *Pittosporum*.

mock-strawberry (mok′strâ″ber-i), *n.* Same as *Indian* ⋆*strawberry* (*a*).

moco (mō′kō), *n.* [W. Ind., of obscure origin.] Cut money. [Windward and Leeward Islands.]

mocock (mō-kok′), *n.* Same as ⋆*mocuck*. *Notes and Queries*, Aug. 10, 1907, p. 107. [Canada.]

mocomoco (mō-kō-mō′kō), *n.* [Carib.] A variety of arum, *Montrichardia arborescens*, growing in Guiana, etc. *N. E. D.*

mocuck (mō-kuk′), *n.* [Also *mowkowk*; < Ojibwa *makak*, Menomini *makak*.] A box of birch bark for sugar, rice, etc., used by the Indians of Ontario, Minnesota, Michigan, etc. *Bartlett*, Dict. of Americanisms.

mod^2 (mōd), *n.* [Gael. *mòd*, an assembly, < Icel. *mōt*. See *moot*^{1}.] The yearly meeting of the Highland Association, for literary and musical compositions. *N. E. D.* [Great Britain.]

modal, *a.* **3.** Of or pertaining to or having the numerical value of a statistical mode.

> Any race as we find it is very largely the product of its *modal* members. *K. Pearson*, Grammar of Sci., p. 445.

4. In *petrog.*, in the quantitative system of classification of igneous rocks (see ⋆*rock*^{1}), relating to the mode.—**5.** Of or pertaining to the mode of a curve. See ⋆*mode*, 11.—**6.** In *math.*, most frequently occurring.—**Modal frequency.** See ⋆*frequency*.—**Modal sensitivity.** See ⋆*sensitivity*.—**Modal value.** Same as ⋆*mode*^{1}, 12.

> A numerical value for which such a frequency is greatest is termed a *modal value* or mode. *K. Pearson*, Grammar of Sci., p. 382.

modality, *n.* **6.** In *psychol.*: (*a*) The nature or character of sensation or stimulus as determined by the sense-department to which it belongs or appeals: a term proposed by Helmholtz, to avoid a confusing use of *quality*.

> It was found, for instance, that the simple reaction-time depended not only upon such objective factors as the *modality* of the stimulus, . . . but also quite as much upon certain more subjective conditions. *Amer. Jour. Psychol.*, XV. 489.

Hence—(*b*) the sense-department itself: as, sensations of different *modalities*.

modalize (mō′da̤l-īz), *v. t.*; pret. and pp. *modalized*, ppr. *modalizing*. [*modal* + *-ize*.] To render modal; impart modality to.

mode^1, *n.* **11.** In *math.*: (*a*) The most frequent measure; the class with greatest frequency. (*b*) The point at which a curve, indicating frequencies of occurrence of a variable event, reaches its maximum. In the normal frequency curve (see *Quételet's* ⋆*curve*), the average is at the same time the mode, while in skew curves the average and mode do not coincide. (*c*) In a table of frequencies which gives a list of the different quantities appearing, with a statement of the number of times that each appeared, the one which occurs most often.—**12.** In *biom.*, that statistical value of a character which is most prevalent in a group of organisms.

> Mr. Tower indicates a similar seasonal change in the case of the *mode* of Chrysanthemum leucanthemum. He proposes a new definition for the term '*mode*,' but the word '*mode*' was introduced into statistics with a perfectly definite sense, and it seems undesirable now to alter it. "The average prevailing state of one or more characters of a homogeneous lot of individuals" is not a biometric definition. It might refer to any constant whatever of the frequency,—to the mean, the *mode*, the variability, or indeed to the whole frequency distribution itself. The now established use of the word '*mode*' is for that value of an organ or character, at which the frequency of the population per unit of the character or organ is a maximum,—the frequency 'per unit of the character' being used, if the character be not discrete, in the sense of the infinitesimal calculus. The definition is clear; it belongs to the theory of statistics to show us how to determine whether there is one or more true *modes*, and if there be, to settle the degree of their significance. *Biometrika*, April, 1902, p. 305.

13. In *petrog.*, in the quantitative classification of igneous rocks (see ⋆*rock*^{1}), the actual mineral composition of a rock in distinction from the norm, with which it may or may not coincide.—**Mode color.** See ⋆*color*.—**Normative mode.** See ⋆*normative*.—**Octave mode.** See *mode*^{1}, 7 (*a*).—**Secular mode,** the statistical mode which prevails for a given year or season in a species or any other statistical population.

> A '*secular mode*' is the prevailing state of one or more characters of a homogeneous lot of individuals, of the same pleomorphic condition and stage of development, for a particular place and year. *Biometrika*, April, 1902, p. 314.

mode-imitation (mōd′im-i-tā″sho̤n), *n.* Imitation of the new, in distinction from *custom-imitation* or imitation of the long established: a term introduced by Tarde.

model, *n.* **7.** See the extract.

> An insect thus resembled by another is spoken of as its "*model*," the imitating insect is called a "mimic," and the combination of model and mimic or mimics is known as a "mimetic pair" or "mimetic assemblage," as the case may be. *Nature*, Oct. 31, 1907, p. 673.

Half-model (*naut.*), a block-model which shows one side of a vessel from the midship line.—**Waterline model.** Same as ⋆*block-model*.

model-basin (mod′el-bā″sn), *n.* An establishment for the experimental investigation of the phenomena of the motion of vessels and screw-propellers through the water, the determination of suitable forms of hull for a given speed, and the ascertainment of the power necessary to drive a given form of hull through the water at any given speed. The basin or tank used in the experimental work is an excavation of canal-shaped cross-section, from 300 to 500 feet long, 25 to 50 feet wide, and 8 to 15 feet deep, and filled with water. Above the surface of the water is a traveling carriage moved by power, which can be run over the length of the basin at any desired speed. The model of a vessel to be tested is towed through the water by a lever-arm attached to and hanging below the carriage, and suitable registering instruments record the speed of the model and its resistance to motion through the water. From the data thus obtained a curve of resistance of the model is made and the power required to drive a full-sized vessel is determined by the application of Froude's law.

modeliar (mo-del′yär), *n.* [Tamil *mudalizār*, an honorific plural from *mudali*, a chief. *Yule and Burnell.*] A native head-man, in the Tamil districts of Ceylon; a chief.

moderant (mod′e̤-rant), *n.* [L. *moderant(em)*, acc. sing. of ppr. of *moderari*, to moderate.] That which moderates or mitigates.

moderantist (mod′e̤-ran-tist), *n.* [*moderant(ism)* + *-ist*.] One who professes moderantism: one who belongs to the party of the 'moderates.' See *moderantism*.

moderator, *n.* **7.** In *astrol.*, any one of the four principal points in a nativity upon which the native's fortunes are supposed to depend: the sun, moon, ascendant, or mid-heaven.—**8.** In *mech.*, a device for moderating or reducing the speed of an internal-combustion engine by the operation of a throttle-valve. Its action is the reverse of that of the accelerator.—**Moderator band.** See ⋆*band*^{2}.

modernism, *n.* **3.** Specifically, a tendency among Roman Catholics to modern and progressive views condemned by Pius X. in an encyclical issued in 1907.

modernist, *n.* **3.** One who holds modern views; specifically, a Roman Catholic who holds the views (modernism) condemned by Pius X. in his encyclical issued in 1907.

modesty, *n.* **4.** (*a*) The hare's-ear or thorough-wax, *Bupleurum rotundifolium*. (*b*) The bladder-ketmia or flower-of-an-hour, *Hibiscus Trionum*.

modificand (mod′i-fi-kand″), *n.* [L. *modificand(us)*, ger. of *modificare*, modify.] That which is to be, or ought to be, modified. [Rare.]

modification, *n.* **7.** In *biol.*, a change which is brought about in a living being by its own activity and is not transmitted to descendants, as contrasted with a variation regarded as a congenital change which is not the effect of the activity of the organism and is transmitted to descendants; an acquired character. *Natural Sci.*, Nov., 1896, p. 288.

modify, *v. t.*—**Modified milk.** See ⋆*milk*.—**Modified smallpox.** Same as *varioloid*.

modinature (mō-di-nā′tṳ̄r), *n.* [Also *modenature*; < L. *modus*, mode, + *natura*, nature.] The dispositon of the moldings in a classical cornice, or, by extension, in any part of the entablature.

modinha (mō-dēn′yä), *n.* [Pg., dim. of *moda*, mode.] In *music*, a form of song very popular in Portugal, combining features of the French romance and the Italian aria.

Modiolopsis (mō″di-ọ-lop′sis), *n.* [NL., < *Modiola* + Gr. ὄψις, a form, appearance.] A genus of extinct pelecypod mollusks, having the form of the *Modiola*, with narrow hinge-plate and edeutulous hinge. It is of Silurian age.

Modiomorpha (mō″di-ọ̄-môr′fạ̈), *n.* [NL., < *Modiola* + Gr. *μορφή*, form.] A genus of prionodesmaceous pelecypods, having the form of the *Modiola*, with a single oblique elongate ridge-like tooth. It is found in Devonian rocks.

mod. præscript. An abbreviation of the Latin *modo præscripto*, in the manner prescribed.

Mods. An abbreviation of *Moderations*. See *moderation*, 5, pl.

> I should have thought that four years of Oxford with a little finishing at Wren's . . . would make a lad quite safe who had been in the Sixth at a public school and got a scholarship and first in *Mods.*
> *Nature*, June 16, 1904, p. 145.

modulation, *n.*—**Abrupt modulation,** in *music*, a modulation or transition of key accomplished suddenly, without ordinary harmonic process. See *modulation*, 3 (*b*).

modulative (mod′ụ̄-lā-tiv), *a.* [*modulate* + *-ive.*] Having the function of modulating; serving to modulate.

> Our punctuation-marks seem to have been originally *modulative*, . . . though punctuation is now mainly logical. *H. Sweet*, Eng. Sounds, § 235.

module, *n.* **5.** Equivalent to the phrase *with congruence-modulus*. See *modulus of a congruence*, under *modulus*.

modulus, *n.*—**Bulk modulus,** the modulus of elasticity of volume. It is the quantity c in the formula: $c = \frac{\text{stress}}{\text{strain}}$, where the stress is a hydrostatic pressure and the resulting strain is the diminution suffered by a unit volume of the substance.—**Modulus of a complex number,** $a + bi$ is $+|a^2 + b^2|^{\frac{1}{2}}$.—**Modulus of a complex quantity,** $x + iy$, the absolute value $|x + iy|$, the positive square root $|x^2 + y^2|^{\frac{1}{2}}$.—**Modulus of a curve,** a function of the coefficients of the equation of a curve which is absolutely invariant for every birational transformation.—**Modulus of a real number,** its absolute value.—**Modulus of compression,** the plastic pressure throughout a substance produced by a forced uniform dilatation of it.—**Modulus of decay,** the time in which a velocity, decreasing in geometrical proportion, becomes $\frac{1}{2.783}$ of its initial value.—**Modulus of periodicity,** the constant by which the values of an integral on opposite banks of a cross-cut differ.—**Modulus of resistance.** Same as ★*modulus of rupture.* Also sometimes used as the equivalent of the modulus of elastic resistance.—**Modulus of rupture,** a number which represents the weight necessary per square inch of cross-section to break a beam of any given material of definite length, breadth, and depth, usually one square inch in section and one foot long.—**Principal modulus,** a modulus of elasticity where the stress provokes only a strain of its own type.—**Stretch modulus,** in *phys.*, a numerical constant used to express the elongation of a substance when subjected to longitudinal stress; Young's modulus. See ★*compressional strength.*

Mœbia (mē′bi-ạ̈), *n.* [NL., named after Professor Karl *Möbius* of Berlin.] A genus of brotuloid fishes containing two species found in the deep sea.

moel (mō′el), *n.* [W. *moel*, a hill bare on top, a sugar-loaf hill (common in local names), also a heap, a pile, prop. an adj., bald (compare E. *bald* as applied to mountains, or to the bare top of a mountain), = Ir. *moil*, a heap, a pile.] An isolated hill or small mountain, of convex or dome-like form above, and with concave slopes around the base.

> Mr. J. E. Marr read a short but important paper on the peculiar form of isolated hill known from its popular Welsh name as a *Moel.* *Geog. Jour.* (R. G. S.), XVI. 446.

Moel Ferna slates. See ★*slate*².

moellon, *n.* **2.** In *tanning*, partly oxidized oil recovered by expression from skins in the process of oil-tanning. It is used in currying leather which has already been tanned by other methods, and for this purpose is sometimes prepared specially from skins that have been repeatedly used. Also called *degras.*

Mœræ, Moirai (mē′rē, moi′rī), *n. pl.* [NL. *Mœræ*, Gr. *Μοῖραι*, pl. of *μοῖρα*, part, lot, destiny, fate; connected with *μέρος*, part, share, < *μείρεσθαι*, part, divide.] In *class. antiq.*, the fates: Homer, in the Iliad, speaks of Mœra in general, and of several Mœræ; and, in the Odyssey, of the Clothes ('spinners'). In later mythology three Fates appear, Clotho ('the spinner'), Lachesis ('the disposer of lots'), and Atropos ('the inevitable'), who cuts the thread.

Mœritherium (mē-ri-thē′ri-um), *n.* [NL., < Gr. *Μοῖρις*, Moeris, a lake in Egypt, + *θηρίον*, a wild beast.] A genus of extinct ungulate mammals, described from remains found in the Eocene of the Fayum, Egypt, and believed to represent the ancestors of the proboscideans. The animal was about the size of a large tapir; the molars are cross-ridged; there is one pair of tusk-like lower incisors; and the second incisors of the upper jaw are developed as tusks. The arrangement of the bones of the cranium shows some points peculiar to the *Proboscidea.*

Mœsa-blight (mē′sạ̈-blīt), *n.* An undetermined East Indian plant-bug of the family *Capsidæ*, allied to *Helopeltis*, which blights the plants of the genus *Mœsa.*

moff (mof), *n.* A Caucasian silk fabric.

mofussilite (mọ̄-fus′il-īt), *n.* [*mofussil* + *-ite*².] In India, one who lives in the mofussil, or country, as distinguished from the residencies.

mogigraphia (moj-i-graf′i-ạ̈), *n.* [NL., < Gr. *μογι-*, hardly (*μόγος*, toil, *μογεῖν*, toil, suffer), + *-γραφια* < *γράφειν*, write.] Writers' cramp.

mogigraphic (moj-i-graf′ik), *a.* [*mogigraph(ia)* + *-ic.*] Pertaining to or of the nature of mogigraphia.

mogiphonia (moj-i-fō′ni-ạ̈), *n.* [Gr. *μόγις*, with difficulty, + *φωνή*, sound.] In *pathol.*, a difficulty in producing loud vocal sounds with the larynx, ordinary speech remaining unaffected. *Syd. Soc. Lex.*

mogo (mō′gō), *n.* [Aboriginal Australian.] A stone ax of the natives of New South Wales.

mogra (mō′grạ̈), *n.* [Hindi.] The Arabian jasmine, *Jasminum Sambac.*

M. O. H. An abbreviation of *Medical Officer of Health.*

Moham. An abbreviation of *Mohammedan.*

mohar, *n.* See *mohur.*

mohawkite (mō′hâk-īt), *n.* [*Mohawk* (see def.) + *-ite*².] An arsenide of copper, nickel, and cobalt, $(Cu,Ni,Co)_3As$, closely related to domeykite, found at the Mohawk mine, in the copper region of Keweenaw Point, Michigan.

Mohawk-weed (mō′hâk-wēd), *n.* The perfoliate bellwort, *Uvularia perfoliata.*

mohel (mō′hel), *n.* [Heb. *mul*, to cut off.] A circumciser; the officiating rabbi who is specially qualified to perform the operation of circumcision.

Moho, *n.* **3.** [*l. c.*] A short-winged, short-tailed rail, *Pennula ecaudata*, peculiar to Hawaii.

Mohrodendron (mō-rọ̄-den′dron), *n.* [NL. (Britton, 1893), < *Mohr* (Charles *Mohr* (1824–1901), a German botanist and pharmacist in America) + Gr. *δένδρον*, tree.] A name improperly given to *Halesia*, a genus of dicotyledonous trees or shrubs belonging to the family *Styracaceæ*. See *Halesia.*

Moine schist. See ★*schist.*

Moiragetes (moi-rạ-jē′tēz), *n.* [Gr. *μοιραγέτης*, < *μοῖρα*, fate, + *ἡγεῖσθαι*, lead.] Leader of the Fates: an epithet of Apollo and Zeus.

> There were also statues of two of the Fates, of Zeus *Moiragetes*, and of Apollo *Moiragetes.*
> *J. H. Middleton*, in Jour. Hellenic Studies, IX. 202.

moiré, *v. t.* **2.** In finishing cotton goods, to stamp a fabric so as to produce a watered or moiré effect, for which various methods are employed.

moirette (mwo-ret′), *n.* [*moire* + *-ette.*] A textile fabric made to imitate moire. *N. E. D.*

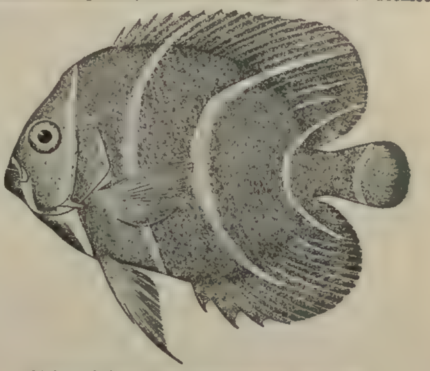
moissanite (mwo′san-īt), *n.* [*Moissan* (see def.) + *-ite*².] Carbon silicide, identified by Dr. Henri Moissan of Paris in the meteoric iron of Cañon Diablo, Arizona. The same substance made artificially in the electric furnace is extensively used in the arts under the name of *carborundum.*

Moist thermometer. See ★*thermometer.*

moisture-proof (mois′tụ̈r-prö̈f), *a.* Proof against moisture or its ill effects; not liable to be affected by moisture; damp-proof: as, transformers mounted in *moisture-proof* iron cases. *Elect. Rev.*, Sept. 10, 1904, p. 420.

moisture-scales (mois′tụ̈r-skālz), *n. pl.* Scales for ascertaining the percentage of weight lost by the evaporation of the moisture held in any sample of ore or other loose material in bulk. The material is first weighed, then dried, and again weighed. The beam has two sets of marks, one for weight and one for percentage gradations, the sliding weight showing at the second weighing both the loss in actual weight and the percentage of loss resulting from the evaporation of the moisture.

Mojarra almejera, a fish, *Hæmulon sexfasciatum*, from the Pacific coast of tropical America.—**Mojarra cantileña,** a fish, *Eucinostomus californiensis*, of the Pacific coast of Mexico and Central America.—**Mojarra cardenal,** a fish, *Holocentrus suborbitalis*, found in abundance from Mazatlan to Panama, inhabiting the pools in the rocky shores left by the tide.—**Mojarra china,** a fish, *Gerres lineatus*, found on the west coast of Mexico.—**Mojarra de las piedras,** a chætodontoid fish, *Pomacanthus zonipectus*, found on the west coast of Mexico and Central America from Mazatlan to Panama.—**Mojarra dorada,** a carangoid fish, *Gnathanodon speciosus*, widely distributed through the tropical parts of the Pacific and Indian oceans.—**Mojarra garabata,** a sparoid fish, *Calamus brachysomus*, found in the Gulf of California and in neighboring waters.—**Mojarra prieta,** a fish, *Hæmulon scudderi*, of the family *Hæmulidæ*, found on the Pacific coast of tropical America.—**Mojarra verde,** a cichloid fish, *Heros beani*, inhabiting the Rio Presidio near Mazatlan, Mexico.



Mojarra de las piedras (*Pomacanthus zonipectus*).
(From Bulletin 47, U. S. Nat. Museum.)

mojarrita (mo-hä-rē′tä), *n.* [Sp., dim. of *mojarra.*] Any fish of the genus *Eucinostomus* and family *Gerridæ*. These fishes are numerous in warm seas.

mojarron (mō-hä-rōn′), *n.* [Sp., aug. of *mojarra*: see *mojarra.*] A fish, *Anisotremus interruptus*, of the family *Hæmulidæ*, found on the west coast of tropical America.

moki¹ (mō′ki), *n.* [Maori.] The native name of two New Zealand fishes, the blue cod, *Percis colias*, and the bastard trumpeter, *Latris ciliaris.* *N. E. D.*

moki² (mō′kē), *n.* [Maori.] Same as ★*mokihi.*

mokihi (mō′kē-hē), *n.* [Maori *mokihi*, also *moki.*] A raft made of bundles of bulrushes, tied firmly together at one end and expanded by being tied to a stick at the other. Also written *moki* and *moguey.*

moko (mō′kō), *n.* [Maori.] Tattooing as practised by the natives of New Zealand, the designs consisting of elaborate figures with predominating spirals and covering a great part of the body.

> The "*moko*" or tattooing of a New Zealander is really a mark of rank, and only slaves are forbidden the more or less complete tattooing of the face. A completely tattooed face is literally covered with spiral scrolls, circles, and curved lines; but though the principal marks are generally similar, they are not exactly alike on any two persons, owing to the almost infinite variety of combinations at the operator's command.
> *Sci. Amer. Sup.*, Sept. 12, 1903, p. 23160.

> It is not a fact—as popularly supposed—that the "*moko*" was distinctive in different families; serving, as is sometimes said, the purpose of a coat-of-arms. The "*moko*" was in fact all made on the same pattern—that of all Maori carvings. Some were more elaborate than others. The sole difference was that some were in outline only, some were half filled in, and others were finished in elaborate detail. *E. E. Morris*, Austral English.

moko (mō′kō), *v. t.* To tattoo in the manner practised by the natives of New Zealand.

moko-moko (mō-kō-mō′kō), *n.* [Maori.] **1.** A New Zealand lizard, *Lygosoma moko.*—**2.** The bell-bird.

mokum (mō′kum), *n.* [Jap. *moku-me.*] A Japanese alloy used chiefly for decorations upon articles of gold or silver.

mol² (mol), *a.* [F. *mol*, *mou*, = G. *moll*, < L. *mollis*, soft: see *moll*².] In *music*, minor: as, E *mol*, or E minor.

mol³, **mole**⁷ (mōl), *n.* [NL. *mol(ecula)*, molecule.] The gram-molecule, or the gram-molecular weight of an element or compound: a brief form introduced by Ostwald.

molad (mō′lad), *n.* [Heb., < *yalad*, bear, bring forth.] The birth-time or beginning of the new moon. The Jewish month is lunar and therefore begins with the molad. See ★*rosh hodesh.*

molal (mō′lal), *a.* [*mol*³ + *-al*¹.] Of, or pertaining to, that amount of an element or compound which is equal to its molecular weight taken in grams. This amount is sometimes called a *mol*, and from the term in the German language an adjective *molar* is derived. The use of this German form of the adjective in English is infelicitous, since the English word 'molar' has already a very different meaning. Accordingly, some have lately used the adjective *molal.*

> From the *molal* fluidity of the components of the mixture the *molal* fluidity was computed by the mixture formula. *Phys. Rev.*, Jan., 1908, p. 55.

molar¹, *a.*—**Molar height.** See ★*height.*

molar², *a.*—**Molar death.** See ★*death.*

molarity (mọ-lar′ i̤-ti), *n.* [*molar*² + *-ity.*] The action of forces upon bodies as a whole, as distinguished from the molecular forces.

> The stellar bodies are interrelated through gravity and various forms of molar force which may be combined under the term *molarity*; and astronomy in its earlier form was the science of these relations.
> *W J McGee*, in Science, May 19, 1905, p. 771.

molasquit (mō-las′kit), *n.* [An arbitrary formation, < *molas*(*ses*) + *-quit* (uncertain).] A food for horses and cattle, prepared from molasses and fine bagasse from the sugar-mills. Sufficient cane-cellulose is mixed with molasses to permit its transportation as a dry material. The fine bagasse readily absorbs a large quantity of molasses and is itself digestible to a considerable extent. The resulting mixture is a valuable fodder which contains about 45 per cent. of saccharine matter.

Molasse, *n.*—**St. Gall Molasse**, a division of the Miocene Tertiary series in Switzerland, being a marine stage lying between the fresh-water or gray Molasse below and the fresh-water Oeningen Molasse above.

molasses, *n.* **2.** The repellent fluid ejected from the mouths of grasshoppers and certain other insects when captured.

molasses-grass (mọ-làs′ez-gràs), *n.* See ★*grass.*

molavee, *n.* Same as ★*maulvi.*

mold², *n.*—**Fruit-mold**, a serious fungous disease which attacks the fruit of the apple, cherry, peach, pear, and plum. It is caused by the fungus *Sclerotinia fructigena*, the conidial condition of which has long been known as *Monilia fructigena.* Also called *fruit-rot* and *brown* ★*rot* (which see).—**Oil-mold.** Same as ★*grease-mold.*—**Sooty mold**, a fungous disease of citrous trees and the olive, which produces a dark sooty growth on leaves, branches, and sometimes the fruit, caused by species of *Meliola* and *Apiosporium.* See ★*Meliola* and ★*Apiosporium.*—**White mold of sweet potato.** Same as *white* ★*rust.*

mold⁴, *n.* **12.** In *paleon.*, the external impression of an organic body, test, or skeleton in the rocks: contrasted with *cast*, which is an internal impression. See *cast*¹, 14.—**Dry-sand mold**, a mold which has been baked to a hard mass to prepare it to receive molten metal: distinguished from a *green-sand mold*, which is not dried or baked before the molten iron or other metal is poured into it.

moldave † (mol-dāv′), *n.* [*Moldavia.*] A long outer garment worn by ladies during the first half of the nineteenth century. *N. E. D.*

moldavite (mol-dā′vīt), *n.* [*Moldavia*, Hungary, + *-ite*².] In *petrog.*, a green glass found in oval grains an inch long. Its origin is in doubt: considered by Suess to be of meteoric character, possibly a variety of obsidian. It is found in sandy deposits in Moldavia, Hungary. Sometimes used as a gem. See ★*bottle-stone.*

mold-block (mōld′blok), *n.* A cast-iron block forming a part of the casting-bed in an iron-refinery.

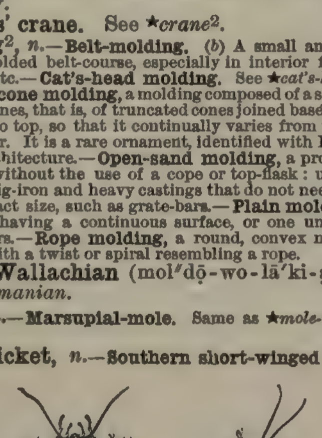
Molders' crane. See ★*crane*².

molding², *n.*—**Belt-molding.** (*b*) A small and delicately molded belt-course, especially in interior fittings, joinery, etc.—**Cat's-head molding.** See ★*cat's-head.*—**Double-cone molding**, a molding composed of a series of double cones, that is, of truncated cones joined base to base and top to top, so that it continually varies from thicker to thinner. It is a rare ornament, identified with Romanesque architecture.—**Open-sand molding**, a process of casting without the use of a cope or top-flask: used for casting pig-iron and heavy castings that do not need to be of an exact size, such as grate-bars.—**Plain molding**, a molding having a continuous surface, or one unbroken by corners.—**Rope molding**, a round, convex molding carved with a twist or spiral resembling a rope.

Moldo-Wallachian (mol″dọ-wo-lā′ki-a̤n), *n.* See *Rumanian.*

mole², *n.*—**Marsupial-mole.** Same as ★*mole-marsupial.*

mole-cricket, *n.*—**Southern short-winged mole-cricket**, an American gryllid, *Scapteriscus abbreviatus*, occurring in the southern United States.



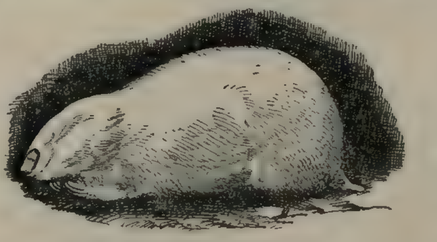
Southern Short-winged Mole-cricket (*Scapteriscus abbreviatus*). *a*, winged adult, dorsal view; *b*, same, lateral view. Natural size. (Chittenden, U. S. D. A.)

Molecular conductivity, death, encounter. See ★*conductivity*, etc.—**Molecular heat of vaporization.** See ★*heat.*—**Molecular magnetic friction.** See *magnetic* ★*hysteresis.*—**Molecular refraction.** See ★*refraction.*—**Molecular refractive power** or **refractivity.** See ★*refractive.*—**Molecular resistance, rigidity, shadow, silver, stability, streams, volume.** See ★*resistance*, etc.—**Molecular theory of vital currents.** See ★*current*¹.

molecule, *n.*—**Active molecules**, in *electrochem.*, those molecules of a dissolved electrolyte which are dissociated into their ions and are therefore active in carrying the electric current.—**Double molecule**, the simplest form of molecular complex in which two molecules combine to form one.—**Inactive molecules**, in *electrochem.*, those molecules of a dissolved electrolyte which are not dissociated into ions and are therefore not active in carrying an electric current.—**Proteid molecule**, a molecule of an albuminous substance in the wider sense of the term, or of a proteid in the narrower sense.

mole-diver (mōl′dī″vėr), *n.* The little grebe.

mole-marsupial (mōl′mär-sū″pi-a̤l), *n.* A small marsupial which has the habits and very much the appearance of a small mole and which inhabits the desert regions of central South Australia. It is of a pale yellow color, with a horny shield on the nose, and a bare, leathery tail. Only about a dozen specimens of the animal, which has been named *Notoryctes typhlops*, have been found. It is the type of the family *Notoryctidæ.*



Mole-marsupial (*Notoryctes typhlops*).

molette, *n.* **2.** A small steel roller upon the surface of which is cut a pattern, in relief, which is pressed into the surface of a copper printing-cylinder of a calico-printing machine.

molewort (mōl′wėrt), *n.* Water-cress.

molinary (mō′li-nā-ri), *a.* [LL. *molinarius*, < *molina*, a mill.] Of or pertaining to milling or the grinding of cereals.

> The 'Lead,' a stream, 'led' from the Tay past Rose Terrace, into the town for *molinary* purposes; and long ago, I suppose, bricked over, or choked with rubbish.
> *Ruskin*, Fors Clavigera, i. 161.

Molka berry. See ★*berry*¹.

mollescence (mo-les′e̤ns), *n.* [L. *mollis*, soft, + *-escence.*] Softening; in *pathol.*, same as *mollities.*

mollescent (mo-les′e̤nt), *a.* [L. *mollescent*(*em*), ppr. of *mollescere*, become soft.] Becoming soft; softening.

mollichthyolin (mol-ik′thi-ọ-lin), *n.* A mixture of molline and ichthyol. It is used externally in diseases of the skin.

Mollienisia (mol″i-e-nis′i-ạ̈), *n.* [NL. (Le Sueur, 1821), named after M. *Mollien*, a French minister of finance.] A genus of fishes of the family *Pœciliidæ*, small mud-loving fishes found from North Carolina to Mexico in the coastwise swamps.

Mollisia (mo-lis′i-ạ̈), *n.* [NL. (Karsten, 1871), irreg. < L. *mollis*, soft.] A large genus of discomycetous fungi having separate or crowded bright-colored sessile waxy ascomata. The spores are elongate, unicellular, and hyaline. About 150 species have been described. They occur on dead stems and decaying branches and are widely distributed.

Mollisiaceæ (mo-lis-i-ā′sẹ̄-ē), *n. pl.* [NL., < *Mollisia* + *-aceæ.*] A family of discomycetous fungi, named from the genus *Mollisia*, containing 19 genera. The ascocarps are mostly small and sessile. See ★*Mollisia.*

Mollities unguium, a trophic disease of the nails in which they become abnormally soft and yielding.

moll-rowing (mol′rou″ing), *n.* Domestic squabbling; the quarreling of man and wife. [Slang.]

> One scene was the work of my brother and myself. It was the outside of a lodging-house by moonlight. . . . The scene wound up with a great concert of "practical" cats on the roof, whose diabolical *moll-rowings* still ring in my ears.
> *G. A. Sala*, Things I have Seen and People I have [Known, II. 121.

molly⁴ (mol′i), *n.* [A senseless application of the familiar name *Molly*: see *Molly*¹.] In the printers' game of jeffing, a throw of quadrats which exposes only the unnicked sides; hence, any useless work with types in a composing-room.

molly-gut (mol′i-gut), *n.* Same as *goose-fish.*

mollyhawk (mol′i-hâk), *n.* An emendation of *mollymawk*, a name given by sailors to the smaller albatrosses. The change has been made on the mistaken supposition that mollymawk was a corruption of mollyhawk.

> On Adam's Island Mr. Cockayne had an opportunity of studying the nests of the albatross placed in exposed situations, where the solitary chicken remains on the nest for a year, and on the desolate Bounty Islands were found the nests of the *mollyhawk*, and numbers of animals, crustaceans, spiders and beetles which make their home in the guano or on the bare rocks.
> *Nature*, Nov. 5, 1903, p. 14.

moloker (mō′lok-ėr), *n.* A renovated silk hat. *N. E. D.* [Slang.]

molombwa (mọ-lom′bwạ̈), *n.* [Native name in West Africa.] Same as *molompi.* The pulverized heartwood of the tree is used by the natives as an ornament by sprinkling it upon their hair and clothing.

molote (mo-lọ̄′tā), *n.* A long-handled heart-shaped hoe used by the Latookas and other natives of the Upper Nile Valley and the lake regions.

> The handles of the *molotes* are extremely long, from seven to ten feet, and the instrument being shaped like a miner's spade (heart-shaped), is used like a Dutch hoe, and is an effective tool in ground that has been cleared, but is unfitted for preparing fresh soil.
> *Sir S. W. Baker*, The Albert Nyanza, p. 164.

Molpadia (mol-pā′di-ạ̈), *n.* [NL., < Gr. Μολπαδία, a feminine name.] The typical genus of the family *Molpadiidæ.* *Cuvier*, 1817.

Molpadiidæ (mol-pā-dī′i-dē), *n. pl.* [NL., < *Molpadia* + *-idæ.*] A family of holothurians, of the order *Actinopoda*, having neither tube-feet nor papillæ, the posterior end gradually tapering into a tail-like piece, mouth and anus terminal, usually fifteen simple or digitate tentacles, calcareous ring of five radial and five interradial pieces, and a single stone-canal with an internal madreporite. Respiratory trees are present but Cuvierian organs are rare. It contains the genera *Molpadia*, *Eupyrgus*, *Caudina*, *Haplodactyla*, *Trochostoma*, and *Ankyroderma.*

molula (mol′ụ̄-lạ̈), *n.* [NL., dim. of L. *mola*, a millstone: see *mola*, *molar*¹.] In *entom.*, the convex and sometimes bent head of the tibia of the hind leg of an insect, armed with a horny process on each side by which it is attached to the thigh. Also called *knee-ball.* *Kirby and Spence.*

mol. wt. An abbreviation of *molecular weight.*

Molybdate of ammonium, a salt of molybdic acid largely used in the determination of phosphorus and phosphoric acid in analysis. It is in constant use in the laboratories of steel-works and fertilizer-factories.

Molybdenum blue. See ★*blue.*—**Molybdenum glance.** See *molybdenite.*

molybdomancy (mọ-lib′dọ-man-si), *n.* [Gr. *μόλυβδος*, lead, + *μαντεία*, divination.] Divination by means of the behavior of molten lead, conclusions being based on the number, form, etc., of the drops.

molybdophyllite (mo-lib-dof′i-līt), *n.* [Gr. *μόλυβδος*, lead, + *φύλλον*, leaf, + *-ite*².] A rare lead silicate occurring in colorless foliated masses somewhat resembling mica, found at Långban, Sweden.

Momable slates. See ★*slate*².

moment, *n.* **9.** In *statistics*, influence in determining the position of the center or of the axis of distribution, as of population or resources.—**Center of moments.** See ★*center*¹.—**Dictyotic moment.** See ★*dictyotic.*—**Lorication moment.** Same as ★*dictyotic moment.*—**Moment of friction.** See ★*friction.*—**Moment of momentum**, a quantity, sometimes employed in the mechanics of rotation, equal to the angular momentum ($m\omega$), or the product of the mass and angular velocity. Since the angular velocity is rv, angular momentum may be written mvr—momentum (mv) multiplied by distance (r); hence the name *moment of momentum.*—**Moment of population**, a compound quantity formed by multiplying the population of a given area by the distance of its population-center from an assumed parallel or meridian. By means of this idea, the United States Census Office, using as element the square degree, determines centers of population.—**Moment of rotation**, the rotational inertia or moment of inertia.—**Moment of torsion**, the torque tending to twist a body, as a rod; the constant T in the equation $T = -\dfrac{\pi n r^4 \theta}{2l}$, where n is the slide modulus, r the radius of the twisted body, θ the angle through which the free end is twisted, and l is the distance from the free end along the axis of torsion to the point of clamping.—**Moment of two straight lines.** See ★*line*².—**Psychological moment**, the nick of time; the opportune moment; the best or the right time: as, he seized the *psychological moment*; it happened at the *psychological moment.*—**Statical moment.** Same as *moment of a force.*—**Unit moment of a couple.** See ★*couple.*

momentum, *n.*—**Angular momentum**, the product of the angular velocity of a rotating body into its moment of inertia.—**Electromagnetic momentum**, momentum due to velocity of an electromagnetic mass: opposed to ordinary mass, the momentum of which is termed *mechanical momentum.*—**Mechanical momentum,** momentum of the sort ordinarily dealt with in dynamics, in which the moving body has no electrostatic charge and consequently no electromagnetic mass.—**Moment of momentum.** See ★*moment.*

momiology (mō-mi-ol'ọ̄-ji), *n.* [F. *momie,* a mummy, + *-ology.*] The scientific study of mummies.

> Even the history of the Egyptian dynasties is a department of *momiology,* for the tablets of Abydos and Sakkarah belonged to temples which are connected with that future life and day of judgment for which the mummy lies patiently waiting.
> *Athenæum,* March 3, 1894, p. 283.

momme (mom'mē), *n.* [Jap.] A Japanese unit of weight, equivalent to 3.756 grams, or nearly 60 grains. *C. Hering,* Conversion Tables, p. 61.

mon^5 (mon), *n.* [Jap.] A Japanese money of account, the ten thousandth part of a silver yen, equal to 50 cents.

mon^6 (mon), *n.* [Corean?] A Corean coin, the hundredth of a Japanese tempo, equivalent to one tenth of a cent.

mon. An abbreviation (*a*) of *monastery;* (*b*) of *monetary;* (*c*) of *Monday.*

Monacanthidæ (mon-a-kan'thi-dē), *n. pl.* [NL., < *Monacanthus* + *-idæ.*] A family of fishes closely allied to the *Balistidæ,* herbivorous shore-forms found in warm seas.

monachate (mon'a̤-kāt), *n.* [L. *monachatus.* See *monk.*] The period of life passed as a monk. *N. E. D.*

monachist (mon'a̤-kist), *a.* [*monach*(*ism*) + *-ist.*] Pertaining or relating to monachism or monasticism.

> I do not find in Giorgione's work any of the early Venetian *monachist* element. He seems to me to have belonged more to an abstract contemplative school.
> *Ruskin,* Modern Painters, V. ix. § 11.

monachize (mon'a̤-kīz), *v. i.;* pret. and pp. *monachized,* ppr. *monachizing.* [*monach*(*ism*) + *-ize.*] To live a monastic life; become a monk.

monaco (mon'a̤-kō), *n.* [It. *Monaco,* a petty principality now under French protection, < L. *Arx* (or *Saxa*) *Monœci,* 'the fort (or rock) of Monœcus,' Gr. Μόνοικος, 'he who dwells alone,' an epithet of Hercules.] A silver coin of the value of 58 sols, bearing the arms of the Prince of Monaco.

monactin (mon-ak'tin), *n.* [Gr. *μόνος,* single, + *ἀκτίς,* (*ἀκτιν-*), ray.] A sponge-spicule of one axis.

monactinellid (mo-nak-ti-nel'id), *n.* and *a.* **I.** *n.* One of the *Monactinellida,* an order of sponges.

II. *a.* Having the characters of or pertaining to the *Monactinellida.*

monad, *n.*—**Collared monad,** in *zoöl.,* a monad which possesses a delicate membranous collar at one pole; one of the *Choanoflagellata.*—**Hooked** or **springing monad.** See ★*Bodo.*

monadary, *n.* Same as *monadiary.*

Monadelphic surface. See ★*surface.*

monadistic (mon-a̤-dis'tik), *a.* Pertaining to or of the nature of monadism.

monadnock (mọ-nad'nok), *n.* [A generic use of the name of Mount *Monadnock* in southwestern New Hampshire. The name *Monadnock* (formerly also *Monadnuck, Monadnic, Menadnock*) is of Algonkin origin, prob. from *manit,* 'that which is exceeding, surpassing, extraordinary, supernatural' (hence *manit, manitto,* a spirit, God: see *manito*), + *-adene* (*-ahdin, -adn*), a hill or mountain, + *-auke* (*-ohke,* etc., in colonial spellings often *-ock, -oc*), land, country, place. The meaning would be 'the place where there is a very high mountain.'] In *phys. geog.,* an isolated hill or mountain rising over a peneplain, and surviving because of the superior resistance of its rocks or of its distance from the larger rivers; a residual hill.

> The rivers Lesse, Ourthe, Süre, and Vierre, which radiate from the Serpont *monadnock,* all suddenly turn, at intervals, at right angles to their normal course, and these bends lie in concentric circles as if the region has been denuded in concentric waves.
> *Geog. Jour.* (R. G. S.), XVIII. 615.

monadological (mon″a̤-dọ̄-loj'i-ka̤l), *a.* [*monadolog*(*y*) + *-ic-* + *-al*^{1}.] Of or pertaining to monadology, or the doctrine of monads.

> In this case matter is thought of as made up of similar [mental] atoms of a lower order (monistic or *monadological* spiritualism), or the mind-atom is regarded as specifically different from matter proper (dualistic spiritualism). *W. Wundt* (trans.), Outlines of Psychol., p. 313.

monæne (mon'ēn), *n.* [Gr. *μόνος,* single, + *-αινα,* as in *τρίαινα,* trident.] In sponge-spicules, a triæne in the cladome of which two of the three rays have atrophied or been arrested in development.

monamide (mon-am'id), *n.* [Gr. *μόνος,* one, + E. *amide.*] A class name applied, in organic chemistry, to compounds, derived from acids and ammonia, containing the univalent radical $-CONH_2$: occasionally used, incorrectly, for amines.

monamido (mon-am'i-dō), *a.* [*mon*(*o*)- + *amido-.*] Containing a single amido (NH_2) group: as, *monamido* acid.

monandric (mọ-nan'drik), *a.* Practising or characterized by monandry; monandrous.

monapsal (mon-ap'sa̤l), *a.* [*mon*(*o*)- + *apse* + *-al*^{1}.] In *arch.,* having only one apse.

Monarch butterfly. See ★*butterfly.*

monarcho† (mon'är-kō), *n.* [For It. *monarcha,* monarch.] A title assumed by a fantastical individual of Shakspere's time; hence, humorously, a monarch.

> This Armado is a Spaniard, that keeps here in court;
> A phantasime, a *Monarcho,* and one that makes sport
> To the prince and his bookmates. *Shak.* L. L. L. iv, i.

monarda, *n.* **2.** [*l. c.*] A plant of the genus *Monarda.*—**Monarda oil.** See ★*oil.*

Monardella (mō-när-del'a̤), *n.* [NL. (Bentham, 1834), a diminutive of *Monarda,* on account of the resemblance of the two genera.] A genus of plants of the family *Menthaceæ.* They are annual or perennial sweet-smelling herbs, with rose-purple, lavender, or white flowers in terminal heads subtended by broad, often colored bracts. There are about 15 species, natives of western North America, chiefly of California, some of which are occasionally cultivated.

monarthritis (mon-är-thrī'tis), *n.* [NL., < Gr. *μόνος,* single, + *ἄρθρον,* joint, + *-itis.*] Inflammation of one joint.—**Monarthritis deformans,** arthritis deformans affecting one joint only.

Monastic architecture, the architecture of the convents and monasteries of the Christian middle ages, and the resulting styles down to the eighteenth century. Romanesque art in western Europe is largely monastic in origin.

monasticize (mọ-nas'ti-sīz), *v. t.;* pret. and pp. *monasticized,* ppr. *monasticizing.* [*monastic* + *-ize.*] To make monastic; convert to monasticism.

monatomism (mon-at'ọm-izm), *n.* [*monatom*(*ic*) + *-ism.*] The character of being monatomic.

monaulic (mọ-nâ'lik), *a.* [Gr. *μόνος,* single, + *αὐλός,* pipe, + *-ic.*] Having an undivided tube, as the hermaphrodite duct leaving the ovotestis in certain mollusks. Compare ★*diaulic,* 2.

monaxile (mon-ak'sil), *a.* and *n.* [Gr. *μόνος,* single, + L. *axis,* axis, + *-ile.*] **I.** *a.* Same as *monaxial.*

II. *n.* A monaxial sponge-spicule.

monaxon, *n.* **2.** In *neurol.,* a nerve-cell with a single neuraxon, or axis-cylinder process.

monaxonal (mon-ak'sọ̄-na̤l), *a.* [*monaxon* + *-al*^{1}.] In sponge-spicules, monactinal.

monaxonidan (mon-ak-son'i-dan), *a.* and *n.* [*Monaxida* + *-an.*] **I.** *a.* Relating or pertaining to the *Monaxonida;* having only monaxon spicules.

II. *n.* Any member of the *Monaxonida.*

monchiquite (mon'chi-kīt), *n.* [Serra de *Monchique,* Portugal, + *-ite*^{2}.] In *petrog.,* a porphyritic rock with aphanitic groundmass, composed of hornblende, augite, biotite, olivin, and magnetite in a ground-mass of the same minerals, with an isotropic base having the composition of analcite. *Hunter and Rosenbusch,* 1890.

monchiquoid (mon'chi-koid), *a.* [*Monchiqu*(*ite*) + *-oid.*] In *petrog.,* resembling monchiquite in mineral composition and texture.

mond (mond), *n.* [D. *mond* = G. *mund* = E. *mouth.*] A mouth; particularly, the mouth of a river: an element in many South African Dutch place-names.

Mond. An abbreviation of *Monday.*

mondaine (mon-dān'), *a.* and *n.* [F., fem. of *mondain,* < L. *mundanus,* of the world: see *mundane.*] **I.** *a.* Worldly; absorbed in the fashionable world.

II. *n.* A woman who loves the pomps and va̤nities of this world; one who is devoted to the world of fashion; a worldling.

monembryonic (mon-em-bri-on'ik), *a.* [Gr. *μόνος,* single, + *ἔμβρυον,* embryo, + *-ic.*] Of or pertaining to a single embryo; bearing a single embryo.

monembryony (mon-em'bri-ọ-ni), *n.* [*monembryon*(*ic*) + *-y*^{3}.] The state or condition of bearing only one embryo.

monergic (mọ-nėr'jik), *a.* [< Gr. *μόνος,* single, + E. (*en*)*ergic:* properly *monenergic.*] In *plant physiol.,* having a single nucleus, or center of vital energy: opposed to ★*polyergic.*

monergist (mon'ėr-jist), *n.* [*monerg*(*ism*) + *-ist.*] One who holds the doctrine of monergism, namely, that the Holy Spirit is the only efficient agent in regeneration.

monergistic (mon-ėr-jis'tik), *a.* [*monergist* + *-ic.*] Of or pertaining to monergism; of the nature of monergism.

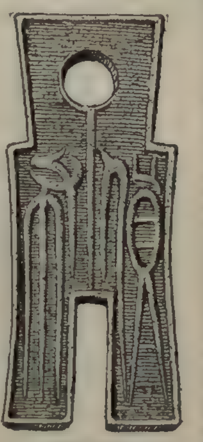
Monesia bark. (*b*) See ★*bark*^{2}.

monetary, *a.*—**Latin Monetary Union.** See ★*Latin Union.*

monetite (mon'ẹ̄-tīt), *n.* [*moneta* (see def.) + *-ite*^{2}.] Acid calcium phosphate ($HCaPO_4$) occurring in minute yellowish-white triclinic crystals, found in a bed of guano on the islands Moneta and Mona, West Indies.

money, *n.*—**Anglo-Gallic money,** coins struck in France by English rulers of a portion of that country, from the time of Henry II.—**Bar money,** an archaic money struck in the Low Countries for Java, in deference to native predilection.—**Black money.** (*a*) Copper coins struck at Tours and made current in England during the reigns of Edward II. and Edward III. (*b*) See the extract.

> When any class of work involves special unpleasantness or injury to clothing, "*black money*" or "dirty money" is sometimes stipulated for. Thus, the boilermakers and engineers receive extra rates for jobs connected with oil-carrying vessels. *Webb,* Industrial Democracy, I. 313.



Cloth Money.

Cloth money, an early Chinese copper coinage.—**Condemnation money,** in *law:* (*a*) The damages which the losing party to an action is adjudged to pay. (*b*) In an appeal bond, the amount that should be awarded against the appellant by the judgment of the court upon affirming the judgment or order appealed from.—**Cut money,** sections of silver or gold coins cut for circulation as subsidiary money, especially in the West Indies and Spanish colonies.—**Danes' money,** a local name for Roman coins found in Northamptonshire. [Eng.]—**Don Patiño's money,** a local name once current in Jamaica for the Spanish pistareen: so named from a colonial and finance minister of Spain at the beginning of the eighteenth century.—**Exurgat money,** an English coinage of Charles I., with the inscription on the reverse, *Exurgat Deus, dissipentur inimici* (Ps. lxvii., Vulg.), "Let God arise, let his enemies be scattered" (Ps. lxviii. 1, Rev. ver.).—**Franco-Italian money,** the coins struck by temporary French rulers of parts of Italy, from Charles VI. to Louis XVI. *W. C. Hazlitt.*—**Franco-Spanish money,** the coins struck in Spain by Louis XIII. and Louis XIV. of France, during their occupation of parts of that country. *W. C. Hazlitt.*—**Hock-Tuesday money,** in *old Eng. law,* money paid to a lord that his tenants and bondmen might celebrate the second Tuesday after Easter week—the day on which the English overcame the Danes. *Cowel.*—**India money,** an English coinage made in the seventeenth century for use by the East India Company. Also called *Indian money,* and *Portcullis money.* See *portcullis,* 4.—**Lanka money,** a bar of silver stamped with Arabic inscriptions, used as money in Ceylon.—**Merovingian money,** a term loosely applied to the whole group of coins struck in the Low Countries and in France in the sixth, seventh, and eighth centuries and actually originating in Holland. *W. C. Hazlitt.*—**New plate money,** a coinage, as opposed to Mexican plate, created by Charles II. of Spain (1686), who ordered that the American piece-of-eight (reals) should pass as a piece of ten new reals.—**Saddle money,** a Chinese copper coinage in use from the first to the fourth century B.C. **Temple money.** See ★*temple*^{1}.—**Tin-dangle money.** Same as ★*bridge-money.*

money-bound (mun'i-bound), *a.* Detained on board awaiting a remittance to pay for a passage that has been made: said of a ship's passenger.

money-grass (mun'i-grȧs), *n.* Same as *penny-grass,* 1.

money-maker, *n.* **3.** Any commodity which sells well and is profitable for those who make or handle it.

money-plant (mun'i-plant), *n.* Same as *money-flower.*

mongo (mon'gō), *n.* See the extract.

> *Mongo* (Phaseolus mungo Bl.), smaller than the lentil, but of the same flavor, cultivated on a large scale, as it is the principal food of many towns.
> *Pron. Gaz. Philippine Is.,* p. 80.

Mongolian, *a.*—**Mongolian idiocy, idiot.** See ★*idiocy,* ★*idiot.*—**Mongolian mark** or **spot,** a dark spot in the lumbar region, occurring in Mongolian new-born children and also observed among the new-born of the American (Indian) race.

Mongolization (mong″gọ-li-zā′shọn), *n.* [*Mongolize* + *-ation*] The process of Mongolizing or rendering Mongolian in character.

Mongolize (mong′gọ-līz), *v. t.*; pret. and pp. *Mongolized*, ppr. *Mongolizing*. [*Mongol* + *-ize.*] To render Mongolian in character; subject to Mongolian influence or control.

> Australia was determined . . . not to *Mongolise* its dominions.
> *Daily News* (London), July 2, 1906. *N. E. D.*

Mongolo-Tatar (mong′gọ-lō-tä′tär), *a.* and *n.* I. *a.* Of or pertaining to peoples that speak languages of the Mongol and Tungus divisions of the Ural-Altaic stock (the Mongol, Kalmuck, Buriat, Tungus, and Manchu), or to the languages themselves. Sometimes also used to include the Turkish languages or the whole group of Ural-Altaic languages. *Keane*, Ethnology, p. 299.

II. *n.* A people of Mongolo-Tatar affinities.

Mongrel disease. See ★*disease.*

monheimite (mon′hīm-īt), *n.* [Named (1853) after a German, Von *Monheim*, who described it.] A variety of the zinc carbonate, smithsonite, containing over 20 per cent. of iron carbonate.

Monicono-stereoscopic glasses. See ★*glass.*

monilethrix (mọ-nil′ẹ-thrix), *n.* [Irreg. < L. *monile*, a necklace, + Gr. *θρίξ*, hair.] Irregular atrophy of the hairs, giving them a beaded appearance.

Monilia (mọ-nil′i-ạ̈), *n.* [NL. (Persoon, 1797), so called in allusion to the chain of spores, < L. *monile*, a necklace.] A genus of *Fungi Imperfecti*, type of the family *Moniliaceæ*, having erect branched conidiophores bearing chains of conidia. *M. fructigena* and *M. cinerea* are known to be conidial conditions of the discomycetous genus *Sclerotinia.* They are the destructive fruit-molds which attack the peach, plum, cherry, etc. See *fruit-★mold*, *peach-blight*, *rot*, and ★*Sclerotinia.*

Moniliaceæ (mọ-nil-i-ā′sẹ-ē), *n. pl.* [NL., < *Monilia* + *-aceæ.*] A family of hyphomycetous fungi named from the genus *Monilia* (see ★*Monilia* and ★*Moniliales*). It is the same as the *Mucedinaceæ*, for which it is to be substituted, that name not being based on the name of a genus.

Moniliales (mọ-nil-i-ā′lēz), *n. pl.* [NL., < *Monilia* + *-ales.*] The largest order of the group *Fungi Imperfecti*, frequently called *Hyphomycetes*, containing the 4 families *Moniliaceæ*, *Dematiaceæ*, *Stilbaceæ*, and *Tuberculaceæ.*

Moniligaster (mọ-nil-i-gas′tėr), *n.* [NL., < L. *monile*, necklace, + *gaster*, belly.] The typical genus of the family *Moniligastridæ.* *Perrier*, 1873.

Moniligastridæ (mọ-nil-i-gas′tri-dē), *n. pl.* [NL., *Moniligaster* (*-gastr-*) + *-idæ.*] A family of terricolous *Oligochæta*, consisting of large or small earthworms with 8 paired setæ in each segment, the inconspicuous clitellum occupying segments 10–13, and one or two pairs of male pores. It contains the genera *Moniligaster* and *Desmogaster*, found in India, Ceylon, Sumatra, Borneo, Burma, and the Bahamas. *M. grandis* attains a length of two feet.

monimiaceous (mọ-nim-i-ā′shius), *a.* Belonging to the plant family *Monimiaceæ.*

monimolite (mọ-nim′ọ-līt), *n.* [G. *monimolit* (1865); < Gr. *μόνιμος*, lasting, stable, + *λίθος*, stone.] An antimoniate of lead, iron, and sometimes calcium, occurring in yellow to brown isometric crystals and also in massive forms: found in Sweden.

Monimostylica (mon″i-mọ-stil′i-kạ̈), *n. pl.* [Gr. *μόνιμος*, lasting, + *στῦλος*, pillar.] A division of reptiles including those which have the quadrate immovable, as turtles, crocodiles, and extinct forms: contrasted with *Streptostylica.*

monism, *n.*—**Cosmonomic monism.** See ★*cosmonomic.*—**Psychophysical monism**, the metaphysical opinion that physical and psychical phenomena are parallel aspects or attributes of one and the same underlying thing of which no experiential knowledge is possible.

> The first [parallelist theory] looks upon mind and body as of equal reality or rather unreality, and interprets them as parallel manifestations or aspects of a single real being: to this we may give the name of *psychophysical monism.* C. A. *Strong*, Why the Mind has a Body, p. 299.

monistically (mọ-nis′ti-kạl-i), *adv.* In the manner of the monists; in accordance with monistic philosophy.

> So far as the present work is concerned, it knows nothing of the value judgments by which the world ground is interpreted in terms of ethical personality; and it ignores all psychological experiences in which the inworkings of a transcendent moral person are known—experiences construed now *monistically* and now pluralistically.
> *Jour. Philos., Psychol. and Sci. Methods*, Aug. 4, 1904, [p. 442.

monistichous (mọ-nis′ti-kus), *a.* [Gr. *μόνος*, single, + *στίχος*, row, file.] Covered with a single layer of cells, like the ommatidium or structure which underlies the lens unit of the eye of a scorpion.

monitor, *n.* 9. In *hydraul.*, a device consisting of a universal-jointed pipe, to which is attached a nozle throwing a powerful stream of water: used in hydraulic mining and on fire-boats. See *hydraulic mining*, under *hydraulic.*—10. A turret or tool-holder in a lathe. See ★*turret*^{1}, 6.—11. Same as ★*catamaran*, 4.—**Gould's monitor**, *Monitor gouldi*, a large Australian lizard, named after the naturalist John Gould.

monitor (mon′i-tọ̈r), *v. t.* To be a monitor or adviser to; admonish.

> So after my own heart! I knew, I knew
> There was a place untenanted in it;
> In that same void white Chastity shall sit,
> And *monitor* me nightly to lone slumber.
> *Keats*, Endymion, iv. 135.

monitor-lathe (mon′i-tọ̈r-lāᴛʜ), *n.* Same as *turret-lathe.*

monitorship (mon′i-tọ̈r-ship), *n.* The position and duties of a monitor.

monium (mō′ni-um), *n.* [NL., < Gr. *μόνος*, single, alone.] The name given by Sir W. Crookes to a supposed new chemical element the presence of which in salts of so-called ‘yttrium’ seemed to be indicated by a peculiar phosphorescent spectrum exhibiting a group of lines almost alone near the extreme ultraviolet (whence the name): it was later proposed to change the name to *victorium*, in honor of Queen Victoria. Monium must be looked upon as one of the large number of inferred but unestablished elements.

> In his presidential address to the British Association in 1898 he [Sir William Crookes] announced the discovery of yet another member of the rarer earths—*monium* or victorium. The spectroscopic examination of this showed the spectrum crossed by an isolated group of lines high up in the ultra-violet end, and the existence of which could be detected only upon the photographic sensitive negative. *Sci. Amer.*, Aug. 8, 1903, p. 99.

monkey, *n.* 10. In *mining*, an appliance for automatically gripping or letting go the rope in rope haulage.—11. *pl.* In the Australian bush, a sheep-shearer's name for sheep. [Slang.]

> No one felt better pleased than he did to see the last lot of ‘*monkeys*,’ as the shearers usually denominated sheep, leave the head-station.
> *A. C. Grant*, Bush Life in Queensland, I. 88, quoted in [E. E. Morris, Austral English.

12. A local name for the cinder-notch of the dam in an iron-making blast-furnace, through which the slag or cinder can be allowed to flow out as it accumulates in the smelting process. It is placed on the side of the furnace, and about 30 or 40 inches below the level of the twyers where the blast is introduced in furnaces of modern size.

> On the side of the furnace, and 30 to 40 inches below the level of the tuyeres, the “cinder notch” or “*monkey*” is situated. *Sci. Amer. Sup.*, Oct. 19, 1907, p. 242.

Green monkey, a name applied to several African monkeys of the genus *Cercopithecus*, but more particularly to *C. sabæus*, the general color of which is a greenish gray.—**Howling monkey.** Same as *howler*, 2.—**King-monkey**, *Colobus polycomus*, one of the colobes, or horse-tailed monkeys of Sierra Leone, having a pure white forehead that suggests a crown.—**Monkey bass.** See ★*bass*^{2}.—**Monkey flush.** See ★*flush*^{9}.—**Patas monkey.** Same as *patas.*—**Road-monkey**, in *lumbering*, one whose duty is to keep a logging-road in proper condition. Also *blue-jay.*—**Satan-monkey**, *Pithecia satanas*, the black saki, a South American monkey, dark brown or black in color, with a bushy tail, heavy whiskers, and a thick crest or wig.—**Stump-tailed monkey**, one of the short-tailed macaques, *Macacus arctoides*, of southeastern Asia.—**Sykes's monkey**, an East African species, *Cercopithecus albogularis*, black above and white beneath.—**Weeper** or **weeping monkey.** Same as *weeper*, 4.

monkey-belt (mung′ki-belt), *n.* *Naut.*, a waist-belt worn by a seaman when working in a dangerous position over the vessel's side, as when ‘cutting in’ a whale.

monkey-drift (mung′ki-drift), *n.* In *mining*, a small drift used by prospectors.

monkey-forecastle (mung′ki-fōr″kȧs-l), *n.* See ★*deck*, 2.

monkeyfy (mung′ki-fī), *v. t.*; pret. and pp. *monkeyfied*, ppr. *monkeyfying.* [*monkey* + *-fy.*] To make like a monkey, literally or figuratively.

> Notwithstanding the very *monkeyfying* process to which some of the illustrations of inferior human types have been subjected in this pictorial chorography, the correspondences are not such as to carry conviction to most minds. *Sir D. Wilson*, Prehistoric Man, I. 172.

monkey-gangway (mung′ki-gang″wā), *n.* A small gangway parallel with the main gangway. *Coal and Metal Miner's Pocket-book.*

monkey-jar (mung′ki-jär), *n.* A water-monkey.

monkey-jug (mung′ki-jug), *n.* A coarse earthenware jug with a globular body and narrow neck, covered with a grayish brown glaze made from wood ashes and sand. The body is modeled in the semblance of a grotesque human head, the eyeballs and teeth being made of a white, porous clay, and usually movable. These jugs were made at Bath, South Carolina, about the year 1863.

monkey-nut (mung′ki-nut), *n.* The peanut.

monkey-orchis (mung′ki-ôr″kis), *n.* A plant, *Orchis tephrosanthos.*

monkey-rolls (mung′ki-rōlz), *n. pl.* The smaller rolls in an anthracite breaker.

monkey-rope (mung′ki-rōp), *n.* *Naut.*, the rope secured to a monkey-belt.

monkey-shaft (mung′ki-shȧft), *n.* In *mining*, a shaft which rises from a lower to a higher level. [Australia.]

> They began to think they might be already too deep for it, and a small ‘*monkey*’-*shaft* was therefore driven upwards from the end of the tunnel.
> *G. Sutherland*, Tales of Goldfields, p. 69, quoted in [E. E. Morris, Austral English.

monkey's-pea (mung′kiz-pē), *n.* See ★*pea*^{1}.

monkey-twyer (mung′ki-twī″ėr), *n.* One of the blank twyer-openings built into a blast-furnace above the ordinary twyers to be used in case of an emergency. *Phillips and Bauerman*, Elements of Metallurgy, p. 225.

monkey-vine (mung′ki-vīn), *n.* A species of the genus *Ipomæa*, *I. Nil.*

monkey-yard (mung′ki-yärd), *n.* *Naut.*, an auxiliary spar; a light yard used in exercising and training cadets and apprentices on board ship or at a naval station.

monk's-head (mungks′hed), *n.* The dandelion. Also *priest's-crown* (which see).

mono-articular (mon″ọ-är-tik′ụ̄-lär), *a.* Same as *monarticular.* *Lancet*, Aug. 22, 1903, p. 513.

monoazo (mon-ọ-az′ō), *a.* [*mono-* + *azo-.*] Pertaining to a chemical compound that contains one azo group.—**Monoazo color.** See ★*color.*—**Monoazo type**, a type of coal-tar coloring matter characterized by the presence of one azo group.

monobacillary (mon-ọ-bas′i-lạ̄-ri), *a.* [Gr. *μόνος*, single, + NL. *bacillus* + *-ary.*] Relating to one species of bacillus.

monobacteria (mon″ọ-bak-tē′ri-ạ̈), *n. pl.* [NL., < Gr. *μόνος*, single, + NL. *bacteria.*] Bacteria the cells of which are separate. *Billroth.*

monobacterial (mon″ọ-bak-tē′ri-ạl), *n.* [Gr. *μόνος*, single, + NL. *bacterium* + *-al*^{1}.] Relating to one form of bacterium.

Monobar chain. See ★*chain.*

monobasic, *a.* 2. Pertaining or relating to monobasis.—**Monobasic phosphate.** See ★*phosphate.*

monobasicity (mon″ọ-bā-sis′ị-ti), *n.* [*monobasic* + *-ity.*] In *chem.*, the character of being monobasic; the character of an acid as containing but one atom of hydrogen replaceable by a metal or electropositive radical; or the special character of a salt as containing a metal or electropositive radical replacing but one atom of hydrogen out of a larger number of such replaceable atoms in the corresponding acid.

monobasis (mọ-nob′ạ-sis), *n.* [Gr. *μόνος*, single, + *βάσις*, step (used in the sense of descent).] Descent on simple or narrow lines, as by inbreeding, or by vegetative propagation: the alternative of symbasis as a method of descent. *Cook and Swingle.*

monobium (mo-nō′bi-um), *n.*; pl. *monobia* (-ạ̈) [NL., < Gr. *μόνος*, single, + *βίος*, life.] A unicellular organism which lives a free or independent life, as contrasted with a cœnobium, one that is a unit in an aggregation of cells. *Haeckel.*

monoblepsia (mon-ọ-blep′si-ạ̈), *n.* [NL.] Same as *monoblepsis.*

monobranchiate (mon-ọ-brang′ki-āt), *a.* [*mono-* + *branchiate.*] Having but one set of branchiæ or gills. *Syd. Soc. Lex.*

monobromacetanilid (mon″ọ-brōm-a-se-tan′-i-lid), *n.* [*mono-* + *brom*(*ine*) + *acetanilid.*] A colorless, crystalline, synthetic compound, $C_6H_4.Br.NH.C_2H_3O$, obtained by the action of bromine on acetanilid and said to combine the sedative effect of bromine and the antipyretic effect of acetanilid. Also *antisepsine.*

monobrom-derivative (mon″ọ-brōm-dẹ-riv′a̤-tiv), *n.* In *organic chem.*, a class-name applied to compounds containing one atom of bromine in the place of one of hydrogen. It is synonymous with *monobrom substitution-product.*

monocarp, *n.*— **Perennial monocarp,** a plant which lives many years but dies after once flowering, as the common century-plant. *Möbius.*

monocarpal (mon-ọ-kär′pa̤l), *a.* Same as *monocarpous.*

monocarpian (mon-ọ-kär′pi-a̤n), *a.* Same as *monocarpous.*

monocelled (mon′ọ-seld), *a.* [Gr. *μόνος*, single, + E. *cell* + *-ed*^{2}.] Consisting of but a single cell; unicellular: said of organisms such as the *Protozoa* and *Protophyta.*

Monocentric eyepiece. See ⋆*eyepiece.*

monochasy (mọ-nok′a̤-si), *n.* Same as *monochasium.*

monochlor-. [*mono-* + *chlor*(*in*)-.] In *chem.*, in compound words, signifying the presence of one atom of chlorin in combination or introduced by substitution, as iodine monochlorid, and monochloracetic acid.

monochloracetic (mon″ọ-klō-ra̤-set′ik), *a.* [*mono-* + *chloracetic.*] Noting an acid, a colorless crystalline compound, $CH_2Cl.COOH$, prepared by the action of chlorin on acetic acid. It crystallizes in needles or rhombic plates, melts at 62.5–63.5° C., boils at 185–187° C., and attacks the skin: used in the synthesis of indigo.

monochlor-derivative (mon″ọ-klōr-dẹ-riv′a̤-tiv), *n.* In *organic chem.*, the class-name applied to compounds containing one atom of chlorin in the place of one of hydrogen. It is synonymous with *monochlor substitution-product.*

monochoanitic (mon″ō-kō-a̤-nit′ik), *a.* [Gr. *μόνος*, simple, + *χόανος*, funnel, + *-ite*^{2} + *-ic.*] Having simple funnels: used of the ammonoid cephalopods, and expressing a primitive condition of shell structure.

monochordist (mon′ọ-kôr-dist), *n.* [*monochord* + *-ist.*] One who plays upon or writes about the monochord.

monochordize (mon′ọ-kôr-dīz), *v. i.*; pret. and pp. *monochordized*, ppr. *monochordizing.* [*monochord* + *-ize.*] To play on, or as on, the monochord. [Rare.]

> He became gay, did leap for joy, would loll and rock himself in the cradle, then nod with his head, *monochordising* with his fingers. *Rabelais* (trans.), i. 48.

monochromasy (mon-ọ-krō′ma̤-si), *n.* [*monochroma*(*tic*) + *-sy.*] In *psychol.*, that form of color-blindness in which all visible objects are seen as shades of the same quality. As opposed to *dichromasy*, by the adherents of the Young-Helmholtz theory of color-vision, the term leaves it open as to whether the single remaining visual quality is a color or a brightness. There is now, however, no doubt that monochromasy is identical with total color-blindness, and that the vision of the monochromate is gray-vision and that only. *Stud. Yale Psychol. Lab.*, 1900, p. 15.

monochromate (mon-ọ-krō′mạt), *n.* [*mono-* + *chromate.*] 1. In *chem.*, a normal chromate, as of potassium, K_2CrO_4, in contradistinction to a dichromate or pyrochromate, as $K_2Cr_2O_7$: the former may be viewed as $K_2O.CrO_3$, and the latter as $K_2O.2CrO_3$.— 2. In *psychol.*, a totally color-blind person; one who is afflicted with monochromasy. *Baldwin*, Dict. Philos. and Psychol., II. 793.

monochromatic, *a.* 2. In *psychol.*, pertaining to or characterized by monochromasy: as, *monochromatic* vision.— 3. Having an affinity for only one dye at a time, in contradistinction to polychromatic.— **Monochromatic illuminator.** See ⋆*illuminator.*

II. *n.* Same as ⋆*monochromate*, 2.

monochromatism (mon-ọ-krō′ma̤-tizm), *n.* [*monochromat-ic* + *-ism.*] Monochromatic light or its production.

> *Monochromatism.*—Fabry and Perot . . . recommend as a source of monochromatic light the arc produced between mercury electrodes in a Torricellian vacuum. *Appleton's Ann. Cyc.*, 1899, p. 707.

monochromatist (mon-ọ-krō′ma̤-tist), *n.* Same as ⋆*monochromist.*

monochrome, *n.* II. *a.* Of one color; painted in one color, monochromic.

monochromic (mon-ọ-krō′mik), *a.* [*monochrome* + *-ic.* See *monochrome.*] Of one color; pertaining to or of the nature of monochromy; monochromical.

monochromist (mon′ọ-krō-mist), *n.* [*monochrom*(*e*) + *-ist.*] One who paints in monochrome.

monocle, *n.* 3. In *photog.*, an uncorrected spectacle-lens, usually periscopic, of about 1¼ inches diameter, and of a focus of 2 inches and upward. It is necessary to make correction in focussing since the lens has both a chemical and a visual focus. For ordinary landscape work this correction may be made by means of the formula $f=f0{\cdot}02$, which is practically one fiftieth of the focus. This is only applicable when the lens is working at its equivalent focus. *Woodbury*, Encyc. Dict. of Photog., p. 290.

monocleid (mon′ọ-klīd), *a.* [Gr. *μόνος*, single, + *κλείς* (*κλειδ-*), key.] Having, or locked by, a single key: said of certain writing-desks and cabinets in which all the compartments are fastened by locking a single lock.

Monoclinal shifting, the tendency of a stream flowing parallel to the strike of tilted strata to shift to one side in eroding its valley. The shifting is in the direction of the dip of the rocks and results in sapping the valley bluff on the down-dip side. *Chamberlin and Salisbury*, Geol., I. 120.

monococcus (mon-ọ-kok′us), *n.*; pl. *monococci* (-sī). [NL., < Gr. *μόνος*, single, + *κόκκος*, berry (coccus).] A coccus form of bacteria in which the cells are separate. *Billroth.*

monocœlic (mon-ọ-sē′lik), *a.* [Gr. *μόνος*, single, + *κοιλία*, a cavity.] Having only one cavity.

Monocondylia (mon-ọ-kon-dil′i-a̤), *n. pl.* [NL.] The more commonly used form of *Monocondyla.*

monocondylic (mon″ọ-kon-dil′ik), *a.* Same as *monocondylian.*

monocondylous (mon-ọ-kon′di-lus), *a.* [As *Monocondyl*(*a*) + *-ous.*] Having a single occipital condyle, as is the case with birds and reptiles, which are collectively termed *monocondylia*: contrasted with ⋆*amphicondylous.*

monocormic (mon-ọ-kôr′mik), *a.* [Gr. *μόνος*, single, + *κορμός*, a tree-trunk.] In *bot.*, having but one trunk, or main axis of growth.

monocot (mon′ọ-kot), *n.* An abbreviated form, among botanists, of *monocotyledon.*

monocotyl (mon-ọ-kot′l), *n.* [Gr. *μόνος*, single, + *κοτύλη*, a cup, a socket.] Same as *monocotyledon.*

Monocotyle (mon-ō-kot′i-lē), *n.* [NL. (Taschenberg, 1878), < Gr. *μόνος*, single, + *κοτύλη*, a cup, a socket.] The typical genus of the family *Monocotylidæ.*

monocotylean (mon-ọ-kot-i-lē′a̤n), *a.* and *n.* I. *a.* Same as *monocotyledonous.* [Rare.]

II. *n.* Same as *monocotyledon.* [Rare.]

Monocotylidæ (mon″ọ-ko-til′i-dē), *n. pl.* [NL., < *Monocotyle* + *-idæ.*] A family of trematodes, of the order *Heterocotylea*, having the posterior sucker usually small, no anterior suckers, and the common genital pore median. It includes the genera *Monocotyle, Calicotyle,* and *Pseudocotyle*, parasites of sharks and rays.

monocotyloid (mon-ọ-kot′i-loid), *a.* and *n.* [*monocotyl* + *-oid.*] I. *a.* Resembling a monocotyledon.

II. *n.* A plant which resembles a monocotyledon.

monocotylous (mon-ọ-kot′i-lus), *a.* [NL. *monocotylus*, < Gr. *μόνος*, single, + *κοτύλη*, cup.] 1. Having but one vent or mouth.— 2. Same as *monocotyledonous.* *N. E. D.*

monocranus (mo-nok′ra̤-nus), *a.*; pl. *monocrani* (-nī). [NL., < Gr. *μόνος*, single, + *κρανίον*, the skull.] A monster having a single skull but more or less duplication of the parts of the face.

monocratic (mon-ọ-krat′ik), *a.* Pertaining to, or of the nature of, monocracy; monarchic.

monocrepid (mon-ọ-krep′id), *n.* [Gr. *μόνος*, single, + *κρηπίς*, foundation.] In the structure of silicious sponge-spicules, such irregular forms or desmata as have only a single fundamental layer.

monocrotic (mon-ọ-krot′ik), *a.* [Gr. *μόνος*, single, + *κρότος*, a stroke, beat.] Striking once: said of a pulse the sphygmographic tracing of which shows but one notch, the down stroke showing an unbroken line.

monocrotism (mọ-nok′rọ-tizm), *n.* [*monocrot*(*ic*) + *-ism.*] A condition in which there is but one pulse-beat for each contraction of the heart: the opposite of *dicrotism.*

monocrotous (mọ-nok′rọ-tus), *a.* Same as ⋆*monocrotic.*

Monocular rivalry. See ⋆*rivalry.*

monoculist (mo-nok′ụ-list), *n.* [LL. *monocul*(*us*), one-eyed, + *-ist.*] A one-eyed person. *N. E. D.*

monocycle, *n.* 2. In *biol.*, the type of individual or racial development which consists of but a single cycle: opposed to ⋆*polycycle.* *Hyatt*, 1893.

monocyclic, *a.* 3. In *bot.*, living only one season; annual: opposed to *dicyclic.* See ⋆*dicyclic*, 3 (*b*). *F. E. Clements.*— 4. In *elect.*, pertaining to a single-phase alternating-current system of electric distribution, which utilizes an auxiliary electromotive force (the teaser electromotive force) out of phase with the main electromotive force, and wattless, that is, supplying no power or practically no power, but only wattless currents. See ⋆*wattless.*— 5. Of or pertaining to a monocycle. See ⋆*monocycle*, 2.— **Monocyclic generator,** a polyphase generator, the armature of which has two windings, a main coil and a lesser coil in quadrature with the former.— **Monocyclic system,** in *phys.*: (*a*) A mechanical system within which only stationary movements in closed curves occur and between the portions of which only conservative forces are active. (*b*) See ⋆*monocyclic*, 4.

monocyclon (mon-ọ-sī′klon), *n.*; pl. *monocycla* (-kla̤). [NL.] In *biol.*, same as ⋆*monocycle.*

monodactylate (mon-ọ-dak′ti-lāt), *a.* [*monodactyl* + *-ate*^{1}.] Having, like a horse, a single digit.

> It is, however, certain that there is a *monodactylate* representative of the family [*Proterotheriidæ*]. *Encyc. Brit.*, XXX. 509.

monodactyly (mon-ọ-dak′ti-li), *n.* [*monodactyl* + *-y*^{3}.] The state of having but one digit in the foot. The horse is a typical example of monodactyly, but the condition is also found in some of the *Litopterna* and, abnormally, in other animals.

monodermic (mon-ọ-dėr′mik), *n.* [Gr. *μόνος*, single, + *δέρμα*, skin.] Consisting of or pertaining to a single layer of cells; epithelial.

monodiametral (mon″ọ-dī-am′e-tra̤l), *a.* [Gr. *μόνος*, single, + *διάμετρος*, diameter.] Having a single diameter: said of quartan curves.

monodic^2 (mọ-nod′ik), *a.* [Gr. *μόνος*, single, + *ὁδός*, way.] In *biol.*, along a single path: used by Giglio Tos in the phrase *monodic development* to express his peculiar conception of biological ontogeny. See ⋆*polyodic*^{2}.

monodiplopia (mon-ọ-di-plō′pi-a̤), *n.* [NL., < Gr. *μόνος*, single, + *διπλόος*, double, + *ὤψ* (*ὠπ-*), eye.] Double vision when an object is looked at with one eye.

monodist, *n.* 2. One who writes or sings a monody. *N. E. D.*

monodomous (mọ-nod′ọ-mus), *a.* [Gr. *μόνος*, single, + *δόμος*, house.] A term applied to a formicary consisting of but a single nest: opposed to ⋆*polydomous.* *Forel.*

monodontal (mon-ọ-don′ta̤l), *a.* [*monodont* + *-al*^{1}.] 1. Having a single tooth; monodont; also, of the nature of a single tooth.

> They [the narwhals] were near me; so near that I could see their checkered backs. . . . The horn, that *monodontal* process which gives them their name of sea-unicorn, was perfectly examinable. *Kane*, in U. S. Grinnell Exped. (First Exped., 1856), [p. 340.

2. In *elect.*, having one armature-tooth per pole for each phase: said of the windings of certain generators and motors.

> Low-voltage machines are usually provided with polyodontal windings, these windings having several separate armature teeth per pole per phase, while the high-voltage machines are generally *monodontal.* *Encyc. Brit.*, XXXI. 889.

monodramatist (mon-ọ-dram′a̤-tist), *n.* [*monodramat*(*ic*) + *-ist.*] A writer of monodramas.

monodrome (mon′ọ-drōm), *a.* [Gr. *μόνος*, single, + *δρόμος*, a running, course, race.] Same as *monodromic.*

> On *monodrome* functions and transcendental numbers. *Nature*, Feb. 11, 1904, p. 359.

monodromy (mọ-nod′rō-mi), *n.* [*monodrome* + *-y*^{3}.] In *math.*: (*a*) The characteristic property that, if the argument returns by any path to its original value, the function also returns to its original value. (*b*) The property that the curves described by a revolution or rotation through four right angles are closed.

> It is pointed out that in the non-Pythagorean geometries devised by Hilbert, Helmholtz's axiom of *monodromy* is not verified, inasmuch as it is possible, by rotation through four right angles, to bring the points of a line into positions which they do not occupy before the rotation. It is pointed out further that, in the same geometries, it is possible to pass from one point to another of a straight line without passing through all intermediate points and without leaving the line. The application of the name "geometry" to systems which admit such possibilities is criticised. *Nature*, Feb. 19, 1903, p. 382.

Monodromy group. See ★*group*^{1}.— **Monodromy of space,** the characteristic property that it coincides with itself (with its trace) after revolution through a perigon about any axis.

monody, *n.* 3. A poem in which grief for the death of the subject of the poem is expressed.

> In this *Monody*, the author bewails a learned friend, unfortunately drowned . . . and by occasion foretells the ruin of our corrupted clergy, then in their height.
> *Milton*, Lycidas, argt.

monodynamism (mon-ọ̄-dī′nạ-mizm), *n.* [Gr. *μόνος*, single, + *δύναμις*, power.] The theory that all natural phenomena are the manifestations of a single principle, power, or force.

> The monotheistic tendency is visible in Greece, as elsewhere. . . . Side by side with this tentative and growing monotheism there is a bold and unhesitating *monodynamism*, the efforts of all the early thinkers being to reduce all the powers of nature to one principle.
> *G. H. Lewes*, History of Philosophy, I. 3.

monodynamous (mon-ọ̄-dī′nạ-mus), *a.* [Gr. *μόνος*, single, + *δύναμις*, power, + *-ous*.] In *bot.*, having one stamen larger than the others.

monoeidic (mon-ọ̄-ī′dik), *a.* [Gr. *μονοειδής*, of one form.] Of one form or nature. *N. E. D.*

> What then shall we imagine to be the aspect of the supreme beauty itself, simple, pure, uncontaminated with the intermixture of human flesh and colours, and all other idle and unreal shapes attendant on mortality; the divine, the original, the supreme, *the monoeidic* beautiful itself?
> *Shelley*, Essays, Letters from Abroad, Trans. and Frag., [I. 124.

mono-electronic (mon″ọ̄-ē-lek-tron′ik), *a.* [Gr. *μόνος*, single, + E. *electron* + *-ic*.] Containing a single electron: said of atoms which when dissociated break up into one negatively charged particle, and one much larger positively charged portion.

monœstrous (mon-es′trus), *a.* [Gr. *μόνος*, single, + *οἰστρος*, vehement impulse, + *-ous*.] Having but one œstrum. See the extract.

> F. H. A. Marshall finds that in Scottish black-faced sheep the length of the sexual season varies with the locality, both in regard to the number of diœstrous cycles in a season and to the duration of each cycle. There is a perfect gradation between the *monœstrous* condition of some wild sheep and the extreme polyœstrum of certain merinos. *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 484.

Monogameliæ (mon″ọ̄-ga-mē′li-ē), *n. pl.* [NL., < Gr. *μόνος*, single, + *γαμήλιος*, of marriage, < *γάμος*, marriage.] In Lankester's classification, a family of *Discomedusæ* in which the four subgenital pits are united into one continuous cavity: contrasted with *Tetragameliæ*.

monogamelian (mon″ọ̄-ga-mē′li-ạn), *a.* [*Monogameliæ* + *-an*.] Relating or pertaining to the *Monogameliæ*; having the four subgenital pits united into one continuous cavity.

monoganglial (mon-ọ̄-gang′gli-ạl), *a.* [Gr. *μόνος*, single, + *γάγγλιον*, a tumor. See *ganglion*.] In *pathol.*, affecting only one gland: said of a bubo.

monogastric, *a.* 2. Said of a muscle having but one part or belly.

> Digastric [muscle]. This, in spite of its name, is really a *monogastric* muscle in the Carnivora.
> *Proc. Zool. Soc. London.*

monogatari (mō-nọ̄-ga-tä′rē), *n.* [Jap., history, story, narration.] In Japanese literature, a story; a narrative.

> If we judge Old Japan by its artistic and literary production, it is precisely in those works which are least Chinese that the greater value is to be found—the ancient poetry, the mediæval *monogatari*, some of the later romances, and the works of the ukiyo school of art. The histories are dreary compilations, of no merit and little authority; the philosophies are platitudinarian logomachies founded on partially understood Chinese arguments; and such science as Old Japan possessed is a mere echo of that of China.
> *Athenæum*, May 6, 1905, p. 552.

monogen (mon′ọ̄-jen), *n.* [See *monogenesis*.] In *chem.*, an element which combines in one proportion only. *N. E. D.*

monogene (mon′ọ̄-jēn), *a.* [Gr. *μονογενής*, produced once: see *monogenous*.] Noting those volcanic outbreaks which consist of a single mass of lava, usually quite infusible and viscous, and which have been formed by one eruptive effort: a term suggested by Strübel. *Geikie*, Text-book of Geol., p. 322.

monogeneity (mon-ọ̄-je-nē′i-ti), *n.* The character of being monogenous.

monogenesis, *n.* (*d*) Origination or derivation from a single species, or, in a restricted sense, from a single pair. Contrasted with ★*polygenesis* (which see).

monogenetic, *a.* 4. Having the whole life-history a single cycle, there being no alternation of generations, or, in parasitic forms, of hosts.—**Monogenetic color.** See ★*color*.

monogenic (mon-ọ̄-jen′ik), *a.* [See *monogenous*.] 1. Same as *monogenous*.—2. In *chem.*, combining with an element in only one form; forming only one compound with a monovalent element. *N. E. D.*—3. Same as *monogenetic*.—4. In *petrog.*, noting a fragmental rock, conglomerate or breccia, whose fragments or parts are all of one kind of rock.—5. Having a univocal derivative: the better and now accepted form for *monogeneous*, 2, and *monogenous*, 3.—**Monogenic function,** $y \equiv fx$, one having the property that $\frac{\Delta y}{\Delta x}$ tends, in general, to a unique finite limit.

Monogenica (mon-ọ̄-jen′ĭ-kạ̈), *n.* See ★*Asporea*.

monogeny, *n.* 3. The 'natal probability,' or statistical expectation of offspring, based on the age of one parent only.

monoglyphic (mon-ọ̄-glif′ik), *a.* [Gr. *μόνος*, single, + *γλυφή*, carving.] Having only one siphonoglyph, the sulcus, as certain polyps: contrasted with ★*diglyphic*.

> A discussion of the variations in Metridium dianthus. In reference to the last topic, it may be noted that the author seeks to show:—(a) that regular hexamerous diglyphic polyps arise non-sexually as well as sexually; (b) that *monoglyphic* forms arise sexually as well as non-sexually. *Jour. Roy. Micros. Soc.*, Feb., 1903, p. 45.

monogonium (mon-ọ̄-gō′ni-um), *n.*; pl. *monogonia* (-ạ̈). [Gr. *μόνος*, single, + *γόνος*, generation.] The non-sexual sporulating stage of the malarial parasite as it occurs in man. *Grassi.*

> In the Atti della Fondazione Scientifica Cagnola (vol. xviii.), Prof. Grassi gives an excellent survey of our present knowledge of malaria. He describes fully its epidemiology and prophylaxis, and the morphology and development of the malaria parasite. In the latter connection he introduces some new terms. The asexual parasites producing the febrile attacks are named "*monogonia*," the developmental forms in the mosquito "amphigonia," while the recurrent attacks of fever which occur at long intervals after infection are regarded as being due to parthenogenetic parasites, which develop from the non-flagellating (female) sexual cells, or gametocytes. *Nature*, Sept. 24, 1903, p. 517.

monogram-machine, *n.* 2. A sewing-machine having a universal feed-motion and presenting the fabric to the needle in any direction, the feed being controlled by a pantograph. In practice, ten or more machines are placed in a line upon a bench, the power being under the control of the operator, who sits at the bench at the right of the battery of machines. Each machine is supplied with the same quality of thread and the fabric clamped in the feed may be the same in each machine, in which case the finished work will be alike in all the machines. A pantograph is placed on the bench before the operator and by means of suitable rods and joints is connected with the feed of each machine. The design to be stitched upon the fabric is placed on the bench under the pointer of the pantograph and the operator, by making the pointer trace the design, causes, through the pantograph, the feed in each machine to present the fabric to its needle in the same order and all the machines to make an exact reproduction of the design in stitching.

Monograptus (mon-ọ̄-grap′tus), *n.* [Gr. *μόνος*, single, + *γραπτός*, written (see *graptolite*).] A genus of monoprionidian graptolites with straight or curved hydrosoma and the thecæ in contact: abundant in the Silurian.

monohydrate (mon-ọ̄-hī′drāt), *n.* [Gr. *μόνος*, single, + *ὕδωρ* (*ὑδρ-*), water, + *-ate*^{1}.] In *chem.*, a substance containing one molecule of water in a combined state: as, the *monohydrate* of sodium carbonate, $Na_2CO_3.H_2O$, now an article of commerce under the trade-name 'concentrated sal-soda.' Sometimes, though improperly, 'monohydrate' is applied to a substance which may be viewed as derived from and as containing the constituent elements of one molecule of water, though no longer united as in water; thus, sulphuric acid, H_2SO_4, is sometimes called a 'monohydrate,' since it may be produced by the interaction of one molecule each of sulphur trioxid and water, $H_2O + SO_3 = H_2SO_4$.

monoic (mo-nō′ik), *a.* Same as *monœcious*.

monoicous (mọ̄-noi′kus), *a.* Same as *monœcious*.

monoidal (mọ̄-noi′dạl), *a.* [*monoid* + *-al*^{1}.] In *math.*, connected with a monoid, a hypersurface of nth order with an $(n-1)$ fold point.

mono-ideistic (mon″ọ̄-ī-dẹ̄-is′tik), *a.* In *psychol.*, pertaining to or characterized by mono-ideism.

> The history of philosophy shows that the *monoideistic* thinkers . . . either stiffened in the mold by precociously formulating and defining their ideas . . . or else were the victims of an environment or an age itself overwrought, one-sided and extreme.
> *G. S. Hall*, Adolescence, II. 50.

mono-infection (mon″ọ̄-in-fek′shọn), *n.* Infection with but one variety of pathogenic organism. *Buck*, Med. Handbook, VIII. 500.

monolater (mọ̄-nol′ạ-tėr), *n.* [See *monolatry*.] One who worships only one god. See *monolatry*.

monolatrous (mọ̄-nol′ạ-trus), *a.* [*monolatr*(*y*) + *-ous*.] Pertaining to or of the nature of monolatry; practising monolatry.

Monolene (mọ̄-nol′ẹ̄-nē), *n.* [NL., < Gr. *μόνος*, single, + *ὠλένη*, arm (see *ulna*).] A genus of flounders found on the Atlantic coast of the United States south to the West Indies.

monolepsis (mon-ọ̄-lep′sis), *n.* [NL., < Gr. *μόνος*, one, only, + *λῆψις*, a taking.] The transmission to a cross-bred organism and to its descendants of the characteristics of only one parent, to the exclusion of those of the other: contrasted with ★*amphilepsis*. *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, I. 155.

monoleptic (mon-ọ̄-lep′tik), *a.* [*monolepsis*.] Pertaining to, by means of, or exhibiting monolepsis. *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, I. 155.

monoline (mon′ọ̄-līn), *n.* [Gr. *μόνος*, single, + E. *line*^{2}.] A trade-name of a form of type-setting machine which produces a solid line of type, or type-bar.

> The Scudder *monoline*, a Canadian machine somewhat like the linotype, except that the matrices are located upon a disk. *Census Bulletin* 216, June 28, 1902, p. 51.

monolithic, *a.* 4. Made of one mass of artificial stone, as a concrete of broken stone, cement, and sand, without joints: used in structures such as mills and houses, dams, retaining-walls, and bridge abutments and piers, floors, columns, and other similar constructions.

> The writer believes that a masonry or *monolithic* dam would be highly objectionable, either at Panama or Nicaragua, on account of the great damage that might be done to it in a few moments by an earthquake, and which might require several years to repair, and in the meantime the canal would be closed.
> *Sci. Amer. Sup.*, Jan. 31, 1903, p. 22648.

monolog, *n.* A simplified spelling of *monologue*.

monologic (mon-ọ̄-loj′ik), *a.* [*monolog*(*ue*) + *-ic*.] Pertaining to, or of the nature of, a monologue.

monological (mon-ọ̄-loj′i-kạl), *a.* [*monolog*(*ue*) + *-ic* + *-al*^{1}.] Pertaining to or of the nature of monologue; fond of monologue.

> There have been three famous talkers in Great Britain, either of whom would illustrate what I say about dogmatists. . . . and Thomas, last of the Dynasty. . . . The talking dynasty has always been hard upon us Americans. . . . As for King Thomas, the last of the *monological* succession, he made such a piece of work with his prophecies and his sarcasms about our little trouble with some of the Southern States, that we came rather to pity him for his whims and crotchets than to get angry with him for calling us bores and other unamiable names.
> *O. W. Holmes*, Poet at the Breakfast-table, x.

monologize, *v. i.* Same as *monologuize*.

monologuist (mon′ọ̄-log-ist), *n.* Same as *monologist*.

monoloph (mon′ọ̄-lof), *n.* [Gr. *μόνος*, single, + *λόφος*, tuft.] In the hexactinellid sponges, having one tuft or rope of elongate spicules for the attachment of the sponge; also, in sponge-spicules derived from the caltrop, having one of the arms tufted.

monolophous (mọ̄-nol′ọ̄-fus), *a.* [Gr. *μονος*, single, + *λόφος*, crest, + *-ous*.] In tetractinal sponge-spicules, having one ray forked or branched like a crest. Compare ★*dilophous*, ★*trilophous* and ★*tetralophous*.

monomeniscous (mon″ọ̄-mẹ̄-nis′kus), *a.* [Gr. *μόνος*, single, + *μηνίσκος*, a crescent (a lens).] Having but a single lens in the eye.

> The central eyes [of Limulus] are "simple eyes," that is to say, they have a single lens and are hence called *monomeniscous*. *Encyc. Brit.*, XXV. 526.

monomeric (mon-ọ̄-mer′ik), *a.* [Gr. *μόνος*, single, + *μέρος*, part, + *-ic*.] 1. In *zoöl.*, relating to or derived from a single metamere; consisting of only one piece or segment. *Baldwin*, Dict. of Philos. and Psychol., II. p. 151.—2. In *petrog.*, a term applied by Stache and John (1879) to segregations in igneous rocks that are composed of a single kind of mineral.

monomethylic (mon″ọ̄-me-thil′ik), *a.* [*mono-* + *methyl* + *-ic*.] Containing one univalent methyl group, CH_3, in the molecule: applied to organic compounds.

monomodal (mon-ọ̄-mō′dạl), *a.* [Gr. *μόνος*, single, + L. *modus*, mode, + *-al*^{1}.] Having only one mode. See ★*mode*, *n.*, 11 (*b*).

> The author shows that a *monomodal* curve is not sufficient evidence that a population is homogeneous, but that a process of biological analysis must precede the general mathematical analysis, to attain satisfactory results. *Bot. Gazette*, April, 1904, p. 314.

monomolecular (mon″ọ-mọ-lek′ụ̄-lạ̈r), *a.* [Gr. *μόνος*, single, + NL. *molecula*, molecule, + *-ar*^{3}.] Consisting of or involving a single molecule: in *chem.*, of a substance, having its simplest molecular composition in contradistinction from polymeric derivatives formed by the union of two, three, or more of the simplest molecules. Thus, formic aldehyde (CH_2O) may be spoken of as monomolecular, and metaformaldehyde ($C_3H_6O_3$) as its trimolecular derivative, $3CH_2O$.

In the synthesis of phenyltolylmethane from toluene and benzyl chloride in the presence of aluminium chloride, the reaction is *monomolecular*, and is probably one between toluene and a compound of aluminium and benzyl chlorides, and the same applies to the reaction in the presence of ferric chloride.
Jour. Phys. Chem., Oct., 1904, p. 521.

monomorphism (mon-ọ-môr′fizm), *n.* [*mono-morph*(*ic*) + *-ism.*] The state or condition of the members of a race or species in which they form a single group with respect to the distribution among them of a given characteristic.

Among the soles this uniformity or *monomorphism* no longer obtains. *Amer. Nat.*, July, 1903, p. 501.

mononeural (mon-ọ-nū′ral), *a.* [Gr. *μόνος*, single, + *νεῦρον*, nerve, + *-al*^{1}.] 1. Relating to one nerve, one source of nervous supply, or one neuromere.—2. Mononeurous.

mononeuritis (mon″ọ-nụ̄-rī′tis), *n.* [NL., < Gr. *μόνος*, single, + *νεῦρον*, nerve, + *-itis.*] Inflammation of a single nerve.

mononeurous (mon-ọ-nū′rus), *a.* [Gr. *μόνος*, single, + *νεῦρον*, nerve. See *Mononeura.*] 1. Having only a ganglionic nervous system; belonging to the *Mononeura.*—2. Mononeural.

monont (mon′ont), *n.* [Gr. *μόνος*, single, + *ὤν* (*ὀντ-*), being.] A non-sexual cell which gives rise to others by the process of fission.

mononuclear, *a.* **II.** *n.* A cell with a single nucleus; a uninuclear, as distinguished from a multinuclear, cell.

It is important, then, to note the percentage of large *mononuclears* met with in the series of typhoid fever cases, so that they may be compared with that of the malarial series to be dealt with presently.
Lancet, May 30, 1903, p. 1503.

mononucleated (mon-ọ-nū′klẹ-ā-ted), *a.* [*mono-* + *nucleus* + *-ate*^{1} + *-ed*^{2}.] Having but a single nucleus; uninucleated: said of certain cells.

With predominance of the large *mononucleated* cells filled with melanotic pigment.
Med. Record, Feb. 28, 1903, p. 336.

mononychous (mọ-non′i-kus), *a.* [Gr. *μονώνυχος*, also *μονῶνυξ*, having a single claw or hoof, solidungulate (applied to the horse), < *μόνος*, single, + *ὄνυξ*, claw, nail, hoof.] Having an undivided claw.

mononymy (mọ-non′i-mi), *n.* [*mononym*(*ic*) + *-y*^{3}.] A mononymic system of nomenclature.

monopectinate (mon-ọ-pek′ti-nāt), *a.* [Gr. *μόνος*, single, + L. *pecten* (*pectin-*), comb, + *-ate*^{1}.] In gastropods, having one row of plates in the ctenidium or gill, as in the *Streptoneura.* Compare *bipectinate.*

monoped (mon′ọ-ped), *a.* and *n.* [*mono-* + L. *pes* (*ped-*), foot.] **I.** *a.* Having but one foot (or leg), a condition sometimes found in human monstrosities.

II. *n.* A person, animal, or thing that has only one foot (or leg); specifically, a monster with only one foot (or leg).

monophagous (mọ-nof′ạ-gus), *a.* [Gr. *μονοφάγος*, < *μόνος*, single, alone, + *-φαγος*, < *φαγεῖν*, eat.] 1. Feeding on a single substance, or a single kind of food: opposed to *heterophagous.* —2. Specifically, of sporozoans, passing the entire life-cycle in one host; permanently intracellular: contrasted with ⋆*polyphagous.*

monophagy (mọ-nof′ạ-ji), *n.* [*monophag*(*ous*) + *-y*^{3}.] 1. The character or habit of being monophagous; the eating of only one kind of food.—2. The act or habit of eating alone. [Rare.]

monophase (mon′ọ-fāz), *a.* [Gr. *μόνος*, single, + *φάσις*, phase.] Having or exhibiting only a single phase; single-phase; monophasic. See ⋆*single-phase.*—**Monophase generator,** an alternating-current generator which produces a single-phase current.

monophasia (mon-ọ-fā′ziạ̈), *n.* [NL., < Gr. *μόνος*, single, + *φάσις*, speaking.] A form of aphasia in which the patient can articulate but one word or, at most, one sentence.

monophasic (mon′ọ-fā-zik), *a.* [*monophas*(*e*) + *-ic.*] Monophase; single-phase.

monophone (mon′ọ-fōn), *n.* [Gr. *μόνος*, single, + *φωνή*, voice.] Same as *homophone.* [Rare.]

monophonous, *a.* 2. Same as *homophonous.*

monophotal (mon′ọ-fō-tạl), *a.* Of or pertaining to the monophote.

monophrastic (mon-ọ-fras′tik), *a.* [Gr. *μόνος*, single, + *-φραστος*, < *φράζειν*, speak (*φράσις*, a speaking), + *-ic.*] 1. Consisting of a single word or phrase.—2. Speaking or responding in a single word or phrase, or with great brevity.

Boys especially are often dumb-bound, *monophrastic*, inarticulate, and semi-aphasic save in their own vigorous or inelegant way. *G. S. Hall*, Adolescence, II. 454.

monophthalmic (mon-of-thal′mik), *a.* [See *monophthalmus.*] Having only one eye.

Monophyes (mo-nof′i-ēz), *n.* [NL., < Gr. *μονοφυής*, of single nature, < *μόνος*, single, + *φύεσθαι*, grow.] The typical genus of the family *Monophyidæ.* *Claus*, 1874.

Monophyidæ (mon-ọ-fī′i-dē), *n. pl.* [NL., < *Monophyes* + *-idæ.*] A family of calyconectous siphonophorans, having a single nectophore at the apex of the long tubular stem, the cormidia eudoxiform, separated by equal free internodes, and each siphon with a bract. It includes, among other genera, *Monophyes*, *Cymba*, and *Sphæronectes.*

monophylesis (mon″ọ-fī-lē′sis), *n.* [Gr. *μόνος*, single, + *φυλή*, tribe.] Evolution in a single line of descent. See ⋆*polyphylesis.*

monophyllic (mon-ọ-fil′ik), *a.* [Gr. *μόνος*, single, + *φύλλον*, leaf, + *-ic.*] Consisting of a single leaf or leaf-like division: used of the sutural divisions in the shells of the ammonoid cephalopods.

monoplane (mon′ọ-plān), *n.* [Gr. *μόνος*, single, + E. *plane.*] A flying-machine or a gliding-machine which depends for sustention upon a single aëroplane (surface) or upon a single pair of aëroplanes laterally disposed. In a flying-machine of this type, M. Louis Bleriot crossed the English Channel, July 25, 1909. See ⋆*aëroplane*^{1}, *n.*, 2.

Another aëroplane . . . is the "*monoplane*" of M. Robert Esnault Pelterie. This, unlike most recent types, has only a single transverse supporting surface, which in one machine measured 9·6 metres from tip to tip with a superficial area of 18 square metres; in a more recent machine these dimensions have been reduced to 8·6 metres and 16 square metres respectively. *Nature*, Dec. 5, 1907, p. 106.

monoplastid (mon-ọ-plas′tid), *n.* [*monoplast* + *-id*^{2}.] A one-celled animal organism.

monoplegic (mon-ọ-plē′jik), *a.* [*monopleg*(*ia*) + *-ic.*] Relating to or suffering from monoplegia.

Monopleura (mon-ọ-plö′rạ̈), *n.* [NL., < Gr. *μόνος*, single, + *πλευρόν*, rib.] A genus of very inequivalve teleodesmaceous pelecypods, typical of the family *Monopleuridæ*, with a long, twisted, conical, attached right valve, a shallow left valve, and strongly developed dentition. It is found in the cretaceous rocks.

monopodium, *n.* 2. A form of table having only a central support, used by the ancient Romans.

monoprostyle (mon-ọ-prō′stīl), *a.* [*mono-* + *prostyle.*] In *arch.*, prostyle, with a single row of columns. See *prostyle*, with cut.

monops (mon′ops), *n.* [Gr. *μονώψ*, one-eyed, < *μόνος*, single, + *ὤψ*, eye.] A being with but one eye.

monopsia (mon-op′si-ạ̈), *n.* [NL., < Gr. *μόνος*, single, + *ὄψις*, vision, sight.] Same as *cyclopia.*

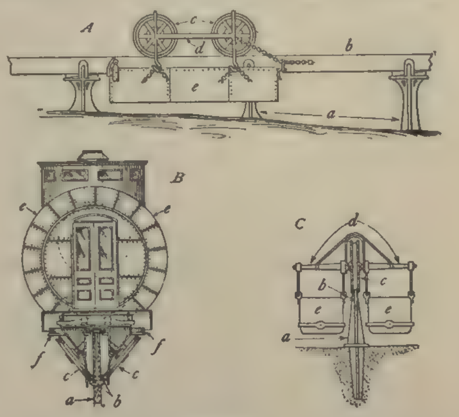
monopsychism (mon-ọ-sī′kizm), *n.* [Gr. *μόνος*, single, + E. *psychism.*] The theory that all souls (or the souls of all mankind) are one; the unity of souls asserted by this theory. *N. E. D.*

monopsychosis (mọ-nop-si-kō′sis), *n.* [NL., < Gr. *μόνος*, single, + *ψύχωσις*, animation (taken as 'mental action').] Same as *monomania.*

monopterous (mọ-nop′tẹ-rus), *a.* [Gr. *μόνος*, single, + *πτερόν*, wing.] Having but one wing, as some seeds.

monopylarian (mon″ọ-pi-lā′ri-ạn), *a.* Same as *monopylean.*

monorail (mon′ọ-rāl), *n.* [*mono-* + *rail*^{1}.] A railway in which the cars run on a single rail.



Monorail.

A, side elevation, suspended type; *B*, front view, supported type; *C*, front view, suspended type.
a, carrying-posts; *b*, single or monorail; *c*, supporting and guiding-wheels; *d*, frame from which cars are suspended; *e*, car bodies; *f*, driving-wheels.

This rail may be fixed to an overhead structure and the cars suspended from it, or it may be laid on ties or chairs and the cars run over it. In the latter case there are usually three rails, one to support the car, and two steadying or side-rails, but all placed on a single stand or chair in the center of the road-bed.

In the Langen *monorail* the car is hung from a single overhead rail; a line on this system is worked between Barmen and Elberfeld, a distance of about 9 miles, the cars for a part of the way being suspended over the river Wupper. *Encyc. Brit.*, XXXII. 143.

monorailroad (mon-ọ-rāl′rōd), *n.* Same as *monorailway.*

monorailway (mon-ọ-rāl′wā), *n.* [*monorail* + *way.*] Same as ⋆*monorail.*

A *monorailway* is employed at Clichy for completing the piling after the bags have been delivered upon the heaps by the inclined conveyors. These *monorailways* are 1,000 feet or more in length, and are constructed as desired on the tops of the great piles of coke.
Amer. Inventor, June 15, 1904, p. 267.

monorchidism (mo-nôr′ki-dizm), *n.* Same as *monorchism.*

monorefringent (mon″ọ-rẹ-frin′jẹnt), *a.* [*mono-* + *refringent.*] Refracting light in the manner of an isotropic, singly refracting medium: opposed to *birefringent.*

monorhinous (mon-ọ-rī′nus), *a.* [*monorhine* + *-ous.*] Having a single nasal passage, as in the lampreys; monorhinal; monorhine.

monosaccharide (mon-ọ-sak′ạ-rid), *n.* [*mono-* + *saccharide.*] A carbohydrate the molecule of which is not divisible into simpler groups without loss of its essential characteristics. According to the number of carbon atoms, monosaccharides are divided into trioses, tetroses, pentoses, hexoses, etc. One of the best-known examples is the hexose dextrose (glucose).

monose (mon′ōs), *n.* [Gr. *μόνος*, single, + *-ose.*] Same as ⋆*monosaccharide.*

monoseme (mon′ọ-sēm), *a.* [Gr. *μόνος*, single, + *σημεῖον*, a sign.] In *anc. pros.*, having a single mora or unit of time. See *monosemic.*

monoserial (mon-ọ-sē′ri-ạl), *a.* [Gr. *μόνος*, single, + L. *series*, series, + *-al*^{1}.] Being in one series: used in zoölogy and comparative anatomy, generally for a series of organs, cells, teeth, or the like, that may be in two or more series in other forms.

A transitional stage from the biserial archipterygium of the latter [Dipnoi] into the *monoserial* of recent sharks.
Encyc. Brit., XXIX. 398.

monosiphonic (mon″ọ-sī-fon′ik), *a.* [Gr. *μόνος*, single, + *σίφων*, siphon.] Monosiphonous; in hydroids, having the tubes of the hydrocaulus distinct from one another: opposed to ⋆*polysiphonic.*

monosodic (mon-ō-sō′dik), *a.* [Gr. *μόνος*, single, + NL. *sod-ium* + *-ic.*] In *chem.*, containing one atom of sodium: said of a salt: as, *monosodic* orthophosphate (NaH_2PO_4), a salt which occurs in normal human urine.

Calcium oxalate, which was ordinarily held in solution by the *monosodic* acid phosphate.
Med. Record, Feb. 14, 1903, p. 277.

monospermic (mon-ọ-spėr′mik), *a.* [Gr. *μόνος*, single, + *σπέρμα*, seed, + *-ic.*] 1. Exhibiting or pertaining to monospermy.—2. Same as *monospermous.*

monospermy (mon′ọ-spėr-mi), *n.* [Gr. *μόνος*, single, + *σπέρμα*, seed, + *-y*^{3}.] The entrance of but a single spermatozoön into the egg: the normal and, in most animals, the only type of fertilization: opposed to ★*dispermy* and *polyspermy*.

monosporangium (mon″ọ-spō-ran′ji-um), *n.*; pl. *monosporangia* (-a̤). [NL., < Gr. *μόνος*, single, + NL. *sporangium*.] A sporangium which contains monospores.

monospore (mon′ọ-spōr), *n.* [Gr. *μόνος*, single, + *σπορά*, seed (spore).] An asexual spore of the red algæ, which remains undivided and is thus distinguished from a tetraspore.

monosporiferous (mon″ō-spọ-rif′e̤-rus), *a.* [*monospore* + L. *ferre*, bear, + *-ous*.] Bearing monospores: said of algæ.

monostele (mon′ọ-stēl), *n.* [Gr. *μόνος*, single, + *στήλη*, pillar.] In *bot.*, a single undivided stele. See ★*stele*^{3}, 2, and compare ★*polystele*.

> Arrangement in strands: the central cylinder or *monostele*. *Encyc. Brit.*, XXV. 412.

monostelic (mon-ọ-stē′lik), *a.* [*monostele* + *-ic*.] In *bot.*, having a monostele. Also *monostelous*.

> Side by side with *monostelic* types which furnish a most interesting sequence. *Encyc. Brit.*, XXV. 415.

monostelous (mon-ọ-stē′lus), *a.* Same as ★*monostelic*.

monostely (mon-ọ-stē′li), *n.* [*monostele* + *-y*^{3}.] In *bot.*, the condition of being monostelic.

monostereoscope (mon-ọ-ster′ẹ-ọ-skōp), *n.* [Gr. *μόνος*, single, + E. *stereoscope*.] An apparatus for projecting two pictures upon a screen so as to appear as one, with stereoscopic or solid effect. The two pictures are projected from separate magic lanterns.

monostich, *n.* **II.** *a.* Consisting of a single line or verse.

monostichodont (mon-ọ-stik′ọ-dont), *a.* [Gr. *μόνος*, single, + *στίχος*, row, + *ὀδούς* (*ὀδοντ-*), tooth.] In leeches, having only one row of teeth in each jaw.

> Among the fresh-water leeches (Natantia), which have an eyeless ring between the third and fourth pairs of eyes, only the *monostichodont* forms (*i.e.*, those with a single row of teeth in each jaw) are important. *Buck*, Med. Handbook, IV. 701.

Monostomatidæ (mon″ọ-stọ-mat′i-dē), *n. pl.* [NL.] Same as *Monostomidæ*.

monostome (mon′ọ-stōm), *n.* [NL. *Monostomum*.] A trematoid of the genus *Monostomum*, or *Monostomulum*.

> The other case was that of an elderly woman from whose eye eight so-called *monostomes* were removed from the lens substance. The descriptions do not enable one to determine the species or to assert the identity of the forms. *Buck*, Med. Handbook, VII. 866.

Eye monostome, *Monostomulum lentis*, a small immature trematoid said to be parasitic in the eye of man.

monostomous (mọ-nos′tọ-mus), *a.* Same as *monostomatous*.

monostratified (mon-ọ-strat′i-fīd), *p. a.* [Gr. *μόνος*, single, + E. *stratified*.] In *biol.*, arranged in a single layer or stratum, like the cells in a simple epithelium. *Buck*, Med. Handbook, IV. 79.

monostromatic (mon″ọ-strọ-mat′ik), *a.* [Gr. *μόνος*, single, + *στρῶμα*(*τ-*), layer, + *-ic*.] Having only one layer of cells: said of the frond or tissue of an alga which is but one layer of cells in thickness.

monosulphonic (mon″ọ-sul-fon′ik), *a.* [*mono-* + *sulphonic*.] In *chem.*, containing one combining unit of the compound radical HSO_3: said of an acid: as, benzene *monosulphonic* acid ($C_6H_5.HSO_3$), in which HSO_3 replaces one atom of hydrogen in benzene (C_6H_6).

Monosyllabic family of languages. See ★*family*.

monosyllabize (mon-ọ-sil′a̤-bīz), *v. t.*; pret. and pp. *monosyllabized*, ppr. *monosyllabizing*. [*monosyllab*(*le*) + *-ize*.] To render monosyllabic. *N. E. D.*

monosymptomatic (mon-ọ-simp-tọ-mat′ik), *a.* [*mono-* + *symptomatic*.] In *med.*, having a single distinct or dominant symptom.

> Neurasthenia is a disease in which headache in some cases may be almost a *monosymptomatic* sign. *F. S. Pearce*, in Therapeutic Gazette, Jan., 1903, p. 9.

monotechnic (mon-ọ-tek′nik), *a.* [Gr. *μόνος*, single, + *τέχνη*, art.] Pertaining to or concerned with a single form of skilled labor: relating to a single branch of technology; opposed to *polytechnic*.

> Thousands of our youth of late have been diverted from secondary schools to the *monotechnic* or trade classes now established for horology, glass-work, brick-laying, carpentry. *G. S. Hall*, Adolescence, I. 170.

> Many of the American schools of engineering are practically *monotechnic* institutes in contradistinction to the polytechnics here, and consequently better equipment and staffing is observed in any one department. *Jour. Inst. Elect. Engin.* (London), Feb. 25, 1903–04, [p. 458.

monothalamous, *a.* **3.** Having but one chamber, as some *Foraminifera* of the family *Lituolidæ*.

Monotidæ (mọ-not′i-dē), *n. pl.* [NL., < *Monot*(*us*) + *-idæ*.] A family of digonoporous marine turbellarians, of the order *Rhabdocellida*, having a single otolith, pharynx plicatus directed backward, and paired germaria and vitellaria. It contains the genera *Monotus* and *Automolos*.

Monotis (mo-nō′tis), *n.* [NL., < Gr. *μόνωτος*, one-eared (one-handled), < *μόνος*, single, + *οὖς* (*ὠτ-*), ear.] A genus of prionodesmaceous *Pelecypoda*, of the family *Pteriidæ*, comprising nearly equivalve, radially striate shells from the Triassic rocks.

Monotocardia (mon″ọ-tọ-kär′di-a̤), *n. pl.* [NL., < Gr. *μόνωτος*, one-eared, + *καρδία*, heart.] A group of gasteropodous mollusks in which the heart has only one auricle, the true breathing organ is single, and there is a single kidney. It includes the great majority of the marine univalves, all of the fresh-water and land operculates, as well as the *Heteropoda*. Contrasted with ★*Diotocardia*.

monotocardiac (mon″ọ-tọ-kär′di-ak), *a.* [*Monotocardia* + *-ac*.] Relating or pertaining to the *Monotocardia*; having a single auricle in the heart: as, the *monotocardiac* condition. *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 630.

monotocardian (mon″ọ-tọ-kär′di-a̤n), *a.* Same as ★*monotocardiac*.

monotomid (mọ-not′ọ-mid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Monotomidæ*.

II. *a.* Having the characters of or belonging to the family *Monotomidæ*.

monotone, *n.* **5.** A single or uniform tint or color. [Rare.]

monotoned (mon′ọ-tōnd), *p. a.* [★*monotone*, 5.] Having a single or uniform tone or tint.

> The *monotoned* wastes of the great Gold Desert. *R. Boldrewood*, Miner's Right, xxxvi.

monotonia (mon-ọ-tō′ni-a̤), *n.* [NL., < Gr. *μονοτονία*: see *monotony*.] Same as *monotony*, 1.

monotonic, *a.* **3.** Homogeneous; in marine zoölogy an aggregation of organisms is said to be monotonic if some one species, genus, or family forms more than one half of the total volume.—**Monotonic plankton.** See ★*plankton*.

monotonize (mọ-not′ọ-nīz), *v. t.*; pret. and pp. *monotonized*, ppr. *monotonizing*. To reduce to one tone or type; render monotonous.

Monotonous throughout an interval, in *math.*, said of a function which never increases or never diminishes throughout the interval.

monotony, *n.* **3.** In *math.*: (*a*) Continual increase, or continual decrease. (*b*) Unchanging character, neither increasing nor decreasing.

monotrichic (mon-ọ-trik′ik), *a.* [Gr. *μόνος*, single, + *θρίξ* (*τριχ-*), hair.] In *bacteriol.*, having a single polar flagellum, as the cells in the genus *Pseudomonas*.

monotrichous (mọ-not′ri-kus), *a.* [*monotrich*(*ic*) + *-ous*.] Same as ★*monotrichic*.

monotriglyphic (mon″ọ-trī-glif′ik), *a.* [*monotriglyph* + *-ic*.] Said of the Doric order when there is but one triglyph over the intercolumniation.

monotrocha, *n.* **3.** [*l. c.*] In chætopodous annelids, a larval stage with a single preoral circle of cilia.

monotropaceous (mon″ọ-trọ-pā′shius), *a.* Belonging to the plant family *Monotropaceæ*.

monotrophic (mon-ọ-trof′ik), *a.* [Gr. *μόνος*, single, + *τροφή*, nourishment, + *-ic*.] Capable of carrying on but one series of fermentations or decompositions.

> The nitrifying, nitrogen-fixing, sulphur- and iron-bacteria he [Fischer] regards as *monotrophic*. *Encyc. Brit.*, XXVI. 55.

monotropism (mọ-not′rọ-pizm), *n.* [*monotrop*(*y*) + *-ism*.] The state or condition of monotropy.

> This development of *monotropism* cannot take place except through the sorting and grouping of specialized molecules. *J. A. Ryder*, Biol. Lectures, 1894, p. 39.

Monotropsis (mon-ọ-trop′sis), *n.* [NL. (Schweinitz, 1817), < *Monotropa* + Gr. *ὄψις*, appearance.] A genus of dicotyledonous plants of the family *Monotropaceæ*. See *Schweinitzia*.

monotropy (mọ-not′rọ-pi), *n.* [Gr. *μόνος*, only, + *τρόπος*, turning.] Homogeneity upon or with reference to a system of parallel lines only. [Rare.]

> [The] completest homogeneity is found to occur in only one direction in parallel lines extending through the mass. This condition we may designate as *monotropy*. *J. A. Ryder*, Biol. Lectures, 1894, p. 38.

Monotus (mọ-nō′tus), *n.* [NL., < Gr. *μόνωτος*, one-eared, < *μόνος*, single, + *οὖς* (*ὠτ-*), ear.] The typical genus of the family *Monotidæ*. *M. hirudo* is parasitic. *Diesing*, 1862.

monotype, *n.* **3.** The trade-name of a machine which casts and sets in order single types.

monotypous (mon-ọ-tī′pus), *a.* Same as *monotypic*, 1.

monoüreid (mon-ọ-ū′rẹ-id), *n.* [*mono-* + *urea* + *-id*.] In *organic chem.*, the class-name applied to compounds containing the bivalent radical –CONHCONHCO–. They are to be regarded as urea (carbamide) in which two hydrogen atoms are replaced by the bivalent radical of a dibasic acid.

monovariance (mon-ọ-vā′ri-a̤ns), *n.* See ★*univariance*. *Physical Rev.*, Dec., 1904, p. 458.

monovariant (mon-ọ-vā′ri-a̤nt), *a.* [Gr. *μόνος*, single, + E. *variant*.] In *phys. chem.*, having but one degree of freedom.—**Monovariant system.** See ★*bivariant system*.

monovular (mon-ō′vụ-lär), *a.* [Gr. *μόνος*, single, + E. *ovular*.] Containing but one ovum or ovule: as, a *monovular* Graafian follicle. *L. O. Howard*, in Science, Dec. 21, 1906, p. 817.

monoxalate (mon-ok′sa̤-lāt), *n.* [*mono-* + *oxal*(*ic*) + *-ate*^{1}.] Oxalic acid in which one hydrogen atom has been replaced by a metal: as, *monoxalate* of potassium, KHC_2O_4.

monoxeny (mọ-nok′se-ni), *n.* [Gr. *μόνος*, single, + *ξενία*, hospitality, < *ξένος*, host.] The habit of frequenting a host of but one species: applied by De Bary to certain fungi. See ★*dixeny* and ★*polyxeny*.

Monozoa, *n. pl.* **2.** A grade of *Cestoidea* in which the animal consists of a single segment containing a single set of reproductive organs: contrasted with ★*Merozoa*. Same as ★*Cestodariidæ*. *Lang*.

monozoic, *a.* **2.** In *Coccidiidea*, producing only one falciform body: as, a *monozoic* spore. Contrasted with ★*dizoic* and so on to ★*polyzoic*, 3.—**3.** In cestodes, having only one set of generative organs, as in the unsegmented *Archigetes*. Contrasted with ★*polyzoic*, or segmented forms like *Tænia*.

Monroe shales. See ★*shale*^{2}.

Monroeism (mo̤n-rō′izm), *n.* Same as *Monroe doctrine* (which see, under *doctrine*).

Monroeist (mo̤n-rō′ist), *n.* [*Monroe*(*ism*) + *-ist*] One who supports the Monroe doctrine (which see, under *doctrine*).

Mons pubis. Same as *mons Veneris*, but designating occasionally the similar region in the male.—**Mons ureteris**, the projection on the wall of the bladder which surrounds the orifice of the ureter.

Monsig. An abbreviation of *Monsignor*.

Monsoon current, forest. See ★*current*^{1}, ★*forest*.

Mont. An abbreviation of *Montana*.

Montalban (mon-tal′ba̤n), *a.* and *n.* [NL. *Mont*(*es*) *alb*(*i*), 'White Mountains,' + *-an*.] **I.** *a.* In *geol.*, noting a division of the Precambrian strata: named from the White Mountains of New Hampshire.

II. *n.* The Montalban division. [Obsolete in both uses.]

Montana formation. See ★*formation*.

montbretia (mont-brē′ti-a̤), *n.* [From *Montbretia*, a former genus name of these plants, dedicated to G. Coquebert de *Montbret* (died in 1836), a French naturalist and traveler.] A small group of cormous gladiolus-like plants of the family *Iridaceæ*, now merged with the genus *Tritonia*. The species best known in gardens (where they are treated after the manner of gladiolus) are *Tritonia Pottsii* and *T. crocosmæflora*, the latter a hybrid of *T. Pottsii* and *Crocosmia aurea*. The plants are South African. They produce a blaze of red or orange flowers in summer.

monte-acide (môn-tä-sēd′), *n.* [F., < *monter*, lift, + *acide*, acid.] An arrangement in use in sulphuric-acid works for raising the acid from a lower to a higher level by means of compressed air, thus avoiding contact of acid with the metal-work or valves of pumps.

Montebello sandstone. See ★*sandstone.*

month, *n.*—**The R months.** See ★*R.*

Montia (mon′ti-ạ̈), *n.* [NL. (Linn.), named after Joseph *Monti*, a professor of botany.] A genus which comprises several species (about 20) of small herbs of the family *Portulacaceæ*, some of which are often referred to *Claytonia.* The species are American. The winter purslane (*M. perfoliata*) is sometimes grown as a pot-herb, and it also runs wild in waste places. It is a tufted herb with edible, radical leaves, and a scape bearing a cluster of small white flowers, and beneath the flowers a leaf-like cup: native to the western side of the continent.

Montian (mon′ti-ạn), *a.* and *n.* In *geol.*, noting a substage of the Cretaceous system in France and Germany which lies at the top of the series above the Maestrichtian and constitutes the upper division of the Danian stage.

monticolous (mon-tik′ọ-lus), *a.* Same as *monticoline.*

monticule, *n.* **2.** In the tabulate corals of the family *Chætetidæ*, a group of autopores which form a slightly elevated cluster on the surface of the corallum.—**3.** Same as *monticulus.*

monticulose (mon-tik′ụ̄-lōs), *a.* [See *monticulous* and *-ose.*] Covered with small eminences; monticulate. *Dana.*

monton, *n.* 2. In *mining*, a heap or pile of ore.

Montrose shales. See ★*shale*^{2}.

montroydite (mon-troid′īt), *n.* [Named from *Montroyd* Sharpe, one of the owners of the Terlingua mercury mines.] Mercuric oxid, HgO, occurring in orange-red orthorhombic crystals: found at Terlingua, Texas.

monument, *n.* **9.** A conspicuous crag of a somewhat pillar-like and symmetrical form. [Western U. S.]

monumentalism (mon-ụ̄-men′tạl-izm), *n.* [*monumental* + *-ism.*] The state or character of being monumental.

> The plain lessons of the Crimean War were unheeded and *monumentalism* became the ideal of the coast defences, although the performance of the little Telegraph Battery at Sebastopol, confirming much previous experience, should have amply sufficed to moderate the ambitions of military engineers. *Encyc. Brit.*, XXVIII. 451.

monumentalize (mon-ụ̄-men′tạl-īz), *v. t.*; pret. and pp. *monumentalized*, ppr. *monumentalizing.* [*monumental* + *-ize.*] To record or commemorate by a monument; record permanently; render monumental in character.

monzonite (mon′zọ̄-nīt), *n.* [F. *monzonite* (De Lapparent, 1864), ＜ *Monzoni*, near Predazzo in Tyrol, + *-ite*^{2}.] In *petrog.*, a phaneric igneous rock intermediate in composition between syenite and diorite, that is, composed of alkali feldspar, usually orthoclase, and lime-soda feldspar, andesin or labradorite, in equal or nearly equal proportions, with subordinate amounts of hornblende, pyroxene, or mica, rarely olivin, and minor constituents. There may be a variable amount of quartz: when it is present in considerable amount the rock is quartz-monzonite or granodiorite.

monzonitic (mon-zọ̄-nit′ik), *a.* [*monzonite* + *-ic.*] In *petrog.*, having the composition of monzonite.

monzonose (mon′zọ̄-nōs), *n.* [*monzonite* + *-ose.*] In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*^{1}), the name of sodipotassic rocks belonging to the domalkalic rang of the perfelic order of the dosalanes.

mooch (möch), *v. i.* See *mouch.*

moocher (mö′chėr), *n.* [See *moucher.*] A moucher. See the extracts.

> "Why, I remember jes lots o' things. I 's been a crook, I 's been a *moocher*, an' now I 's shatin' on me uppers. Why, what I 's seen would keep them blokes up there in Cooper Union readin' all winter, I guess." *J. Flynt*, in Cent. Mag., March, 1894, p. 706.

> In police parlance as a '*moocher*,' or a man who hung around saloons and drank and ate only when some one treated. *Kansas City Daily Times*, Feb. 15, 1904.

moodirieh, *n.* See ★*mudirieh.*

moogadee (mö′gạ̈-dē), *n.* [Western Amer. Indian.] A name applied by the Fort Hall Indians of Idaho to *Catostomus pocatello*, a sucker of the Snake River basin. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 53.

moolvi (möl′vẹ̄), *n.* Same as ★*maulvi.*

moon^1, *n.* **1.** Upon the moon's surface the force of gravity is only one sixth of gravity upon the earth, a fact of great importance in relation to the moon's surface-phenomena, and probably connected with the almost complete, if not absolute, absence of a lunar atmosphere. Some recent observers report appearances which they attribute to gases and water vapor rising at various points on the moon's surface through fumaroles and fissures, and condensing during the lunar night into white patches of snow or frost, which disappear after the sun rises. If this is correct it would indicate a possible feeble survival of the moon's former volcanic activity. The recent investigations of Very apparently prove that the temperature of the moon's surface at points where the sun is nearly overhead rises above that of boiling water, as was long ago maintained by Lord Rosse. When the sun's rays are withdrawn it probably falls nearly to the absolute zero (−273°C., −460°F.), so low that most gases would be liquefied or frozen. Photography has of late done much to improve our maps of the moon's surface. In the study of delicate details, however, the best photographs cannot rival visual observations made with powerful telescopes. **4.** (*d*) A kind of knife used in shaving skins; a moon-knife. See ★*mooning.*

7. Moonlight.

> In the *moon* athwart the place of tombs. *Tennyson*, Passing of Arthur, l. 214.

Horizontal moon, the moon as viewed when rising or setting. Its diameter at such times appears much greater than at considerable altitudes, whence the expression, once familiar, now obsolete, "the illusion of the horizontal moon."—**Hunters' moon,** in *astron.*, the full moon next after the *harvest-moon* (which see).—**Local transit of the moon.** See ★*transit.*—**Lower transit of the moon.** See ★*transit.*—**Station of the moon.** See ★*station.*—**Tidal theory of the moon's origin.** See ★*tidal evolution.*—**To shoot the moon,** to remove secretly with one's belongings in the night in order to escape payment of rent, or distraint. [Slang.]—**Wet moon,** a new moon, one horn of whose crescent is much lower than the other, like a bowl tipped up on edge and unable to hold water. The wet moon is a popular (but fallacious) sign of coming wet weather.

moon^1, *v. t.* **3.** In opposum-hunting, to locate (the hiding-place of the animal) by bringing the tree in which it is supposed to lurk into clear view between one's self and the moon. [Australia.]—**4.** To shave (skins) with a moon or moon-knife. See ★*mooning*, 1.

moonack, *n.* **2.** A mythical animal much feared by the negroes of the Southern States.

moon-blindness (mön′blīnd″nes), *n.* **1.** Same as *moon-blink.*

> Hemeralopia is called *moon-blindness* by sailors, and is attributed by them to a morbific influence emanating from that planet, especially affecting such persons as commit the imprudence of sleeping on deck. *Buck*, Med. Handbook, IV. 627.

2. An eye-disease of the horse, scientifically known as periodic ophthalmia, the cause of which is unknown. One attack is followed at regular intervals by others which finally produce total blindness in one or both eyes.

moon-dog (mön′dog), *n.* A luminous spot in the sky due to the refraction and reflection of the moon's rays by minute ice-crystals floating in the air. See *paraselene* and *sun-dog.*

mooneyed, *a.* **4.** Having feathers marked towards the ends with rounded or oval spots, as in the spangled Hamburg breeds of fowls.

> The feather markings of the penciled varieties differ greatly from those of the spangled; the latter being commonly called "*moon-eyed*" from the round or oval appearance of the spangles, while the markings of the penciled varieties are in parallel bars of reddish-bay or black, or clear silvery-white and black, as the case may be. *Yearbook U. S. Dept. Agr.*, 1896, p. 467.

moonfish, *n.* (*f*) The opah, *Lampris guttatus.* (*g*) Same as ★*mariposa*, 2.

moon-guitar (mön′gi-tär″), *n.* Same as ★*yuẹkin.*

mooning (mö′ning), *n.* [*moon*^{1}, *v.*, + *-ing*^{1}.] **1.** In *leather-manuf.*, the shaving of skins with a 'moon' or moon-knife.

> The kid skins are shaved either by "*mooning.*" . . . "*Mooning*" is performed with a round steel, shaped like a plate, and having the center cut out, and a handle placed across the opening. *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22629.

2. The act of going about as if moonstruck.

moonlet (mön′let), *n.* [*moon*^{1} + *-let.*] A little moon: applied to the small bodies of which the rings of Saturn are composed.

> The rings of Saturn appear to be continuous masses separated by circular rifts. This is the phenomenon which is observed through a telescope. By no known means can we ever approach or handle the rings; yet everybody who understands the evidence now believes that they are not what they appear to be, but consist of minute *moonlets*, closely packed, indeed, but separate the one from the other. *A. W. Rucker*, in Smithsonian Rep., 1901, p. 175.

moonsif, *n.* Same as ★*munsif.*

moor^1, *n.*—**Moor rock.** See ★*rock*^{1}.

moor^2, *v. i.*—**To moor across** (*naut.*), to drop the anchors on either side of a stream.—**To moor along** (*naut.*), to come to anchor in a river with a hawser leading to the shore for the purpose of steadying the vessel.

moored (mörd), *a.* In *mining*, obstructed with rubbish or mud; silted up. *Barrowman*, Glossary. [Scotch.]

mooring-buoy (mör′ing-boi), *n.* A can-buoy which has a large swivel on its top, to which vessels make fast their cables instead of riding at anchor.

moor-burn (mör′bėrn), *n.* The burning of the heather on a moor, which is unlawful between April 11 and Nov. 1. *N. E. D.* [Scotch.]

moor-burner (mör′bėr″nėr), *n.* One who sets fire to heather on a moor. See ★*moor-burn.* [Scotch.]

mooring-kit (mör′ing-kit), *n.* In marine hardware, a wooden keg with an air-tight cover, used to support a mooring-chain. It has galvanized iron rings at top and bottom, joined together by an iron rod. The lower ring supports the chain and the upper ring is used as a holdfast for a boat's mooring-rope or -chain. It is usually painted in some distinctive color or pattern.

mooring-mat (mör′ing-mat), *n.* *Naut.*, a flat mat made of thrums like a door-mat. It is bound around a mooring hawser to prevent chafing at a certain part or point.

mooring-staple (mör′ing-stā″pl), *n.* A large staple-shaped forging fastened on the side of a war-ship, to which chain-cable may be shackled to hold the vessel when moored alongside a wharf.

moor-myrtle (mör′mėr″tl), *n.* See ★*myrtle.*

mooruk (mör′uk), *n.* [Native name: from the sound of its cry?] A species of cassowary, *Casuarius bennetti*, peculiar to the island of New Britain.

moose, *n.* The Alaskan moose has been described as a new species, *Alces gigas*, distinguished by its larger teeth and antlers, and by other characteristics.

moose-berry (mös′ber″i), *n.* Same as ★*moose-bush.*

moose-bush (mös′bu̇sh), *n.* The hobble-bush or American wayfaring-tree, *Viburnum alnifolium.*

moose-horn (mös′hôrn), *n.* Same as *moose-call.* *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 249.

moosemise (mös′mīs), *n.* [From an eastern Algonkian form answering to the (western) Ojibwa *monzomish* (applied to the hobble-bush, *Viburnum alnifolium*); ＜ *monz*, moose, + *-mish*, bush.] The false wintergreen, *Pyrola rotundifolia.* See *Indian* ★*mozemize.* [Vermont.] *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 249.

moose-trumpet (mös′trum″pet), *n.* Same as *moose-call.* *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 249.

moot^4 (möt), *n.* In *ship-building:* (*a*) A ring used to gage the diameter of treenails. (*b*) A piece of hard wood bound with iron at both ends, used in making blocks.

mooted (mö′ted), *p. a.* [*moot*^{1}, *v.*, + *-ed*^{2}.] Unsettled; disputed; argued; subject to different opinions; moot.

mope-hawk (mōp′hâk), *n.* Same as *more-pork*, a large Australian night-jar of the genus *Podargus.* The name is probably given under the mistaken impression that it was the original and proper form.

moph (mof), *n.* [A perverted abbreviation of *hermaphrodite*, the instrument being properly named *hermaphrodite calipers.*] An instrument consisting of a pair of compasses, one leg of which is fashioned like the leg of a pair of calipers. *N. E. D.*

mopoke (mō′pōk), *n.* Same as *more-pork.*

Mor. An abbreviation of *Morocco.*

mora^2, *n.*—**Giuoco della mora,** a game played in Italy by two players matching the fingers of the right hands, the left being held behind the back. A similar game was common in ancient Greece in which the left hands were confined by holding a stick.

mora^4 (mō′rạ̈), *n.*; pl. *moræ* (-rē). [NL., ＜ Gr. *μόρα*, a part; connected with *μοῖρα*, a part: see ★*Mœræ.*] In *Gr. antiq.*, one of the six main divisions of the army of Sparta, commanded by a polemarch.

Moraceæ (mọ̄-rā′sẹ̄-ē), *n. pl.* [NL. (Lindley, 1847), ＜ *Morus* + *-aceæ.*] A family of dicotyledonous archichlamydeous (apetalous) plants of the order *Urticales*, the mulberry family, typified by the genus *Morus*, and characterized by unisexual flowers, the staminate usually in panicles or spikes, and the pistillate in heads, a superior ovary, solitary, pendulous, anatropous ovules, one or two styles, and as many seeds. There are 67 genera and about 925 species, mostly trees and shrubs of temperate and tropical regions. Besides the mulberries the family includes the breadfruits, the figs, the Osage orange, the hop, and the hemp.

moraceous (mọ̄-rā′shius), *a.* Belonging to the *Moraceæ* or mulberry family.

moradin (mō-rā′din), *n.* [NL. *morada* (see def.) + *-in*^{2}.] A colorless crystalline compound, $C_{16}H_{14}O_6$, contained in the bark of false cinchona, cascarilla, or china morada, *Pogonopus febrifugus.* It has a blue fluorescence and melts at 201–202° C.

morai (mō-rä'ẹ), *n.* [Also *marae, morae,* in many Polynesian dialects.] A sort of elevated stone platform or terrace, often of considerable size, found on elevated sites in certain of the Polynesian Islands.

> The principal object of ambition among these people ['Otaheite'] is to have a magnificent *Morai*, and this was a striking memorial of the rank and power of Oberea.
> *Hawkesworth*, Voyages into Southern Hemisphere, 1785, [II. 443.

moraine, *n.*—**Bottom moraine,** a ground moraine; subglacial drift and boulder-clay.—**Frontal moraine,** a moraine found at the front of a glacier.—**Interlobate moraine,** a compound moraine formed between adjacent glacial lobes.—**Intermediate moraine,** a special name, suggested by T. C. Chamberlin, for those portions of the terminal moraine of the continental ice-sheet which were deposited where two lobes coalesced. Also *interlobate moraine. Rep. U. S. Geol. Surv.*, 1881–82, p. 301.—**Kame moraine,** a moraine formed of roughly stratified glacial debris and having a knob and basin topography.

> In its relations to other phases of drift, therefore, as well as in the particulars already specified, the kame belt stands in the position of a moraine. For it, and for similar aggregations of kames, the designation *kame moraine* is proposed.
> *R. D. Salisbury*, Geol. Surv. of New Jersey, 1892, p. 93.

Lodge moraine, glacial debris deposited beneath the ice. *Chamberlin and Salisbury*, Geol., I. 286.—**Marginal moraine,** a moraine deposited at the margin of a glacier; a terminal moraine.—**Moraine of advance,** a moraine which is formed during the advance of a glacier. *J. Geikie*, The Great Ice Age, p. 262.—**Moraine of recession.** Same as ★*moraine of retreat.*—**Moraine of retreat,** a moraine which is formed during the retreat of a glacier. *J. Geikie*, The Great Ice Age, pp. 209, 213.—**Moraine profonde.** (*a*) The stony, mixed drift, which constituted the ground moraine of the continental ice-sheet. (*b*) A mixed stony drift gathered from the disintegration of underlying rocks and strewn over lower slopes as by landslides.—**Push moraine,** a moraine formed of the debris pushed forward by the front of a glacier. *Chamberlin and Salisbury*, Geol., I. 286.—**Retreatal moraine.** Same as ★*moraine of retreat.*—**Shoved moraine.** Same as *push* ★*moraine.*—**Submarginal moraine,** the deposit of debris formed under the margin of a glacier. *J. Geikie*, The Great Ice Age, p. 741.—**Superficial moraine,** the debris on the surface of a glacier.—**Terminal moraine.** See *moraine.* The term is used only in North America as applied to the ice-sheet of the Wisconsin epoch.

Morainic apron. Same as ★*apron,* 6.—**Morainic loops,** the forward curves of moraines formed around the lobes of a continental glacier.

moralism, *n.* **3.** A tendency to moralize; a habit of moralizing.

> Is it the laureate? He lies buried under his own historical quartos! There is neither his mannerism nor his *moralism*, nor his methodism.
> *Southey*, Doctor, Interchap. vii.

morassic (mọ-ras'ik), *a.* [*morass* + *-ic.*] Having the character of or pertaining to a morass: as, a *morassic* habitat; a *morassic* soil.

> All of these *morassic* formations characterize quiet shores.
> *C. MacMillan*, in Minn. Bot. Stud., Bulletin IX. 995.

moratorium (mor-a̤-tō'ri-um), *n.* [NL., neut. sing. of LL. *moratorius*, causing delay, dilatory: see ★*moratory.*] In *law*, legal title to delay in making a due payment: as a legislative authorization of suspension of payment by a government bank.

moratory (mor'a̤-tọ-ri), *a.* and *n.* [LL. *moratorius*, delaying, < *morator*, a delayer, < *morare*, delay: see *moration.*] **I.** *a.* Of or pertaining to moratorium; delaying: as, a *moratory* bill.

II. *n.* One who postpones the maturity of notes, bills of exchange, and the like.

morauke (mo-râ'ke), *n.* [G. dial. (Swiss) *morache, moroche, moracher*, dim. *morauchli* (Stalder, 1812).] A whitefish, *Coregonus hiemalis*, native of Lake Constance, Switzerland, now introduced into the United States.

Moravian² (mọ-rā'vi-a̤n), *a.* and *n.* [ML. *Moravia*, Moray, + *-an.*] Of or pertaining to Moray; an inhabitant of Moray.

moray, *n.*—**Black moray,** *Lycodontis funebris*, an eel of the family *Murænidæ*, found on both coasts of tropical America.—**Common spotted moray,** *Lycodontis moringa*, an eel found from Punta Concepcion to Isla de Cedros.

morbify (môr'bi-fī), *v. t.*; pret. and pp. *morbified*, ppr. *morbifying.* [L. *morbus*, disease, + *-i-* + *-fy.*] To render diseased. [Rare.] *Browning*, Aristoph. Apol.

morbigenous (môr-bij'e-nus), *a.* [L. *morbus*, disease, + *-genus*, -producing.] Exciting or producing disease.

morbus, *n.*—**Morbus anglicus,** rachitis.—**Morbus cæruleus,** cyanosis of the new-born, due usually to some malformation of the heart.—**Morbus comitialis,** epilepsy.—**Morbus cordis,** heart-disease.—**Morbus coxæ senilis,** arthritis deformans which affects the hip.—**Morbus regius,** jaundice.—**Morbus sacer,** epilepsy.

morcellate (môr-sel'āt), *v. t.*; pret. and pp. *morcellated*, ppr. *morcellating.* [F. *morceler*, divide, + *-ate²*. The Latin type would be **morsellate.*] To shatter or break into many pieces. Rocks which are finely divided by many joints are said to be morcellated.

morcellation (môr-se-lā'shọn), *n.* [*morcellate* + *-ion.*] **1.** The act of shattering or breaking.—**2.** In *surg.*, removal of a part, as a tumor, a little at a time instead of by excision in mass.

morcellement (môr-sel-moṅ'), *n.* [F., < *morceler*, divide: see ★*morcellate.*] Same as ★*morcellation,* 2.

> Porcelini suggested *morcellement*, the danger of which consists in the subsequent necrosis of the stump of the cervix.
> *Phil. Med. Jour.*, Jan. 31, 1903, p. 199.

mordant. **I.** *a.*—**Acid mordant colors.** Same as *mordant acid* ★*colors.*

II. *n.*—**Dutch mordant,** one of the acid baths used in biting a plate in etching. Its composition is given by Hamerton as chlorate of potash, 20 grams; hydrochloric acid, 100 grams; water, 880 grams.

mordant, *v. t.*—**Mordanting principle,** a term used by textile-colorists to indicate the substance used to produce a mordant, in order to distinguish it from the mordant proper.

> In one of the most important wool mordanting processes, potassium bichromate ($K_2Cr_2O_7$) is used in the mordanting bath, but the actual mordant precipitated upon the fiber is an acid oxide of chromium (CrO_3). The potassium bichromate is, therefore, the *mordanting principle. L. A. Olney*, Textile Chem. and Dyeing, II. 115.

mordellid (môr-del'id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Mordellidæ.*

II. *a.* Having the characters of or belonging to the family *Mordellidæ.*

Mordey effect. The effect of increasing load in diminishing the hysteresis of the core of armatures of certain generators and motors: first noted by W. M. Mordey.

mordoré (mōr-dō-rā'), *n.* [F., < OF. *more*, Moor, + *doré*, gilded.] A brown color mixed with red. *N. E. D.*

morelle, *n.* **2.** The belladonna.

morena (mō-rā'nä), *n.* [Sp., also *murena*, < L. *muræna*: see *Muræna.*] Any eel of the family *Murænidæ*, commonly called *moray eels.* They inhabit tropical and subtropical seas and are abundant about rocky places and coral reefs. Some of them reach a large size, and all are pugnacious and voracious.—**Morena pinta,** *Muræna lentiginosa*, an eel found from the Gulf of California to the Galapagos Islands.—**Morena pintita,** *Lycodontis dovii*, an eel of the family *Murænidæ*, found from the Gulf of California to the Galapagos Islands.—**Morena prieta,** *Lycodontis castaneus*, an eel reaching a length of six feet, and found in abundance about the rocks of Mazatlan, Mexico.—**Morena verde.** Same as *black* ★*moray.*

morencite (mọ-ren'sīt), *n.* [*Morenci* (see def.) + *-ite².*] A hydrated ferric silicate occurring in brownish-yellow silky fibrous seams in a lime shale at Morenci, Arizona.

morenosite (mọ-rā'nọ-sīt), *n.* [Sp. *morenosita* (1853) (irreg. formed), named after a Señor *Moreno* of Spain.] Hydrous nickel sulphate, $NiSO_4+7H_2O$, usually occurring in fibrous forms or as an efflorescence of a green color. It results from the alteration of nickel ores.

Moresco-Spanish (mọ-res"kō-span'ish), *a.* Of or pertaining to the Moors of Spain, especially to Moorish art in Spain.

Moreton Bay canes. See ★*bangalow.*

Morgagni's crypts, globules or **spheres.** See ★*crypt,* ★*globules.*

Morgan (môr'ga̤n), *n.* A breed of trotting horses which originated with a stallion owned by a Vermont schoolmaster named Justin Morgan.

morganic (môr-gan'ik), *a.* Same as *morganatic.*

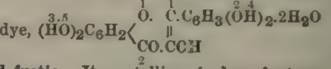
morget (môr-zhā'), *n.* [Swiss F., also *mourdjet*; so named from *Morges*, a village on Lake Geneva.] A land-breeze which blows as a strong north wind during the night on the northern shore of Lake Geneva. This wind is not to be confounded with the descending mountain wind known as the *joran.*

> Large lakes may give rise to off-shore and on-shore breezes. . . . On the northern shore [of Lake Geneva], . . . the land breeze (*morget*) blows as a strong north wind from between 5 and 7 o'clock in the evening to between 7 and 9 in the morning. This breeze always begins on the land and works out toward the lake, as . . . [has been observed] at Morges. . . . In the autumn, when the land cools, while the lake is still warm, the air flows toward the lake from all sides in calm weather, and the *morget* then blows almost continuously. The same thing happens to a more marked degree in winter, when the land is covered with snow. The *morget* is, however, then no longer a true land breeze. . . . The real descending mountain wind, known as joran, is much stronger than the *morget*, but reaches only the base of the mountains, not advancing on to the lake. *J. Hann* (trans.), Handbook of Climatol., p. 161.

moribundity (mor-i-bun'di-ti), *n.* A moribund state or condition.

> If the American Association insists upon meeting in the last week of the dying year the gatherings are likely to reveal *moribundity* as the years die in succession.
> *Science*, March 11, 1904, p. 434.

moric (mō'rik), *a.* [L. *morus*, mulberry, + *-ic.*] Of or pertaining to morin or moric acid.—**Moric acid,** a dye,



$$\overset{3.5}{(HO)}_2C_6H_2\left\langle\begin{matrix}\overset{1}{O}.\ \overset{1}{C}.C_6H_3\overset{2\ 4}{(OH)}_2.2H_2O\\ \|\\ CO.\underset{2}{C}CH\end{matrix}\right.$$

contained in old fustic. It crystallizes in long lustrous needles and produces characteristic colors with certain metallic salts.

morindin (mọ-rin'din), *n.* [*Morinda* + *-in².*] A yellow compound, $C_{26}H_{18}O_{14}.H_2O$, contained in the root-bark of *Morinda citrifolia* and *M. tinctoria* from India. It crystallizes in small needles and closely resembles ruberythric acid. Called by the natives *suranji.*

morindone (mọ-rin'dōn), *n.* [*morind(in)* + *-one.*] An orange-red compound, $CH_3C_{14}H_{14}(OH)_3O_2$, prepared by heating morindin alone or with a dilute acid. It crystallizes in needles, melts at 271–272° C., and may be sublimed.

moringatannic (mō-ring-ga̤-tan'ik), *a.* See ★*morintannic.*

moringic (mọ-rin'jik), *a.* [*Moringa* + *-ic.*] Obtained or derived from plants of the genus *Moringa*; specifically, noting an acid, a compound supposed to occur, in combination with glycerol, in oil of ben, from *Moringa aptera.* It is probably oleic acid.

morintannic (mō-rin-tan'ik), *a.* [*morin* + *tannic.*] Pertaining to morin and tannic acid.—**Morintannic acid,** 2, 4, 6, 3', 4'-pentahydroxybenzophenone, $(OH)_3C_6H_2COC_6H_3(OH)_2$, a compound found in yellow-wood or fustic. Also called *maclurin, moringatannic* and *moritannic acid.*

moriogram (mō'ri-ō-gram), *n.* [Gr. *μόριον*, a piece, part, member, + *γράμμα*, a writing.] A diagram devised for the rapid approximate determination of the angles between a plane of symmetry and any crystal faces with rational indexes which lie in the same zone with it. *G. F. Herbert Smith*, in Mineralogical Mag., 1904, p. 49.

Moriscan (mọ-ris'ka̤n), *a.* [*Morisc(o)* + *-an.*] Moorish. *Lytton*, Leila, I. iii.

Morisco, *n.* **7.** The offspring of a mulatto woman and a Spaniard; also, in general, any one with a considerable amount of negro blood. [Mexico.]

morisqueta (mō-rẹ̄s-kā'tä), *n.* [Philippine Sp., prop. a device of the Moors or Moros, < *morisco*, Moorish.] Rice boiled in water, eaten by the natives in place of bread. Called by the Tagalogs *canin.* [Philippine Is.]

> Rice boiled in water without salt, called by Spaniards "*morisqueta*" and by the Tagalos "canin," is looked upon by the natives the same as Americans and Europeans look upon bread. *Gaz. Philippine Is.*, 1902, p. 70.

moritannic (mō-ri-tan'ik), *a.* See ★*morintannic.*

Mormon¹, *n.* (*c*) [*l. c.*] In *entom.*, an American hesperiid butterfly, *Atrytone hobomok*, which occurs from eastern Canada to the Mississippi valley. Its larvæ feed on grasses. Also called *hobomok skipper.*

Mormon-weed (môr'mọn-wēd), *n.* The velvetleaf, *Abutilon Abutilon.*

mormyrid (môr'mi-rid), *n.* Any fish of the family *Mormyridæ*, a peculiar group confined to the fresh waters of Africa. They are commonly called *beaked fishes*, from the form of the muzzle, which in some of the species is long and bent downward.

morn. An abbreviation of *morning.*

morning, *n.*—**False morning,** the false dawn or *subhi Kázib* of the Persians; the fore-glow or transient light that precedes the auroral dawn of the true sunrise. See *fore-glow, afterglow,* ★*dawn.*

> Before the phantom of *False morning* died,
> Methought a Voice within the Tavern cried,
> "When all the Temple is prepared within,
> "Why nods the drowsy Worshipper outside?"
> *Fitzgerald*, tr. of Omar Khayyam, Rubaiyat, quat. ii.

morning-glory, *n.*—**Bush morning-glory,** the man-root, *Ipomœa leptophylla.*—**Cypress morning-glory.** Same as *cypress-vine.* See also *quamoclit*, 1.—**Dwarf morning-glory,** *Convolvulus spithamæus*, of North America, a nearly upright species with oblong leaves and handsome terminal white flowers on long peduncles.—**Ivy-leaved morning-glory,** *Pharbitis hederacea*, a tropical American plant with trilobate leaves and blue or purple flowers, which has established itself as far north as Long Island, Pennsylvania, and Nebraska.—**Pink morning-glory,** *Ipomœa Carolina*, a pink- or purple-flowered species with deeply three-lobed leaves, the terminal lobe much prolonged and pointed: found from South Carolina to Florida and west to Texas.—**Red**

morning-glory, *Quamoclit coccinea*, a small red-flowered annual twiner with ovate or orbicular deeply cordate leaves, naturalized from tropical America as far north as Pennsylvania.—**White morning-glory**, *Ipomœa lacunosa*, which has very small white flowers and ovate-cordate leaves, the lower ones angled. It ranges from Pennsylvania to South Carolina and west to Kansas and Texas.—**Wild morning-glory**, the hedge-bindweed, *Convolvulus sepium*.

morning-sickness (môr′ning-sik″nes), *n.* Nausea and sometimes vomiting from which a woman often suffers at the beginning of pregnancy, in the early part of the day.

morning-song (môr′ning-sông), *n.* A song, or a musical service, performed in the morning. See *aubade*, 1, *laud*, 4, and *matin*, 3.

moro, *n.* **2.** A small abscess or tumor of mulberry shape.

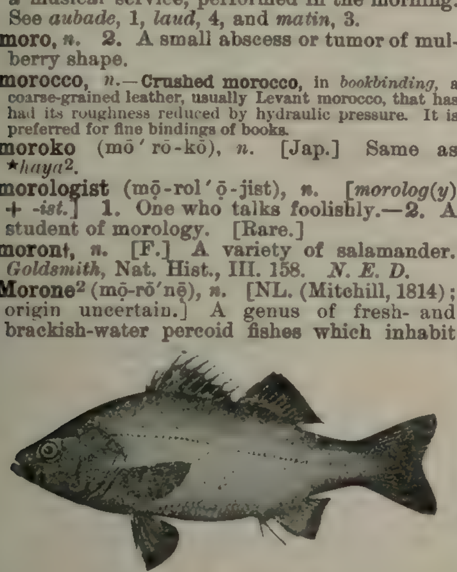
morocco, *n.*—**Crushed morocco**, in *bookbinding*, a coarse-grained leather, usually Levant morocco, that has had its roughness reduced by hydraulic pressure. It is preferred for fine bindings of books.

moroko (mō′rō-kō), *n.* [Jap.] Same as ★*haya*^{2}.

morologist (mọ-rol′ọ-jist), *n.* [*morolog*(*y*) + *-ist.*] **1.** One who talks foolishly.—**2.** A student of morology. [Rare.]

moron†, *n.* [F.] A variety of salamander. *Goldsmith*, Nat. Hist., III. 158. *N. E. D.*

Morone^{2} (mọ-rō′nẹ), *n.* [NL. (Mitchill, 1814); origin uncertain.] A genus of fresh- and brackish-water percoid fishes which inhabit streams and river-mouths of the eastern and southern United States.



White Perch (*Morone americana*).
(From Bulletin 47, U. S. Nat. Museum.)

moronolite (mọ-ron′ọ-līt), *n.* [Irreg. < Gr. *μόρον*, mulberry, + *λίθος*, stone.] A pale-brown concretionary variety of jarosite, found at Monroe, New York.

Morosaurus (mō-rọ-sâ′rus), *n.* [NL., < Gr. *μωρός*, dull, + *σαῖρος*, a lizard.] A genus of dinosaurian reptiles described by Marsh from the Upper Jurassic beds of Colorado and Wyoming. The animal was of great size, but is imperfectly known. It had an extremely long and flexible neck and a short back with but ten dorsal vertebræ, resembling in general aspect the *Diplodocus* and *Brontosaurus* (which see).

morosis (mō-rō′sis), *n.* [NL., < Gr. *μώρωσις*, stupidity, fatuity, < *μωροῦν*, make stupid, < *μωρός*, stupid, silly, foolish.] Imbecility; idiocy.

moroxylic (mō-rok-sil′ik), *a.* [Gr. *μόρον*, mulberry, + *ξύλον*, wood, + *-ic.*] Noting an acid the calcium salt of which is found in the stems of *Morus alba.* It is probably succinic acid.

morph. An abbreviation of *morphology*, *morphological*, etc.

morphallaxis (môr-fa-lak′sis), *n.* [NL., < Gr. *μορφή*, form, + *ἀλλαξις*, exchange.] The development of a new whole from a piece of an organism by a remodeling of the original piece into the typical form. A characteristic feature of the process is that it takes place without proliferation of new material at the cut surfaces of the piece. It is thus distinguished from the more common form of regeneration, or epimorphosis. *T. H. Morgan*, Regeneration, p. 121.

morphiated (môr′fi-ā-ted), *a.* [*morphia* + *-ate*^{2} + *-ed*^{2}.] Containing or impregnated with morphine or with one of its salts.

morphically (môr′fi-kal-i), *adv.* In relation or respect to form. *Proc. Boston Soc. Nat. Hist.*, April 5, 1893, p. 66, note.

morphinated (môr′fi-nā-ted), *a.* [*morphine* + *-ate*^{2} + *-ed*^{2}.] Same as ★*morphiated.*

morphine, *n.*—**Oleate of morphine.** See ★*oleate.*

merphinic (môr-fin′ik), *a.* [*morphin*(*e*) + *-ic.*] Of or pertaining to morphine.

morphinist (môr″fin-ist), *n.* [*morphin*(*ism*) + *-ist.*] One who is addicted to the use of morphine.

morphinization (môr″fi-ni-zā′shọn), *n.* [*morphiniz*(*e*) + *-ation.*] The act or process of subjecting to the physiological effects of morphine.

morphinize (môr′fi-nīz), *v. t.*; pret. and pp. *morphinized*, ppr. *morphinizing.* [*morphine* + *-ize.*] To bring under the influence of morphine. *Amer. Jour. Psychol.*, II. 355.

morphœa, *n.* **2**†. Same as *leprosy*.

morphogenesis, *n.*—**Law of morphogenesis**, as stated by Hyatt, the law that the life of the individual organism, in all its phases (morphological, physiological, normal or pathologic, embryonal, larval, adolescent, adult, or old), is correlated with the morphological and physiological history of the group to which it belongs. See ★*recapitulation doctrine*, ★*auxology*, and *palingenesis*, 2.

morphographic (môr-fọ-graf′ik), *a.* Same as *morphographical.*

In a purely *morphographic* sense the line indicates the limit of a steep wall and a furrow reaching from sea to sea. *Amer. Geol.*, Nov., 1904, p. 283.

morphography, *n.* **2.** The descriptive science of land forms.

morphol. An abbreviation of *morphology*, *morphological*, etc.

morpholite (môr′fọ-līt), *n.* [Gr. *μορφή*, form, + *λίθος*, stone.] A term applied by Ehrenberg to the coccoliths found in deep-sea ooze and in many chalk deposits, and regarded by him as inorganic.

morphology, *n.* **3.** In *phys. geog.*, the study of the form of lands.—**Mental morphology.** (*a*) Comparative psychology.

The former of these aims to carry the investigation of the mind or consciousness into all of its manifestations in the animal world. . . . We thus have the problem of *mental morphology*, as it has been called by a prominent biologist. *Carnegie Inst. Yearbook*, 1902, p. 202.

(*b*) Structural ★psychology (which see).

morphon, *n.* **2.** A structural or organic individual, as contrasted with one that is functionally or physiologically, but not structurally, independent. See ★*bion.*

morphophysics (môr-fọ-fiz′iks), *n.* [Gr. *μορφή*, form, + E. *physics.*] See the extract.

Fifth and last, I should like to gather under the head of *morphophysics* a number of researches, nearly all of which are very recent, and which tackle the doctrine of the chemical and physical causes of development. These researches have been largely experimental in character, and though we are only at the beginning of this sort of work, yet the results already obtained are of the highest value and make us hope for far greater results to come. *C. S. Minot*, in Pop. Sci. Mo., July, 1906, p. 12.

morphoplasm (môr′fọ-plazm), *n.* [Gr. *μορφή*, form, + *πλάσμα*, something formed.] The protoplasm of the body of a cell, or its cytoplasm, contrasted with the protoplasm of the nucleus, and considered as the part which gives its form to the organism.

As the term ‘protoplasm’ is used in a far too indefinite sense, I shall follow Nägeli's example, and call the vital substance of the cell the ‘formative plasm’ or *morphoplasm*, . . . in contrast to the idioplasm. *Weismann* (trans.), Germ-plasm, p. 38.

morphoplasmic (môr-fọ-plaz′mik), *a.* Pertaining to or of the nature of morphoplasm.

The specific morphogenic factors are connected in some way with specific forms of protoplasm, which I think may conveniently be designated as formative (perhaps better, ‘*morphoplasmic*’) stuffs. *Science*, Dec. 2, 1904, p. 749.

morphotic (môr-fot′ik), *a.* [Gr. *μορφωτικός*, < *μόρφωσις*, forming. See *morphosis.*] Organized; organic. *Buck*, Med. Handbook, V. 764.

morphotropic (môr-fọ-trop′ik), *a.* [Gr. *μορφή*, form, + *τρόπος*, turning, + *-ic.*] Pertaining to the relation of crystalline form to chemical composition or morphotropism; exhibiting morphotropism. *Rep. Brit. Ass'n Advancement of Sci.*, 1900, p. 167.

morphotropically (môr-fọ-trop′i-kal-i), *adv.* In a morphotropic manner; with respect to the relation of crystalline form and the composition of chemically similar substances or of substances derived from the same parent compound.

morphotropism (môr-fot′rọ-pizm), *n.* [*morphotrop*(*ic*) + *-ism.*] The relation in form, optical characters, etc., exhibited by crystals of related chemical compounds, specifically those whose molecules differ by the mutual replacement of equivalent atoms or groups of atoms. See ★*humite.*

The chapter on *Morphotropism* deals with the dependence of the crystal structure on the chemical constitution of the body. The author here, after describing the changes produced by substitutions as in the nature of homogeneous deformations of the crystal structure, explains the manner of measuring these modifications and gives the morphotropic influence of elements and radicals. *Amer. Chem. Jour.*, July, 1905, p. 104.

morphotropy (môr-fot′rọ-pi), *n.* [*morphotrop*(*ic*) + *-y*^{3}.] Same as ★*morphotropism.*

morrenine (mọ-rē′nin), *n.* [*Morrenia* + *-ine*^{2}.] A dark-red gelatinous alkaloid found in the root and milky sap of *Morrenia brachystephana* Grieseb, from the Argentine Republic. It melts at 106° C.

morrenol (mọ-rē′nol), *n.* [*Morren*(*ia*) + *-ol.*] A crystalline compound, $C_{14}H_{22}O$ or $C_{15}H_{24}O$, formed in the milky sap of the fruit of *Morrenia brachystephana* Grieseb, from the Argentine Republic. It melts at 168° C.

morrhuic (mor′ọ-ik), *a.* [*Morrhua* + *-ic.*] Of or pertaining to cod-liver oil.—**Morrhuic acid**, an organic substance of the composition $C_9H_{13}NO_3$.

morrhuine (mor′ọ-in), *n.* [*Morrhua* + *-ine*^{2}.] A yellow, thick, oily, strongly basic compound, $C_{19}H_{27}N_3$, the characteristic active alkaloid of cod-liver oil. It has an odor of syringa-flowers, crystallizes in microscopic needles, and is a powerful diuretic and sudorific.

morrhuol (mor′ọ-ol), *n.* [*Morrhua* + *-ol.*] A pungent, bitter, partly crystalline oily substance of disagreeable odor, which is obtained by extracting cod-liver oil with 90 per cent. of alcohol and removing the alcohol by distillation: said to represent the physiologically active portion of the oil.

Morrill Act. See ★*act.*

Morris chair, tube. See ★*chair*, ★*tube.*

morro (mor′ō), *n.* [Sp., something round; a prominence.] A round hill, hillock, or rocky promontory, especially one that is fortified or is crowned with a castle.

morsal (môr′sal), *a.* [Prop. **morsual*, < L. *morsus*, a biting. See *morse*^{2}.] Biting or chewing: said of the edge of a tooth.

Morse^{3} (môrs), *n.* A telegram written in the Morse alphabet.

Morse^{3} (môrs), *v. t.* and *i.*; pret. and pp. *Morsed*, ppr. *Morsing.* To write or transmit in the Morse alphabet, as a telegram.

The first part is private signals. Ah! now she's *Morsing* against the fog. *R. Kipling*, Traffics and Discoveries, p. 133.

Morse finger. Contraction of the finger following a traumatic inflammation of the joints excited by overuse in pressing the keys of the Morse telegraph.

Morse ivory. See ★*ivory*^{1}.

morselization, *n.* **2.** Same as ★*morcellation.*

morselize (môr′sl-īz), *v. i.*; pret. and pp. *morselized*, ppr. *morselizing.* [*morsel* + *-ize.*] To divide up into morsels; communicate piecemeal.

There is nothing in the environment to which the adolescent nature does not keenly respond. With pedagogic tact we can teach about everything we know that is really worth knowing, but if we amplify and *morselize* instead of giving great wholes, . . . and if we wait before each methodic step till the pupil has reproduced all the last, we starve and retard the soul, which is now all insight and receptivity. *G. S. Hall*, Adolescence, II. 454.

mor. sol. An abbreviation of the Latin *more solito*, in the usual manner.

mort^{5} (môrt), *n.* A salmon in the third year.

mortality, *n.*—**Makeham's law of mortality.** See ★*law*^{1}.

mortar^{1}, *n.*—**Mortar-apparatus.** Same as *life-saving mortar* (which see, under *life-saving*).

mortar^{2}, *n.*—**Adobe mortar.** See ★*adobe.*

mortar-bed^{2} (môr′tär-bed), *n.* [*mortar*^{2} + *bed*^{1}.] In *geol.*, a relatively hard bed of silt, sand, or gravel, cemented together by carbonate of lime and standing out in relief after the erosion of the soft beds with which it is associated in the region of the Great Plains. The name was given by Robert Hay, and is current in the discussions regarding water-supply in these regions. *Amer. Geol.*, June, 1904, p. 38.

mortar-circle (môr′tär-sėr″kl), *n.* In *ordnance*, the circular platform on which a mortar is fixed.

mortar-float (môr′tär-flōt), *n.* A vessel of raft-like construction specially designed for carrying and working a mortar.

mortar-ketch (môr′tär-kech), *n.* Same as *bomb-ketch.*

mortar-structure (môr′tär-struk″tūr), *n.* In *petrog.*, a texture, in some metamorphic rocks that have been crushed, in which larger crystals or fragments of crystals are surrounded by finer-grained fragments or crystals, like stones cemented together by mortar.

mortar-ware (môr′tär-wār), *n.* A very hard porcelain biscuit invented by Wedgwood and used by him in the manufacture of mortars. *N. E. D.*

Morte slates. See ★*slate*^{2}.

mortgage-bond (môr-gạj-bond), *n.* A bond secured by a mortgage.

mortgage-note (môr′gạj-nōt), *n.* A note the payment of which is secured by a mortgage given at the same time and recited in the note. Its effect is to hold the borrower liable for the deficiency if the mortgaged property does not satisfy the debt. The term *bond* is also used.

mortific (môr-tif′ik), *a.* [LL. *mortificus.* See *mort*^{1}, *n.*, and *-fic.*] Causing death; deadly.

mortification-root (môr″ti-fi-kā′shọn-röt), *n.* The marsh-mallow, *Althæa officinalis.*

Mortimer's variation. See ★*variation.*

mortiser (môr′ti-sėr), *n.* A mortising-machine (which see).

mortising-machine, *n.*—**Chain mortising-machine,** in *woodworking*, a machine for sinking a mortise in wood by means of a band-saw composed of an endless band or chain each link of which is a cutting-tool. The chain is supported by two wheels in a vertical position and is driven at a high speed. The wooden sill or other piece to be mortised is brought up against the lower end of the chain, and each link chips out a small piece, the effect being quickly to cut a mortise in the wood the exact length of the width of the loop of the chain and as wide as the cutting-face of the links. The depth of the mortise is governed by the upward pressure of the wood against the chain.

Mortuary chapel. See ★*chapel.*

morula, *n.* **2.** In *pathol.*, same as *button-scurvy* (which see, under *scurvy*^{2}).

morulit (mor′ọ̈-lit), *n.* [See *morula.*] In sporozoans, the chromatin mass in the nucleus. *Frenzel.*

moruloid, *a.* **2.** In *bacteriol.*, applied to colonies which are broken up into regular segments, like a morula.

morvin (môr′vin), *n.* [F. *morve*, glanders, + *-in*^{2}.] The specific poison of the bacillus of glanders. See ★*mallein.*

morwong (môr′wong), *n.* [New South Wales aboriginal name.] The fish *Chilodactylus macropterus*, also called *carp* and *jackass-fish*, and in New Zealand by the Maori name of *tarakihi*. The *red morwong* is *Chilodactylus fuscus*, also called *carp*. The *banded morwong* is *Chilodactylus vittatus*. *E. E. Morris*, Austral English.

mos. An abbreviation of *months.*

mosaic^1. **I.** *a.* **2.** In *biol.*, pertaining to or characterized by the presence of antagonistic or mutually exclusive parental characters in different parts of the body or of the germ-cells.

> Unless there is an original sport on the part of the individual, such a phenomenon may be taken as indicating that the germ-cells may also have been *mosaic.*
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., [1902, I. 127.

Mosaic chromatic process, a method of printing from a combination, in proper design, of colored pastes or chalks arranged upon a plate of metal. It was introduced in New York about 1870 by Hitchcock, an engraver on wood. Prints could be had only on paper that had been moistened with turpentine or benzin. The process was most applicable to the tints of maps and of wall-papers.—**Mosaic disease.** See ★*disease.*—**Mosaic inheritance,** particulate inheritance. See ★*inheritance.*—**Mosaic theory of development.** See ★*development.*—**Mosaic tile.** See ★*tile*^{1}.

II. *n.* **4.** In *biol.*, an organism which has antagonistic or mutually exclusive parental characteristics in different parts of its body.

> These *mosaics* occurred as varieties both on prickly individuals and on smooth ones still more rarely.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, [I. 23.

> The families of the albino D [dominant] . . . are especially interesting; for, . . . all the 13 coloured offspring by two different broken-coloured males, one brw. [pied-brown], the other blw. [pied-black], were self-coloured, brown, or black. This result resembles one obtained by Castle . . ., but the suggestion that such a pied individual is a *mosaic* which throws self-colour gametes is not readily applicable to this case. For here the peculiarity evidently lies in the gametes of the individual albino, since with other albinos the same males gave pied offspring. As Castle commonly obtained such self-coloured mice from albinos crossed with pied, it is likely that the peculiarity may belong to certain strains of albinos.
> *Proc. Zool. Soc. London*, 1903, II. 84.

mosaic^1 (mọ-zā′ik), *v. t.* To work up into a mosaic; represent in or decorate with mosaic patterns. Also *mosaick.*

> The windward slope was *mosaiced*, if the word be allowed, with the coarse sand [shown] in bottle No. 1.
> *Geog. Jour.* (R. G. S.), XI. 559.

> Literature, philosophy, and history abound in variant editions of the same theme, which, although relative and partial, . . . illustrate certain features of the ephebic metamorphoses . . . and might be *mosaicked* into a new and higher unity about this theme.
> *G. S. Hall*, Adolescence, II. 339.

mosaic-machine (mọ-zā′ik-ma-shēn″), *n.* A power-machine for cutting marble and other ornamental stone into the small cubes used in laying mosaic floors. It is essentially a shearing-machine.

mosasaur (mō′sa-sâr), *n.* [*Mosasaur*(*us*).] A general name for the large, extinct marine reptiles of the family *Mosasauridæ*, including the well-known genera *Mosasaurus*, *Tylosaurus*, *Clidastes*, etc. They had long, pointed heads, rather long bodies, a compressed tail, and limbs modified into short, flattened paddles. They abounded in the Cretaceous period and their remains are particularly abundant in the chalk of Kansas.

Mosasauri (mō-sạ-sâ′rī), *n. pl.* Same as *Mosasauria.*

mosasauroid (mō-sạ-sâ′roid), *a.* [*mosasaur* + *-oid.*] Resembling a mosasaur.

moschatine (mos′kạ-tin), *n.* [NL. *moschata* + *-ine*^{2}.] A bitter pulverulent alkaloid, $C_{21}H_{27}O_7N$, contained in *Achillea moschata* and in *A. millefolium.*

moschophoros (mos-kof′ọ-rus), *n.* [NGr. **μοσχοφόρος*, < Gr. *μόσχος*, calf, + *-φορος*, < *φέρειν*, carry.] In *Gr. antiq.*, a calf-carrier: the name given to certain statues in which a man is represented carrying a sacrificial calf upon his shoulders.

Moscovian (mos-kō′vi-ạn), *a.* and *n.* [*Moscovia*, *Muscovia* (< Moscow), Russia, + *-an.*] **I.** *a.* In *geol.*, noting the middle division of the Carboniferous system when this expresses the marine type of sedimentation, as contrasted with the Westphalian, which represents the lagoon type.

II. *n.* The Moscovian division.

Moseleya (mōs-e-lē′yạ̈), *n.* [Named after Professor Henry N. *Moseley*, F. R. S.] A genus of deep-sea fishes of the family *Macruridæ*, taken off the coast of British Columbia.

mosker (mos′kėr), *n.* [Yiddish.] A pledger; one who makes a living by taking advantage of the business incapacity of persons engaged in the pawnbroking trade. Also *moskeneer*, *moskinner.*

moskinner, *n.* Same as ★*mosker.*

mosky (mos′ki), *a.* [Origin obscure.] Having a yellow tail: applied by sailors to a dolphin. Also used as a noun. [Eng.] *N. and Q.*, 10th ser., I. 266.

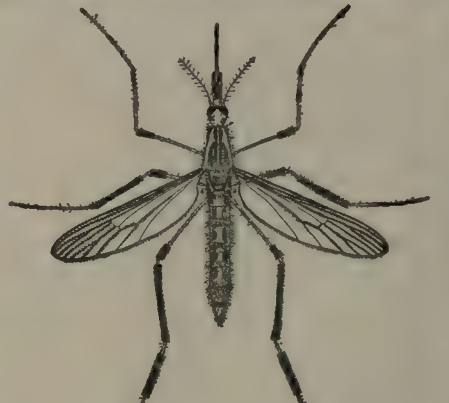
Moslemic (mos-lem′ik), *a.* [*Moslem* + *-ic.*] Moslem.

Moslemite (mos′lem-īt), *n.* [*Moslem* + *-ite.*] A Moslem.

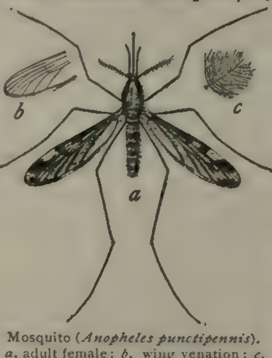
Moslemize (mos′lem-īz), *v. t.*; pret. and pp. *Moslemized*, ppr. *Moslemizing.* To cause to become a Moslem or to believe in the Mohammedan faith; render Moslem.

> Emin Effendi (he had *Moslemized* himself) was appointed governor of the equatorial province.
> *Smithsonian Rep.*, 1890, p. 281.

mosquito, *n.*—**Big woods-mosquito,** *Janthinosoma musica*, a rather large black species with purple reflections, which breeds in woodland swamps.—**Brown-striped woods-mosquito,** *Culex siphonalis*, a rather small dark mosquito with a brown stripe in the center of the thorax. It breeds in swampy woodlands.—**Brown woods-mosquito,** *Culex cantans*, a large brown mosquito with banded abdomen and tarsi. It flies in the spring and breeds in woodland pools, its larvæ hiding among the dead leaves on the bottom.—**Dapple-winged mosquito,** a name used by British investigators to designate the first of the malarial mosquitos which proved to carry malaria, *Anopheles claviger.*—**Elephant mosquito,** a large East Indian mosquito, *Toxorhynchites immisericors*, occurring abundantly from Ceylon through India and down the Malay Peninsula. Its larvæ live in the hollow stumps of the giant bamboo and prey solely upon the larvæ of other mosquitos.—**Fringe-legged mosquito,** *Psorophora ciliata*, a large mosquito with erect scales on its legs. Its larvæ are carnivorous and feed on other mosquito larvæ.—**Irritating mosquito,** *Culex perturbans*, a large brown species with the tarsi broadly banded with white. It is an especially fierce biter.—**Malarial mosquito,** any one of numerous species of the culicid genus *Anopheles.* With certain species of the genus, however, notably *Anopheles punctipennis*, careful experimenters have failed to establish the malarial relation. See ★*Anopheles* (with cut).—**Mottled mosquito,** *Culex discolor*, a small yellow-brown species with banded legs and beak, spotted wings, and the abdomen mottled with brown and yellowish white.—**Pitcher-plant mosquito,** *Wyeomyia smithii*, a small black species which breeds in the leaf-pitchers of *Sarracenia.*—**Rock-pool mosquito,** *Culex atropalpus*, a species not uncommon in the northeastern United States. The thorax is golden yellow with a blackish central stripe, and the abdomen has narrow irregular white bands at the bases of the segments. It breeds in pot-holes and other rocky pools.—**Salt-marsh mosquito,** any one of several species of *Culicidæ* which breed in salt or brackish water; notably, *Culex sollicitans*, *C. tæniorhynchus*, and *C. cantator.*—**Silver-striped mosquito,** *Culex serratus*, a black species with a broad silvery-gray stripe down the middle of the thorax and with unbanded legs and beak. It lives in low swampy woods and is wide-spread, occurring from South America north to New Jersey.—**Snowy-foot mosquito,** *Culex niveitarsis*, a small brown species whose hind tarsi are almost wholly white. It flies in the spring, and its larvæ are found in rocky pools.—**Spotted-legged mosquito,** *Culex jamaicensis*, a large dark-colored species which has the legs spotted with yellow.—**Swamp-mosquito,** *Culex sylvestris*, a medium-sized or small species having white-rimmed tarsal joints and the abdominal segments banded with pure white. It is especially abundant in fresh-water swamps.—**Three-striped mosquito,** *Culex trivittatus*, a species having a pale-yellow thorax with three black longitudinal stripes and unbanded legs and proboscis. It is a woodland form and breeds in small springs and surface pools.—**Tree-hole mosquito,** *Culex triseriatus*, a small species with black proboscis and legs and the sides of the thorax silvery white. It breeds most abundantly in water-filled holes in trees, stumps, and logs.—**White-lined mosquito,** *Culex signifer*, a medium-sized black mosquito, with the thorax marked with narrow white lines and the hind tarsi broadly banded with white at either end of each joint, the last one being wholly white.—**Woods-mosquito, wood-mosquito,** any one of several species of mosquitos which breed by preference in woods, as the brown-striped woods-mosquito, *Culex siphonalis*, or the brown woods-mosquito, *Culex cantans.*



Fringe-legged Mosquito (*Psorophora ciliata*). Female, greatly enlarged. (Howard, U. S. D. A.)



Mosquito (*Anopheles punctipennis*). *a*, adult female; *b*, wing venation; *c*, male antenna: greatly enlarged. (Howard, U. S. D. A.)

mosquito-bee (mus-kē′tō-bē), *n.* Any one of the small stingless tropical bees of the genera *Melipona*, *Trigona*, or *Tetragona.*

mosquito-blight (mus-kē′tō-blīt), *n.* A blight of the tea-plant in East India, caused by the punctures of a capsid bug, *Helopeltis theivora*, and other species of the same genus; also, the insect itself.

mosquitocide (mus-kē′tō-sīd), *n.* [*mosquito* + L. *-cida*, < *cædere*, kill.] One who or that which kills *mosquitos.*

moss^1, *n.*—**Besom-moss,** the haircap-moss.—**Bird's-nest moss.** See *resurrection-plant* (*b*).—**Cord-moss,** any moss of the genus *Funaria.* See *Funaria.*—**Corsican moss.** See ★*Alsidium* and *moss*^{1}.—**Flowering moss.** (*b*) The moss-pink, *Phlox subulata.* (*c*) The widow's-cross, *Sedum pulchellum.*—**Golden moss.** (*b*) The wall-pepper or wall-moss, *Sedum acre.* (*c*) The haircap-moss, *Polytrichum juniperinum.*—**Kentucky moss,** *Portulaca grandiflora*, a plant introduced into the United States from South America and widely cultivated under a variety of forms.—**Moss copper.** See ★*copper*^{1}.—**Mountain-moss.** (*a*) *Selaginella selaginoides*, a low creeping plant found on wet rocks in high northern latitudes of both hemispheres, ranging southward in America to New Hampshire, Michigan, and Colorado. (*b*) Same as *golden* ★*moss* (*b*).—**Pyxie moss,** the flowering moss, *Pyxidanthera barbulata.*—**Rock-moss.** (*a*) See *rock-moss.* (*b*) Same as *flowering* ★*moss* (*c*).—**Rose-moss.** Same as *Kentucky* ★*moss.*—**Running moss.** Same as *snake-moss.* Also *running-pine.*

moss^1, *v. t.* **2.** To fill with moss, as the crevices between the logs in a logging-camp.

mossbacked (môs′bakt), *a.* [*mossback*, *n.*, 2, + *-ed.*] Antiquated; old-fashioned; very conservative. [Slang.]

moss-bush (môs′bůsh), *n.* Same as ★*moss-plant.*

moss-flower (môs′flou″ėr), *n.* The reproductive organs of a moss.

moss-fruit (môs′fröt), *n.* The fruiting portion (sporocarp, sporogonium, capsule) of a moss. See *sporogonium.*

mossite (môs'īt), *n.* [*Moss*, a locality in Norway, + *-ite*².] A tetragonal mineral consisting, like tapiolite, of the niobate and tantalate of iron, but containing a relatively large amount of niobium: found near Moss, Norway.

moss-land (môs'land), *n.* Land that consists chiefly of peat-bog; peat-moss.

moss-peat (môs'pēt), *n.* Peat derived chiefly from moss, as distinguished from that derived from other plants, such as wild rice, etc. See *peat*¹.

moss-plant (môs'plant), *n.* A moss-like plant, *Harrimanella hypnoides*, of the heath family, found on alpine summits in New England and New York, and northward throughout the arctic regions of both hemispheres.

mosswort (môs'wėrt), *n.* A bryophyte, especially a moss, as distinguished from the *liverworts*.

mot⁴, *n.* 3. A small grove or clump of timber on a prairie, sometimes likened to an 'island.' [Local, U. S.]

mot⁵ (mōt), *n.* [Marathi *moṭ*, Telugu *moṭa*, *motu*.] An ancient mechanical device used in India and other countries of the Orient for lifting water by animal power. It consists of a bucket or water-tight bag, raised by means of a rope fastened over a pulley, two bullocks or other animals being attached to the end of the rope. *H. M. Wilson*, Irrigation Engineering, p. 489.

mote¹, *n.* 6. In *cotton-spinning*, a piece of broken cotton-seed, cotton-leaf, etc.

> The fragmental portions of cotton seeds carry a tuft of attached fibres on the outer membrane; this is termed a bearded *mote*, and is regarded as an imperfection or an impurity, as it interferes with the spinning qualities of a good yarn. *Hannan*, Textile Fibres of Commerce, p. 102.

mote⁶ (mō'te), *n.* [Peruvian and Bolivian: Quichua *mutti*, = Aymara *motti*.] Boiled grains of maize, a dish much eaten in Peru and Bolivia.

mote⁷ (mōt), *v. i.*; pret. and pp. *moted*, ppr. *moting*. [Back-formation from *motor*.] To ride in a motor vehicle; engage in the sport of motoring. [Colloq.]

mote-knife (mōt'nīf), *n.* A steel bar with a sharp edge, attached to a cotton-carding machine immediately under the feed-rolls for removing fragments of broken seed and leaf that may be in the cotton. See ★*mote*¹, 6. *Taggart*, Cotton Spinning, I. 132.

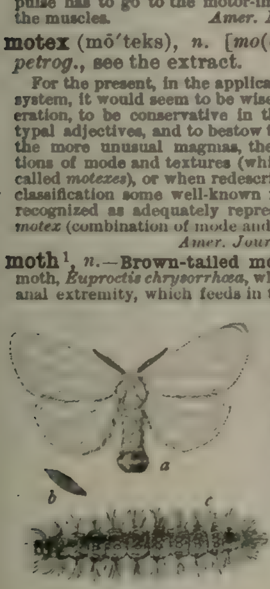
moter (mō'tėr), *n.* [*mote*¹ + *-er*¹.] 1. One who extracts motes or particles of extraneous substances from wool; a wool-moter.—2. A device in a cotton-gin for removing motes or small impurities, as pieces of stalk and dirt.

moteur (mō-tėr'), *n.* [F.] A person who is ★motor-minded (which see).

> The so-called motor reaction is one given by a *moteur*, whose movements are habitually initiated by motor images: to whatever sense the stimulus is given, the impulse has to go to the motor-image-centres, and then to the muscles. *Amer. Nat.*, March, 1903, p. 207.

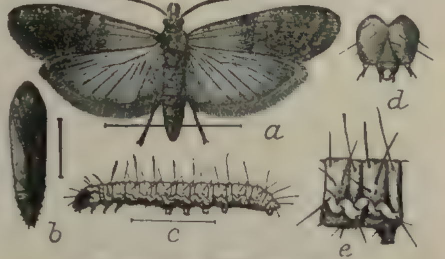
motex (mō'teks), *n.* [*mo*(*de*) + *tex*(*ture*).] In *petrog.*, see the extract.

> For the present, in the application of the quantitative system, it would seem to be wisest, and the part of moderation, to be conservative in the matter of systematic typal adjectives, and to bestow them only in the case of the more unusual magmas, the less common combinations of mode and textures (which may conveniently be called *motexes*), or when redescribing in terms of the new classification some well-known rock which is commonly recognized as adequately representative of some usual *motex* (combination of mode and texture). *Amer. Jour. Sci.*, Sept., 1907, p. 230.



Brown-tailed Moth (*Euproctis chrysorrhœa*).
a, female moth; *b*, antennæ of moth; *c*, larva: all one fourth reduced.

moth¹, *n.*—**Brown-tailed moth**, a European liparid moth, *Euproctis chrysorrhœa*, white in color with a brown anal extremity, which feeds in the larval stage in a great variety of orchard-, shade-, and forest-trees, and which has been established in eastern Massachusetts, where it has become a great pest.—**Chinese-character moth.** Same as *goose-egg* ★*moth*.—**Clothes moth.** See *clothes-moth*.—**Copper hind-wing moth.** Same as *American copper* ★*hindwing*.—**December moth**, a British collectors' name for a lasiocampid moth, *Pœcilocampa populi*, which often issues from its cocoon in December.—**Delta moth**, any one of a group of noctuid moths formerly known as *Deltoides* from the triangular outline of the wings when at rest. The *Hypeninæ* or *Hypenidæ* (which see) are characteristic delta moths. See *deltoid moth*.—**Diamond-back moth**, a cosmopolitan moth, *Plutella maculipennis*, probably originally a European species, but carried by commerce to most parts of the world. Its larvæ feed on cabbage and other cruciferous vegetables.—**Diverse-line moth**, an American geometrid moth, *Eustroma diversilineata*, pale ocher-yellow in color, with the forewings crossed by many diverging brown lines. Its larvæ feed on the foliage of grape, and those of the fall generation hibernate.—**Dried-currant moth**, a cosmopolitan phycitid moth, *Ephestia cautella*, whose larvæ feed on dried raisins and currants, as well as in chocolate-nuts or cocoa-beans, English walnuts, figs, and corn meal.—**Engrailed moth**, a British collectors' name for a geometrid moth, *Tephrosia biundularia*.—**Gipsy moth.** See *gipsy-moth*.—**Goose-egg moth**, an old British collectors' name for a European platypterygid moth, *Drepana glaucata*. Also called the *Chinese-character moth*.—**Harnessed moth**, an American arctiid moth, *Apantesis vittata*, so marked as to appear as if harnessed.—**House-builder moth**, a psychid moth, *Oiketicus saundersii*, occurring in the West Indies, whose larva builds a portable house which it carries about with itself. The name is equally applicable to many psychid larvæ. See *bag-worm*.—**Imperial moth**, a large and handsome American ceratocampid moth, *Basilona imperialis*, yellow in color with brown markings. Its large hairy larva feeds on the leaves of butternut, hickory, and other forest-trees.—**Indian-meal moth**, a phycitid moth, *Plodia interpunctella*, probably of American origin, whose larva feeds on stored grain, flour, or meal.—**Japan moth**, a British collectors' name for a European tineid moth, *Adela degeerella*.—**Many-plumed moth**, any moth of the family *Orneodidæ*, the species of which have the wings each split up into longitudinal sections or plumes.—**Mocha-stone moth**, any one of several moths of the notodontid genus *Melalopha*. The peculiar markings of the wings resemble somewhat those of a moss-agate. The larvæ feed on the willow and the poplar.—**Mottled plum-tree moth**, an American noctuid moth, *Apatela superans*, whose larva feeds on the leaves of plum-trees.—**Neat cucumber-moth.** See ★*cucumber*.—**Pepper-and-salt moth**, an American geometrid moth, *Lycia cognataria*, whose larva feeds on currant-leaves.—**Poplar mocha-stone moth**, *Melalopha inclusa*.—**Potato-tuber moth.** Same as ★*potato-moth*.—**Processionary moth**, the adult of the processionary caterpillar (which see, under *processionary*).—**Regal moth**, an American ceratocampid moth, *Citheronia regalis*. See *walnut-moth*.—**Royal moth**, the regal walnut-moth. See *royal horned caterpillar*.—**Scallop-shell moth**, a British collectors' name for an Old World geometrid moth, *Calocalpe undulata*, whose wings are marked like a scallop-shell.—**Senatorial moth**, an American ceratocampid moth, *Anisota senatoria*, whose larvæ feed on oak-leaves.—**Small engrailed moth**, a British collectors' name for a geometrid moth, *Tephrosia crepuscularia*.—**Smoky moth**, any species of the lepidopterous family *Pyromorphidæ*. They are small moths of a smoky-black color, sometimes marked with brighter colors. *Harrisina Americana* is a familiar example: formerly called the *grape-vine Procris*.—**Two-colored royal moth**, an American ceratocampid moth, *Adelocephala bicolor*, occurring in the Mississippi valley. The fore wings are yellowish brown speckled with black, and the hind wings are pink. The larva feeds on honey-locust and on the Kentucky coffee-tree.—**Underwing moth.** See ★*Catocala*.—**White-tipped moth**, an American notodontid moth, *Symmerista albifrons*, having a conspicuous white patch on the outer half of the costal border of each fore wing. Its larvæ feed on oak-leaves.—**Window-winged moth**, any one of the small moths of the family *Thyridæ* or *Thyrididæ*. The English name is derived from the white or yellowish translucent spots on the wings.



Indian-meal Moth (*Plodia interpunctella*).
a, moth; *b*, pupa; *c*, larva: all nearly twice natural size; *d*, head of larva; *e*, segment of larva: more enlarged.
(Chittenden, U. S. D. A.).

moth³ (mōt), *n.* [Hind. *moṭh*.] In India, a trailing dwarf bean, *Phaseolus aconitifolius*, cultivated for food and fodder. Also called *Turkish gram*. See ★*gram*³.

moth-borer (môth'bōr"ėr), *n.* Same as *sugar-cane* ★*borer* and *larger corn-stalk* ★*borer*. [British West Indies.]

mother-cyst (muᴛʜ'ėr-sist), *n.* The cyst which produces daughter-cysts by budding.

mother-gate (muᴛʜ'ėr-gāt), *n.* In *mining*, a large passage in a coal-mine used as a main roadway.

motherhood, *n.* 2. A clan constituted by kinship through the mother. *N. E. D.*

mother-lobster (muᴛʜ'ėr-lob"stėr), *n.* An edible crustacean, *Scyllarus latus*, found in the Mediterranean and the Atlantic: said sometimes to attain a length of 18 inches and to be superior to the common lobster in flavor.

mother-lode, *n.* 2. The principal vein of any district.

mother-metal (muᴛʜ'ėr-met"al), *n.* A metal or metallic compound from which some other form of the metal can be obtained.

> The composition of the remaining solid-solution or "*mother-metal*" of martensite has reached that of hardenite. *Encyc. Brit.*, XXIX. 573.

mother-of-emerald (muᴛʜ"ėr-ọv-em'ẹ-rald), *n.* Prase: sometimes so called because formerly supposed to be the mother-rock of emerald. *Max Bauer* (trans.), Precious Stones, p. 488.

mother-of-niter (muᴛʜ"ėr-ọv-nī'tėr), *n.* The residual bitter saline liquor from which saltpeter has been crystallized. The term was used by Black in the middle of the eighteenth century.

mother-of-wheat (muᴛʜ"ėr-ọv-hwēt'), *n.* 1. The cow-wheat, *Melampyrum arvense*.—2. The ivy-leaved speedwell, *Veronica hederæfolia*.

mother-right (muᴛʜ'ėr-rīt), *n.* 1. Alleged supremacy of the mother in the primitive family and clan; in reality, the supremacy of the male relatives of the wife or mother as opposed to the supremacy of husband or father. *L. F. Ward*, Pure Sociol., p. 213.—2. That social order in which descent is traced from mother to children, so that the children belong to the mother's family and inherit from their mother's brothers: same as *matriarchy*.

mother-rule (muᴛʜ'ėr-röl), *n.* Same as ★*mother-right*, 1.

mother's-heart (muᴛʜ'ėrz-härt), *n.* The shepherd's-purse, *Bursa Bursa-pastoris*.

motherwort, *n.*—**Golden motherwort**, the chafeweed or wood-cudweed, *Gnaphalium sylvaticum*, a native of Europe and Asia and found also in New Brunswick and Cape Breton, where it has probably been introduced.

moth-fly (môth'flī), *n.* Same as *moth-like* ★*fly*.

moth-miller (môth'mil"ėr), *n.* Same as *miller*, 3.

motion, *n.* 18. In *geom.*, a reversible unique transformation of the aggregate of all points into itself.—**Absolutely total motion**, in *geom. topics*, a motion during which no two instantaneous places of the moving object have any part in common.—**Alternating motion**, reciprocating or oscillatory motion.—**Angle motion** or **canting motion**, a device in the tables of band-saws, or in the carriage or fence of circular saws, by which the work may be presented at an angle with the plane of the saw for cutting bevels.—**Circular motion**, a device or mechanism for guiding a planing- or shaping-tool along the arc of a circle. Such a device is frequently used for finishing curved surfaces which can not be finished in a lathe because the radius of the arc is so long as to be beyond the capacity or convenience of standard machine-tools.—**Compound motion**, the resultant of two or more simple motions or the combination of a motion of translation with one of rotation.—**Euclidean motion**, a reversible unique transformation of the aggregate of all points into itself, in which the Euclidean postulate with regard to parallels is assumed.—**Fore-and-aft motion**, in *mech.*: (*a*) A forward and backward motion, used in connection with something that has a distinct front and rear. (*b*) A motion parallel to the keel of a vessel.—**Gooch's link-motion**, a form of link-motion, derived from Stephenson's, in which the slot-link was not lifted and lowered, as in Stephenson's, but the rod to the valve was raised and lowered to secure the same adjustment in the slot of the vibrating non-adjustable link. The valve-rod had to be long enough to be jointed, but no variation in lead occurred, because the eccentric-straps were not swung around the shaft in adjusting the position of the sliding-block. The radius of the link was that of the length of the first or pivoted section of the valve-rod.—**Homogeneously total motion**, in *geom. topics*, a motion during which no two instantaneous places of the moving object have any homogeneous part in common.—**Impulsive motion**, a motion conceived of as generated instantaneously from rest by the application of impulses.—**Latent motions**, motions of cyclic or gyrostatic nature, imagined as taking place in the ultimate particles of a substance. The assumption of such latent motions is an essential feature of certain speculations concerning the structure of matter.—**Motion curve.** See ★*curve*.—**Motion in altitude.** See ★*altitude motion*.—**Naperian motion**, a superposition of a rotation and a dilatation.—**Negative motion**, in *weaving*, a kind of drag motion for taking up the cloth in the loom as it is being woven: used in contradistinction to *positive motion*.—**Non-Euclidean motion**, a reversible unique transformation of the aggregate of all points into itself, in which the Euclidean postulate with regard to parallels is not assumed.—**Notice of motion**, in *law*, a formal legal notice, given by one party in a cause to the other or others, that an application for an order affecting the cause will be made to the court at a certain time and place.—**Periodic motion**, a motion in which changes of speed or of direction recur at regular intervals of time. Simple harmonic motions, all types of vibratory motions, orbital motions, and the motions of any part of a revolving body not within the axis of revolution are examples of periodic motion.—**Pick-at-will motion**, a motion for throwing the shuttle of a loom, which has a series of shuttle-boxes at each end, so as to allow a single weft, or any kind or color of weft, to be passed through a shed or between the warp-threads.—**Polygon of motion**, a vector diagram, analogous to the polygon of forces, representing the components of a motion and the direction and magnitude of their resultant. It is usual, and more accurate, to speak of a *polygon of velocities*, *acceleration*, or *momenta* rather than of a *polygon of motion.*—**Precessional motion,** in *mech.*, gyroscopic precession.—**Simple motion,** a motion of translation alone or of rotation alone, but not of the two in combination.—**Single preventer motion.** See *single* ★*preventer.*—**Star-wheel motion,** a motion employed for operating-, measuring-, or recording-machines, such as cyclometers and the feed of machine-tools: so called because a small wheel having pointed teeth and resembling the conventional symbol for a star is used. The wheel is turned one tooth or more at each stroke or revolution, as the case may require.—**Thwartwise motion.** Same as ★*cross-motion.*—**Translatory motion.** See *translation*, 6.—**Traverse motion,** a to-and-fro motion, forming part of the mechanism of a number of machines used in textile-manufacturing.—**Uniform motion,** motion with uniform velocity.—**Uniplanar motion,** motion in which the paths described by the particles of the moving body lie in planes parallel to one another.

motion-block (mō′sho̤n-blok), *n.* 1. A moving block, such as a link-block or cross-head, used to connect two moving parts.—2. An engine cross-head. [Eng.]

motion-frame (mō′sho̤n-frām), *n.* Same as ★*motion-plate.*

motion-plate (mō′sho̤n-plāt), *n.* A rolled steel or iron plate which is bolted transversely between the longitudinal frame-plates of a locomotive, to carry the ends of the cross-head guides which are farthest from the cylinder. The connecting-rods and valve-rods sometimes pass through openings in this plate.

motion-process (mō′sho̤n-pros″es), *n.* [Tr. G. *bewegungsvorgang.*] Any physical phenomenon regarded as a mode of motion; especially, a process of stimulation: opposed to *mental process.*

> We generally understand by stimulus the external *motion-process,* which . . . is accompanied by the mental process of sensation.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 16.

motion-rod (mō′sho̤n-rod), *n.* In a steam-engine, a rod which communicates motion from a rock-shaft, driven by the eccentric, to the valve-stem. [Eng.]

motiv. A simplified spelling of *motive.*

motivity, *n.* 2. In *thermodynam.*, a term proposed by Lord Kelvin for the available energy of a system.

motivization (mō″tiv-i-zā′sho̤n), *n.* Motivation. *W. Wundt* (trans.), Human and Animal Psychol., p. 433.

motocycle (mō′tọ-sī-kl), *n.* [L. *motus*, motion, + E. *cycle.*] 1. Same as ★*motor-cycle.*—2. A light motor vehicle, without body, on three or four wheels, carrying one or more persons.

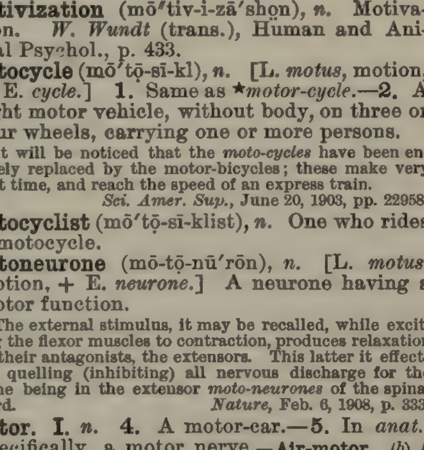
> It will be noticed that the *moto-cycles* have been entirely replaced by the motor-bicycles; these make very fast time, and reach the speed of an express train.
> *Sci. Amer. Sup.*, June 20, 1903, pp. 22958.

motocyclist (mō′tọ-sī-klist), *n.* One who rides a motocycle.

motoneurone (mō-tọ-nū′rōn), *n.* [L. *motus*, motion, + E. *neurone.*] A neurone having a motor function.

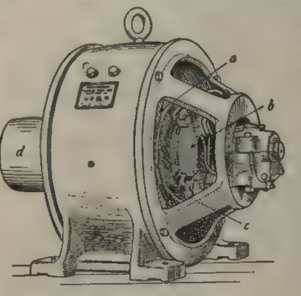
> The external stimulus, it may be recalled, while exciting the flexor muscles to contraction, produces relaxation of their antagonists, the extensors. This latter it effects by quelling (inhibiting) all nervous discharge for the time being in the extensor *moto-neurones* of the spinal cord.
> *Nature*, Feb. 6, 1908, p. 333.

motor. I. *n.* 4. A motor-car.—5. In *anat.*, specifically, a motor nerve.—**Air-motor.** (*b*) A motor-car driven by an air-motor.—**Asynchronous motor,** an alternating-current motor in which the speed is not rigidly determined by the frequency of alternation. Induction-motors (see below) are asynchronous.—**Brayton motor** a form of gas-engine or internal-combustion engine devised about 1873 to operate on a cycle in which the gas and air were ignited and expanded at constant pressure beyond the piston.—**Compensated motor.** (*a*) An electric motor in which the armature reaction is compensated by an auxiliary winding in the field structure: used for alternating-current railway-motors. (*b*) An alternating-current motor in which the wattless current is compensated by a condenser or by auxiliary commutator-brushes; a compensated repulsion-motor.—**Compound motor.** See *electric* ★*motor.*—**Double-opposed motor,** an arrangement of the cylinders of an internal-combustion engine in which two cylinders on opposite sides of the crank-shaft are connected to cranks which are 180 degrees apart: usually applied in horizontal engines in motor-car practice, either parallel to the long axis of the vehicle or at right angles to it. If the two cylinders operate on the four-phase or Otto cycle, the working-strokes may occur together in the two cylinders, so as to balance the thrust against the cylinder-covers; or the working-stroke of one may occur when the other is aspirating its charge. In two-phase cycles the working-strokes will always be together.—**Electric motor,** an apparatus for converting electric into mechanical power. In general, any electric generator, when supplied with a suitable form of electric power, will act as a motor, and an electric motor, when driven by mechanical power, will become an electric generator, that is, produce electric power. By the form of electric power supplied, electric motors are divided into *direct-current motors* and *alternating-current motors.* Direct-current motors usually have a commutator and brushes to receive the current, a revolving armature, and a stationary field, which may be bipolar or multipolar. By the connection of the field-exciting coils, direct-current motors are divided into *shunt-motors, series-motors,* and *compound motors.* In the shunt-motor the field-coils are connected in parallel or multiple to the armature. Such motors give fairly constant speed at all loads, and therefore are commonly used as stationary motors in factories, mills, and in general for driving apparatus at constant speed. In starting, they require a rheostat in the armature circuit. In the series-motor the full supply-current passes the field-coils (which consist of fewer turns of larger wire) in series to the armature. In such motors the speed increases with decrease of load and decreases with increase of load, that is, increase of torque, and the torque is a maximum in starting. They are used where heavy starting-torque and a variation of speed with the load are desired, as for hoist-motors, and especially in electric railroading. Compound motors with cumulative compounding—that is, having a shunt-field and a series-field magnetizing in the same direction—are intermediate in character between shunt-motor and series-motor, and are used for electric elevators, etc. Differential compounding, that is, a small series-field counteracting the shunt-field, has been used to obtain more constant speed than that given by shunt-motors, but its use has been discontinued because the modern shunt-motor gives a sufficiently constant speed. Alternating-current motors are *induction-motors, commutator-motors,* and *synchronous motors.* Induction-motors contain a primary winding, usually stationary, and excited by single-phase or more commonly polyphase alternating currents, and a secondary winding, usually revolving, closed upon itself in short circuit. In the secondary winding a rheostat is frequently used, in starting, which is external and connected to the windings by collector-rings and -brushes, or revolving with the armature or secondary winding. If no starting rheostat is used the secondary winding usually is a 'squirrel-cage,' that is, a number of copper bars passing through the iron of the armature-core near the periphery and connected with each other electrically by two end-rings. In such motors, in starting, especially in large motors, an autotransformer or autostarter is frequently used to lower the voltage and thereby the starting current. The characteristics of the induction-motor are those of the shunt-motor, that is, constant speed at all loads. To the direct-current series-motor corresponds the alternating-current commutator-motor, which is usually single-phase. It may be a *series-motor* (that is, the main current passes in series through the stator or field, and, by brushes and commutator, through the rotor or armature), and then usually contains a stationary compensating winding to neutralize the armature reaction and self-induction, this compensating winding being either excited by the main current or short-circuited upon itself (inductive compensation). Another form of alternating-current commutator-motor is the *repulsion-motor*, in which the main current traverses only the stator winding, while the rotor winding is short-circuited upon itself through the commutator and the brushes which are set under a small angle with the axis of the stator winding. Another form is the *series repulsion-motor*, in which a part of the supply voltage is impressed upon the compensating winding, a part on the armature, and their proportion varied with the speed. The commutator-motors have high starting torque and variable speed, and are used for railroading, etc. The synchronous motor consists of an armature excited by the single-phase or usually polyphase alternating supply-current, and a field excited by direct current. They can operate only at synchronism, that is, by keeping step with the generator, and therefore give absolutely constant speed. They usually have sufficient induction-motor properties to start themselves at light load. They are less severe than any other motor in their reaction on the system, and are therefore preferred for very large sizes. By their speed characteristics, motors are divided into *constant-speed motors* (direct-current shunt-, alternating-current induction-, and synchronous motors), *variable-speed motors* (shunt-motors with field rheostat, induction-motors with variable number of poles), and *heavy starting-torque motors* (direct-current series-, alternating-current commutator-motors). By their construction, motors are divided into *bipolar* and *multipolar*, *ironclad* or *protected*, and *open motors.*—**Fan motor,** a small electric motor driving a fan for creating a current of air for cooling or ventilation. The fan usually consists of a circle of inclined vanes.—**Internal-combustion motor,** a form of heat-engine in which a mixture of air and the fuel is delivered to a cylinder behind a piston and there ignited. The expansion of the air due to the combustion of the fuel, usually a hydrocarbon liquid or vapor or a gas, causes an increase in the pressure by the effort to increase in volume. That pressure forces the piston forward in the cylinder and overcomes the external resistance on the crank-shaft to which the piston is attached. This form is much used in motor-vehicles, since no boiler is required but each stroke develops its own power at its beginning. The usual cycle or succession of events in modern motors is called the *Otto cycle* or the *four-phase cycle* (see ★*cycle*1, 12). On an outgoing stroke of the piston the charge of air and fuel-vapor is drawn into the cylinder; on the return of the piston this mixture is compressed, raised in pressure and temperature, and confined in the clearance volume behind the cylinder. The mixture is ignited while thus compressed, expands (doing work against the moving piston on its second outgoing traverse), and is exhausted by the opening of an exhaust-valve on the second ingoing traverse. Then the cycle is repeated. The *two-phase cycle* compresses the mixture either in front of the piston or in a second cylinder. It flows into the cylinder behind the piston under slight pressure, and, by a stratification, acts to help expel the exhaust gases at the end of the working-stroke. The piston uncovers exhaust-ports by its outward traverse, and the burnt gases are expelled by their own pressure and the displacing action of the fresh charge. The return of the piston compresses the fresh mixture, and it expands after ignition, working the piston outward. Hence a working-stroke occurs every revolution instead of once in two revolutions as in the four-phase cycle. If the incoming charge is ignited by flame from the burnt gases while the inlet-valve is open, annoying back-firing takes place into the mixture-chamber, so that the two-phase cycle is not at its best with varying resistance. The firing of the charge is usually done by an electric spark which passes between separated insulated terminals projecting into the compression volume or clearance (see ★*spark-plug*). Governing is effected by throttling the admission of the mixture of fuel and air, or by varying the period of its admission to the cylinder during the aspirating-stroke. With the four-phase cycle four cylinders are usual, in motor-car practice, in order to distribute the effort and to secure two work-impulses in every revolution. Such engines also balance better. They are light in weight, in proportion to power developed, and hence have come into extensive use for high-speed launches (called *motor-boats*), and have been selected to drive the dirigible air-ships which have been constructed. See *internal-combustion* ★*engine*, with cuts.—**Monocyclic motor,** an alternating-current motor having two superimposed fields in quadrature, one of which is excited by the driving or primary circuit, the other by a magnetizing circuit.—**Multiphase motor,** an alternating-current motor for use on polyphase circuits.



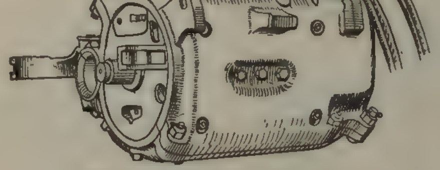
Compensated Railway-motor.

a, frame; *b*, frame-head; *c*, frame-head cover; *d*, bearing; *e*, field laminations; *f*, armature-lead; *g*, commutator-hole cover; *h*, brush-holder; *i*, oil-well cover; *k*, field- and compensator-leads.

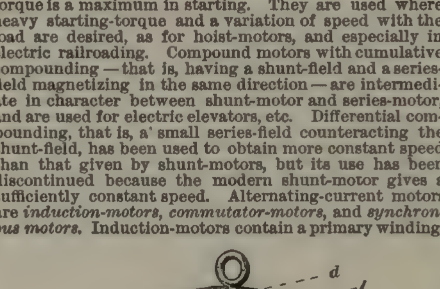


Direct-current Type Stationary Motor.

a, field-coils; *b*, commutator; *c*, armature winding; *d*, pulley.

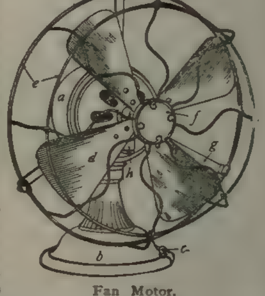


Direct-current Iron-clad Railway-motor.



Induction-motor.

a, bed-plate; *b*, foot; *c*, belt-tightening bolt; *d*, frame; *e*, end-plate; *f*, bearing; *g*, pulley; *h*, shaft; *i*, key; *k*, leads; *l*, primary or stator winding; *m*, secondary or rotor bars; *n*, rotor end-ring; *o*, rotor ventilator.



Fan Motor.

a, motor-frame; *b*, base and pedestal; *c*, starting-switch; *d*, vane; *e*, wire guard; *f*, monogram name-plate; *g*, wire guard-support; *h*, oil-cup.

—**Multipolar motor,** an electric motor which has more than two poles.—**Octopolar motor,** an electric motor with eight poles.—**Open-coil motor,** an electric motor in which only one coil of the armature is in circuit at a time.—**Overtype motor,** a bipolar electric motor which has the armature below the field-magnets.—**Panchronous motor,** in *elect.*, a motor which tends to assume a fixed characteristic speed differing by a certain amount from the speed of synchronism.

> Such a motor being neither a synchronous nor a non-synchronous motor is called a *panchronous motor.*
> *Electrical World*, Nov. 14, 1903, p. 811.

Pilot-motor, in *elect.*, a small motor used to move automatically the controlling devices of any circuit or system of circuits.

> The invention is designed to overcome these objections, and to this end a *pilot-motor* is used for intermittently moving the regulator, its movement being stopped when the starting current exceeds a predetermined limit.
> *Elect. Rev.*, Sept. 24, 1904, p. 495.

Polyphase induction-motor, an electric motor with alternating magnetic field and a short-circuited armature: designed for use on a polyphase circuit.—**Polyphase motor,** an electric motor driven by two or more alternating currents differing in phase; a motor designed to be operated in a polyphase circuit.—**Pyromagnetic motor,** an electric motor the action of which depends upon the influence of temperature on the magnetization of iron.—**Repulsion motor.** See *electric* ★*motor.*—**Rheostatic motor,** in *elect.*, a motor connected with and automatically regulated by a rheostat.—**Series-, shunt-motor.** See *electric* ★*motor.*—**Single-phase motor,** an electric motor operated by means of an alternating, single-phase current.—**Solar motor,** an engine which uses the direct heat from the sun's rays as a motive power. Such motors involve a series of reflecting-surfaces to reflect the radiant heat from the sun, which strikes a large area, and concentrate it on a definite heating surface.—**Split-phase motor,** a single-phase alternating-current motor in which the starting effort is produced by dividing the supply current in two branch currents differing in phase from each other.—**Squirrel-cage, synchronous motor.** See *electric* ★*motor.*—**Transformer motor.** Same as *induction-motor.* See *electric* ★*motor.* [Rare.]

II. *a.*—**Absolute motor field,** a region of the cerebral cortex in which a lesion is always followed by impaired motion, as distinguished from a *relative motor field,* in which a lesion may or may not be followed by motor disturbance.—**Motor aphasia, center, economy,** etc. See ★*aphasia,* etc.—**Motor point,** the point corresponding to that at which a motor nerve enters a muscle, where an electrode must be placed to produce the maximum of contraction.—**Motor reaction, reflex, region, rhythm.** See ★*reaction,* etc.—**Motor root,** the root of a spinal nerve which contains the motor fibers only.

motor-bicycle (mō′to̤r-bī″si-kl), *n.* Same as ★*motor-cycle.*

motor-boat (mō′to̤r-bōt), *n.* A launch driven by an internal-combustion motor using a hydrocarbon such as gasolene, naphtha, kerosene, or alcohol as a source of fuel. See ★*autoboat.*

motor-break (mō′to̤r-brāk), *n.* A rotary interrupter for induction-coils. See ★*interrupter* (*a*).

motor-bus (mō′to̤r-bus), *n.* An automobile omnibus. *Daily Chronicle,* Sept. 11, 1905. [Colloq.]

motor-car, *n.* **2.** A mechanically propelled vehicle or automobile. The term is used to include all classes of automobiles, from the racing-machine, in which speed is the prime requisite, to the commercial vehicle, in which speed is of no moment, but carrying capacity for loads is desired.

motor-carist (mō′to̤r-kär-ist), *n.* One who uses a motor-car, especially for pleasuring.

> Now that the cyclist and *motor-carist* travel over the whole of the roads of the country the neglect of our ancient roadway system is very apparent.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 764.

motor-cell (mō′to̤r-sel), *n.* One of the cells of the spinal cord of vertebrates which has its neuraxon continued into a motor nerve-fiber: distinguished from *sensory* ★*cell.*

motor-coach (mō′to̤r-kōch), *n.* A railway-car carrying within itself a motor to propel it on the rails without an attached locomotive. The motor may be a steam-engine or an internal-combustion motor.

motor-cycle (mō′to̤r-sī′kl), *n.* A bicycle or tricycle operated by some form of motor as well as by pedals.

motor-drive (mō′to̤r-drīv), *n.* An arrangement for driving a machine, or a small group of machines, by an electric motor.

motor-driven (mō′to̤r-driv″n), *a.* Driven or propelled by a motor or engine: applied to vehicles.

motor-fluid (mō′to̤r-flö″id), *n.* Any fluid used as a means of conveying heat, motion, or energy from one point to another.

motor-generator (mō′to̤r-jen′e̤-rā-to̤r), *n.* In *elect.*, an apparatus which changes one form of electrical power into another by means of two separate machines, a motor and a generator, permanently connected together. See ★*converter,* 3, ★*dynamotor,* and *motor-*★*generator.*

motoring (mō′to̤r-ing), *n.* The art of driving or riding in an automobile or motor-car; the sport of driving motor-cars.

> The Bennett Cup race is the *motoring* Derby, the blue ribbon of the automobile world. The approaching contest is the sixth running, it having been won by France three times and by Great Britain and Germany each once.
> *Automobile Topics,* European Sup., May 27, 1905, p. 2.

motorist (mō′to̤r-ist), *n.* One who uses a motor-vehicle in traveling for pleasure or on business.

> In the little manual before us, the same author describes concisely the theory and action of the motor bicycle, and provides in text and illustration just the kind of information which the *motorist* will find of service.
> *Nature,* Feb. 5, 1903, p. 316.

motorization (mō″to̤r-i-zā′sho̤n), *n.* In *psychol.*, apprehension in motor or kinesthetic terms of an auditory or visual stimulus.

> The *motorization* of a word [seen] would seem to have often been present and disregarded.
> *Amer. Jour. Psychol.*, VII. 303.

motorize (mō′to̤r-īz), *v. t.*; pret. and pp. *motorized,* ppr. *motorizing.* [*motor* + *-ize.*] In *psychol.*, to apprehend a visual or auditory stimulus in motor or kinesthetic terms.

> The fourth page was *motorized,* at normal speed, but without lip-movement. *Amer. Jour. Psychol.*, XII. 295.

motorman (mō′to̤r-man), *n.*; pl. *motormen* (-men). **1.** One whose business it is to drive a motor-car or automobile vehicle.—**2.** A man who operates a motor; specifically, one who operates a railway motor.

motormeter (mō′to̤r-mē″tėr), *n.* In *elect.*, an integrating wattmeter (that is, a meter which registers the total electric power passing over the circuit) based on the principle of the electric motor, either the commutator motor (Thomson recording wattmeter) or the induction-motor. See *electric* ★*motor.* All electric meters installed for recording the power consumed by a customer are now motormeters. *Elect. World and Engin.*, June 4, 1904, p. 1095.

motor-minded (mō′to̤r-mīn″ded), *a.* In *psychol.*, endowed with a mental constitution such that one thinks, remembers, imagines, dreams, etc., principally in motor or kinesthetic images; specifically, endowed with a kinesthetic memory; more specifically, endowed with a verbal memory of the kinesthetic type.

> Consonants were not thought to be generally more important than vowels for word perception. The relative importance of these elements might depend upon the reader's tendency to be *motor* or auditory *minded.*
> *Amer. Jour. Psychol.*, XI. 297.

motor-mindedness (mō″to̤r-mīn′ded-nes), *n.* In *psychol.*, a type of mental constitution characterized by the predominance, throughout the intellectual processes, of motor or kinesthetic images; specifically, kinesthetic or motor memory type; more specifically, kinesthetic or motor verbal memory type. *Baldwin,* Dict. Philos. and Psychol., II. 571.

motorneer (mō′to̤r-nēr′), *n.* [*motor* + (*engi*)*neer.*] An objectionable substitute for ★*motorman* (which see).

motorogerminative (mō″to̤r-o̤-jėr′mi-nā̤-tiv), *a.* In *embryol.*, giving rise to or developing into the musculature: said of portions of the middle germ-layer, or mesoderm.

motorphobe (mō′to̤r-fōb), *n.* [*motor* + Gr. -φοβος, < φοβεῖν, fear.] One who dislikes motor-cars or automobiles; one who has a strong prejudice against motor-cars. [Rare.]

> From pillar to post the poor motorist is pushed, and no Pariah was more persecuted than he is in some places. The time will come when . . . the *motorphobes* will wonder what ever possessed them to act so foolishly.
> *Automobile Topics,* May 27, 1905, p. 448.

motor-shaft (mō′to̤r-shȧft), *n.* **1.** The shaft of an electric or other motor.—**2.** The shaft in an automobile or other machine which is directly connected with the crank-shaft of the engine.

motor-vehicle (mō′to̤r-vē″hi-kl), *n.* A vehicle containing an engine or motor which propels it; an automobile.

motor-wagon (mō′to̤r-wag″o̤n), *n.* **1.** A motor-car.—**2.** An automobile vehicle, smaller than the motor-truck, designed for business use.

motor-wheel (mō′to̤r-hwēl), *n.* **1.** A motor-cycle.—**2.** A self-propelling truck, consisting of an axle and wheels carrying the driving-power, which can be fastened to the body of a carriage or wagon in place of the front axle and wheels, and used to propel the vehicle; a fore-carriage.

motse (mōt′se), *n.* [Heb.] See ★*seder.*

mottle, *n.* **2.** One of the spots or blotches which together constitute a mottling.—**3.** *pl.* See *diseased* ★*butter.*

mottled, *p. a.*—**Mottled-top disease.** Same as *mosaic* ★*disease.*

motuca-fly (mo̤-tö′kā̤-flī), *n.* [Braz. Pg. *motuca,* < Tupi *mutucuna.*] A large Brazilian tabanid fly, *Hadrus lepidotus,* which makes such a large and deep puncture that much bleeding may follow the bite.

mouche, *n.* **2.** In the hurdy-gurdy, the open string next to the lowest one, usually tuned to the G next below middle C.

moucheté (mösh-tā′), *n.* [F., 'spotted,' pp. of *moucheter,* spot, mark with fly-specks, < *mouche,* fly: see *mouche.*] The black end of the wheat grain due to a black rich soil and moist climate.

mougat (mö′gat), *n.* Same as ★*mucket.*

mouillé (mö-yā′), *a.* [F., pp. of *mouiller,* make wet, moisten, soften, make liquid, < LL. **molliare,* for L. *mollire,* soften, < *mollis* (> F. *mou*), soft.] Made 'liquid,' as a sound; applied especially to the consonant *l* as pronounced with a following *y* sound as in French -(*i*)*ll*-, Spanish *ll,* Italian *gl*(*i*), and English *ll*(*i*) in *brilliant, million,* etc.

> The 36th [letter of the Cyrillic Alphabet] . . . softens a preceding letter, giving it a *mouillé* sound.
> *Encyc. Brit.*, I. 614.

mouillure (mö-yür′), *n.* [F., < *mouiller,* make liquid; see ★*mouillé.*] The pronunciation of *l* with a following *y* sound. *Scripture,* Exper. Phonetics, p. 316.

mouket (mö′ket), *n.* Same as ★*mucket.*

moulleton (möl-toṅ′), *n.* [Trade F. ?] A fabric for women's wear, having a satin-armure weave.

Moulmein cedar. See ★*cedar.*

Mound-building ant. See ★*ant*¹.

mound¹, *v.* **II.** *intrans.* To form into mounds; become piled up into mounds.

> The enormous masses of ice, thrust under [the brig] . . . by the action of repeated pressures, had glued themselves together so completely, that we remained cradled in a mass of ice exceeding twenty-five feet in solid depth. . . . Our ice-saw with great labor buried its length in the floe, . . . but the submerged material is so thick that it has little or no effect. Wedging, by billets of wood between her sides and the *mounding* ice, was equally ineffectual.
> *Kane,* in U. S. Grinnell Exped. (First Exped., 1850), [p. 405.

mound-lily (mound′lil″i), *n.* See ★*lily.*

mound-planting (mound′plan″ting), *n.* In *forestry,* a method of planting on wet ground in which the seeds or young trees are planted on mounds, ridges, or hills. Also called *ridge-planting* and *hill-planting.*

mound-turkey (mound′tėr″ki), *n.* The Australian megapod or mound-builder.

mount², *v. t.*—**To mount a breach.** See ★*breach.*

mount², *n.* **3.** A trumpet signal for mounting.

mountain, *n.*—**Block mountain,** a mountain produced by block-faulting and tilting in such a manner as to develop escarpments of great relief. See ★*block,* 18, with cut.—**Embayed mountain,** a mountain near the sea that has been depressed so that the ocean enters the valleys, as, for example, on the coast of southwestern Ireland.—**Folded mountain,** a mountain formed by anticlinal folding.—**Mountains of circumdenudation,** the remnants of the continents left by rivers as they eat out deep valleys and gorges: distinguished from mountains due to the folding of strata, to faulting, or to other geological processes.—**Mountain system,** in *geol.*, a group of parallel or consecutive mountain-ranges of the same age.

Embayed Mountains.

> A *mountain system* includes all ranges in a region made in different, more or less independent, geosynclines at the same epoch.
> *Dana,* Manual of Geol. (4th ed.), p. 389.

Residual mountain, a mountain whose origin involves the removal by gradual erosion of a large neighboring volume of former mountains or highlands.—**Subdued mountain,** a mountain which has been so much worn down as to have lost its peaks and cliffs and become covered with its own detritus.—**Subtuberant mountain,** a mountain elevated by an igneous intrusion among or beneath its basement rocks.

mountain-ash, *n.* **3.** See *Texas* ★*ash*¹.

mountain-bay (moun′tạn-bā), *n.* *Franklinia Alatamaha.* See *Gordonia* and ★*Franklinia.*

mountain-clover (moun′tạn-klō″vėr), *n.* A papilionaceous plant, *Trifolium montanum.*

mountain-devil (moun′tạn-dev″l), *n.* The small spiny Australian lizard, *Moloch horridus.* See cut at *thorn-devil.*

mountain-elder (moun′tạn-el″dėr), *n.* See ★*elder*^{2}.

mountain-elm (moun′tạn-elm″), *n.* See ★*elm.*

mountain-flax, *n.*, **1.** (*a*) Same as *purging-flax.* (*b*) Same as *Seneca snakeroot* (which see, under *snakeroot*). (*c*) The lesser centaury, *Centaurion Centaurium.* Also called *bitter-herb* and *earth-gall.*

mountain-flower (moun′tạn-flou″ėr), *n.* A variety of crane's-bill, *Geranium sylvaticum.*

mountain-heather (moun′tạn-heᴛʜ″ėr), *n.* Same as *sand-myrtle* (which see, under *myrtle*).

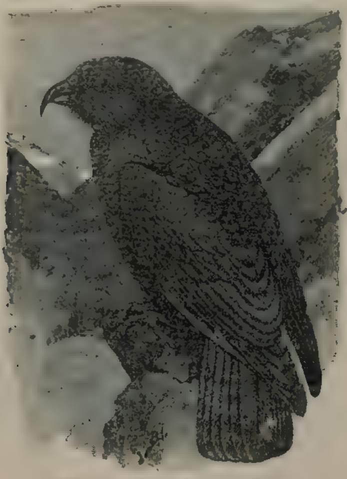
mountain-hummer (moun′tạn-hum″ėr), *n.* A humming-bird of the genus *Oreotrochilus,* found high up on the Andes. Also called *hill-star.*

mountain-larch (moun′tạn-lärch), *n.* A fir, *Larix lyalli,* of the Rocky Mountains.

mountain-moss (moun′tạn-môs), *n.* See ★*moss*^{1}.

mountain-oak (moun′tạn-ōk), *n.* See ★*oak.*

mountain-parrot (moun′tạn-par″ọt), *n.* The kea, *Nestor notabilis,* of New Zealand, which attacks and kills sheep.



Mountain-parrot (*Nestor notabilis*).

mountain-partridge (moun′tạn-pär″trij), *n.* A common name of a large West Indian ground-pigeon, *Geotrygon montana.*

mountain-pheasant (moun′tạn-fez″ạnt), *n.* See *mountain* ★*curassow.*

mountain-plover (moun′tạn-pluv″ėr), *n.* A small plover, *Ægialitis montana,* related to the killdeer and found on the upland plains of the western United States.

mountain-quail (moun′tạn-kwāl″), *n.* One of the North American quails, somewhat larger than the familiar bob-white and readily distinguished by a slender tuft of black plumes on either side of the head. The general color is slaty-blue, marked beneath and on the sides with white and chestnut. It inhabits the mountain regions of Oregon, California, and Nevada.

mountain-range (moun′tạn-rānj), *n.* A range of mountains; specifically, in *geol.*, the series of more or less parallel ridges formed over the area and border of a single anticlinal or synclinal mountain-fold considered as a unit. *Dana,* Manual of Geol. (4th ed.), p. 389.

mountain-rose, *n.* **2.** The rhododendron.

mountain-rush (moun′tạn-rush), *n.* *Ephedra antisyphilitica,* the common joint-fir of the western United States, with somewhat the aspect of a scouring-rush.

mountain-sheep, *n.* No less than six species and two subspecies of *Ovis* have been described from North America, but it is possible that one or two of these may not stand the test of further research. The northernmost species is the white or Dall's sheep, *O. dalli,* widely spread over northern Alaska. The southernmost and smallest is *O. mexicana,* from northern Mexico and the adjoining parts of New Mexico. The black or Stone's sheep, *O. stonei,* from Alaska and British Columbia, is very dark with white belly and marks down the legs. Other species are *O. nelsoni* and *O. fannini.*

mountain-sickness (moun′tạn-sik″nes), *n.* A morbid condition, marked by various distressing symptoms, caused by very high altitudes.

> *Mountain-sickness* results from a diminution in the O[xygen] fixed by the blood, and from the rapid consumption of that O, but also from defect of adaptation of the organism, either from causes due to itself (less rapid mobilization and deficient increase of the red corpuscles, deficient increase in pulmonary ventilation, etc.); or by a less regular intervention of some of the accelerating atmospheric conditions (light, ozonization, etc.).
> *Med. Record,* April 4, 1903, p. 537.

mountain-silverspot (moun′tạn-sil″vėr-spot), *n.* See ★*silverspot.*

mountain-sucker (moun′tạn-suk″ėr), *n.* See ★*sucker.*

mountain-thrush (moun′tạn-thrush), *n.* *Greocincla lunulata,* one of the thrush family, found in Australia and Tasmania.

mountant (moun′tạnt), *n.* [*mount*^{1} + *-ant,* after F. *montant.*] In *photog.*, a paste or other adhesive substance used in mounting prints.

> Starch, although much employed as a *mountant,* should be carefully used. Unless quite pure and fresh it is very dangerous, as it is very likely to become acid and destroy the print upon which it is laid.
> *Woodbury,* Encyc. Dict. of Photog., p. 293.

mounted, *p. a.* **4.** In *organ-building,* said of a pipe or a stop which is set up away from the general wind-chest to which it belongs, usually as a part of the display-pipes: as, a *mounted* diapason.

Mount Vernon series. See ★*series.*

mourner^{1}, *n.* **5.** A penitent, especially one who makes public announcement of a desire for salvation: used in Methodist churches.— **Mourners' bench,** one of the front seats in a Methodist church which the mourners, that is, the penitents, occupy, thus publicly showing their anxiety as inquiring sinners and their desire for salvation.

Mourning horse-fly. Same as *black* ★*gadfly.*

mouse, *n.* **10.** A device used in underground pipe-conduits to get cables into the tubes after the latter have been laid. It consists of a small conical piece of wood to the rear end or butt of which is fastened a washer of leather, which is a little larger than the diameter of the tube. A fine wire is attached to the block, which is then inserted in the tube, with air-pressure from an air-pump applied behind it against the washer. The leather is forced out cup-wise and converts the block into a piston which carries the wire forward to the next manhole-opening, where it drops out, leaving the wire continuous to the previous opening. A cord and rope can then be drawn through the duct and, finally, the insulated cable.

> A fine wire is sometimes drawn through a duct by a conical piece of wood with a thin leather washer filling the duct, and forced ahead by the air pressure at the rear, which is exerted through the application of an air pump at the front end of the duct at the next manhole. This piece of wood is termed the "*mouse,*" and the name is probably responsible for the persistent story that lines are first drawn through the conduits by a fine string tied to the tail of a tame rat who has been taught to do this work. *Jour. Franklin Inst.*, March, 1905, p. 185

Dancing mouse. See *waltzing* ★*mouse.*— **Pouched mouse.** (*a*) See *pouched.* (*b*) Any one of several small marsupials of the genus *Phascogale,* so called from their strong resemblance to a mouse or rat.— **Red-backed mouse,** a small and common field-mouse, *Evotomys rutilus,* of Northern Europe. The name is also applied to various species of the same genus found in North America, especially *E. alascensis.*— **Spiny mouse,** any one of a number of small rodents characterized by having small flattened spines mixed with the fur. The typical species belong to the genera *Echimys* and *Loncheres.* With the exception of one species from Africa all are South American. See *spiny rat,* under *spiny.*— **Waltzing mouse,** a breed of domesticated mice which has the habit of spinning rapidly around. This habit is said to be due to a malformation of the semicircular canals of the ear, the function of these being to preserve the equilibrium. Also called *dancing mouse.*

mouse-hare (mous′hãr), *n.* A small rodent of the genus *Ochotona,* more commonly known as a *pika.* See cut under *Lagomys.*

mousle (mou′zl), *v. t.*; pret. and pp. *mousled,* ppr. *mousling.* [Also *mouzle, mowsle, mowzle,* ‹ *mouse, v.* Compare *tousle.*] To pull about roughly. *N. E. D.*

mousse (mös), *n.* [F., lit. moss. See *moss*^{1}.] In *cookery,* a whipped cream, sweetened and variously flavored, with or without eggs, and frozen without stirring.

mousseline-de-soie (mö-sẹ-lēn′dė-swo′), *n.* [F.: *mousseline,* muslin; *de,* of; *soie,* silk.] A thin and gauzy silk muslin, sometimes embroidered.

Moustierian (mös-ti-ē′ri-ạn), *a.* Of or pertaining to Moustier, in France: a term used in the classification of Paleolithic human relics according to their workmanship and degree of finish, and applied to such as have the character of the flint scrapers found in the sands of Moustier. They are regarded as intermediate in workmanship between the ruder Acheulian and the more deftly made Solutrian implements, and it has hence been inferred that they belong to a correspondingly intermediate period. *Keane,* Ethnology, p. 86.

> III. Glacial period: *Mousterian* culture (cold climate).
> *Smithsonian Rep.*, 1906, p. 374.

moutac (mö-täk′), *n.* [F. spelling of a native name?.] In *entom.*, the name in Mauritius of a large cerambycid larva, possibly of the genus *Prionus,* which is, or was, dressed and eaten by both whites and natives. *Kirby and Spence.*

mouth, *n.* **3.** (*g*) In transverse flutes, the edge of a mouth-hole. See ★*mouth-hole.* (*h*) In *metal.*, the opening through which a furnace is charged with fuel, ore, etc. (*i*) In *mining,* a mine entrance. [Scotch.]— **Glass-blowers' mouth,** a chronic swelling of the parotid gland sometimes seen in glass-blowers.— **To give mouth,** to bay or cry out: said of hounds upon a trail.

mouth-board (mouth′bōrd), *n.* In *exper. psychol.*, a strip of wood, hollowed out in front and smeared with sealing-wax, for the reception of the teeth: used with or without a head-rest to secure a constant position of the head in certain experiments upon visual space perception, etc. *E. B. Titchener,* Exper. Psychol., I. ii. 245.

mouth-cook† (mouth′kůk), *n.* A cook; especially a chef in the household of a king or great noble.

mouth-frame (mouth′frām), *n.* In ophiurans, one of the large calcareous plates of the oral skeleton.

mouth-hole (mouth′hōl), *n.* In transverse flutes, the hole in the side of the tube against the edge of which the player's breath is so directed as to produce the tone.

mouth-mapping (mouth′map″ing), *n.* In *phonetics,* the construction of maps or plans of the mouth-pharynx cavity.

> The methods of *mouth-mapping* are still so crude that at present no reliance can be placed on such calculations.
> *Scripture,* Exper. Phonetics, p. 294.

mouth-papilla (mouth′pạ-pil″ạ̈), *n.*; pl. *mouth-papillæ* (-ē). In starfishes, one of the ambulacral spines which occur in groups, one at each of the five corners of the mouth.

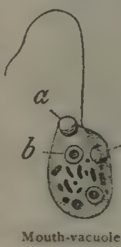
mouth-plate (mouth′plāt), *n.* **1.** Same as ★*buccal shield.*—**2.** In starfishes, one of the plates which border the mouth.—**3.** In *mining,* a cast-iron switch-plate; a plate with a raised ridge to direct car-wheels from the plate to the rails. [Scotch.]

mouth-vacuole (mouth′vak″ụ̄-ōl), *n.* In flagellate protozoans, a vacuole at the base of the main flagellum where the food enters; an oral vacuole.

mouthy, *a.* **2.** Given to grimacing or to distorting the lips or the face in speaking, etc.: as, *mouthy* children are unpleasant. [Colloq.]

moutonnée, *a.* See *roches moutonnées.*

mouz, mouzer. Simplified spellings of *mouse, mouser.*

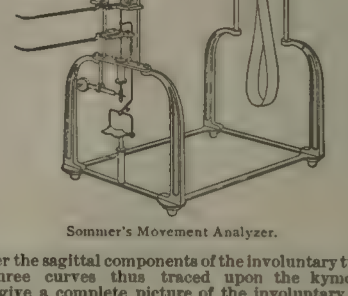


Mouth-vacuole.

a, mouth-vacuole; *b*, nucleus; *c*, contractile vacuole.

move, *n.*— **False move,** at *chess,* a move which is impossible according to the rules of the game.— **Forced move,** in *chess,* a move which one must make, having no other move at one's disposal.— **Rule of fifty moves.** See ★*rule*^{1}.— **To get a move on one,** to begin to act; be active; hasten one's steps. [Slang.] — **To make a move.** (*a*) To take action; begin active operations. (*b*) To move a piece in a game, as in checkers, chess, etc.

movement, *n.*— **Illusions of movement.** See ★*illusion,* 2.— **Movement analyzer,** in *physiol.* and *exper. psychol.*, an instrument for analyzing and recording the involuntary tremor of the hand and forearm. The movement analyzer of R. Sommer consists of a metal frame carrying a sling for the forearm and a rest for the first and second fingers of the hand. This rest is connected by a complex lever system with three writing-levers, one of which records the vertical, another the transverse, and another the sagittal components of the involuntary tremor. The three curves thus traced upon the kymograph drum give a complete picture of the involuntary movements made, with analysis into their three spatial dimen-



Sommer's Movement Analyzer.

sions. Also called *tridimensional analyzer.*—**Periodic movement,** specifically in *bot.*, a manifest change of position in plant-organs responding to diurnal changes; also, a movement taking place in a few plants by very short periods, as in the telegraph-plant. See *sleep*, 5.—**Swedish movements,** in *med.*, a form of kinesitherapy, or treatment of disease by means of active and passive exercises, devised by Peter Henrik Ling of Sweden.

movement-contrast (möv′mẹnt-kon″tråst), *n.* The reciprocal influence of eye-movements of opposed directions, supposed by some psychologists to explain certain phenomena of optical illusion.

movement-illusion (möv′mẹnt-i-lū″zhọn), *n.* In *psychol.*, an illusory perception of motion. The illusion may be visual (apparent movement of an object in space) or kinesthetic (apparent movement of a part of one's own body). See ★*illusion*, 2.

> It has sometimes been thought that the act of will suffices of itself to explain these subjective *movement-illusions.*
> *W. Wundt* (trans.), Human and Animal Psychol., p. 187.

movement-sensation (möv′mẹnt-sen-sā″shọn), *n.* In *psychol.*: (*a*) Any sensation (or, more properly, any sensation-complex) the office of which is to inform us of the movement of objects in space, or of our own body or of some part of it. In this significance, the term must include sensations of sight and hearing, as well as kinesthetic sensations. It is formed on the analogy of 'weight sensation,' 'resistance sensation,' etc.; and its use is to be condemned, since it substitutes end or function for psychological analysis. (*b*) The sensation (or, more properly, the sensation-complex) directly aroused by movement of the body or of some part of it; a kinesthetic sensation.

> The action of the vocal muscles occurs under guidance of the sensations of movement obtained from them. The association of the correct *movement-sensation* ordinarily occurs with the aid of hearing the sounds produced.
> *Scripture*, Exper. Phonetics, p. 387.

(*c*) A specific sensation whose adequate stimulus is movement. Some psychologists posit movement-sensations of sight, of touch, etc., but it is probable that the articular or joint sensation of kinæsthesis is the only true movement-sensation under this heading.

> Joints, on the other hand, constitute a very important factor, so far at least as concerns appreciation of position and change of position. . . . The distinction between position-sensations and *movement-sensations* is important.
> *G. F. Stout*, Manual of Psychol., p. 192.

Moving platform or **sidewalk.** See ★*platform.*—**Moving picture.** See *moving-picture machine*, under ★*picture.*

mowkowk, *n.* Same as ★*mocuck.*

moxie-berry (mok′si-ber″i), *n.* The creeping snowberry, *Chiogenes hispidula.*

Moxostoma (mok-sos′tọ-mä), *n.* [NL., an error for **Myzostoma*, irreg. ‹ μυζᾶν, suck, + στόμα, mouth.] A genus of suckers, numerous in species, found in the United States east of the Rocky Mountains.

mozambique (mō-zam-bēk′), *n.* [Named with reference to *Mozambique* in Africa.] A loosely woven fabric for women's wear, having a cotton warp and a woolen weft.—**Mozambique spindles.** See ★*spindle.*

mozemize (mō′zem-īz), *n.* See ★*moosemise.*—**Indian mozemize,** the American mountain-ash, *Sorbus Americana.*

mozo (mō′thō), *n.* [Sp. *mozo*, Pg. *moço*, a young man or boy.] A man-servant.

M. P. An abbreviation (*b*) of *Master of Painting*; (c) of *man-power*; (*d*) of *Member of Police*; (*e*) of *Methodist Protestant*; (*f*) of *Metropolitan Police*; (*g*) [*l. c.*] of the Latin *millia passuum*, a thousand paces: the Roman mile; (*h*) of *Municipal Police.*

M. P. C. An abbreviation of *Member of Parliament in Canada.*

M.Ph. An abbreviation of *Master of Philosophy.*

m. p. h. An abbreviation of *miles per hour.*

M. P. L. An abbreviation of *Master of Polite Literature.*

M. P. P. An abbreviation of *Member of the Provincial Parliament.*

M. P. S. An abbreviation (*a*) of *Member of the Pharmaceutical Society*; (*b*) of *Member of the Philological Society*; (c) [*l. c.*] of *meter per second.*

mr. An abbreviation of *millier.*

M. R. An abbreviation of *Master of the Rolls.*

M. R. A. S. An abbreviation of *Member of the Royal Asiatic Society.*

M. R. C. C. An abbreviation of *Member of the Royal College of Chemistry.*

M. R. C. S. An abbreviation of *Member of the Royal College of Surgeons.*

M. R. C. V. S. An abbreviation of *Member of the Royal College of Veterinary Surgeons.*

M. R. G. S. An abbreviation of *Member of the Royal Geographical Society.*

M. R. I. An abbreviation of *Member of the Royal Institution.*

M. R. I. A. An abbreviation of *Member of the Royal Irish Academy.*

M. R. S. L. An abbreviation of *Member of the Royal Society of Literature.*

M. R. U. S. I. An abbreviation of *Member of the Royal United Service Institute.*

M. S. An abbreviation (*b*) of *Master of Science*; (*c*) of *Master of Surgery*; (*d*) [*l. c.*] of *month's sight*; (*e*) of Latin *Memoriæ Sacrum*, sacred to the memory (of, etc.).

M. S. A. An abbreviation (*a*) of *Master of Scientific Agriculture*; (*b*) of *Member of the Society of Arts.*

M. Sc. An abbreviation of *Master of Science.*

M. S. C. An abbreviation of *Madras Staff Corps.*

M. S. H. An abbreviation of *Master of Staghounds.*

m. s. l. An abbreviation of *mean sea-level.*

M. S. S. An abbreviation of *Member of the Statistical Society.*

m. t. An abbreviation of *mean time.*

mth. An abbreviation of *month.*

Mts. [*cap.* or *l. c.*] An abbreviation of *Mountains.*

mu (mū), *n.* The Greek letter M. μ (μῦ, earlier μῶ), corresponding to the English *M*, *m*. See *M* and ★*mem.*

muang (mū-äng′), *n.* [Siamese *muang*, *meuang*, kingdom, country, city.] A town; especially, the official residence of the governor of a province. *Geog. Jour.* (R. G. S.), XI. 469. [Siam.]

muawinine (mö-ä′wi-nin), *n.* [E. African *muawi*, a tree of Mozambique, + *-in* + *-ine*^{2}.] An amorphous syrup-like alkaloid contained in a tree of Mozambique.

mucambo (mö-käm′bō), *n.* [Brazilian.] The village of a colony of bush negroes. [Brazil.]

mucamide (mö-kam′id), *n.* [*muc*(*ate*) + *amide.*] A colorless crystalline compound, $C_6H_8OC_4H_8O_4(CONH_2)_2$, prepared by the action of ammonia on ethyl mucate. It is the diamide of mucic acid.

mucedinaceous (mū″se-di-nā′shius), *a.* Of or pertaining to the *Mucedinaceæ.*

mucedineous (mū-se-din′ẹ̄-us), *a.* Same as ★*mucedinaceous.*

mucinic (mụ̄-sin′ik), *a.* [*mucin* + *-ic.*] Noting a dibasic acid obtained from galactose.

mucinogen (mụ̄-sin′ọ̄-jen), *n.* [*mucin* + *-gen*, producing.] Same as *mucigen.*

mucinoid, *a.* **II.** *n.* Same as ★*mucoid.*

mucinuria (mū-si-nū′ri-ạ̈), *n.* [*mucin* + Gr. οὖρον, urine.] The passage of urine containing mucin.

mucitis (mụ̄-sī′tis), *n.* [NL., ‹ *mucus* + *-itis.*] Inflammation of any mucous membrane.

muckerish (muk′ėr-ish), *a.* Of, pertaining to, or resembling a mucker. See *mucker*^{3}, 2. [Slang.]

muckerishly (muk′ėr-ish-li), *adv.* In a muckerish manner; with ill-breeding; coarsely; roughly; noisily. *Outing*, Jan., 1906, p. 494. [Slang.]

muckerism (muk′ėr-izm), *n.* Underbreeding; coarseness; low roughness; the conduct of a 'bounder' or mucker. [Slang.]

> Both battalions were equally guilty, and we hope it does not mean an entrance of *muckerism* into our Army and Navy games.
> *Outing*, Jan., 1906, p. 494.

mucket (muk′et), *n.* [Also *mouket*, *mougat*; origin obscure.] A large dark-brown mussel, *Lampsilis ligamentinus*, found in the Mississippi river and used in the manufacture of pearl buttons.

muck-iron (muk′ī″ėrn), *n.* Iron which has been rolled only once after being squeezed or shingled into a bloom, in the manufacture of wrought-iron by the puddling process. Such iron contains cinder and is imperfectly welded throughout. It must be cut up, piled into fagots, again heated, and rolled into bar before it is salable.

muckite (muk′īt), *n.* [G. *muckit* (1878); named after H. *Muck.*] A yellow resin from the coal-beds of Neudorf, Silesia.

muckluck (muk′luk), *n.* [Also *mukluk*, *maclock*, ‹ Eskimo *magdlag*, ground-seal.] 1. In Alaska, a seal; also sealskin.

> Soles of "*maclock*," or sealskin.
> *Whymper*, Travels in Alaska, p. 136.

> The Innuit name of the same seal is *mukluk*, a word which is also used by the Russians to designate seal-skin.
> *W. H. Dall*, Alaska, p. 533.

2. The high boot of the Alaskan Eskimo and of the Aleutians, made of sealskin, with soles of ground-seal hide. Also spelled, in this sense, *muck-a-luck.*

> The *muck-a-lucks* . . . are water-tight, clumsy, evil-smelling, so large that hay is put inside to make a good bed for the foot, and so loose that leather thongs must be wrapped around instep and ankle.
> *Pall Mall Mag.*, Jan., 1904, p. 56.

muckna (muk′nạ̈), *n.* [Hind. *makhnā*, ‹ Skt. *matkuna*, a bug, a tuskless elephant, etc.] An East Indian name for a tuskless elephant; strictly speaking, a tuskless male elephant, since the female Indian elephants seldom develop tusks.

muckweed (muk′wēd), *n.* 1. The curled-leaved pondweed, *Potamogeton crispus.*—2. The lamb's-quarters or pigweed, *Chenopodium album.*

mucobromic (mū-kō-brō′mik), *a.* [L. *mucus*, mucus, + *bromic.*] Noting an acid, a colorless compound, OCHCBr: CBrCOOH, prepared by the action of bromine on pyromucic acid. The acid crystallizes in lustrous leaflets and melts at 120° C.

mucocartilage (mū-kō-kär′ti-lạ̄j), *n.* [L. *mucus*, mucus, + *cartilago*, cartilage.] In *histol.*, a soft cartilage the cells of which are embedded in a limpid, mucous-like matrix.

mucochloric (mū-kō-klō′rik), *a.* [L. *mucus*, mucus, + *chlor*(*in*) + *-ic.*] Noting an acid, a colorless compound, OCHCCl: CClCOOH, prepared by the action of chlorin on pyromucic acid. The acid crystallizes in rhombic plates and melts at 125° C.

mucocutaneous (mū″kō-kụ̄-tā′nẹ̄-us), *a.* [L. *mucus*, mucus, + *cutis*, skin. See *cutaneous.*] Relating to both mucous membrane and skin.

muco-enteritis (mū-kō-en-tẹ-rī′tis), *n.* [NL., ‹ L. *mucus*, mucus, + Gr. ἔντερον, intestine, + *-itis.*] Intestinal catarrh.

mucofibrous (mū-kō-fī′brus), *a.* [L. *mucus*, mucus, + *fibra*, fiber, + *-ous.*] Both mucous and fibrous: as, the *mucofibrous* tissue of the umbilical cord, which is chiefly mucous, with enough fibrous tissue to give it support.

mucoid, *a.*—**Mucoid tumor.** Same as *myxoma.*

II. *n.* A viscid, glairy substance derived from connective tissue and containing a large amount of mucin.

> It may be mentioned that some holothurians have the remarkable property of converting their tough, brown, leather-like skin into *mucoid* within a few hours, on their being brought into air. The whole skin may undergo this viscous transformation.
> *Encyc. Brit.*, XXXI. 517.

mucomembranous (mū-kō-mem′brạ̄-nus), *a.* [L. *mucus*, mucus, + *membrana*, membrane, + *-ous.*] Relating to mucus and a membrane: noting a form of enteritis or enterocolitis in which there is a discharge of mucus and of membranous patches with the intestinal passages.

muconic (mụ̄-kon′ik), *a.* Noting an acid, a colorless compound, HOCOCH: CH.CH: CH-COOH, prepared by the action of alcoholic potassium hydroxid on 3, 4-dibromadipic acid. It crystallizes in small needles and decomposes at about 320° C.

mucoraceous (mū-kọ̄-rā′shius), *a.* Pertaining or belonging to the family *Mucoraceæ*, or mold family.

mucosal (mụ̄-ko′sạl), *a.* [L. *mucosa* (sc. *membrana*) + *-al*^{1}.] Relating to mucous membrane.

mucosanguineous (mū″kō-sang-gwin′ẹ̄-us), *a.* [L. *mucus*, mucus, + *sanguis* (*sanguin-*), blood, + *-e-ous.*] Both mucous and bloody.

mucosanguinolent (mū″kō-sang-gwin′ọ̄-lẹnt), *a.* Same as ★*mucosanguineous.*

Mucous cancer. Same as *colloid cancer.*—**Mucous edema.** Same as *myxedema.*—**Mucous fermentation.** See *mucic* ★*fermentation.*—**Mucous patch.** See ★*patch.*—**Mucous râles.** Same as *moist râles* (which see, under *râle*).—**Mucous tubercle.** Same as *condyloma.*—**Mucous wart.** See ★*wart*^{1}.

mucronation (mū-krọ̄-nā′shọn), *n.* 1. The condition or quality of being mucronate; a mucronate process.

> The apex is often very slightly retuse, and the midrib produced into a slight spiculation or *mucronation.*
> *Buck*, Med. Handbook, III. 154.

2. In *bot.*, same as *mucro* (*b*).

mucroniform (mụ̄-kron′i-fôrm), *a.* Having the shape of a mucro; spine-like.

mucus-gland (mū'kus-gland″), *n.* See *mucous glands*, under *gland*.—**Pallial mucus-gland**, in some gastropods, a glandular area on the inner surface of the mantle.

mucusin (mū'kus-in), *n.* [Irreg. < L. *mucus* + *-in*^{2}.] Same as *mucin*.

mucus-passage (mū'kus-pas″āj), *n.* A simple or branched tube filled with mucus, often found in the tissue of certain species of *Laminaria*.

mud, *n.*—**Green mud** a name applied to a certain deep-sea mud because of its color. This extremely fine sediment covers great areas of the ocean bottom at depths of from 100 to 700 fathoms. The green mineral glauconite is a constituent. *Geikie*, Text-book of Geol., p. 106.—**Weldon mud**, the trade-name for regenerated manganese oxid obtained by the process invented by Walter Weldon as an important improvement in the production of chlorin for bleaching-powder. Since chlorin gas is prepared by the interaction of aqueous hydrochloric acid and manganese dioxid, there is left in the still a solution of manganese chlorid, which is treated with a proper quantity of slaked lime (calcium hydroxid), and an abundance of air is driven through the turbid liquid in a tall cylindrical vat. A black deposit, the Weldon mud, forms as the result of oxidation. It consists essentially of calcium-acid manganite and manganese manganite, which can be used, instead of new manganese dioxid, to act upon a fresh lot of hydrochloric acid.

mud, *v. t.* **3.** To fill with mud or soft clay, as the crevices between the logs in a log house.

mudarin (mu-dä'rin), *n.* [*mudar*(*i*) (see the def.) + *-in*^{2}.] An odorless, bitter mixture of compounds contained in the bark of madar-root, *Calotropis mudari*. It is used in India as a medicine and is also called *madarin*.

mud-barge (mud'bärj), *n.* A mud-boat; a mud-scow: usually arranged with a hopper or dumping-bottom, so that when filled by means of a dredge, or otherwise, it may be towed to a designated point and there emptied.

mud-binder (mud'bīn″dėr), *n.* See ★*soil-binder*.

mud-blow (mud'blō), *n.* A pipe with a straight-way valve leading away from the lowest point of a boiler and used for blowing out or cleaning out mud and other deposits. Also *blow-off* and *bottom-blow*.

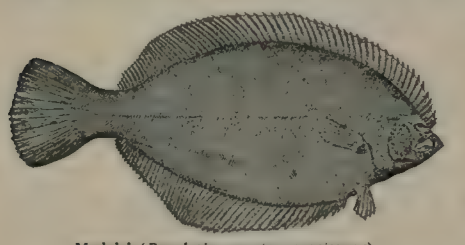
mud-boat, *n.* **2.** A low sled with wide runners, used for hauling logs in swamps.

mud-collector (mud'ko̤-lek″to̤r), *n.* A mud-drum.

mud-crack (mud'krak), *n.* In *geol.*, a shrinkage-crack produced in mud when it dries and sometimes filled with matter later introduced.

mudd (mud), *n.* [Ar.?] A measure of capacity used in Morocco, equal to 1.28 English bushels.

mud-dab (mud'dab), *n.* The winter flounder, *Pseudopleuronectes americanus*, found on the Atlantic coast of North America from Labrador to Chesapeake Bay.



Mud-dab (*Pseudopleuronectes americanus*).
(From Bulletin 47, U. S. Nat. Museum.)

mudder (mud'ėr), *n.* [*mud* + *-er*.] A horse which runs best on a muddy track; a mud-runner. [Racing slang.]

> The second horse was King Pepper, synonymous with mud, and the third horse, Athlone, is by Handsel, a *mudder* himself and a son of a *mudder*.
> *N. Y. Eve. Sun*, Aug. 17, 1905.

mud-digger (mud'dig″ėr), *n.* A broad, flat-bottomed boat fitted with machinery and a large scoop, or steam-shovel, for dredging the bottoms of rivers, deepening channels, etc.

mud-diver (mud'dī″vėr), *n.* Same as ★*parsley-frog*.

muddlement (mud'l-ment), *n.* A muddled or confused state or condition. [Colloq.]

> Thunder-storms, as a rule, are familiar enough and definite enough to escape the general *muddlement*.
> *Pop. Sci. Mo.*, Feb., 1901, p. 385.

mud-duck (mud'duk), *n.* Any domesticated duck.

> They are a cross between the mallard and ordinary *mud duck*, and almost a perfect imitation of the mallard.
> *Forest and Stream*, Feb. 21, 1903, p. 150.

mud-fat (mud'fat), *a.* As fat as mud; very fat: as, "veal, *mud-fat* and tender as a chicken, worth a shilling a pound," *Rolfe Boldrewood*, quoted in E. E. Morris, Austral English.

mud-flow (mud'flō), *n.* In *geol.*: (*a*) A characteristic structure seen in certain shales or hardened mud-rocks, and produced by the stoppage and subsequent hardening of a small flow of soft fluid mud. (*b*) A great flow of mud and water such as often attends volcanic eruptions, when rain, or hot water from the crater, gathers up fine volcanic tuff and flows with it down the sides of the volcano like a sheet of lava.

> The largest ejected block that we saw was one on the surface of the *mud-flow* between the rivers Blanche and Sèche and not more than two hundred yards from the sea coast. *Bulletin Amer. Mus. Nat. Hist.*, XVI. 347.

mud-guard (mud'gärd), *n.* A light shield so placed as to protect riders or passengers from mud thrown by the wheel of a bicycle, carriage, or motor-car.

mud-hen, *n.* **5.** A woman who dabbles in stock-gambling. [Slang.] *Clapin*, Americanisms.

mud-hole, *n.* **4.** A soft spot in granite due to decomposition. [Quarrymen's slang.]

> Knots, streaks, and "*mud holes*" must be carefully avoided in a conscientious selection of stock for monumental work.
> *W. C. Day*, in Rep. U. S. Geol. Surv., 1897-98, p. 230.

mudirieh (mö-dē-rē'e), *n.* [Also *moodirieh*; < Ar. *mudīriya*, < *mudīr*. See *mudir*.] The province administered by a mudir.

mud-land (mud'land), *n.* A marsh left dry by the ebbing tide.

mud-lark, *n.* **4.** The Australian magpie-lark, *Grallina picata*, named from its large and elaborately built mud nest.—**5.** A ★mudder (which see).

mud-lighter (mud'lī″tėr), *n.* An open flat-bottomed boat which receives the contents of the iron scoop or shovel operated by a mud-digger.

mud-lump (mud'lump), *n.* A projecting mass or lump of mud specially characteristic of the delta of the Mississippi, and produced by the local bulging of underlying soft beds because of overloading in the neighborhood, or perhaps also by the generation of confined gases.

> Within the region lie a number of "mud volcanoes," apparently analogous to the "*mud lumps*" of the Lower Mississippi, which have attracted much attention by reason of their novelty, though they are quite subordinate to the general features. *Smithsonian Rep.*, 1901, p. 71.

mud-oyster (mud'ois″tėr), *n.* See ★*oyster*.

mud-pot (mud'pot), *n.* A mud geyser.

mud-ring (mud'ring), *n.* A piece of metal so shaped as to close the bottom of a locomotive boiler or an upright boiler between the shell and the fire-box sheets.

mud-runner (mud'run″ėr), *n.* In *racing*, a horse which runs best in mud or on a muddy track; a mudder.

> This theory [of heredity] was supported yesterday [a wet, muddy day] by the result of all the races on the flat which, without exception, were won by the product of stallions that in their day were famous *mud runners*.
> *N. Y. Eve. Sun*, Aug. 17, 1905.

mud-saucer (mud'så″sėr), *n.* In *trap-shooting*, a clay pigeon or other composition target. See *clay pigeon*. [Slang.]

mud-scoop (mud'sköp), *n.* A bucket or scoop for dredging mud from the bottom of a pond, river, or the like; a machine for dredging or digging in mud or other soft material.

mudsill, *n.* **3.** Specifically, the bed-piece or bottom timber of a dam placed across the stream and usually resting on rocks or in mud.

mud-skipper (mud'skip″ėr), *n.* A name of the gobioid fishes of the genus *Periophthalmus*, from their remarkable ability to hop about on mud-flats, and even to climb trees and bushes growing near the shore. The generic name, *Periophthalmus*, refers to the prominent eyes, set close together, capable of protrusion and retraction, and furnished with a well-developed eyelid. See cut at *Periophthalmus*.

mud-wheel (mud'hwēl), *n.* In *brickmaking*, any form of tempering-machine. See *pug-mill*.

muf, *n.* and *v.* A simplified spelling of *muff*.

muff^1, *n.* **5.** A lap or fleece of fibrous material, such as the lap of waste cotton, which is taken from the comb of a combing-machine.

muff-coupling (muf'kup″ling), *n.* Same as ★*box-coupling*.

muffin^2 (muf'in), *n.* [*muff*^{2}, *v.*] One who is given to muffing or acting clumsily in playing a game, but more particularly one who in cricket or base-ball fails to retain hold on a ball which comes into his hands. See *muff*^{2}, *n.*, 3.

muffled, *p. a.* **3.** Having feathered feet, such as are found in many breeds of domesticated pigeons: thus a black, self-*muffled* tumbler is a tumbler of uniform black color with the feet and lower part of the tarsus feathered.

muffle-kiln (muf'l-kil), *n.* A closed kiln in which the enamel and gold decorations on pottery and porcelain are fired: so constructed that the flame, gases, and smoke do not come into contact with the ware. See *enamel-kiln*.

muffler, *n.* (*e*) A device to deaden or silence the explosive puff of the exhaust of hot gases from an internal-combustion motor such as is used on motor vehicles. The escape of these gases at high temperatures and pressures into the open air is followed by their expansion, with a shock to the displaced air and a noisy report. The muffler compels them to escape slowly and evenly, and by cooling them in the process less change of volume occurs. The simplest type consists of enlargements of the cross-section of the exhaust-pipe, and the discharge through a large number of small orifices. Called *silencer* in England.

mugginess (mug'i-nes), *n.* The state of being muggy.

muggy, *a.* **II.** *n.* A half-intoxicated person. [Sailors' slang.]

mug-house, *n.*—**Mug-house club.** See the extract.

> The *mug-house clubs* in Long Acre, . . . where gentlemen, lawyers, and tradesmen, used to meet in a great room, seldom under a hundred. They had a president . . . to keep the whole room in order. A harp played all the time at the lower end of the room, and, every now and then, one or other of the company rose, and entertained the rest with a song. . . . Here was nothing drank but ale, and every gentleman had his separate mug, which he chalked on the table where he sate, as it was brought in.
> *W. Chappell*, Pop. Music of the Olden Time, quoted in N. [and Q., 5th ser., II. 333.

muguet (mü-gā'), *n.* [F., name of several plants, also a disease, the thrush.] In *pathol.*, same as *thrush*^{2}.

mugwumpian (mug-wump'i-a̤n), *a.* Of or relating to mugwumps or mugwumpery.

muktar (mök'tär), *n.* A minor provincial official of the Turkish empire.

mukti (mük'ti), *n.* [Skt. *mukti*, release, deliverance, emancipation from the bonds of existence, < *mukta*, set free, released, < √*much*, let go, set free, release.] In *Hindu philos.*, release from existence: equivalent of nirvana in the Buddhist scheme.

mulada (mö-lä'dä), *n.* [Amer. Sp., < *mulo*, mule.] A drove of mules.

mulattoism (mū-lat'o̤-izm), *n.* [*mulatto* + *-ism*.] The condition of being a mulatto.

mulazem (mö-lä-zem'), *n.*; pl. *mulazemin* (-ze-mēn'). [Ar.] In the Arabic-speaking regions of northern Africa, an attendant of higher rank than a servant; a superior servant or attendant.

> The next morning, . . . I feigned sickness, and asked the chief of the *mulazemin* for permission to absent myself from morning prayers.
> *R. C. Slatin Pasha* (trans.), Fire and Sword in the [Sudan, p. 589.

mulberry, *n.*—**Bacteriosis of the mulberry.** See ★*bacteriosis*.—**Chytridiose of the mulberry.** See ★*chytridiose*.—**Mulberry-root disease.** See ★*disease*.

mulberry-body (mul'ber-i-bod″i), *n.* A segmenting egg in the morula or mulberry stage.

mulberry-fig (mul'ber-i-fig″), *n.* The sycamore-fig, or Pharaoh's fig, *Ficus Sycomorus*. See *fig*^{2}, 1, and *sycamore*, 1.

mulberry-wing (mul'ber-i-wing), *n.* An American hesperiid butterfly, *Poanes massasoit*, occurring in the eastern and middle United States, Texas, Nebraska, and Colorado.

mule, *n.* **10.** In *mech.*, a locomotive for towing canal-boats, operated by compressed air, electricity, or steam: so called because it replaces the mules usually used for towing.

> The "*mule*" has two large hooks for the towropes and has also a running board and guard hand rail, . . . so that the driver can go around the machine without dismounting.
> *Elect. World and Engin.*, Nov. 14, 1903, p. 795.

mule-gate (mūl'gāt), *n.* The floor-space in a mill occupied by the spinning-mule. *Nasmith*, Cotton Spinning, p. 409.

mule-jenny (mūl'jen″i), *n.* **1.** A spinning-jenny.—**2.** A female mule.

mule-killer, *n.* **2.** Any one of several insects, as the wheel-bug, a mantis, or a walking-stick. [Southern U. S.]

mule-mark (mūl'märk), *n.* A dark stripe on the fore part of the back of a horse or mule, considered an ancestral character.

mule-spinner, *n.* 2. Same as *mule*, 5.

mule-steerer (mūl'stēr″ėr), *n.* A mule-driver. [U. S.]

Muley brick. See ★*brick*^{2}.

mulga (mul'ga̤), *n.* [Aboriginal Australian.] 1. A long, narrow shield used by the natives of Australia, but usually only in single combat, as a protection against the native club. It is usually made from acacia wood.—2. Any one of several species of *Acacia*, especially *A. aneura*, a shrub or small tree found all over Australia, but more commonly in the arid desert region of the interior. Its dark-brown wood is very hard, and is used by the aboriginals for boomerangs, spear-sticks, and shields, while its leaves are eaten by stock and in times of drought often form their only food.

mulga-grass (mul'ga̤-gràs), *n.* Either of two Australian fodder grasses, *Danthonia penicillata*, also called *wallaby-grass*, and *Neurachne Mitchelliana:* so called because they grow in company with the tree called *mulga*.

muliebrile (mū'li-e-bril), *a.* [L. *muliebris*, of woman, + *-ile*.] Feminine; female. [Rare.]

The progeny of successive generations are not the offspring of average parents, but of pairs at the perfection and conjugal culmination of their virile and *muliebrile* excellencies. *Science*, May 17, 1901, p. 782.

mulierine (mū'li-e-rin), *a.* [L. *mulier*, woman, + *-ine*^{1}.] Female; feminine. [Rare.]

The jewel of seven stars is a carven ruby found on a queen mummy, or a mummied queen, in an Egyptian tomb and brought to England along with other lingerie of the lady, including a mummied cat. . . . Mr. Trelawney, an Englishman, rich and learned in Egyptology, had the feline and *mulierine* mummies in a strange cabinet of . . . weird and woozy curios. *The Reader*, May, 1904, p. 658.

mull^1, *v. t.* 4. In *leather-manuf.*, to soften. *C. T. Davis*, Manuf. of Leather, p. 415.

mullen, *n.*—**Turkey mullen**, a low, heavy-scented annual herb, *Piscaria setigera*, belonging to the spurge family. It is very abundant on the Pacific coast from southern California to the Columbia river. The leaves are densely stellate-pubescent and whitish, somewhat resembling those of the mullen, and the oblong smooth, shining seeds are said to be eaten by turkeys. See *California* ★*fish-poison*.

muller^1, *n.* 3. A prehistoric stone implement, so called because supposed to have been used for grinding grain. See the extract.

The objects known as *mullers* are generally flat or smooth on one side and convex on the other, sometimes with a pit on one side or both. They are mostly of granite, quartzite, or sandstone, rarely of other materials. *Fowke*, Archæol. Hist. Ohio, p. 539.

Turkey Mullen (*Piscaria setigera*).
a, portion of a plant, one fourth natural size; *b*, capsule, and *c*, seed, one and a half times natural size.

Müllerian mimicry. See ★*mimicry*.

Müller-Lyer figure. See ★*figure*.

Müller's net. See ★*net*^{1}.

mullet^1, *n.*—**Blue-back mullet.** Same as *white* ★*mullet*.—**Common mullet**, *Mugil cephalus*, found from California to Chile in great abundance.—**Fan-tail mullet**, *Mugil trichodon*, known from the Florida Keys to Brazil.—**Flat-tail mullet**, *Mugil peronii*, a mullet found in Australia.—**French mullet**, *Mugil incilis*, found in brackish waters from Rio Chágres to Pará.—**King of the mullets.** (*a*) See *king*^{1}. (*b*) *Apogon imberbis*, a Mediterranean fish.—**Red-eye mullet**, *Mugil gaimardianus*, known from the Florida Keys to Cuba.—**Red mullet**, specifically, *Upeneus vlamingii* and *Pseudupeneus porosus*.—**Sea mullet**, any mullet found in the sea; in Australia, *Mugil grandis*.—**Snip-nose mullet**, a common name of *Palinurichthys perciformis*, usually called *rudder-fish*. It is found on the Atlantic coast of North America.—**Whirligig mullet**, a very small mullet, *Querimana gyrans*, found on the South Atlantic coast of the United States.—**White mullet**, *Mugil curema*, found on both coasts of North and South America.

mullid (mul'id), *n.* Any fish belonging to the family of the mullets, or more properly the surmullets, *Mullidæ*.

mullock (mul'ọk), *v. t.* [*mullock*, *n.*] To work on in a blundering, untidy, or unsatisfactory way; half do (a thing); spoil; botch. [Prov. Eng.]—**To mullock over**, to half do; slur over.

I affirm as a practical shearer, that no man could shear 321 sheep in eight hours, although I will admit he might do what we shearers call '*mullock over*' that number.
The Age, Sept. 23, 1893, quoted in E. E. Morris, Austral [English.

mullocky (mul'ọ-ki), *a.* [*mullock* + *-y*^{1}.] In *mining*, rubbishy; not metal-bearing; of no value.

mulloid (mul'oid), *n.* [L. *mullus*, mullet, + *-oid*.] Of or related to the family *Mullidæ*.

Mulloides (mu-loi'dēz), *n.* [NL., < *mullus*, mullet, + Gr. εἶδος, form.] A genus of fishes of the family *Mullidæ*, having numerous species: found chiefly in the Pacific Ocean.

mulsh, *n.* A mulsh may also be of use in preventing the evaporation of soil-moisture and the baking or cementing of the soil, and in preventing the washing of the soil as well as too deep freezing. The upper part of the soil itself may be employed as a mulsh to the soil beneath, by being kept loose and dry by means of tillage: this, in fact, is one of the chief objects of tillage. The frequently stirred top soil is often spoken of as the *earth-mulsh* or *soil-mulsh*. Sometimes the crops themselves are utilized as mulshes by being cut and allowed to lie on the land, as, for example, with grass or rye in orchards. The cover crop is sometimes considered as a mulsh even when it is still alive and growing. See *cover* ★*crop*.

mulshing (mul'shing), *n.* The process and operation of applying mulshes in agricultural practice. Also written *mulching*.

multenion (mul-tē'ni-on), *n.* [L. *multus*, many. Cf. *quaternion*.] In *math.*, a multifold quantity, analogous to a quaternion. The system called 'multenions' resembles Grassmann's 'Ausdehnungslehre,' but has only one method of multiplication. *Nature*, April 25, 1907, p. 623.

multiactinate (mul-ti-ak'ti-nāt), *a.* [*multi-* + *actine* + *-ate*^{2}.] In sponge-spicules, having many actines, as an aster.

multibrachiate (mul-ti-brā'ki-āt), *a.* [NL. **multibrachiatus*, < L. *multus*, many, + *brachium*, arm.] Having many arms, as the *Crinoidea*.

multicircuit (mul'ti-sėr-kit), *a.* Having a multiple circuit.—**Multicircuit arc-dynamo**, a generator the armature of which is wound in such a manner as to supply several arc-lighting circuits connected in parallel.—**Multicircuit generator**, an electric generator, as for the supplying of arc-lights, which is connected with and feeds several parallel circuits.

multicycle, *n.* 2. A bicycle designed to carry more than two riders.

multicylinder (mul'ti-sil″in-dėr), *a.* Same as ★*multiple-cylinder*.

Two types of gas engines are on view: the vertical single-acting and the horizontal double-acting. Both are *multi-cylinder* machines, the former having three cylinders with cranks at 120 degrees angularity and the latter two cylinders arranged in tandem with single crank.
Elect. World and Engin., Sept. 24, 1904, p. 516.

multifoliate (mul-ti-fō'li-āt), *a.* [*multi-* + *foliate*.] Having many leaves.

multiganglionic (mul-ti-gang-gli-on'ik), *a.* [L. *multus*, many, + NL. *ganglion* + *-ic*.] Relating to or having many ganglia.

multiglobulus (mul-ti-glob'ụ-lus), *n.*; pl. *multiglobuli* (-lī). [L. *multus*, many, + *globulus*, a little ball.] In polyzoans, a group of zoœcia on an internode.

multigravida (mul-ti-grav'i-da̤), *n.*; pl. *multigravidæ* (-dē). [L. *multus*, many, + *gravida*, gravid.] A woman who has been pregnant two or more times.

multilirate (mul-ti-lī'rāt), *a.* [L. *multus*, many, + *lira*, a ridge, a furrow, + *-ate*^{2}.] Bearing or marked by many grooves or furrows, as a gastropod shell.

The body-whorl bears eleven longitudinal ribs, thick, spirally *multilirate*, these liræ of varying widths alternately disposed. *Proc. Zool. Soc. London*, 1901, p. 450.

multilobulate (mul-ti-lob'ụ-lāt), *a.* [*multi-* + *lobulate*.] Having numerous lobules.

multimammate (mul-ti-mam'āt), *a.* [L. *multus*, many, + *mamma*, breast, + *-ate*^{2}.] Having more than one pair of mammæ, as the pig. *Annals and Mag. Nat. Hist.*, March, 1902, p. 219.

multimillionaire (mul″ti-mil-yọn-ãr'), *n.* [L. *multus*, many, + E. *millionaire*.] One who possesses property worth several million dollars (or pounds, or francs, etc.).

multimodal (mul-ti-mō'da̤l), *a.* [L. *multus*, many, + *modus*, mode, + *-al*^{1}.] 1. Having a number of modes: said of a frequency curve which does not correspond to the probability curve and which has several maxima. See ★*mode*^{1}, 11.

We see therefore quite clearly in a special case . . . that the *multimodal* appearance of short series of crania such as those represented in our diagrams may be wholly due to random sampling and be no sign of racial heterogeneity. *Biometrika*, Aug., 1902, p. 454.

In other cases it has been found that there are two or more classes containing a large number of individuals with intermediate classes containing few. The curve plotted from such a series of observations would present two or more modes, as the case might be, and would be what is called a *multimodal* curve.
Buck, Med. Handbook, IV. 24.

2. Concerning, pertaining to, or illustrative of multimodalism.

Those who have considered the "*multimodal*" character of many botanical distributions as furnishing evidence of the existence of subspecies or local races will find reasons for reconsidering their views in these papers.
Nature, July 3, 1902, p. 234.

multimodalism (mul-ti-mō'da̤l-izm), *n.* [*multimodal* + *-ism*.] The character of being multimodal; that state or condition of a group of organisms in which it exhibits more than one character which occurs more frequently than characters of adjacent statistical value.

The object of the present series of papers is to indicate that much of the *multi-modalism* interpreted in the case of flowers as polymorphism . . . is not true *multi-modalism* at all. *Biometrika*, April, 1902, pp. 305, 306.

multinervate (mul-ti-nėr'vāt), *a.* [L. *multus*, many, + *nervus*, nerve, + *-ate*^{1}.] Having many nerves, in any sense.

multinipple (mul-ti-nip'l), *a.* Having numerous teats: said of animals.

From Dr. Alexander Graham Bell, three of his *multinipple* sheep. *Carnegie Inst. Yearbook*, 1904, p. 32.

multioral (mul-ti-ō'ra̤l), *a.* [L. *multus*, many, + *os* (*or-*), mouth, + *-al*^{1}.] Having several mouth-openings, as a polyp.

During the subsequent growth of the *multioral* polyp the original linear arrangement is soon lost.
Annals and Mag. Nat. Hist., Nov., 1902, p. 389.

multiovulation (mul″ti-ō-vụ-lā'shọn), *n.* [L. *multus*, many, + NL. *ovulum*, ovule, + *-ation*.] In *bot.*, the production of many ovules. *Pound and Clements*.

multiparous, *a.* 3. Of or pertaining to a multipara; having given birth to two or more children.

Multipartite number. See ★*number*.

multiperforate (mul-ti-pėr'fọ-rāt), *a.* [L. *multus*, much, + *perforatus*, bored through.] Having many perforations or minute pores, as, for example, septa in the tissues of plants through which the sap passes in the process of transpiration.

In determining the rates of gaseous diffusion of atmospheric carbon dioxide through *multiperforate* diaphragms extended over chambers containing perfect absorbents, the same relations between partial pressure of the gas and its absorption were found to hold good.
Nature, Oct. 16, 1902, p. 620.

multiperiodic (mul-ti-pē-ri-od'ik), *a.* [L. *multus*, many, + *periodus*, period, + *-ic*.] Characterized by a multiplicity of periods.—**Multiperiodic current**, an alternating electric current having components of various frequency.

multiphase (mul'ti-fāz), *a.* [*multi-* + *phase*.] Having many phases, in any sense of that word; specifically, in *elect.*, same as *polyphase*.

multiphaser (mul'ti-fā-zėr), *n.* [*multiphase* + *-er*.] In *elect.*, a generator which furnishes multiphase alternating currents. *Houston*, Dict. Elect.

multiphone (mul'ti-fōn), *n.* [L. *multus*, many, + Gr. φωνή, sound.] A number of phonographs so arranged as to play the same record simultaneously, thus increasing the loudness in proportion to the number of instruments used.

multiphotography (mul″ti-fọ-tog'ra̤-fi), *n.* [*multi-* + *photography*.] The photographing of an object (person or thing) before two mirrors set at an angle so as to secure a number of images. Also called *mirror-photography*.

multiplanar (mul-ti-plā'na̤r), *a.* [L. *multus*, many, + *planus*, plane, + *-ar*^{3}.] Consisting of several planes.

multiplane (mul'ti-plān), *a.* [L. *multus*, many, + *planum*, a plane.] 1. Having several planes.—2. Having several aëroplanes.

multiple. I. *a.*—**In multiple series.** See ★*series*.—**Multiple algebra**, algebra having units of different qualitative character, which can, however, be multiplied together.—**Multiple circuit.** See ★*circuit*.—**Multiple connection**, the character of a multiply connected surface.—**Multiple individuality, jacks, point, pregnancy, press, resonance, reversal.** See ★*individuality*, etc.—**Multiple root.** See ★*root*^{1}.—**Multiple screws, spectra, unit.** See ★*screw*^{1}, ★*spectrum*, ★*unit*.—**Multiple vision.** Same as *polyopia*.

II. *n.* 2. In *telephony*, a multiple jack. (See ★*jack*^{1}.)—**In multiple**, in *elect.*: (*a*) So connected as to form a divided circuit in each branch of which the current will be inversely proportional to the impedance of that branch. (*b*) Arranged with all positive terminals, on the one hand, and all negative terminals, on the other, in direct metallic connection: said of motors, generators, voltaic cells, and the like.

multiple-color (mul″ti-pl-kul′o̤r), *a.* Consisting of or using more than one color: as, a *multiple-color* calico-printing machine, which has several printing-cylinders for as many colors.

multiple-cylinder (mul″ti-pl-sil′in-dėr), *a.* Having three or more cylinders: as, a *multiple-cylinder* engine; a *multiple-cylinder* pump.

multiplex, *a.*—**Multiplex telegraphy**, a method by which several messages (specifically, more than four) can be sent over the same wire. By Edison's method (see *quadruplex*) four messages can be sent, and the number has been increased by Rowland to twelve or sixteen. See *duplex telegraph*.—**Multiplex telephony.** See ★*telephony*.

multiplexly (mul′ti-pleks-li), *adv.* In a multiplex way; intricately.

> On account of this exaggerated and concentrated sensibility, it becomes very difficult to persuade or dissuade either men of genius or the insane. In them the roots of error, as well as those of truth, fix themselves more deeply and *multiplexly* than in other men, for whom opinion is a habit, an affair of fashion, or of circumstance.
> *C. Lombroso* (trans.), The Man of Genius, p. 32.

multiplicate, *a.* **3.** Bearing many ridges or folds, as a gastropod shell.

> The whorls delicately longitudinally *multiplicate*.
> *Proc. Zool. Soc. London*, 1901, p. 366.

multiplication, *n.* **5.** A dice-game in which the highest of three dice thrown is left on the table. The remaining two are thrown again, and the higher left, and then the third is thrown as a multiplier of the sum of the other two. The player who gets the highest total in this way wins.—**Arithmetic multiplication**, multiplication by a number.—**Combinatorial multiplication**, multiplication in which (1) $(l_m l_n) + (l_n l_m) = 0$; (2) $(l_1 l_1) = (l_2 l_2) = \dots = (l_n l_n) = 0$; (3) $(l_1 l_2 \dots l_n)(l_{n+1}\; l_{n+2} \dots l_r) = (l_1 l_2 \dots l_n l_{n+1} \dots l_r)$, where $l_1 l_2 l_n$ are the reference elements.—**Compound multiplication**, the multiplication of compound numbers.—**Geometric multiplication**, the multiplication of one sect by another. See ★*product of two sects*.—**Multiplication of effects.** See ★*effect*.—**Outer multiplication**, progressive and regressive multiplication.—**Progressive multiplication**, in the extensive calculus with n independent units, if $A_r \equiv \Sigma\alpha E^{(r)}$ and $B_s \equiv \Sigma\beta E^{(s)}$ be two extensive quantities of species r and s; then if $r + s \leqq n$, the product $A_r B_s = \Sigma(\alpha\beta) E^{(r)} E^{(s)}$, where the products $E^{(r)} E^{(s)}$ of derived units of species r and s may be expressed as derived units of species $(r + s)$. *Grassmann.*—**Regressive multiplication**, when $r + s > n$, $A_r B_s = \Sigma\alpha E_r \Sigma\beta E_s = \Sigma\,(ab)\, E_r E_s$, where the regressive products $E_r E_s$ are to be reduced to units of species $(r + s - n)$ by taking them as the supplements of the progressive products $|E_r|E_s$ where $|E$, the supplement of E, is the only unit such that the (progressive) product $E|E = 1$. Compare *progressive* ★*multiplication*. *Grassmann.*—**Scalar multiplication**, in *math.*, commutative multiplication, where $ab = ba$.

multiplication-theorem (mul″ti-pli-kā′sho̤n-thē″o̤-rem), *n.* A theorem by virtue of which a certain function of mx is an algebraic function of the same function of x.

Multiplicative function. Same as *factorial function* (which see, under *function*).

multiplicity, *n.* **3.** In *math.*, the number of times an object ought to be counted for the sake of regularity. Thus, a zero of a function has a multiplicity of two, if it ought to be regarded as a union of two zeros. This will be shown on a conform representation by the whole circuit of longitude being twice traversed in going round such a point once.

multiplier, *n.*—**Dynamic multiplier**, an inductance-coil or choke-coil. [Obsolete.]—**Electromagnetic multiplier**, a galvanometer which consists of a compass-needle surrounded by a coil of many turns to increase the action of the current: a device introduced by Schweigger and also called *Schweigger's multiplier*. [Obsolete.]—**Schweigger's multiplier.** See *electromagnetic* ★*multiplier*.

multiply (mul′ti-pli), *adv.* In a manifold way.

> The tables give the numbers of distinct abstract groups of each order as far as 63; the number of substitution groups of each degree as far as 18, classified as *multiply* transitive, other primitive, imprimitive, and intransitive.
> *Science*, June 5, 1903, p. 904.

Multiply connected surface. See ★*surface*.

multipoint (mul′ti-point), *a.* [L. *multus* (*multi-*), many, + E. *point*¹.] Serving to connect together several points in a divided electric circuit: said of certain forms of switch.

> Mr. Stillwell has enumerated . . . the several advantages in favor of group switches. . . . It seems as though the latter class of advantages might be obtained as readily and more simply and cheaply by the use of *multi-point* control-switches, used in parallel with the ordinary ones; as group operation could be easily obtained in this way.
> *Trans. of Amer. Inst. of Elect. Engineers*, March 23, [1904, p. 483.

Multipolar field. See ★*field*.

multipress (mul′ti-pres), *n.* [L. *multus*, many, + E. *press*¹.] A flat-bed perfecting-press of the same type as the Cox duplex press. *Census Bulletin* 216, June 28, 1902, p. 63.

multiradial (mul-ti-rā′di-al), *a.* [L. *multus*, many, + *radius*, spoke (radius), + *-al*¹.] **1.** Pertaining to or having many radii; multiradiate.

> It is necessary to determine if the modification be a simple change that might have occurred in independent cases, in fact if it be a *multiradial* apocentricity.
> *Encyc. Brit.*, XXVIII. 342.

2. In *biol.*, purely adaptive or homoplastic. *P. C. Mitchell.*—**Multiradial apocentricity.** See ★*apocentricity*.

multirotation (mul″ti-rō-tā′sho̤n), *n.* [L. *multus*, many, + *rotatio*(*n-*), rotation.] In *chem.* and *phys.*, the power possessed by solutions of certain optically active sugars, hydroxy-acids, lactones, and other compounds of changing their rotatory power according to the length of time they have been in solution. A constant value for the rotation is finally obtained, which may be greater or less than the initial one. This phenomenon is probably due to the formation of hydrates of the active compound. Also *mutarotation*. *Jour. Phys. Chem.*, Oct., 1907, p. 559.

multiscaled (mul″ti-skāld), *a.* [L. *multus*, much, + E. *scale*¹ + *-ed*².] Having several scales: said of certain ammeters and voltmeters the constants of which can readily be changed so as to enable more than one scale to be employed on a single instrument.

multiseated (mul′ti-sē-ted), *a.* In *mech.*, having a number of seats or surfaces of contact: said of valves or other parts of a machine which rest on three or more seats.

multisect (mul-ti-sekt′), *v. t.* [L. *multus*, many, + *sectus*, pp. of *secare*, cut.] To divide into more than two parts.

multisection (mul-ti-sek′sho̤n), *n.* [L. *multus*, many, + *sectio*(*n-*), a cutting.] The act of multisecting.

multisegmental (mul″ti-seg-men′ta̤l), *a.* [L. *multus*, many, + *segmentum*, segment, + *-al*¹.] Having many segments: as, a *multisegmental* commutator.

> A closed coil armature, connected with a *multi-segmental* commutator.
> *Steinmetz*, Elect. Engineering, p. 122.

multisegmented (mul-ti-seg′men-ted), *a.* [L. *multus*, many, + E. *segment* + *-ed*².] Having many segments; having been divided into many segments.

> The whole body distinctly *multisegmented*, and elongated; without dorsal plates or articulate limbs.
> *Proc. Zool. Soc. London*, April 18, 1899, p. 477.

multispicular (mul-ti-spik′ụ-lär), *a.* [L. *multus*, many, + *spiculum*, spicule, + *-ar*³.] Composed of or containing many spicules: as, the *multispicular* strands of a sponge-skeleton.

> In one of the two specimens [of sponges] in the collection, . . . there are a few *multispicular* strands in the otherwise very regular unispicular meshwork.
> *Proc. Zool. Soc. London*, 1902, p. 210.

multispiculate (mul-ti-spik′ụ-lạt), *a.* [L. *multus*, many, + *spiculum*, spicule, + *-ate*¹.] Having many spicules.

multispinous (mul-ti-spī′nus), *a.* [L. *multus*, many, + *spina*, spine, + *-ous*.] Bearing many spines: as, a *multispinous* varix of a gastropod shell, for example, *Murex tenuispina*.

> It is clear that the *multispinous* varix is a modification of the unispinous one. *Amer. Nat.*, Dec., 1902, p. 933.

multistation (mul′ti-stā-sho̤n), *n.* Same as ★*polystation*.

multistratified (mul-ti-strat′i-fīd), *a.* [L. *multus*, many, + *strata*, layers, + *-fy* + *-ed*² (see *stratified*).] Composed of many strata or layers.

multisyllabic (mul″ti-si-lab′ik), *a.* [L. *multus*, many, + *syllaba*, syllable, + *-ic*.] Consisting of many syllables; polysyllabic.

Multituberculata (mul″ti-tū-bėr-kụ-lā′tạ̈), *n. pl.* [NL., < L. *multus*, many, + *tuberculum*, tubercle.] An order of small mammals having enlarged incisors and the molar teeth with numerous points or tubercles typically arranged in longitudinal rows. The species range from the Trias to the Eocene. The name is in common use, but is antedated by *Allotheria*, Marsh.

multituberculate, *a.* **II.** *n.* A member of the mammalian order *Multituberculata*.

multituberculy (mul″ti-tū-bėr′kū-li), *n.* [*multitubercul*(*ate*) + *-y*³.] The condition of having molar teeth with many cusps or tubercles. The primitive mammals afford typical examples of multituberculy. *Proc. Zool. Soc. London*, 1897, p. 714.

Multitude of a set. Same as ★*potency of a set*.

multitudinous, *a.* **4.** Thronged; crowded. [Rare.]

> The transport of a fierce and monstrous gladness
> Spread through the *multitudinous* streets, fast flying
> Upon the wings of fear. *Shelley*, Revolt of Islam, xii.

multivane (mul′ti-vān), *a.* [L. *multus*, many, + E. *vane*.] Having many vanes or blades: said of propellers, windmills, aëroplanes, etc.

multivariance (mul-ti-vā′ri-a̤ns), *n.* [*multivariant*.] The character or condition of being multivariant; in *phys. chem.*, the possession by a thermodynamic system of more than one degree of freedom. See ★*degree of freedom* (*b*) and ★*phase rule*. *Physical Rev.*, Dec., 1904, p. 458.

multivariant (mul-ti-vā′ri-a̤nt), *a.* [L. *multus*, many, + E. *variant*.] In *phys. chem.*, having more than one degree of freedom. The variance (V) of a chemical system is expressed by the equation $V = c + 2 - \phi$, where c is the number of independent components and ϕ is the number of phases in which the system may exist.

> The indifferent curve divides the plane into two regions, in one of which the bivariant or *multivariant* system can exist in equilibrium while in the other it cannot.
> *Jour. Phys. Chem.*, Oct., 1904, p. 492.

multivincular (mul-ti-ving′kụ-lạ̈r), *a.* [L. *multus*, many, + *vinculum*, bond, + *-ar*³.] In the *Pelecypoda*, noting a type of ligament which consists of a multiplication of ligamental plugs along the hinge-line, as in *Perna*, *Arca*, etc. It is a reduplication of the alivincular type, in which there is a single median plug between the valves.

multivoltage (mul-ti-vōl′tạj), *n.* [L. *multus*, many, + E. *voltage*.] Having a multiplicity of voltages.

> With the aid of diagrams he discussed at some length the rheostatic control and the *multivoltage* systems.
> *Elect. World and Engin.*, April 11, 1903, p. 621.

Multivoltage system, a system of electrical distribution from a central station by which two or more voltages are available for the operation of motors or for the simultaneous use of motors and lamps.

mulvi (möl′vi), *n.* Same as ★*maulvi*.

mummy¹, *n.*—**Mummy brown.** See ★*brown*.—**Mummy-corn.** See ★*corn*¹.

mummy-pot (mum′i-pot), *n.* In *Egypt. archæol.*, an earthenware jar in which a mummied cat or bird was deposited; also a Canopic vase (which see).

Munchausenism (mun-châ′zen-izm), *n.* [*Munchausen* (G. *Münchhausen*) (see def.) + *-ism*.] **1.** A disposition to indulge in extravagant romance and wild exaggeration, in the manner of Baron Munchausen, the hero of a work of fiction originally composed by Rudolph Erich Raspe (1737–94), a German scholar and adventurer, whose work, written in English, and published in England in 1785, was afterward expanded by booksellers' hacks, and became very popular.—**2.** A grossly exaggerated story or statement such as those of Baron Munchausen; an incredible tale; a 'whopping' lie.

Munchausenize (mun-châ′zen-īz), *v. i.*; pret. and pp. *Munchausenized*, ppr. *Munchausenizing*. To exaggerate grossly; indulge in extravagant romance and wild exaggeration; lie egregiously, after the fashion of Baron Munchausen. See ★*Munchausenism*.

> The bragging, boastful lie is a psychosis by itself which has of late been somewhat treated in the literature of psychology. Here the truth is left behind and the imagination *Munchausenizes* in the field of romance, heroics, and rodomontade. *G. S. Hall*, Adolescence, II. 366.

muñeca (mön-yā′kạ̈), *n.* [Sp., a child's doll.] A little fish, *Chætodon hymeralis*, especially common about rocks, found from Guaymas to Panama.

muney, *n.* and *v. t.* An amended spelling of *money*.

mung, *n.* [Hind.] See *moong*.

muni (mu̇n′i), *n.* [Skt. *muni*, Hind. *munī*.] **1.** A Hindu sage or ascetic, especially one who has taken the vow of silence.—**2.** One of the seven stars (the seven sages or rishis) of Charles's Wain, or the Dipper, in the constellation Ursa Major.

muniama (mö-ni-ä′mä), *n.* [Porto Rican.] A name in Porto Rico of a gerroid fish, *Xystæma cinereum*, found on both coasts of tropical America.

Munich candle. See *standard* ★*candle*.

municipal, *a.* **II.** *n.* A municipal magistrate at Toulouse in the Middle Ages. See the extract.

> They [the Sternes] were now established at Toulouse. . . . It had the air and tone of a little capital, and boasted

its own provincial gentility and local nobles. . . . There was a corporate state kept up—lifted a good deal above common corporate associations; and eight *municipals*, bearing the quaint names of "Capitouls," administered the affairs of the city with suitable magnificence.
Fitzgerald, Life of Sterne (edition of 1864), II. ch. xxii. [p. 206.

municipalization, *n.* 2. Transference from private to municipal ownership. See ★*municipalize*, 2.

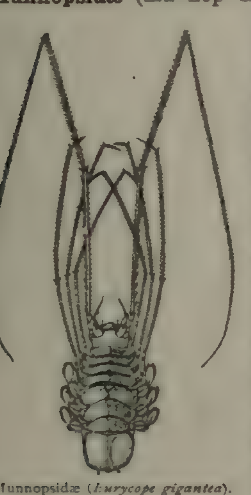
municipalize (mū-nis′i-pal-īz), *v. t.*; pret. and pp. *municipalized*, ppr. *municipalizing*. 1. To make a municipality of; render municipal in character.—2. To transfer from private to municipal ownership and management: applied especially to such transfer of water, gas, and electric-lighting works, street-railways, docks, and ferries, and less frequently to such transfer of bakeries, abattoirs, and markets.

Now it is obvious that if electricity production in London should become *municipalised*, so far as London is concerned the rate of development and the adoption of improved methods will be much hindered. Experience has shown that local authorities are, as in fact they should be, very cautious in adopting scientific improvements.
Nature, Feb. 28, 1907, p. 419.

munjack (mun′jak), *n.* [Appar. a native name.] A pitch common in the Bay of Honduras and there used to paint vessels' bottoms as a protection against marine worms.

munk, munkey, munkish. Amended spellings of *monk, monkey, monkish*.

Munnopsidæ (mu-nop′si-dē), *n. pl.* [NL., < *Munnopsis* + *-idæ*.] A family of isopod crustaceans having the body distinctly separated into two regions, the anterior consisting of the head and the first four segments of the pereion and the posterior composed of the last three segments of the pereion and the consolidated pleon. There are no eyes, and the various limbs are prehensile, ambulatory, and natatory. It contains the genera *Munnopsis*, *Eurycope*, *Ilyarachna*, *Desmosoma*, and *Acanthocope*.



Munnopsidæ (*Eurycope gigantea*).

Munnopsis (mu-nop′sis), *n.* [NL. (*M. Sars*, 1861), < *Munna*, a related genus, + ὄψις, appearance.] The typical genus of the family *Munnopsidæ*.

munshi (mön′shē), *n.* Same as *moonshee*.

The "*Munshi*," a native surveyor attached to the Forsyth Mission. *Geog. Jour.* (R. G. S.), XIII. 443.

munsif (mûn′sif), *n.* [Also *munsiff*, *moonsif*; < Hind. Ar. *munsif*, a judge.] A native petty judge in the civil courts of British India.

Münsterberg's chronoscope, figure. See ★*chronoscope*, ★*figure*.

Munychia (mū-nik′i-ä), *n. pl.* [Gr. Μουνύχια, < Μουνυχία, epithet of Artemis, fem. of Μουνύχιος, of Μουνυχία, a place in Attica.] A festival of Artemis Munychia, the goddess of the full moon, which was especially celebrated at Munychia, the port of Athens, where her shrine stood. It was held in the month Munychion (April–May), in commemoration of the battle of Salamis.

It is evident that they [reliefs] refer to a victory won in the boat-races at Athens; perhaps in one of those races of Ephebi at the festivals of Diisoteria, Aianteia, or *Munychia* which are spoken of in the Ephebic inscriptions. *P. Gardner*, in Jour. Hellenic Studies, XI. 146.

Munychion (mū-nik′i-on), *n.* [Gr. Μουνυχιών.] The tenth month of the Athenian year. It included the latter part of April and the early part of May. The festival of the Munychia was celebrated in this month.

munyeru (mun′yė-rö), *n.* [Aboriginal name in central Australia.] A succulent plant of the family *Portulacaceæ*, *Baitaria Balonensis* (*Calandrinia Balonensis* of Lindley); also, especially, its small black seeds, and a paste made from them, which is a staple article of food among the Arunta and other tribes of Central Australia. The spore-cases of *Marsilea Drummondii* are much used in a similar way in the districts to the south and east. See *nardoo*.

Mural decoration. See ★*decoration*.

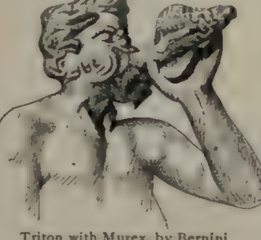
Muranashiji lacquer. See ★*lacquer*.

Murchisonian (mėr-chi-sō′ni-an), *a.* and *n.* I. *a.* Of or relating to Sir R. I. Murchison, a noted British geologist (1792–1871); in *geol.*, applied by d'Orbigny to the Upper Silurian formation.

II. *n.* The Murchisonian formation.

murcielago (mör″thi-e-lä′gō), *n.* Same as *flying-robin*.

murder, *n.*—**Murder in the first degree**, in *law*, the inexcusable or unjustifiable killing of a human being from a deliberate and premeditated design to effect his death: the highest form of homicide. In most jurisdictions it also includes the taking of a human life by an act imminently dangerous to others, as the wrecking of a train, and evincing a depraved mind regardless of human life, although without a premeditated design to cause the death of any particular person; or the killing of a person by another without design when engaged in an attempt to commit a felony, or when perpetrated in committing the crime of arson in the first degree.—**Murder in the second degree**, in *law*, the inexcusable or unjustifiable killing of a human being when committed with a design to effect the death of the person killed, but without premeditation and deliberation.—**Murder in the third degree**, the killing of a human being by one engaged in a felony, if the killing is incidental to the felony and not essential: a degree of murder recognized in some parts of the United States. With like limitation the term *murder in the fourth degree* signifies the killing of a human being by means of a dangerous weapon, the murderer being in a passion but not intending death. *Murder in the fifth degree* is unjustifiable homicide not already classified. Generally speaking, the term *manslaughter* covers all but murder in the first and second degrees.



Triton with Murex, by Bernini.

murex, *n.* 4. A shell used as a trumpet, as in representations of tritons, in art.

murexoin (mū-rek′sō-in), *n.* [*murex* + *-o-* + *-in*².] A red compound, $(CH_3)_4C_8O_6N_5NH_4$, prepared by the action of ammonia gas and air on amalic acid. It crystallizes in quadratic prisms and sublimes at 230° C.

Murgeresque (mėr-zhãr-esk′), *a.* Pertaining to or characteristic of the writings or style of Henri Murger, the author of "Scènes de la vie de Bohême"; hence, Bohemian.

We have become more practical; the customs of Bohemia in *Murgeresque* times exist no more.
J. C. Van Dyke, Modern French Masters, p. 114.

muriate, *n.*—**Muriate of potash**, an old name for potassium chlorid.—**Muriate of soda**, an old name for sodium chlorid or common salt.—**Muriate of tin**, an old name for tin chlorid, still in use as a trade-name for the chlorid with smaller proportion of chlorin (stannous chlorid), used as a dyers' mordant in solution of two degrees of concentration, known as *single* and *double muriate of tin*.

muriated (mū′ri-ā-ted), *p. a.* [*muriate* + *-ed*².] In *chem.*, charged with or containing chlorids (formerly called muriates); as, the *muriated* water of a medicinal spring. An antiquated term.

muriaticum (mū-ri-at′i-kum), *n.* [NL.] Same as ★*murium*.

Muriceidæ (mū-ri-sē′i-dē), *n. pl.* [NL., < *Muricea* + *-idæ*.] A large family of alcyonarians of the order *Axifera*, having the axis horny, the zoöids divided into three regions, and the tentacles infolded at rest and provided at their bases with an armor of stout spicules forming a false operculum. It contains more than twenty genera, among which are *Acanthogorgia*, *Paramuricea*, *Villogorgia*, and *Acis*.

muriform¹, *a.* 2. In *mycol.*, same as ★*dictyoid*.

murium (mū′ri-um), *n.* [NL., < *muri(atic)um*.] A hypothetical radical at one time imagined as existing, combined with oxygen, in hydrochloric (formerly called *muriatic*) acid. Also called *muriaticum*.

murloch (mėr′loċh), *n.* [Prob. of Gaelic origin; cf. Gael. *murlach*, a kingfisher, *murlag*, *murlach*, a fishing-basket.] 1. The young dogfish. [Scotch.] *Eng. Dial. Dict.*—2. A trade-name for pickled dogfish.

murmur, *n.*—**Anemic murmur**, a cardiac murmur heard in cases of anemia.—**Aortic murmur**, a murmur caused by disease of the aortic valve of the heart.—**Arterial murmur**, a sound heard, in certain cases of anemia and in other morbid states, when the ear is applied over one of the larger blood-vessels.—**Endocardial murmur**, an abnormal heart-sound due to disease of the lining membrane of the heart.—**Functional murmur**, an abnormal heart-sound not due to disease of the cardiac valves.—**Hemic murmur**, a functional murmur, heard on auscultation, due to an altered state of the blood and not to disease of the heart.—**Mitral murmur**, an abnormal heart-sound caused by disease of the mitral valve.—**Muscle murmur**, a low murmur heard on applying a stethoscope over a muscle which is in a state of contraction.—**Obstructive murmur**, an abnormal heart-sound produced by the blood passing through a narrowed valve.—**Organic murmur**, an abnormal heart-sound due to some pathological change in one or more of the cardiac valves.—**Pericardial murmur**, an abnormal sound produced in the pericardial sac.—**Pulmonary murmur**, an abnormal heart-sound caused by disease of the pulmonary valve.—**Tricuspid murmur.** See *tricuspid*.—**Venous murmur.** Same as *venous hum* (which see, under *hum*¹).

muromontite (mū-rō-mon′tīt), *n.* [NL. **Muromons* (*-mont-*), translation of G. *Mauersberg*, + *-ite*².] A mineral, related to allanite, of complex composition, containing the yttrium earths in large amount: found at Mauersberg, Saxony.

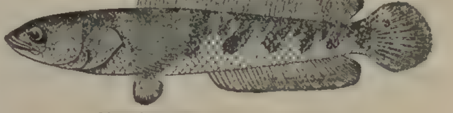
Murphy's button. See ★*button*.

murracyte (mur′a-sīt), *n.* [NL. *Murracyteæ*.] A small transparent single-celled vegetable organism found, in great numbers, floating at the surface in tropical and subtropical oceans.

Murracyteæ (mur-a-sī′tē-ē), *n. pl.* [*murra*, a glass-like mineral (see *murra*), + Gr. κύτος, a hollow (a cell), + *-eæ*.] A group of single-celled transparent vegetable organisms from .5 to 1.5 mm. in diameter, and spherical, oval, or spindle-shaped. Their continuous cell-membrane is thin and transparent like glass. They are present in enormous numbers in tropical and subtropical seas and are one of the chief sources of the phosphorescence of their waters. *Haeckel*, 1890.

murrain-worm (mur′ān-wėrm), *n.* The larva of the elephant hawk-moth, *Chærocampa elpenor*: so named in Ireland, where it is popularly thought that cattle become diseased by eating it.

murral (mur′al), *n.* [Also *murrel*, *murrul*; < Hind. **mural*, < Skt. *murala*, a fresh-water fish.] An East Indian fish, *Ophiocephalus marulius*. This and related species are called by the Chinese *living-fish*, from their tenacity of life. A peculiar thick membranous lining of the gill-chamber enables these fishes to breathe air directly. Many of them are sent alive to San Francisco, where the Chinese keep them in shallow tanks.



Murral (*Ophiocephalus marulius*).

Murray carp. See ★*carp*².

murrayetin (mur′ā-e-tin), *n.* [*Murraya* + *-et* + *-in*².] A colorless compound, $C_{12}H_{12}O_5$, prepared by the action of dilute acids on the glucoside murrayin, from *Murraya exotica*. It crystallizes in needles or rhombic prisms and melts at 110° C.

murre², *n.*—**Pallas murre**, the Pacific thick-billed guillemot, or arre, *Uria lomvia arra*, a common water-bird of the North Pacific. *Yearbook U. S. Dept. Agr.*, 1900, p. 433.

murrnong (mėr′nông), *n.* [Aboriginal name, southern Australia.] A yellow-flowered plant of the chicory family, *Microseris scapigera*, found in the mountainous parts of southern Australia, Tasmania, and New Zealand. Its sweet milky tubers are a favorite food of the aborigines.

mursinskite (mör-sinsk′īt), *n.* [*Mursinsk* (see def.) + *-ite*².] A rare mineral, occurring in wine-yellow, or honey-yellow, tetragonal crystals inclosed in the topaz of Alabashka near Mursinsk in the Ural. Its composition is undetermined.

murvite (mėr′vīt), *n.* A trade-name of an insecticide preparation for application to plants by spraying. It consists of a mixture of kerosene, soap, and fir-balsam, prepared with the aid of heat and used as an emulsion with water.

mus. An abbreviation (*a*) of *music, musical*; (*b*) of *museum*.

Musagetes (mū-sa-jē′tēz), *n.* [Gr. μουσαγέτης, 'leader of the Muses.'] The leader of the Muses: an epithet of Apollo.

musaph (mö′säf), *n.* [Heb., < *yāsaph*, add.] An additional Jewish service after the daily morning prayer, on Sabbaths and festivals.

Mus. Bac. An abbreviation of the Latin *Musicæ Baccalaureus*, Bachelor of Music.

Musca, *n.*—**Musca Borealis**, the Northern Fly, a small constellation lying just north of Aries. It was proposed by Bartschius, and still appears on many celestial globes and maps, but is rejected by the best authorities, who include its stars in Aries.

Muscardinidæ (mus-kär-din′i-dē), *n. pl.* [NL., < *Muscardinus*, the type genus, + *-idæ*.] The dormice, comprising small rodents belonging to the genera *Muscardinus*, *Eliomys*, and *Typhlomys*, and to other allied genera considered as forming a family: same as *Myoxidæ*. *T. S. Palmer*, 1899.

muscarine, *n.* 2. A brownish-violet pulverulent dye, $(\mathrm{CH}_3)_2\overset{4}{\mathrm{N}}\mathrm{C}_6\mathrm{H}_3 <\begin{matrix}\mathrm{N}\\ \underset{2}{\mathrm{O}}\end{matrix}> \mathrm{C}_{10}\mathrm{H}_5\overset{7}{\mathrm{O}}\mathrm{H.HCl}$, prepared by the action of nitroso-dimethylaniline hydrochlorid on 2, 7-dihydroxynaphthalene.

muscid (mus′id), *n.* and *a.* I. *n.* A member of the dipterous family *Muscidæ*.

II. *a.* Having the characters of or belonging to the family *Muscidæ*.

muscidian (mu-sid′i-an), *a.* Having the characters of the dipterous family *Muscidæ*.

muscle¹, *n.*— **Columellar muscle.** See ★*columellar*. — **Inspiratory muscles,** the muscles concerned in inspiration, ordinarily the intercostal muscles and the diaphragm: others, however, such as the pectoral muscles, may become inspiratory when the arms are raised and fixed in that position.— **Muscle formula.** See ★*formula*.— **Muscle process,** the contractile process of an epitheliomuscular cell, in the cœlenterates.— **Perforating muscles.** See *perforans*.— **Skew muscles,** muscles whose fibers run obliquely.— **Smooth muscle.** See *smooth*.

muscle-banner (mus′l-ban″ėr), *n.* In anthozoans, a band of muscular tissue, forming the longitudinal retractor muscles, supported on plaited folds of the mesoglœa.

> The mesenteries are provided with well-developed longitudinal retractor muscles, supported on longitudinal folds or plaits of the mesoglœa, so that in cross-section they have a branched appearance. These *muscle-banners*, as they are called, have a highly characteristic arrangement. *Encyc. Brit.*, XXV. 455.

muscle-bound (mus′l-bound), *a.* Suffering from a loss of elasticity of the muscles, with increase in bulk, a condition which sometimes results from overtraining.

muscle-curve (mus′l-kėrv), *n.* The tracing recorded by a myograph.

muscle-juice (mus′l-jös), *n.* Same as *muscle-plasm*.

muscle-sound (mus′l-sound), *n.* Same as *muscle* ★*murmur*.

muscle-spindle (mus′l-spin″dl), *n.* 1. A striated muscular fiber.— 2. Same as *end-plate*.

muscoid² (mus′koid), *a.* and *n.* I. *a.* Having the characters of or belonging to the dipterous superfamily *Muscoidea*.

II. *n.* A member of the superfamily *Muscoidea*.

Muscoidea (mus-koi′dẹ-ä), *n. pl.* [NL., < *Musca* + *-oidea*.] The *Muscidæ* considered as a group of superfamily rank.

muscovado, *n.* 2. In *petrog.*, a name given by Minnesota geologists to any rusty-brown weathered rock that resembles brown sugar. It has been applied to gabbros and to quartzite.

muscovitization (mus″kọ-vīt-i-zā′shọn), *n.* [*muscovite* + *-ize* + *-ation*.] In *petrog.*, the alteration of a rock or mineral into muscovite.

Muscular insufficiency. Same as ★*imbalance*.— **Progressive muscular dystrophy.** Same as *progressive muscular atrophy*.

muscularis (mus-kụ-lā′ris), *n.* [NL.] The muscular layer in the wall of a hollow organ or tube, such as the stomach or blood-vessels. — **Muscularis mucosæ,** muscular fibers contained in the mucous coat of the intestine.

muscularize, *v. t.* 2. To convert into muscular tissue.

musculomembranous (mus″kụ-lō-mem′brạ-nus), *a.* [L. *musculus*, muscle, + *membrana*, membrane, + *-ous*.] Composed of both muscle and membrane.

musculorachidian (mus″kụ-lō-rạ-kid′i-an), *a.* [L. *musculus*, muscle, + Gr. ῥάχις, spine: see *rachidian*.] Relating to the spinal muscles: noting certain arteries which supply these parts.

musculotegumentary (mus″kụ-lō-teg-ụ-men′tạ-ri), *a.* [L. *musculus*, muscle, + *tegumentum*, cover, + *-ary*.] Relating to or formed of both skin and muscle.

musculotendinous (mus″kụ-lō-ten′di-nus), *a.* [L. *musculus*, muscle, + *tendo* (*tendin-*), tendon, + *-ous*.] Relating to both tendon and muscle.

Mus. D. An abbreviation of the Latin *Musicæ Doctor*, Doctor of Music.

musette, *n.* 4. Same as ★*schalmei*, 4.

museum, *n.*— **Dime museum,** a low-class museum or show in which, for an admission fee of one dime or ten cents, are exhibited freaks of nature, or supposed freaks of nature, or other curiosities.— **Type museum,** a museum in which type-specimens relating to some particular science or department of science are systematically arranged for preservation or study.

> The "Outlook Tower" of Old Edinburgh, which is being arranged as a *type-museum* and observatory, alike of physical and of political geography. *Geog. Jour.* (R. G. S.), XII. 585.

mush¹ (mush), *v.* [*mush*¹, *n.*] I. *trans.* To reduce to a mush or a pulp, or to a pulverized condition; pulverize; crush.

II. *intrans.* 1. To become reduced to a pulverized condition; crumble; waste away. [Prov. Eng.]—2. To trudge or travel through the snow, while driving a dog-sled. See ★*mushing* and ★*musher*. [Alaska.]

mushal, *n.* Same as *mussal*.

musher (mush′ėr), *n.* [*mush*¹, *v.*, + *-er*¹.] The driver of a dog-team in arctic Alaska. The dog-teams are harnessed in the style customary among the Eskimos and the driver walks behind the team urging the dogs while a woman walks ahead of the dogs.

> Traveling by this means [by dog-sled] is known, in the language of the country [Alaska], as "mushing," and the traveler is called a "*musher*." The "*musher*" does not ride on the sled, . . . but follows the sled afoot and urges the dogs forward. *U. S. Geol. Surv.*, Prof. Paper No. 20, p. 14.

Mushet steel. See ★*steel*¹.

mushing (mush′ing), *n.* [*mush*¹, *v.*, + *-ing*¹.] Traveling by dog-sled in arctic Alaska. See ★*musher*.

> Traveling by this means [by dog-sled] is known, in the language of the country [Alaska], as "*mushing*." *U. S. Geol. Surv.*, Prof. Paper No. 20, p. 14.

mush-paddle (mush′pad″l), *n.* A paddle-shaped stirrer for acorn mush, used by the Indians of California.

mushroom. I. *n.*— **Cæsar's mushroom,** the royal agaric, or orange amanita, *Amanita cæsarea*. See ★*agaric* and ★*Amanita*.

II. *a.* 3. Having the form or shape of a mushroom or toadstool; formed like the segment of a sphere; said of valves, anchors, etc.

> Both valves are of the single-beat poppet, or *mushroom* type, and seat vertically along the same axis but in opposite directions, the admission-valve opening downward and the exhaust upward. *Elect. World and Engin.*, Sept. 24, 1904, p. 517.

Mushroom body, loaf. See ★*body*, ★*loaf*¹.

mushroom, *v.* II. *intrans.* To spread out at the top in a form resembling that of a mushroom; curve over at the top; curve down from the top like a mushroom.

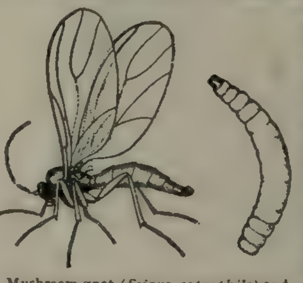
> As the bullet was composed of soft lead, a resistant bone usually caused it to *mushroom* or otherwise lose its shape. *Buck*, Med. Handbook, IV. 431.

mushroom-cloud (mush′röm-kloud), *n.* A cloud, specifically an ascending cloud, which spreads outward and downward at the top in a form resembling that of a mushroom.

Mushroom-cloud.
As seen above Mt. Pelée during its eruption in June, 1902.

mushroom-disease (mush′röm-di-zēz″), *n.* See ★*disease*.

mushroom-gnat (mush′röm-nat), *n.* Any one of several species of small flies whose larvæ damage mushrooms. They belong principally to the families *Mycetophilidæ* and *Phoridæ*. The species principally concerned in the damage in the United States are *Sciara multiseta*, *S. agraria*, and *Phora albidihalteris*. *Sciara coprophila* has also been reported as injurious to mushrooms. It lives chiefly in manure, whence it is also called *manure-fly*.



Mushroom-gnat (*Sciara coprophila*) and larva. Much enlarged.

music, *n.* 11. In *golf*, the degree of suppleness in the shaft of a club.

> The man with a less rapid swing will get equally as long a ball by using a more supple shaft. The more "*music*" there is in the shaft, however, the greater is the liability to slice or pull, especially if the least pressing is indulged in. *W. J. Travis*, Practical Golf, p. 111.

Absolute music, music the effect of which is not due to the intellectual suggestion of a title, motto, text, or program, but which appeals directly to the feelings by its tonal qualities only. Also called *pure music*, in distinction from *program music*, *vocal music*, and every style that utilizes some verbal suggestion of thought.— **Academy of music.** See ★*academy*.— **Act music,** at Oxford, vocal works performed at commemoration exercises (see *act*, *n.*, 5), the words being written by the professor of poetry and the music by the professor of music. — **Chamber music.** See *chamber-music*.— **Dramatic music,** in general, music written to a dramatic text or intended for dramatic performance, including large forms such as the opera, the oratorio (usually), and many shorter works; specifically, operatic music.— **False music.** See *musica ficta*, under *musica*.— **Popular music,** either music of popular origin, such as folk-songs, or music devoid of great difficulty or artistic elaboration: music which is not classical.— **Pure music.** Same as *absolute* ★*music*.— **Salon music,** music intended for use in a drawing-room or salon, not for public performance. Such music is usually in small forms, often mediocre in quality, and designed more for amusement or the display of technical skill than for real artistic effect. Hence the term is not equivalent to the old expression *chamber-music*.

Musica figurata. See *figurate*, 3.— **Musica mensurata.** See *mensurable*, 2.

Musical agraphia. See ★*agraphia*.— **Musical box.** Recent devices include many other forms, especially such as are operated by means of interchangeable perforated metal disks, so that the repertoire of pieces may be extensive. Small musical boxes are also made to be set in motion by placing a coin in a slot, and are attached in various ways to other mechanisms, including toys.

Musicians' cramp. See *occupation* ★*cramp*.

music-pad (mū′zik-pad), *n.* A set of sheets of music-paper fastened together in a pad.

music-printer (mū′zik-prin″tėr), *n.* One whose business or occupation is the printing of music.

music-roll, *n.* 2. In certain mechanical musical instruments, such as piano-players, the removable roll of perforated paper, or stencil, by which the admission of air is regulated and the music is thus produced. See ★*piano-player*, 2.

music-store (mū′zik-stōr), *n.* A store, or place of business, where music or musical instruments are sold. [U. S.]

music-trade (mū′zik-trād), *n.* The lines of business, collectively, that are connected with the manufacture and sale of printed music and of musical instruments and appliances.

music-typography (mū′zik-tī-pog″rạ-fi), *n.* The art or process of printing music by means of movable types.

musily (mū′zi-li), *adv.* Musingly. [Rare.]

> If you beheld the dancers, . . . you would slide down three thousand years in a moment, and, *musily* gazing from the door into the soft morning, your eyes would yearn toward Esne. *G. W. Curtis*, Nile Notes of a Howadji (ed. of 1877), p. 314.

musk, *n.* 1. The artificial or imitation musk of Baur, trinitrobutyltoluene, made from the toluene of coal-tar, is now extensively used in perfumery.

musk-crowfoot (musk′krō″fu̇t), *n.* See ★*crowfoot*.

musk-deer, *n.*— **Pygmy musk-deer.** Same as *musk-deer*, 2.

muskeg (mus-keg′), *n.* [Also *muskeag*; Ojibwa **muskig*? Menomini *moskik*.] A bog; a soft mossy or peaty spot.

> Sphagnum formations with the various attendant plants are commonly designated as *Muskeag* by the woodsmen of Minnesota. *C. MacMillan*, in Bulletin Torrey Bot. Club, XXIII. 501.

musk-kangaroo (musk′kang-gạ-rö″), *n.* A rat-kangaroo of the genus *Hypsiprymnodon*.

musk-ox, *n.*—**Ward's musk-ox**, *Ovibos moschatus wardi*, the variety found in Greenland, having a white forehead and light saddle mark on the back.

musk-polyp (musk′pol″ip), *n.* An edible cephalopodous mollusk, *Eledone moschata*, of the Mediterranean, which exhales a strong odor of musk.

muskrat-weed (musk′rat-wēd), *n.* The tall meadow-rue, *Thalictrum polygamum.* Also *musquash-weed.*

musk-terrapin (musk′ter″a̤-pin), *n.* The musk-turtle, skilpot, or stinkpot. The name includes several small ill-smelling fresh-water turtles of the genera *Aramochelys* and *Cinosternon*, widely distributed in the United States.

muslin, *n.* 3. A general term for a vessel's canvas.—**Madras muslin**, a very fine muslin made in the presidency of Madras, India.

muslin-de-soie. See ★*mousseline-de-soie.*

Mus. M. An abbreviation of the Latin *Musicæ Magister*, Master of Music.

musquash-poison (mus′kwosh-poi″zn), *n.* Same as *beaver-poison.*

musquash-weed (mus′kwosh-wēd), *n.* Same as ★*muskrat-weed.*

mussel-crab (mus′l-krab), *n.* A small crab, *Pinnotheres maculatus*, which lives commensally in the gill-chamber of mussels and scallops.

mussel-mud (mus′l-mud), *n.* Estuarine mud sufficiently rich in the remains of dead shellfish for use as a fertilizer. See *shell-marl.*

mussel-scale (mus′l-skāl), *n.* Any scale-insect of the genus *Mytilaspis* or *Lepidosaphes.* The scale resembles an oyster-shell, whence the name.

mussitation, *n.* 2. In *pathol.*, movement of the lips and tongue as in speaking, but without articulation: a sign of bad omen in disease.

must^{3}, *n.* II. *a.* Frenzied; in the state of madness known as *must:* as, a *must* elephant. *Kipling.*

mustaba, *n.* Same as *mastaba.*

mustahfuz (mös-täh′föz), *n.* [Turk. *mustahfiz*, a soldier in a garrison.] A division of the military forces of the Turkish empire corresponding to the German landsturm or territorial army.

> Conscripts . . . serve 9 years in the Nizam [regular army], . . . 9 years in the Redif [the Landwehr]; and 2 years in the *Mustahfuz* [the Landsturm].
> *Statesman's Year-book*, 1905, p. 1224.

mustard, *n.*—**Ball mustard**, a slender annual crucifer, *Neslia paniculata*, a weed of the Old World introduced into Manitoba, where it gives trouble in grain-fields.—**Brown mustard**, the black mustard, *Brassica nigra.*—**California mustard**, the hedge-mustard, *Sisymbrium officinale.*—**Clown's mustard.** See ★*clown.*—**Dish mustard**, the field penny-cress, *Thlaspi arvense.*—**False mustard**, the clammy-weed, *Polanisia graveolens.*—**Hare's-ear mustard**, an annual cruciferous weed, *Conringia orientalis*, introduced from the Old World and troublesome in grain-crops in the northern United States and Manitoba. See *hare's-ear*, 2.—**Orange mustard**, the western wall-flower, *Erysimum asperum.*—**Poor-man's mustard.** Same as *garlic-mustard* (which see, under *mustard*).—**Tumbling mustard**, *Sisymbrium altissimum*, a plant introduced into the United States from Europe and which has become a noxious weed, a sort of tumbleweed, in the northwestern section.—**Yellow mustard**, the charlock, *Brassica arvensis.*

mustard-yellow (mus′tärd-yel″ō), *n.* In *ceram.*, a yellow glaze of Oriental porcelain, of the color of ground mustard.

muster, *n.*—**Bang-tail muster.** See ★*bang-tail.*

mustizo, *n.* Same as *mestizo.*

musume (mös′mā), *n.* [Jap.] A daughter; a girl.

> The *musumé* (young girl) wears hair-pins decorated with fans in her dark hair.
> *C. M. Salwey*, Fans of Japan, p. 65.

mut. An abbreviation of *mutual.*

muta (mö′tä), *v.* [It., impv. of *mutare*, < L. *mutare*, alter: see *mutate.*] In orchestral or band music, a direction to the player on an instrument such as the horn, the trumpet, the timpani, etc., to alter the pitch of his instrument by changing the crooks or the tension.

mutant, *a.* 2. Of, pertaining to, or by means of mutation.

> The special purpose of the present paper is to consider . . . some of the *mutant* forms.
> *Amer. Nat.*, Nov., 1903, p. 740.

II. *n.* In *biol.*, a race or an individual organism that has arisen through mutation. See ★*mutation*, 8.

> [A] period in which they do form *mutants*, to use the terminology of de Vries, which *mutants* may be true to seed.
> *Rep. Brit. Ass'n*, 1901, p. 848.

mutation, *n.* 8. In *biol.*: (*a*) A sudden and inheritable change of type; a discontinuous variation; a sport.

> Finally, there is the group of discontinuous variations. Of these there may be several kinds. . . . For the present we may include all the different sorts under the term *mutation*, meaning that the new character or group of characters suddenly appears, and is inherited in its new form.
> *Morgan*, Evolution and Adaptation, p. 458.

(*b*) One of a group of individuals which originate directly and immediately from pure-bred stock and have uniform or nearly uniform characteristics different from those of the parents. Mutations differ in form from their parents in much the same manner as closely related species differ from each other. The seeds from a single plant of one of the evening primroses, *Œnothera Lamarckiana*, often produce several mutations in the first generation.—**Mutation of libel.** See ★*libel.*—**Progressive mutation**, in *biol.*, a mutation which is attributed to an increase in the complexity of germ-cells.—**Regressive mutation**, in *biol.*, a mutation which is attributed to a decrease in the complexity of germ-cells.

mutational (mṳ̄-tā′sho̤n-a̤l), *a.* Of or pertaining to mutation in the biological sense. See ★*mutation*, 8.

> Dr. Bastian does not seem to have quite realised how many biologists now accept, as proved up to the hilt, the frequent occurrence of Galton's "transilient," or Bateson's "discontinuous," or De Vries's "*mutational*" variations.
> *Nature*, Feb. 25, 1904, p. 386.

mutationist (mṳ̄-tā′sho̤n-ist), *n.* [*mutation* + *-ist.*] One who believes that new species arise as mutations, sports, or sudden and inheritable changes of type. See ★*mutation*, 8.

> From the hasty presentation here given it might be inferred that Lamarckians and Darwinians are necessarily regarded as believers in adaptiveness as a factor in evolution, and *mutationists* are necessarily supposed to hold the opposite view.
> *Science*, June 10, 1904, p. 881.

mutator (mṳ̄-tā′to̤r), *n.* [NL., < *mutator*, changer, < *mutare*, change.] Same as ★*mutationist.*

> The criterion between the "Biometriker," as Johannsen calls them, and the "*Mutators*," as we may perhaps call their opponents, cannot be made to turn on the breeding true of "pure lines" or on the variability of such lines about their type.
> *Nature*, Dec. 17, 1903, p. 149.

mute^{1}, *a.* 7. In *numis.*, destitute of legend or means of identification beyond those furnished by heraldic or other symbolic devices.

muted (mū′ted), *p. a.* Of musical instruments, played with a mute: as, *muted* strings or *muted* horns. Also applied to the tones thus produced.

muter (mö′ter), *a.* [Heb.] Among the Jews, lawful, permitted: a rabbinical term: applied to matters ritual or secular. The opposite term is ★*osur.*

mutivity (mṳ̄-tiv′i̤-ti), *n.* [*mutive* + *-ity.*] 1. The character of being mutive or mutable.—2. The proportion of energy contained in a substance after it has changed form, or without the addition of energy from some external source. *Nature*, Dec. 18, 1902, p. 161.

mutoscope (mū′tō̤-skōp), *n.* An instrument for the exhibition of a series of photographs in rapid succession to give the optical effect known as a moving picture. The pictures, taken in a moving-picture camera, are placed radially upon a spool in the instrument and are viewed tangentially through the eyepiece, one picture being shown at a time and just long enough to cause them all to merge into one continuous moving picture. It is made in many forms for showing the effect to one or more spectators.

mutoscopic (mū-tō̤-skop′ik), *a.* [*mutoscope* + *-ic.*] Of, pertaining to, or exhibited by a mutoscope or with the rapidity of a mutoscope: as, *mutoscopic* views.

mutton, *n.*—**To return to one's muttons**, to return (after an interruption or digression) to the topic or subject under discussion or consideration: a blundering translation of the French phrase *revenons à nos moutons.*

mutton-bag (mut′n-bag), *n.* A woven seamless cotton bag used in the Australasian frozen-meat trade for enveloping the carcass of a sheep.

mutton-cane (mut′n-kān), *n.* See ★*cane*^{1}.

mutton-fish, *n.* 3. A common name of a fish of the family *Gerridæ*, *Gerres olisthostomus*, found from Florida to Brazil.—4. A marine univalve mollusk, *Haliotis nævosa*, so called from its flavor when cooked. *E. E. Morris*, Austral English.—5. One of the snappers, *Lutianus analis*, found from Florida to Brazil. It is the most important food-fish in the Havana markets.

mutton-grass (mut′n-gràs), *n.* A blue-grass, *Poa Fendleriana*, found on mesas and dry hills from Colorado to Arizona and California. It is valuable for grazing, as is suggested by the name, originally applied to a smooth subspecies, *P. Fendleriana Arizonica.* Also called *California* and *Fendler's blue-grass.*

mutual, *a.* 4. Based on the principle of mutuality in sharing both burdens and benefits: as, a *mutual* insurance company.—**Mutual insurance**, insurance in which the insured become members of a company who reciprocally engage, by payment of certain amounts into a common fund, to indemnify each other against loss.

mutualistic (mū″tṳ̄-a̤-lis′tik), *a.* [*mutual* + *-istic.*] Of or pertaining to mutualism or mutualists.—**Mutualistic symbiosis**, in *biol.*, same as *mutualism.*

mutualization (mū″tṳ̄-a̤l-i-zā′sho̤n), *n.* [*mutualize* + *-ation.*] The act or process of rendering mutual; specifically, the act of making an insurance company a mutual company. See ★*mutual*, 4.

> The Directors of the Equitable Life Assurance Society by a unanimous vote yesterday adopted the plan of *mutualization* proposed by the *Mutualization* Committee appointed to consider the subject at the special meeting of the board on Feb. 13.
> *N. Y. Times*, March 22, 1905.

mutualize (mū′tṳ̄-a̤l-īz), *v. t.*; pret. and pp. *mutualized*, ppr. *mutualizing.* [*mutual* + *-ize.*] To render mutual; specifically, reorganize (a proprietary or stock insurance company) as a mutual company. See ★*mutual*, 4.

> It is entirely within the power of the policy holders to honestly *mutualize* the society by going to the Legislature.
> *N. Y. Times*, March 22, 1905.

muzziness, *n.* 2. Lack of definiteness, as in outline or general treatment; a blurred or indistinct character or appearance.

> It is a magnificent composition; but here, as often in the case of the work of primitive artists, we lament the *muzziness* which seems inseparable from the process employed in this work.
> *Athenæum*, May 7, 1904, p. 599.

muzzle, *n.* 6. A workman's name for a covering of many folds of flannel cloth tied over the nose and mouth of one who is engaged in removing bleaching-powder from the chambers in which it is made, and in packing it, to afford protection from the chlorin gas and the fine dust suspended in the air. A sponge moistened with water is sometimes used in the same way.—7. A chain clevis or shackle. [Scotch.]

muzzle-ring (muz′l-ring), *n.* A ring or projection of metal on the exterior of a solid-cast gun near the muzzle.

M. V. An abbreviation (*a*) of the Latin *Medicus Veterinarius*, veterinary physician; (*b*) in *music*, of the Italian *mezza voce*, with half the force of the voice; (*c*) in *exper. psychol.*, of *mean variation.*

M. V. O. An abbreviation of *Member of the Royal Victorian Order.*

M. W. An abbreviation (*a*) of *Most Worshipful*; (*b*) of *Most Worthy.*

M. W. G. M. An abbreviation (*a*) of *Most Worshipful Grand Master*; (*b*) of *Most Worthy Grand Master.*

M. W. P. An abbreviation of *Most Worthy Patriarch.*

M. W. V. An abbreviation of *Mexican War Veteran.*

myal (mī′a̤l), *a.* [Gr. *μῦς*, muscle, + *-al*^{1}.] Pertaining to myotomes or muscle segments in *Amphioxus* or embryos.

> The ventral roots, on the contrary, are *myal* or segmental in position.
> *Encyc. Brit.*, XXV. 386.

myall^{2} (mī′âl), *n.* [Aboriginal name ('men') in New South Wales.] 1. A wild and independent native Australian.—2. *pl.* By transference, wild cattle.

myamœba (mī-a̤-mē′bä̤), *n.*; pl. *myamœbæ* (-bē). [NL., < Gr. *μῦς*, muscle, + *ἀμοιβή*, exchange. See *amœba.*] A muscle-cell. Compare *neuramœba.*

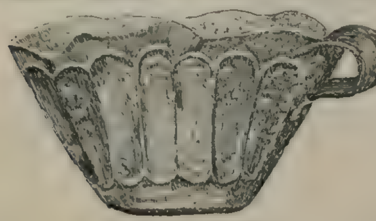
myasis (mī′a̤-sis), *n.* Same as ★*myiasis.*

Myasthenia gastrica, a condition marked by weakness and loss of tone in the muscular wall of the stomach.

> We speak, therefore, less of the size of the stomach and more of its functional activity. The term dilatation threatens to be displaced by motor insufficiency, *myasthenia gastrica*, and ischochymia.
> *Med. Record*, Aug. 3, 1907, p. 171.

Mycena (mī-sē′nä̤), *n.* [NL. (J. E. Gray, 1821), altered from Gr. *μύκης*, a fungus.] A genus of white-spored agaricaceous fungi having a somewhat membranaceous, striate pileus and a smooth cartilaginous hollow stem. The species are numerous, occurring in forests either on the ground or on decaying wood. *M. galericulata* is common on decaying trunks and stumps.

Mycenæan, Mycenean (mī-sẹ̄-nē′a̤n), *a.* [L. *Mycenæus*, < Gr. Μυκηναῖος, < Μυκῆναι, L. *Mycenæ.*] Of or pertaining to ancient Mycenæ, in Greece, or to the civilization represented by its remains. A series of excavations, beginning with those of Schliemann at Hissarlik (ancient Troy) in 1873, and continued by those of Evans in Crete (1893–1905) have revealed numerous remains of the first Hellenic civilization, which may have begun as early as 2000 B.C., and which continued until it was obliterated by the Doric invasion, about 1200 B.C. These remains show so many points of resemblance to descriptions in the Homeric poems that it is usually assumed that they belong to the same civilization as that which is the subject of the Iliad and Odyssey. Until quite recently the most typical and important of these relics were those found at Mycenæ, the seat of the Achean kings in the Peloponnesus, first excavated by Schliemann in 1876; and this entire class of monuments, metal-work, pottery, gems, etc., has hence taken the name *Mycenæan.* Within a few years, however, investigation has made it probable that the chief seat of this early civilization was the island of Crete. See the extract.



Gold Cup from Mycenæ.
(Schlieman, "Mykenā," fig. 342.)

The name '*Mycenean*' is now applied to a whole class of monuments — buildings, sepulchres, ornaments, weapons, pottery, engraved stones — which resemble more or less closely those found at Mycenæ.
Ridgeway, Early Age of Greece, I. 1.

Mycenæologist (mī-sē-nẹ̄-ol′ọ̄-jist), *n.* [*Mycenæ* + *-olog(y)* + *-ist.*] A student of the Mycenæan civilization; one who is skilled in the study of Mycenæan remains. *Nature*, Sept. 15, 1904, p. 483.

mycetogenic (mī-sē-tọ̄-jen′ik), *a.* Same as *mycetogenetic.*

mycetoid (mī-sē′toid), *a.* [Gr. μύκης (μυκητ-), fungus, + εἶδος, form.] Resembling or pertaining to a fungus; mycoid.

mycetologist (mī-sẹ̄-tol′ọ̄-jist), *n.* Same as *mycologist.*

mycetophilid (mī-sẹ̄-tof′i-lid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Mycetophilidæ.*

II. *a.* Having the characters of or belonging to the family *Mycetophilidæ.*

mycetous (mī-sē′tus), *a.* [Gr. μύκης (μυκητ-), fungus, + *-ous.*] Having the appearance of a fungus; fungoid.

mycetozoan (mī-sē-tọ̄-zō′a̤n), *a.* and *n.* **I.** *a.* Of or pertaining to the *Mycetozoa.*

II. *n.* Same as *mycetozoön.*

mychogamy (mī-kog′a̤-mi), *n.* [Gr. μυχός, innermost part, + γάμος, marriage.] In *bot.*, the condition in which self-pollination is rendered possible by the contiguity of anthers and stigma. Mychogamy is *homomorphic* when the stamens and pistils are of similar length in all the plants; *heteromorphic* when they are of different length in different plants.

Mycobacterium (mī″kọ̄-bak-tē′ri-um), *n.* [NL., < Gr. μύκης (μυκητ-), fungus, + NL. *bacterium.*] A genus proposed by Lehmann-Neumann to include certain pathogenic bacteria, as *Bacterium lepræ:* regarded as synonymous with the genus *Bacterium*, in which it is included by Migula.

mycodesmoid (mī-kọ̄-des′moid), *n.* [Gr. μύκης, fungus, + δεσμός, bond, + εἶδος, form.] A new growth of connective tissue in the inguinal region of the horse, due to infection with *Micrococcus Ascoformans* of the severed end of the spermatic cord following castration. More commonly termed *scirrhous cord.*

mycoid (mī′koid), *a.* Same as ★*mycetoid.*

mycolichen (mī′kọ̄-lī-ken), *n.* [Gr. μύκης, fungus, + λειχήν, lichen.] A lichen, such as certain species of *Pyrenula* and *Calicium*, in which the algal element is inconspicuous or sometimes wanting.

mycomelic (mī-kọ̄-mel′ik), *a.* [Gr. μύκης, fungus, + μῆλον, apple (?), + *-ic.*] Noting an acid, a gelatinous compound, $C_4H_4O_2N_4\cdot\frac{1}{2}H_2O$, prepared by the action of aqueous ammonia on alloxan.

mycomycete (mī′kọ̄-mī-sēt), *n.* One of the *Mycomycetes*, or higher fungi.

Mycomycetes (mī″kọ̄-mī-sē′tēz), *n. pl.* [NL., < Gr. μύκης, fungus, + μύκης (μυκητ-), fungus.] A name applied by Brefeld to the so-called higher fungi, including the *Ascomycetes* and *Basidiomycetes.*

mycomycetous (mī″kọ̄-mī-sē′tus), *a.* Of or pertaining to the *Mycomycetes.*

mycophagous (mī-kof′a̤-gus), *a.* [Gr. μύκης, fungus, + -φαγος, < φαγεῖν, eat.] Feeding on fungi, as the larvæ of many mycetophilid flies and other insects.

mycophylaxin (mī″kọ̄-fi-lak′sin), *n.* [Gr. μύκης, fungus, + φύλαξις, guarding, + *-in*².] A defensive proteid.

mycoplasm (mī′kō-plazm), *n.* **1.** See ★*mycoplasma.*—**2.** Frank's term for the strands of zoöglœa in the root-nodules of legumes.

mycoplasma (mī-kọ̄-plaz′mạ̈), *n.* [NL., < Gr. μύκης, fungus, + πλάσμα, anything formed.] A term applied by Eriksson to a latent infective form of *Puccinia* which, concealed within the cytoplasm of the host-cells, later develops into mycelium. Also *mycoplasm.*

mycoplasmic (mī-kọ̄-plaz′mik), *a.* [*mycoplasm(a)* + *-ic.*] Of, pertaining to, or of the nature of mycoplasma.

mycorhiza, *n.*—**Ectotrophic mycorhiza**, a form of mycorhiza in which the hyphæ of the fungus are always on the outside of the root.—**Endotrophic mycorhiza**, the form of mycorhiza in which the hyphæ of the fungus enter the parenchyma cells of the root.

mycorhizal (mī-kọ̄-rī′za̤l), *a.* [*mycorhiza* + *-al*¹.] Of or pertaining to mycorhiza.

The discovery of the widespread occurrence of this *mycorhizal* symbiosis must be held to be one of the most important results of research upon the nutritive processes of plants during the closing decade of the 19th century.
Encyc. Brit., XXXI. 760.

mycorhizome (mī-kọ̄-rī′zōm), *n.* [Gr. μύκης, fungus, + ῥίζωμα, root.] A structure similar to a mycorhiza, which occurs in the roots of *Corallorhiza* and other living plants: also found in certain fossil plants.

Prof. Weiss exhibited some preparations and photographs of a mycorhiza or *mycorhizome* from the Coal-Measures. *Athenæum*, Nov. 14, 1903, p. 654.

mycosin (mī′kō-sin), *n.* [Gr. μύκης, fungus, + *-ose* + *-in.*] A nitrogenous compound said to occur in the cell-wall of fungi. It is regarded as playing the same part in these that cellulose does in the cell-walls of higher plants.

mycosozin (mī-kọ̄-sō′zin), *n.* [Gr. μύκης, fungus, + σώζειν, save, + *-in.*] A defensive proteid.

Mycosphærella (mī″kọ̄-sfẹ̄-rel′ạ̈), *n.* [NL. (Johanson, 1884), < Gr. μύκης, fungus, + σφαῖρα, sphere, + dim. *-ella.*] A genus of pyrenomycetous fungi having minute membranous perithecia buried in the tissue of the host. The spores are hyaline or greenish and uniseptate. About 500 species have been described, mostly under the untenable name *Sphærella.* They occur chiefly on fallen leaves. *M. maculiformis* is common on oak-leaves.

Mycosphærellaceæ (mī-kọ̄-sfē-re-lā′sẹ̄-ē), *n. pl.* [NL., < *Mycosphærella* + *-aceæ.*] A family of pyrenomycetous fungi named from the genus *Mycosphærella.*

mycothrix (mī′kọ̄-thriks), *n.* [Gr. μύκης, fungus, + θρίξ, hair.] In *bacteriol.*, a chain of micrococci: same as *streptococci.* [Rare.]

The new elements of successive divisions may remain connected, and thus form a chain (or *mycothrix*).
E. Klein, Micro-organisms and Disease, p. 37.

Mycteroperca (mik-tẹ-rọ̄-pėr′kạ̈), *n.* [NL., < Gr. μυκτήρ, nose, snout, + πέρκη, perch. The allusion is to the large divided posterior nostril of *M. olfax.*] A genus of large serranoid fishes found in the tropics; most of them are American. See cut under ★*gag*².

Myctophidæ (mik-tof′i-dē), *n. pl.* [NL., < *Myctophum* + *-idæ.*] A family of fishes living away from the shores at a considerable depth, many of them deep-sea fishes. They have luminous spots more or less regularly placed along the sides.

Myctophum (mik′tọ̄-fum), *n.* [NL., < Gr. μυκτήρ, nose, + ὄφις, serpent.] A genus of deep-sea fishes of the family *Myctophidæ.* The species are numerous and widely distributed.

mydan, *n.* See *maidan.*

mydatoxine (mī-da̤-tok′sin), *n.* [Irreg. < Gr. μύδος, damp, decay, + τοξ(ικόν), poison, + *-ine*².] A strongly alkaline toxic ptomaïne, $C_6H_{13}O_2N$, formed by the putrefaction of the human body and of horse-flesh.

mydine (mī′din), *n.* [Gr. μύδος, damp, decay, + *-ine*².] A strongly reducing non-toxic ptomaïne, $C_8H_{11}ON$, formed by the putrefaction of human flesh.

mydriasis, *n.* **2.** Hydrophthalmia.

mydrin (mid′rin), *n.* [*mydr(iatic)* + *-in*².] A 10-per-cent. aqueous solution of a mixture of the hydrochlorids of ephedrine and homatropine: an evanescent mydriatic.

myectomy (mī-ek′tọ̄-mi), *n.* [Gr. μῦς (μυ-), muscle, + ἐκτομή, excision.] A surgical operation for the removal of a portion of a muscle.

myel (mī′el), *n.* [NL. *myelon*, < Gr. μυελός, later μυελόν, marrow.] The spinal cord.

myelæmia, *n.* Same as ★*myelemia.*

myelalgia (mī-el-al′jiạ̈), *n.* [NL., < Gr. μυελός, marrow, + ἄλγος, pain.] Pain in the spinal cord or its membranes.

myelatrophy (mī-el-at′rọ̄-fi), *n.* Same as *myelatrophia.*

myelemia (mī-el-ē′mi-ạ̈), *n.* [NL. *myelæmia*, < Gr. μυελός, marrow, + αἷμα, blood.] The appearance in the blood of large numbers of cells which are normally found only in the bone-marrow, such as neutrophilic and eosinophilic myelocytes and nucleated red blood-corpuscles. This is seen almost exclusively in the myelogenous type of leucemia.

myelencephalospinal (mī″el-en-sef″a̤-lộ-spī′na̤l), *a.* [Gr. μυελός, marrow, + ἐγκέφαλος, brain, + L. *spina*, spine.] Of or pertaining to the medulla oblongata and the spinal cord.

myelic (mī-el′ik), *a.* [*myel* + *-ic.*] Of or pertaining to the myel, or spinal cord.

myelin, *n.* **II.** *a.* Resembling myelin: said of lecithin which has been placed in water and has become swollen and pasty. On microscopical examination it will then be seen to exist in the form of peculiar slimy droplets and threads, which are known as the *myelin forms* of the substance.

myelinated (mī′e-lin-ā-ted), *p. a.* [*myelin* + *-ate*¹ + *-ed*².] Having the axis-cylinder inclosed in a sheath of myelin: said of nerve-fibers. *Philos. Trans. Roy. Soc.* (London), 1898, Ser. B, p. 86.

myelination (mī″e-li-nā′sho̤n), *n.* [*myelin* + *-ation.*] The acquisition by a nerve-fiber of a sheathing of myelin. *M. Foster*, in Smithsonian Rep., 1897, p. 447.—**Flechsig's myelination method**, the determination of nerve-paths from a study of the time in the development of the nerve-fibers at which their myelin-sheath develops.

myelinic (mī-e-lin′ik), *a.* [*myelin* + *-ic.*] Of or pertaining to myelin.

myelinization (mī″e-lin-i-zā′sho̤n), *n.* [*myelin* + *-ize* + *-ation.*] Same as ★*myelination.*

Basing his opinion on the tardy *myelinisation* of the nerve-fibres which terminate in it, subsequent to the birth of the individual and to the *myelinisation* of the fibres of the sensory and motor centres, Flechsig supposes that these convolutions were designed to enable the different cerebral centres to communicate with each other and to render us conscious of this communication; therefore he has named their grey substance "centres of association." *Deniker*, Races of Man, p. 103.

myelitis, *n.*—**Ascending myelitis**, inflammation of the spinal cord extending upward.—**Cavitary myelitis**, syringomyelia.—**Central myelitis**, inflammation which involves mainly the gray substance of the spinal cord.—**Compression myelitis**, inflammation of the spinal cord due to compression by a tumor or in consequence of angular bending of the spine in Pott's disease.—**Descending myelitis**, inflammation of the spinal cord extending downward.—**Disseminated myelitis**, inflammation of the spinal cord occurring at several distinct points.

myeloblast (mī′e-lọ̄-blȧst), *n.* [Gr. μυελός, marrow, + βλαστός, germ.] A cell from which the myelocyte is developed; sometimes also synonymous with ★*myelocyte*, 2.

myelocyst (mī′e-lọ̄-sist), *n.* [Gr. μυελός, marrow, + κύστις, bladder (cyst).] A cyst of the spinal cord.

myelocystocele (mī″e-lọ̄-sis′tọ̄-sēl), *n.* [Gr. μυελός, marrow, + κύστις, bladder (cyst), + κήλη, tumor.] Spina bifida in which the tumor is composed of a sac of spinal-cord tissue inclosing fluid.

myelocystomeningocele (mī″e-lọ̄-sis″tọ̄-mẹ̄-ning′gọ̄-sēl), *n.* [Gr. μυελός, marrow, + κύστις, bladder (cyst), + μῆνιγξ, membrane, + κήλη, tumor.] A myelocystocele covered with the spinal membranes.

myelocytæmia (mī″e-lọ̄-sī-tē′mi-ạ̈), *n.* [NL., strictly **myelocythæmia*; Gr. μυελός, marrow, + κύτος, a hollow (a cell), + αἷμα, blood.] A condition in which the blood contains myelocytes in abnormal number.

myelocyte (mī′e-lọ̄-sīt), *n.* [Gr. μυελός, marrow, + κύτος, a hollow (a cell).] **1.** One of the cells of the gray substance of the brain.—**2.** A bone-marrow cell; one of the varieties of leucocytes formed in the bone-marrow.

myelocytic (mī″e-lọ-sit′ik), *a.* [*myelocyte* + *-ic.*] Of, pertaining to, or of the nature of, myelocytes.

myelocytosis (mī″e-lọ-sī-tō′sis), *n.* [*myelocyte* + *-osis.*] The occurrence of myelocytes in the blood.

myelogenesis (mī″e-lọ-jen′e-sis), *n.* [Gr. *μυελός*, marrow, + *γένεσις*, origination.] The origin and development of the nervous system, more especially of the brain and spinal cord. *Lancet*, July 11, 1903, p. 106.

myelogenic (mī″e-lọ-jen′ik), *a.* [Gr. *μυελός*, marrow, + *-γενης*, -produced, + *-ic.*] Originating from bone-marrow.

myelogenous (mī-e-loj′e-nus), *a.* [*myelogen*(*ic*) + *-ous.*] Same as ⋆*myelogenic.*

myeloid, *a.* **II.** *n.* Same as ⋆*myeloidin.*

myeloidin (mī′e-loi′din), *n.* [*myeloid* + *-in*2.] A mixture of protagon and lecithalbumins occurring in the rods and hexagonal epithelial cells of the retina.

myeloma, *n.* **2.** A tumor of the bone-marrow, often multiple.

> Multiple *myeloma* is a convenient term enough for certain rare cases in which myelogenic new growth has been found, but in which there are such differences that two if not more types may be distinguished.
>
> *Med. Record*, April 11, 1903, p. 584.

myelomatosis (mī″e-lọ-ma̤-tō′sis), *n.* [NL., < *myeloma*(*t-*) + *-osis.*] A pathological condition, characterized by the occurrence of multiple myelomata (tumor-like structures which are histologically suggestive of granulation tissue), affecting especially the thoracic skeleton, but found also elsewhere in the bony structures of the body.

myelomeningocele (mī-e-lọ-mẹ-ning′gọ-sēl), *n.* [Gr. *μυελός*, marrow, + *μῆνιγξ*, membrane, + *κήλη*, tumor.] Hernia of the spinal cord and its membranes; spina bifida.

myelomere (mī′e-lọ-mēr), *n.* [Gr. *μυελός*, marrow, + *μέρος*, part.] One of the segmental portions, corresponding with a pair of mesoblastic somites, in the embryonic brain and spinal cord of vertebrate animals.

myelopathia (mī″e-lọ-path′i-a̤), *n.* [Gr. *μυελός*, marrow, + *πάθος*, disease.] Same as ⋆*myelopathy.*—**Myelopathia tropica.** Same as *beriberi.*

myelopathic (mī″e-lọ-path′ik), *a.* [*myelopath*(*y*) + *-ic.*] Relating to or affected with disease of the spinal cord. *Med. Record*, April 11, 1903, p. 585.—**Myelopathic albuminuria.** See *Bence-Jones* ⋆*albumin.*

myelopathy (mī-e-lop′a̤-thi), *n.* [NL. *myelopathia*, < Gr. *μυελός*, marrow, + *πάθος*, disease.] Any disease of the spinal cord.

myeloplaque (mī′e-lọ-plak), *n.* [Gr. *μυελός*, marrow, + F. *plaque*: see *plaque.*] Same as *myeloplax.*

myelorrhaphy (mī-e-lor′a̤-fi), *n.* [Gr. *μυελός*, marrow, + *ῥαφή*, sewing.] Surgical suture of the spinal cord following an injury.

myelosarcoma (mī″e-lọ-sär-kō′mä), *n.*; pl. *myelosarcomata* (-ma̤-ta̤). [NL., < Gr. *μυελός*, marrow, + *σάρκωμα*, sarcoma.] An osteosarcoma arising from the marrow.

myelospongium (mī″e-lọ-spon′ji-um), *n.*; pl. *myelospongia* (-a̤). [NL., < Gr. *μυελός*, marrow, + *σπογγιά*, sponge.] A network of connecting or sustentacular tissue in the embryonic brain and spinal cord, derived from the spongioblasts; the embryonic neuroglia.

myelosyphilis (mī″e-lọ-sif′i-lis), *n.* [NL., < Gr. *μυελός*, marrow, + NL. *syphilis.*] Syphilis of the spinal cord.

myelotherapy (mī″e-lọ-ther′a̤-pi), *n.* [NL., < Gr. *μυελός*, marrow, + *θεραπεία*, medical treatment.] Employment of bone-marrow in the treatment of disease.

myelotoxic (mī″e-lọ-tok′sik), *a.* [*myelotox*(*in*) + *-ic.*] Pertaining to, or having reference to the action of, myelotoxins.

myelotoxin (mī″e-lọ-tok′sin), *n.* [Gr. *μυελός*, marrow, + *τοξ*(*ικόν*), poison, + *-in*2.] A cytotoxin which causes the destruction of the granular leucocytes of the bone-marrow.

myenteric (mī-en-ter′ik), *n.* [*myenteron* + *-ic.*] Of or pertaining to the muscular coat of the intestine.

myenteron (mī-en′tẹ-ron), *n.*; pl. *myentera* (-ra̤). [NL., < Gr. *μῦς*, muscle, + *ἔντερον*, intestine.] The muscular layer of the intestine.

myg. An abbreviation of *myriagram.*

myiasis (mī-i-ā′sis), *n.* [NL., < Gr. *μυῖα*, a fly, + *-iasis.*] The infestation of human beings by dipterous and other insect larvæ.

> Such are the cutaneous swellings caused by the larvæ of the œstrid *Dermatobia noxialis*; the occurrence of the larvæ of the screw-worm fly, *Lucilia* (or *Compsomyia*) *macellaria*, in the nasal passages or in wounds; and the occurrence of larvæ (as anthomyiid larvæ swallowed with uncooked vegetables) in the alimentary tract. Myiasis is referred to medically as *internal* or *external*, *myiasis interna* or *myiasis externa*. Also called *scholechiasis.*
>
> *Cambridge Nat. Hist.*, VI. 512.

myiferous (mī-if′ẹ-rus), *a.* [Gr. *μῦς*, muscle, + L. *-fer*, < *ferre*, bear, + *-ous.*] Bearing or supporting the muscles: used especially of certain shelly plates on the valves of the *Brachiopoda* and *Pelecypoda* on which the muscle-bands are implanted.

myiosis (mī-i-ō′sis), *n.* [NL., < Gr. *μυῖα*, fly, + *-osis.*] Same as ⋆*myiasis.*

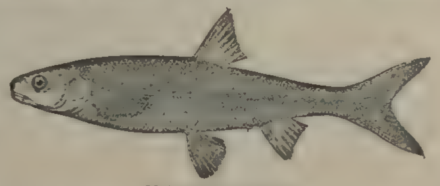
Mykenean (mī-kẹ-nē′a̤n), *a.* Same as ⋆*Mycenæan.*

mykis (mī′kis), *n.* [A vernacular name in Kamchatka.] A common name of a trout, *Salmo mykis.* It inhabits the streams of Alaska and Kamchatka, and is represented southward by several subspecies.

mykomelinic (mī″kọ-me-lin′ik), *a.* Same as ⋆*mycomelic.*

myl. An abbreviation of *myrialiter.*

Mylocheilus (mī-lọ-kī′lus), *n.* [NL., < Gr. *μύλος*, a grinder, + *χεῖλος*, lip.] A genus of large cyprinoid fishes found on the Pacific slope of the United States.



Mylocheilus caurinus.

(From Bulletin 47, U. S. Nat. Museum.)

mylonite (mī′lọ-nīt), *n.* [Gr. *μυλών*, a mill, + *-ite*2.] In *petrog.*, a schist produced by crushing or granulation, that is, by dynamic metamorphism. *Lapworth*, 1885.

mylonitic (mī-lọ-nit′ik), *a.* [*mylonite* + *-ic.*] In *petrog.*, having the characters of mylonite, chiefly the granular texture of a rock metamorphosed by crushing.

mylonize (mī′lọ-nīz), *v. t.*; pret. and pp. *mylonized*, ppr. *mylonizing.* [*mylon*(*ite*) + *-ize.*] To render a mylonite or mylonitic; make schistose by dynamic metamorphism.

> In the field, bands of *mylonised* rock have been traced near the base of the overlying cake of gneiss, and the microscopic examination of the latter by Mr. Teall has revealed cataclastic structures due to dynamic movement.
>
> *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 617.

Mylopharodon (mī-lō-far′ọ-don), *n.* [NL. **Mylopharyngodon*, < *μύλος*, grinder, + *φάρυγξ*, pharynx, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of large cyprinoid fishes found in the Sacramento and San Joaquin rivers.

mym. An abbreviation of *myriameter.*

mymy (mī′mī), *n.* Same as ⋆*mia-mia.*

myoalbumin (mī″ọ-al-bū′min), *n.* [Gr. *μῦς*, muscle, + E. *albumin.*] Muscle albumin.

myocardiac (mī-ọ-kär′di-ak), *a.* [Gr. *μῦς*, muscle, + *καρδία*, heart, + *-ac.*] Of or pertaining to the muscular tissue of the heart.

myocardiagram, myocardiagraph. Same as ⋆*myocardiogram*, ⋆*myocardiograph.*

myocardiogram (mī-ọ-kär′di-ọ-gram), *n.* [Gr. *μῦς*, muscle, + *καρδία*, heart, + *γράμμα*, anything written.] A tracing made by a myocardiograph.

myocardiograph (mī-ọ-kär′di-ọ-gråf), *n.* [Gr. *μῦς*, muscle, + *καρδία*, heart, + *γράφειν*, write.] An instrument for recording the work performed by the heart muscle. *Buck*, Med. Handbook, II. 688.

myocarditic (mī″ọ-kär-dit′ik), *a.* [*myocarditis* + *-ic.*] Relating to myocarditis.

myochrome (mī′ọ-krōm), *n.* [Gr. *μῦς*, muscle, + *χρῶμα*, color.] A muscle-pigment. The common red muscle-pigment is identical with the hemoglobin of the blood. Other myochromes belong to the order of the lipochromes, and are especially abundant in certain fishes, such as the salmon and trout.

myoclonia (mī-ọ-klō′ni-a̤), *n.* [NL., < Gr. *μῦς*, muscle, + *κλόνος*, spasm.] A disease characterized chiefly by muscular spasm, or myoclonus.

myoclonic (mī-ọ-klon′ik), *a.* [*myoclon*(*us*) + *-ic.*] Pertaining to or exhibiting myoclonus or myoclonia.

myoclonus (mī-ok′lọ-nus), *n.* [NL., < Gr. *μῦς*, muscle, + *κλόνος*, spasm.] Spasmodic contraction of the muscles of the extremities and, less frequently, of the back. *Med. Record*, Feb. 14, 1903, p. 258.

myocœle (mī′ọ-sēl), *n.* [Gr. *μῦς*, muscle, + *κοῖλος*, hollow.] **1.** The cavity in a myocomma.—**2.** In the embryonic vertebrate, the most dorsal portion of the cœlomic or true body-cavity which lies in the protovertebra, or myotomic portion of the mesoderm.

myocœlom (mī′ọ-sē-lom), *n.* Same as ⋆*myocœle.*

myoctonine (mī-ok′tọ-nin), *n.* [Gr. *μυόκτονος*, mouse-killing (< *μῦς*, mouse, + *-κτονος*, < *κτείνειν*, kill), + *-ine*2.] A powerfully poisonous alkaloid, obtained from Aconitum lycoctonum, resembling curare in its effects.

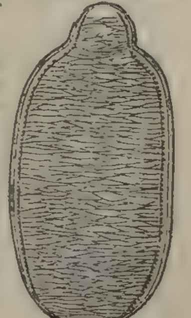
myocyte, *n.* **2.** In *Gregarinida*, the deeper layer of the ectoplasm containing a system of contractile fibrils: contrasted with ⋆*sarcocyte.*

myocyte-fibrillæ (mī″ọ-sīt-fi-bril′ē), *n. pl.* The system of fine contractile fibrils in the deeper part of the ectoplasm of gregarines.

myodiastasis (mī″ọ-dī-as′ta̤-sis), *n.* [Gr. *μῦς*, muscle, + *διάστασις*, separation.] Rupture of a muscle.

myodynamic (mī″ọ-dī-nam′ik), *a.* [Gr. *μῦς*, muscle, + *δύναμις*, power.] Of or pertaining to muscular force.

myo-epithelial (mī″ọ-ep-i-thē′li-a̤l), *a.* [*myo-epitheli*(*um*) + *-al*1.] Pertaining to or having the characters of myo-epithelium. *Nature*, March 3, 1904, p. 431.



Myocyte-Fibrillæ.

Gregarina munieri (A. Schn.), (par. *Timarcha tenebricosa*), showing the network of myocyte fibrils.

(From Lankester's "Zoology.")

myo-epithelium (mī″ō-ep-i-thē′li-um), *n.* [NL., < Gr. *μῦς*, muscle, + NL. *epithelium.*] **1.** A kind of tissue, found in the *Cœlenterata*, which partakes at the same time of the characters of epithelial and muscular tissue.—**2.** The epithelium of the mesoblastic somite of the vertebrate embryo: so named because, though epithelial in form, it nevertheless gives rise to muscle.

myofibril (mī-ọ-fī′bril), *n.* [Gr. *μῦς*, muscle, + E. *fibril.*] A muscle-fibril.

> A. Labbé finds that in Nebalia there is an actual continuity of substance between the epithelial "tonofibril" and the *myofibril.*
>
> *Jour. Roy. Micros. Soc.*, Feb., 1903, p. 38.

myogen (mī′ọ-jen), *n.* [Gr. *μῦς*, muscle, + *-γενης*, -producing.] An albuminous substance which occurs in muscle-plasma. Like the fibrinogen of the blood, it is capable of clotting, during which process it is transformed into myogen-fibrin. Also called *myosinogen.*

myogenous (mī-oj′e-nus), *a.* Same as *myogenic.*

myoglyphis (mī-og′li-fis), *n.*; pl. *myoglyphides* (mī-ọ-glif′i-dēz). [NL., < Gr. *μῦς*, muscle, + *γλυφίς*, the notched end of an arrow, < *γλύφειν*, cut, carve.] In *entom.*, one of the notches in the posterior margin of the neck, usually two in number, to which the levator muscles are attached: found in the *Coleoptera.*

myoid, *a.* **II.** *n.* Same as ⋆*myonema.*

myokymia (mī-ọ-kī′mi-a̤), *n.* [NL., < Gr. *μῦς*, muscle, + *κῦμα*, wave.] A pathological condition in which slow, wave-like contractions pass from one end to the other of a muscle without locomotor effect.

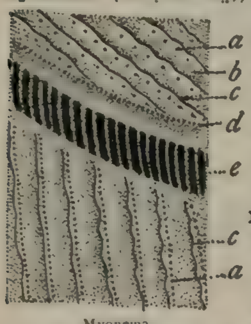
myolipoma (mī″ọ-li-pō′mä), *n.*; pl. *myolipomata* (-ma̤-ta̤). [NL., < Gr. *μῦς*, muscle, + NL. *lipoma.*] A tumor of mixed muscular and fatty tissue.

myolysis (mī-ol′i-sis), *n.* [NL., < Gr. *μῦς*, muscle, + *λύσις*, dissolution.] Softening and degeneration of muscle.

myometritis (mī″ọ-mẹ-trī′tis), *n.* [NL., < Gr. *μῦς*, muscle, + *μήτρα*, uterus, + *-itis.*] Inflammation of the muscular tissue of the uterus.

myometrium (mī-ọ-mē′tri-um), *n.* [NL., < Gr. *μῦς*, muscle, + *μήτρα*, uterus.] The muscular tissue of the uterus.

myonema (mī-ọ̄-nē'mạ̈), *n.*; pl. *myonemata* (-mạ-tạ̈). [NL., < Gr. *μῦς*, muscle, + *νῆμα*, thread.] One of the contractile, muscle-like fibrillæ found in the protoplasm of certain ciliate *Infusoria*, such as the bell-animalcule, *Vorticella*.



Myonema.

Section parallel with the surface and in the region of the adoral zone of *Stentor niger*.

a, basal corpuscle; *b*, cytoplasm; *c*, myonema; *d*, row of marginal cilia; *e*, adoral zone.

(Drawn from Gurwitsch's "Morphologie und Biologie der Zelle.")

myoneme (mī'ọ̄-nēm), *n.* Same as ★*myonema*.

> A. Prenant in attempting a phylogenetic survey of the evolution of muscular elements has begun naturally with the so-called *myonemes* of Protozoa.
>
> *Jour. Roy. Micros. Soc.*, [Oct., 1903, p. 618.

myoneure (mī'ọ̄-nūr), *n.* [Gr. *μῦς*, muscle, + *νεῦρον*, nerve.] A motor nerve-cell.

myonymy (mī-on'i-mi), *n.* [Gr. *μῦς*, muscle, + *ὄνομα*, *ὄνυμα*, name, + *-y*³.] A nomenclature of the muscles.

myopericarditis (mī-ọ̄-per"i-kär-dī'tis), *n.* [NL., < Gr. *μῦς*, muscle, + *περικάρδιον*, pericardium, + *-itis*.] Inflammation of the muscular wall of the heart and of its enveloping membrane.

myophage (mī'ọ̄-fāj), *n.* [Gr. *μῦς*, muscle, + *φαγεῖν*, eat.] A phagocyte which takes part in breaking down and consuming muscle-fibers. *Buck*, Med. Handbook, VI. 32.

myophane (mī'ọ̄-fān), *n.* Same as *myophan*.

myophonia (mī-ọ̄-fō'ni-ạ̈), *n.* [NL., < Gr. *μῦς*, muscle, + *φωνή*, sound.] Sound produced by the contraction of muscular tissue.

myophoric (mī-ọ̄-for'ik), *a.* [Gr. *μῦς*, a muscle, + *-φορος*, < *φέρειν*, bear, + *-ic*.] Same as ★*myiferous*.

myopia, *n.*—**Chromic myopia.** See ★*chromic*.—**Malignant** or **pernicious myopia**, near-sightedness associated with serious disease of the eye, progressing steadily to total blindness.

Myopic crescent. See ★*crescent*.

myoproteid (mī-ọ̄-prō'tẹ̄-id), *n.* [Gr. *μῦς*, muscle, + E. *proteid*.] A peculiar albuminous substance, possibly a globulin, which has been found in the muscle-plasma of fishes and crabs.

myoproteose (mī-ọ̄-prō'tē-ōs), *n.* [Gr. *μῦς*, muscle, + E. *proteose*.] An albumose derived from one of the soluble muscle-albumins.

myorrhexis (mī-ọ̄-rek'sis), *n.* [Gr. *μῦς*, muscle, + *ῥῆξις*, rupture.] The tearing of a muscle.

myosclerosis (mī"ọ̄-sklẹ̄-rō'sis), *n.* [Gr. *μῦς*, muscle, + *σκλήρωσις*, hardening.] Overgrowth of the connective-tissue septa in a muscle.

myosclerotic (mī"ọ̄-sklẹ̄-rot'ik), *a.* Pertaining to or exhibiting myosclerosis.

myoseptum (mī-ọ̄-sep'tum), *n.*; pl. *myosepta* (-tạ̈). [Gr. *μῦς*, muscle, + L. *septum*, partition.] A plate of tendinous connective tissue separating muscle-segments and extending transversely to the long axis of the muscle-cells or fibers.

> In somewhat shrunken transverse sections each bundle of fibrils is seen to be contained in a sheath of protoplasm containing a nucleus at one side, the whole forming a somewhat cylindrical 'cell' stretching from the one *myoseptum* to the other.
>
> *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 655.

myosinogen (mī-ọ̄-sin'ọ̄-jen), *n.* [*myosin* + *-gen*.] Same as ★*myogen*.

myosinose (mī'ọ̄-si-nōs), *n.* [*myosin* + *-ose*.] An albumose derived from myosin.

myosis, *n.*—**Spinal myosis**, myosis occurring in connection with any disease of the spinal cord.

myositis, *n.*—**Interstitial myositis**, inflammation, with overgrowth of the connective-tissue septa, in muscular tissue.—**Ossifying myositis**, inflammation of muscle leading to bone-formation, most marked at the points of origin and insertion.—**Parenchymatous myositis**, inflammation of the true muscular tissue rather than of the connective-tissue septa.

myospasm (mī'ọ̄-spazm), *n.* Same as *myospasmus*.

myostromin (mī-ọ̄-strō'min), *n.* [Gr. *μῦς*, muscle, + NL. *stroma* + *-in*².] A phosphorized proteid found in the muscle stroma.

myotasis (mī-ot'ạ-sis), *n.* [Gr. *μῦς*, muscle, + *τάσις*, tension, < *τείνειν*, stretch.] Tension of muscular tissue.

myotenotomy (mī"ọ̄-tẹ̄-not'ọ̄-mi), *n.* [Gr. *μῦς*, muscle, + *τέν(ων)*, tendon, + *-τομια*, < *ταμεῖν*, cut.] Surgical division of a muscle and its tendon.

myotonia (mī-ọ̄-tō'ni-ạ̈), *n.* [NL., < Gr. *μῦς*, muscle, + *-τονια*, < *τόνος*, tension.] **1.** A state of continuous muscular contraction.—**2.** Same as *myotony*.—**Myotonia congenita.** Same as *Thomsen's disease*.

Myoxocephalus (mī-ok-sọ̄-sef'ạ-lus), *n.* [NL., < Gr. *μυωξός*, the dormouse, + *κεφαλή*, head.] See ★*Acanthocottus*.

myriachit, *n.* See *miryachit*.

myriadyne (mir'i-ạ-dīn), *n.* [Irreg. < Gr. *μυριάς*, ten thousand, + *δύν(αμις)*, power. See *dyne*.] A unit of force equal to 10,000 dynes. [Rare.]

myriagon (mir'i-ạ-gon), *n.* [Irreg. < Gr. *μυριάς*, ten thousand, + *γωνία*, angle.] A polygon of ten thousand sides.

myricaceous (mir-i-kā'shius), *a.* Belonging to the plant family *Myricaceæ*.

Myricales (mir-i-kā'lēz), *n. pl.* [NL. (Engler, 1897), < *Myrica* + *-ales*.] An order of dicotyledonous apetalous plants coextensive with the family *Myricaceæ* and containing only the genus *Myrica* (which see).

myricetin (mi-ris'ē-tin), *n.* [*Myrica* + *-et* + *-in*².] A yellow coloring-matter, $C_{15}H_{10}O_8$, a hydroxyquercitin contained in the bark of *Myrica Nagi* and in the leaves of the Sicilian sumac, *Rhus Coriaria*. It crystallizes in lustrous needles and melts above 300° C.

Myrichthys (mi-rik'this), *n.* [NL., < Gr. *μῦρος*, a kind of sea-eel, + *ἰχθύς*, fish.] A genus of eels, of the family *Ophichthyidæ*, found in most tropical seas.

Myridæ (mir'i-dē), *n. pl.* [NL., < *Myrus* + *-idæ*.] A family of eels which inhabit sandy coasts of most tropical seas.

myringa (mi-ring'gạ̈), *n.* [NL., appar. originally a mistaken form of **meninga*, Gr. *μήνιγγα*, acc. of *μῆνιγξ*, membrane. See *meninx*.] Same as *tympanic membrane*.

myringodectomy (mi-ring-gọ̄-dek'tọ̄-mi), *n.* [NL. *myringa* + Gr. *εκτομή*, excision.] Excision of a portion of the tympanic membrane.

myringomycosis (mi-ring"gọ̄-mī-kō'sis), *n.* [NL., < *myringa* + Gr. *μύκης*, fungus, + *-osis*.] Inflammation of the tympanic membrane due to the presence of a fungous growth.

myringoplasty (mi-ring'gọ̄-plas-ti), *n.* [NL. *myringa* + Gr. *πλαστός*, formed, + *-y*³.] In *surg.*, a plastic operation for the closing of a ruptured tympanic membrane.

myringotomy (mir-ing-got'ọ̄-mi), *n.* [NL. *myringa* + Gr. *-τομια*, < *ταμεῖν*, cut.] Incision into the tympanic membrane.

myriologist (mir-i-ol'ọ̄-jist), *n.* [*myriologue* + *-ist*.] One who sings myriologues.

myriologue (mir'i-ọ̄-log), *n.* [F. *myriologue*, said to be < Gr. *μύριοι*, ten thousand, + *λόγος*, speech.] An extempore lament or funeral song.

myriometer (mir-i-om'e-tėr), *n.* [Gr. *μυριάς*, myriad, + *μέτρον*, measure.] See the extract.

> Mr. G. W. Evans-Cross exhibited his calculating machine, the *myriometer*. The instrument has several different forms, which are all, in principle, modifications of the slide-rule. In the form in which the instrument can be used for multiplication, the rule consists of a number, equal to that of the digits in one factor, of slips placed diagonally in a frame, and the slide carries as many cursors as there are digits in the other factor. The instrument will give exact results for numbers of six or eight digits. In other forms the instrument can be used for various calculations relating to commerce, such as the reduction of the interest on a stated sum from one percentage to another. In another form slides can be set so as to give the calendar of any year, B.C. or A.D., and all the new moons of the year.
>
> *Nature*, March 21, 1907, p. 503.

myrionomous (mir-i-on'ọ̄-mus), *a.* [Gr. *μυριάς*, myriad, + *ὄνομα*, name, + *-ous*.] Having a myriad names; myriad-named.

> Love would be not only blind but aphasic without flowers, the language of which is the signature of its diverse and *myrionomous* phases.
>
> *G. S. Hall*, Adolescence, II. 130.

Myriothela (mir"i-ō-thē'lạ̈), *n.* [NL., < Gr. *μυριάς*, myriad, + *θηλή*, a teat.] The typical genus of the family *Myriothelidæ*. *Sars*, 1857.

Myriothelidæ (mir"i-ọ̄-thel'i-dē), *n. pl.* [NL., < *Myriothel(a)* + *-idæ*.] A family of tubularian hydromedusans consisting of colonial forms with a perisarc destitute of investing layer of cœnosarc, and the polyp solitary, with scattered capitate tentacles. It contains the genus *Myriothela*.

Myriozoidæ (mir"i-ọ̄-zō'i-dē), *n. pl.* [NL., < *Myriozo(um)* + *-idæ*.] A family of chilostomatous gymnolæmatous polyzoans having the zoarium incrusting or rising into foliaceous expansions, or dendroid, the zoœcia calcareous with no membranous area or raised margins, and the orifice with a sinus on the lower lip. It includes several genera, among them being *Myriozoum*, *Schizoporella*, and *Hippothoa*.

Myriozoum (mir"i-ọ̄-zō'um), *n.* [NL., < Gr. *μυριάς*, myriad, + *ζῷον*, animal.] The typical genus of the family *Myriozoidæ*. *Donati*.

Myripristis (mir-i-pris'tis), *n.* [NL., < Gr. *μυριας*, myriad, + *πρίστις*, a fish so called (*πρίστης*, sawyer).] A genus of berycoid fishes, of the family *Holocentridæ*, which has numerous species in tropical seas.

myristicin (mī-ris'ti-sin), *n.* [*Myristic(a)* + *-in*².] A colorless crystalline compound,  $CH_2\langle{}^{O}_{O}\rangle C_6H_2(OCH_3)C_4H_7$, contained in oil of mace. It melts at 30.2° C. and boils at 142–149° C. under 10 millimeters pressure.

myristicol (mī-ris'ti-kol), *n.* [*Myristic(a)* + *-ol*.] A colorless compound, $C_{10}H_{16}O$, isomeric with camphor, contained in nutmeg-oil, from *Myristica fragrans*.

myristinic (mī-ris-tin'ik), *a.* [*myrist(ic)* + *-in* + *-ic*.] Noting an organic acid, $C_{14}H_{28}O_{21}$, found in nutmeg-butter, in the spermaceti of whales, and in ox bile.

myristodiolein (mī-ris"tọ̄-dī-ọ̄-lē'in), *n.* [*myrist(ic)* + *di-*² + L. *oleum*, oil, + *-in*².] A glyceride, $C_3H_5(C_{14}H_{27}O_2)(C_{18}H_{33}O_2)_2$, found in the oil from Bir Bahoti, or the 'rains insect.' The oil extracted from this mite is used medicinally by the Mohammedans of Allahabad. *Nature*, April 6, 1905, p. 552.

myristolic (mī-ris-tol'ik), *a.* [*myrist(ic)* + *-ol* + *-ic*.] Noting an acid, a yellow oil, $C_{14}H_{24}O_2$, prepared by the action of chlorin and alcoholic potassium hydroxid on myristic acid. It melts at 12° C.

myristone (mī-ris'tōn), *n.* [*myrist(ic)* + *-one*.] A colorless ketone, $(C_{13}H_{27})_2CO$, prepared by the distillation of calcium myristate. It crystallizes in small plates melting at 76.3° C.

myrmecographer (mėr-mẹ̄-kog'rạ-fėr), *n.* [*myrmecograph(y)* + *-er*².] One who describes ants; a myrmecologist.

myrmecographist (mėr-mẹ̄-kog'rạ-fist), *n.* [*myrmecograph(y)* + *-ist*.] Same as ★*myrmecographer*.

myrmecography (mėr-mẹ̄-kog'rạ-fi), *n.* [Gr. *μύρμηξ*, ant, + *-γραφια*, < *γράφειν*, write.] The descriptive portion of myrmecology; that portion of the study of ants which comprises the description of species, the forms of their nests, etc.

myrmecologist (mėr-mẹ̄-kol'ọ̄-jist), *n.* [*myrmecolog(y)* + *-ist*.] An entomologist who makes a special study of ants, or of myrmecology. *Science*, April 8, 1904, p. 589.

myrmecophile (mėr'mẹ̄-kọ̄-fil), *n.* [Gr. *μύρμηξ*, ant, + *φίλος*, loving.] An animal or plant which lives in symbiotic or intimate relations with ants. The majority of myrmecophiles are arthropods, especially beetles.

myrmecophily (mėr-mẹ̄-kof'i-li), *n.* [*myrmecophile* + *-y*³.] The state or condition of being myrmecophilous, or of living in intimate relations with ants: said of certain beetles, plants, etc.

> Another relation of which the facts are clear enough, but of which the evolution is doubtful, is that known as *Myrmecophily*. Species of ants make their home on tropical plants, living in hollows of stem, petiole, or stipule. . . . These ants act as a bodyguard to their home against the inroad of leaf-cutting ants collecting material for their fungus-gardens.
>
> *Encyc. Brit.*, XXV. 439.

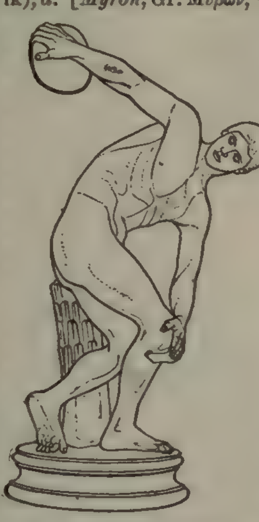
myrmeleontid (mėr-mē-lẹ̄-on'tid), *n.* and *a.* **I.** *n.* A member of the neuropterous family *Myrmeleontidæ*.

II. *a.* Having the characters of or belonging to the family *Myrmeleontidæ* or *Myrmeleonidæ*.

myrmicid (mėr'mi-sid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Myrmicidæ*.

II. *a.* Having the characters of or belonging to the hymenopterous family *Myrmicidæ*.

Myronic² (mī-ron′ik), *a.* [*Myron*, Gr. *Μύρων*, + *-ic.*] In the style of Myron, a Greek sculptor who flourished in the fifth century B.C. and who especially favored athletic subjects. The quality of his work is supposed to appear in the statue of the Discobolus at the Lancellotti palace in Rome.



Myronic Style in Sculpture.
The Discobolus of the Lancellotti Palace, Rome.

myronin (mī′rọ̄-nin), *n.* A hydrous ointment base consisting of a mixture of soap, carnauba-wax, and doegling oil.

Myrophis (mī′rọ̄-fis), *n.* [NL., < Gr. *μῦρος*, a kind of sea-eel, + *ὄφις*, serpent.] A genus of small eels, of the family *Myridæ*, which resemble earthworms. They are found on the sandy shores of tropical America.

myroxylic (mī-rok-sil′ik), *a.* [*Myroxyl(on)* + *-ic.*] Pertaining to or derived from trees of the genus *Myroxylon.*—**Myroxylic acid**, a compound obtained from Peru balsam by the action of concentrated alcoholic potassium hydroxid. It is apparently impure benzoic acid.

myrrh, *n.*—**East Indian myrrh.** See ★*hebbakhade.*—**False myrrh**, a name applied to more than one gum-resin resembling true myrrh, as East Indian myrrh or besabol (of African origin) and Arabian myrrh: the latter differs little from the true drug.

myrrholin (mir′ọ̄-lin), *n.* [L. *myrrha*, myrrh, + *-ol* + *-in*².] A mixture of equal parts of tincture of myrrh and castor-oil: a vehicle for administering creosote.

Myrsiphyllum (mėr-si-fil′um), *n.* [NL., < Gr. *μυρσί(νη)*, myrtle, + *φύλλον*, leaf.] A section of the genus *Asparagus*, of the family *Liliaceæ*, containing the 'smilax' of florists, *Asparagus asparagoides*, a climbing perennial South African herb much prized by the public in floral decorations. The foliage, which is composed of cladodes or leaf-branches, is broad and ovate, in this respect differing from the true asparagus, which has linear or filiform foliage.

Myrtales, *n. pl.* 2. A large order of dicotyledonous chiefly choripetalous plants. It consists of trees, shrubs, and herbs with simple leaves and flowers with the gamosepalous calyx superior or adnate to the compound ovary, which contains numerous ovules. It embraces 13 families, including, besides the myrtle family, the *Lythraceæ*, *Punicaceæ*, *Combretaceæ*, *Melastomaceæ*, *Onagraceæ*, *Trapaceæ*, and *Haloragidaceæ*.

myrtle, *n.*—**Barren myrtle.** (*a*) The bearberry, *Arctostaphylos Uva-ursi.* (*b*) The sweet-gale, *Myrica Gale.*—**Bridal myrtle**, the common myrtle, *Myrtus communis.*—**Brush-myrtle.** Same as ★*brush-cherry*, 2.—**California wax-myrtle.** See *wax-myrtle.*—**Common myrtle**, *Myrtus communis.* See *myrtle*, 1.—**Dwarf myrtle.** Same as *Jew's-myrtle*, 1.—**Moor-myrtle**, the sweet-gale.—**Odorless myrtle**, *Myrica inodora*, a shrub or small tree of the Gulf Coast from Florida to Mississippi. It resembles the wax-myrtle but has entire leaves and is nearly devoid of odor.—**Ridge myrtle**, a large evergreen tree of the myrtle family, *Melaleuca genistifolia*, native to Queensland and New South Wales. It yields a hard grayish wood.—**Sweet myrtle**, the sweet-flag, *Acorus Calamus.*—**Three-veined myrtle.** See ★*brush-turpentine*, and *red scrub tea-tree*, under *tea-tree.*—**Tree myrtle**, *Ceanothus arboreus*, a small, round-headed tree found in the Santa Barbara islands off the coast of California.—**Wild myrtle.** Same as *Jew's-myrtle*, 1.

Myrtle-berry wax. Same as *myrtle-wax.*

myrtle-green, *n.*—**Fast myrtle-green.** Same as *dark* ★*green.*

myrtle-oak (mėr′tl-ōk), *n.* See ★*oak.*

myrtle-pan (mėr′tl-pan), *n.* A tub-like pottery receptacle for evergreens or other plants: made in England near the end of the eighteenth century.

myrtol (mėr′tol), *n.* [L. *myrtus*, myrtle, + *-ol.*] A colorless aromatic volatile liquid consisting of the fraction between 160–180° C. obtained by the distillation of the oil of *Myrtus communis.* It consists principally of d-pinene and cineol, and is antiseptic.

Mysis stage, in the development of some decapodous crustaceans, a larval stage in which the thoracic limbs are long and biramous and serve for swimming, as in *Mysis.* Also called *schizopod stage.*

Myst. An abbreviation of *Mysteries.*

mystacinous (mis-tas′i-nus), *a.* [Gr. *μύσταξ* (*μυστακ-*), upper lip, mustache, + *-ine*¹ + *-ous.*] In *entom.*, having a mystax.

Mystacoceti (mis″tạ-kọ̄-sē′tī), *n. pl.* [NL., < *μύσταξ*, mustache, + *κῆτος*, a whale.] An order of cetaceans containing the whalebone-whales. They are without teeth, having baleen in the upper jaw.

mystæ (mis′tē), *n. pl.* [NL., < Gr. *μύσται*, pl. of *μύστης*, one initiated.] The name assumed by various Dionysiac societies in Asia Minor and Thrace in the second and third centuries A. D.

> The *Mystæ* of Dionysus Trieterikos may be compared with a number of other Dionysiac societies, calling themselves οἱ Μύσται, which flourished especially in Asia Minor and Thrace during the second and third centuries A. D. . . . The discovery of the hall in which the *Mystæ* held their meetings is an important addition to our knowledge of these associations.
> *R. C. Bosanquet*, in Jour. Hellenic Studies, XVIII. [78, 79.

mysterious-plant (mis-tē′ri-us-plant), *n.* The spurge-laurel, *Daphne Mezereum.*

mystery¹, *n.*—**Samothracian mysteries.** See ★*Cabiria.*

Mystriophis (mis-trī′ọ̄-fis), *n.* [NL., < Gr. *μυστρίον*, a spoon, + *ὄφις*, serpent.] A genus of eels, of the family *Ophichthyidæ*, found in warm seas.

Mystrosporium (mis-trọ̄-spō′ri-um), *n.* [NL. (Corda, 1837), < Gr. *μύστρος*, a spoon, + *σπορά*, seed (spore).] A genus of *Fungi Imperfecti*, of the family *Dematiaceæ*, having simple or sparingly branched conidiophores and many-septate muriform dark-brown spores. About 16 species have been described. *M. adustum* causes bulb-scab of *Iris*, and *M. abrodens* is said to cause a blight of wheat. See ★*bulb-scab* and *wheat-*★*blight.*

Mystrothamnus (mis-trọ̄-tham′nus), *n.* [NL. (Coville, 1908), < Gr. *μύστρον*, spoon, + *θάμνος*, bush, in allusion to the use and habit of the plant. Compare the South African name *ladlewood.*] A genus of plants of the family *Celastraceæ.* See *Hartogia.*

myth, *n.* 3. A landmark for directing the course of a vessel through a channel, or along a dangerous shore.—**Ætiological myth.** See ★*ætiological.*—**Creation-myth.** See ★*creation-myth.*—**Origin-myth**, a myth supposed to explain the origin of a tribe or people. *Jour. Amer. Folk-lore*, Jan.–March, 1902, p. 36.—**Power-myth**, a myth in which the powers of nature appear personified as heroes.

> *Power-myth* — In the second stage of myth or romance we discover a radical development in the personages of the story. A new class of deities is found. From the same linguistic cause, which we have set forth, the conspicuous phenomena of nature are personified as gods. The powers of the universe as they are known in that stage of society become the heroes of myth.
> *J. W. Powell*, in An. Rep. Bur. Amer. Ethnol., 1897–98, [I. lxxxiii.

Transformation-myth, a myth which explains the present form of the world by a series of transformations from a previous stage: opposed to ★*creation-myth.*

myth. An abbreviation of *mythological*, *mythology.*

myth-keeper (mith′kē″pėr), *n.* A person whose duty it is to learn, remember, and teach the knowledge of the mythology of a tribe, either to all the members of the tribe, or to a successor. Myth-keepers are found among tribes which have well-developed religious organization but which do not possess the art of writing.

> The *myth-keepers* and priests were accustomed to meet together at night in the ási, or low-built log sleeping house, to recite the traditions and discuss their secret knowledge. *An. Rep. Bur. Amer. Ethnol.*, 1897–98, i. 230.

mythogeny (mi-thoj′e-ni), *n.* Same as ★*mythogony.* *Smithsonian Rep.*, 1891, p. 444.

mythogonic (mith-ọ̄-gon′ik), *a.* [*mythogon(y)* + *-ic.*] Pertaining or relating to mythogony: as, *mythogonic* studies or investigations.

mythogony (mi-thog′ọ̄-ni), *n.* [Gr. *μῦθος*, myth, + *-γονια*, -production.] The origination of myths, or the study of their origins.

mythologema (mith-ọ̄-lō-jē′mạ̈), *n.*; pl. *mythologemata* (-mạ̈-tạ̈). [Gr. *μυθολόγημα*, < *μυθολογεῖν*, tell myths or legends, < *μῦθος*, myth, + *λόγος*, speech, story.] A record or account of a myth in a poem or other writing.

> The apotheosis of Homer and his marriage with Hebe . . . do not properly belong to the Homeric era, but to the *mythologema* of later times.
> *Cecil Smith*, in Jour. Hellenic Studies, V. 236.

mythomania (mith-ō-mā′ni-ạ̈), *n.* [Gr. *μῦθος*, a myth, + ML. *mania.*] An abnormal propensity to untruthfulness, especially to the telling of stories, affecting oneself or others, which have no foundation on fact.

mythomaniac (mith-ō-mā′ni-ak, *n.* [*mythomania* + *-ac.*] One who is subject to mythomania; a chronic liar. *Lit. Digest*, Feb. 1, 1908.

mythopheme (mith′ọ̄-fēm), *n.* [Gr. *μῦθος*, a myth, + *φήμη*, a speaking.] An accepted myth or legend.

> We must have an introduction to science that touches rather lightly on nearly all the great hypotheses, frontier questions, and larger syntheses over the whole field, in a way that a modern specialist wots not of, that is unitary and synthetic and non-analytic, that commands and compares the great ethnic *mythophemes*, that is poetic and historical and orienting. *G. S. Hall*, Adolescence, II. 151.

mythosociologic (mith-ọ̄-sō″shi-ọ̄-loj′ik), *a.* Relating to a system of society the organization of which is founded on myth. *F. N. Cushing*, in An. Rep. Bur. Amer. Ethnol., 1891–92, p. 325.

mytilotoxicon (mit″i-lọ̄-tok′si-kon), *n.* [Gr. *μυτίλος*, mussel, + *τοξικόν*, poison.] A poisonous substance found in decaying mussels; mytilotoxin.

mytilotoxism (mit″i-lọ̄-tok′sizm), *n.* [*mytilotox(in)* + *-ism.*] Poisoning by eating decaying mussels. See ★*mytilotoxicon.*

myxadenitis (mik″sad-e-nī′tis), *n.* [Gr. *μύξα*, mucus, + *ἀδήν*, gland, + *-itis.*] Inflammation of a mucous gland.

myxadenoma (mik″sad-e-nō′mạ̈), *n.*; pl. *myxadenomata* (-mạ-tạ̈). [NL., < Gr. *μύξα*, mucus, + *ἀδήν*, gland, + *-oma.*] Adenoma containing islets of mucoid material.

myxamœba (mik-sạ-mē′bạ̈), *n.*; pl. *mixamœbæ* (-bē). [Gr. *μύξα*, slime, + *ἀμοιβή*, change, spontaneous movement.] In *Mycetozoa*, a swarm-cell with purely amœboid creeping motion.

> Swarm-cells with purely amoeboid motion have been unnecessarily distinguished by the name of *myxamoebae.*
> *DeBary* (trans.), Fungi, p. 423.

myxedema, *n.* It has been found that this affection is usually entirely amenable to treatment by extracts and other preparations made from the thyroid gland (throat-sweetbread) of the sheep. The same treatment is often of great value in cretinism, which is regarded as a congenital form of myxedema. The use of preparations of the thyroid gland to supply a deficiency of the secretion of this gland, which is the underlying defect in myxedema and cretinism, affords one of the most brilliant examples of successful organotherapy.—**Congenital myxedema.** Same as *cretinism.*

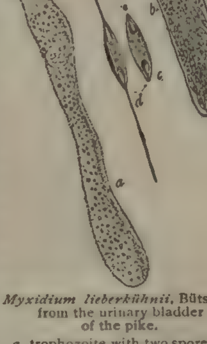
myxedematoid (mik-sē-dem′ạ-toid), *a.* [*myxedema(t-)* + *-oid.*] Resembling myxedema. *Buck*, Med. Handbook, I. 122.

Myxididæ (mik-sid′i-dē), *n. pl.* [NL.] Same as ★*Myxidiidæ.*

Myxidiidæ (mik-si-dī′i-dē), *n. pl.* [NL., < *Myxidi(um)* + *-idæ.*] A family of *Myxosporidia*, forming two or more spores at the same time, the spores being variously shaped and inclosing two polar capsules. It includes several genera, among which are *Myxidium*, *Leptotheca*, and *Sphærospora*. They are found mainly in the gall-bladder and kidney-tubes of fishes and amphibia. Also called *Myxididæ.*

Myxidium (mik-sid′i-um), *n.* [NL. (*Bütschli*, 1882), < Gr. *μύξα*, mucus, slime, + dim. *-ιδιον.*] The typical genus of the family *Myxidiidæ.*

Myxobacteriaceæ (mik′sọ̄-bak-tē″ri-ā′sẹ̄-ē), *n. pl.* [NL. (Thaxter, 1892), < Gr. *μύξα*, slime, + NL. *Bacteriaceæ.*] An order of *Schizomycetes.* In the vegetative condition, they consist of a mass of rod-like bodies produced by repeated fission of individuals possessing power of slow locomotion and secreting a firm gelatinous substance which connects the whole colony. In the fruiting condition, the masses become elevated above the substratum and sometimes irregularly branched, producing cysts in which the rod-like bodies occur in groups or are converted into spore-masses. They occur chiefly on decaying vegetable matter and dung of animals, and partake of the characteristics of both the *Myxomycetes*, or slime-molds, and bacteria, whence the name. See ★*Chondromyces.*



Myxidium lieberkühnii, Bütschli, from the urinary bladder of the pike.

a, trophozoite with two spores and pseudopodia, after Lieberkühn; *b*, trophozoite with numerous spores; *c*, and *d*, spores, the latter with extruded polar filaments; *b*, *c*, and *d*, after Balbiani. (From Wasielewski.) (From Lankester's "Zoology.")

> Thaxter's group of *Myxobacteriaceæ*, if these turn out to be autonomous, points to alliances with the Myxomycetes.
> *Encyc. Brit.*, XXVI. 51.

Myxobolidæ (mik-sọ̄-bol′i-dē), *n. pl.* [NL., < *Myxobolus* + *-idæ.*] A family of *Myxosporidia*, consisting of forms which are usually polysporous, the spores having one or two polar capsules. It contains the genera *Myxobolus* and *Henneguya*, found mostly in the gills, kidney, and spleen of fishes.

Myxobolus (mik-sob′ọ̄-lus), *n.* [NL. (*Bütschli*, 1882), < Gr. *μύξα*, mucus, slime, + *-βολος*, < *βάλλειν*, throw.] The typical genus of the family *Myxobolidæ*.

Myxococcidium (mik″sọ̄-kok-sid′i-um), *n.* [NL., < Gr. *μύξα*, mucus, slime, + *κόκκος*, berry (see *coccus*), + dim. *-ιδιον.*] **1.** A genus of protozoan parasites. *M. stegomyiæ* has been found in the body of the mosquito *Stegomyia fasciata*, which has been contaminated by sucking the blood of a yellow-fever patient. —**2.** [*l. c.*] pl. *myxococcidia* (-ä̤). A protozoan of this genus.

myxocylindroma (mik-sọ̄-sil-in-drō′mä̤), *n.*; pl. *myxocylindromata* (-ma̤-tä̤). [NL., < Gr. *μύξα*, mucus, slime, + E. *cylindroma.*] Same as *myxosarcoma.*

Myxodagnus (mik-sọ̄-dag′nus), *n.* [NL., < *Myxodes* + *Agnus*, 2 (*b*).] A genus of fishes belonging to the family *Dactyloscopidæ*, found only at Cape San Lucas.

myxœdema, *n.* See *myxedema.*

myxogaster (mik-sọ̄-gas′tėr), *n.* Any member of the *Myxogastres* or *Myxomycetes.*

myxoglioma (mik″sọ̄-glī-ō′mä̤), *n.*; pl. *myxogliomata* (-ma̤-tä̤). [Gr. *μύξα*, mucus, + NL. *glioma.*] A glioma which contains more or less mucous tissue.

myxoid (mik′soid), *a.* [Gr. **μυξοειδής*, *μυξώδης*, like mucus, < *μύξα*, mucus, + *εἶδος*, form.] Same as *mucoid.*

myxomycete (mik′sọ̄-mī-sēt), *n.* One of the group of *Myxomycetes* or slime-molds.

myxoneurosis (mik″sọ̄-nụ̄-rō′sis), *n.* [Gr. *μύξα*, slime, + NL. *neurosis.*] A neurosis marked by excessive secretion from the mucous membranes, especially the intestinal mucous membrane; mucous colitis.

> The flushing of the colon in these cases usually brings large masses of mucus in strings, and this mucous colitis, or better, "*myxoneurosis*," is perpetuated by the constant use of cathartics to which these patients are addicted.
> *Med. Record*, July 20, 1907, p. 86.

Myxophyceæ (mik-sọ̄-fī′sẹ̄-ē), *n.* [Gr. *μύξα*, mucus, + *φῦκος*, seaweed, + *-eæ.*] Same as *Schizophyceæ.*

myxopodium (mik-sọ̄-pō′di-um), *n.*; pl. *myxopodia* (-ä̤). [Gr. *μύξα*, mucus, slime, + *πόδιον*, dim. of *πούς* (*ποδ-*), foot.] A flexible protrusible and retractile pseudopodium which may fuse with neighboring pseudopodia into a network, or flow together with them into a mass of protoplasm outside the body.

Myxospongida (mik-sọ̄-spon′ji-dä̤), *n. pl.* [NL., < Gr. *μύξα*, mucus, slime, + *σπόγγος*, sponge, + *-ida.*] A grade of sponges devoid of a skeleton in any form, and containing the families *Oscarellidæ* and *Halisarcidæ.*

myxospongidan (mik-sọ̄-spon′ji-da̤n), *n.* One of the *Myxospongida.*

Myxosporidia (mik″sọ̄-spọ̄-rid′i-ä̤), *n. pl.* [NL., < Gr. *μύξα*, mucus, slime, + *σπορά*, seed (spore), + dim. *-ιδιον.*] An order of *Sporozoa.* The trophozoite is amœboid, spore-formation begins at an early period and proceeds throughout the growth of the trophozoite, the spores being produced within the protoplasm of the latter, and each spore always possesses one or more polar capsules. They are sometimes called *fish-psorosperms* and are parasitic in many common species of teleost and elasmobranch fishes, as well as in some amphibians, reptiles, and invertebrates. The order includes the families *Ceratomyxidæ*, *Myxidiidæ*, *Chloromyxidæ*, *Myxobolidæ*, and *Glugeidæ.*

myxosporidian (mik″sọ̄-spọ̄-rid′i-a̤n), *a.* and *n.* **I.** *a.* Resembling or characteristic of the *Myxosporidia*: as, a *myxosporidian* parasite.

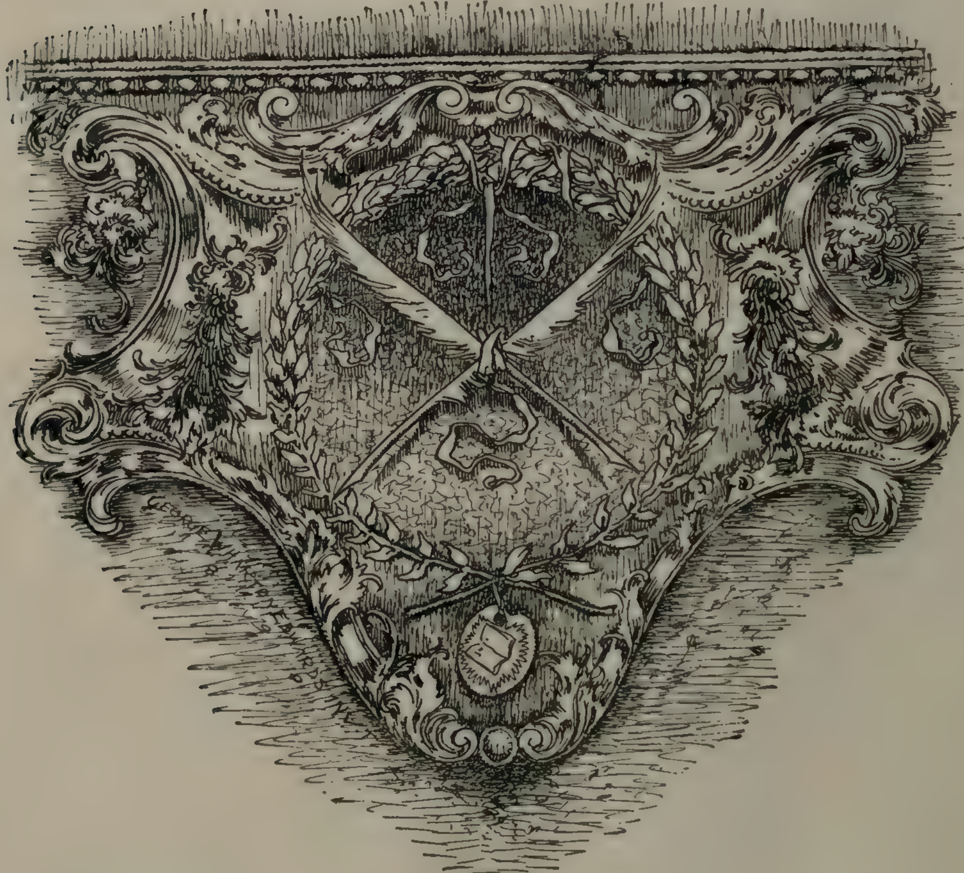
II. *n.* Any sporozoan of the order *Myxosporidia.*

Myxothallophyta (mik″sọ̄-tha-lof′i-tä̤), *n. pl.* [NL., < Gr. *μύξα*, slime, + NL. *Thallophyta.*] Engler's name for the *Myxomycetes.*

myzorhynchus (mī-zọ̄-ring′kus), *n.*; pl. *myzorhynchi* (-kī). [Gr. *μύζειν*, suck in, + *ῥύγχος*, snout.] In certain tapeworms, as *Echeneibothrium*, an apical muscular proboscis or sucker.

Myzostomatidæ (mī″zọ̄-stọ̄-mat′i-dē), *n. pl.* [NL.] Same as *Myzostomidæ.*

myzostomidan (mī-zọ̄-stom′i-da̤n), *a.* [*Myzostomid*(*a*) + *-an.*] Of or pertaining to the *Myzostomida* or *Myzostomidæ.*



N 5. An abbreviation (*e*) [*cap.*] of *Nationalist*; (*f*) [*cap.*] in *meteor.*, of *nimbus*; (*g*) [*l. c.*] in *chem.*, of *normal*, in reference to the strength of a solution; $\frac{1}{10}$ *n.* stands for one tenth normal strength, or a normal solution diluted tenfold: also written $^{N}/_{10}$ or $^{N}/_{10}$. See *normal* ★*solution.* (*h*) [*l. c.*] of *name*; (*i*) [*l. c.*] of the Latin *natus*, born; (*j*) [*l. c.*] of *nephew*; (*k*) [*l. c.*] of *new*; (*l*) [*l. c.*] of *women*; (*m*) [*l. c.*] of *nominative*; (*n*) [*cap.*] of *noon*; (*o*) [*cap.*] of *Norse*; (*p*) [*cap.*] in *electrotechnics*, of *north pole*; (*q*) [*l. c.*] of *note*; (*r*) [*cap.*] of *Northern Postal District, London.*—6. In *electrotechnics*, a symbol (*a*) used by telegraph operators to indicate that a message is completed and that there is nothing more to follow; (*b*) of the total number of lines of magnetic flux in a circuit; (*c*) of the frequency of any harmonic or periodic function of the time.

nabid (nab'id), *n.* and *a.* **I.** *n.* A member of the family *Nabidæ*.

II. *a.* Having the characters of or belonging to the heteropterous family *Nabidæ*.

Nabidæ (nab'i-dē), *n. pl.* [NL., ‹ *Nabis* + *-idæ*.] A family of predatory heteropterous insects having the beak four-jointed and the front legs fitted for grasping prey. They are allied to and sometimes included in the *Reduviidæ*. The commonest American species belong to the genus *Coriscus*.

Nabis (nā'bis), *n.* [NL. (Latreille, 1807), from a proper name.] The typical genus of the family *Nabidæ*. There are few American species. The British species, *N. lativentris*, in its early stages of growth greatly resembles an ant.

nabla (nab'lä), *n.* [NL. *nabla*, L. *nablium*, *naulium*, ‹ Gr. *νάβλα*, also *νάβλας*, *ναῦλας*, later *ναῦλον*, *ναύλη*, prob. from a Phenician form cognate with Heb. *nēbel* (also *nebel*), a harp. Some compare O. Egypt. *nefer*.] An ancient Egyptian lute with two or three strings. Compare ★*nefer*.

nablar (nab'lär), *n.* [*nabla* + *-ar*^{3}.] Clerk-Maxwell's name (1872) for Hamilton's operator, the inverted Greek delta, ∇, or the physical operation indicated by the partial differential equation $\frac{\partial^2\phi}{\partial x^2}+\frac{\partial^2\phi}{\partial y^2}+\frac{\partial^2\phi}{\partial z^2}$.

nablium (nab'li-um), *n.* [L.: see ★*nabla*.] A Roman musical instrument, either a lute (like the Egyptian *nabla*) or a small lyre or harp.

nablock^1†, *n.* Same as *niblick*.

nablock^2 (nab'lok), *n.* [Origin obscure.] In *mining* and *geol.*, a nodule or concretion, such as flint or pyrite, in some other and usually softer rock, as chalk, clay, or coal.

nabo (nä'bō), *n.* [Philippine *nabo*, a corruption of *anabo*.] Same as ★*anabo*. See *devil's-cotton*.

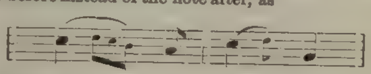
nabobery (nā'bob-e-ri), *n.* [*nabob* + *-ery*.] The conduct and characteristics of nabobs as a class; the wealthy, collectively, or their ways.

nabobess (nā'bob-es), *n.* A female nabob: the wife of a nabob.

> He hopes to live long enough to be introduced as a friend to my fair Indian disciple, and to see her eclipse all other *nabobesses* as much in wealth, as she does already in exterior and . . . interior merit.
>
> *Sterne*, Letters, lxxxiii.

Nabothian cysts, follicles. See ★*cyst*, ★*follicle*.

nachschlag (näċh'shläċh), *n.* [G., ‹ *nach*, after, + *schlag*, stroke.] In *music*: (*a*) A melodic embellishment consisting of one, two, or even more grace-notes appended to a principal note and borrowing from its time-value: opposed to *appoggiatura* or ★*vorschlag*. It is noted in the same way as is an appoggiatura (by a small-sized note, usually connected with the principal note by a slur), but its position and its slur connect it with the note before instead of the note after, as



(*b*) The turn or other figure at the end of a shake or trill. The term is sometimes translated *after-note*.

nachtanz (näċh'tänts), *n.* [G., ‹ *nach*, after, + *tanz*, dance.] An old form of round dance following a country-dance, or the music for such a dance. Also called *proportio*. See *saltarello* (*a*).

nachthorn (näċht'hōrn), *n.* [G., ‹ *nacht*, night, + *horn*, horn.] In *organ-building*, a stop with stopped wooden pipes yielding a soft, horn-like tone. Also called *pastorita*.

nacreous, *a.* 3. In *bacteriol.*, applied to colonies which are of a translucent, grayish-white color with a pearly luster.—**Nacreous cloud.** See ★*cloud*^{1}.

nacrite (nā'krīt), *n.* [*nacre* + *-ite*^{2}.] A variety of the mineral kaolinite; also, a partially altered mica.

nacrous (nā'krus), *a.* Same as *nacreous*.

N. A. D. An abbreviation of *National Academy of Design*.

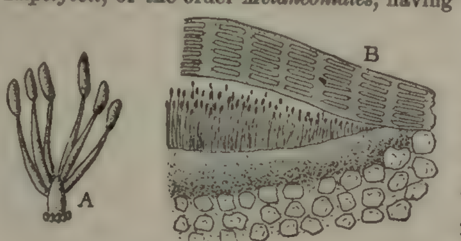
nadiral (nā'dėr-al), *a.* [*nadir* + *-al*^{1}.] Pertaining to or situated at the nadir. [Rare.]

> Its transcendental aspirations still unconsciously based on the geocentric view of things, a zenithal paradise, a *nadiral* hell—were as foreign to his own as if they had been the dreams of people on another planet.
>
> *T. Hardy*, Tess of the D'Urbervilles, xxv.

nadir-point (nā'dėr-point), *n.* The reading of a vertical circle when its telescope points toward the nadir.

naegite (nä-yā'gīt), *n.* [*Naegi* (see def.) + *-ite*^{2}.] A silicate of uranium and thorium found in placer tin-washings at Naegi (Nayegi), near Takayama, Japan. It varies in color from green to gray and brown, and is probably isomorphous with zircon. It exhibits marked radioactivity.

Næmospora (nē-mos'pō-rä), *n.* [NL. (Willdenow, 1787), prob. an error for *Nemaspora* (sometimes so written), ‹ Gr. *νῆμα*, a thread, + *σπορά*, a seed (spore).] A genus of *Fungi Imperfecti*, of the order *Melanconiales*, having the sporogenous hyphæ forming an irregular bright-colored gelatinous layer beneath the epidermis of the host. The spores are mostly hyaline and unicellular, adhering in tendril-like masses. The species occur chiefly on fallen branches of trees, and are regarded as the conidial condition of pyrenomycetous fungi.



Næmospora.

A, *Næmospora croccola* (sporophore); *B*, *N. Tiliæ* (half of a section through a spore-bed).

nævolipoma (nē"vō-li-pō'mä), *n.*; pl. *nævolipomata* (-ma-tä). [NL., ‹ *nævus* + *lipoma*.] A nævus which contains much fatty tissue. Also called *nævus lipomatodes*. *Lancet*, June 6, 1903, p. 1595.

nævus, *n.*—**Capillary nævus**, the ordinary form of nævus, due to dilatation of the superficial capillary blood-vessels of the skin. Also called *port-wine mark* and *claret-cheek*.—**Nævus araneus.** Same as *spider* ★*cancer*.—**Nævus linearis**, elongated, slightly elevated streaks associated with a papillary eruption.—**Nævus lipomatodes.** Same as ★*nævolipoma*.—**Nævus vinosus**, strawberry-mark.

naftalan (naf'ta-lan), *n.* [**nafta* (?), naphtha, + *-al*^{3} + *-an*.] A gelatinous mass consisting of soap impregnated with a peculiar Russian naphtha: it is antiseptic, antiparasitic, deodorant.

naftha, naptha, *n.* Amended spellings of *naphtha*.

nagal (nä'gäl), *n.* [Telugu.] A tree of the verbena family, *Premna tomentosa*, common in southern India, Burma, and Ceylon. It is planted for its wood, which is smooth, light-brown, close, and even-grained, and seasons and polishes well. It is used in Burma for making shuttles.

nagana (na-gä'nä), *n.* [Zulu.] A very fatal, at present incurable infectious (but not contagious) disease of horses in Africa, caused by the presence of flagellate protozoa of the species *Trypanosoma brucei*. The parasites live in the blood-plasma, and are transmitted by the tsetse-fly, *Glossina morsitans*. Also called *tsetse-fly disease*.

> In 1895 and 1897 the well-known reports of Lieut.-Colonel Bruce appeared. He described the tsetse fly disease or *nagana* met with in Zululand, and established the fact that it is due to a protozoan blood parasite, the Trypanosoma Brucei, which is conveyed by the bites of the tsetse fly from affected to healthy animals.
>
> *Nature*, Dec. 10, 1903, p. 123.

nagas (nä'gäs), *n.* [Hindustani *naghas*, the name of the tree.] The East Indian ironwood, *Mesua ferrea*. See *Mesua* and *nagkassar*.

Nageia (nā-gē'ä), *n.* [NL. (Gaertner, 1788), from *nagi*, the Japanese name of *Nageia Nagi*.] A genus of plants of the family *Taxaceæ*. See *Podocarpus* and *native* ★*deal*.

nagual (nä-gwäl'), *n.* [Sp. *nagual*, Nahuatl *naualli*, a sorcerer.] Among the aborigines of Mexico and the adjoining countries of Central America, a personal guardian spirit (sometimes in the form of beast or bird); a magical power. See the extract.

> The guardian spirit was obtained in various ways by different American tribes, but the dream apparition was the most widely spread. Dr. Frazer calls it 'individual totem'; Miss Fletcher speaks of the object dreamed of (the wahube of the Omaha) as the 'personal totem' or simply as the 'totem'; it is termed by the Algonkin manitu, by the Huron okki, by the Salish Indians sulia, and *nagual* in Mexico. Perhaps it would be best to adopt either wahube or manitu to express the guardian spirit.
>
> *Rep. Brit. Ass'n. Advancement of Sci.*, 1902, p. 741.

nagualism (nä-gwäl'izm), *n.* [*nagual* + *-ism*.] The development of the belief in personal guardians as found in Mexico and in the adjoining countries of Central America. In pre-Columbian times the sorcerer whose powers were derived from the nagual seems to have been different from the tonalpouhgue, whose office it was to divine the future from the divinatory calendar. In later times nagualism seems to have developed into a secret rite and to have embodied occult doctrines and the belief in necromantic powers.

nagualist (nä-gwäl'ist), *n.* One who practises nagualism.

nagualistic (nä-gwä-lis'tik), *a.* [*nagualist* + *-ic*.] Pertaining to or of the nature of nagualism.

Nah. An abbreviation of *Nahum*, a book of the Old Testament.

Nahash Hakadmoni (nä'ċhäsh hä-kad-mō'nē). [Heb., the pit, serpent.] In cabalistic doctrine, Satan, in opposition to ★Adam Kadmon.

nahoor, nahur (na-hör'), *n.* [E. Ind.] The bharal, or blue sheep of Tibet, *Ovis nahura*.

nahualism (nä-hwäl'izm), *n.* Same as ★*nagualism*.

Naiad, *n.* 3. [*l. c.*] One of the naiades or pearly fresh-water mussels; a fresh-water mollusk as distinguished from an oceanid or marine mollusk.

Naiadacea (nā-ya-dā'sē-ä), *n. pl.* [NL., ‹ *naiad* + *-acea*.] A superfamily of prionodesmaceous *Pelecypoda*, including shells of varied form, normally equivalve, inequilateral, and dimyarian, with obscure hinge-area and parivincular, opisthodetic ligament. They are of fluviatile or brackish-water habit. Species occur from the Devonian to the present.

Naiadales (nā-ya-dā'lēz), *n. pl.* [NL. (Britton, 1898), < *Naias* (*Naiad-*) + *-ales.*] An order of monocotyledonous plants, consisting of aquatic or marsh herbs with unisexual flowers, the parts of which are usually unequal in number. It embraces 7 families of which the *Naiadaceæ, Potamogetonaceæ, Alismaceæ,* and *Vallisneriaceæ* are the chief.

naiadology (nā-ya-dol'ō-ji), *n.* [*naiad* + Gr. *-λογια*, < *λέγειν*, speak.] The study of the naiads or pearly fresh-water mussels.

> A revolution in *naiadology*, comparable with that produced by Pilsbry in the study of the Helicidæ.
> *Science*, June 21, 1901, p. 984.

naid (nā'id), *n.* [*Naid*(*idæ*).] Any worm of the family *Naididæ*.

naik (nä'ik), *n.* [Hindi *nāik, nāyak*, < Skt. *nayaka*, a leader, < *nāya*, guide.] **1.** An Indian title of nobility; also, a lord, prince, or governor.

> Mysore was gradually growing into a third Hindu state, while everywhere local chieftains, called pálegárs or *naiks*, were in semi-independent possession of citadels or hill-forts.
> *Encyc. Brit.*, XII. 800.

2. A military officer; in later use, a corporal of native infantry. *N. E. D.*

nail, *n.* **10.** A straight stamping-tool.—**Boat-nail**, a nail used by boat-builders. Boat-nails are of different lengths, rose-headed, square at the points, and made of either iron or copper.—**Deck-nail**, a nail used for fastening deck-planking. Such nails range from 4 to 12 inches in length and have a snug head.—**Filling nail**, an obsolete type of cast-iron nail which was driven, in large numbers, in the bottom planks of a vessel to take the place of copper sheathing.—**Flat nail**, a small, sharp-pointed nail having a flat, thin head, used for nailing the scarfs of molds.—**Hippocratic nails**, thick rounded nails curving over the clubbed ends of the fingers in certain diseases marked by profound disturbances of nutrition. See *Hippocratic* ★*fingers*.—**Nail-making machine.** See ★*machine*.—**Port nails**, nails similar to clamp-nails: they are made both double and single and are used for fastening ironwork.—**Reedy nail**, a nail marked by various furrows and grooves.—**Sort nails**, four-, six-, eight-, ten-, twenty-four-, thirty-, and forty-penny nails of different lengths for nailing boards, etc.—**Wall of the nail**, the fold of skin which covers the nail at each side. See cut (*a*) under *nail*, 1.—**Wire nail**, a nail made of round iron wire, sharply pointed and with a head produced by compression of the end, the metal being soft: a variety of wrought nail having the advantage of that form.—**Wrought nail**, a nail of wrought iron, originally worked by hand on the anvil. Such nails are valuable because they are easily clenched.

nail, *v. t.*—**Blind nailing.** Same as *secret* ★*nailing*.—**Secret nailing**, the method of nailing used for floor planks, the nails being driven into the exposed edge of each plank after it is driven firmly into place. The planks for this kind of nailing are always tongued-and-grooved. Also called *blind nailing*, because the heads of the nails are not seen.

nailage (nāl'ạj), *n.* The charge made by the customs for nailing up a package of tobacco opened for inspection. *N. E. D.* [Rare.]

nail-clencher (nāl'klen″chėr), *n.* A tool used by horseshoers to clench, or turn down, the points of the nails driven through the hoof to hold the shoe.

nail-culture (nāl'kul″tụ̈r), *n.* A colony of bacteria which grows downward in the culture medium in the form of an iron nail.

nail-driver (nāl'drī″vėr), *n.* A machine for driving nails, used in box-making. The nails are put in the machine and are driven by a single stroke of a reciprocating plunger.

nail-gun (nāl'gun), *n.* An invention for nailing down floor-planks rapidly and without the necessity of kneeling upon the floor. A piston working in a tube serves as a hammer to drive the nail.

nailing-block (nā'ling-blok), *n.* One of the small pieces of wood built into a brick wall to which the trim, dado, etc., may be nailed.

nailing-machine, *n.*—**Box-nailing machine**, a machine for placing, driving, and clinching nails in making wooden packing-boxes. It consists essentially of a feeding-device for delivering three or more nails at once and placing them in any desired position or angle at the sides, ends, tops, or bottoms of boxes or upon the box-cleats, and a gang nailing-device under the control of the operator. The box to be nailed is placed upon a table and the nails are driven along two sides at once, a single turn of the box serving to nail it together on four edges. Some machines also clinch the nails as fast as they are set. Such machines range from small machines driving three brads, in making a cigar-box, up to machines driving sixteen nails at once in making dry-goods packing-cases. It also drives nails through box-straps or shooks.

nail-puller (nāl'pụl″ėr), *n.* A nail-extractor (which see).

nail-rod, *n.* **2.** In Australia, a coarse dark tobacco smoked by bushmen: named from the shape of the plug, which looks like a thin flat stick of licorice. The name is also applied to any coarse stick of tobacco. *E. E. Morris*, Austral English.

nail-scissors (nāl'siz″ọrz), *n. pl.* Scissors, generally with curved blades, designed to be used in cutting the finger-nails.

nail-set (nāl'set), *n.* A short slender rod of steel used to drive a nail home or flush with the wood. It is held on top of the nail and struck with the hammer.

nail-sick (nāl'sik), *a.* Leaky at the nail-holes. *N. E. D.*

> Much smaller waves soon make a boat "*nail-sick*," as the phrase is. The keeper said that after a long and strong blow there would be three large waves, . . . and then no large ones for some time.
> *Thoreau*, Cape Cod, p. 145.

naio (nī'ọ), *n.* [Hawaiian *naio*, < Maori *ngaio*, a New Zealand tree of the same genus.] The bastard sandalwood of Hawaii, *Myoporum Sandwicense*. See *Myoporum*, and *bastard sandalwood*, under *sandalwood*.

nair (nä'ēr), *n.* [Sp. and Pg. *nayre, naire.*] A member of the noble and military caste in Malabar. *N. E. D.*

Nairoa series. See ★*series*.

naiscus (nạ-is'kus), *n.*; pl. *naisci* (-ī). [NL., < Gr. *ναίσκος*, dim. of *ναός*, a temple.] In *Gr. archæol.*, a small temple; a shrine: by extension, a small medieval building, such as a tomb, in eastern countries.

> Inscriptions often occur, and most frequently on one type of tombstone—a *Naiscus* with round arch, panelled door below, and pointed gable above.
> *Geog. Jour.* (R. G. S.), IX. 269.

Nakanuri lacquer. See ★*lacquer*.

naked, *a.* **2.** (*d*) Said of a vessel's bottom when her copper is stripped off.—**Naked contract.** Same as *nude pact* (which see, under *nude*).—**Naked light**, a candle or any form of lamp with an unprotected flame; a light that is not a safety-lamp.—**Naked possessor, power, title.** See ★*possessor*, etc.—**Naked vertebræ.** See ★*vertebra*.

naked-eared (nā'ked-ērd), *a.* Having hairless ears: as, the *naked-eared* deer of Columbia, *Odocoileus gymnotis*.

nakedize (nā'ked-īz), *v. i.* and *t.*; pret. and pp. *nakedized*, ppr. *nakedizing*. [*naked* + *-ize.*] To go naked; render naked. *N. E. D.*

> Grown persons may derive much benefit from remaining some hours in mild weather, without their clothes. It was most manifest that the children liked to *nakedize*—such was the term of art—exceedingly; . . . it was something new and different from the ordinary routine of jackets, trowsers, and petticoats.
> *T. J. Hogg*, Life of Percy Bysshe Shelley, II. 289.

naked-stopper (nā'ked-stop″ėr), *n.* A shrub or small tree, *Anamonis dichotoma*, of the myrtle family, found in the West Indies, Florida, and the Keys. Compare *nakedwood*.

naked-weed (nā'ked-wēd), *n.* The gum-succory, *Chondrilla juncea*.

nakhod (nạ-ċhōd'), *n.* [Pers. *nukhūd*, a pea.] A Persian unit of weight, the twenty-fourth part of a miskal, equal to 2.96 grains.

nakhoda (nä'kō-dä), *n.* [Pers. *nākhodā*, < *nāw*, boat, + *khudā*, master.] In India, the captain or master of a boat or vessel.

nalita (nä-lē-tä'), *n.* [E. Ind.] A small herbaceous plant, *Hibiscus cannabinus*, largely cultivated throughout India for its fiber. See *Dekhan* ★*hemp* and *Hibiscus*, 1.

N. Am. An abbreviation of *North America*, or *North American*.

Nama (nā'mạ̈), *n.* [NL. (Linnæus, proposed in 1747, established in 1753), in allusion to the habitat of the type species *N. Zeylanica*, < Gr. *νᾶμα*, running water.] A genus of dicotyledonous plants of the family *Hydrophyllaceæ*. See *Hydrolea*.

namamahay (nä-mä-mä-hī'), *n.* [Tagalog (at the time of the Spanish conquest) *aliping* (*alimpig*) *namamahay*.] In the Philippine Islands, formerly, serfs who lived in their own houses under socage tenure, being held to assist their master in agricultural work, as rowing-crews, in building houses, etc.

namaqualite (nä-mä'kwä-līt), *n.* [*Namaqua* + Gr. *λίθος*, stone.] A pale-blue fibrous mineral with silky luster, consisting of the hydrated oxids of aluminium and copper: found in Namaqualand, South Africa.

Namaquan (nä-mä'kwạ̈n), *n.* [S. Afr. *Namaqua*, connected with *Nama*, a native term.] One of the three varieties of the Hottentot language; the Nama. The other dialects are the Kora, the Eastern, and the Cape.

namaycush (nam'ạ-kush), *n.* [Cree *namekus*, Ojibwa *namegos*; prob. connected with Natick *namohs, nâmâs*, Narragansett *nammaùus*, Menomini *nahmaish*, a fish.] The great lake-trout, *Aristivomer namaycush*, called also *Mackinaw trout* and (in Maine) *togue*. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 251.

namely (nām'li), *a.* Notable. [Obsolete or Scotch.]

name-plate, *n.* (*b*) A metal plate bearing the name of the manufacturer, and often giving the size and capacity of the machine, placed on a machine-tool, engine, dynamo, or other machine.

> The committee recommends that the ratings of generators and motors, except traction motors, be marked plainly on the *name-plate*. Two types of service are recommended, continuous working and intermittent working, and the *name-plate* must state to which service it relates.
> *Elect. Rev.*, Sept. 3, 1904, p. 327.

nami (nä'mē), *n.* Same as ★*calut*.

namma-hole (nam'ạ̈-hōl), *n.* [Aboriginal Australian *namma*, elsewhere *ngumma*, lit. breast, + E. *hole*¹.] In Australia, a native well or water-hole.

> The route all the way from York to Coolgardie is amply watered, either '*namma holes*' (native wells) or Government wells being plentiful on the road.
> *Australasian*, Aug. 5, 1893, p. 252, quoted in E. E. [Morris, Austral English.

Nanaimo beds. See ★*bed*¹.

nancy-story (nan'si-stō″ri), *n.* [Corruption of native African *ananse*, spider.] A folk- or fairy-tale of a type current among the negroes of the Gold Coast and the West Indies. *N. E. D.*

nandinine (nan'di-nin), *n.* [*Nandina*² (see def.) + *-ine*².] An amorphous, poisonous, pulverulent alkaloid, $C_{19}H_{19}O_4N$, contained in the root-bark of *Nandina domestica*, from Japan.

ñandubay (nyän-dö-bī'), *n.* [Native name.] In Argentina, a small tree of the mimosa family, *Prosopis Nandubey*, with strong, hard, durable wood. On account of the short trunk the wood is not much used for cabinet-work, but great numbers of the trees are cut for fence-posts.

nanduly (nan'dụ̄-li), *n.* [S. Amer.?] A fiber-lace of South America, made by the needle into small squares which are afterwards joined together. *Dry Goods Economist*, Aug. 20, 1904, p. 142.

nangka (näng'kä, näng-kä'), *n.* [Also *nangca*; Chamorro *nángka*, Tagalog *nangká*, the jack-fruit, *Artocarpus integrifolia*.] **1.** In Guam, the edible seeds of the fertile breadfruit, *Artocarpus communis*, which, like those of the jack-fruit of the Philippines, are roasted and eaten, and resemble chestnuts in taste. See ★*dugdug*.—**2.** In the Philippine Islands, the jack-fruit, *Artocarpus integrifolia*. See *jack-tree* and *Artocarpus*. Also called *langka*.

nanguer (nang'gwėr), *n.* [Said to be from native, Senegal, name.] A species of antelope formerly accepted by zoölogists on the authority of Buffon. *N. E. D.*

Nankeen crane. Same as ★*Nankeen heron*.—**Nankeen hawk.** Same as *Nankeen* ★*kestrel*.—**Nankeen heron**, a species of night-heron, *Nycticorax caledonica*, found in Australia: named from its general pale yellow color.—**Nankeen yellow.** See ★*yellow*.

Nanking china. See ★*china*.

nannandrium (nan-an'dri-um), *n.*; pl. *nannandria* (-ạ̈). [NL., < Gr. *νάννος, νᾶνος*, dwarf, + *ἀνήρ* (*ἀνδρ-*), male.] The peculiar dwarf male plant of the *Œdogoniaceæ* (which see).

Nannastacidæ (nan-as-tas'i-dē), *n. pl.* [NL., < *Nannastacus* + *-idæ.*] A family of cumacean crustaceans. They have either one or two eyes, the first antennæ alike in the two sexes, the flagella very unequal, the smaller being one- or two-jointed, the mandibles with few spines on the anterior branch, the first two pairs of pereiopods in the female and the first four in the male with well-developed swimming-branches, and the telson wanting. It contains the genera *Nannastacus, Cumella, Diops*, and *Spencebatea*.

Nannastacus (na-nas'tạ-kus), *n.* [Gr. *νάννος, νᾶνος*, dwarf, + *ἀστακός*, lobster.] The typical genus of the family *Nannastacidæ*. *Spence Bate*, 1865.

Nanno (nan'ọ), *n.* [NL., < Gr. *Ναννώ*, a proper name, < *νάννος, νᾶνος*, a dwarf.] A genus of holochoanitic nautiloid *Cephalopoda* having an apically swollen endosiphuncle. It occurs in the Trenton limestone.

Nannobrachium (nan-ọ-brā'ki-um), *n.* [NL., < Gr. *νάννος, νᾶνος*, dwarf, + *βραχίων*, arm.] A genus of deep-water marine fishes of the family *Myctophidæ*.

nannocephalic (nan-ọ-se-fal'ik), *a.* [Also *nanocephalic*; < Gr. *νάννος, νᾶνος*, dwarf, + *κεφαλή*, head, + *-ic.*] Having a disproportionately small head; specifically, in *anthrop.*, having a cranial capacity of less than 1,200 cubic centimeters. *Virchow.*

Therefore, if we seek ethnic relationships for the Negritos of the Philippines, or as they are named, the Aetas (Etas, Itas), such connections obtrude themselves with the stocks named, and the more strongly since they all have brachycephalic, relatively small (*nannocephalic*) heads and through their small size attach themselves to the peculiar dwarf tribes. *Pop. Sci. Mo.*, July, 1901, p. 260.

nannocephalism (nan-ọ̄-sef′ạ-lizm), *n.* [*nannocephal(ous)* + *-ism.*] Same as ★*nannocephaly.*

nannocephalous (nan-ọ̄-sef′ạ-lus), *a.* [Gr. *νάννος*, *νᾶνος*, dwarf, + *κεφαλή*, head, + *-ous.*] Same as ★*nannocephalic.*

nannocephaly (nan-ọ̄-sef′ạ-li), *n.* [Gr. *νάννος*, *νᾶνος*, dwarf, + *κεφαλή*, head, + *-y*³.] Abnormally small size of the head in comparison with the body and limbs.

nannocormia (nan-ọ̄-kôr′mi-ạ̈), *n.* [Gr. *νάννος*, *νᾶνος*, dwarf, + *κορμός*, trunk (of a tree).] A condition in which the body is markedly dwarfed in comparison with the head, and sometimes the extremities as well.

nannocranous (na-nok′rā-nus), *a.* [Gr. *νάννος*, *νᾶνος*, dwarf, + *κρανίον*, skull, + *-ous.*] In *anthrop.*, having a cranium the total volume of which is less than 1,530 cubic centimeters in males, and 1,410 cubic centimeters in females. *E. Schmidt.*

Nannopterum (na-nop′tẹ-rum), *n.* [NL., < Gr. *νάννος*, *νᾶνος*, dwarf, + *πτερόν*, wing.] A genus of cormorants, distinguished by the small size of the wings, the type being the flightless Harris's cormorant, *N. harrisi* Rothschild, of Narborough Island. See *Harris's* ★*cormorant*, with cut.

nannosomus (nan′ọ̄-sō-mus), *n.*; pl. *nannosomi* (-mī). [NL., < Gr. *νάννος*, *νᾶνος*, dwarf, + *σῶμα*, body.] A dwarf.

nanny-bush (nan′i-bu̇sh), *n.* Same as *nannyberry.*

nannygai (nan′i-gī), *n.* [Also *nannygy*, *nannagai*, from the aboriginal name in New South Wales, which is given as *nura ngin a gai.*] In New South Wales, a fish, *Beryx affinis*, common in Australian waters.

nanny-plum (nan′i-plum), *n.* Same as *nannyberry.*

nanocephalic (nā″nō-se-fal′ik), **nanocephalism**, etc. Same as ★*nannocephalic*, etc.

nanocormia (nā-nọ-kôr′mi-ạ̈), *n.* Same as ★*nannocormia.*

nanocranous (nạ-nok′rạ-nus), *a.* Same as ★*nannocranous.*

nanosomus (nā′nọ-sō-mus), *n.* Same as ★*nannosomus.*

Nansenia (nan-sē′ni-ạ̈), *n.* [NL., named after F. *Nansen*, an Arctic explorer.] A genus of fishes of the family *Microstomidæ* found, in deep water, in the Arctic Ocean.

nantusi (nan′tọ̈-sẹ̄), *n.* The trade-name of a mixture of about 30 per cent. sulphur with about 70 per cent. of paraffin-wax with a little beeswax and tallow: used as an addition to some of the lower grades of vulcanized india-rubber, in order to prevent cracking on exposure to the sun.

naological (nā-ọ̄-loj′i-kạl), *a.* [*naolog(y)* + *-ical.*] Of or pertaining to naology or the study of temples.

naology (nạ̄-ol′ọ̄-ji), *n.* [Gr. *ναός*, temple, + *-ology.*] The architectural or archæological study of temples or other sacred buildings.

Naosaurus (nā-ọ̄-sâ′rus), *n.* [Gr. *ναός*, temple, + *σαῦρος*, lizard.] An extinct genus of reptiles of the suborder *Pelycosauria*, family *Clepsydropidæ*, differing from the related genus *Dimetrodon* in having transverse processes on the greatly elongated neural spines. Found in the Permian of Bohemia.

napa (nä′pạ̈ or nap′ä), *n.* The name of a city and a county in California, applied to a product and a process of leather-manufacture.—**Napa finish**, a cheap tannage or curing-process applied to light, thin sheepskins. *C. T. Davis*, Manuf. of Leather, p. 275.—**Napa glove**, a glove made of sheepskin or goatskin with an oily tannage.

napal (nā′pạl), *a.* [*nape*¹ + *-al*¹.] Of or pertaining to the nape of the neck. [Rare.]

naperer (nā′pėr-ėr), *n.* [*napery.*] The person having charge of the royal table-linen. *N. E. D.* [Obs. or historical.]

naphindone (naf′in-dōn), *n.* [*naph(tha)* + *ind(igo)* + *-one.*] A basic coal-tar color of the monoazo type derived from safranine. It dyes tannin-mordanted cotton blue. Same as *indoin* ★*blue.*

naphtha, *n.*—**Bathgate naphtha**, naphtha obtained from Boghead shale of Torbane Hill, at the Bathgate works, Scotland.—**Boghead naphtha.** Same as *Bathgate* ★*naphtha.*—**Caoutchouc naphtha.** See ★*caoutchouc.*—**Coal-tar naphtha.** Same as ★*coal-naphtha.*—**Mineral naphtha**, petroleum or mineral oil, especially the lighter and more volatile varieties.—**Miscible naphtha**, a trade-name for crude wood-naphtha, obtained from brown acetate of lime in working up the products of the destructive distillation of wood.—**Naphtha gas.** See ★*gas.*—**Naphtha vitrioli**, an old name for ordinary ether.—**Shale naphtha**, a mixture of hydrocarbons, obtained in the distillation of Scotch bituminous shales, chiefly of the olefine series, and therefore chemically different from petroleum naphtha and from coal-tar naphtha: used as a solvent in the india-rubber and other industries.—**Solvent naphtha**, a trade-name, chiefly applied to the coal-tar naphtha used as a solvent by manufacturers of india-rubber goods, but also to the wood-naphtha used as a solvent for resins in varnish-making. See ★*coal-naphtha* and *wood-naphtha.*

naphtha-burner (naf′thạ̈-bėr″nėr), *n.* See ★*burner.*

naphthalate (naf′thạ̈-lāt), *n.* [*naphtha* + *-al*³ + *-ate*¹.] The former name for ★*phthalate.*

naphtha-launch (naf′thạ̈-länch), *n.* A launch the motive power of which is derived from the explosion of naphtha in the engine-cylinder.

Naphthalene blue, green, oil. See ★*blue*, etc.—**Naphthalene rose, scarlet.** Same as *magdala red* (which see, under *red*¹).—**Naphthalene yellow.** See *Manchester yellow*, under *yellow.*

naphthalenic (naf-thạ̈-len′ik), *a.* [*naphthalene* + *-ic.*] Of or pertaining to naphthalene, or, specifically, to naphthalenic acid.—**Naphthalenic acid**, a yellow compound, $C_{10}H_5(\overset{\beta}{O}H)\overset{\alpha}{O}_2$, formed by heating aminonaphthoquinonimide or similar compounds with acids or alkalies. It crystallizes in needles, and melts at 190° C. Also called *naphthalic acid*, or, more correctly, *β-hydroxy-α-naphthoquinone.*

naphthalenoid (naf′thạ̈-lẹ̄-noid), *a.* [*naphthalene* + *-oid.*] Pertaining to or derived from naphthalene: applied to chemical compounds the molecules of which contain the same atomic grouping as naphthalene.

naphthalic (naf-thal′ik), *a.* [*naphthal(ene)* + *-ic.*] Pertaining to naphthalene, especially to naphthalic acid.—**Naphthalic acid.** (*a*) Same as ★*naphthalenic acid.* (*b*) A colorless compound, $C_{10}H_6(COOH)_2$, prepared by the oxidation of acenaphthene. It crystallizes in long, silky, hair-like needles and melts at 266° C.

naphthalide (naf′thạ̈-lid), *n.* [*naphthal(ene)* + *-ide*¹.] In *organic chem.*, the class-name of acyl derivatives of napthamine, such as formylnaphthalide, $C_{10}H_7NHCOH$.

naphthalidine (naf-thal′i-din), *n.* [*naphthalide* + *-ine*².] A former name for *naphthylamine.*

naphthalol (naf′thạ-lol), *n.* [*naphtha* + *-al*³ + *-ol.*] Same as ★*betol.*

naphthase (naf′thās), *n.* [*naphtha* + *-ase.*] A substance, $C_{20}H_{12}N_2$, belonging to the class of azins, from which valuable coloring-matters are obtainable: now known as *dinaphthazin.*

naphthazarine (naf-thaz′a-rin), *n.* [*naphtha* + *(ali)zarin.*] A reddish-brown compound prepared by the reduction of 1, 5-dinitronaphthalene with zinc and sulphuric acid at 200° C. It sublimes and forms needles.

naphthazin (naf-thaz′in), *n.* [*naphtha* + *-azin.*] In *organic chem.*, the name given to those azins, such as $C_{10}H_6{<}\begin{matrix}N\\N\end{matrix}{>}C_{10}H_6$, which contain naphthalene instead of benzene radicals. The substitution of certain radicals for the hydrogen gives rise to valuable dyes.—**Naphthazin blue.** See ★*blue.*

naphthazurin (naf-thazh′ụ̈-rin), *n.* [*naphtha* + *azure* + *-in*².] A basic coal-tar color. It dyes tannin-mordanted cotton navy-blue shades.

naphthene (naf′thēn), *n.* [*naphtha* + *-ene.*] In *organic chem.*, a class-name of a series of hydrocarbons derived from hexahydrobenzene (cyclohexane), C_6H_{12}. Many of them may be made synthetically, and a considerable number are found in petroleum, especially in that from the Baku district.

naphthenic (naf-then′ik), *a.* [*naphthene* + *-ic.*] Derived from naphthene; referring to cyclohexane.—**Naphthenic acid**, in *organic chem.*, the general term applied to the carboxylic acids derived from cyclohexane and its homologues. The simplest member is cyclohexane carboxylic acid (hexahydrobenzoic acid), $C_6H_{11}COOH$.

naphthenol (naf′thē-nol), *n.* [*naphthene* + *-ol.*] A former name for naphthol.

naphthide (naf′thid), *n.* [*naphtha* + *-ide*¹.] In *organic chem.*, the general name applied to salts of acids with substituted aminonaphthalenes, such as methylaminonaphthalene, $CH_3NHC_{10}H_7$.

naphthidine (naf′thi-din), *n.* [*naphthide* + *-ine*².] A colorless compound, $H_2NC_{10}H_6C_{10}H_6NH_2$, prepared by the reduction of hydrazonaphthalene. It crystallizes in silvery lustrous plates, melts at 198° C., and corresponds to benzidine. Also called *diaminodinaphthyl.*

Naphthion red. See ★*red*¹.

naphthionic (naf-thi-on′ik), *a.* [*naph(tha)* + *thionic.*] Noting an acid, a colorless compound, $H_2\overset{1}{N}C_{10}H_6\overset{4}{S}O_3H.\frac{1}{2}H_2O$, prepared by the action of alcoholic ammonium sulphite on 1-nitronaphthalene. It crystallizes in small needles, blackens without melting, and is also called 1, 4-*aminonaphthalene-sulphonic acid.*

naphthoform (naf′thọ̄-fôrm), *n.* [*naphtha* + *form(aldehyde).*] A synthetic compound of β-naphthol and formaldehyde. It is a dermal antiseptic.

naphthoformine (naf-thọ̄-fôr′min), *n.* [*naphthoform* + *-ine*².] The trade-name of a condensation compound of α- and β-naphthol with formaldehyde and ammonia. It is an insoluble powder which possesses powerful antiseptic properties owing to the readiness with which it is resolved into its constituents.

naphthoic (naf-thō′ik), *a.* [*naphth(alene)* + *-o-* + *-ic.*] Of or pertaining to naphthalene.—**Naphthoic acid.** Two acids, $C_{10}H_7COOH$, with this name are known, distinguished as α- and β- or 1- and 2-. They are prepared by the hydrolysis of the corresponding cyanides and bear the same relation to naphthalene that benzoic acid does to benzene. They crystallize in needles; the 1-derivative melts at 160° C., the 2-compound at 182° C. Also called *naphthalene-carboxylic acids.*

Naphthol black. See ★*black.*—**Naphthol black 12B.** Same as *naphthol* ★*blue-black.*—**Naphthol blue.** See *naphthol.* The name is applied to several basic coal-tar colors of the oxazine type, similar to the new blues; also to several acid coal-tar colors which produce dark navy-blue shades on wool.—**Naphthol blue-black, orange.** See ★*blue-black*, ★*orange*¹.—**Naphthol red.** Same as ★*amaranth*, 5.—**Naphthol yellow.** See ★*yellow.*

naphthol-aristol (naf″thol-ar′is-tol), *n.* A greenish-yellow powder, $C_{16}H_{8}$[illegible]uble in water; diiodo-β-naphthol: a substitute for iodoform.

naphtholate (naf′thọ̄-lāt), *n.* [*naphthol* + *-ate*¹.] A salt-like compound formed by replacing the hydrogen atom of the hydroxyl group of a naphthol with a metal: thus sodium β-naphtholate ($C_{10}H_7ONa$-β) is formed when β-naphthol is dissolved in caustic soda.

naphtholsulphonic (naf″thol-sul-fon′ik), *a.* Noting an acid, a derivative from naphthol obtained by heating with concentrated sulphuric acid. The two isomeric modifications, made from α-naphthol and β-naphthol respectively, are used in the manufacture of scarlet and other dyes.

naphthopyrin (naf-thọ̄-pī′rin), *n.* [*naphtho(l)* + *(anti)pyrin.*] The trade-name of a combination of β-naphthol and antipyrin, for use as an antiseptic and antipyretic.

naphthorubin (naf-thọ̄-rö′bin), *n.* [*naphtho(l)* + *rubin.*] An acid coal-tar color of the monoazo type, prepared by combining diazotized α-naphthylamine with naphtholdisulphonic acid. It dyes wool a bluish red in an acid bath. Also called *palatine red.*

naphthosalol (naf″thō-sal′ol), *n.* [*naphtho(l)* + *salol.*] Same as ★*betol.*

naphthous (naf′thus), *a.* [*naphtha* + *-ous.*] Having the characters of naphtha; resembling naphtha.

naphthyl (naf′thil), *n.* [*naphth(alene)* + *-yl.*] A univalent organic radical derived from naphthalene by the removal of one hydrogen atom. Its formula is $C_{10}H_7-$.—**Naphthyl blue.** See ★*blue.*—**Naphthyl blue 2B.** See ★*blue.*—**Naphthyl blue-black.** See ★*blue-black.*

Naphthylamine black. See ★*black.*—**Naphthylamine Bordeaux.** Same as *alpha-naphthylamine* ★*red.*—**Naphthylamine brown.** See ★*brown.*—**Naphthylamine red.** Same as *magdala red.*—**Naphthylamine yellow.** Same as *naphthol* ★*yellow.*

naphthylene (naf′thi-lēn), *n.* [*naphthyl* + *-ene.*] 1. Same as *naphthalene.*—2. Tetrahydrobenzene (cyclohexene) C_6H_{10}. It is used as a class name for derivatives of this hydrocarbon.—**Naphthylene blue.** See ★*blue.*—**Naphthylene red.** See ★*red*¹.

Naples beds. See ★*bed*¹.

napoleon, *n.* 3. A small piece of frosted pastry, made by putting several thin layers of puff-paste together with a cream filling.—4. *pl.* The crimson clover, *Trifolium incarnatum.*—**Napoleon porcelain.** See ★*porcelain*¹.

nappe, *n.* 2. In *geom.*, a sheet; a separate portion of a surface.

napped (napt), *p. a.* [*nap*² + *-ed*².] Having a nap: as, a *napped* fabric.

napping-cylinder (nap′ing-sil″in-dėr), *n.* A napping-machine cylinder covered with wire teeth.

napping-hammer, *n.* Same as *knapping-hammer.*

napping-machine² (nap′ing-mạ-shēn″), *n.* See *knapping-machine.*

napu (nä′pö), *n.* [Malay *nāpuh*, a small deer.] A small Asiatic deer, of the genus *Tragulus*: a chevrotain, specifically the Sumatran species, *Tragulus napu*, one of the largest of the group.

narangillo (nä-rän-hēl′yō), *n.* [Sp. *naranjilla*, dim. of *naranja*, orange.] In Central Chile, a shrub, *Villaresia mucronata*, of the family *Icacinaceæ*, the leaves of which are used as tea.

naranj (na-ranj′), *n.* See ★*mancala.*

naras (nä′rạs), *n.* [Native name in southwest Africa.] An erect spiny shrub of the gourd family, *Acanthosicyos horrida*; a native of southwest Africa, bearing edible globose fruits with a very thin, hard rind. The flesh of the fruit and the oily seeds form the principal food of the Hottentots and other native tribes of the region. The fruit is eaten fresh and is also made into a kind of cake, which with the seeds is kept until times of need. For a long time the seeds have been an article of export to Cape Colony under the name of *butter-pits*, where they are used as food by the colored peoples and by the whites as a substitute for almonds. See *narras-plant.*

Narayana (nä-rä′yä-nä), *n.* [Skt. *nārāyaṇá*, 'the son of the primordial man.'] In *Hindū myth.*, a patronymic of the personified Purusha, identified with Vishnu and Krishna.

narceine² (när′sẹ̄-in), *n.* An acid coal-tar color of the monoazo type, prepared by combining diazotized sulphanilic acid with β-naphthol and then treating the product with sodium bisulphite. It dyes wool orange in an acid bath, but is chiefly used in textile-printing.

narceonic (när-sẹ̄-on′ik), *a.* [*narce*(*ine*¹) + *-one* + *-ic.*] Derived from narceine.—**Narceonic acid,** a colorless compound,

$CH_2{<}\begin{matrix}\overset{4}{O}\\ \underset{5}{O}\end{matrix}{>}C_6H(\overset{6}{O}CH_3)(\overset{2}{C}H{:}CH_2)CH_2\overset{1}{C}O.C_6H_2(\overset{3}{O}\overset{4}{C}H_3)_2\overset{2}{C}OOH$, prepared by the action of methyl iodide on narceine. It crystallizes in plates which melt at 208–209° C.

Narcine (när-sī′nē), *n.* [NL., < Gr. *νάρκη*, the torpedo or electric ray.] A genus of electric rays of the family *Narcobatidæ*, found in warm seas.

narciss (när-sis′), *n.* An abbreviation of *narcissus.*

Narcobatidæ (när-kō-bat′i-dē), *n. pl.* [NL., < *Narcobatis* + *-idæ.*] A family of electric rays, found in most warm seas.

Narcobatis (när-kob′ạ-tis), *n.* [NL., < Gr. *νάρκη*, the torpedo or electric ray, + *βατίς*, a ray.] A genus of electric rays, found in European, Asiatic, and African waters.

narcoleptic (när-kọ-lep′tik), *a.* Relating to or affected with narcolepsy. *G. S. Hall*, Adolescence, I. 264.

narcomania (när-kọ-mā′ni-ạ̈), *n.* [Gr. *νάρκη*, torpor, + *μανία*, madness.] A morbid craving for some narcotic drug.

narcosis, *n.*—**Medullary narcosis,** anæsthesia induced by the injection of a solution of cocaine or a drug with similar properties into the sheath of the spinal cord.

> A. W. Morton has found that under the influence of *medullary narcosis*, analgesia about the mouth is as complete as in the lower extremities.
> *Med. Record*, March 28, 1903, p. 508.

narcostimulant (när-kọ-stim′ụ̄-lạnt), *n.* [*narco*(*tic*) + *stimulant.*] An agent having combined narcotic and stimulant properties. *Alien. and Neurol.*, Aug., 1904, p. 326.

narcoticism (när-kot′i-sizm), *n.* Same as *narcotism.*

narcotico-acrid (när-kot″i-kō-ak′rid), *a.* Possessing both acrid and narcotic properties.

narcotico-irritant (när-kot″i-kō-ir′i-tạnt), *a.* Possessing both narcotic and irritant properties.

narcotile (när′kọ-til), *n.* [*narcot-ic* + *-ile.*] The trade-name of 1, 2-dichlorpropane, CH_3-$CHCl.CH_2Cl$. It is a colorless liquid, prepared by the action of chlorin on propylene, boils at 96.8° C., and is used as an anesthetic. *Lancet*, April 18, 1903, p. 1091.

narcotist (när′kọ-tist), *n.* [*narcot*(*ic*) + *-ist.*] One who habitually uses narcotics.

narcotization (när″kọ-ti-zā′shọn), *n.* [*narcotize.*] The act or process of narcotizing; the state of being narcotized; narcotic poisoning.

narcous (när′kus), *a.* [Gr. *νάρκη*, numbness, torpor, + *-ous.*] Same as *narcotic.*

naregamine (na-rej′ạ-min or -mēn), *n.* [*Naregamia* + *-ine*².] An alkaloid contained in *Naregamia alata*, from the East Indies.

nargol (när′gol), *n.* [*n*(*ucleide*) + Gr. *ἀργ*(*υρος*), silver, + *-ol.*] Silver nucleide containing ten per cent. of silver.

Narica (nar′i-kạ̈), *n.* [L. *naris*, nostril?] The typical and only genus of the family *Naricidæ*. *Récluz*, 1841.

Naricidæ (nạ-ris′i-dē), *n. pl.* [*Narica* + *-idæ.*] A family of tænioglossate pectinibranchiate gastropods having a circular foot with an epipodial lobe on each side, the tentacles flattened, and the shell naticoid with a velvety periostracum. The family includes the single genus *Narica*, found in warm seas among corals.

naringin (na-rin′jin), *n.* [Pers. *nārinj*, *nāranj*, an orange: see *orange*¹.] A lemon-colored levorotatory glucoside, $C_{21}H_{26}O_{11}.4H_2O$, contained in the flowers of *Citrus decumena*, from Java. It crystallizes in small monoclinic prisms and when anhydrous melts at 171° C. Also called *aurantiin* and *hesperidin.*

naringinin (nạ-rin′ji-nin), *n.* [*naringin* + *-in*².] A colorless compound, $HOC_6H_4CH{:}CHCOOC_6H_3(OH)_2$, prepared by the action of dilute acids on the glucoside naringin. It crystallizes in pearly lustrous leaflets and melts and decomposes at 248° C.

narra (när′ä), *n.* [Philippine Sp. *narra*, < Bisaya *naga.*] In the Philippine Islands, *Pterocarpus Indicus* and *Pterocarpus echinatus*, valuable hardwood trees from which furniture is made. See ★*asana*, with cut.

Narrabeen beds. See ★*bed*¹.

narra-pula (när-ä-pö′lä), *n.* [Philippine Sp., < Bisaya *naga narra* + *pola* (*pula*), red.] *Pterocarpus echinatus*, sometimes called Philippine mahogany. See ★*mahogany.*

narsarsukite (när-sär′sụ̈-kīt), *n.* [*Narsarsuk* (see def.) + *-ite*².] A titano-silicate of ferric iron and sodium, occurring in honey-yellow to brownish-gray tabular tetragonal crystals: from the neighborhood of Narsarsuk in Southern Greenland.

narshallik, *n.* See ★*badhan.*

narthecal (när′the-kạl), *a.* [*narthex* (*narthec-*) + *-al*¹.] Pertaining to or of the nature of a narthex.

N. A. S. An abbreviaton of *National Academy of Sciences.*

Nasal artery, an artery which supplies the skin of the nose, derived from the ophthalmic and anastomosing with branches of the facial artery.—**Nasal cartilages,** the cartilages which form the anterior portion of the nose. There are two lateral cartilages on each side and a septal cartilage in the center.—**Nasal catarrh.** Same as *coryza* (acute form) and *ozæna* (chronic fetid form).—**Nasal height.** See ★*height* —**Nasal hinge.** Same as *frontonasal* ★*hinge.*—**Nasal plate.** (*b*) Any plate over the snout in the nasal region of fishes.—**Nasal reflex.** See ★*reflex.*—**Nasal retina,** the nasal half of the retina.—**Nasal shield.** See ★*shield.*

nasalia (nạ-sā′li-ạ̈), *n. pl.* [NL., neut. pl. of L. *nasalis*, nasal.] In the skull of fishes, small ossifications above each nasal opening, sometimes fixed to the outer face of the ethmoid.

Nasalis, *n.* 2. [*l. c.*; pl. *nasales* (-lēz).] A muscle on either side of the nose, the action of which is to depress the alæ, narrowing the anterior nares. Also called *compressor naris.*—**Nasalis ossis frontis,** the median bone in the cranium of fishes above the vomer; the ethmoid. *Starks*, Synonymy of the Fish Skeleton, p. 509.

nasalism (nā′zạl-izm), *n.* [*nasal* + *-ism.*] Nasality; the practice or habit of pronouncing words 'through the nose.'

> The Yankee *nasalism* is another familiar instance of the same kind.
> *Trans. Roy. Soc. Edinburgh*, 1887, p. 349.

nascence (nas′ẹns), *n.* [See *nascency*, *nascent.*] Origination; birth; beginning; specifically, in *phytogeog.*, the rise of a new plant formation on an area destitute of floral covering.

> Recent formations may arise either from *nascence* or by modification. If by *nascence* they must originate upon areas previously destitute of any floral covering, while in the second case they are formed by the elaboration or modification of existing formations, often by the intrusion of foreign elements. Abandoned cultivated patches may represent the first, timber claims the second. Formations often disappear through the agency of fires, floods, mankind, etc., in which cases new formations may arise by *nascence.* *Science*, June 21, 1901, p. 983.

N. A. S. E. An abbreviation of *National Association of Stationary Engineers.*

nashiji (nä′shē-jē), *n.* [Jap., < *nashi*, a pear, + *ji*, ground, texture, ground of a picture.] A kind of Japanese lacquer, having a pear-colored ground sprinkled with gold-leaf. *Trans. Jap. Soc.*, III. 8.

Nashville group. See ★*group*¹.

nasial (nā′zi-ạl), *a.* [*nasi*(*on*) + *-al*¹.] Of or pertaining to the nasion.—**Nasial angle,** in *anthrop.*, the angle formed by the lines drawn from the basion to the nasion and to the alveolar point.

naso-antritis (nā″zọ-an-trī′tis), *n.* [L. *nasus*, nose, + NL. *antrum* + *-itis.*] Inflammation of the nasal mucous membrane, involving also the lining-membrane of the antrum of Highmore.

nasobronchial (nā-zọ-brong′ki-ạl), *a.* [L. *nasus*, nose, + NL. *bronchia* + *-al*¹.] Relating to the nasal cavities and to the bronchial tubes. *Buck*, Med. Handbook, III. 147.

nasobuccal (nā-zọ-buk′ạl), *a.* and *n.* [L. *nasus*, nose, + L. *bucca*, mouth, + *-al*¹.] **I.** *a.* Relating to both the nose and the cheeks.

II. *n.* In some sharks, a groove connecting each nostril with the angle of the mouth. *Parker and Haswell*, Zoology, II. 136.

Nasolabial sulcus. See ★*sulcus.*

Nasomalar index. See ★*index.*

nasomental (nā-zọ-men′tạl), *a.* [L. *nasus*, nose, + *mentum*, chin.] In *craniom.*, relating to the nasion and to the chin.

nasonite (nā′sọn-īt), *n.* [Named after F. L. *Nason.*] A silicate of lead and calcium, containing a small amount of chlorin. It occurs sparingly in granular cleavable masses at Franklin Furnace, New Jersey.

nasopharyngitis (nā″zọ-far-in-jī′tis), *n.* [*nasopharynx* (*-ryng-*) + *-itis.*] Inflammation of the nasopharynx.

nasopremaxillary (nā″zọ-prē-mak′si-lā-ri), *a.* [L. *nasus*, nose, + E. *premaxillary.*] Relating to the nasal and premaxillary bones: as, the *nasopremaxillary* suture, which lies between the two bones. *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 681.

nasorostral (nā-zọ-ros′trạl), *a.* [L. *nasus*, nose, + E. *rostral.*] Relating to the nasal and rostral regions. *Proc. Zool. Soc. London*, 1902, p. 16.—**Nasorostral shield.** See ★*shield.*

nasoseptal (nā-zọ-sep′tạl), *a.* [L. *nasus*, nose + *septum*, partition, + *-al*¹.] Relating to the septum of the nose.

nasoturbinal (nā-zọ-tėr′bi-nạl), *a.* [NL. *nasus*, nose, + E. *turbinal.*] Relating to the nasal cavity and the turbinal bodies: noting the first ethmoturbinal. *Proc. Zool. Soc. London*, 1894, p. 9.

nasrol (nas′rol), *n.* [*na*(*tron*) + *s*(*ulphur*) + (*sympho*)*rol.*] The trade-name of sodium sulphocaffeate or symphorol sodium, a bitter crystalline powder. It is used in medicine as a diuretic, being more powerful in this respect than caffeine.

nasse (näs), *n.* [F., < L. *nassa*, a wicker basket for catching fish.] A trap made of wickerwork, used in the Mediterranean for catching fish.

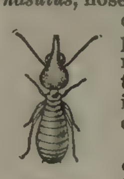
nassellarian (nas-e-lā′ri-ạn), *a.* and *n.* **I.** *a.* Of or belonging to the *Nassellaria.*

II. *n.* An individual of the *Nassellaria.*

nastika (näs′ti-kä), *n.* [Skt. *nāstika*, *adj.* unbelieving, *n.* an unbeliever, < *na-*, not, + *asti*, it is so, √*as*, be, is.] In *Hindu religion* or *philosophy*, an atheist; one who denies the authority of the Vedas.

nasturtian, *n.* Same as *nasturtium*, 2.

nasutus (nạ-sū′tus), *n.*; pl. *nasuti* (-tī). [L. *nasutus*, nosed, < *nasus*, nose.] One of a caste of termites in which the head is prolonged into a point like a long nose. A duct opens at the extremity of the point and from it issues a fluid used as a cement in constructing the nest.



Nasutus.
Two and one half times natural size.
(From "Cambridge Natural History.")

> The largest of the nests collected was exhibited, and also a queen cell and alcoholic specimens of queens, workers, *nasuti* and other forms of the insects. Notes on the life history of "Eutermes ripperti" contributed by E. A. Schwarz were also read.
> *Science*, June 3, 1904, p. 857.

Nat. An abbreviation (*a*) of *Natal*; (*b*) of *national*; (*c*) [*l. c.* or *cap.*] of *natural*; (*d*) [*l. c.*] of *naturalist.*

natal¹, *a.*—**Natal stone.** Same as ★*birth-stone.* **Natal bitter-root.** See ★*bitter-root.*—**Natal boil.** See *Veldt* ★*sore.*—**Natal cotton.** See ★*cotton*¹.

Natalidæ (nạ-tal′i-dē), *n. pl.* [NL. *Natal*(*us*) + *-idæ.*] A family of small bats containing those of the genus *Natalus* and allied genera:

practically the subfamily *Natalinæ* of Harrison Allen raised to family rank. *Miller*, 1899.

nataline (nat′a̤-lin), *a.* [*Natal*(*us*) + *-ine*^{1}.] Belonging to the genus *Natalus*, tropical American bats, or resembling them. See *Natalus*. *Amer. Nat.*, Jan., 1904, p. 91.

natational (nā̤-tā′sho̤n-a̤l), *a.* [*natation* + *-al*^{1}.] Of or pertaining to swimming. [Rare.]

natch^{1}, *n.* **2.** In *mining*, a small hitch or dislocation, as of a coal seam. [Scotch.] *Barrowman*, Glossary.—**3.** The junction of two rails where the rails are out of level or out of line. [Scotch.] *Barrowman*, Glossary.

natch^{3}, *n.* Same as *nautch*.

natchnee (nach′nē), *n.* [Anglo-Ind., ‹ Marathi *nachnī*.] The ragi millet, *Eleusine Coracana*. See ★*millet*^{1} and *Eleusine*. In northwestern India the name is often given to another grass, *Dactyloctenium Ægyptiacum*.

Naticopsis (nat-i-kop′sis), *n.* [*Natica*, a genus of mollusks, + Gr. ὄψις, appearance.] A genus of extinct prosobranchiate gastropods, related to the existing *Natica*, having thick imperforate shells with a short spire, large body-whorls, and a calcareous operculum. It ranges from the Devonian to the Trias.

Natiform eminence. See ★*lobus pyriformis* (*a*).

National economics, forest, forest reserve. See ★*economics*, ★*forest*, ★*reserve*.

nationalism, *n.* **4.** The conduct of all business by the public for the benefit of the public; the substitution of public for private control of all business.

> The recent change in the trend of economic discussion as to the questions involved in the proposition of *Nationalism* has not been less marked than the moral awakening. *E. Bellamy*, in N. A. Rev., June, 1892, p. 748.

nationalty (nash′o̤n-a̤l-ti), *n.* The property or funds belonging to a nation; public property.

> O, that our clergy did but know and see that their tithes and glebes belong to them as officers and functionaries of the *nationalty*,—as clerks, and not exclusively as theologians, and not at all as ministers of the Gospel.
> *Coleridge*, Literary Remains, III. 119.

nativ, *a.* and *n.* A simplified spelling of *native*.

native. I. *a.* **8.** Peopled with natives or aborigines; not civilized: as, a *native* region; *native* country.

> Sir James Brooke's famous utterance, "We aim at the development of *native* countries through *native* agency."
> *Geog. Jour.* (R. G. S.), XVI. 56.

Native citizen, in *U. S. law*, one born of citizen parents, whether born at home or abroad.—**Native deal.** See ★*deal*^{2}. **Native dog,** *Canis dingo*, the dingo, or wild dog of Australia. See cut under *dingo*.

II. *n.* **7.** A name given in Australia to the schnapper, *Pagrus unicolor*, after it has ceased to school. Also called *rock-native*. *E. E. Morris*, Austral English.

Nat. Ord. An abbreviation of *Natural Order*.

natrium (nā′tri-um), *n.* [NL., ‹ *natrum*, *natron* (carbonate of sodium): see *natron*.] In *chem.*, the metal, more generally called sodium, of which the hydroxid and the carbonate constitute caustic soda and washing soda respectively.

natrojarosite (nā″trō̤-ja-rō′sīt), *n.* [*natron* + *jarosite*.] A variety of jarosite which contains several per cent. of soda, found in Soda Springs valley, Nevada.

natronberzeliite (nā″tron-bėr-zē′li-īt), *n.* Same as ★*manganberzeliite*.

natroncatapleiite (nā″tro̤n-kat-a̤-plē′i-īt), *n.* A variety of catapleiite, which contains sodium and no calcium, found in Norway.

natronium (nā̤-trō′ni-um), *n.* [NL., ‹ *natron* + *-ium*.] In *chem.*, same as ★*natrium* or *sodium*.

natronmicrocline (nā″tro̤n-mī′krō̤-klīn), *n.* [*natron* + E. *microcline*.] Same as ★*anorthoclase*.

natrophilite (nā̤-trof′i-līt), *n.* [*natron* + Gr. φιλεῖν, love, + *-ite*^{2}.] A rare sodium-manganese phosphate ($NaMnPO_4$) occurring in cleavable masses of a deep wine-yellow color: found at Branchville, Connecticut.

natrum (nā′trum), *n.* [NL.: see *natron*.] Same as *natron*.

natuary (nat̤′ṳ̄-ā̤-ri), *n.* [NL. **natuarium*, ‹ L. *natus* (*natu-*), birth, ‹ *nasci* (pp. *natus*), be born.] A room or ward in a hospital or other public institution where women are cared for during parturition.

> The *natuary*, it is observed, was clean and ventilated and armed with proper appliances, with a midwife on the spot. *Lancet*, June 25, 1904, p. 1775.

natural. I. *a.*—**Natural day.** (*b*) In *law*, the period from sunrise to sunset; the solar day, as distinguished from the calendar day, which extends from midnight to midnight.—**Natural drainage,** in *mining*, drainage by means of an adit or drift, the water flowing from the mine workings above this level by gravity.—**Natural heir,** in *law*, a child, legitimate or adopted; also, where a testator having no children uses the phrase, it means such next of kindred as one would naturally choose to the exclusion of others, as a mother or sister as against cousins.—**Natural number, scale.** See ★*number*, ★*scale*^{3}.

II. *n.* **9.** In *gaming*, anything which wins the stake immediately, such as a throw of 7 or 11 at craps, showing 21 at vingt-et-un, or holding 8 or 9 at baccara. See *nick*^{3}, *n.*, 3.

naturalisti (nä-tö-rä-lēs′tē̤), *n. pl.* [It.: see *naturalist*.] The 'Naturalists,' a school of realistic painters in Italy centering especially in Naples in the seventeenth century.

> The realism of the *Naturalisti* was founded upon passion. It was the elemental truth of vehement natures, delighting in detail and in strong contrasts.
> *Hartley*, Spanish Painting, p. 185.

naturalistic, *a.* **4.** In *photog.*, said of a photograph in which the chief object is slightly out of focus. *Woodbury*, Encyc. Dict. of Photog., p. 296.

Naturalization papers, a document which testifies that a certain person has been admitted to citizenship and is entitled to all the rights and privileges of a citizen.

nature, *n.*—**To come to nature,** to reach that phase in the puddling of iron when the metal becomes pasty. *Lockwood*, Dict. Mech. Engin. Terms.

naturel (nä-tü-rel′), *n.* [F., a noun use of *naturel*, natural.] One's own individual nature.

> The two points in a boy's training are, to keep his *naturel* and train off all but that: to keep his *naturel*, but stop off his uproar, fooling and horse-play; keep his nature and arm it with knowledge in the very direction in which it points.
> *Emerson*, Education, Lectures and Biog. Sketches, [p. 142.

nature-right (nā′t̤ṳ̄r-rīt), *n.* Same as *natural right* (which see, under *right*).

> And when Savigny, the herald of evolution, was already in the field, the day for a "*Nature-Right*"—and Austin's projected "general jurisprudence" would have been a *Nature-Right*—was past beyond recall.
> *Encyc. Brit.*, XXVIII. 253.

nature-rightly (nā′t̤ṳ̄r-rīt″li), *a.* Pertaining to nature-right or natural right. [Rare.]

> The principal outlines of equity were drawn by men who were steeped in the common law. By way of ornament a Roman maxim might be borrowed from a French or Dutch expositor, or a phrase which smacked of that "*nature-rightly*" school which was dominating Continental Europe. *Encyc. Brit.*, XXVIII. 252.

nature-study (nā′t̤ṳ̄r-stud″i), *n.* In recent pedagogics, the process and means of coming into sympathetic contact with common natural objects and phenomena in their normal relationships and in their native places. Nature-study extends the laboratory out-of-doors, making the conventional indoor laboratory an adjunct to the fields, rather than the fields a proving-place for the laboratory. It first studies the objects in their natural forms and relationships, rather than by means of dissection and technical analysis. It studies the things of out-of-doors primarily for the purpose of putting the pupil into sympathy with nature (and therefore with his own life), rather than of developing the spirit of scientific research. It considers first the objects and phenomena that are nearest at hand, since these are most vital and relevant to the child.

> But the ordinary teacher without any particular training in the subject has wanted more systematic guidance, his previous training has been in the wrong direction, and the many text-books that have been hurried on to the market have only tended to confirm his probable original error that *nature-study* consisted in reading about natural objects or anything bearing on country life.
> *Nature*, Oct. 8, 1903, p. 546.

naturistic, *a.* **2.** Relating to that form of culture in which only simple appliances are used: opposed to ★*manganic*^{2}.

> On every grade of culture women were more *naturistic* than men. Any culture area, therefore, which afforded occasion and stimulus for the employment of mechanical powers, the forces of nature, and continuous organized effort of mind and muscle was virile and most propitious for men. *O. T. Mason*, in Pop. Sci. Mo., Feb., 1902, p. 338.

nat-worship (nat′wėr″ship), *n.* The worship of nats. See *nat*^{4}.

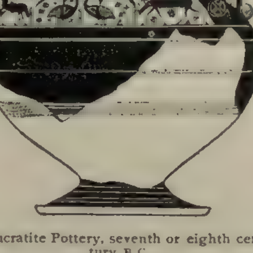
naucorid (nâ′kō̤-rid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Naucoridæ*.

II. *a.* Having the characters of or belonging to the family *Naucoridæ*.

naucrary (nâ′krā̤-ri), *n.* [Gr. ναυκραρία.] A political subdivision of the Athenians. See the extract.

> Solon appears first distinctly to have perceived the peculiar advantage of the maritime position of Attica. . . . He appears to have laid the foundation of the Attic navy by charging the forty-eight sections, called *naucraries*, into which the tribes had been divided for financial purposes, each with the equipment of a galley, as well as with the mounting of two horsemen.
> *Bp. Thirlwall*, History of Greece, I. 186.

Naucratite (nâ′kra̤-tīt), *a.* Of or pertaining to Naucratis, an ancient Greek colony in Egypt; especially, pertaining to the pottery of Naucratis, which is in a clearly defined style. The product of the great factory there is characterized by a whitish ground with black or polychrome decoration. The vases are black inside. Similar ware was made at Cyrene, in Northern Africa.



Naucratite Pottery, seventh or eighth century B.C.

naucum (nâ′kum), *n.* [L. *naucum*, a trifle.] **1.** The fleshy part of a drupe. *Lindley*.—**2.** A seed with a large hilum. *Gaertner*.

Nauheim treatment. See ★*treatment*.

naukar-chackur, *n.* See ★*chackur*.

Naumannian (nou-mȧn′i-an), *a.* Of or pertaining to K. F. Naumann, a German mineralogist (1797–1873), or to the system of crystallography and crystallographic notation which he introduced. See ★*symbol*^{1}.

Nausea gravidarum, the morning sickness of early pregnancy.—**Nausea marina, nausea navalis,** seasickness.

naut (nât), *n.* An abbreviation of *nautical mile* (6,080 feet), sometimes used, especially in writing of the laying of submarine cables.

> From Vancouver to Fanning Island the copper weighs 600 pounds per *naut*, and the gutta-percha 340 pounds per *naut*. *Sci. Amer. Sup.*, Dec. 13, 1902, p. 22528.

Nautical block, a navigation pad made up of a certain number of sheets of paper on which the form of a problem is printed. Also *navigation block*.—**Nautical forms,** navigation formulæ. Also *navigation forms*.—**Nautical surveying.** Same as *marine surveying* (which see, under *surveying*).

Nautichthys (nâ-tik′this), *n.* [NL., ‹ Gr. ναύτης, sailor, + ἰχθύς, fish.] A genus of small cottoid fishes found on the northern Pacific coast of America.

nautics (nâ′tiks), *n.* [Pl. of *nautic*.] **1.** The art or science of navigation. *N. E. D.*—**2.** Aquatic sports and exercises.

> There was also special training in swimming and *nautics*, as rowing and sailing.
> *G. S. Hall*, Adolescence, II. 259.

nautilicone (nâ′til-i-kōn), *n.* [NL., ‹ *Nautilus*, + Gr. κῶνος, cone.] In the cephalopods, a closely coiled shell having an impressed zone, as in the genus *Nautilus*.

nautiline (nâ′ti-lin), *a.* [NL. *nautilinus*, ‹ *Nautilus*.] Having the characters of the *Nautilinidæ* or *Nautilini*, a primitive group of goniatites with simple septal sutures.

Nautiscus (nâ-tis′kus), *n.* [NL., ‹ Gr. ναύτης, sailor, + dim. -ισκος.] A genus of cottoid fishes which inhabit Bering Sea.

Nav. An abbreviation (*a*) [*l. c.* or *cap.*] of *naval*; (*b*) [*l. c.*] of *navigation*.

navaja (nä-vä′hä), *n.* [Sp. *navaja* = Cat. *navalla* = Pg. *navalha*, ‹ L. *novacula*, a sharp knife, a razor, a dagger, ‹ *novare*, renew, plow again, coin, etc., ‹ *novus*, new: see *new*, *novel*.] **1.** A folding or clasp-knife.—**2.** A razor. [Spanish use.]

naval, *a.*—**Naval apprentice,** a youth enlisted in the navy for a term of years to do duty as a sailor and to advance successively through the grades of seaman and petty officer to possible warrant-officer's rank.—**Naval architect,** one who follows the profession of ship-designing.—**Naval asylum,** a home, supported by the United States government, for retired naval men; specifically, an institution in Philadelphia for men who have served twenty years in the United States navy.—**Naval brass.** See ★*brass*^{1}.—**Naval brigade,** the organization of the officers and crew of two or more war-ships as a landing force for military operations on shore.—**Naval dock,** a dock provided with naval stores, ship-building material, etc.—**Naval lord.** See ★*lord*.

navalism (nā′va̤l-izm), *n.* [*naval* + *-ism*.] The predominance of naval interests; the excessive strengthening of naval power.

> The beginning of this extraordinary policy was the Barrundia affair, in which Mr. Blaine . . . co-operated with Mr. Tracy in . . . handing the foreign policy of the Government over to *navalism*.
> *The Nation*, Jan. 21, 1892, p. 44.

Navassa phosphate. See ★*phosphate*.

Nav. Const. An abbreviation of *Naval Constructor*.

nave-aisle (nāv′īl), *n.* One of the aisles which flank the nave in a church.

navel-hood (nā′vl-hůd), *n.* In *wood shipbuilding*, heavy plank or timber worked outside the framing around the hawse-holes on which the outer flange of the hawse-pipe is secured. Also called *naval hood.*

navel-pipe (nā′vl-pīp), *n.* A chain-pipe; a pipe through which a chain passes from one deck to another.

Navesink group. See ★*group*¹.

navette, *n.* 2. Same as ★*marquise*, 3.

Navicular arthritis, disease. See ★*arthritis*, ★*disease*.

Navig. An abbreviation [*l. c.* or *cap.*] of *navigation*, *navigator*.

navigating-officer (nav′i-gā-ting-of″i-sėr), *n.* One of a ship's officers whose special duty it is to care for the chronometers, compasses, charts, etc., to measure altitudes and take the bearings of the heavenly bodies from which to calculate latitude, longitude, and the deviation of the compass, and to lay out the vessel's course, etc.,—all, however, under authority of the captain. On a man-of-war the navigating-officer is next in rank below the executive officer, or the second in rank after the captain. In addition to his duties as navigator, he has supervision over the ground-tackle, steering-gear, etc., the disposal of the ballast, the stowage of water, provisions, etc.

navigation, *n.*—**Bureau of Navigation.** See ★*bureau*. **Inside navigation.** Same as *inland navigation* (which see, under *navigation*).

navigerous (na-vij′ẹ-rus), *a.* [L. *naviger*, ‹ *navis*, ship, + *gerere*, bear, + *-ous*.] Capable of bearing or floating ships; navigable.

navipendular (nav-i-pen′dū-lär), *a.* [*navipendulum* + *-ar*³.] Of or pertaining to a navipendulum or to its use.

> The *navipendular* method of experiments as applied to some warships of different classes.
> *Nature*, April 9, 1903, p. 541.

navipendulum (nav-i-pen′dū-lum), *n.* [L. *navis*, ship, + NL. *pendulum*, pendulum.] A piece of mechanism by which the rolling movement of a ship, in still water or amongst waves, is reproduced on a small scale. It consists of two parts, a pendulum of special shape representing the ship, called the "*navipendulum*," and a device for giving to the pendulum the motions of a ship. *Sci. Amer.*, Dec. 6, 1902, p. 374.

navy¹, *n.* **3.** The navy may be divided into the central administration, both military and civil; the ships of every kind, including war-vessels properly so called, supply-vessels, transports, repair-ships, hospital-ships, and minor craft, their personnel of officers and crew; and the shore stations or navy-yards (in Great Britain called 'dock-yards') at which these vessels are built and repaired, and receive their supplies of all kinds, and at which is stationed the military and civil personnel required for these purposes. The central administration in the United States navy is called the *Navy Department*, in the British navy, the *Admiralty*. The fighting ships of a modern navy may be divided into a number of types. The first in importance are the battle-ships (see ★*battle-ship*), which take the place of the line-of-battle ship of the days of wooden sailing vessels. Analogous to the battle-ship, but of higher speed and less offensive and defensive power, is the modern armored cruiser. Following these are armored coast-defense vessels of limited speed and sea-going qualities. Next are the protected cruisers. The modern tendency is to diminish the number and importance of ships of the latter type owing to their feeble defensive power against modern shell fire in comparison with their size. The recent tendency is to replace them with a new type of cruiser called the *scout-cruiser*. This is a vessel of sufficient size to have high speed in rough weather and with other qualities sacrificed to extreme speed. Following these are torpedo-boat destroyers and torpedo-boats, together with the recently developed submarine boats. The above comprise all the types of fighting vessels distinctly recognized in a modern navy. Coast- and harbor-defense vessels may be considered as small battle-ships having limited speed and seaworthiness, and tend to disappear as a distinct type. Besides the fighting ships, a modern navy requires a number of auxiliary vessels. Among these may be mentioned supply-ships to bring ammunition, provisions, water, etc., to the fighting fleet; colliers, with special appliances for coaling ships at sea; repair-ships or floating shops, to repair damages to the fighting ships; and hospital-ships, to take care of the sick and wounded. To build these vessels originally, to repair them when they are damaged to an extent beyond the capacity of the repair-ships, and to supply their numerous wants, navy-yards in suitable harbors are required. These yards include in their plant and equipment dry-docks, numerous shops, storehouses, etc., with a floating equipment of tugs, lighters, etc. To these may be added certain detached functions, such as the personnel and material necessary to carry on hydrographic surveys and make charts, observatories for astronomical work in connection with navigation, and the schools necessary to train the various kinds of officers, enlisted men, and civil employees. There is also the important service of the organization of a naval militia or reserve force of naval volunteers for the expansion of the personnel in time of war and the conversion of merchant vessels to naval purposes. The central administration of the United States navy is in the Navy Department at Washington. There are navy-yards located at Kittery, Maine (opposite Portsmouth, New Hampshire), officially designated *Portsmouth Navy-yard*; at Boston; at Brooklyn, officially designated *New York Navy-yard*; at Philadelphia, formerly designated *League Island Navy-yard*; at Portsmouth, Virginia (opposite Norfolk), officially designated *Norfolk Navy-yard*; at Warrington, Florida (near Pensacola), officially designated *Pensacola Navy-yard*; at Mare Island, California, at the head of San Francisco Bay; and at Bremerton, Washington (near Seattle), officially designated *Puget Sound Navy-yard*. There are numerous minor naval stations along the coast not equipped for building or repairing vessels, and also in the island possessions. At Cavite, Philippine Islands, near Manila, there is a naval station at which vessels are repaired. At Washington is located the naval gun-factory, at Annapolis the United States Naval Academy for the education of naval officers, and at Newport, Rhode Island, the principal training-station for enlisted men. A recent type of battle-ship in the United States navy is the *Connecticut* class, including the *Connecticut*, *Louisiana*, *Vermont*, *Minnesota*, *Kansas*, and *New Hampshire* (which differ from each other only in minor changes in the distribution of armor; for description see ★*battle-ship*). The comparative tables below show the sea-strength of the principal naval powers (June 1, 1908). Prior to the war with Japan, Russia ranked as the third naval power of the world.

The following vessels are not included in the tables: Those over 20 years old, unless they have been reconstructed and rearmed; those not actually begun, although authorized; gunboats and other vessels of less than 1,000 tons; transports, colliers, repair-ships, torpedo-depot ships, and converted merchant vessels or yachts; torpedo craft of less than 50 tons.—**Department of the Navy.** See *department*. The Assistant Secretary of the Navy has special charge of the building, survey, and repairs of vessels, the naval militia, and the administration of the island possessions of the United States placed under the Navy Department. The Bureau of Yards and Docks has charge of the construction and maintenance of buildings, of docks, and of civil engineering work in general for the navy; the Bureau of Equipment, of the equipment of ships, of the electric generators and lighting and means of communication on shipboard, of the Naval Observatory, of the Hydrographic Office, and of the furnishing, storing, and transportation of coal for ships' use; the Bureau of Navigation, of the commissioned and enlisted personnel of the navy, their education, training, and employment, and of the assignment and movements of ships; the Bureau of Ordnance, of the manufacture and use of armor, guns, mounts, and ammunition; the Bureau of Construction and Repair, of the designing, building, and repair of the hulls of vessels and their appurtenances; the Bureau of Steam Engineering, of the designing, building, and repair of the propulsive machinery of vessels; the Bureau of Supplies and Accounts, of the purchase, transportation, and care of all stores, of provisions and clothing for enlisted men, of payments of money, and of keeping the accounts of the navy; the Bureau of Medicine and Surgery, of the hospitals and of the care and treatment of the sick and wounded. Besides the eight bureaus, there is the Judge Advocate General, who has charge of all legal matters, claims, proceedings of courts-martial, etc.; the Brigadier General Commanding, who has charge of all that relates to the marine corps; and the General Board, which has charge of devising measures for the effective preparation and maintenance of the fleet for war.—**Navy blanket.** See ★*blanket*.

SEA STRENGTH OF THE PRINCIPAL NAVAL POWERS, JUNE 1, 1908.

WAR-SHIPS, BUILT AND BUILDING, OF 1,000 TONS DISPLACEMENT AND OVER, AND TORPEDO CRAFT OF MORE THAN 50 TONS DISPLACEMENT.

TYPE OF VESSEL	GREAT BRITAIN		UNITED STATES		GERMANY		FRANCE		JAPAN		RUSSIA		ITALY		AUSTRIA

Submarines	42	18	12	7	1	2	44	50	8	2	25	6	4	2	..	6

Battle-ships, first class, are those of 10,000 tons displacement and over.

[2] Includes smaller battle-ships and monitors.

[3] All unarmored war ships of more than 1,000 tons are in this table classed, according to displacement, as cruisers. Scouts are considered as cruisers in which battery and protection have been sacrificed to secure extreme speed. The word 'protected' has been omitted because all cruisers except the smallest and oldest now have protective decks.

RELATIVE ORDER OF WAR-SHIP TONNAGE.

At present		As it would be if vessels building were now completed	
Nation	Tonnage	Nation	Tonnage
Great Britain	1,655,075	Great Britain	1,859,174

Japan	368,565	Japan	444 903
Russia	240 943	Russia	320 040
Italy	220,308	Italy	284,778
Austria	114,250	Austria	148,350

navy-board (nā′vi-bōrd), *n.* A former title of the admiralty. *N. E. D.*

nawls² (nâlz), *n. pl.* [Orig. *mine alls*: see *alls*, under *all*, n. 2.] Same as *alls*.

> But up I soon start, and was dress'd in a trice,
> And call'd for a draught of ale, sugar, and spice;
> Which having turn'd off, I then call to pay,
> And packing my *nawls*, whipp'd to horse, and away.
> *Cotton*, A Voyage to Ireland in Burlesque, iii.

nay² (nä′ē), *n.* [Also *nei*; ‹ Ar. *nāy*, pl. *nāyāt*.] A native Egyptian transverse flute, usually with six holes. *Grove.*

nay-say (nā′sā), *n.* A saying of 'nay'; a refusal.

> Sir Frederick would say then, nineteen *nay-says* are half a grant.
> *Scott*, Black Dwarf, v.

Nazarene, *n.* **3.** *pl.* The name given to a coterie of painters in Germany in the early nineteenth century who were especially opposed to the classicism of Winckelmann and endeavored to return to the religious intensity of the middle ages and early Renaissance. They formed themselves especially on the Italian primitives, the painters before Raphael, and to a certain extent corresponded to the pre-Raphaelites of England. The leading painters were Overbeck (1789–1869), Schnorr (1794–1872), and Führich (1800–1876).

Nazia (naz′i-ä), *n.* [NL. (Adanson, 1763), of unknown significance.] A genus of grasses. See *Tragus*, 3.

nazir, *n.* **2.** In Mohammedan countries, the warden of a mosque.

N. B. An abbreviation (*b*) of *New Brunswick*; (*c*) of *North Britain*; (*d*) of *North British*.

N. C. An abbreviation (*a*) of *New Church*; (*b*) of *North Carolina*.

Nd. In *chem.*, the symbol for the element neodymium.

N. D. An abbreviation of *no date*.

N. Dak. An abbreviation of *North Dakota*.

n-declension (en′dẹ̄-klen′shọn), *n.* The weak declension of Teutonic nouns and adjectives, in which the stem ends in *n*. *N. E. D.*

Ne. In *chem.*, the symbol for the element *neon*.

N. E. An abbreviation (*a*) of *New England*; (*b*) of *northeast*; (*c*) of *Northeastern Postal District, London*.

nealing (nē′ling), *n.* Same as *annealing*.

nealogic, *a.* **2.** Same as ★*neanic*.

> In several immature individuals it has been observed that in the early *nealogic* [neanic] stage the beaks are strongly elevated, probably erect, and each has a very large open delthyrium, surface smooth at first, but gradually developing eight plications and a mesial sinus in each valve.
> *Amer. Jour. Sci.*, Jan., 1903, p. 9.

Nealotus (nē-ạ-lō′tus), *n.* [NL., ‹ Gr. *νεάλωτος*, newly-caught, ‹ *νέος*, new, + *ἁλωτός*, taken, ‹ *ἁλῶναι*, take, catch.] A genus of deep-sea fishes of the family *Gempylidæ*, found in the Atlantic.

Neanderthal skull. See ★*skull*¹.

neanic (nẹ-an′ik), *a.* [Gr. *νεανικός*, youthful, ‹ *νεανίας*, a youth, ‹ *νέος*, new.] Noting that stage of evolution or auxology which is broadly equivalent to adolescence or approaching maturity: opposed to the ★*nepionic* or infantile, and the ★*ephebic* or adult stage.

> At this stage, the early *neanic*, the lines of growth are well marked and of nearly equal strength with the revolving lines, the two together giving the shell surface a reticulated appearance. *Amer. Nat.*, Aug., 1903, p. 519.

Nearctica (nē̤-ärk′ti-kạ̈), *n.* The Nearctic region. See *Nearctic*.

near-point, *n.*—**Absolute near-point**, the nearest point at which an object can be distinctly seen by one eye alone.—**Relative near-point**, the nearest point of distinct vision for both eyes.

nearthrosis (nē-är-thrō′sis), *n.* [NL., < *νέος*, new, + NL. *arthrosis*.] Same as *pseudarthrosis*.

Neb. An abbreviation of *Nebraska*.

nebenkern (nā′ben-kern), *n.*; pl. *nebenkerne* (-ker-ne). [G., < *neben*, near, + *kern*, nucleus.] In *cytol.*, the paranucleus; an extra-nuclear body in the spermatid, arising from the spindle-fibers of the secondary spermatocyte. This name is also given to many other cytoplasmic structures, such as the mitosome and yolk-nucleus.

nebhelah (neb-hā′lä), *n.* [Heb. *nebhēlah*, carcass, dead body, < *nabhal*, decay, wither.] A dead body; especially, the carcass of an animal which has died from disease and is not fit for food.

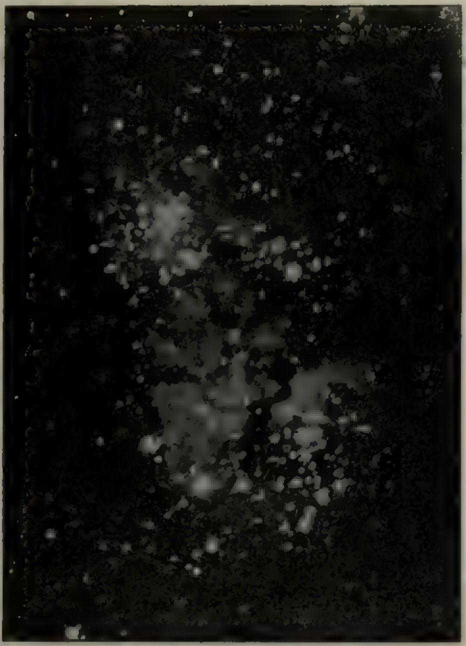
Nebr. An abbreviation of *Nebraska*.

nebris, *n.* 2. [*cap.*] A genus of sciænoid fishes found on both coasts of tropical America.

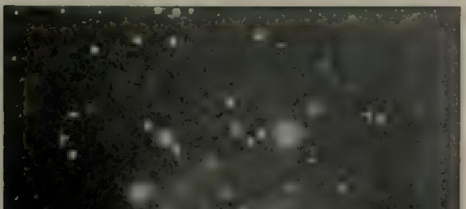
nebula, *n.*—**Cometary nebula**, a nebula which resembles a comet in appearance, usually having a stellar nucleus, and sometimes branching out on one side as if forming a tail.—**Crab nebula**, a nebula in Taurus, Messier 1: called the *crab nebula* by Lord Rosse, and so generally still known, although the appendages which rendered the name appropriate have not been seen since Rosse noted them,—photography does not show them, and it is not impossible that they were temporary and have disappeared.—**Fish-mouth nebula**, a descriptive name of the great nebula of Orion, which has a notable feature of the appearance indicated.—**Green nebula**, one which shows a greenish tint due to the bright lines of nebulium: contrasted with *white* ★*nebula*. The planetary nebula H. iv. 1 in Aquarius is especially vivid in color.—**Hind's nebula**, a nebula near the variable star T Tauri, discovered by Hind in 1852 with a small telescope. After growing brighter for a time it faded away with fluctuating luminosity and is now visible only in the largest telescopes, if at all. Another, discovered near it by O. Struve in 1868, has behaved in a similar manner.—**Horseshoe nebula**, the nebula Messier 17, often called the *Omega nebula*, on account of its form.—**Keyhole nebula**, a nebula in the constellation Argo (Carina) which has a peculiar dark keyhole-shaped hole near its center. The remarkable variable η Argus is close to the eastern edge of the keyhole.—**Omega nebula**, a bright nebula, Messier 17, shaped like the Greek letter omega (Ω) in the constellation of Scutum Sobieskanum.—**Owl nebula**, a peculiar planetary nebula, Messier 97, in Ursa Major: so called from its apparent resemblance to the face of an owl.—**Stellar nebula**, a body of numerous distant stars, appearing like a nebula, or a nebula with a stellar nucleus.—**Variable nebula**, a nebula which varies in brightness, for example, 1,555 in Dreyer's New General Catalogue, which is connected with the variable star T Tauri.—**Whirlpool nebula**, the nebula Messier 51 in the constellation of the Hunting Dogs: so called by Lord Rosse because of its wonderful spiral structure. Similar features have since, however, been brought out in numerous other nebulæ.—**White nebula**, one which is not green, like the nebulæ which give a bright-line spectrum. Its spectrum is continuous. An example is the great nebula in Andromeda (Messier 31).

Fish-mouth Nebula,—the great nebula in Orion.

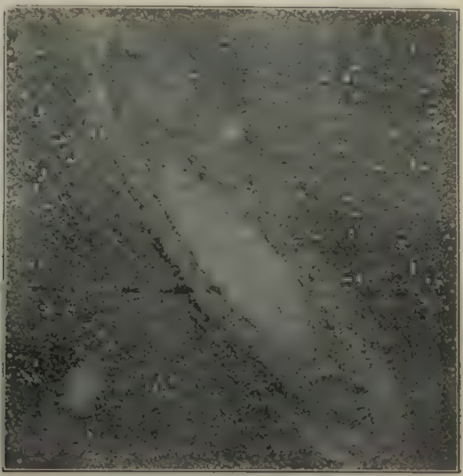
Nebular hypothesis. The hypothesis was suggested in a somewhat crude and unscientific form by Swedenborg and Kant, but was first distinctly formulated by Laplace about the beginning of the nineteenth century. He assumed that the matter of which the sun and planets are now composed was once a nebula—an immense ball of heated gases, somewhat condensed at the center, and with a revolution on an axis. He did not assume, as Kant had done, that the whole material universe was once gaseous, and that the formation of such a rotating nebulous ball was produced simply by the action of gravitation. He did not undertake to explain the genesis of the primordial nebula, but simply assumed its existence. Starting with this, he assumed that the nebula losing heat by radiation would contract under its own gravitation and that, for mechanical reasons, the speed of its rotation would necessarily increase. In consequence of this rotation the nebulous globe would become flattened at the poles and, ultimately, as the contraction went on, the centrifugal force at the equator would become equal to gravity and rings of nebulous matter, like the rings of Saturn, would be detached from the central mass. In fact, Saturn's rings suggested this feature of the theory. A ring thus formed would for a time revolve entire, but would ultimately break, and the material would collect into a globe, revolving around the central nebula as a planet. Laplace seems to have supposed that the ring would revolve as if it were solid, the outer edge moving more swiftly than the inner, and if so the planet would necessarily rotate in the same direction as that of the revolution of the ring. Its revolution around the central mass would of course be in or near the plane of the equator of the whole. The planet thus formed might throw off rings of its own, and so form for itself a system of rings and satellites. Obviously this theory explains most of the peculiar facts of the solar system, especially the fact that the planets all revolve in nearly circular orbits, all in the same direction, and in planes nearly coinciding with the sun's equator; and also the fact that the planets and their satellites revolve in the same direction, with the exception of Uranus and Neptune. These exceptions can be explained in more than one way, by slightly modifying the assumption that the rings revolve as if solid. It is almost certain that the particles at the outer edge of a ring must move more slowly, instead of more rapidly, than those at the inner edge. This has been shown to be actually the case with the rings of Saturn. It is to be remarked, however, that, judging from the prevailing spiral structure of the nebulæ and the number of binary stars, both visual and spectroscopic, it seems likely that the formation of rings would occur only seldom. So far as yet appears the rings of Saturn are unique in the universe. A modified form of the nebular hypothesis proposed by Faye assumes that the inner planets were formed within the nebula, before the outer ones, and are therefore older; but this has gained little acceptance. There are serious, and probably fatal, objections to any theory which assumes as its starting-point a mass of heated gas. In the light of modern investigations it seems far more likely that the original 'cloud' or 'nebula' was cold, and that the present high temperature of the sun and planets has been developed in the process of their formation. Nor does it appear how the matter of a nebulous ring could coalesce into a planet, at least within any such length of time as can be reconciled with the conclusions as to the possible age of the solar system deduced by Lord Kelvin and others from the theory of heat—conclusions which, however, may be greatly modified if it should appear that other sources than mechanical contraction have contributed heat to be radiated into space, thus reducing the rate of contraction and allowing more time for the formation of planets and satellites. At present the general drift of opinion favors a 'meteoritic hypothesis' of some sort, substituting for the primordial gaseous nebula a swarm of small cold meteoric masses, from the slow aggregation of which the sun and planets have gradually been built up. Such a meteoritic cloud would behave, as George Darwin has shown, very much like a mass of gas, but with an immensely magnified time-scale of evolution. The distinctive feature of the *planetesimal hypothesis* lately proposed by Chamberlin consists in assuming that the meteors, instead of moving indiscriminately in all directions, move in paths which are nearly concentric circles and nearly in one plane, like infinitesimal planets, occasionally overtaking each other and coalescing without any violent shock.—**Nebular line.** See ★*line*^{2}.



Keyhole Nebula,—nebula in Carina.



Whirlpool Nebula,—great spiral nebula in Hydra.



White nebula,—great nebula in Andromeda.
(By courtesy of Dr. Isaac Roberts of England.)

nebulated (neb′ụ̄-lā-ted), *p. a.* [L. *nebula*, a cloud.] Obscured as with a cloud; clouded.

> On the head and neck the light rufous decidedly predominates, and seems indistinctly but thickly *nebulated* with dusky; this dusky forming a conspicuous spot just at the anterior canthus of the eye. *Coues*, Birds of the Northwest, p. 608.

nebulation (neb-ụ̄-lā′shọn), *n.* [*nebula* + *-ation*.] Nebulosity; the character or condition of being nebulated.

nebulium (ne-bū′li-um), *n.* [NL., < *nebula*, nebula.] A supposed gaseous element assumed to account for the brilliant green lines in the spectrum of the nebulæ. Thus far it has not been detected on the earth, or in any of the heavenly bodies except the nebulæ.

> The spectrum is purely gaseous, and is dominated visually, with more than the usual emphasis, by the green *nebulium* line, while in the photographic region the ray at λ 3727 was found by Von Gothard to be of quite peculiar strength. Symptoms of helium-emission should be looked for. *A. M. Clerke*, Problems in Astrophysics, p. 517.

nebulization (neb″ụ̄-li-zā′shọn), *n.* [*nebuliz*(*e*) + *-ation*.] The state of being nebulized; reduction to a fine spray or vapor: said of a liquid.—**Nebulization treatment**, treatment of disease, chiefly of disease of the mucous membrane, by the direct application or the inhalation of a medicated spray.

Nebulous star. (*b*) See ★*star*^{1}.

necessario (ne-che-sä′ri-ō), *a.* [It.] In *music*, same as *obbligato*.

necessarious†, *a.* Same as *necessary*.

necessist (nē̤-ses′ist), *n.* [*necess*(*ism*) + *-ist*.] Same as *necessitarian*. *W. G. Ward.*

necessitate (nẹ-ses′i-tāt), *a.* Necessitated.

necessitative (nẹ-ses′i-tạ-tiv), *a.* [*necessitate* + *-ive.*] Rendering necessary; necessitating: as, a *necessitative* conviction.

neck, *n.* 6. (*j*) (3) The prolonged apex of a perithecium or pycnidium. (*l*) The crook of the head of a golf-club where it joins the shaft. (*m*) A reduced section in a rod or bar; specifically, the part of a rod or bar under tensile test in a testing-machine where the material is stretching more than in other parts of its length. As the weight of the piece cannot change, the material must diminish in cross-section as its length increases. Hence, a hollowing of the sides or perimeter and the formation of a neck occur before the piece parts. This local stretch or diminution of area at the fracture is a measure of the toughness or ductility of the material, the reduction of the area at fracture being greatest for ductile materials and least for those which are brittle.

When a wrought iron or steel piece is tested, the elongation is made up of two parts: first, a fairly uniform stretch throughout the whole length of the cylindrical portion; and second, for a length of 1-2 inch to 1 inch on each side of the break, there is superposed on the first a greater local elongation in what is called the "*neck*" of the break. *Jour. Phys. Chem.*, June, 1905, p. 456.

Nithsdale neck, goiter.—**Septal neck,** the calcareous tube in the septum of an ammonite or nautilus through which the siphuncle passes.—**To get it in the neck,** to receive a hard blow in, or as if in, the neck; be hit in a sensitive place. [Slang.]

Showing how Vanity is still on deck
And Humble Virtue *gets it in the neck.*
Wallace Irwin, Love Sonnets of a Hoodlum, Epilogue.

Volcanic neck. See *neck*, 6 (*k*).

neckatee (nek′ạ-tē), *n.* [*neck* + *-atee*, an arbitrary ending, as if F.] A neckerchief; a small shawl-shaped wrap. [Rare.]

Other colonists had speckled neck-cloths, lawn and silesia neck-cloths. Men and women both wore them. They were also called neck-clothes, neckerchiefs, neckingers, and *neckatees.*
A. M. Earle, Costume of Colonial Times, p. 167.

neck-band, *n.* 3. Same as ★*neck-cord.*

neck-bang (nek′bang), *n.* The short hair which grows on the back of the neck of a woman where the line of hair growth begins. See *bang*, *n.*

She wore brown cotton gloves and a brown cotton veil to preserve her complexion. Her *neck-bangs*, recently released from curling-tins, stood out like a bunch of tumbleweed. *The Century*, Aug., 1905, p. 602.

neck-cord (nek′kôrd), *n.* A cord which connects the Jacquard attachment of a loom with the harness or heddle. Also called *neck-band. R. Marsden*, Cotton Weaving, p. 192.

neck-core (nek′kōr), *n.* A mass of resistant lava in the chimney of a volcano.

The fact that most volcanoes 'plug' themselves after varying periods of activity, and that some of these reopen directly in the line of earlier eruptions, would in itself seem to suggest that from time to time extravasated plugs (*neck-cores* or towers) should appear at the surface.
Science, May 20, 1904, p. 801.

Necker's cube or **parallelepiped.** See ★*parallelepiped.*

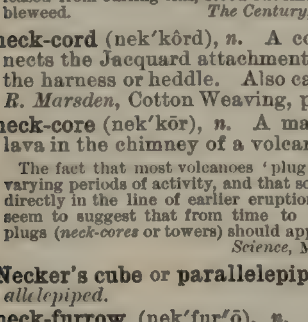
neck-furrow (nek′fur″ō), *n.* The posterior groove on the cephalon of a trilobite, dividing the glabella from the occipital segment. Also called *nuchal furrow.*

neckgear (nek′gēr), *n.* Same as *neckwear.*

necklace (nek′lạ̄s), *v. i.* and *t.*; pret. and pp. *necklaced*, ppr. *necklacing.* To form into a necklace; encircle or surround with, or as with, a necklace. *N. E. D.*

necklace-shell (nek′lạ̄s-shel), *n.* A marine univalve mollusk (the pearly necklace-shell), *Elenchus bellulus.* When deprived of its epidermis by the action of acid or by other means, it has a blue or green pearly luster. [Tasmania.]

necklace-weed (nek′lạ̄s-wēd), *n.* 1. The white baneberry, *Actæa alba.*—2. The false gromwell, *Onosmodium Virginianum.*



A Wooden Neck-rest of the Ba-Mangwato Tribe, South Africa.

neck-leathers (nek′leᴛʜ″-ėrz), *n. pl.* In *mining*, leather washers on top of the lid of a clack to prevent wear.

neck-plate (nek′plāt), *n.* Same as *neck-piece*, 1.

neck-rest (nek′-rest), *n.* A support for the neck, used in resting. It consists generally of a rounded crosspiece with supports, and is four to eight inches high. The sleeper places the neck [illegible] Neck-rests are used in many parts [illegible] in China, Japan, New Gu[illegible] of Africa. In some regions, as in Alaska, [illegible] only by shamans.

neck-ring, *n.* 2. In *mech.*, a bushing fitted in the bottom of the stuffing-box on an engine-cylinder or steam-chest. It is usually of brass and prevents the rod and cylinder from rusting together when the engine is shut down for some time. It is easily renewable in case of wear.

neck-stock (nek′stok), *n.* A made-up, stiffly arranged cravat worn in the eighteenth century, and somewhat resembling the stock of the present day. There was a metal spring within it to keep it in place on the neck. *A. M. Earle*, Costume of Colonial Times, p. 169.

neck-stool (nek′stöl), *n.* Same as ★*neck-rest.*

neck-yoke, *n.*—**Whiffletree neck-yoke,** in *lumbering*, a heavy logging neck-yoke, to the ends of which short whiffletrees are attached by rings. From the ends of the whiffletrees wide straps run to the breeching, thus giving the team added power in holding back loads on steep slopes.

necræmia (nek-rē′mi-ạ̈), *n.* [NL., < Gr. *νεκρός*, a dead body, + *αἷμα*, blood.] Destruction or devitalization of the red blood-corpuscles.

necrobacillosis (nek″rọ-bas-i-lō′sis), *n.* [Gr. *νεκρός*, a dead body, + NL. *bacillus* + *-osis.*] Any disease of animals produced by *Bacillus necrophorus* and characterized by caseonecrotic lesions. *U. S. Dept. Agr., Rep. Bur. Animal Industry*, 1905, p. 18.

necrobiosis, *n.* 2. In *biol.*, the doctrine or opinion that living beings may arise from decomposing organic matter: contrasted with the opinion that they may be spontaneously generated from inorganic matter.

necrogenic (nek-rọ-jen′ik), *a.* [Gr. *νεκρός*, a dead body, + *-γενης*, -produced, + *-ic.*] Originating, actually or supposedly, from dead matter.

necrogenous (nek-roj′e-nus), *a.* [Gr. *νεκρός*, a dead body, + *-genous.*] Growing on dead or dying tissues or organs. *Mayne.*

necrographer (nek-rog′rạ-fėr), *n.* [Gr. *νεκρός*, a dead body, + *γράφειν*, write.] A necrologist.

What Twysden read in the Globe was a mere curt paragraph: but in next morning's Times there was one of those obituary notices to which noblemen of eminence must submit from the mysterious *necrographer* engaged by that paper. *Thackeray*, Philip, II. p. 35.

necromania (nek-rọ-mā′ni-ạ̈), *n.* [NL., < Gr. *νεκρός*, a dead body, + *μανία*, madness.] A morbid attraction toward death or the dead.

necromorphous (nek-rọ-môr′fus), *a.* [Gr. *νεκρός*, a dead body, + *μορφή*, form.] That simulates death; seeming lifeless; lying motionless like a dead body: applied to the pupæ of certain *Coleoptera.*

necrophile (nek′rọ-fil), *n.* [Gr. *νεκρός*, a dead body, + *φίλος*, loving.] One who exhibits necrophilism.

necrophobic (nek-rọ-fō′bik), *a.* [*necrophobi(a)* + *-ic.*] Pertaining to or exhibiting necrophobia.

necropole (nek′rọ-pōl), *n.* Same as *necropolis.*

Necropsittacus (nek-rop-sit′ạ-kus), *n.* [NL., < Gr. *νεκρός*, dead, + *ψίττακος*, a parrot.] The generic name for a large and extinct species of parrot, *Necropsittacus rodericanus*, formerly found on Rodriguez Island.

necrosial (nek-rō′ziạl), *a.* [*necrosis* + *-al*[1].] Relating to necrosis.

necrosis, *n.* 2. (*b*) A disease of the grape, attributed to *Bacillus vitivorus.*—**Phosphorus necrosis,** necrosis of the jaw, due to poisoning by the fumes of phosphorus.

necrotize (nek′rọ-tīz), *v.*; pret. and pp. *necrotized*, ppr. *necrotizing.* [*necrot(ic)* + *-ize.*] I. *intrans.* To become necrotic.

It is assumed generally that the fraying of the velvet has originated through fighting, that the bared portion of the antler-bone became necrotic, and had therefore to be renewed &c., and that the whole process of stripping, *necrotising*, shedding, and renewing has become rhythmical—a feature due to cumulative inheritance.
Proc. Zool. Soc. London, 1902, I. 211.

II. *trans.* To cause necrosis in; render necrotic.

In this same article Dorset and de Schweinitz described the isolation of a *necrotizing* acid which they obtained from tuberculous cultures.
U. S. Dept. Agr., Rep. Bur. Animal Industry, 1902, p. 276.

necrotomist (nek-rot′ọ-mist), *n.* [*necrotom(y)* + *-ist.*] One who dissects dead bodies. *Craig.*

necrotomy, *n.* 2. A surgical operation for the removal of necrosed bone.

Nectalia (nek-tā′li-ạ̈), *n.* [NL. (*Haeckel*, 1888), < Gr. *νηκτός*, swimming, + *ἅλς*, the sea.] The typical genus of the family *Nectalidæ.*

Nectalidæ (nek-tal′i-dē), *n. pl.* [NL., < *Nectalia* + *-idæ.*] A family of physonectous siphonophorans. The forms are polygastric, with a short vesicular stem and branched tentacles, the stem bearing numerous siphons, palpons, and bracts, the nectocalyxes being in two or four rows and the pneumatophore having radial pouches. It includes the genera *Nectalia* and *Sphyrophysa.*

nectariferous (nek-tạ-rif′ẹ-rus), *a.* [L. *nectar* + *-fer*, < *ferre*, bear.] Producing nectar, as a flower.

The fritillary, . . . a large, handsome, bell-shaped flower, with separate petals, . . . and with a *nectariferous* cavity at their base, . . . is purple or red, chequered with lurid marks.
Grant Allen, Colours of Flowers, p. 56.

nectarine, *n.*—**Native nectarine,** in Australia, the emu-apple, *Rancooria acidula.*

nectarivorous (nek-tạ-riv′ọ-rus), *a.* [Gr. *νέκταρ*, nectar, + L. *-vorus*, < *vorare*, eat.] Feeding on nectar, as the true bees.

Nectarivorous insects, having acquired the habit of frequenting leaves covered throughout their entire surface with honey dew, continued to do so, even when the excretion had ceased. *Smithsonian Rep.*, 1896, p. 421.

necteric (nek-ter′ik), *a.* [Gr. *νηκτήρ*, for *νήκτης*, a swimmer, < *νήχειν*, swim.] Capable of swimming: in *marine zoöl.*, said of an animal that is able to direct its own movements through the water: contrasted with ★*ploteric* or drifting.

necton (nek′ton), *n.* [Gr. *νηκτόν*, neut. of *νηκτός*, swimming.] A name introduced by Haeckel in 1890 for the entire assemblage of aquatic animals that lead an actively swimming life. A torpedo-like form, bilateral symmetry, and highly developed swimming-musculature characterize this group, of which the fishes, whales, and squids are examples.

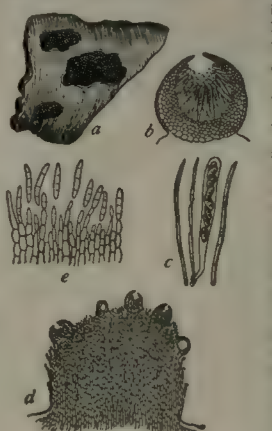
Nectonemertes (nek″tọ-nẹ-mėr′tēz), *n.* [NL. (*Verrill*, 1893), < Gr. *νηκτός*, swimming, + NL. *Nemertes.*] A typical genus of the family *Nectonemertidæ.*

Nectonemertidæ (nek″tọ-nẹ-mėr′ti-dē), *n. pl.* [NL., < *Nectonemertes* + *-idæ.*] A family of nemerteans, of the order *Metanemertini*, consisting of deep-sea forms with short, broad bodies, the hinder end being flattened into a fin, the mouth and proboscis openings separate, and eyes absent. It contains the genera *Nectonemertes* and *Hyalonemertes.*

nectophore (nek′tọ-fōr), *n.* [Gr. *νηκτός*, swimming, + *-φορος*, < *φέρειν*, bear.] A nectocalyx or nectozoöid.

Isolated *nectophores* occur in the hauls from 620, 1275, and 1470 fathoms. In shape they resemble the *nectophores* of Vogtia pentacantha, Köll., but their margin is smooth, instead of being surrounded with spinous processes.
Annals and Mag. Nat. Hist., April, 1903, p. 429.

Nectria (nek′tri-ạ̈), *n.* [NL. (Fries, 1849), < Gr. *νηκτρίς*, fem. of *νηκτήρ*, a swimmer. The allusion is obscure; perhaps the fungus was first found on aquatic plants.] 1. A large genus of pyrenomycetous fungi of the family *Hypocreaceæ*, having the perithecia membranous, single, or variously aggregated on a stroma, and usually bright-colored. The spores are elongate, hyaline, and uniseptate. In many species conidia occur which have been described under the genus *Tubercularia* of the *Fungi Imperfecti.* About 250 species have been described. Most of them are regarded as saprophytes, but *N. Ipomœæ* is said to cause a stem-rot of egg-plant and sweet-potatoes, and *N. ditissima* is considered by some authorities as the cause of the canker of fruit-trees.



Nectria ditissima.

a, three groups of perithecia on a branch; *b*, section of a perithecium showing asci; *c*, an ascus with spores and paraphyses; *d*, the *Tubercularia* stage, a section showing ascigerous perithecia forming; *e*, a portion of the *Tubercularia* stage showing conidia. All except *a*, highly magnified.

2. [*l. c.*] pl. *nectrias.* Any fungus of the genus *Nectria.* See *apple-tree* and *plum* ★*canker*, *cacao* and *coral-spot* ★*disease*, and *Tubercularia.*

nectriaceous (nek-tri-ā′shius), *a.* [*nectria* + *-aceous.*] Pertaining to or resembling the genus *Nectria.*

Nectrioidaceæ, Nectrioideæ (nek″tri-oi-dā′-sẹ̄-ē, nek-tri-oid′ẹ̄-ē), *n. pl.* [NL., < *Nectria* + *-oid* + *-aceæ, -eæ.*] Same as ★*Zythiaceæ.*

needle, *n.* **3.** (*i*) In *mech.*: (1) the needle-shaped or pointed stem in a needle-valve. (2) A curved arm which carries the binding-wire around the bundle in a binder or reaper. (*j*) A slender timber, usually square or rectangular in cross-section, generally used in a contiguous parallel series to close an opening or to cover an area, as in a *needle* ★*weir* (which see), where it is placed in an inclined or vertical position against horizontal bottom and top sills, extending across the channel or waterway to be regulated or closed.

6. *pl.* In *mining:* (*a*) Beams laid across a mine shaft to support a cage. (*b*) Buntons. —**Active needle,** a lively, sensitive compass-needle.—**Crazy needle,** a compass-needle which flies about in an erratic manner owing to some magnetic disturbance in its vicinity.—**Demagnetized needle,** a needle which has lost its magnetism.—**Hang-back needle,** a compass-needle which does not respond immediately to the change of a vessel's head, but sticks for the time being.—**Hypodermic needle,** a hollow needle used for injecting medicated solutions into the tissues.—**Ligature needle,** a slender steel rod with an eye in its curved extremity, used to pass a ligature underneath an artery.—**Needle bath.** See ★*bath*1.—**Needle of oscillation,** a suspended magnet which is free to oscillate about a vertical axis, and is used to determine, by means of its frequency of vibration, the relative horizontal intensity of the magnetic field in which it swings.—**Quick needle,** a compass-needle that responds instantly to the change of course; that neither hangs back nor takes a long time to settle.—**Slow needle,** a magnetic needle that has little life.—**Sluggish needle.** Same as *slow* ★*needle.*—**Submerged needle,** the needle of a liquid compass.—**Vicat's needle,** in *ceram.*, an instrument for testing the softness of clays and for determining the time of setting of Portland cement. It consists of a needle, which, by means of a fixed load, is forced to a certain depth into the prepared clay within a given time. "The softened clay is well 'wedged' to make it perfectly homogeneous, and pressed into a ring four centimeters deep, set on a glass plate under the needle and struck off level with a steel spatula. The needle is then allowed to penetrate the clay, and if within five minutes it sinks to a depth of four centimeters into the same, the clay is of the proper consistence; if not, it is either made stiffer or softened, as the case may be." *Langenbeck*, Chem. of Pottery, p. 19.—**Wire needle,** a light thin steel wire to which magnetic properties have been imparted.

needle-and-thread (nē′dl-a̤nd-thred′), *n.* See ★*needle-grass*, 2.

needle-bolt (nē′dl-bōlt), *n.* The bolt which carries the needle in a needle-gun. *N. E. D.*

needle-bush (nē′dl-bu̇sh), *n.* A name of two Australian trees: (*a*) *Hakea leucoptera*, having smooth, terete leaves, from 1 to 3 inches long, with fine straight rigid points: called also *pin-bush* and *water-tree.* (*b*) The wallaby acacia, *Acacia rigens*, having linear, terete, rigid phyllodia, from 2 to 3 inches long, armed with a short, often recurved point. See ★*water-tree*, 2, and *wallaby acacia*, under *wallaby.*

needle-carrier (nē′dl-kar″i-ėr), *n.* A long-handled needle-holder used in surgery.

needle-cast (nē′dl-kast), *n.* A destructive disease of the young Scotch pine, due to the fungus *Lophodermium Pinastri.* Also called *pine-blight.* See ★*Lophodermium* and ★*casting*, 11.

needle-fish, *n.* **5.** A fish of the family *Tylosuridæ*, widely distributed.

needle-galvanometer (nē′dl-gal-va̤-nom″e-tėr), *n.* A galvanometer the indications of which are noted by means of the movement of a needle or pointer over a graduated circle.

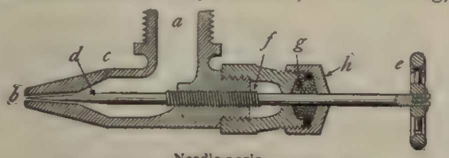
needle-gate (nē′dl-gāt), *n.* A gate or obstruction formed by placing long, slender bars, or 'needles,' side by side vertically in a suitable frame. The needles, since they are relatively small, can be quickly placed in the swiftly flowing water and the current checked without shock, or without the use of an expensive and heavy mechanism. *H. M. Wilson*, Irrigation Engineering, p. 229.

needle-grass (nē′dl-gràs), *n.* **1.** *Aristida fasciculata*, a grass of the dry country from Texas to Montana, constituting on some poor lands in Texas a large element in the forage. The long, straight beards of the spikelets sometimes penetrate the skin or intestines of lambs, but the loss is less than the value of the pasturage. Also called *purple beard-grass* and *dog-town grass.* Associated with this under the same name is *A. coarctata.*—**2.** One of several species of *Stipa*, especially *S. comata*, a common bunch-grass of the dry mesas and foot-hills of the Rocky Mountain region, where it is abundant and affords valuable forage. The awns of this grass also cause some trouble. They are long and flexuous and have suggested the name *needle-and-thread.* Other needle-grasses of this genus are *S. Lettermanni*, *S. Nelsoni*, and *S. Tweedyi.* The porcupine-grass, *S. viridula*, is locally called by the same name.

needle-lace (nē′dl-lās), *n.* Lace made with a needle, in distinction from that made with the bobbin. See *needle-point lace*, under *lace.*

needle-lubricator (nē′dl-lū″bri-kā-to̤r), *n.* A lubricator consisting of a reservoir from which a conical tube leads the oil to the bearing, the flow being regulated by the position of a stem or needle which almost touches the bearing.

needle-nozle (nē′dl-noz″l), *n.* In hydraulic impulse-turbines or jet-wheels, a form of long, slender, conical nozle for directing the jet of water against the buckets of the wheel, in which the velocity of water through the nozle is regulated, without disturbing the form or direction of the jet, by the axial motion of a corresponding long, slender, conical valve, called a *needle-valve.* See ★*needle-valve.*



Needle-nozle.

a, inlet of water; *b*, outlet of water, annular opening between needle-rod and nozle proper; *c*, body of valve; *d*, needle-rod; *e*, controlling wheel for hand; *f*, screw-thread; *g*, packing in stuffing-box; *h*, stuffing-box gland.

needle-palm (nē′dl-päm), *n.* The short-leaved tree-yucca or Spanish bayonet, *Yucca Schottii*, of the southwestern United States and Mexico.

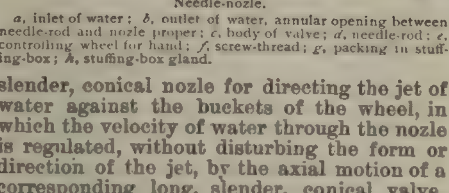
needle-plate (nē′dl-plāt), *n.* A perforated plate for receiving the ends of the horizontal needles of the warp-shedding mechanism of a dobby-loom.

needle-point (nē′dl-point), *n.* A small steel wire having a point at each end, used in the leg of a drawing-compass in place of a fixed point.

needle-segment (nē′dl-seg″ment), *n.* The section of the comb-cylinder which contains the comb-needles in a cotton-combing machine.

needle-sight (nē′dl-sīt), *n.* A slender front sight, used on small arms intended for match-firing and sometimes for sharp-shooting.

needle-valve (nē′dl-valv), *n.* **1.** A valve capable of very fine adjustment.—**2.** A valve having a stem with a sharp conical point which bears on a conical seat. The stem is made to travel by a very fine screw, and a large turn of the handle is required to make a small change in the opening through the valve. —**3.** A similar valve controlling an opening of very small size.



Needle-valve.

a, supply inlet; *b*, discharge outlet; *c*, body of valve; *d*, needle-valve; *e*, lever or handle; *f*, screw on spindle; *g*, packing in stuffing-box; *h*, stuffing-box gland.

> A small quantity of ammonia is injected through a *needle valve*, which allows a very fine stream to pass into the space between two pipes, running in a coil approximately 300 feet long surrounding a pipe containing the brine above mentioned.
>
> *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22628.

needle-wire (nē′dl-wīr), *n.* A high grade of steel wire.

neeskotting (nēs′kot-ing), *n.* [Verbal n. of **neeskot*, *v.*, supposed to be from a noun **neeskot*, an appar. perverted form of an Amerindian word which appears in Canadian F. as *nigogue*, < Micmac *negok* (Rand), the jaw of a salmon-spear, also the salmon-spear itself, used in taking fish at night with the aid of fire or torch.] The spearing, or rather gaffing, of fish in shallow water at night with the aid of a lantern or torch, the 'spear' being a long pole with a hook at the end. Compare ★*weequashing.* *F. Starr*, cited in Jour. Amer. Folk-lore, Oct.–Dec., 1902, p. 251.

Neetroplus (nē-et′rọ̄-plus), *n.* [NL., < Gr. *νέος*, new, + NL. *Etroplus*, a related genus of fishes (< Gr. *ἦτρον*, abdomen, + *ὅπλον*, armor).] A genus of fishes of the family *Cychlidæ*, found in fresh waters of Central America.

nefer (nef′ėr), *n.* [Old Egyptian.] An ancient Egyptian lute or guitar, usually with three strings, a small elliptical body, and a very long neck. See ★*nabla.*

nefew, nevew, *n.* Amended spellings of *nephew.*

nefritic, *a.* and *n.* An amended spelling of *nephritic.*

neftgil (neft′gil), *n.* A kind of earth-wax, allied to ozocerite, found on the island of Cheleken in the Caspian, and said to occur also in Persia. It consists of paraffins and a resinous material. It is reported as existing in large quantity. *Sadtler*, Handbook of Indust. Chem., p. 16.

neg. An abbreviation (*a*) of *negative;* (*b*) of *negatively.*

negative. I. *a.*—**Negative class** or **order,** the class or order of a function which has more infinities than zeroes.—**Negative culture.** See ★*culture.*—**Negative form, pyramid, tetrahedron,** etc. See ★*form*, 2.—**Negative motion, number, remainder, skewness.** See ★*motion*, etc.

II. *n.*—**Grained negative,** in *photog.*, a negative in which the half-tones of the image are given a grained appearance, usually by interposing a fine netting or wire gauze between the lens and the object photographed. Such negatives are used in photomechanical printing.—**Line negative,** in *photog.*, a negative made behind a line-screen and used in photo-engraving. *Woodbury*, Encyc. Dict. of Photog., p. 272.

negative-clasp (neg′a̤-tiv-klàsp), *n.* In *photog.*, a wire clamp for raising negative plates from a bath without injury to the film. Also called *negative-lifter.*

negativistic (neg″a̤-ti-vis′tik), *a.* [*negative* + *-ist* + *-ic.*] Of, pertaining to, or characterized by negativism.

Negaunee formation. See ★*formation.*

Negligée shirt, a shirt not of the conventional white, stiffly starched kind; a shirt of woolen or unstarched linen or cotton, worn for comfort.

Negri bodies, minute round or oval bodies found in the nerve-cells of the hippocampus major, the pons, the Purkinje cells of the cerebellum, and elsewhere in the brain and spinal cord, in animals dead of rabies. They are supposed to be protozoa and the specific cause of the disease. *Med. Record*, Nov. 2, 1907, p. 750.

negrified (nē′gri-fīd), *a.* Having become similar to negroes through intermixture continued through many generations.

Negrillo. I. *n.* **2.** [*l. c.*] A silver ore, black sulphid of silver.

II. *a.* Of or pertaining to the dwarfish negroid tribes of Africa. Also *Negrito.*

Negritic (nẹ̄-grit′ik), *a.* Same as *Nigritian.*

negritize (nē′gri-tīz), *v. t.*; pret. and pp. *negritized*, ppr. *negritizing.* To make similar to negroes, particularly by infusion of negro blood. *Smithsonian Rep.*, 1899, p. 513.

Negrito, *n.* **2.** An individual belonging to one of the dwarfish negroid tribes of southern Asia and Africa. Also *Negrillo.*

II. *a.* Of or pertaining to the Negritos.

negro. I. *n.*—**Pied negro,** a negro whose skin presents numerous spots and patches of a lighter color: a condition sometimes observed after a long and exhausting illness.

II. *a.*—**Negro bat.** (*b*) A fish of the West Indian fauna, *Bodianus fulvus punctatus*, of the family *Serranidæ.*—**Negro bean.** See ★*bean*1.

negro-fish (nē′grō-fish), *n.* Same as *nigger-fish.*

negro-ground (nē′grō-ground), *n.* Formerly, in the West Indies, a portion of an estate on which the negro slaves were allowed to plant vegetables, etc., for their own use. See the extract.

> Whenever it is found convenient for the owner to exchange the *negro-grounds* for other lands, the Negroes must be satisfied, in money or otherwise, before the exchange takes place.
>
> *Bryan Edwards*, A Hist. of the Brit. W. Indies, II. 163.

Negro-head beech, an Australian tree, *Fagus Cunninghamii*, used in furniture-making.

negro-Hottentot (nē′grō-hot″n-tot), *a.* Of or relating to a people of mixed negro and Hottentot descent. *Keane*, Ethnology, p. 153.

negroid, *a.* **II.** *n.* An individual of a negroid race, such as those of Micronesia, the Negritos of the Philippine Islands, and the mixed tribes of northeastern Africa.

> There is even the same succession of types, running from the pygmy Negritoes of Borneo and the Philippines, through the Negroes of Papua and Melanesia, to the *Negroids* of Micronesia.
>
> *Pop. Sci. Mo.*, March, 1902, p. 455.

negroidal (nẹ̄-groi′da̤l), *a.* [*negroid* + *-al*1.] Similar to or pertaining to the negro race; negroid.

negroization (nē″grọ-i-zā′shọn), *n.* [*negro* + *-ize* + *-ation.*] The process of negritizing or the state of being negritized. *Ratzel* (trans.), Hist. of Mankind, III. 258.

negroloid (nē′grọ-loid), *a.* Same as *negroid.*

negrophil (nē′grọ-fil), *n.* [*negro* + Gr. *φιλεῖν*, to love.] One who is a friend of the negro; one who desires to promote the welfare of the negro.

> This is not the language of prejudice, of racial or religious bias, but the sober truth, frankly admitted by the *Negrophiles* themselves "behind the scenes."
> *Keane*, Ethnology, p. 268.

negrophilism (nẹ-grof′i-lizm), *n.* [*negrophil(e)* + *-ism.*] A disposition to favor the negro race; benevolence toward the negro.

negrophilist (nẹ-grof′i-list), *n.* [*negrophil-(ism)* + *-ist.*] One who favors the negro race and exerts himself in its behalf.

negrophilistic (nẹ-grof-i-lis′tik), *a.* Tending to negrophilism; of the nature of negrophilism.

negrophobe (nē′grọ-fōb), *n.* [*negro* + Gr. *φόβος*, fear.] One who fears or has a strong antipathy to the negro; one who exhibits negrophobia.

negrophobia (nē-grọ-fō′bi-ạ̈), *n.* [*negro* + Gr. *φόβος*, fear.] Fear of the negro; strong antipathy to the negro.

negrophobiac (nē-grọ-fō′bi-ak), *n.* [*negrophobia.*] One who exhibits negrophobia.

negro's-ear (nē′grōz-ēr), *n.* The black, curved pods of *Enterolobium contortisiliquum.*

negrotic (nẹ-grot′ik), *a.* Of or pertaining to the negro. *N. E. D.* [Rare.]

> "This is Mponbinda, and you know we're bound for Mbátá!" Nothing *negrotic* now astonishes us, there is nought new to me in Africa.
> *R. F. Burton*, Two Trips to Gorrilla Land, I. 34.

negro-yard (nē′grō-yärd), *n.* On West Indian plantations, a portion of ground, near the mills and the manager's house, where the laborers have their dwellings, and generally some fruit-trees, with places for pigs, goats, and poultry. Originally these grounds were occupied only by negroes, but at present coolies and other laborers are frequently associated with them.

Neh. An abbreviation of *Nehemiah*, a book of the Old Testament.

nei², *n.* See ★*nay*².

n. e. i. An abbreviation of the Latin *non est inventus*, is not found.

neighbor, *n.*—**Help your neighbor**, a dice-game for six players with three dice. Each player has a number, from 1 to 6. Each has one throw, and any player whose number appears on any die scores a point. Game is five points.

neighborhood, *n.* 7. In *math.*, the part of a line, surface, space, or other *locus in quo* so near to a correlative point that from its utmost parts to that point it has everywhere a certain given character with respect to which it is the neighborhood of that point. Thus, to say that the air is condensed in the *neighborhood* of a certain point, is to say that after one has approached it sufficiently near, the nearer one approaches the more condensed is the air up to the point itself.—**Neighborhood house.** See *college* ★*settlement.*—**Neighborhood of a number** or **point**, *a*, for a positive number *h*, is the aggregate of all numbers (or points) *x* for which the absolute value of *x-a* denoted by | *x-a*, | does not exceed *h*.

neighboring, *a.* **2.** In *chem.*, same as ★*vicinal*, 2.

neiloid (nē′loid), *n.* [*Neile* (see def.) + *-oid.*] A solid resembling a cone, but in part concave: named for William Neile (1637–1670).

neinei (nā-ẹ-nā′ẹ), *n.* [Maori *neinei.*] In New Zealand, a name applied to several species of *Dracophyllum*, especially to *D. Traversii*, a tree belonging to the *Epacridaceæ*, having long grassy leaves terminating in a slender point, and slender terminal panicles of small sessile flowers crowded closely together. The wood is white, marked with satin-like specks, and adapted for cabinet-work.

Neisandra (nē-i-san′drạ̈), *n.* [NL. (Rafinesque, 1838), < Gr. *νη-*, a negative prefix, + *ἴσος*, equal to, + *ἀνήρ* (*ἀνδρ-*), man, stamen; the genus not having as many stamens as others formerly confused with it.] A genus of plants belonging to the family *Dipterocarpaceæ.* See *Hopea*, and *vegetable tallow*, under *tallow.*

nek (nek), *n.* [D. *nek*, neck.] In South Africa, a neck or saddle between two hills. *N. E. D.*

nekozame (nā′kō-zä-mē), *n.* [Jap. *neko*, cat, + *zame*, shark.] A shark, *Heterodontus japonicus*, of the family *Heterodontidæ.*

nekton (nek′ton), *n.* [NL., < Gr. *νηκτός*, swimming, < *νήχειν*, swim.] Swimming organisms considered collectively and in contrast with those that float and those that live upon or in the bottom. See ★*plankton*, ★*benthos.*

> The fauna of the sea is divisible into the plankton, the swimming or drifting fauna which never rests on the bottom (generally taken now to include Hæckel's *nekton*, the strong swimmers, such as fish and cephalopods), and the benthos, which is fixed to or crawls upon the bottom.
> *Encyc. Brit.*, XXXIII. 932.

nektonic (nek-ton′ik), *a.* [*nekton* + *-ic.*] Of or pertaining to nekton; swimming. See ★*nekton.*

> It has been asserted on various excellent grounds that life originated in the coastal regions with benthonic forms; that slowly creeping organisms preceded the planktonic and *nektonic* forms in the lower phyla of the animal kingdom. *Amer. Geol.*, April, 1903, p. 211.

nekudoth (ne-kö′dōth), *n. pl.* See *Hebrew* ★*vowel-points.*

nelly (nel′i), *n.* [Perhaps from the personal name *Nelly.*] The giant fulmar, *Ossifraga gigantea.* [Eng.]

nelma (nel′mạ̈), *n.* Same as *inconnu.*

Nelson (nel′sun), *n.* [From the surname *Nelson.*] A hold in wrestling. In a *full Nelson*, one of the contestants, slipping behind the other, puts his arms up under his opponent's armpits and clasps his hands or arms as high up as possible around the latter's neck.

nelsonite (nel′sọn-īt), *n.* See ★*meteorite.*

nelumbian (nẹ-lum′bi-ạn), *a.* Pertaining or relating to the genus *Nelumbo*; lotus-like.

nema (nē′mạ̈), *n.*; pl. *nemata* (-mạ-tạ̈). [NL., < Gr. *νῆμα*, a thread.] The flexuous filiform process by which the sicula and rhabdosome of graptolites are suspended from the primary disk. It attains great length in the young of certain forms, as in *Dictyograptus, Dictyonema flabelliforme*, and in certain *Axonolipa*, as species of *Tetragraptus.*

nemacaulus (nem-ạ-kâ′lus), *n.*; pl. *nemacauli* (-lī). [NL., prop. **nematocaulus*, < Gr. *νῆμα*, a thread, + *καυλός*, a stalk.] A stout, nontheciferous supporting stem of a graptolite colony. By means of it the colony was either suspended from or sessile upon a disk or system of adhesive fibers. *Lapworth.*

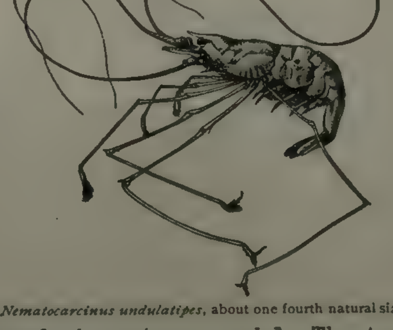
nemaline (nem′ạ-lin), *a.* [Gr. *νῆμα*, a thread, + *-al*¹ + *-ine*¹.] In *mineral.*, exhibiting a fibrous structure.

nemalitic (nem-ạ-lit′ik), *a.* [*nemalite* + *-ic.*] Characteristic of the mineral nemalite.

> *Nemalitic* structure or fibration, commonly occurring in brucite within serpentinoids subjected to dynamic stresses. The major axis of elasticity always lies parallel to the direction of the fibers.
> *Science*, March 31, 1905, p. 511.

Nematocarcinidæ (nem″ạ-tọ-kär-sin′i-dē), *n. pl.* [NL., < *Nematocarcinus* + *-idæ.*] A family of caridean macrurous crustaceans in which the animal is slender and smooth, the first antennæ have two long slender flagella, the second antennæ have a long narrow scale and an elongated slender flagellum, and the telson is slender and tapering. It includes the two genera *Nematocarcinus* and *Stochasmus.*

Nematocarcinus (nem″ạ-tọ-kär′si-nus), *n.* [NL. (A. Milne-Edwards, 1881), < Gr. *νῆμα*, thread, + *καρκίνος*, a crab.] The typical genus of the family *Nematocarcinidæ.*



Nematocarcinus undulatipes, about one fourth natural size.

nematoceratous (nem″ạ-tọ-ser′ạ-tus), *a.* Same as *nematocerous.*

nematocide (nem′ạ-tọ-sīd), *n.* and *a.* [*nemato(de)* + L. *-cida*, a killer, < *cædere*, kill.] **I.** *n.* A substance that kills nematoid worms.

II. *a.* Destructive of threadworms or nematoids.

nematogene (nem′ạ-tọ-jēn), *n.* Same as *nematogen.*

Nematonurus (nem″a-tọ-nū′rus), *n.* [NL.] A genus of gadoid fishes which inhabit deep seas.

Nematonus (nem-a-tō′nus), *n.* [NL.] A genus of deep-sea fishes of the family *Brotulidæ.*

nematopode (nem′ạ-tō-pōd), *n.* One of the *Nematopoda* or cirripeds.

nematopodous (nem-ạ-top′ọ-dus), *a.* Having the characters of or belonging to the *Nematopoda* or cirripeds.

Nematorhyncha (nem″ạ-tọ-ring′kạ̈), *n. pl.* [Gr. *νῆμα* (*νηματ-*), thread, + *ῥύγχος*, snout.] A group of organisms including the *Gastrotricha* and the *Kinorhyncha.* *Bütschli.*

nematospermia (nem″ạ-tọ-spėr′mi-ạ̈), *n.* [Gr. *νῆμα* (*νηματ-*), thread, + *σπέρμα*, seed.] A group of spermatozoa having a head or body and more or less elongated end-piece or tail. The other group in Waldeyer's classification comprises the *spherospermia*, which have only a variously shaped body without any appendage.

nem. diss. An abbreviation of the Latin *nemine dissentiente*, no one dissenting, that is, unanimously.

Nemertini (nē-mėr-tī′nī), *n. pl.* [NL. *Nemertes* + *-ini.*] A class of elongated wormlike marine animals having a ciliated ectoderm, as in the *Turbellaria*, and an eversible proboscis lying in a sheath on the dorsal side of the enteron. They have a mouth and an anus, simple gonads, and a vascular system; and are, as a rule, diœcious. There is no external segmentation as in the more highly organized class of *Chætopoda.*

nemertite (nẹ-mėr′tīt), *n.* [*Nemert(ea)* + *-ite*².] A name given to certain vermiform markings in rock strata, some of which may be trails of annelids.

Nemesia (nẹ-mē′si-ạ̈), *n.* [NL. (Ventenat, 1803), < Gr. *νέμεσις*, Dioscorides' name for a plant of the related genus *Antirrhinum.*] A genus of South African plants of the family *Scrophulariaceæ.* It contains about 30 species, annual or perennial herbs bearing white, yellow, or red short-tubular, solitary, or racemed saccate or spurred flowers. A few of them are in cultivation as garden annuals, one of the most advertised being *N. strumosa.*

nemestrinid (nẹ-mes′tri-nid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Nemestrinidæ.*

II. *a.* Having the characters of or belonging to the family *Nemestrinidæ.*

Nemipterus (nẹ-mip′tẹ-rus), *n.* [Gr. *νῆμα*, thread, + *πτερόν*, fin (wing).] A genus of fishes of the family *Lutianidæ* which inhabit the western Pacific.

nemophilist (nẹ-mof′i-list), *n.* [Gr. *νέμος*, a wooded pasture, + *φίλος*, loving, + *-ist.*] One who is fond of woods and groves.

nemophily (nẹ-mof′i-li), *n.* [See *nemophilous.*] Love of the woods; fondness for a woodland life. [Rare.]

nene (nā′nā), *n.* [Native name.] A species of goose, *Bernicla sandwichensis*, peculiar to the Sandwich Islands.

N. Eng. An abbreviation of *New England.*

neo-American (nē″ọ-ạ-mer′i-kạn), *a.* [Gr. *νέος*, new, + E. *American.*] New American: applied especially to the nomenclature of American botanists.

> A "Flora of Los Angeles and Vicinity," by Abrams (Stanford University Press, April 5, 1904) forms an octavo volume of 474 pages, and contains analytical keys and full descriptions of the Spermatophyta of the coast slope of Los Angeles and Orange Counties, California. The Orders are arranged in the Engler and Prantl sequence, and the *Neo-American* nomenclature is adopted—with synonymic citation where the generic name is unfamiliar to the ordinary reader. *Amer. Nat.*, Sept., 1904, p. 682.

neoarthrosis (nē″ọ-är-thrō′sis), *n.* [Gr. *νεός*, new, + E. *arthrosis.*] Same as *pseudarthrosis.*

neoatavistic (nē-ọ-at-ạ-vis′tik), *a.* [Gr. *νεός*, new, + E. *atavistic.*] In *biol.*, derived from recent ancestors: opposed to ★*paleoatavistic.*

> Infant growth means being loaded with paleoatavistic qualities, . . . while the pubescent increment is relatively *neoatavistic.* *G. S. Hall*, Adolescence, I. 50.

neobiologist, *n.* 2. A student of the biology of recent organisms, as distinguished from one who studies fossils.

This author really does seriously consider some of the neglected theories usually omitted by students of existing biological phenomena, or *neobiologists*.
A. Hyatt, Biol. Lectures, 1899, p. 147.

neoblastic, *a.* 2. Relating to the formation of new tissue.

neobotanist (nē-ọ-bot′a̤-nist), *n.* [Gr. *νέος*, new, + E. *botanist.*] A botanist proper, as distinguished from a paleobotanist.

neobotany (nē-ọ-bot′a̤-ni), *n.* [Gr. *νέος*, new, + E. *botany.*] Botany proper, as distinguished from paleobotany.

neo-Buddhism (nē″ọ-bu′dizm), *n.* [Gr. *νέος*, new, + E. *Buddhism.*] Later Buddhism; specifically: (*a*) Buddhism as altered by the addition or admixture of the Shivaitic, Shamanistic, and other notions introduced some centuries after the death of the Buddha. It is professed largely by the Buddhists of Kashmir, Tibet, China, Mongolia, and Japan (the so-called Northern School). See the *Great Vehicle*, in the *Cyclopedia of Names*. (*b*) The 'Buddhistic' notions and doctrines professed by modern theosophists.

neo-Buddhist (nē-ọ-bu′dist), *n.* One who accepts neo-Buddhism.

neo-Buddhistic (nē″ọ-bu-dis′tik), *a.* Of or pertaining to neo-Buddhism.

The four great gods of the Mayas, the 'props of the heavens,' answered to the four great Mexican gods of the four quarters of the compass. . . . There is something similar in the *Neo-Buddhistic* teachings; but Buddhism, even of the oldest type, is much too recent to explain anything in the religious worlds of Mexico or Yucatan.
Keane, Ethnology, p. 346.

neo-Catholic (nē-ọ-kath′ọ-lik), *a.* and *n.* **I.** *a.* [Gr. *νέος*, new, + E. *Catholic.*] New Catholic: applied (*a*) to a party in the Anglican Church which openly sympathizes with the Roman communion; (*b*) to the party of liberals in the French Church represented by Lamennais.

II. *n.* One who accepts the neo-Catholic doctrines. See ★*neo-Catholic* (*a*).

neo-Catholicism (nē″ọ-ka-thol′i-sizm), *n.* The neo-Catholic doctrines. See ★*neo-Catholic*.

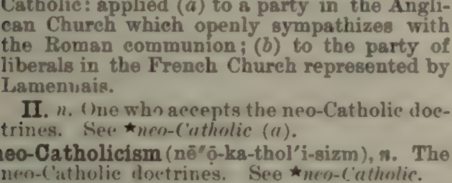
Neocene (nē′ọ-sēn), *a.* and *n.* [Gr. *νέος*, new, + *καινός*, recent.] In *geol.*, the later Tertiary, including the Miocene and Pliocene.

neochrysolite (nē-ọ-kris′ọ-līt), *n.* [Gr. *νέος*, new, + E. *chrysolite.*] A mineral from the ancient lava (1631) of Vesuvius occurring in small, black, tabular crystals near chrysolite in angle. It is probably identical with fayalite.

neoclassic (nē-ọ-klas′ik), *a.* [Gr. *νέος*, new, + E. *classic.*] Noting any phase of modern civilization which is based on principles or practices developed during the period of Greek and Roman antiquity. It is especially applicable to resemblances between modern and ancient art. See ★*neo-Greek*.

neoclassicism (nē-ọ-klas′i-sizm), *n.* [*neoclassic* + *-ism.*] The character of being neoclassic; revival of classic style in art or literature.

Neoclinus (nē-ọ-klī′nus), *n.* [NL., < Gr. *νέος*, new, + NL. *Clinus*, a generic name.] A genus of blennioid fishes found off the California coast.



Neoclinus satiricus. (From Bulletin 47, U. S. Nat. Museum.)

Neoconger (nē-ọ-kong′gėr), *n.* [NL., < Gr. *νέος*, new, + L. *conger*, a conger.] A genus of eels of the family *Murænesocidæ*, found on both coasts of the warmer parts of America.

neocorate (nẹ-ok′ọ-rāt), *n.* [L. *neocor*(*us*), < Gr. *νεωκόρος*, a person having charge of a temple, + *-ate*³.] The office of custodian or guardian of a temple. See the extract and *neokoros*.

A single *neocorate* implied a single temple to an emperor or an imperial family, such as the Julii or Flavii.
W. M. Ramsay, in Classical Rev., April, 1889, p. 175.

neocorus (nẹ-ok′ọ-rus), *n.*; pl. *neocori* (-rī). Same as *neokoros*.

Now I do not know what were the duties or the social position of a *neocorus*, but if he at all corresponded to the verger of a modern cathedral, then he would have plenty of time to ply a trade of his own when he was off duty and to supplement thus his official salary.
F. B. Jevons, in Jour. of Hellenic Studies, XV. 246.

Neocosmospora (nē″ọ-koz-mos′pọ-rä), *n.* [NL. (E. F. Smith, 1899), < Gr. *νέος*, new, + *κόσμος*, order, + *σπορά*, seed.] A genus of pyrenomycetous fungi closely related to *Nectria*, but having brown unicellular ascospores. The conidial form is a *Fusarium*. A single species, *N. vasinfecta*, with two varieties, has been described. The wilt-disease of cotton is caused by this fungus. The variety *tracheiphila* causes the wilt of the cow-pea and the variety *nivea* the wilt of watermelons. See *wilt-disease*, under ★*disease*.

Neocosmospora occurs on cotton (Gossypium herbaceum and G. Barbadense), watermelon (Citrullus vulgaris), and on cowpea (Vigna sinensis). It probably occurs also on okra (Hibiscus esculentus), although the identification is not complete, depending solely on the character of the symptoms, on the presence of similar macro- and microconidia, and on the occurrence of the disease in the same localities, no cultures or cross inoculations of the okra fungus having been made and no perithecial fruits having been discovered.
U. S. Dept. Agr., Div. Veg. Physiol. and Pathol., Bulletin [17, 1899, p. 31.

neocriminalist (nē-ọ-krim′i-nal-ist), *n.* [Gr. *νέος*, new, + E. *criminalist.*] An adherent of the school of criminologists who consider criminality in an individual to be due to physiological conditions which govern his activities.

neo-Darwinian (nē″ọ-där-win′i-an), *a.* and *n.* [Gr. *νέος*, new, + E. *Darwinian.*] **I.** *a.* Darwinian (in reference to Darwin's view of the origin of species) with modifications by later writers. See ★*neo-Darwinism*.

How then does it fare with the case of inherited characters which are not also adaptive? Merely that this case is met by another and sequent assumption, which constitutes an integral part of the *Neo-Darwinian* creed—namely, that in nature there can be no such characters.
G. J. Romanes, Darwin, and after Darwin, II. 55.

II. *n.* One who accepts or advocates neo-Darwinism.

As soon as we begin to cast about for cases which will satisfy the *Neo-Darwinians*, we find that the structure of their theory is such as to preclude, in almost every conceivable instance, the possibility of meeting their demand. *G. J. Romanes*, Darwin, and after Darwin, II. 55.

neo-Darwinism (nē-ọ-där′win-izm), *n.* [Gr. *νέος*, new, + E. *Darwinism.*] New or modified Darwinism; specifically, the doctrine or opinion that the survival of the fittest, in the struggle for existence, is an all-sufficient account of the origin of species, as contrasted with Darwin's opinion that natural selection is an important, but not the exclusive means of modification. Since Weismann is the latest of its prominent advocates it is commonly regarded as identical with Weismannism, although many neo-Darwinians reject the system of metaphysical subtilties that makes up Weismann's doctrine of germ-plasm. See ★*Weismannism*.

Admitting the possible truth of either of the current doctrines of heredity, called *Neo-Darwinism* and Neo-Lamarckism respectively, yet there are certain defects inherent in both of them.
J. M. Baldwin, Development and Evolution, p. 135.

neo-Darwinist (nē-ọ-där′win-ist), *n.* [*neo-Darwin*(*ism*) + *-ist.*] One who accepts or advocates neo-Darwinism; one who advocates some modification of Darwin's view of the origin of species through the survival of the fittest in the struggle for existence, or some substitute for this view; specifically, one who believes that organisms do not, or can not, transmit to their descendants anything which has not itself come to them through the germ-cells from which they were themselves generated.

I am not a *Neo-Darwinist*, and so have no desire to make "natural selection" synonymous with "natural causation" throughout the whole domain of life and mind. *G. J. Romanes*, Darwin, and after Darwin, II. 28.

neodidymium (nē″ọ-dī-dim′i-um), *n.* [*neo-* + *didymium.*] Same as ★*neodymium*.

Neoditrema (nē″ọ-dī-trē′mạ̈), *n.* [Gr. *νέος*, new, + NL. *Ditrema*. See *Ditrema*.] A genus of fishes of the family *Embiotocidæ*, found in Japanese waters.

neodymate (nẹ-od′i-māt), *n.* [*neodym*(*ium*) + *-ate*¹.] In *chem.*, a substance which may be viewed as consisting of neodymium oxid united to the oxid of a monobasic or electropositive metal, or as a salt in which neodymium forms part of the acid radical: as, barium *neodymate* ($BaO.Nd_2O_3$ or $Ba(NdO_2)_2$).

neodyme (nē′ọ-dīm), *n.* Same as ★*neodymium*.

neodymia (nē-ọ-dim′i-ạ̈), *n.* Neodymium oxid (Nd_2O_3), one of the so-called rare earths.

neodymium (nē-ọ-dim′i-um), *n.* [*neo-* + (*di*)*dymium.*] An element which occurs in cerite, albanite, and other comparatively rare minerals. In 1803 Berzelius and Hisinger recognized as containing a new metallic oxid an earth-like substance extracted from cerite and gave to the metal the name *cerium*. In 1839 Mosander showed that this oxid contained a second metal, which he named *lanthanum*, and in 1841 the same chemist proved that there was also present still another metal, which he called *didymium*. In 1885 Auer von Welsbach succeeded, by a most laborious series of fractional crystallizations of certain salts of the didymium of Mosander, in resolving these into salts of two distinct metals, for which he proposed the names *neodymium* and *praseodymium*, respectively. Neodymium has the higher atomic weight of the two: it forms a single oxid of faint bluish-gray tint and its salts are characterized by a bright rose-red color inclining to violet red, affording special absorption and emission spectra. Neodymium is present in larger proportion than praseodymium in the original didymium compounds of Mosander.

neoformation (nē″ọ-fôr-mā′shọn), *n.* [Gr. *νέος*, new, + E. *formation.*] Same as *neoplasm*.

Neogæic (nē-ọ-jē′ik), *a.* [*Neogæa* + *-ic.*] Of or pertaining to *Neogæa*.

In laying down the great zoological subdivisions of the Earth's surface, he [R. Lyddeker] agrees in the main with Mr. Sclater, adopting, like him, the three broad divisions proposed by Dr. Blanford in 1890, and using likewise for them the terms Notogæic, *Neogæic*, and Arctogæic. These he considers as "realms," the minor subdivisions being designated "regions." In the definition of these latter, he rather follows Dr. Heilprin than Mr. Sclater, uniting the Palæarctic and Nearctic regions under the name "Holarctic," and raising the Sonoran transition tract of the former to an equal rank with the other subdivisions of Arctogæa. Madagascar and neighbouring islands form another separate region, while Notogæa constitutes four separate regions, instead of the two of Dr. Heilprin. *Geog. Jour.* (R. G. S.), X. 99.

Neogæic realm South America, Central America, and the hot coastal plains of Mexico, considered as together forming a prime zoögeographical region: correlative with ★*Arctogæic* and ★*Notogæic realms*. The terms and divisions were made by Dr. W. T. Blanford in 1890.

neogamous (nẹ-og′a̤-mus), *a.* [*neogam*(*y*) + *-ous.*] Pertaining to or characterized by neogamy. *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 536.

neogamy (nẹ-og′a̤-mi), *n.* [Gr. *νέος*, new, + *γάμος*, marriage.] In *zoöl.*, the very precocious conjugation of two gregarines, in some instances, as in *Cystobia irregularis*, where it takes place at the beginning of the life-cycle, when the two parasites have hardly advanced beyond the sporozoite stage.

In C. Minchinii occurs one of the most advanced instances of *neogamy* yet known, the fusion taking place almost at the commencement of the life-cycle when the parasites are scarcely more than sporozoites, and comprising an absolute union of the two cytoplasms, the nuclei alone remaining distinct.
Jour. Roy. Micros. Soc., Oct., 1904, p. 535.

neogen (nē′ọ-jen), *n.* [Gr. *νέος*, new, + *-γενης*, -produced. See *-gen*.] An alloy resembling silver, said to have the following composition: copper, 58 per cent.; zinc, 27; nickel, 12; tin, 2; aluminium, 0.5; and bismuth, 0.5.

neogenesis (nē-ọ-jen′e-sis), *n.* [NL., < Gr. *νέος*, new, + *γένεσις*, generation.] A new genesis or begetting; new production. See the extract.

The term *neogenesis* was first used to explain this sudden origin of new forms from old-established species, if I am not mistaken, by my friend and colleague Professor Paolo Mantegazza, many years ago; it has been since used, more or less in the same sense, by the late Professor Cope and by others.
W. E. D. Scott, in Science, Sept. 1, 1905, p. 281.

neogenetic (nē″ọ-jẹ-net′ik), *a.* [Gr. *νέος*, new, + *-genetic.*] Pertaining to or of the nature of neogenesis; newly generated or originated; in *biol.*, making its appearance during individual development or ontogeny.

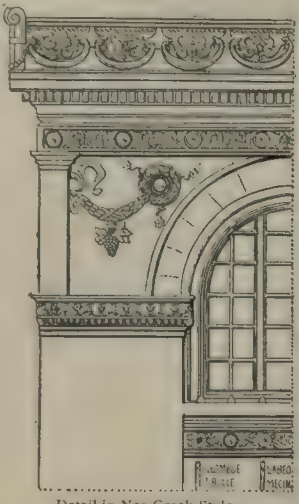
neogenic (nē-ọ-jen′ik), *a.* Same as ★*neogenetic*.

Neognathæ (nẹ-og′na̤-thē), *n. pl.* [Gr. *νέος*, new, + *γνάθος*, jaw.] One of two main divisions of existing birds, comprising all save the ostriches and their allies, and the tinamous. Contrasted with ★*Palæognathæ*. *Pycraft*, 1900.

neographic (nē-ọ-graf′ik), *a.* [See *neography*.] Of or pertaining to neography, or a new method of writing or spelling.

neo-Grecianism (nē-ọ-grē′sha̤n-izm), *n.* A tendency to introduce Greek types and motives in art or literature. See ★*neo-Greek*.

neo-Greek (nē-ọ-grēk′), *a.* and *n.* [Gr. *νέος*, new, + E. *Greek*.] **I.** *a.* Noting a revival of antique Greek style, types, or motives, in art or literature; specifically, noting a style in French architecture introduced in the reign of Louis Philippe (1830–48), by the architects Duc, Duban, Labrouste, and others, characterized by a free and modern rendering of essentially Greek motives. The leading examples are the tomb of Napoleon at the Invalides by Visconti, the Palais de Justice by Duc, the Bibliothèque Ste. Geneviève by Labrouste, and the École des Beaux Arts by Duban. The Opera by Garnier conforms generally to the neo-Greek style.



Detail in Neo-Greek Style.
Bibliothèque Ste. Geneviève, Paris.

II. *n.* The language of modern Greece in its various dialects.

neo-Hebraic (nē-ō-hẹ-brā′ik), *a.* and *n.* [Gr. *νέος*, new, + E. *Hebraic.*] I. *a.* Of or pertaining to the modern Hebrews.

II. *n.* The post-biblical Hebrew language. Neo-Hebraic may be divided into several periods, the most important of which are: (*a*) the period of Hebrew Aramaic, the language in which the Talmud, Middrashim, etc., were written, which begins with the third century of our era; (*b*) the period of medieval Hebrew, the style in which the celebrated commentators, philosophers, and poets of the Sephardi school wrote, which may be subdivided into various categories. Writers of pure biblical Hebrew were few and the Aramaic element seems to have been in supremacy until the middle of the eighteenth century when, with the beginning of the 'Renaissance,' renowned writers of biblical Hebrew arose everywhere. It is now making rapid strides among the Jews even in the United States. Owing, however, to the abnormal influx of Russian immigrants it is being outstripped by Yiddish.

neo-Hellenic (nē″ọ-he-len′ik), *a.* and *n.* [Gr. *νέος*, new, + E. *Hellenic.*] I. *a.* 1. Of or pertaining to modern Greece or Hellas.—2. Relating to neo-Hellenism.—3. Relating to the vernacular language of modern Greece, the Romaic.

II. *n.* Same as *Romaic.* *I. Taylor.*

neo-Hindu (nē-ō-hin′dö), *a.* [Gr. *νέος*, new, + E. *Hindu.*] Modern Hindu.

> The Aryans of India form the greatest portion of the population to the north of the Nerbada and Mahanadi; they speak different dialects of the *neo-Hindu* language (ancient Bracha language, branch of the Prakrit or corrupt vulgar Sanscrit). *Deniker*, Races of Man, p. 412.

Neohipparion (nē″ọ-hi-pā′ri-on), *n.* [Gr. *νέος*, new, + NL. *Hipparion.*] A genus of three-toed horses occurring in the Miocene deposits of North America, and distinguished from the European Pliocene genus *Hipparion* by the structure of the teeth, the more slender construction of the long bones of the limbs and feet, and the relatively greater reduction of the lateral digits.

neokosmium (nē-ọ-koz′mi-um), *n.* [NL., < Gr. *νέος*, new, + *κόσμος*, order.] A supposed substance announced in 1896 as a new chemical element. There is no reason for believing in its existence.

neo-Lamarckian (nē″ō-la-mär′ki-a̤n), *a.* and *n.* [Gr. *νέος*, new, + E. *Lamarckian.*] I. *a.* Of or pertaining to neo-Lamarckism.

> The weakness of the *Neo-Lamarckian* view lies in its interpretation of heredity. *Encyc. Brit.*, XXVIII. 344.

II. *n.* One who advocates or accepts a modification of the opinions of Lamarck on the origin of species; especially, one who, while accepting natural selection, believes that it is aided by the inheritance of acquired characters. *G. J. Romanes*, Darwin, and after Darwin, II. 63.

neo-Lamarckianism (nē″ọ-la-mär′ki-a̤n-izm), *n.* Same as ⋆*neo-Lamarckism.*

neo-Lamarckism (nē″ọ-la-mär′kizm), *n.* [Gr. *νέος*, new, + E. *Lamarckism.*] A modification of the opinions of the French naturalist, the Chevalier de Lamarck (1744–1829), on the origin of species. Lamarck, who was one of the earliest advocates of the mutability of species, regarded the structural changes that are produced in animals by their activities under the stimulus of new habits and new needs and new desires, and those that are produced in plants by the direct modifying influence of external conditions, as the means of transformation and adaptation. The word *neo-Lamarckism* was introduced into biological literature by A. S. Packard, an American entomologist and biologist (1839–1905), who held that species cannot arise through the survival of the fittest in the struggle for existence without the aid of the modifying influence of external conditions. Packard attributed the blindness of cave-animals to the inheritance of the effects of disuse; and as it is clear that use and disuse and the external conditions of life cannot give rise to new species unless their effects are inherited, the defense of the belief in the inheritance of 'acquired characters' occupies so prominent a place in the literature of neo-Lamarckism that this belief is commonly regarded as the meaning of the term, although one who admits that 'acquired characters' may be inherited without admitting that this inheritance is a means for modifying species is not a neo-Lamarckian.

> Inasmuch as Lamarck attempted to frame a theory of evolution in which the principle of natural selection had no part, the interpretation placed on their work by many bionomical investigators recalls the theories of Lamarck, and the name *Neo-Lamarckism* has been used of such a school of biologists, particularly active in America. *Encyc. Brit.*, XXVIII. 344.

neo-Latin, *a.* II. *n.* One who speaks a neo-Latin or Romance language.

Neolepidoptera (nē″ọ-lep-i-dop′tẹ-rä̤), *n. pl.* [Gr. *νέος*, new, + NL. *Lepidoptera.*] A suborder of *Lepidoptera*, erected by Packard to include all the *Lepidoptera* except the *Micropterygidæ* (*Paleolepidoptera*) and the *Eriocephalidæ* (*Protolepidoptera*).

Neolimulus (nē-ọ-lim′ụ-lus), *n.* [Gr. *νέος*, new, + NL. *Limulus.*] A genus of extinct merostomatous crustaceans allied to the *Xiphosura* or horseshoe-crabs. They are found in the Silurian beds of Scotland.

Neoliparis (nē-ọ-lip′ạ-ris), *n.* [NL., < Gr. *νέος*, new, + NL. *Liparis.*] A genus of fishes of the family *Liparididæ*, found in northern seas. *Jordan and Evermann*, Fishes of North and Middle Amer., p. 2106.

neolite, *n.* 2. In *petrog.*, a term used by King (1878) to designate a group of volcanic rocks including both rhyolite and basalt.

neolith (nē′ọ-lith), *n.* [*neolith*(*ic*).] A stone implement, or weapon, of the Neolithic period; also a person living in that period. See *Neolithic.*

> Although the wolf was abundant in Europe during the old stone age, the dog was unknown till it appeared on the scene with the *Neoliths*, a race that came from the home of the jackal. *E. S. Thompson*, in Smithsonian Rep., 1901, p. 715.

> Large numbers of barbed and grooved bone spear and arrow points, as well as stone adzes, axes, fish and skinning knifes, chisels, scrapers, &c., are found. Some of these are of the rough 'palæolithic' type, others are finely wrought and polished '*neoliths.*' The two are commonly found side by side. *Rep. Brit. Ass'n. Advancement* of *Sci.*, 1902, p. 442.

neologianism (nē-ọ-lō′ji-a̤n-izm), *n.* [*neologian* + *-ism.*] Same as *neology.*

neologization (nẹ-ol″ọ-ji-zā′sho̤n), *n.* [*neologize* + *-ation.*] The act of neologizing, in any sense of that word. [Rare.]

neologous (nẹ-ol′ọ-gus), *a.* Same as *neological.*

Neomænis (nē-ọ-mē′nis), *n.* [NL., < Gr. *νέος*, new, + NL. *Mænis.*] An obsolete genus of fishes, now known as *Lutianus*, belonging to the family *Lutianidæ*, found on both coasts of America. See ⋆*raiado*, with cut.

neomon (nē′ọ-mon), *n.* [Gr. *νέος*, new, + *μον*(*άς*), unit.] The square root of minus one; $\sqrt{-1}$; *i.*

neomonic (nē-ō-mon′ik), *a.* and *n.* [*neomon* + *-ic.*] I. *a.* Pertaining to, or based upon the neomon.—**Neomonic number.** See ⋆*number.*

II. *n.* A neomonic number, for instance $\sqrt{-2}$.

> The notion of number has been made more clear and precise; at the same time it has received diverse generalizations. The most precious for the analyst is that which results from the introduction of *neomonics*, which modern mathematicians could not now dispense with. *Science*, Sept. 16, 1904, p. 354.

neomonoscope (nē-ọ-mon′ọ-skōp), *n.* [Gr. *νέος*, new, + *μόνος*, single, + *σκοπεῖν*, view.] In *photog.*, an instrument for magnifying photographs, invented about 1862. *Woodbury*, Encyc. Dict. of Photog., p. 299.

neomorph (nē′ọ-môrf), *n.* [Gr. *νέος*, new, + *μορφή*, form.] In *biol.*, a part or organ, or a modification of a part or organ, which has recently been generated or acquired.

neomorphic (nē-ọ-môr′fik), *a.* [*neomorph* + *-ic.*] Of, pertaining to, or of the nature of, neomorphs.

> Madagascar has yielded a Physa (P. lamellata) with a *neomorphic* gill, a character shared by species of Planorbis (P. corneus and P. marginatus). *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 631.

neomorphosis (nē′ọ-môr′fọ-sis), *n.* [NL., < Gr. *νέος*, new, + *μόρφωσις*, formation.] In *biol.*, the replacement of a lost part by a part that normally belongs in a different region of the body or by one that is unlike any normal part of the body.

> As an illustration of this process [*neomorphosis*] may be cited the development of an antenna, when the eye of a crab or of a prawn is cut off near the base. *T. H. Morgan*, Regeneration, p. 24.

Neomylodon (nē-ō-mī′lọ-don), *n.* [NL., < Gr. *νέος*, new, + NL. *Mylodon.*] A genus of gigantic extinct ground-sloths whose remains have been found in the caverns of Patagonia in a condition and association which indicate that the animal is but recently extinct and has been a contemporary of the existing fauna of the region, including man. The remains found have been not only bones but pieces of epidermis bearing a hairy covering. Hauthal has observed, in association with these, bones of the horse, a human scapula, and bone tools, together with masses of dried excrement and cut hay, and believes that this great sloth was domesticated by an early race of men in that region.

neon (nē′on), *n.* [NL., 'the new (element),' < Gr. *νέον*, neuter of *νέος*, new: see *new.*] An elementary substance occurring in gaseous form in the earth's atmosphere: atomic weight, 20. It was first isolated in 1898, and was obtained by the fractional distillation of liquid air. It is a colorless transparent gas which has been liquefied. Its boiling-point under normal pressure is − 239° C. (− 398.2° F.). In the gaseous state its density is 9.97 (hydrogen = 1). In a tube suitably exhausted, electric discharge gives a characteristic spectrum, most of the lines of which are in the area of the visible red, with a specially noteworthy line at 5016 in the green. Neon is, like argon and the other recently discovered atmospheric gases, chemically inactive. It occurs in the air in larger proportion than any of the other gases of this class except argon—about 1 to 2 parts by volume in 100,000 of air.—**Neon tube**, a vacuum-tube containing neon and showing, when traversed by an electric discharge, the spectrum of that gas.

> The wave-length of the oscillator's vibration can, therefore, be measured by isolating a complete wave on the helix by means of a sliding earthed saddle using a *neon tube* as indicator. *Elect. World and Engin.*, Oct. 1, 1904, p. 583.

neonatal (nē-ọ-nā′ta̤l), *a.* [*neonatus* + *-al*[1].] Relating to the new-born; of recent birth.

neonatus (nē-ọ-nā′tus), *n.*; pl. *neonati* (-tī). [NL., < Gr. *νέος*, new, + L. *natus*, born.] A new-born child.

neontological (nē″on-tọ-loj′i-ka̤l), *a.* [*neontolog*(*y*) + *-ical.*] Of or pertaining to neontology, or the zoölogy of existing animals: opposed to *paleontological.*

neopallial (nē-ọ-pal′i-a̤l), *a.* [*neopalli*(*um*) + *-al*[1].] Relating to the neopallium, or area between the pyriform lobe and hippocampus. *Trans. Linnean Soc. London*, Zool., Feb., 1903, p. 370.

neopallium (nē-ọ-pal′i-um), *n.* [NL., < Gr. *νέος*, new, + NL. *pallium.*] That area of the cortex of the brain which lies between the hippocampus and the pyriform lobe.

> He [Dr. Elliot Smith] applies to the pyriform lobe and the hippocampus the terms "basal" and "marginal" pallium, in order sufficiently to emphasise, for the first time, the fact that the intervening area of "*neopallium*," the most variable, is both morphologically and physiologically the most important pallial constituent. *Nature*, Feb. 12, 1903, p. 340.

neo-Persian (nē-ọ-pėr′sha̤n), *a.* [Gr. *νέος*, new, + E. *Persian.*] Persian of modern times. *Keane*, Ethnology, p. 412.

neophilism (nẹ-of′i-lizm), *n.* [Gr. *νέος*, new, + *φίλος*, loving, + *-ism.*] A love of novelty; a preference, sometimes amounting to an insane desire, for what is new.

neophrastic (nē-ọ-fras′tik), *a.* [Gr. *νέος*, new, + *φράζειν*, declare, express.] Of or pertaining to the coinage or use of new words or phrases. [Rare.]

> I am "awfully" afraid (as my grandchildren will say—no d—g will stay this *neophrastic* flood) that I have lost my Emerson letters. *Lowell*, Letters, II. 327.

neopithecine (nē″ọ-pi-thē′sin), *a.* [*Neopithecini.*] Relating to, or having the characters of, monkeys above the marmosets.

> It is reasonably clear, therefore, that these three species are primitive members of the *Neopithecine* division of the Anthropoidea. *Amer. Jour. Sci.*, Jan., 1904, p. 23.

Neopithecini (nē-ọ-pith-ẹ-sī′nī), *n. pl.* [NL., < Gr. *νέος*, new, + *πίθηκος*, ape, + *-ini.*] A division of the order *Primates* containing those above the marmosets: correlative with *Arc-*

topithecini, the living marmosets, and *Palæopithecini*, *Tarsius*, and its allies, considered as representing primitive monkeys.

neoplasia (nē-ǫ-plā´ziạ̈), *n.* [NL., ‹ Gr. *νέος*, new, + *πλάσις*, formation.] The formation of neoplasms or true tumors.

neoplastic, *a.* **2.** Relating to or consisting in neoplasty.

neoplasty (nē´ǭ-plas-ti), *n.* [Gr. *νέος*, new, + *πλαστός*, formed, + *-y*^{3}.] Surgical measures adapted to the formation of new parts.

neopsychic (nē-ǫ-sī´kik), *a.* [Gr. *νέος*, new, + E. *psychic.*] In *psychol.*, of recent mental development: opposed to ⋆*paleopsychic.* [Rare.]

> The mind . . . is repeating most rapidly the later *neopsychic* stages of phyletic experiences, and laying on this foundation the corner-stones of a new and unique adult personality. *G. S. Hall*, Adolescence, II. 70.

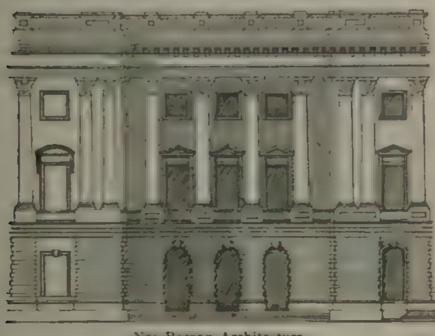
neo-Punic (nē-ǭ-pū´nik), *a.* [Gr. *νέος*, new, + E. *Punic.*] Punic of more recent date (than old Punic): applied to a Punic dialect of North Africa, represented in the neo-Punic inscriptions (100 B.C. to A.D. 400).

Neorhynchidæ (nē-ǭ-ring´ki-dē), *n. pl.* [NL., ‹ *Neorhynchus* + *-idæ.*] A family of *Nemathelminthes* in which sexual maturity is reached in the larval stage, the proboscis-sheath has a single wall, the circular muscle-layer is very simply developed, and the longitudinal muscle-cells are present only in certain places. It includes the genus *Neorhynchus.*

Neorhynchus (nē-ō-ring´kus), *n.* [NL., ‹ Gr. *νέος*, new, + *ῥύγχος*, snout.] The typical and only genus of the family *Neorhynchidæ. N. clavæceps* is parasitic in the carp and *N. agilis* occurs in *Mugil auratus* and *M. cephalus. Hamann*, 1892.

Neornithes (nē-ôr´ni-thēz), *n. pl.* [NL., ‹ Gr. *νέος*, new, + *ὄρνις*, pl. *ὄρνιθες*, bird.] One of two main divisions of birds, comprising all save the extinct *Archæopteryx* and its immediate, but as yet unknown, relatives: contrasted with ⋆*Archæornithes. Gadow*, about 1898.

neo-Roman (nē-ǫ-rō´man), *a.* [Gr. *νέος*, new, + E. *Roman.*] In *mod. arch.*, characterized by a strongly marked classical design with a free use of columns in porticos and the like, and abundance of detail taken from ancient Roman buildings.



Neo-Roman Architecture.
(From the Capitol at Washington.)

neoromantic (nē″ǭ-rō-man´tik), *a.* [Gr. *νέος*, new, + E. *romantic.*] Belonging to or characteristic of the later romantic school.

> In the modern [Hungarian] drama three great and clearly differentiated groups may be distinguished. First the *neo-romantic* group, whose chief representatives are Eugen Rákosi, Louis Dóczi (born 1845). *Encyc. Brit.*, XXIX. 361.

neo-Sanskritic (nē-ǭ-san-skrit´ik), *a.* [Gr. *νέος*, new, + E. *Sanskritic.*] Sanskritic of a more recent date. *Keane*, Ethnology, p. 210.

Neosho formation. See ⋆*formation.*

Neosporidia (nē″ǭ-spǭ-rid´i-ạ̈), *n. pl.* [NL., ‹ Gr. *νέος*, new, + NL. *sporidium*, pl. *sporidia.* See *sporidium.*] A group of *Sporozoa* in which growth and reproduction go on at the same time. It includes the *Myxosporidia* and *Sarcosporidia.* Contrasted with ⋆*Telosporidia. Schaudinn.*

neossidin (nē-os´i-din), *n.* [*neoss*(*ine*) + *-id* + *-in*^{2}.] The hyalin which corresponds to neossine.

neossoptile (nē-os´op-til), *n.* [Gr. *νεοσσός*, a chick, + *πτίλον*, a down feather.] One of the feathers which form the covering of a newly-hatched bird, resembling but distinct from the down of an adult bird. Neossoptiles are distinguished by having a very short calamus; a very short rhachis, or none at all; practical absence of cilia; long slender rami; and no aftershaft, save in the emu. The term is correlative with ⋆*mesoptile* and ⋆*teleoptile.*

> The whole process [evolution of horns and antlers] recalls the relation of the *neossoptile* to the teleoptile or permanent feather, and still more the shedding of our own fœtal finger-nails. *Proc. Zool. Soc. London*, 1902, p. 213.

neostoma (nẹ-os´tǭ-mạ̈), *n.*; pl. *neostomata* (-tō´ma-tạ̈). [NL., ‹ Gr. *νέος*, new, + *στόμα*, mouth.] In *embryol.*, the existing mouth-opening of vertebrates: so named because it is supposed to have been formed more recently than the palæostoma. (See ⋆*palæostoma*, 2.) It lies behind the palæostoma and is supposed to have arisen from a pair of branchial clefts.

neostyle (nē´ǭ-stīl), *n.* [Gr. *νέος*, new, + L. *stilus*, *stylus*, style.] A duplicating-machine constructed on the principle of the press. In the rotary neostyle a stencil is laid on the outer surface of a perforated steel drum, rotated by hand or by a motor, and ink is forced through the stencil at the proper moment upon the paper to be printed, which is then automatically discharged.

neo-Sumerian (nē-ǭ-sụ̄-mē´ri-ạn), *a.* [Gr. *νέος*, new, + E. *Sumerian.*] Sumerian of a more recent date (than the earliest Sumerian).

neo-Syriac (nē-ǭ-sir´i-ak), *a.* and *n.* [Gr. *νέος*, new, + E. *Syriac.*] Syriac of modern times: applied to certain dialects spoken in Mesopotamia, Kurdistan, and Lake Urumiah.

neotenia (nē-ǭ-tē´ni-ạ̈), *n.* Same as ⋆*neoteny.*

> Epistasis is a modified form of the process emphasized by Boas under the name of *neotenia*, a reversion of a phylum to a modified embryonic condition. *Science*, March, 1903, p. 381.

neotenic (nē-ǭ-ten´ik), *a.* [*neoten*(*y*) + *-ic.*] Pertaining to, or characterized by, neoteny.

> Amphiuma is a sort of *neotenic* Cæcilian, a larval form become sexually mature while retaining the branchial respiration. *Encyc. Brit.*, XXV. 383.

neoteny (nẹ-ot´e-ni), *n.* [Gr. *νέος*, new, young, + *τείνειν*, keep.] In *biol.*: (*a*) The reversion of a phylum to a modified embryonic condition. (*b*) The retention by an organism of larval or juvenile characters beyond the time characteristic of other members of the group to which it belongs. This may be partial, as in the case of some toads and frogs, whose young pass the winter in the tadpole condition, or total, as in some salamanders that retain their external gills when adult. Also ⋆*neotenia.*

> These cases of *neoteny* are therefore instances of more or less complete retardation, or of the retention, of partially larval conditions. *H. Gadow*, Amphibia and Reptiles, p. 65.

neoterically (nē-ǭ-ter´i-kạl-i), *adv.* In a neoteric or modern way or fashion.

neotocite (nē-ot´ǭ-sīt), *n.* [Gr. *νεότοκος*, newly born, + *-ite*^{2}.] A hydrated silicate of manganese and iron, derived from the alteration of some other species, as rhodonite.

Neotremata (nē-ǭ-trem´ạ-tạ̈), *n. pl.* [NL., ‹ Gr. *νέος*, new, + *τρῆμα*(*τ-*), hole.] In Beecher's classification of the brachiopods, an order including forms without articular hinge, with the pedicel aperture restricted to the ventral valve and modified by a listrium.

neotrematous (nē-ǭ-trem´ạ-tus), *a.* [*Neotremat*(*a*) + *-ous.*] Of or pertaining to the *Neotremata.*

Neotropic (nē-ǭ-trop´ik), *a.* Same as *Neotropical.*

neottious (nẹ-ot´i-us), *a.* [*Neotti*(*a*) + *-ous.*] Belonging to the genus *Neottia*; characteristic of orchids of the genus *Neottia.*

Neottopteris (nē-ǭ-top´tẹ-ris), *n.* [NL. (John Smith, 1841), ‹ Gr. *νεοττιά*, a nest, + *πτέρις*, a fern, in allusion to the nest-like growth of the fronds (see *bird's-nest* ⋆*fern*).] A genus of large epiphytic ferns, related to *Asplenium*, with simple, entire, broadly linear or lanceolate fronds from 2 to 6 feet long borne in crowns, with forked parallel veins running from the usually raised midrib nearly to the margin where their apices are connected by a continuous transverse vein. There are about 6 species, natives of Asia, Australia, and the islands of the Pacific. Several of these, including *N. Nidus*, are commonly cultivated. See *bird's-nest* ⋆*fern.*

neotype (nē´ǭ-tīp), *n.* [Gr. *νέος*, new, + *τύπος*, type.] A specimen identified with some described and named species, selected as a standard of reference where the original type is lost or damaged beyond recognition, or is not available. *Schuchert and Buckman*, 1905.

neovitalism (nē-ǭ-vī´tạl-izm), *n.* [*neo-* + *vital* + *-ism.*] **1.** In *physiol.*: (*a*) The doctrine or opinion that the distinctive activities of living beings cannot completely be accounted for as the resultants of the physical and chemical constitution of their bodies and of their movements, according to the principles of mechanics.

> It is true that at times in these latter days, sporadic upshoots of a *neo-vitalism* raise their tiny heads, but these are to be ascribed to the innate aversion of the human mind to confess its ignorance of what it really does not know, and they do not receive serious attention from the more hopeful seekers after truth. *Sci. Amer. Sup.*, March 14, 1903, p. 22741.

(*b*) The doctrine or opinion that the distinctive activities of living beings are different in kind from those of inorganic bodies, and that they are due to a different kind of energy from any that is made known by the study of the inorganic universe: because knowledge of the physics and chemistry of their bodies, while it may make it possible to foresee or predict their actions, does not reveal what brings them about and makes them to be what they are. Since the aim of the concrete sciences is to predict the consequences of given antecedents and not to discover who or what makes them to be, there is no difference between physics and physiology in this respect.

> Prof. Verworn regards with disfavour the intrusion of such idealistic conceptions as have been made familiar by the exponents of "*neo-vitalism*," and accordingly he limits the subject-matter of general physiology. *Nature*, Jan. 1, 1903, p. 212.

2. In *biol.*, the doctrine or opinion that the generation of new beings from eggs and parts of eggs, and the regeneration or replacement of parts that have been lost, cannot be explained or understood as the mechanical resultants of the conditions under which they take place, because they bring about or restore that due subordination and interadjustment of parts which is necessary for establishing or restoring the coördination and unity of the whole: although inability to account for these processes by means of the history of the individual does not show that they may not be the intelligible consequences, direct or indirect, of ancestral history.

neovitalist (nē-ǭ-vī´tạl-ist), *n.* [*neovital*(*ism*) + *-ist.*] An advocate of or believer in neovitalism, in any sense of that word.

neovitalistic (nē″ǭ-vī-tạ-lis´tik), *a.* [*neovitalist* + *-ic.*] Of or pertaining to, or of the nature of, neovitalism.

> But all the so-called *neo-vitalistic* efforts . . . have nothing to do with the older vitalism. *Encyc. Brit.*, XXXI. 712.

Neowashingtonia (nē″ǭ-wosh-ing-tō´ni-ạ̈), *n.* [NL. (Sudworth, 1897), ‹ Gr. *νέος*, new, + NL. *Washingtonia*, an untenable name for the genus.] A genus of palms. See *Washingtonia*, 2.

neo-ytterbium (nē″ǭ-i-tėr´bi-um), *n.* [Gr. *νέος*, new, + E. *ytterbium.*] See the extract, and compare ⋆*lutecium.*

> A new element, lutecium, resulting from the splitting of Marignac's ytterbium: G. Urbain. The separation was effected by fractional crystallization of the nitrates from nitric acid of density 1.3. The characteristic lines in the arc spectrum of the new element are given. For the purified ytterbium resulting from the separation the name of *neo-ytterbium* is proposed. *Nature*, Nov. 14, 1907, p. 48.

neoza (nẹ-ō´zạ̈), *n.* [Bhutanese.] A tree, *Rinus Gerardiana*, of the Himalayas. Its seeds are edible.

neozoölogist (nē″ǭ-zǭ-ol´ǭ-jist), *n.* [Gr. *νέος*, new, + E. *zoölogist.*] One who studies recent animals: contrasted with *paleontologist*, one who studies fossil animals. *Encyc. Dict.* [Rare.]

neozoölogy (nē″ǭ-zǭ-ol´ǭ-ji), *n.* [Gr. *νέος*, new, + E. *zoölogy.*] That branch of science which deals with existing or recent animals: contrasted with *paleozoölogy*, which deals with fossil animals, and correlative with ⋆*neobotany. Nicholson* and *Lydekker.* [Rare.]

nepaline (ne-pâl´in), *n.* [*Nepal* (*Nepaul*) + *-ine*^{2}.] A poisonous alkaloid found in *Rumex nepalensis* Wall. It crystallizes in orange-colored needles which melt at 136° C.

nepenthaceous (nē-pen-thā´shius), *a.* Belonging to, or having the characters of, the *Nepenthaceæ*, a family of insectivorous plants.

nepenthic (nẹ-pen´thik), *a.* [*Nepenth*(*es*) + *-ic.*] Pertaining to or derived from the *Nepenthes*, a genus of insectivorous plants.

nephelescope (nef′e-lẹ̄-skōp), *n.* [Gr. *νεφέλη*, a cloud, + *σκοπεῖν*, view.] 1. An instrument for showing the changes in the temperature of the air induced by rarefaction.—2. An instrument for viewing the upper strata of clouds.

nepheliad (ne-fē′li-ad), *n.* [Gr. *νεφέλη*, a cloud, + *-ad*^{1}. Cf. *Naiad.*] A cloud-nymph *N. E. D.* [Rare.]

> Ho! We are the *Nepheliads*, we,
> Who bring the clouds from the great sea,
> And have within our happy care
> All the love 'twixt earth and air.
>
> *L. Hunt*, Foliage, The Nymphs, p. xxxi.

nepheligenous (nef-e-lij′e-nus), *a.* [Gr. *νεφέλη*, cloud, + *-γενης*, -producing, + *-ous.*] Producing clouds (of tobacco-smoke). [Rare.]

> Let us sit awhile with nubiferous, or, if we may coin a word, *nepheligenous* accompaniment such as shall gently narcotize the over-wearied brain.
>
> *O. W. Holmes*, in The Atlantic, Dec., 1862, p. 759.

nephelodometer (nef″e-lọ̄-dom′e-tėr), *n.* [Gr. *νεφέλη*, a cloud, + *ὁδός*, way, + *μέτρον*, measure.] An instrument for determining the distances of clouds.

nephelological (nef″ẹ-lọ̄-loj′i-kạl), *a.* Of or pertaining to nephelology.

nephelology (nef-e-lol′ọ̄-ji), *n.* [Gr. *νεφέλη*, a cloud, + *-ology.*] The study or science of clouds.

nephelometer, *n.* 2. In *chem.*, an instrument for estimating the quantity of a solid substance suspended, in very small proportion and in a very finely divided state, in a liquid, as in the case of one or two milligrams of silver chlorid in a liter of water. It depends on a comparison of the degrees of illumination required to produce the same apparent opalescence in two tubes, one of which contains a known quantity of the finely divided solid under examination, the other containing the unknown quantity of the same which is to be estimated, both similarly suspended in water or some other suitable liquid.

nephelometry (nef-e-lom′e-tri), *n.* [Gr. *νεφέλη*, cloud, + *-μετρια* < *μέτρον*, measure.] 1. The art of measuring, observing, or studying the general cloudiness of the sky.—2. The art of measuring the size, growth, and other changes of a particular cloud.—3. The application of the photogrammeter to cloud-work.

nephelopsychosis (nef″e-lọ̄-sī-kō′sis), *n.* [Gr. *νεφέλη*, cloud, + E. *psychosis.*] In *psychol.*, mental processes and attitudes set up by the sight of clouds: supposed by some psychologists to be specific and atavistic in character.

> *Nephelopsychoses* . . . are distinctly more prominent and numerous among girls than boys, and as the female organism is more conservative this of itself suggests rapport with phylogeny. *G. S. Hall*, Adolescence, II. 181.

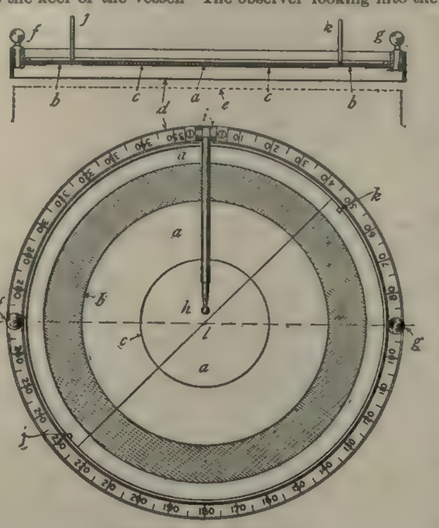
nephite (nef′īt), *n.* [*Nephi* (see def.) + *-ite*^{2}.] According to the Book of Mormon, one of the descendants of Nephi, who, with his brothers and his father Lehi, of the tribe of Joseph, fled from Jerusalem to America. The narrative says that after the ascension Christ appeared to the Nephites, and converted the whole nation; that they were destroyed by the Lamanites; but that their chronicles, kept on gold plates, were preserved by Mormon, whose abridged form of the history was found later by Joseph Smith.

nephodoscope (ne-fod′ọ̄-skōp), *n.* [Gr. *νέφος*, a cloud, + *ὁδός*, way, + *σκοπεῖν*, view.] A form of nephoscope, devised by Fornioni in 1881, consisting essentially of a magnetic compass containing, above the needle, a circular plane mirror on which are drawn radial lines corresponding to the wind-rose. A rod with terminal sighting-eye or knob is pivoted to the edge of the mirror. The observation consists in keeping the reflections of the sight-point and of the cloud coincident as they pass from the center of the mirror off to the edge.

nephogram (nef′ọ̄-gram), *n.* [Gr. *νέφος*, a cloud, + *γράμμα*, a writing.] A photograph of a cloud or clouds.

nephograph (nef′ọ̄-grȧf), *n.* [Gr. *νέφος*, cloud, + *γράφειν*, write.] An instrument for photographing clouds.

nephoscope, *n.*—**Abbe's marine nephoscope,** a form of nephoscope devised for use on vessels at sea, to enable the navigator to observe the motions of the upper or lower clouds as accurately as he observes the winds. The nephoscope rests on the ship's standard compass—the Ritchie liquid compass of the U. S. navy—when used at sea, but can be supported on a fixed pillar when used on land. A horizontal circular glass mirror, *a a a*, having the silvered back removed from the circular band *b*, as well as from the circular line *c*, is fastened in the circular frame *d*, which slips down over the rim of the compass *e*, and is rotated horizontally to any azimuth by the handles *f*, *g*. An adjustable rod, ending in the knob *h*, is pivoted to the frame at *i*, so that it can move vertically. A light wire circle lying flat on the mirror at its outer edge carries a diametral thread which is set at any azimuth by means of the handles *j*, *k*. The compass is fastened to the deck of the vessel so that its fore-and-aft line or zero is parallel to the keel of the vessel. The observer looking into the mirror sees a small cloud or other celestial object reflected therein. He moves his eye until the object is reflected at the center, *l*. He also moves the brass rim by the handles *f* and *g*, and slides the knob *h* until the latter is also reflected at *l*. As the object appears to move away from *l* he moves his eye so that the knob *h* continually covers the reflected object: at the same time he turns the thread by the handles *j* and *k* so that the reflection of the object moves along it. The thread now represents the desired direction of the apparent motion of the cloud. The compass-card is visible through the clear glass band *b*, and the observer records the bearings of the thread and of the lubber-line. The absolute motion and the altitude of the cloud may also be determined if desired by a second observation when the ship has a different speed or course.—**Aimé's nephoscope,** a nephoscope which has two mirrors, one near and the other distant from the observer. The same cloud is observed in both, and when the images overlap the inclinations of the mirrors are recorded, and the distance or altitude of the cloud is computed. Called by Aimé a *reflecting anemometer.*—**Besson's zenithal nephoscope,** a nephoscope designed for observations near the zenith. It consists of a horizontal frame on which are stretched two orthogonal systems of threads, with an inclined plane mirror below. The observer looks horizontally through an eyehole in a fixed position.—**Vanishing-point nephoscope,** an arrangement of horizontal and inclined circles whose horizontal axes can be set parallel to the direction of the movement of the clouds, so that one may quickly determine the radiation-point and vanishing-point for the motion of all clouds that happen to be moving in parallel directions.



Abbe's Marine Nephoscope.

nephoscopic (nef-ọ̄-skop′ik), *a.* [*nephoscope* + *-ic.*] Of or pertaining to the nephoscope; made by the use of the nephoscope: as, *nephoscopic* observations.

nephralgic, *a.*—**Nephralgic crises,** sudden attacks of very severe pain in the kidneys, sometimes experienced in locomotor ataxia.

nephrectasia (nef-rek-tā′ẓiạ̈), *n.* [NL., < Gr. *νεφρός*, kidney, + *ἔκτασις*, extension.] Dilatation of the pelvis of the kidney, leading to the formation of a cystic kidney.

nephrectomize (nef-rek′tọ̄-mīz), *v. t.*; pret. and pp. *nephrectomized*, ppr. *nephrectomizing.* [*nephrectom*(*y*) + *-ize.*] To perform the operation of nephrectomy upon; remove a kidney, or the kidneys, from.

> A patient who has been *nephrectomized* for tuberculosis should never consider that the future is safe.
>
> *Therapeutic Gazette*, Feb. 15, 1903, p. 126.
>
> In studying the properties of the blood of *nephrectomized* rabbits it was found that bullock's serum, which is distinctly hæmolytic, for normal rabbit's blood, was less so for the red cells of *nephrectomized* rabbits.
>
> *Science*, May 27, 1904, p. 831.

nephria (nef′ri-ạ̈), *n.* [NL., < Gr. *νεφρός*, kidney.] Bright's disease of the kidney.

nephric (nef′rik), *a.* [Gr. *νεφρός*, a kidney, + *-ic.*] Same as *nephritic.*—**Nephric duct.** See ★*duct.*

Nephridial gland. See ★*gland.*

nephridiopore (nef-rid′i-ọ̄-pōr), *n.* [NL. *nephridium* + Gr. *πόρος*, pore.] An opening of a nephridium to the exterior.

> The *nephridiopores* are only plainly visible upon the clitellar segments; they lie close to the anterior margin of the segment in a line with the ventralmost of the two lateral setæ. *Proc. Zool. Soc. London*, 1902, p. 191.

nephridiostome (nef-rid′i-ọ̄-stōm), *n.* [NL. *nephridium* + Gr. *στόμα*, mouth.] The internal, ciliated, funnel-like opening of a nephridium into the cœlomatic cavity; a nephrostome.

> The Hesionidæ have compound organs, serving both as excretory and as genital ducts, formed by the grafting of the cœlomostome on to the *nephridiostome.*
>
> *Encyc. Brit.*, XXXIII. 882.

nephridium, *n.*—**Diffuse nephridia.** Same as ★*plectonephric nephridia.*—**Meganephric nephridia,** in many limicolous and terricolous annelids, nephridia consisting of the cœlomatic funnel and long tube opening to the exterior.—**Plectonephric nephridia.** See ★*plectonephric.*

nephrin (nef′rin), *n.* [*Ne*(*o*)*phr*(*onium*) + *-in*^{2}.] A colorless neutral compound, $C_{20}H_{34}O$, contained in the lichen *Neophronium arcticium.* It crystallizes in needles which melt at 168° C.

nephrism (nef′rizm), *n.* [Gr. *νεφρός*, kidney, + *-ism.*] A pathological condition characterized by serious disease of the kidneys.

nephritic, *n.* 2. One who suffers from nephritis. *Buck*, Med. Handbook, I. 563.

nephritis, *n.*—**Glomerular nephritis.** Same as *glomerulonephritis.*

nephritoid (nef′ri-toid), *n.* [*nephrit*(*is*) + *-oid.*] One of several minerals which have the properties and uses of nephrite, as jade (nephrite), jadeite, chloromelanite, and similar varieties of other species, as vesuvianite.

nephro-abdominal (nef″rọ̄-ab-dom′i-nạl), *a.* [Gr. *νεφρός*, kidney, + E. *abdominal.*] Of or relating to the kidney and the abdominal wall.

nephroblast (nef′rọ̄-blȧst), *n.* [Gr. *νεφρός*, kidney, + *βλαστός*, germ.] One of the pole-cells which furnish the material for the development of the nephridia in annelids. See cut under ★*neuroblast.*

nephrocele, *n.* 2. In *embryol.*, the cavity of the pronephric and mesonephric tubule considered as an extension of the cœloma or true body-cavity of the embryo.

nephrocolica (nef-rọ̄-kol′i-kạ̈), *n.* [NL., < Gr. *νεφρός*, kidney, + *κωλική*, colic.] Same as *renal colic* (which see, under *colic*).

nephrocyst (nef′rọ̄-sist), *n.* [Gr. *νεφρός*, kidney, + *κύστις*, bladder.] One of the kidneys of certain larval mollusks, consisting of a few large vacuolated cells which contain excreta in the form of fluid or concretions.

> The larva also possesses additional organs of excretion, two in number, lying bilaterally in the anterior region of the body cavity. These, the "*nephrocysts*," are composed of but a few large vacuolated cells which contain concretions and fluid excreta. The origin of these cells has not been determined definitely, but they are probably derived from the mesoderm.
>
> *Amer. Nat.*, July–Aug., 1904, p. 506.

nephrocystitis (nef″rọ̄-sis-tī′tis), *n.* [NL., < Gr. *νεφρός*, kidney, + *κύστις*, bladder, + *-ιτις.*] Inflammation of both the kidney and the bladder.

nephrocyte (nef′rō-sīt), *n.* [Gr. *νεφρός*, kidney, + *κύτος*, a hollow (a cell).] An excretory cell, with fibrillar or vacuolated cytoplasm, which contains masses of waste products. Such cells occur in the track of the blood-currents in the *Crustacea.*

> More recently Masterman (1894) has asserted that collar cells [of sponges] when full fed become amœboid and pass into the parenchyma as trophocytes, . . . and that further, after having distributed their nutriment to the parenchymal cells, they take up waste products and migrate to the surface of the body, where they act as *nephrocytes.* It seems more than probable that these statements are founded on mistaken observations.
>
> *E. R. Lankester*, Treatise on Zoology, II. 57.

nephrogastric (nef-rọ̄-gas′trik), *a.* [Gr. *νεφρός*, a kidney, + E. *gastric.*] Pertaining to the kidneys and the stomach. *Syd. Soc. Lex.*

nephrogenic (nef-rọ̄-jen′ik), *a.* Same as ★*nephrogenous.*

nephrogenous (ne-froj′e-nus), *a.* [Gr. *νεφρός*, kidney, + *-γενης*, -producing, + *-ous.*] Originating in the kidney.

nephrolith (nef′rọ̄-lith), *n.* [Gr. *νεφρός*, kidney, + *λίθος*, stone.] A kidney-stone or renal calculus.

nephrolysin (nef-rol′i-sin), *n.* [*nephrolys*(*is*) + *-in*^{2}.] Same as ★*nephrotoxin.*

nephrolysis (ne-frol′i-sis), *n.* [NL., < Gr. *νεφρός*, kidney, + *λύσις*, dissolution.] 1. Destruction of the cells of the kidney by a toxin or other morbid agent in the blood.—2. The loosening or destruction of pathological adhesions which bind the kidney to the surrounding tissues.

> Rovsing's "*nephrolysis*," or destruction of adhesions after nephrotomy, was successfully tried in three cases, and it seems to be indicated when the adhesions are particularly extensive and tough.
>
> *Med. Times*, Aug., 1907, p. 230.

nephrolytic (nef-rọ̄-lit′ik), *a.* [*nephrolysis* (*-lyt-*) + *-ic.*] Causing the destruction of renal epithelial cells by the corresponding cytotoxin: as, a *nephrolytic* serum. *Med. Record*, July 18, 1903, p. 84.

nephromalacia (nef″rọ-ma-lā′si-a̤), *n.* [NL., ‹ Gr. νεφρός, kidney, + μαλακία, softness.] Softening of the kidneys.

nephromegaly (nef-rọ-meg′ạ-li), *n.* [NL. **nephromegalia*, ‹ Gr. νεφρός, kidney, + μέγας (μεγαλ-), great.] Enlargement of one or both kidneys.

nephromere (nef′rọ-mēr), *n.* [Gr. νεφρός, kidney, + μέρος, part.] That part of the mesoderm which forms the kidneys.

> Those [muscles] originating in the *nephromere* or region of the segmental organs. *Encyc. Brit.*, XXV. 399.

nephromeric (nef-rọ-mer′ik), *a.* [*nephromere* + *-ic.*] Of or pertaining to the nephromere.

> The muscles which are derived from the *nephromeric* region, sometimes called hypaxial or hyposkeletal muscles, are a few, small aberrant somatopleural slips. *Encyc. Brit.*, XXV. 399.

nephromixium (nef-rọ-mik′si-um), *n.*; pl. *nephromixia* (-a̤). In certain worms, one of the organs which perform both excretory and genital functions.

> In other words, the duct does not issue from the centre of the funnel as in the sperm-ducts of other Oligochæta. It is suggested that here is a composite organ, such as Goodrich has described in several Polychæta, and termed by Lankester "*nephromixium*." It would appear that the sperm-ducts are not absolutely homologous throughout the Oligochæta. *Jour. Roy. Micros. Soc.*, Feb., 1905, p. 56.

nephroncus (nef-rong′kus), *n.*; pl. *nephronci* (-ron′sī). [NL., ‹ Gr. νεφρός, kidney, + ὄγκος, mass.] Tumor of the kidney.

nephropathy (nef-rop′ạ-thi), *n.* [Gr. νεφρός, kidney, + πάθος, disease.] Disease of the kidneys.

nephropexy (nef′rọ-pek-si), *n.* [Gr. νεφρός, kidney, + πῆξις, fastening, fixing.] A surgical operation for fixing a floating kidney in position. *Med. Record*, March 7, 1903, p. 389.

nephrophthisis (ne-frof′thi-sis), *n.* [NL., ‹ Gr. νεφρός, kidney, + φθίσις, consumption.] Tuberculosis of the kidney.

Nephropsidæ (nef-rop′si-dē), *n. pl.* [NL., *Nephrops* + *-idæ.*] A family of macrurous decapod crustaceans. They have a subcylindric carapace bearing a prominent rostrum; the second antennæ with a long multiarticulate flagellum; the segments of the pleon imbricated; the epipodial plates large; and a well developed podobranchial plume attached to all the trunk-legs except the last pair. The family includes six genera, among which are *Nephrops*, *Astacus*, and *Nephropsis.*

nephroptosis (nef-rop-tō′sis), *n.* [NL., ‹ Gr. νεφρός, kidney, + πτῶσις, falling.] Downward displacement of the kidney; floating or wandering kidney. *Med. Record*, March 7, 1903, p. 389.

nephropyosis (nef″rọ-pi-ō′sis), *n.* [NL., ‹ Gr. νεφρός, kidney, + πύον, pus, + *-osis.*] Suppuration of the kidney.

nephroscleria (nef-rọ-sklē′ri-a̤), *n.* [NL., ‹ Gr. νεφρός, kidney, + σκληρός, hard.] A hardening of the kidneys through the formation of much new fibrous tissue.

nephrosclerosis (nef″rọ-sklẹ-rō′sis), *n.* [NL., ‹ Gr. νεφρος, kidney, + σκληρός, hard, + *-osis.*] Same as ★*nephroscleria.*

nephrostomial (nef-rọ-stō′mi-a̤l), *a.* [*nephrostome* + *-i-al*^{1}.] Of or pertaining to the nephrostome of a nephridium.

> In all Pisces, with the exception of certain Elasmobranchii, the mesonephric bodies retain connection with the cœlom by means of the *nephrostomial* tubules. *Proc. Zool. Soc. London*, 1903, p. 338.

nephrotome (nef′rọ-tōm), *n.* [Gr. νεφρός, kidney, + -τομος, ‹ ταμεῖν, cut.] A segmental portion of the mesoblast, which, in the vertebrate, gives rise to the embryonic kidneys, that is, the pronephros and mesonephros. *Philos. Trans. Roy. Soc.* (London), 1895, ser. B, p. 166.

nephrotomization (nef-rot″ọ-mi-zā′shọn), *n.* The operation of nephrotomizing; nephrotomy.

nephrotomize (nef-rot′ọ-mīz), *v. t.*; pret. and pp. *nephrotomized*, ppr. *nephrotomizing.* [*nephrotom*(*y*) + *-ize.*] To subject to the operation of nephrotomy.

nephrotoxic (nef-rọ-tok′sik), *a.* [Gr. νεφρός, kidney, + τοξικόν, poison.] Same as ★*nephrolytic.* *Vaughan and Novy*, Cellular Toxins, p. 144.

nephrotoxin (nef-rọ-tok′sin), *n.* [Gr. νεφρός, kidney, + τοξ(ικόν), poison, + *-in*^{2}.] A cytotoxin, resulting on immunization with renal epithelial cells.

nephrotyphoid (nef-rọ-tī′foid), *n.* [Gr. νεφρός, kidney, + E. *typhoid.*] Acute inflammation of the kidneys associated with the presence of typhoid bacilli.

nephrotyphus (nef-rọ-tī′fus), *n.* [NL., ‹ Gr. νεφρός, kidney, + E. *typhus.*] Severe inflammation of the kidneys complicating typhus fever.

Nephthya (nef′thi-a̤), *n.* [NL.] The typical genus of the family *Nephthyidæ.* *Savigny.*

Nephthydidæ (nef-thid′i-dē), *n. pl.* [NL.] Same as ★*Nephthyidæ*^{2}.

Nephthyidæ^2 (nef-thī′i-dē), *n. pl.* [NL., ‹ *Nephthya* + *-idæ.*] A family of alcyonaceans having a branched cœnenchyma with a sterile base and terminal polyps. It contains a number of genera, among them being *Nephthya*, *Siphonogorgia*, and *Ammothea.*

nepiastic (nep-i-as′tik), *a.* [Gr. νήπιος, an infant, + *-ast-* + *-ic.*] Noting that condition in the development of the compound individual or colony which corresponds to the nepionic stage in the simple individual.

> The *nepiastic* stage is taken to represent the period from the formation of the primary buds [in the Bryozoa], i.e., those buds which are given off by the protœcium, to the establishment of the definite budding habit of the colony. *Cumings*, in Amer. Jour. Sci., Jan., 1904, p. 56.

nepiasty (nep′i-as-ti), *n.* [*nepiast*(*ic*) + *-y*^{3}.] The nepiastic condition. See ★*nepiastic.*

nepionic (nep-i-on′ik), *a.* [Gr. νήπιος, an infant, + *-on* + *-ic.*] In evolution or auxology, a stage in ontogeny immediately succeeding the embryonic and broadly equivalent to infancy; in *entom.*, larval: contrasted with ★*neanic*, ★*ephebic*, 2, and ★*gerontic.*

> For larval Hyatt proposes the term *nepionic.* *A. S. Packard*, Text-book of Entom., p. 594.

> The *nepionic* stage of shell growth begins with the second whorl. *Amer. Nat.*, Aug., 1903, p. 517.

nepticulid (nep-tik′ụ-lid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Nepticulidæ.*

II. *a.* Having the characters of or belonging to the family *Nepticulidæ.*

Neptune's cup. (*a*) Same as *Neptune's spoon-worm.* (*b*) A Sumatran coral, *Alcyonium poculum.*— **Neptune's girdle.** See ★*girdle*^{1}.— **Neptune's sleeve**, a popular name for any lace-coral of the genus *Retepora.*

neptune-bond (nep′tūn-bond″), *n.* The trade-name for a copper bond used to make a good electrical connection between the adjacent ends of two rails.

neptunic (nep-tū′nik), *a.* [*Neptune* + *-ic.*] In *geol.*, deposited in water; sedimentary.

> The descriptive terms are compounded of two elements, the first being descriptive of the materials (I, plutonic, II, *neptunic*, III, metamorphic). *Amer. Geol.*, May, 1904, p. 302.

neptunicentric (nep″tū-ni-sen′trik), *a.* [L. *Neptunus*, Neptune, + Gr. κέντρον, center.] In *astron.*, having Neptune as a center.

Neptunism (nep′tụn-izm), *n.* [L. *Neptunus*, god of the sea, + *-ism.*] A geological doctrine, chiefly developed and supported by A. G. Werner (1750–1817), professor in the Mining Academy of Freiberg, Saxony, according to which the ancient crystalline schists and gneisses and even later basalts when interstratified with obvious sedimentary rocks, were precipitated from solution in the ocean: also *Wernerianism*: the opposite of *Plutonism* or ★*Huttonianism.*

neptunite (nep′tụ-nīt), *n.* [*Neptune* + *-ite*^{2}.] A titano-silicate of iron, manganese, sodium, and potassium, occurring in black prismatic crystals. It is found in southern Greenland.

neptunium (nep-tū′ni-um), *n.* [NL., ‹ L. *Neptunus*, Neptune.] In *chem.*, a supposed new element announced by Hermann in 1877 as present in columbite and ferro-ilmenite. Its existence has not been confirmed.

nereidiform (nē-rẹ-id′i-fôrm), *a.* [*Nereis* (*-d-*) + *-form.*] Belonging to the suborder *Nereidiformia*, or resembling the worms of this group.

Nereis, *n.* 1. (*b*) [*l. c.*] A marine worm of the genus *Nereis.*

nerfling (nėr′fling), *n.* [G. *nerfling*, *nörfling*, a dial. variant of *örfling*, dim. of *orf*, the ide, ‹ L. *orphus*, ‹ Gr. ὄρφος, Attic ὀρφώς, a kind of sea-perch (NGr. ὀρφός, ὀρφάς, blackfish).] The ide or golden ide, *Leuciscus idus*, a fish found in the central and northern parts of Europe.

nerianthin (nē-ri-an′thin), *n.* [*Nerium* + Gr. ἄνθος, flower, + *-in*^{2}.] A glucoside contained in the leaves of *Nerium oleander.* It resembles the glucosides of *Digitalis*, and, when hydrolyzed, yields resinous compounds.

neriin (nē′ri-in), *n.* [*Nerium* + *-in*^{2}.] A glucoside contained in the leaves and bark of *Nerium oleander.* It resembles nerianthin.

Nerinea (nẹ-rin′ẹ-a̤), *n.* [NL., ‹ L. *Nerine*, a feminine name for **Nereine*, ‹ Gr. Νηρηίνη, a Nereid, ‹ Νηρεύς, Nereus.] A genus of platypodous gastropods characterized by turreted shells in which the columella and inner and outer lips bear simple folds or corrugations which greatly contract the interior of the whorls. It occurs in Jurassic and Cretaceous rocks.

neriodorein (nē″ri-ọ-dō′rẹ-in), *n.* [See ★*neriodorin.*] An intensely bitter, amorphous glucoside associated with neriodorin in the bark and seeds of *Nerium odorum.*

neriodorin (nē″ri-ọ-dō′rin), *n.* [From the botanical name of the plant from which it is derived.] A light yellow, bitter, varnish-like glucoside contained in the bark and seeds of *Nerium odorum.*

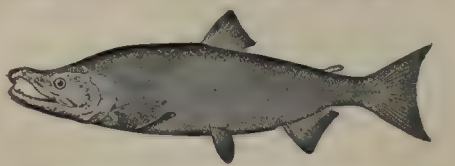
neritic (nẹ-rit′ik), *a.* [Gr. νηρός, ναρός, flowing (see *Nereid*), + *-it-ic.*] Of or pertaining to the water near the coast, as contrasted with the high sea.

> Special conditions of wind and current may of course carry into the *neritic* zone forms which are characteristic of the open sea, and vice versâ. *Encyc. Brit.*, XXXIII. 936.

Neritic plankton. See ★*plankton.*

neritidan (nẹ-rit′i-da̤n), *n.* A gastropod of the family *Neritidæ.*

nerka (när′ka̤), *n.* [Russ. *nyarka.* Prob. a Tunguse name.] The most abundant salmon of Alaska, *Oncorhynchus nerka*, found from the Klamath and Rogue rivers northward to Kamchatka and Japan. Also called *red salmon*, *redfish*, *blueback*, and *sawqui.*



Oncorhynchus nerka; breeding male, large form.
(From Bulletin 47, U. S. Nat. Museum.)

Nernst lamp. See ★*lamp*^{1}.

nerocurrent (nē′rọ-kur-ẹnt), *n.* [Gr. νηρός, flowing, + L. *currens*, current.] An oceanic current near to and influenced by the coast.

> The fishermen, pilots, etc., are very well acquainted with these local coast currents, which we will briefly call *nerocurrents.* *Haeckel* (trans.), Planktonic Studies, in Rep. U. S. Fish [Com., 1889–91, p. 625.

nerol (nē′rol), *n.* [*ner*(*oli*) + *-ol.*] A colorless liquid terpene alcohol, $C_{10}H_{18}O$, contained in French oil of orange-flowers and in other essential oils. It boils at 225–227° C.

neroli (nē′rō-li), *n.* [F. *néroli*, so called from an Italian princess *Neroli*, said to have discovered it.] An oil extracted from the flowers of the bitter orange; a French perfume. Also *neroli-oil* and *oil of neroli.*

nerolin (nē′rō-lin), *n.* [*neroli* + *-in*^{2}.] A colorless compound, $CH_3\overset{2}{O}C_{10}H_7$, prepared by the action of methyl alcohol and zinc chlorid on β-naphthylamine. It crystallizes in small plates, melts at 72° C., boils at 274° C., and has an odor of neroli-oil. Also called *β-naphthyl methyl ether.*

Neronian (nẹ-rō′ni-a̤n), *a.* Pertaining to the Roman emperor Nero (54–68 A.D.), or to his reign; characteristic of or resembling Nero; grossly cruel and tyrannical.

Neronic (nẹ-ron′ik), *a.* Same as ★*Neronian.*

Neronize (nē′rọn-īz), *v. t.* and *i.*; pret. and pp. *Neronized*, ppr. *Neronizing.* [*Neron*(*ic*) + *-ize.*] To render like Nero; to become or act like Nero.

nerv, *n.* and *v. t.* A simplified spelling of *nerve.*

nerval, *a.* **II**†. *n.* A healing ointment for the sinews. *N. E. D.*

nervate (nėr′vāt), *a.* [*nerve* + *-ate*^{1}.] In *bot.*, having nerves or veins; nerved: said of leaves.

nerve, *n.*— **Galen's nerve**, an anastomotic twig which connects the superior with the ascending branch of the inferior laryngeal nerve.— **Intestinal nerve**, in *ornith.*, a term applied by Mitchell to that portion of the sympathetic system which supplies the intestine. It arises usually from two or three main nerves, which leave the ganglia corresponding to the solar plexus and the ganglia over the ovary and suprarenal capsule, and enter the mesenteric expanse. *Trans. Linnean Soc. London*, Zool., Oct., 1901, p. 259.— **Mixed nerve**, a nerve which contains both motor and sensory fibers.— **Musculospiral nerve**, a nerve which passes around the humerus, in the musculospiral groove, down the arm and forearm, supplying in its branches the muscles on the back and radial side of the forearm, and a part of the skin of the fingers.

—**Nerve formula.** See ★*formula.*—**Nerve of arrest.** Same as *inhibitory nerve* (which see, under *inhibitory*).—**Pain nerve,** in *neurol.*, a specific sensory nerve whose function is the conduction of pain stimuli.

> He [Goldscheider] admits pain points (points sensible to pain), but not a specific organ for pain nor special nerves to transmit it. Frey, on the other hand, professes to have proved experimentally both *pain nerves* and appropriate terminal organs.
> *Ribot* (trans.), Psychol. of Emotions, p. 27.

Spino-occipital nerves, nerves from the spinal and occipital regions: a term used in connection with the distribution of nerves in fishes.

nerve-cavity (nėrv′kav″i̤-ti), *n.* The pulp-cavity of a tooth, which contains the nerve-terminations.

nerve-excitation (nėrv′ek-si-tā″sho̤n), *n.* In *neurol.*, the excitatory process conducted by a nerve-fiber, afferent or efferent.

> By irritating the extremities of the sensory nerves, this external stimulation becomes a *nerve-excitation*. This *nerve-excitation* is another physiological process, that may also be properly regarded as physical or chemical.
> *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 22.

nerve-papilla (nėrv′pạ-pil″a̤), *n.* Same as ★*neurothele.*

nerve-plasma (nėrv′plas″ma̤), *n.* Same as ★*neuroplasm.*

nerve-ring, *n.*—**Circumesophageal nerve-ring,** the ganglion or nerve-center encircling the gullet: found in many invertebrates and typically present in the lobster. Also called *nerve-collar.*

nerve-root (nėrv′röt), *n.* Either of two species of *Cypripedium, C. acaule* and *C. hirsutum.*—**Water nerve-root,** the swamp milkweed or white Indian hemp, *Asclepias incarnata.*

nerve-sheath (nėrv′shēth), *n.* Same as *neurilemma.*

nerve-sign (nėrv′sīn), *n.* Any symptom indicative of disease of or injury to the nerves or nervous centers.

nervine, *n.*—**Male nervine,** the yellow lady's-slipper, *Cypripedium hirsutum.* Also called *nerve-root.*

nervism (nėr′vizm), *n.* [*nerve* + *-ism.*] Nerve-force; also, nervous excitement. *N. E. D.* [Rare.]

nervomuscular (nėr″vọ-mus′kụ-la̤r), *a.* Same as *neuromuscular.*

nervosism (nėr′vọ-sizm), *n.* [L. *nervosus*, nervous, + *-ism.*] 1. Neurasthenia.—2. The theory that disease is due to variations in nervous force.

nervous, *a.*—**Central nervous system,** the brain and spinal cord.

nervulation (nėr-vụ-lā′sho̤n), *n.* [*nervule* + *-ation.*] Same as *nervation* (*b*).

nervulose (nėr′vụ-lōs), *a.* [*nervule* + *-ose.*] In *bot.*, having many fine nerves.

nervuration (nėr-vụ-rā′sho̤n), *n.* [*nervure* + *-ation.*] Same as *nervation* (*b*).

nervus, *n.*—**Nervi erigentes,** branches of the sacral nerves which supply the base of the bladder and the sides of the prostate gland; erection nerves. Stimulation of these nerves causes an erection of the penis.

neshannock (ne-shan′ọk), *n.* [So called from *Neshannock*, in Mercer county, Pennsylvania. This local name, which also appears in *Neshannock* Falls, Lawrence county, Pennsylvania, and in *Neshanic*, New Jersey, is of Amerindian origin. According to some, the potato is also called *meshanic*, which indicates a source in Delaware *meshanik* (?), Ojibwa *misanik*, black squirrel.] A white-fleshed variety of potato. [Pennsylvania.]

> *Neshánnock.* A white-fleshed variety of potato, which has obtained its name from the region of Pennsylvania where it first became noteworthy.
> *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 251.

neshness (nesh′nes), *n.* [*nesh* + *-ness.*] The character of being nesh; softness; tenderness; weakness or delicacy of constitution.

> "What did she die from?"
> "I don't know for certain; but I should be inclined to think it was from general *neshness* of constitution. She was such a limber maid that 'a could stand no hardship."
> *T. Hardy*, Madding Crowd, xli.

Nesopithecidæ (nes″ọ-pi-thē′si-dē), *n. pl.* [NL., < *Nesopithecus*, the type genus, + *-idæ.*] A family of lemurs, based on a single species, *Nesopithecus roberti.* They have the orbital cavity open behind; the upper incisors oblique, the middle pair much enlarged; the upper canine with a basal cingulum; and the upper molars quadritubercular. *Forsyth Major*, 1896.

nesquehonite (nes-ke-hō′nīt), *n.* [*Nesquehon*(*ing*) (see def.) + *-ite*^{2}.] Hydrous magnesium carbonate, $MgCO_3 + 3H_2O$, occurring in orthorhombic crystals and white fibrous masses: found in a coal-mine at Nesquehoning, Schuylkill county, Pennsylvania, and similarly elsewhere.

Nessler jar. See ★*jar*^{3}.

nest^1 *n.*—**Cocks' nests,** the nests which the wren builds but never uses, supposed to be intended to cheat and mislead the enemy. *Athenæum*, July 29, 1905, p. 143.

nest-aura (nest′â″ra̤), *n.* The aura or 'atmosphere' of the nest, by the perception of which ants are able to distinguish their own colonies or nests. The organ of this sense is supposed to be in the distal joint of the antenna.

> A single worker may live apparently well in isolation for six months. Familiarity with the *nest-aura* does not reconcile aliens. The kings have the distinctive odour of their blood-relations.
> *Jour. Roy. Micros. Soc.*, Feb., 1903, p. 35.

nest-epiphyte (nest′ep″i-fīt), *n.* See ★*epiphyte*, 1 (*c*).

nester (nes′tėr), *n.* A bird or other animal that makes a nest.

nest-fungus (nest′fung″gus), *n.*; pl. *nest-fungi* (-fun″jī). Any fungus belonging to the family *Nidulariaceæ.* See *bird's-nest fungus.*

nest-gearing (nest′gēr″ing), *n.* A pair or set of gears inclosed in a box or case, as in the head of a capstan.

nestiatria (nes″ti-a̤-trī′a̤), *n.* [NL., < Gr. νήστις, fasting, + ἰατρεία, medical treatment.] The treatment of disease by the withholding of food. Also called *hunger-cure* and *nestitherapy* or *nestotherapy.*

nestitherapy, nestotherapy (nes-ti-ther′a̤-pi, nes-tọ-ther′a-pi), *n.* [Gr. νήστις, fasting, + θεραπεία, medical treatment.] Same as ★*nestiatria.*

Nestorianize (nes-tō′ri-a̤n-īz), *v. i.*; pret. and pp. *Nestorianized*, ppr. *Nestorianizing.* To adopt Nestorian views; become Nestorian.

nest-root (nest′röt), *n.* The Indian-pipe, *Monotropa uniflora*, so called in allusion to its root-parasitic habit.

nesty (nes′ti), *a.* Full of nests or of markings resembling nests. [Nonce-word.]

> His eyes would be pulled down like to the *nesty*, streaky water.
> *R. Kipling*, The Disturber of Traffic, in Many Inventions, p. 10.

net^1, *n.* 9. In *cricket*, an open fabric of twine placed so as to enable batsmen to practise without inconveniencing one another. *Hutchinson*, Cricket, p. 50.—10. In *mining*, a heavy leather harness used for lowering or raising horses in a shaft. [Scotch.]—**Bathypelagic net, bathygraphic net,** a pelagic net, or towing-net, which may be let down, closed, to any desired depth, then opened and towed through the water, and then again closed and brought to the surface. Any organisms it may contain are thus, evidently, inhabitants of the water at the depth to which it was lowered. The existence of a rich and diversified fauna in the water of the ocean, down to a depth of more than a mile, has been proved by the use of this net.—**Gnomonic net,** the imaginary lines of latitude and longitude as represented by the gnomonic projection. *Nature*, Feb. 18, 1904, p. 382.—**Müller's net,** a pelagic net: so named because first used by Johannes Müller in 1845.—**Pelagic net,** a net used by students of marine biology for collecting the delicate organisms, larvæ, and microscopic plants that float or swim in the water. It is a bag of fine silk bolting-cloth, kept open by a hoop or rim, and either dragged gently through the water by a towing-line, or fastened to a short handle and used as a dipping-net. In either case the net is soon lifted carefully from the water and inverted into sea-water contained in a bucket or glass jar, into which its contents are washed off for examination.—**Spherical net,** a system of spherical polygons just covering the surface of a sphere once, twice, or more.—**Wheatstone's net,** in *elect.*, a divided circuit of the type of which the Wheatstone bridge is the simplest form.

net^2, *a.*—**Net ton.** See ★*ton*^{1}.

net., nett. [See *net*^{2}.] Abbreviations of the Italian *netto*, free from all deductions.

net-cutter (net′kut″ėr), *n.* A device attached to the nose of a torpedo for cutting a torpedo-net.

net-fork (net′fôrk), *n.* In *lawn-tennis*, a metal bar standing upright in the middle of a tennis-net, the lower part of it being inserted in the ground, to hold up the middle of the net to the required height and give the net stability.

Neth. An abbreviation of *Netherlands.*

Netherlandic (neᴛʜ′ėr-lan-dik), *a.* Same as *Netherlandish.* *Encyc. Brit.*, XXXI. 294.

Netherlandish, *a.* II. *n.* The language spoken by the Netherlanders; Dutch.

neti (nā′tẹ), *n.* [Chamorro name.] In Guam, *Xiphagrostis floridula*, a tall perennial grass with terminal feathery panicles, growing in damp places and covering vast treeless savannas on the hilltops. The edges of the leaves are armed with minute sharp teeth which are very apt to inflict painful cuts upon those passing through a neti thicket, and which give to the plant the name of *sword-grass.* The leaves form an excellent thatch, much more durable than that of coconut leaves with which the houses of the island are usually covered. See cut under ★*cutting-grass.*

net-knot (net′not), *n.* A kind of nucleolus which stains like chromatin and is probably to be regarded as a mere enlargement of the chromatin network of the cell-nucleus. Same as ★*karyosome*, 1. *Buck*, Med. Handbook, III. 72.

net-lace (net′lās), *n.* Same as *punto a reticello* ★*lace.*

netop (nē′top), *n.* [Also *netup, neetup*; < Narragansett **netop*, Natick *neetomp* = Powhatan *netoppu* (Ojibwa *nita*), 'my brother' or 'my kinsman,' < *ne-*, a prefix, my, + *weetompain*, a friend, prob. < *weetu-, weto-*, dwell with, + *-omp*, an element meaning 'man,' and appearing also in Natick *mugwomp* (whence *mugwump*) and other words.] A friend (used at first in reference to New England Indians); a crony; a chum.

> Mr. Harum and I are great "*neetups*," as he says.
> *E. N. Westcott*, David Harum, XXXIII.

> *Netop.* A word once very commonly used in Massachusetts and some other parts of New England in the sense of "friend," and (later) "crony," "chum."
> *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 251.

net-play (net′plā), *n.* In *lawn-tennis*, the play of the player who stands nearest the net, and who usually volleys.

Netrocera (net-ros′ẹ-ra̤), *n.* [NL., < Gr. νῆτρον, a spindle, + κέρας, horn.] 1. A genus of lepidopterous insects. *Felder*, 1874.—2. A suborder of *Lepidoptera* proposed by Haase to include the family *Hesperiidæ* only. On account of the preoccupation of the name, as given above, Reuter's name *Grypocera* has been substituted.

Nettastoma (ne-tas′tọ-ma̤), *n.* [NL., < Gr. νῆττα, duck, + στόμα, mouth.] A genus of eels found in the Mediterranean Sea.

Nettastomidæ (net-a̤-stom′i-dē), *n. pl.* [NL., < *Nettastoma* + *-idæ.*] A family of deep-sea eels.

nettle^1, *n.*—**Bee-nettle.** (*a*) See *bee-nettle.* (*b*) The white dead-nettle, *Lamium album.*—**Blind nettle.** Same as *bee-*★*nettle* in both senses. **Burning nettle,** the small nettle, *Urtica urens.*—**Canada nettle.** See *wood-*★*nettle.*—**Day-nettle,** either the red dead-nettle, *Lamium purpureum*, or the white dead-nettle, *L. album.*—**Deaf nettle,** the red dead-nettle, *Lamium purpureum.*—**Dog-nettle,** either the hemp-nettle or the red dead-nettle.—**Dumb nettle,** the white dead-nettle.—**Flowering nettle.** Same as *bee-*★*nettle* in both senses.—**French nettle,** the red dead-nettle.—**Sand-nettle,** the spurge-nettle.—**Slender nettle,** *Urtica gracilis.* See *Urtica.*—**Tall wild nettle.** Same as *slender* ★*nettle.*—**Weak nettle,** *Urtica chamædryoides*, a delicate species which grows in thickets in the southern United States.—**Wood-nettle,** *Urticastrum divaricatum*, a North American nettle-like plant. It is an unofficial alterative, etc. See *Laportea.* Also called *Canada nettle* and *Albany hemp.*

nettle-animal (net′l-an″i-ma̤l), *n.* An animal provided with nettle-cells or stinging-cells; one of the *Cœlenterata.*

nettle-grub (net′l-grub), *n.* Either of two stinging caterpillars of the lepidopterous family *Limacodidæ*, which feed on the tea-plant in East India. The larva of *Thosia divergens* is known as the *Assam brown-and-green-striped nettle-grub*, and the larva of *Parasa lepida* is known as the *blue-striped nettle-grub.*

nettle-potato (net′l-pọ-tā″tō), *n.* Same as *queen's-delight.*

Netuma (ne-tū′ma̤), *n.* [NL.] A genus of catfishes of the family *Siluridæ*, found in warm seas.

netup, *n.* Same as ★*netop.*

network, *n.*—**Chiari's network,** a network of fine fibers sometimes found stretching across the interior of the right auricle of the heart. *Lancet*, June 25, 1904, p. 1806.—**Network hypothesis,** the opinion that the network of branching fibers that forms a framework in three dimensions, in some cells, is the fundamental structure of all protoplasm.—**Polygonal network,** in topographical surveying of large areas or ranges, a system of intersecting surveys on the polygonal method forming a network of traverse survey-lines covering an area or range. See *polygonal* ★*method.*

> Nearly 12,000 miles of *polygonal network* have been measured in the Andine Valley.
> *Geog. Jour.* (R. G. S.), XVI. 343.

Neudeckian (noi-dek′i-a̤n), *a.* and *n.* [*Neudeck*, Silesia, + *-ian.*] In *geol.*, noting a division of glacial time and deposits in Europe regarded by James Geikie as the third interglacial epoch, represented by marine and fresh-water deposits between the boulder-clays of the southern Baltic coast. It was preceded by the Polandian or third glacial epoch and followed by the Mecklenburgian or fourth glacial epoch.

Neudorf sands. See ★*sand*^{1}.

Neuhoff's diagram. See ★*diagram.*

Neumann's bacillus. See ★*bacillus.*

Neurachne (nū-rak′nẹ), *n.* [NL. (Robert Brown, 1810), < Gr. νεῦρον, nerve, + ἄχνη, chaff;

in allusion to the marking of the glumes.] A genus of grasses which includes 3 species, all natives of Australia, characterized by the ovoid or cylindrical spike and sessile spikelets, and a single terminal hermaphrodite flower with rarely a male flower below it. *N. Mitchelliana* is a low thickly-growing species which endures drought and produces a good pasture feed. See ★*mulga-grass*.

neural, *a.*—**Neural cavity**, the cavity of the cranium and vertebral canal, containing the brain and spinal cord.—**Neural crest.** See ★*crest*.—**Neural plate.** Same as ★*neural*.—**Neural process.** See ★*process*.

II. *n.* One of the bony plates that lie upon and fuse with the summit of the spinous process and take part in the formation of the carapace of a turtle.

neurale (nụ-rā'lē), *n.*; pl. *neuralia* (-li-ạ̈). [NL. *neurale*, neut. of **neuralis*. See *neural*.] A neural plate or neural.

neuralgia, *n.*—**Cardiac neuralgia.** Same as *angina pectoris*.—**Crural neuralgia.** Same as *sciatica*.—**Facial neuralgia**, severe pain in one or more of the branches of the fifth or trigeminal nerve. Also called *tic-douloureux, face-ache, brow-ague, infra-orbital neuralgia, maxillary neuralgia*, etc.—**Femoropopliteal neuralgia.** Same as *sciatica*.—**Infra-orbital neuralgia, maxillary neuralgia.** Same as *facial* ★*neuralgia*.—**Morton's neuralgia**, a form of neuralgia of the plantar nerves; metatarsalgia. Also called *Morton's foot* and *Morton's toe*.—**Plantar neuralgia.** Same as *erythromelalgia*.—**Red neuralgia.** Same as *erythromelalgia*.

neuramœbimeter (nụ-ram-ẹ̄-bim'e-tėr), *n.* [Gr. *νεῦρον*, nerve, + *ἀμοιβή*, exchange, response, + *μέτρον*, measure.] A device for determining the rapidity of nervous impulses, or the duration of the simple reaction, by recording the time between the application of a stimulus and the movement made in response to it.

neurarthropathy (nū-rär-throp'ạ-thi), *n.* [Gr. *νεῦρον*, nerve, + E. *arthropathy*.] Disease of the joints involving also disease of the nerves.

neurasthenia, *n.*—**Cerebral neurasthenia.** Same as *cerebrasthenia*.—**Gastric neurasthenia**, impaired digestion associated with nervous exhaustion. *Lancet*, June 25, 1904, p. 1797.

neurastheniac (nū-ras-thē'ni-ak), *n.* [*neurasthenia* + *-ac*.] One who suffers from neurasthenia.

Whether the "*neurastheniacs*" that present themselves at the clinic for diseases of the nervous system are in reality cases of psychasthenia or neurasthenia it was difficult to decide. *Lancet*, June 18, 1904, p. 1737.

neurastheny (nụ-ras'the-ni), *n.* [See *neurasthenia*.] **1.** In *path.*, nervous weakness; neurasthenia. Hence—**2.** Moral weakness; lack of moral principles.

It is frequent that among vagabonds, robbers, thieves, and other criminals against property there is a physical and moral *neurastheny*, a term coined by Benedikt, of Vienna. *Smithsonian Rep.*, 1890, p. 660.

neuraxial (nụ-rak'si-ạl), *a.* [*neuraxis*.] Of or pertaining to the neuraxis.

neuraxis (nụ-rak'sis), *n.* [NL., ‹ Gr. *νεῦρον*, nerve, + L. *axis*, axis.] **1.** The central nervous system; the brain and spinal cord.—**2.** Same as ★*neuraxon* or *axis-cylinder*. *Parker and Haswell*, Zoology, I. 28.

neuraxon (nụ-rak'son), *n.* [Gr. *νεῦρον*, nerve, + *ἄξων*, axis.] The axis-cylinder of the nerve- or ganglion-cell, as distinguished from its other processes, the dendrites.

Whatever may in the end be shown to be the exact differences in nature and action between the dendrites and the *neuraxon*, this at least seems sure, that cell plays upon cell only by such a kind of contact as seems to afford an opportunity for change in the figure of the dance—that is to say, in the nature of the impulse—and that in at least the ordinary play it is the terminal of the *neuraxon* (either of the main core or a collateral) of one cell which touches with a vibrating touch the dendrite or the body of some other cell.
M. Foster, in Smithsonian Rep., 1897, p. 450.

neurectasia (nū-rek-tā'ẓiạ̈), *n.* [NL.] Same as ★*neurectasis*.

neurectasis (nụ-rek'tạ-sis), *n.* [NL., ‹ Gr. *νεῦρον*, nerve, + *ἔκτασις*, stretching, extension.] The surgical operation of stretching a nerve.

neurectasy (nụ-rek'tạ-si), *n.* Same as ★*neurectasis*.

neurectopia (nū-rek-tō'pi-ạ̈), *n.* [NL., ‹ Gr. *νεῦρον*, nerve, + *ἔκτοπος*, out of place.] Congenital displacement or accidental dislocation of a nerve.

Neurenteric pore. See ★*pore*².

neurhypnology (nūr-hip-nol'ọ-ji), *n.* [Gr. *νεῦρον*, nerve, + E. *hypnology*.] Same as *neurohypnology*.

neurilemmal (nū-ri-lem'ạl), *a.* [*neurilemma* + *-al*¹.] Of or pertaining to the neurilemma or nerve-sheath.

From the microscopic study of the distal portions of divided nerve-trunks we arrived at the conclusion that the activity of the *neurilemmal* cells has some relation to the development of the new nerve-fibres.
Rep. Brit. Ass'n Advancement of Sci., 1902, p. 782.

neurine, *n.* **3.** The substance of which nerve-tissue is composed, consisting chiefly of fat and albumin containing phosphorus.—**4.** An extract made from nerve-tissue, employed therapeutically.

neurite (nū'rīt), *n.* [Gr. *νεῦρον*, nerve, + *-ite*².] In *neurol.*, the principal process or axis-cylinder process of a nerve-cell; a neuraxon: opposed to ★*dendrite*.

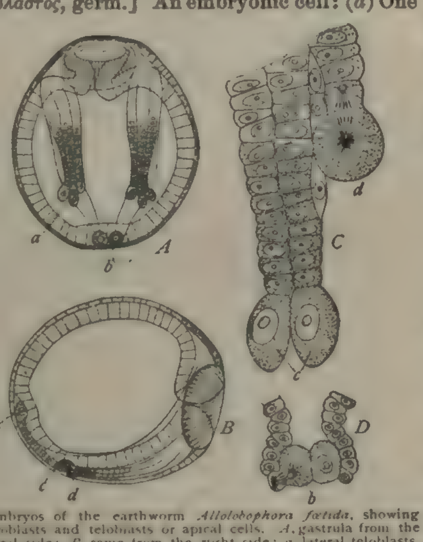
The nerve-cells are characterised by their processes, one of which usually passes over directly into a nerve-fibre, while the others ramify, if not immediately, after running a brief course, into fine fibrils. The former is called the axis-cylinder, nerve-process or *neurite*; the latter are termed protoplasmic processes or dendrites.
W. Wundt (trans.), Physiol. Psychol., I. 41.

neuritis, *n.*—**Alcoholic neuritis**, multiple neuritis due to chronic poisoning by alcohol.—**Ascending neuritis**, inflammation of a nerve extending gradually from the periphery toward its origin.—**Descending neuritis**, inflammation of a nerve which progresses gradually in a direction from the origin of the nerve toward the periphery.—**Peripheral neuritis**, inflammation of the terminal nerves or of the nerve-endings.—**Pressure neuritis**, inflammation of a nerve caused by compression.—**Tabetic neuritis**, degenerative inflammation of the nerves occurring in locomotor ataxia.—**Toxic neuritis**, inflammation of the nerves caused by the action of some poison, such as alcohol, arsenic, or lead, circulating in the blood.

neuro-anatomical (nū"rọ-an-ạ-tom'i-kạl), *a.* [Gr. *νεῦρον*, nerve, + E. *anatomical*.] Relating or pertaining to the anatomy or structure of the nervous system. *Biol. Bulletin*, Jan., 1904, p. 90.

neuro-anatomy (nū"rō-ạ-nat'ọ-mi), *n.* [Gr. *νεῦρον*, nerve, + E. *anatomy*.] The anatomy of the nervous system.

neuroblast (nū'rō-blåst), *n.* [Gr. *νεῦρον*, nerve, + *βλαστός*, germ.] An embryonic cell: (*a*) One of two large cells or teloblasts which are situated at the posterior end of the body in the annelid embryo and larva and give rise to the ventral nerve-cord of the adult animal. *Whitman.* (*b*) One of the cells in the embryonic brain and spinal cord of vertebrates. These cells are said to give rise without division to the ganglion-cells. *His.* (*c*) In arthropod embryos, certain ectodermal cells which proliferate inward from the surface to form rows of elements that become the ganglion-cells. *Wheeler.*



Embryos of the earthworm *Allolobophora fœtida*, showing neuroblasts and teloblasts or apical cells. *A*, gastrula from the ventral side; *B*, same from the right side; *a*, lateral teloblasts, comprising a neuroblast, *d*, from which the ventral nerve-cord arises, and two nephroblasts, *c*, of somewhat doubtful nature, but probably concerned in the formation of the nephridia; *b*, the terminal teloblasts or primary mesoblasts, which bud forth the mesoblast-bands, cell by cell; *C*, lateral group of teloblasts, more enlarged, the neuroblast, *d*, in division; *c* the nephroblasts; *D*, the primary mesoblasts enlarged, one in division.
(From Wilson's "The Cell.")

neuroblastic (nū-rọ-blas'tik), *a.* [*neuroblast* + *-ic*.] Of or pertaining to neuroblasts.

neurocentrum (nū-rọ-sen'trum), *n.*; pl. *neurocentra* (-trạ̈). [Gr. *νεῦρον*, nerve, + *κέντρον*, center.] One of a pair of vertebral elements (arcualia) lying on the dorsal face of the notochord from which the spinous process and its adjoining processes are developed. The neurocentra of Osborn correspond with the basidorsalia of Gadow, and neural arches of others.

The '*neurocentra*' correspond with the neural arches or neuropophyses of authors.
Science, Feb. 12, 1904, p. 257.

neurochitin (nū-rọ-kī'tin), *n.* [Gr. *νεῦρον*, nerve, + E. *chitin*.] A compound, resembling chitin, which constitutes the supporting framework of the nervous tissue.

neurochondrite (nū-rọ-kon'drīt), *n.* [Gr. *νεῦρον*, nerve, + *χονδρίτης*, made of coarse meal, cartilaginous, ‹ *χόνδρος*, coarse meal, cartilage.] One of two cartilaginous elements that by growth and ossification become the neural arch of a completed vertebra. When fully formed in cartilage they are known as the *neuroids*: correlated with *centrochondrite* and ★*pleurochondrite*.

Starting with the terms chondrite and osteite already proposed (p. 43), the cartilages of which any vertebral segment is formed will be called respectively the centrochondrite, *neurochondrites*, and pleurochondrites. By the concrescence of these is formed a cartilaginous vertebra, the regions of which are centrum, neuroids, and pleuroids.
Phil. Trans. Roy. Soc. London, ser. B, 1891, p. 72.

neurochord (nū'rọ-kôrd), *n.* [Gr. *νεῦρον*, sinew (nerve), + *χορδή*, a cord.] A cord of giant fibers which, in the earthworms and their allies and in some of the thoracostracous *Crustacea*, accompanies the ventral nervous system, on its dorsal surface. It is commonly regarded as a degenerated nervous structure which has acquired a supporting function, serving a purpose similar to that of the notochord in vertebrates.

Immediately above the notochord there lies another subcylindrical chord, also surrounded by a sheath of connective tissue. This chord is neither elastic nor solid, but consists of nerve tissue, fibres, and ganglion cells, surrounding a small central canal. For the sake of uniformity in nomenclature this nerve chord may be called the *neurochord*. It is the central nervous system, and contains within itself the elements of the brain and spinal marrow of higher forms. The *neurochord* tapers towards its posterior end, where it is coextensive with the notochord, but ends abruptly in front, some distance behind the tip of the snout. *Encyc. Brit.*, XXV. 386.

neurochordal (nū-rọ-kôr'dạl), *a.* [*neurochord* + *-al*¹.] Of or pertaining to a neurochord.

neuroclonic (nū-rọ-klon'ik), *a.* [Gr. *νεῦρον*, nerve, + *κλόνος*, spasm. See *clonic*.] Marked by or exhibiting nervous spasms.

neurocord, *n.* Same as ★*neurochord*.

neurocyte (nū'rọ-sīt), *n.* [Gr. *νεῦρον*, nerve, + *κύτος*, a hollow (a cell).] In *neurol.*: (*a*) Any adult nerve-cell within the central nervous system, together with its processes of whatever sort.

The conception that underlies his theory is that the *neurocytes* possess a kind of amœboid movement.
Amer. Jour. Psychol., XII. 165.

(*b*) The cell-body of such a nerve-cell.

neurodegenerative (nū"rọ-dẹ̄-jen'ẹ-rạ̄-tiv), *a.* [Gr. *νεῦρον*, nerve, + E. *degenerative*.] Pertaining to, or characterized by, nervous degeneration.

Spitzka, in defining paranoia, states that it is "based on an acquired or transmitted *neurodegenerative* taint."
Med. Record, Aug. 17, 1907, p. 263.

neurodendrite (nū-rọ-den'drīt), *n.* [Gr. *νεῦρον*, nerve, + *δενδρίτης*, of a tree: see *dendrite*.] One of the branching processes given off from a neurone: distinguished from the axis-cylinder process or neuraxon.

neurodendron (nū-rọ-den'drọn), *n.*; pl. *neurodendra* (-drạ̈), *neurodendrons* (-drọnz). [NL., ‹ Gr. *νεῦρον*, nerve, + *δένδρον*, tree.] In *neurol.*: (*a*) The arborization or terminal ramification of the processes of a nerve-cell; a neurodendrite.

He confines the amœboid movement to the extremities of the *neurodendrons*. *Amer. Jour. Psychol.*, XII. 165.

(*b*) Same as ★*neurocyte* (*a*).

neuroderm (nū'rọ-dėrm), *n.* [Gr. *νεῦρον*, nerve, + *δέρμα*, skin.] The ectoderm, or epiblast of the embryo: so called because it gives rise to the nervous system. *Lankester.*

neurodermal (nū-rọ-dėr'mạl), *a.* [*neuroderm* + *-al*¹.] Of or pertaining to the neuroderm.

neurodermatosis (nū"rọ-dėr-mạ-tō'sis), *n.* [NL., ‹ Gr. *νεῦρον*, nerve, + *δέρμα*(*τ*-), skin, + *-osis*.] Same as ★*dermatoneurosis*.

neurodiagnosis (nū"rọ-dī-ag-nō'sis), *n.* [NL., ‹ Gr. *νεῦρον*, nerve, + *διάγνωσις*, diagnosis.] Diagnosis of diseases of the nervous system. *Alien. and Neurol.*, Feb., 1903, p. 21.

neurodin (nū'rọ-din), *n.* [Gr. *νευρώδης*, nervous (sinewy), + *-in*².] The trade-name for acetyl-p-hydroxyphenylurethane, $CH_3COO\overset{4}{C}_6$-$H_4\overset{1}{N}HCOOC_2H_5$, a colorless crystalline compound used in medicine as an antineuralgic and antipyretic.

neurodynamic (nū″rọ-dī-nam′ik), *a.* [Gr. *νεῦρον*, nerve, + *δύναμις*, force.] In *neurol.*, of or pertaining to nervous energy and its discharge.

> This interrelation may be either direct, *neurodynamic*, or indirect, vasomotoric. The first is probably due to the fact that energy which accumulates in one region as the result of inhibition, is discharged through the connecting fibres into other central regions.
> *W. Wundt* (trans.), Outlines of Psychol., p. 274.

neurodynia (nū-rō-din′i-a̤), *n.* [NL., < Gr. *νεῦρον*, nerve, + *ὀδύνη*, pain.] Same as *neuralgia.*

neuro-enteric (nū″rọ-en-ter′ik), *a.* Same as *neurenteric.*

neuro-epidermal (nū″rọ-ep-i-dėr′ma̤l), *a.* Of or pertaining to the nervous system and the epidermis: as, the *neuro-epidermal* layer of the vertebrate embryo.

neuro-epithelioma (nū″rọ-ep-i-thē-li-ō′ma̤), *n.*; pl. *neuro-epitheliomata* (-ma̤-tä). [Gr. *νεῦρον*, nerve, + NL. *epithelioma.*] A tumor arising in neuro-epithelial tissue.

neuro-equilibrium (nū″rọ-ē-kwi-lib′ri-um), *n.* [Gr. *νεῦρον*, nerve, + L. *æquilibrium.*] The condition of even nervous tension in which there is a ready response to stimuli of whatever nature. *Baldwin*, Dict. of Philos. and Psychol., II. 437.

neurofibril (nū-rō-fī′bril), *n.* Same as ⋆*neurofibrilla*. *Jour. Exper. Med.*, Oct. 1, 1900, p. 21, note.

neurofibrilla (nū″rọ-fī-bril′a̤), *n.*; pl. *neurofibrillæ* (-ē). [NL., < Gr. *νεῦρον*, nerve, + NL. *fibrilla*, fibril.] The very delicate fibrils that have been found to lie within the ganglion-cells and their neuraxons and dendrites.

> In the ganglion-cells and their processes there is no known differentiation of *neurofibrillæ*.
> *Encyc. Brit.*, XXXI. 793.

neurofibrillar (nū-rọ-fī′bri-lär), *a.* [*neurofibrilla* + *-ar*³.] Of or pertaining to the neurofibrils or neurofibrillæ.

neurofibroma (nū″rọ-fi-brō′mä), *n.*; pl. *neurofibromata* (-ma̤-tä). [NL., < Gr. *νεῦρον*, nerve, + E. *fibroma.*] A tumor of a nerve, caused by circumscribed overgrowth of the fibrous tissue. *Med. Record*, June 13, 1903, p. 926.

neurofibromatosis (nū″rọ-fi-brō-ma-tō′sis), *n.* [NL., < *neurofibroma(t-)* + *-osis.*] The occurrence of one or more neurofibromata, or a general increase of fibrous tissue in the nerves. *Med. Record*, June 13, 1903, p. 925.

neurogenic, neurogenous (nū-rọ-jen′ik, nụ-roj′e-nus), *a.* [Gr. *νεῦρον*, nerve, + *-γενης*, -producing.] Originating in the nerves or in nervous substance. *Buck*, Med. Handbook, III. 111.

neuroglandular (nū-rọ-glan′dụ-lär), *a.* [Gr. *νεῦρον*, nerve, + E. *glandular.*] Having the characteristics of sensory and glandular organs: as, the *neuroglandular* pit of some *Nemertini*. Compare ⋆*cerebral organ.*

neuroglia-cell (nụ-rog′li-a̤-sel″), *n.* Same as ⋆*glia-cell.*

neuroglioma (nū″rog-li-ō′ma), *n.*; pl. *neurogliomata* (-ma̤-tä). [NL., < Gr. *νεῦρον*, nerve, + NL. *glioma.*] A tumor formed of overgrowth of the neuroglia; a glioma.

neurohematology (nū″rō-hem-a̤-tol′ọ-ji), *n.* [Gr. *νεῦρον*, nerve, + E. *hematology.*] The study of the changes in the composition of the blood occurring in diseases of the nervous system. *Alien. and Neurol.*, Aug., 1907, p. 431.

neurohistologist (nū″rọ-his-tol′ọ-jist), *n.* [*neurohistolog(y)* + *-ist.*] One who makes a special study of the microscopic structure of the nervous system. *Buck*, Med. Handbook, II. 336.

neurohistology (nū″rọ-his-tol′ō-ji), *n.* [Gr. *νεῦρον*, nerve, + E. *histology.*] The department of histology which treats of the minute structure of the nervous tissues and their elements, the neurones. *Buck*, Med. Handbook, V. 40.

neurohypnotic (nū″rọ-hip-not′ik), *a.* [*neurohypnotism.*] Same as *hypnotic.*

neurolemma, *n.* Same as *neurilemma.*

neurolite (nū′rọ-līt), *n.* [Gr. *νεῦρον*, string, sinew, tendon, nerve, + *λίθος*, stone.] A soft yellow hydrated aluminium silicate occurring in fibrous masses, wood-like in aspect: from Stanstead, Province of Quebec.

neurolymph (nū′rọ-limf), *n.* [Gr. *νεῦρον*, nerve, + L. *lympha*, fluid.] The cerebrospinal fluid.

neurolysin (nụ-rol′i-sin), *n.* [Gr. *νεῦρον*, nerve, + E. *lysin.*] A cytotoxin resulting on immunization with nerve-cells.

neurolysis (nụ-rol′i-sis), *n.* [NL., < Gr. *νεορον*, nerve, + *λύσις*, dissolution.] 1. Destruction of nerve-substance; the physiological action of neurolysins.—2. The state of exhaustion in a nerve due to over-stimulation.

neurolytic (nū-rọ-lit′ik), *a.* [*neurolysis.*] Of or pertaining to, or of the nature of, neurolysis: (*a*) having a destructive action upon nerve-substance; (*b*) exhausting a nerve by over-stimulation.

neuroma, *n.*—**Amputation neuroma**, a tumor due to enlargement of the end of a nerve in the stump after an amputation.—**False neuroma**, a tumor situated on a nerve-trunk, but not composed of any nervous elements.

neuromechanism (nū-rō-mek′a̤-nizm), *n.* [Gr. *νεῦρον*, nerve, + E. *mechanism.*] The structure or arrangement of the nerves and nerve-centers in relation to any function. *Buck*, Med. Handbook, I. 647.

neuromerism (nụ-rom′ẹ-rizm), *n.* [Gr. *νεῦρον*, nerve, + *μέρος*, part, + *-ism.*] The state or condition of metamerism, or segmentation in the central nervous system.

neurometer (nụ-rom′e-tėr), *n.* [Gr. *νεῦρον*, a nerve, + *μέτρον*, a measure.] A means of measuring nerve-force. [Rare.]

> The nitrous oxyd approaches nearer to the notion of a *neurometer* than anything which perhaps could be devised; and I was acted upon by a far smaller dose than any person upon whom it had ever been tried.
> *Southey*, Life xxiv.

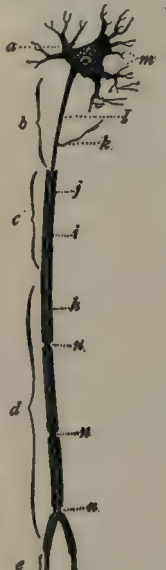
neuromyic (nū-rọ-mī′ik), *a.* [Gr. *νεῦρον*, a nerve, + *μῦς*, muscle.] Same as *neuromuscular.*

neuromyomere (nū-rọ-mī′ọ-mēr), *n.* [Gr. *νεῦρον*, nerve, + *μῦς*, muscle, + *μέρος*, part.] A segment or metamere of the central nervous system, with the myomere or muscle-segment belonging to it. *Philos. Trans. Roy. Soc.* (London), 1895, ser. B, p. 216.

neuromyositis (nū″rọ-mī-ọ-sī′tis), *n.* [Gr. *νεῦρον*, a nerve, + E. *myositis*. See *myositis.*] Inflammation of both nerves and muscles.

neuron, *n.* 3. Same as ⋆*neurone.*

neuronal (nū-rō′na̤l), *a.* [*neurone* + *-al*¹.] Of or pertaining to a neurone. *Alien. and Neurol.*, Nov., 1907, p. 520.



Schema of a Neurone (after Verworn).
a, nerve-cell; *b*, naked axis-cylinder; *c*, axis-cylinder clothed with medullary sheath; *d*, axis-cylinder clothed with medullary sheath and neurilemma; *e*, axis-cylinder clothed with neurilemma; *f*, naked axis-cylinder; *g*, terminal branches; *h*, neurilemma; *i*, axis-cylinder; *j*, medullary sheath; *k*, collateral branch; *l*, axis-cylinder process; *m*, dendrites; *n*, *n*, *n*, nodes of Ranvier. (From Hall's "Physiology.")

neurone (nū′rōn), *n.* [Gr. *νεῦρον*, nerve, + *-one* (Gr. *-ων*).] 1. One of the structural elements of the nervous system; a nerve-cell together with all its processes, the neuraxon and the dendrites.

> The primordial segmentation of the vertebrate nervous centres has become overlaid and masked by the development of groups of *neurones*, which combine, co-ordinate, and otherwise influence the relations of the segmental nerve-cells. This is true of the spinal cord, but much more so of the brain.
> *Encyc. Brit.*, XXV. 399.

2. The axis-cylinder of a nerve-cell.

> The brain here grows by the addition of cells in the indifferent stage, but as soon as these cells are differentiated they conform to the general law and divide no more (*neurones*) or slowly (glia cells).
> *C. S. Minot*, in Science, March 29, [1901, p. 488.

Neurone theory, the theory that the nervous system is composed of independent nerve-cells (neurones) which are not united anatomically with one another.

neuronic (nụ-ron′ik), *a.* [*neurone* + *-ic.*] Of or pertaining to, or of the nature of, neurones.

> The object of the present research has been to indicate the exact region of the cortex to which the visuo-sensory function is limited. For this purpose it has been unnecessary to pay attention to the special *neuronic* structure of this portion of the cerebrum but the general histology of the cortex referred to . . . has been considered minutely.
> *Philos. Trans. Roy. Soc.* (Lon- [don), 1900, ser. B, p. 166.

neuronophage (nụ-ron′ọ-fāj), *n.* [*neurone* + Gr. *φαγος*, < *φαγεῖν*, eat.] One of the neuroglia cells which have been supposed to eat or prey on injured nerve-cells. *Med. Record*, July 18, 1903, p. 86.

neuronophagocytosis (nū″-rọ-nọ-fag″ọ-sī-tō′sis), *n.* [*neurone* + *phagocytosis.*] In *pathol.*, the destruction of the neurones of ganglion cells by phagocytes. *Buck*, Med. Handbook, VI. 261.

neuronym (nū′rọ-nim), *n.* [Gr. *νεῦρον*, a nerve, + *ὄνυμα*, a name. See *onym.*] The anatomical name of a nerve. *B. G. Wilder.* [Rare.]

neuronymy (nụ-ron′i-mi), *n.* [*neuronym* + *-y*³.] Neurological nomenclature. *Baldwin*, Dict. of Philos. and Psychol., II. 174.

neuroparalysis (nū″rọ-pa̤-ral′i-sis), *n.* [NL., < Gr. *νεῦρον*, nerve, + *παράλυσις*, paralysis.] Paralysis due to lesion of a nerve rather than to disease or destruction of the nervous centers.

neuroparalytic (nū″rọ-par-a̤-lit′ik), *a.* [*neuroparalysis* (*-lyt-*) + *-ic.*] Relating to or resulting from loss of conducting power in a nerve.

neuropathia (nū-rọ-path′i-ä), *n.* [NL.] Same as *neuropathy*. *Brinton*, Basis of Social Relations, p. 109.

neuropathist (nụ-rop′a̤-thist), *n.* [*neuropath(y)* + *-ist.*] One who is versed in the study and treatment of nervous diseases.

neuropathogenesis (nū″rọ-path-ọ-jen′e-sis), *n.* [Gr. *νεῦρον*, nerve, + *πάθος*, disease, + *γένεσις*, origination.] The development of disease of the nervous system.

> His lectures on *neuropathogenesis*, gout, leprosy, diseases of the tongue, &c., were full of original observation.
> *Encyc. Brit.*, XXIX. 367.

neuropile (nū′rọ-pīl), *n.* [Gr. *νεῦρον*, nerve, + L. *pilus*, hair.] One of the delicate, ultimate branches of a nerve-cell process.

> It was easy to decide this question by separating the ganglion-cells with their axis-cylinder process from the motor neurons without injuring the *neuropiles*.
> *J. Loeb*, Comp. Physiol. of the Brain, p. 45.

neuropilem (nụ-rop′i-lem), *n.* [Gr. *νεῦρον*, nerve, + L. *pilus*, hair.] An interweaving mass of minute fibrils forming the termination of a nerve. *Baldwin*, Dict. of Philos. and Psychol., II. 175.

neuroplasm (nū′rọ-plazm), *n.* [Gr. *νεῦρον*, nerve, + *πλάσμα*, anything formed.] The protoplasm, or the living substance of the nerve-cells and their fibrillæ. Also called *nerve-plasma.*

neuroplasmic (nū-rọ-plaz′mik), *a.* [*neuroplasm* + *-ic.*] Of or pertaining to the neuroplasm, or protoplasm of the nerve-cells.

neuroplasty (nū′rọ-plas-ti), *n.* [Gr. *νεῦρον*, nerve, + *πλαστός*, formed, + *-y*³.] Surgical reunion of divided nerve-trunks and other forms of plastic surgery of the nerves.

neuropod (nū′rọ-pod), *n.* [Gr. *νεῦρον*, a nerve, + *πούς* (*ποδ-*), foot.] An invertebrate animal, as a worm, in which the neuropodia are well developed; an animal in which the limbs are upon the neural aspect of the body.

neuropodion (nū-rọ-pō′di-on), *n.*; pl. *neuropodia* (-ä). [See *neuropodium.*] One of the terminal branches of the axon of a neurone; a dendraxon.

neuropodous (nụ-rop′ọ-dus), *a.* [*neuropod(ium)* + *-ous.*] Having the neuropodia well developed; also, having the limbs on the neural instead of the hemal side of the body, as many worms and other invertebrates.

neuropsychic (nū-rọ-sī′kik), *a.* [Gr. *νεῦρον*, nerve, + E. *psychic.*] In *neurol.*, pertaining to or characteristic of the nerve-centers that form the substrate of mind.

> Electric energy is synonymous with *neuropsychic* energy. *Amer. Anthropologist*, Oct.-Dec., 1902, p. 767.

neuropsychical (nū-rọ-sī′ki-ka̤l), *a.* Same as ⋆*neuropsychic.*

neuropsychological (nū″rọ-sī-kọ-loj′i-ka̤l), *a.* [*neuropsycholog(y)* + *-ical.*] Pertaining to, or of the nature of, neuropsychology.

neuropsychologist (nū″rọ-sī-kol′ọ-jist), *n.* [*neuropsycholog(y)* + *-ist.*] One who is versed in neuropsychology.

neuropterist (nụ-rop′tẹ-rist), *n.* [*Neuropter(a)* + *-ist.*] One who is versed in the study of the *Neuroptera.*

neuropteroid (nụ-rop′tẹ-roid), *a.* [*Neuroptera* + *-oid.*] Having the characters of, or belonging to, the old Linnean order *Neuroptera.*

> Thus the *Odonata*, *Trichoptera*, and *Mecaptera*, although split off into independent orders, may be referred to as belonging to the neuropteroid series.

Neuropteroidea (nụ-rop-tẹ-roi′dẹ-a̤), *n. pl.* [NL., < *Neuroptera* + *-oidea.*] A suborder of fossil insects including those forms which resemble the *Neuroptera.*

neurorthopteran (nū-rôr-thop'tẹ-rạn), *a.* and *n.* [*Neurorthoptera* + *-an.*] **I.** *a.* Pertaining to or having the characters of the *Neurorthoptera.*

II. *n.* A member of the *Neurorthoptera.*

neurosclerosis (nū'rọ̄-sklẹ̄-rō'sis), *n.* [NL., < Gr. *νεῦρον*, nerve, + *σκλήρωσις*, hardening.] Overgrowth of the fibrous structure in a nerve-trunk, encroaching upon and destroying more or less the nervous substance.

neurosis, *n.* **3.** In *neurol.*, a process of nervous excitation: used thus generally only in opposition to *psychosis*, a mental process.

"No psychosis without *neurosis*": there is no mental state which has not a peculiar nervous state corresponding to it. *E. B. Titchener*, Outline of Psychol., p. 360.

Occupation neurosis, any nervous affection, such as writers' cramp, which is directly referable to the person's occupation as a cause.

neurosome (nū'rọ̄-sōm), *n.* [Gr. *νεῦρον*, nerve, + *σῶμα*, body.] In *neurol.*, one of the minute particles in the ground-substance of the cytoplasm of a neurone. *Buck*, Med. Handbook, II. 326.

neurospasm (nū'rọ̄-spazm), *n.* [Gr. *νεῦρον*, nerve, + *σπασμός*, spasm.] A muscular spasm of nervous origin.

neurospongium (nū-rọ̄-spon'ji-um), *n.* [NL., < Gr. *νεῦρον*, nerve, + *σπογγιά*, sponge.] A fine meshwork of minute fibrillæ traversing the granular matrix of the optic tract in certain insects. *Hickson.*

neurostearic (nū"rọ̄-stē-ar'ik), *a.* [Gr. *νεῦρον*, nerve, + E. *stearic.*] Noting an acid, a colorless compound, $C_{17}H_{35}COOH$, prepared by the action of dilute sulphuric acid on phrenosin, a glucoside found in the brain. It melts at 84° C.

neurosteite (nụ-ros'tẹ̄-īt), *n.* [Gr. *νεῦρον*, nerve, + *ὀστέον*, bone, + *-ite*².] The center of ossification in the cartilaginous segments or neuroids that, by ossifying, become the neural arch: correlated with *chondrosteite* and ★*pleurosteite.*

When ossification takes place one or two centres appear in the body, the centrosteites, one in each neuroid, the *neurosteites*, which extend ventrad into the body, and one in each pleuroid, the pleurosteites. Thus the entire centrum of the bony vertebra, although co-extensive with that of its cartilaginous predecessor, consists not only of the single or paired centrosteites but of the ventral ends of the *neurosteites.*
Phil. Trans. Roy. Soc. (London), ser. B, 1891, p. 73.

neurosthenia (nū-rọ̄-sthē'ni-ạ̈), *n.* [NL., < Gr. *νεῦρον*, nerve, + *σθένος*, strength.] Excessive irritability of the nerves.

neurosurgery (nū-rọ̄-sėr'jėr-i), *n.* [Gr. *νεῦρον*, nerve, + E. *surgery.*] Surgery of the nervous system. *Alien. and Neurol.*, Aug., 1904, p. 404.

neurotabes (nū-rọ̄-tā'bēz), *n.* [Gr. *νεῦρον*, nerve, + L. *tabes*, wasting.] Multiple neuritis with symptoms resembling tabes dorsalis.

neurotendinous (nū-rọ̄-ten'di-nus), *a.* [Gr. *νεῦρον*, nerve, + L. *tendo* (*tendin-*), tendon, + *-ous.*] Relating to both nerve and tendon: noting the nerve-terminations in tendons.

neurothele (nū'rọ̄-thēl), *n.* [NL., < Gr. *νεῦρον*, nerve, + *θηλή*, nipple.] A papilla in the skin which contains tactile corpuscles or other forms of nerve termination. Also called *nerve-papilla.*

neuroticism (nụ-rot'i-sizm), *n.* [*neurotic* + *-ism.*] A condition of exalted or perverted nervous or psychic action.

neurotization (nū-rot-i-zā'shọn), *n.* [*neurotiz(e)* + *-ation.*] Reunion of a nerve after division.

neurotize (nū'rọ̄-tīz), *v. t.*; pret. and pp. *neurotized*, ppr. *neurotizing.* [Gr. **νευρωτός* (< *νευροῦν*, nerve, < *νεῦρον*, a nerve) + *-ize.*] To reunite and restore the axis-cylinder of (a nerve) after it has been divided. *Buck*, Med. Handbook, VIII. 274.

neurotome (nū'rọ̄-tōm), *n.* [Gr. *νεῦρον*, nerve, + *-τομος*, < *ταμεῖν*, cut.] **1.** A long two-edged scalpel used in the dissecting of nerves.—**2.** Same as *neuromere.*

neurotomist (nụ-rot'ọ̄-mist), *n.* [*neurotom(y)* + *-ist.*] One who practises neurotomy or section of the nerves; a dissector of the nerves.

neurotonic, *n.* **II.** *a.* **1.** Tending to improve the general tone of the nervous system.—**2.** Relating to the tonus of a nerve.—**Neurotonic reaction**, contraction of a muscle which persists after the removal of the stimulus which excited it.

neurotoxic (nū-rọ̄-tok'sik), *a.* [Gr. *νεῦρον*, nerve, + E. *toxic.*] Causing the destruction of nerve-cells by means of neurotoxins.

It is possible by replacement experiments in vitro to demonstrate the occupation of the receptors by the neurotoxin of serum and the consequent exclusion of the *neurotoxic* constituent of venom.
Science, July 3, 1903, p. 12.

neurotoxical (nū-rọ̄-tok'si-kạl), *a.* Same as ★*neurotoxic. Sci. Amer.*, Sept. 30, 1905, p. 256.

neurotoxin (nū-rọ̄-tok'sin), *n.* [Gr. *νεῦρον*, nerve, + E. *toxin.*] A cytotoxin which results on immunization with nerve-tissue.

neurotropic (nū-rọ̄-trop'ik), *a.* [Gr. *νεῦρον*, nerve, + *-τροπος*, < *τρέπειν*, turn.] Influenced, by way of attraction or repulsion, by nervous tissue. *Buck*, Med. Handbook, VI. 270.

neurotropism (nụ-rot'rọ̄-pizm), *n.* Same as ★*neurotropy.*

neurotropy (nụ-rot'rọ̄-pi), *n.* [*neurotrop(ic)* + *-y*³.] In *histol.*, the attraction or repulsion of certain substances for nerve-tissue; especially the affinity of nerve-cells for certain stains. *Buck*, Med. Handbook, VI. 270.

neurovaricosis (nū-rọ̄-var-i-kō'sis), *n.* [NL., < Gr. *νεῦρον*, nerve, + NL. *varix* (*varic-*), varix, + *-osis.*] The formation of bead-like swellings along the course of a nerve.

neurovascular (nū-rọ̄-vas'kụ̄-lär), *a.* [Gr. *νεῦρον*, a nerve, + E. *vascular.*] Both nervous and vascular: as, *neurovascular* tension. *Allbutt*, Sys. Med., VIII. 609.

neurula (nū'rö-lạ̈), *n.*; pl. *neurulæ* (-lē). [NL., < Gr. *νεῦρον*, nerve, + dim. *-ula.* See *-ule.*] An early stage in embryonic development, characterized by the first appearance of the central nervous system.

neururgic (nụ-rėr'jik), *a.* [Gr. *νεῦρον*, nerve, + *ἔργον*, work.] Relating to, or of the nature of, nerve action.

On the contrary, we would have assumed that the correspondence between what I have called *neururgic* and noetic changes is thoroughgoing; that not only is there no modification of consciousness without a *neururgic* change; but that no *neururgic* change can occur without a corresponding modification of consciousness.
Jour. Philos., Psychol. and Sci. Methods, June 9, 1904, [p. 310.

Neusser's perinuclear granules. See ★*granule.*

neutral. **I.** *a.* **8.** In *metal.*: (*a*) Neither acid nor basic: said of slag and linings. (*b*) Neither red-short nor cold-short: said of wrought-iron. (*c*) Suitable for production of neutral iron: said of iron-ore.—**Arago's neutral point.** See ★*point*¹.—**Babinet's neutral point.** See ★*point*¹. **Neutral ammeter**, an ammeter connected with the neutral conductor of a three-wire circuit.—**Neutral armature**, in *telegraphy*, the armature of a nonpolarized relay.—**Neutral brick, conductor, oil,** etc. See ★*brick*², etc.—**Neutral zone.** (*a*) See *neutral.* (*b*) See ★*zone.*

II. *n.* **2.** Specifically, in some United States colleges and universities, one who belongs to none of the Greek-letter or other secret societies.

The distinction [at German universities, between the corps-students and others] resembles that which exists at Yale, for instance, between "society-men" and *neutrals.*
J. M. Hart, German Universities, p. 70.

3. In *elect.*, the neutral conductor of a three-wire circuit.

If the ground were in the primary coils of a transformer, it was possible to get a voltage of four or five times the regular pressure of the system. It was always better to ground the *neutral.*
Elect. World and Engin., April 11, 1903, p. 607.

neutralism (nū'trạl-izm), *n.* [*neutral* + *-ism.*] The character or state of being neutral; neutrality.

It is not . . . unreasonable to ask of those "Religions of the Future" . . . that they will equip themselves with a substantial shape, with a worship, a ministry, and a flock. . . . But, when they have done this, their *neutralism* will be at an end, denominationalism will have made them prisoners; the denominationalism of Groningen or Tübingen, instead of that of Utrecht or Geneva.
M. Arnold, Pop. Educ. of France, p. 221.

neutralization, *n.* **3.** [From the French.] In *motor-racing*, the act of neutralizing or rendering neutral. See ★*neutralize*, 4.

France was entitled to select the course, and her choice fell upon the Auvergne Circuit, located in a mountainous and thinly populated section, where there are no cities or large towns to require frequent *neutralizations.*
Automobile Topics, European Sup., May 27, 1905, p. 2.

Heat of neutralization. See ★*heat.*—**Richter's law of neutralization.** See ★*law*¹.

neutralize, *v. t.* **4.** In *motor-racing*, to give a neutral character to (a town or to a specified part of a road), that is, to arrange that the time used in passing through or over it is not to be counted in the race.

Fournier made an average speed of 53 miles an hour to Bordeaux—a distance (after deducting the *neutralized* sections) of 328 miles. *Encyc. Brit.*, XXXI. 13.

The first stage, to Bordeaux, which was the only one allowed by the authorities, passed through Chartres, Poitiers, and Angoulème. A number of different villages were *neutralized*, and the chauffeurs were given from 5 to 25 minutes to make the passage. The total time which was allowed for passing through the towns was 3 hours 32 minutes; and this was not counted in the speed contest.
Sci. Amer. Sup., June 20, 1903, p. 22958.

neutraloid (nū'trạ̈-loid), *n.* [*neutral* + *-oid.*] See the extract.

Neutraloids are non-fermentable oxidized hydrocarbons that are somewhat related to glucosoids. Aloin, elaterin, and glycyrrhizin are varieties of *neutraloids.*
Sci. Amer. Sup., Feb. 29, 1908, p. 138.

neutrophile, *a.* **II.** *n.* A leucocyte, or colorless blood-corpuscle, containing granules that stain in neutral dyes. *Med. Record*, Feb. 28, 1903, p. 347.

neutrophilic (nū-trọ̄-fil'ik), *a.* Same as *neutrophile.*

The invading cells are endothelial cells, *neutrophilic* and eosinophilic polymorphonuclear leucocytes, mononuclear eosinophiles, and cells of the lymphocytic series.
Jour. Med. Research, Dec., 1906, p. 486.

neutrophilous (nụ-trof'i-lus), *a.* Same as *neutrophile.*

neutrosaline (nū-trọ̄-sạ̄-līn'), *a.* In *chem.*, having the character of a neutral salt or a mixture of neutral salts.

Neuvizyan (nė-viz'i-ạ̈n), *a.* and *n.* [Named from *Neuvizy*, a village of France.] In *geol.*, noting a division of the Jurassic system in France and the Jura Mountains equivalent to the Lower Oxfordian of England.

Nev. An abbreviation of *Nevada.*

Nevada blue-grass, clover. See ★*blue-grass*, ★*clover.*

Nevadan (nẹ̄-vä'dạn), *a.* Of or pertaining to the State of Nevada or to the Sierra Nevada: as, the *Nevadan* desert.

nevado (nā-vä'dō), *n.* [Sp. *nevado*, snowy, of snow, < L. *nivatus*, cooled with snow, < *nix* (*niv-*), snow: see *nival.*] A violent dry, cold wind which blows down the slopes of the Andes in the more elevated portions of Colombia, South America, from about 7 A.M. to sunset.

Nevers pottery. See ★*pottery.*

nevjanskite (nev'yän-skīt), *n.* [*Nevjansk*, in Siberia, + *-ite*².] A variety of the iridium-osmium alloy iridosmium, containing a relatively large amount of iridium.

nevus, *n.* See *nævus.*

New Connection, woman. See ★*connection*, ★*woman.*

Newark half-crown, series. See ★*half-crown*, ★*series.*

Newberg circles. See ★*circle.*

Newburg (nū'bėrg), *n.* [Appar. from the city of Newburg, N. Y.] A preparation of delicate meat or shell-fish, stewed usually in cream, thickened with eggs and flavored with wine: frequently made in a chafing-dish. Also *Newberg*, *Newburgh.*

newburn-weed (nū'bėrn-wēd), *n.* In the Bahamas, the blood-leaf or Juba's-bush, *Iresine paniculata.* See *Iresine.*

Newcastle coal-measures. See ★*coal-measures.*

newel¹, *n.*—**Hollow newel**, the open space around which a flight of stairs is disposed, especially spiral stairs: a misnomer.

new-fallen (nū'fâ"ln), *a.* Newly or recently fallen: as, *new-fallen* snow.

Meantime forget this *new-fall'n* dignity.
Shak., As You Like It, v. 4.

New Guinea balls. See ★*ball*¹.

newkirkite (nū'kėrk-īt), *n.* [*Newkirk*, translating G. *Neukirchen*, where found, + *-ite*².] A mineral, a variety of manganite, from Neukirchen in Alsace.

new-laid (nū'lād), *a.* Newly laid.

And *new laid* eggs, which Baucis' busy care
Turn'd by a gentle fire, and roasted rare.
Dryden, tr. of Ovid, Baucis and Philemon, l. 97.

new-lighted (nū'lī"ted), *a.* Newly alighted.

A station like the herald Mercury
New-lighted on a heaven-kissing hill.
Shak., Hamlet, iii. 3.

New M. An abbreviation of *New Mexico.*

new-made (nū'mād), *a.* Newly or freshly made: as, *new-made* bread.

Suffolk, the *new-made* duke that rules the roast.
Shak., 2 Hen. VI., i. 1.

Newmanism (nū'mạn-izm), *n.* The religious views and theories of John Henry Newman (1801-90), during the period just prior to his conversion to the Roman Catholic Church, in which he sought to find a 'middle way' between Anglicanism and Roman Catholicism;

especially, the doctrine laid down in the famous Tract XC., in the interpretation of the Thirty-nine articles.

Newmanite (nū′man-īt), *a.* and *n.* **I.** *a.* Of or pertaining to Newmanism.

II. *n.* An adherent of Newmanism, the view that a middle way may be found between Anglicanism and Romanism.

Newmanize (nū′man-īz), *v. i.*; pret. and pp. *Newmanized*, ppr. *Newmanizing*. [See ⋆*Newmanism*.] To adopt the views or intellectual methods of John Henry Newman.

new-mown (nū′mōn), *a.* Newly or recently cut or mown.

> And the ripe harvest of the *new-mown* hay
> Gives it a sweet and wholesome odour.
> *Cibber*, Richard III., v.

news, *n.*—**Do you hear the news?** (*naut.*), the preface to the ordering out of a watch: as, "*Do you hear the news?* on deck the starboard (or port) watch!"—**News agency**, an agency, such as the Associated Press (which see under ⋆*associated*), engaged in the business of collecting and distributing telegraphic news to those newspapers which subscribe for this service.—**News bureau**, a news agency.—**To carry the news forward**, to transmit orders or information from the officers to the crew.—**Ward-room news**, information in the possession of the ward-room officers concerning the vessel, its destination, etc., carried forward by the mess-boys.

news-editor (nūz′ed″i-tor), *n.* That member of the editorial staff of a newspaper whose business it is to attend to the collecting and editing of news items. *Athenæum.*

newspapery (nūz′pā″pėr-i), *a.* Having the characteristics of a newspaper: implying flimsiness, superficiality, and inaccuracy.

news-stand (nūz′stand), *n.* A stand or place at which newspapers, periodicals, etc., are sold.

newt, *n.*—**Webbed newt**, *Molge palmata*, the smallest species of newt found in Great Britain, distinguished by having the hind toes fully webbed during the breeding-season.

New Test. An abbreviation of *New Testament*.

Newtonian constant. Same as *gravitation constant* (which see, under *constant*).

newtonite (nū′ton-īt), *n.* [*Newton* (county in Arkansas) + *-ite*[2].] A hydrous silicate of aluminium occurring in soft white compact masses resembling kaolin: found in Newton county, Arkansas.

newtonium (nū-tō′ni-um), *n.* [NL., < *Newton* + *-ium*.] A name proposed by Mendeléjeff for the cosmical ether considered as a chemical substance so light but with such molecular velocity as to escape gravitation. For this he assumes a molecular weight of about one millionth that of hydrogen, with a velocity of at least 2,240 kilometers per second.

Newton's scale of colors, parallelogram, principle. See ⋆*color*, etc.

New York series. See ⋆*series*.

New Zealand boxwood, cedar, cotton, etc. See ⋆*boxwood*, ⋆*cedar*, ⋆*cotton*[1], etc.

Nexilarius (nek-si-lā′ri-us), *n.* [NL., < L. *nexilis*, tied or bound together, < *nectere*, bind.] A genus of fishes, of the family *Pomocentridæ*, found on the Pacific coast of Central America.

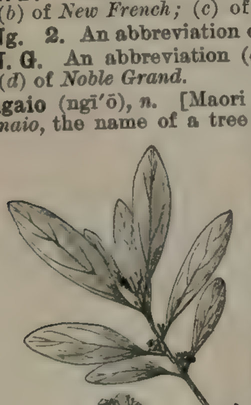
next, *a.*—**To get next**, to get into favorable and close relations with (a person or thing). [Slang.]—**To make it next**, in *euchre*, to name the same color for trumps as the suit just turned down.

N. F. An abbreviation (*a*) of *Newfoundland*; (*b*) of *New French*; (*c*) of *Norman French*.

Ng. **2.** An abbreviation of *Norwegian*.

N. G. An abbreviation (*c*) of *New Granada*; (*d*) of *Noble Grand*.

ngaio (ngī′ō), *n.* [Maori name, = Hawaiian *naio*, the name of a tree of the same genus.] In New Zealand, *Myoporum lætum*, a shrub or small tree closely allied to the bastard sandalwood of Hawaii (*M. Sandwicense*) and the Australian blueberry-tree (*M. serratum*). It bears small edible drupes and its light, tough white wood is used for making gunstocks. In the South Island the name is generally corrupted to *kaio*.



Ngaio (*Myoporum lætum*). Greatly reduced. *a*, single flower.

ngawite (ngä′wīt), *n.* See ⋆*meteorite*.

N. G. C. An abbreviation of (Dreyer's) *New General Catalogue* of nebulæ, a revised and enlarged edition of Sir John Herschel's General Catalogue, usually referred to by the abbreviation G. C.

N. H. An abbreviation of *New Hampshire*.

nhanica (nyä-nē′kä), *n.* [Native name.] A tree of the myrtle family, *Eugenia Nhanica*, native of southern Brazil, bearing edible berries the size of plums, which are there used as a table fruit.

N. H. D. An abbreviation of the Latin *Naturalis Historiæ Doctor*, Doctor of Natural History.

N. Heb. An abbreviation of *New Hebrew*.

N. H. P. An abbreviation of *nominal horse-power*. [No longer in use.]

N. I. An abbreviation of *Native Infantry*.

Niagaran (nī-ag′a̤-ra̤n), *a.* and *n.* [*Niagar*(*a*) + *-an*.] **I.** *a.* In *geol.*, noting a period or group of the Upper Silurian which embraces the Clinton limestone, sandstone, and shales, the Rochester shale, and the Lockport dolomite of New York and elsewhere.

II. *n.* The Niagaran period or group.

niaiserie (nē-ā-ze̤-rē′), *n.* [F., < *niais*, fem. *niaise*, simple, stupid.] Foolishness or stupidity; a foolish or stupid act.

Niam fat. See the extract.

> *Niam fat* was obtained from the seeds of Lophira alata, Banks, a tree indigenous to Senegambia, Sierra Leone, and the Egyptian Soudan. The fat, freed from extraneous matter, forms 41 per cent. of the kernels. It is a soft, buttery mass melting at 24° C., and is used by the natives for culinary purposes and as a hair oil.
> *Nature*, Dec. 26, 1907, p. 189.

niata (ni-ä′tä), *n.* [South Am.] A small variety of South American cattle.

> These cattle can browse as well as others on grass, but . . . they cannot, during the often recurrent droughts, browse on the twigs of trees, reeds, &c. . . . so that at these times the *Niatas* perish, if not fed by their owners.
> *Darwin*, Origin of Species, vii.

niatism (nī′a̤-tizm), *n.* [*niat*(*a*) + *-ism*.] In *zoöl.*, the condition of being a dwarf; a sudden variation or mutation which produces a dwarfed stature in animals.

nib[1], *n.* **8.** The tip or growing point of an oyster-shell. [Local, U. S.]—**9.** The button or nodule of graphitic carbon which is sometimes deposited upon the negative terminal by an electric arc between carbon poles.

nib-block (nib′blok), *n.* *Naut.*, a metal block whose distinctive feature is a fixed or rigid hook to insure the block's standing square (against turning).

nibs (nibz), *n.* [Also *nabs*, *knabs*.] A nonsensical title: used in the phrase 'his royal *nibs*.' [Slang.]

Nicæan (nī-sē′a̤n), *a.* and *n.* [L. *Nicæa*, Gr. Νίκαια, Nice, + *-an*.] **I.** *a.* Of or concerning the Nicene council or Creed.

II. *n.* One who holds to the Nicene Creed.

Nicar. An abbreviation of *Nicaragua*.

Nicaragua scraps and sheets. See ⋆*scrap*[1].

niccolanum (nik-ọ-lā′num), *n.* [NL., < *niccolum*, nickel, + *-anum*.] A supposed new chemical element announced in 1805 as present in certain cobalt ores. It proved to be merely impure nickel mixed with cobalt, arsenic, and iron.

Nicholson's blue. Same as *alkali blue* (which see, under *blue*).

nick[1], *n.* **4.** In *type-founding*, a small groove, made by the mold on the front side and lower part of the body of American type. The first purpose of the nick is to enable the type-setter to place the type properly in the stick without examining the face. When many faces are designed for the same body, it is customary to cast two or more nicks at irregular intervals to prevent accidental mixing of unlike faces. In France the nick is on the hinder side. In some forms of type-setting and type distributing, the nicks are square-cut grooves, with a different arrangement of nicks for each character.

5. In *violin-making*, one of the little notches cut midway in the side of an f-hole or sound-hole, to indicate the proper location for the bridge.—**6.** In *lumbering*, same as ⋆*undercut*, 2.—**A nick on the green**, in *golf*, a slight depression or shallow cup on a green.

nick[3], *n.* **4.** In *craps*, a throw of 7 or 11, which wins all the stakes for the caster immediately.

nickar-tree, *n.* **2.** See ⋆*nicker-tree*, 2.

nickel, *n.*—**Antimonial nickel**, breithauptite.—**Christofle's method of nickel-smelting**, a process in which New Caledonia ore, mixed with appropriate fluxes, is smelted with coke, and the resulting regulus, which contains iron, copper, and nickel as sulphids, is ground and roasted. The nickel is recovered from the roasted product, which consists mainly of sulphid of nickel and oxid of iron, either by precipitation or by repeated fusing in reverberatory furnaces with fluxes added to absorb the iron.—**Grain-nickel**, fragments of reduced metallic nickel, fitted together and resembling grains in shape.—**Nickel carbonyl**, a remarkable substance obtained by passing carbon-monoxid gas over finely divided metallic nickel at a temperature of 30–80° C. and cooling the escaping gas by a freezing-mixture. Nickel carbonyl condenses as a colorless liquid of the density 1.32 which solidifies at –25° C. and boils at 43°. Its composition is represented by the formula $Ni(CO)_4$. The vapor decomposes explosively at 60° and burns in the air with a brilliantly luminous flame. Mixed with an inactive gas, as hydrogen or nitrogen, and passed through a tube heated to 180° C., the vapor deposits pure metallic nickel. On the basis of this reaction, Mond, the discoverer of nickel carbonyl, devised an industrial process for obtaining the metal from its ores.

nickel-aluminium (nik′el-al-ū-min″i-um), *n.* The name of a class of aluminium alloys containing varying proportions of nickel. Some of them have a tensile strength of over 40,000 pounds to the square inch. *U. S. Geol. Surv.*, Mineral Resources of U. S., 1902, p. 233.

nickel-bronze (nik′el-bronz), *n.* An alloy of copper and nickel: not as good as many of the other copper alloys, since it is apt to be brittle.

nickeled, nickelled (nik′eld), *p. a.* Nickel-plated; coated with nickel.

nickelin (nik′el-in), *n.* [*nickel* + *-in*[2].] An alloy of 74.5 per cent. of copper, 25 per cent. of nickel, and 5 per cent. of iron. It is used for electric resistance. *Elect. World and Engin.*, Feb, 27, 1904, p. 409.

nickelite, *n.* Same as *niccolite*.

nickelization (nik″el-i-zā′sho̤n), *n.* [*nickelize* + *-ation*.] The act or process of nickelizing, or coating with nickel.

nickel-plate (nik′el-plāt), *v. t.*; pret. and pp. *nickel-plated*, ppr. *nickel-plating*. To coat with nickel; deposit nickel on the surface of, by means of electroplating or otherwise.

nicker-tree, *n.* **2.** The Kentucky coffee-tree, *Gymnocladus dioica*.

nicking (nik′ing), *n.* The act of cutting nicks or notches; specifically, the operation of cutting the depressor or lateral muscles of the tail of a horse, for the purpose of either elevating or straightening it.

nicking-buddle (nik′ing-bud″l), *n.* A box or buddle used in washing ore.

nicking-trunk (nik′ing-trungk), *n.* A tub in which metalliferous slimes are washed.

nick-pot† (nik′pot), *n.* **1.** An inn-keeper or tapster.—**2.** A fraudulent beer-pot. *N. E. D.*

Niclausse boiler. See ⋆*boiler*.

Nicolaier's bacillus. See ⋆*bacillus*.

nicolo, *n.* **2.** The tenor or basset bombard. See *bombard*, 6.

nicolo[2] (nik′ọ-lō), *n.* [It. *niccolo*, < **onicolo*, < L. *onyx*, onyx.] A variety of onyx consisting of a layer of a bluish tint over black.

> An antique gem representing a bust . . . of Oraphale, cut in a double *nicolo*. *Daily News*, June 29, 1899. *N. E. D.*

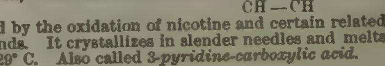
Nicomachean (nī-kom′a̤-kē-an), *a.* [L. *Nicomachus*, < Gr. Νικόμαχος.] Of or pertaining to some ancient Greek named Nicomachus; particularly, either (*a*) Nicomachus, physician to Amyntas II., King of Macedonia, and the father of Aristotle, the philosopher, or (*b*) Nicomachus the Younger, a son of Aristotle, who, like his father and grandfather, was also an author.—**Nicomachean ethics** [Gr. Ἠθικὰ Νικομαχεία], the "Ethics of Aristotle," said to have been published by Nicomachus the Younger after his father's death.

nicotic (ni-kot′ik), *a.* Of or pertaining to nicotine: as, *nicotic acid*. *N. E. D.*

nicotidine (ni-kot′i-din), *n.* [*nico*(*tine*) + *-id* + *-ine*[2].] A pale-yellow poisonous thick oil, $C_{10}H_{14}N_2$, prepared by the action of zinc or concentrated hydrochloric acid on metadipyridyl. It boils at 287–289° C., has a strongly narcotic odor, and is found in bone-oil. Also called 3- or *meta-hexahydrodipyridyl*.

nicotinian (nik-ọ-tin′i-a̤n), *a.* Same as *nicotian*.

nicotinic (nik-ọ-tin′ik), *a.* [*nicotine* + *-ic*.] Pertaining to or derived from nicotine.—**Nicotinic acid**, a colorless compound,



$$\mathrm{N}\left\langle\begin{array}{l}\mathrm{CH}=\mathrm{CH}-\\ \mathrm{CH}-\mathrm{CH}\end{array}\right\rangle\overset{\mathrm{CO_2H}}{\mathrm{CH}},$$

prepared by the oxidation of nicotine and certain related compounds. It crystallizes in slender needles and melts at 228–229° C. Also called *3-pyridine-carboxylic acid*.

nicotism (nik'ọ-tizm), *n.* Same as *nicotinism.*

nicotize (nik'ọ-tīz), *v. t.*; pret. and pp. *nicotized*, ppr. *nicotizing.* Same as *nicotinize.*

nicotunia (nik-ọ-tū'ni-ạ̈), *n.* [*Nicot*(*iana*) + (*Pet*)*unia.*] A hybrid of *Petunia* and *Nicotiana*, offered in 1893 by Luther Burbank, but now lost.

> Hybrids which are infertile in thousands of cases may for once prove a success among hundreds of thousands. Burbank has an example of this in his crossing of Petunia with tobacco. From numberless hybrids he got one germinating from seed. He named this curiosity *Nicotunia* (from Nicotiana and Petunia). It was not very attractive and succumbed after one year, having flowered profusely, but failed to produce any seed.
> *Pop. Sci. Mo.*, Aug., 1905, p. 347.

nicotyrine (nik-ọ-tī'rin), *n.* A colorless liquid,  $\mathrm{CH}<{}^{\mathrm{CH.CH}}_{\mathrm{N{=}CH}}>\mathrm{C.C}<{}^{\mathrm{CH—CH}}_{\mathrm{N(CH_3).\overset{\|}{C}H}}$, prepared by the action of potassium hydroxid and potassium ferricyanide on nicotine. It boils at 280–281° C. under 744 millimeters pressure and has an odor of mushrooms. Also called *dipyridine* or, more correctly, 1-*methyl*-2, 3-*pyridylpyrrol*, or *n-methyl-pyridylpyrrol.*

nicou (ni-kö'), *n.* A poison derived from a plant, *Lonchocarpus rufescens.* It is used by American Indians to poison fish in streams.

nidal (nī'dạl), *a.* [L. *nid*(*us*), a nest, + *-al*¹.] Relating to or of the nature of a nidus, in any of the meanings of that word. *G. S. Hall*, Adolescence, I. 483.

nidana (nẹ-dä'nạ̈), *n.* [Skt. *nidāna*, a band, a rope or halter, a cause; ‹ √*dā*, bind.] Any one of the 12 links which form the Buddhist chain of causality and bind man to earthly existence with its round of transmigration and its attendant suffering and misery. These are: (1) *Avidyā*, or ignorance (in a previous state of existence) of the four verities or noble truths (see ★*verity*). From this comes (2) *conformations* or the character-forming qualities derived from previous existence, which give rise to (3) *consciousness.* This leads to (4) *nāmarupa*, or name and corporeal form (that is, individual being), from which come (5) the six fields or *organs of sense* and the corresponding objects of sense. (6) *Contact* between these senses and their respective objects produces (7) *sensation.* From sensation comes (8) *desire* or thirst; this brings (9) *attachment* or a clinging to life and its pleasures, resulting in (10) *continuity of becoming*, with (11) *birth* and rebirth in one of the six forms of sentient being (gods, men, demons, animals, etc.), and (12) the *suffering* and misery incident to life in any of these forms.

niddui (nid'ö-i), *n.* [Heb., ‹ *nadah*, exclude, put away.] A lesser degree of Jewish herem or excommunication, lasting only seven days or, in Palestine, thirty days. See ★*herem.*

niddy-noddy (nid'i-nod"i), *v. i.* Same as *niddle-noddle, v.* *Carlyle.*

nidge² (nij), *v. i.* and *t.* [Origin obscure.] To shake; quiver. *N. E. D.*

> "Upon my honor, Mr. Lascelles," added he, smiling, and turning towards the coxcomb, who stood *nidging* his head with anger by Miss Beaufort's chair,—"upon my honor, Mr. Lascelles, I did not mean to draw any parallel between your person and talents and those of this Mr.——."
> *J. Porter*, Thaddeus of Warsaw, xxvi.

nidget² (nij'et), *n.* [Origin obscure.] A triangular horse-hoe, used in Kent and Sussex, chiefly in cultivating hops. *N. E. D.*

nidget² (nij'et), *v. t.* [*nidget*², *n.*] To cultivate with a nidget.

> Shimming, *nidgeting*, digging round and hoeing hills.
> *Encyc. Brit.*, XXIX. 324.

Nidicolæ (nī-dik'ọ-lē), *n. pl.* [NL., ‹ L. *nidus*, nest, + *colere*, dwell.] A collective name for those birds which are hatched in a naked and helpless condition, and remain for some time in the nest: same as *Altrices:* contrasted with ★*Nidifugæ.*

nidicolous (nī-dik'ō-lus), *a.* [L. *nidus*, nest, + *colere*, dwell, + *-ous.*] Abiding in the nest; noting those birds which are hatched in a more or less helpless condition and remain for some time in the nest; altricial: contrasted with ★*nidifugous.* *Gadow.*

> But, it is to be noted, these young are all *nidicolous*—born blind and helpless.
> *Knowledge*, Nov., 1907, p. 274.

nidificational (nid"i-fi-kā'shọn-ạl), *a.* [*nidification* + *-al*¹.] Of or pertaining to nidification or nest-building. *J. T. Gulick.*

Nidifugæ (nī-dif'ụ̄-jē), *n. pl.* [NL., ‹ L. *nidus*, nest, + *fugere*, flee.] A collective name for those birds which are able to run about as soon as they are hatched: same as *Præcoces:* contrasted with ★*Nidicolæ.*

nidifugous (nī-dif'ụ̄-gus), *a.* [L. *nidus*, nest, + *fugere*, flee, + *-ous.*] Of birds, able to run about when hatched: same as *precocial:* contrasted with ★*nidicolous.* *Gadow.*

> Plantigrade, *nidifugous*, aquatic.
> *Encyc. Brit.*, XXVI. 257.

nidologist (nī-dol'ọ̄-jist), *n.* [*nidolog*(*y*) + *-ist.*] One who makes a study of the nests of birds: a caliologist.

nidology (nī-dol'ọ̄-ji), *n.* [L. *nidus*, nest, + Gr. -λογια, ‹ λέγειν, speak.] The branch of ornithology that treats of birds' nests: same as *caliology.*

nidulariaceous (nid-ụ̄-lā-ri-ā'shius), *a.* Pertaining or belonging to the fungus family *Nidulariaceæ.*

Nidulariales (nid-ụ̄-lā-ri-ā'lēz), *n. pl.* [NL., ‹ *Nidularia* + *-ales.*] An order of gasteromycetous fungi containing the single family *Nidulariaceæ* (which see). Formerly written *Nidulariineæ.*

Nidulariineæ (nid-ụ̄-lā-ri-ī'nẹ-ē), *n. pl.* See ★*Nidulariales.*

Nidulites (nid-ū-lī'tēz), *n.* [NL., ‹ L. *nidulus*, a little nest. See ★*nidulus.*] A genus of enigmatical fossils which have a sack-like shape, hollow within and open at one end or attached by a pedicel. The outer wall is composed of angular plates or tubes united at the base, the closed ends being perforated by a single hole. These bodies have been regarded as related to the cystids, the sponges, the *Foraminifera*, and the calcareous algæ. Their systematic position is altogether uncertain. They are found in the Silurian rocks.

nidulus (nid'ụ̄-lus), *n.*; pl. *niduli* (-lī). [L., dim. of *nidus*, a nest.] Same as *nidus*, 3.

niellated (ni-el'ā-ted), *a.* [*niello* + *-ate*¹ + *-ed*².] Ornamented with designs in niello (which see).

niello-silver (ni-el'ō-sil"vėr), *n.* An alloy of silver, lead, copper, bismuth, and sulphur which has a dull bluish cast. Also called *Russian tula.*

nievita (nē-ā-vē'tä), *n.* [Amer. Sp., dim. of *nieve*, snow, ‹ L. *nix* (*niv-*), snow.] In California, a plant of the genus *Cryptanthe*, or sometimes of any of the genera included under the name *white* ★*forget-me-not* (which see). The name, meaning 'light snow,' refers to the appearance of fields in which the plant abounds.

nig⁴, *v. i.* A colloquial form for *renege.* See *renege*, 2.

Nigella, *n.* **2.** [*l. c.*] A plant of the genus *Nigella;* also some other plants, especially with a qualifying word.—**Bastard nigella, field nigella**, the corn-cockle, *Agrostemma Githago.*

niggardize (nig'ạ̈rd-īz), *v. i.* and *t.*; pret. and pp. *niggardized*, ppr. *niggardizing.* [*niggard* + *-ize.*] To be niggardly; give in a niggardly way.

> Fame, I accuse thee, thou didst *niggardize*,
> And faintly sound my love's perfections,
> Great lady Fortune and fair Empress.
> *Chapman*, Plays, Alphonsus, II. ii.

nigger², *n.*—**Angola niggers**, a trade-name for a kind of india-rubber ,in small black balls, brought from the west coast of South Africa.—**Massai niggers**, a trade-name for a variety of crude india-rubber of good quality, the product of *Landolphia owariensis* and *L. florida*, brought in reddish-brown balls, pink and white on a cut surface, from Sierra Leone in Africa.—**Sierra Leone niggers.** Same as *Massai* ★*niggers.*

nigger-caterpillar (nig'ėr-kat"ėr-pil-ạ̈r), *n.* Same as *nigger*², 3.

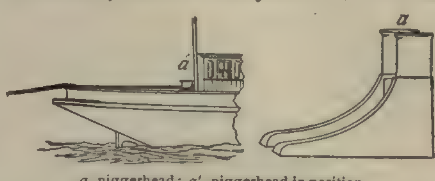
nigger-dick (nig'ėr-dik), *n.* In Pennsylvania, the cut-lip chub, *Exoglossum maxillingua.*

nigger-goose (nig'ėr-gös), *n.* A name given to the cormorant in some parts of the United States.

niggerhead, *n.* **2.** Also, applied to boulders of chromite in the region north of Baltimore, Maryland, and generally, among English-speaking peoples, to any tough black rock in loose boulders.—**3.** In swampy land, tufts or clumps of sedge and grass growing up stiffly, and somewhat resembling a black head. [Local. U. S.]

> The surface is pre-eminently swampy during the warmer periods of the year, and walking over it means either wading through the water or risking continuous jumps to and from the individual clumps of matted grass and moss—the so-called "*nigger-heads.*'
> *Pop. Sci. Mo.*, April, 1900, p. 637.

4. A spool or capstan for lifting or hauling, formed on the end of a shaft which is turned by power: so called because it is usually black. Also known as a *wildcat.*—**5.** In *bot.*: (*a*) The cone-flower or black-eyed-Susan, *Rudbeckia hirta.* (*b*) The common greenbrier or catbrier, *Smilax rotundifolia.*—**6.** A towing bitt; an upright timber to which towing hawsers are secured.—**7.** A fresh-water mussel, *Quadrula ebena*, of the Mississippi River, used in the manufacture of pearl buttons. It is rather small with a thick shell and a black or dark brown outer skin.—**Mud-niggerhead**, a form of the niggerhead (see ★*niggerhead*, 7).—**Warty-back niggerhead**, *Quadrula metanerva* or *Q. pustulosa*, so called from the tubercular excrescences on the shell.



a, niggerhead; *a'*, niggerhead in position.

nigger-toe (nig'ėr-tō), *n.* [Local, U. S.] The Brazil-nut, *Bertholletia excelsa.*

nigger-weed (nig'ėr-wēd), *n.* The joepye-weed, *Eupatorium purpureum.*

niggery² (nig'ėr-i), *n.* [D. *negerij.*] An administrative division of the Dutch West Indies. *N. E. D.*

night-bag (nīt'bag), *n.* A traveling-bag containing necessaries for the night. *N. E. D.*

night-blue (nīt'blö), *n.* A trade-name for a blue which retains its color under artificial light.

night-chant (nīt'chȧnt), *n.* A chant intended to be chanted at night; specifically, a ceremony of the Navajo Indians, performed for curing disease. It occupies nine days. *Jour. Amer. Folk-lore*, Jan.–March, 1903, p. 61.

night-clothes, *n. pl.* **2**†. Negligé or informal dress worn in the evening. *N. E. D.*

> The Queene gone, and ladies; only my Lady Castlemaine, who looked prettily in her *night-clothes.* So took my coach, which waited, and through Covent Garden, to set down two gentlemen and a lady.
> *Pepys*, Diary, Dec. 24, 1667.

night-flowering (nīt'flou"ėr-ing), *a.* Same as *night-blooming.*

nightgear (nīt'gēr), *n.* Night-clothes. [Colloq.]

> Miss Prissy took the *nightgear* between her finger and thumb.
> *J. C. Lincoln*, Partners of the Tide, ii.

night-hawk, *n.* **4.** One who prowls about at night; specifically, a night cabman or his cab or horse. [Colloq.]

night-hunter (nīt'hun"tėr), *n.* Same as *night-walker*, 3. [Rare.]

nightingale¹, *n.*—**Kentish nightingale**, a name given in some parts of England to the blackcap, *Sylvia atricapilla*, on account of the sweetness of its song.—**Swedish nightingale.** (*a*) A European thrush, *Turdus iliacus.* (*b*) A title popularly given to Jènny Lind, the famous Swedish singer.—**Virginia nightingale**, a name sometimes given to the cardinal, *Cardinalis cardinalis.*

night-rider (nīt'rī-dėr), *n.* One who rides by night; specifically, a member of a band of (usually mounted) men who perpetrate deeds of violence or intimidation by night. [Southern U. S.]

night-riding (nīt'rī-ding), *n.* The practices of the night-riders. [Southern U. S.]

nightshade, *n.*—**American nightshade**, the pokeweed, *Phytolacca Americana.*—**Beaked nightshade**, the sand-bur, *Solanum rostratum.*—**Bindweed nightshade**, the enchanter's nightshade, *Circæa Lutetiana.*—**Black-berried nightshade**, the black nightshade.—**Climbing nightshade**, the bittersweet, *Solanum Dulcamara.*—**Fetid nightshade**, the henbane, *Hyoscyamus niger.*—**Garden nightshade**, the black nightshade.—**Silver-leafed nightshade**, the bull-nettle, *Solanum elæagnifolium.* See ★*bull-nettle.*—**Spiny nightshade.** (*a*) The sand-bur, *Solanum rostratum.* (*b*) *Solanum aculeatissimum*, a shrubby and prickly species with yellow berries found from North Carolina to Florida and west to Texas.

night-shift (nīt'shift), *n.* **1.** See *shift, n.*, 6.—**2.** A shift or shirt used to sleep in: so called in the seventeenth and eighteenth centuries. *Sterne*, Tristram Shandy, viii. 9.

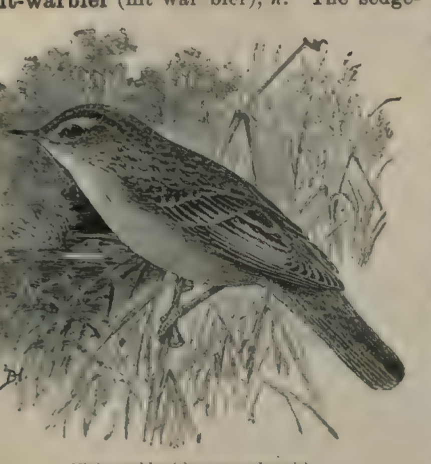
night-stick (nīt'stik), *n.* A strong club carried by a policeman at night.

> San Juan Hill and the Gut were under *nightstick* law until early this morning.
> *N. Y. Times*, July 15, 1905.

night-tide (nīt'tīd), *n.* **1.** Night-time.—**2.** A tide occurring at night. *N. E. D.*

night-vision (nīt'vizh"ọn), *n.* Vision or sight that is strongest and best at night; ability to see clearly only at night or in a dim light.

night-warbler (nīt′wâr″blėr), *n.* The sedge-warbler, *Curruca salicaria*, a European warbler which sings at night.



Night-warbler (*Curruca salicaria*).

night-worm† (nīt′wėrm), *n.* **1.** A treacherous comrade.—**2.** A prostitute.—**3.** A glow-worm. *N. E. D.*

nighty^2 (nī′ti), *n.* [*night*(*-gown*) + *-y*^{2}.] A night-gown or night-dress: originally a child's word. [Colloq.]

nignay (nig′nā), *n.* [Also *nignye.* Origin obscure.] A trifle; a trifling thing or act. [Scotch.]

nigori (nẹ-gō′rẹ or nēng-gō′rẹ), *a.* and *n.* [Jap., impure, impurity.] **I.** *a.* Impure: applied in Japanese to certain sounds (g, z, j, d, b, and p) which are substituted in certain circumstances for the pure sounds k, s, sh (or ch), t, h, or f.

II. *n.* **1.** The substitution of an impure consonantal sound for a pure one when it begins the second part of a compound, or the second part of a plural expression formed by reduplication, as in ★*kami-dana* (which see) for *kami-tana*, 'god-shelf'; *kawa-guchi* for *kawa-kuchi*, 'river-mouth'; ★*ban-zai* (which see) for *ban-sai*, 'ten thousand years'; *kanagawa* for *kana-kawa* (name of the prefecture in which Yokohama is situated); *hito-bito*, 'men,' for *hito-hito*, from *hito*, 'man,' etc.—**2.** In Japanese writing and printing, the mark ʺ (earlier °°), placed at the right of a pure consonant to show that it has become impure.

> The nido is exactly analogous to the Japanese Katakana script, in which modified forms of Chinese ideographs are used phonetically to express 47 syllables (the so-called I-ro-fa syllabary), raised to 73 by the *nigori* and maru diacritical marks. *Keane*, Man, Past and Present, p. 308.

Han nigori, literally 'half nigori,' the mark ° placed after *h* or *f* to show that it is nigori or impure and takes the sound of *p*.

nigramine (nig-ram′in), *n.* [L. *niger* (*nigr-*), black, + E. *amine.*] A basic coal-tar color of unpublished composition, similar to methylene gray. It dyes tannin-mordanted cotton bluish gray.

nigraniline (nig-ran′i-lin), *n.* [L. *niger* (*nigr-*), black, + E. *aniline.*] An intermediate product of the oxidation of aniline to aniline black (which see, under *black*).

nigresceous (nī-gres′ẹ̄-us), *a.* [See *nigresent.*] Somewhat black. [Rare.]

nigrify (nig-ri′fī), *v. t.*; pret. and pp. *nigrified*, ppr. *nigrifying.* [LL. *nigrificare*, make black, blacken. See *nigrification.*] To blacken.

> Where was the harm? 'T would have been but giving a polish to lamp-black, not *nigrifying* a negro primarily. After all, I cannot but regret my involuntary virtue. *Lamb*, Letters, lxxii. 151.

nigrism (nig′rizm), *n.* [L. *niger* (*nigr-*), black, + *-ism.*] Same as *nigrities.*

nigrite, *n.* **2.** A kind of asphaltum allied to albertite and grahamite.

nigritic (ni-grit′ik), *a.* [NL. **nigriticus*, after Sp. *negrito*, 'a little negro.' See *Negrito.*] Of or pertaining to the negro race; specifically, of or pertaining to the Oceanic negroes.

nigritism (nig′ri-tizm), *n.* [L. *nigrities*, blackness, + *-ism.*] Same as *nigrities.*

nigritudinous (nig-ri-tū′di-nus), *a.* [L. *nigritudo* (*-din-*), blackness, + *-ous.*] Having the character of nigritude; negro-like.

nigrium (nig′ri-um), *n.* [NL., < L. *niger* (*nigr-*), black.] The name given by Church to a supposed new chemical element the occurrence of which in zircon he supposed to be indicated by certain black bands in the absorption-spectrum. Its existence has not been confirmed.

nigrosine, *n.* The name is applied to three different coal-tar colors: (*a*) Spirit-soluble nigrosine, which is closely allied to spirit-soluble induline. (*b*) Water-soluble nigrosine, which is the sodium salt of certain sulphonic acids of spirit-soluble nigrosine. (*c*) Methylene gray (which see, under ★*gray*).

nigrous (nī′grus), *a.* [L. *niger* (*nigr-*), black, + *-ous.*] Deep black.

> Blacks:—piceous or piceus, the colour of pitch: atrous or ater, the colour of liquid ink; . . . *nigrous* or niger, the colour of lamp black: fuliginous or fuliginosus, the colour of soot. *E. Newman*, A Familiar Introd. to the Hist. of Insects. [iii. 2.

nigua (nē′gwä), *n.* [Sp. *nigua.*] **1.** Same as *chigoe.*—**2.** In Cuba and Porto Rico, a name applied to several plants belonging to the genus *Tournefortia* of the borage family, especially to *T. hirsutissima*, a trailing shrub with one-sided spikes of flowers resembling those of heliotrope.—**Nigua enredadera**, *Tournefortia volubilis.* See *basket-withe.* **Nigua de playa**, seaside nigua, *Tournefortia gnaphalodes*, a strand shrub with silky-tomentose leaves.

nihilum album (nī′hil-um al′bum), *n.* [L., 'white nothing.'] An old name of white oxid of zinc, in loose light flakes, produced by the combustion of zinc vapor in the air. Also known as *flowers of zinc* and *lana philosophica.*

nika^1 (nē′kä), *n.* [Chamorro *nika.*] On the island of Guam, the name for several varieties of yam with cordate-acuminate leaves having a deep basal sinus, especially *Dioscorea aculeata.*—**Nika cimarron**, the wild yam of Guam, *Dioscorea spinosa*, a species in which the large starchy tuber is protected by a mass of spines surrounding the base of the stem.

Nika^2 (nī′kä), *n.* [NL.] The typical genus of the family *Nikidæ.* *Risso*, 1816.

nikau (nē′kou), *n.* [Maori *nikau*, the New Zealand palm-tree, = Mangarevan *nikau*, cocoanut-palm, = Hawaiian *niau*, or *niao*, the petiole or midrib of a cocoanut-palm leaf.] In New Zealand, *Hedyscepe sapida*, a palm-tree with a slender green ringed stem and pinnate leaves with narrow linear leaflets. The young unexpanded inflorescence is eaten by the natives. This species occurs also on the Chatham islands and is the most southerly representative of the palm family.

Nikâya (nē-kä′yä), *n.* [Skt. *nikāya*, assemblage, class, society, collection, < *ni*, down, in, + *kāya*, body, mass.] A collection of *sutras*, or sayings (of Buddha).

> A number of such efforts, after the *Nikâyas* had been closed, were included in a supplementary *Nikâya* called the Khuddaka *Nikâya.* *Encyc. Brit.*, XXVI. 431.

Nikidæ (nī′ki-dē), *n. pl.* [NL. *Nik*(*a*) + *-idæ.*] A family of caridean crustaceans in which the rostrum is horizontal with the dorsal surface of the carapace, the mandibles are without cutting edge, the first pair of trunk-legs is simple or chelate, and the second is minutely chelate. It includes the genera *Nika*, *Lysmata*, and *Glyphocrangon*, of which the first two contain edible species.

nikie (nik′i-ē), *n.* [Omaha and Ponca Indian.] Something handed down from a mythical ancestor.—**Nikie kinship**, kinship based on descent from the same or a similar mythical ancestor.—**Nikie name**, a name derived from the ancestor myth. These terms are used in reference to customs of the Omaha and Ponca Indians.

nil^2, *n.* **2.** In *musical acoustics*, a minute interval, equal to a fifty-first part of a semitone.

nila (nē′lä), *n.* [Skt. *nīla*, dark blue; as a noun, indigo. See *anil, lilac.*] A dark shade of blue used in the decoration of East Indian pottery.

nil album. Same as ★*nihilum album.*

Nile-bird (nīl′bėrd), *n.* A local English name of the wryneck, from its cry. *N. E. D.*

Nile blue. See ★*blue.*

Nileus (nil′ẹ̄-us), *n.* [NL.] A genus of trilobites of Silurian age.

nilfactum (nil′fak″tum), *n.* [L. *nil*, nothing, + *factum*, pp. neuter of *facere*, make, do.] A quantity equated to zero.

nilgai (nēl′gī), *n.* Same as *nilgau*: the form most commonly used in India to designate the large antelope *Portax pictus.*

nilionid (nil-i-on′id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Nilionidæ.*

II. *a.* Having the characters of or belonging to the family *Nilionidæ.*

Nilot (nī′lot), *n.* [Gr. Νειλώτ(ης), on the Nile.] One who dwells on the banks of the Nile.

Nilotic, *a.* **2.** In *ethnol.*, denoting the eastern division of the Sudanese negroes.

Nilous (nī′lus), *a.* [*Nile* + *-ous.*] Of or pertaining to or derived from the Nile.

> I executed my commission like a winged Mercury flying to save friends from Pluto's drear domains, when they might live a little longer to enjoy this *Nilous* earth; for certainly it is more like Egypt's alluvium during the inundation than hard-set soil. *Sir R. Wilson*, Diary, II. 448.

nimbated (nim′bā-ted), *p. a.* [L. *nimb*(*us*), cloud, + *-ate-* + *-ed.*] Provided with or having a nimbus; nimbed.

nimble, *a.* **4.** Fresh or strong: applied to tan-liquor.

nimble-fly (nim′bl-flī), *n.* Any dipterous insect of the family *Dexiidæ.*

nimble-Kate (nim′bl-kāt), *n.* The star- or bur-cucumber, *Sicyos angulatus.*

nimbleness, *n.*—**Thermal nimbleness**, the sensitiveness of a thermometer to changes of temperature.

> The time in which the instrument loses half its heat has been called its *thermal nimbleness.* *J. Y. Buchanan*, in Antarctic Manual, p. 130.

nimbo-pallium (nim-bō-pal′i-um), *n.*; pl. *nimbo-pallia* (-ä). [NL., < *nimbus* + *pallium.*] A broad sheet of cloud from which rain is falling. Also called *nimbo-stratus.*

nimbo-stratus (nim-bō-strā′tus), *n.*; pl. *nimbo-strati* (-tī). Same as ★*nimbo-pallium.*

nimfadoro† (nim-fạ-dō′rō), *n.* [It.] An effeminate fellow; a ladies' man. [Rare.]

> Pvnt. Peace, you, ban-dogge, peace: what briske *Nimfadoro* is that in the white virgin boot there?
> Carl. Mary, sir, one, that I must entreat you take a very particular knowledge of.
> *B. Jonson*, Every Man out of his Humour, ii. 3.

nim-oil (nim′oil), *n.* Same as *neem-oil.* See *margosa.* Also written *nimb-oil.*

nine, *n.*—**The two nines**, a fire-alarm signal, used only in an emergency, which calls out all the fire-fighting apparatus, and every available fireman. [New York City.]

> Acting Chief K— arrived a few minutes later and ordered the fourth [alarm], and then *the two nines*, calling out every piece of apparatus on the island. *The two nines* were sounded less than an hour after the fire alarm had been sent in. *N. Y. Tribune*, Dec. 22, 1903.

nineted (nīn′ted), *p. a.* [Corruption of *nointed.*] Wicked; incorrigible. *N. E. D.* [Dial. Eng.]

nineteenth, *n.* **3.** In *organ-building*, a stop whose pitch is two octaves and a fifth above that of the keys used, as, for example, the larigot.

nino (nē′nō), *n.* [Tagalog *nino*, Malay *nona*, Polynesian *nonu*, Hawaiian *noni.*] *Morinda citrifolia*, a shrub or tree which yields a dye. See ★*al*^{1}, and ★*nonu.*

Ninsei ware. See ★*ware*^{2}.

Niobe, *n.* **3.** In *bot.*, a genus of monocotyledonous plants belonging to the family *Liliaceæ.* See *Funkia.*

niobifluoride, niobiofluoride (nī″ọ-bī-, nī-ō″bī-ọ-flö′ọ-rid), *n.* Same as ★*fluoniobate.*

niobous (nī-ō′bus), *a.* [*niob*(*ium*) + *-ous.*] Pertaining to or derived from niobium: implying a lower degree of oxidation than *niobic.*

Niobrara group. See ★*group*^{1}.

niog (nē′ōg), *n.* [Tagalog *niog*, Chamorro *niyog*, Malay *nior* or *nyor*, Polynesian *niu.*] In the Philippine Islands, the cocoanut-palm, *Cocos nucifera.*

nip^1, *v. t.* **10.** In *cricket*: (*a*) To catch neatly: said of a fielder. (*b*) To break sharply: said of a bowled ball. *Hutchinson*, Cricket, p. 322.—**To nip her** (*naut.*), to take a sharp turn in a rope: to stop the cable from running out so that the ship may jerk suddenly to her anchor.

nip^1, *n.* **11.** The place of contact between two cylinders, rollers, or bowls. *G. Duerr*, Bleaching and Calico-Printing, p. 21.—**To freshen the nip.** (*a*) *Naut.*, to shift the chafing from a certain spot. (*b*) To take a new hold; refresh the memory.

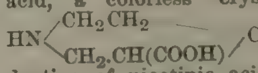
nip^3, *n.* **3.** A low cliff cut in the border of land near the sea. [Eng.]

> Tidal cuspate forelands . . . where the aggradation begins at the shoreline at the foot of the earlier formed "nip." *Geog. Jour.* (R. G. S.), IX. 542.

nip^3 (nip), *v.*; pret. and pp. *nipped*, ppr. *nipping.* [*nip*^{3}, *n.*] To cut a low cliff in (the border of the land) by wave action.

> The coasts of the counties of Kent and Sussex, or, physiographically speaking, the coasts of the dissected Weald dome, form a succession of headlands *nipped* back by the sea. *Geog. Jour.* (R. G. S.), IX. 538.

nipecotic (nip-ẹ̄-kot′ik), *a.* Noting an acid, a colorless crystalline compound,



$$HN\begin{matrix}\diagup CH_2CH_2 \\ \diagdown CH_2.CH(COOH)\end{matrix}\diagup CH_2$$

prepared by a reduction of nicotinic acid by the means of sodium and alcohol. It melts at 249–250° C. Also called *hexahydronicotinic* or *piperidine-3-carboxylic acid.*

Nipigon (nip′i-gon), *n.* [*Nipigon*, name of a Canadian lake, and river.] Among Canadian geologists, a name applied to the vast series of basaltic rocks and sediments which immediately precedes the Cambrian strata in the Lake Superior region and which contains deposits of native copper. These strata are usually called *Keweenawan* in the United States.

nip-out (nip′out), *n.* See *nip*¹, 8.

nipper¹, *n.* **5.** (*l*) A device for holding the fibers of cotton, in the early process of combing.

12. A local name in Australia of species of *Alphæus*, a genus of prawns.

nippering (nip′ėr-ing), *n.* Same as *racking*¹, 2.

nipper-knife (nip′ėr-nīf), *n.* That part of a Heilmann cotton-combing machine which holds or nips the cotton staple as the combs pass through it.

nipper-motion (nip′ėr-mō″shọn), *n.* A combination of devices on a cotton-combing machine for holding the cotton during the process of combing.

nipper-shaft (nip′ėr-shȧft), *n.* The shaft or arbor to which are fastened the nippers in a cotton-combing machine.

nipper-tap (nip′ėr-tap), *n.* In *chem.*, a little wire clamp which, when pressed upon by the finger and thumb or by turning a screw, serves partly or completely to close an india-rubber tube over which it fits and thereby obstructs the flow of a liquid or a gas. Various special forms are known as *Mohr's clamp, Hofmann's clamp*, etc.

nipping-jaw (nip′ing-jâ), *n.* A device on a cotton-combing machine for holding a tuft of cotton while it is combed.

nipping-rollers (nip′ing-rō″lėrz), *n. pl.* See ★*roller*.

nipple, *n.*— **Push-nipple**, a nipple, or piece of pipe having a thread on each end, used in such a way that it receives a thrust.

> In the case of the *push-nipple* type of boiler the rule would be as follows. *Engin. Rev.*, Jan., 1903, p. 14.

nipple-pipette (nip′l-pi-pet″), *n.* A pipette provided with a rubber nipple. By compressing the nipple air is expelled. If the pressure is withdrawn while the point of the pipette is in a liquid, the liquid enters the pipette.

nipple-wrench (nip′l-rench), *n.* A wrench for seating or removing the nipple of a small-arm.

Nirodha (ni-rō′dạ̈), *n.* [Skt. *nirodha*, confinement, obstruction, destruction, ‹ *nis-*, out, + *rodha*, holding back, obstruction, suppression.] Cessation: used as equivalent to *nirvana*.

nirvanic (nir-vä′nik), *a.* Pertaining to or of the nature of nirvana.

> In spite of the *nirvanic* remoteness of its nature, it is not troubled by human emotions.
> *E. F. Benson*, Six Common Things, p. 73. *N. E. D.*

nirvanin (nir-vä′nin), *n.* [*nirvan*(*a*) + *-in*².] The trade-name of a colorless, neutral, crystalline compound, $(C_2H_5)_2NCH_2CONHC_6H_3(OH)COOCH_3.HCl$, used in surgery as a local anesthetic.

Nishikide ware. See ★*ware*².

nishikiye (nẹ-shē′kē-yā′), *n. sing.* and *pl.* [Jap., ‹ *ni*, two, + *shiki*, color, + *ye*, a picture, drawing.] In Japanese art, prints taken in color, and by hand, from wooden blocks, cut (as is usual with the Japanese) in the direction of the grain instead of across it, as has been the custom in Europe since Bewick's time. The method of printing is to lay the color on the block with a brush and to press the paper against it with a pad or dabber called the *baren*. This method of printing is much more sensitive than the usual mechanical one. A printing may be accomplished with few impressions, but usually from twenty to thirty are employed. The number of blocks does not necessarily correspond to the number of impressions. Japanese color-printing is a recent art, not having been known much before the middle of the eighteenth century.

nishu (nē′shö), *n.* [Jap.] A small rectangular Japanese silver coin, worth half a bu: no longer made or used. See *bu*.

Nisi prius roll. Same as *nisi prius record* (which see, under *nisi prius*).

nispero (nis′pe-rō), *n.* [Sp. *níspero*, medlar-tree.] **1.** In Spain, the medlar-tree, *Mespilus Germanica*.—**2.** In the Spanish West Indies, the sapodilla, *Sapota zapotilla*, the name of which has been corrupted in Jamaica to naseberry. **Nispero cimarron** or **Nispero de monte**, wild nispero, a name applied to several wild trees which bear fruit more or less resembling the medlar or sapodilla; in Colombia, to *Pouteria Tovarensis*, which bears a golden-yellow edible fruit and yields wood suitable for use in building; in Porto Rico, to *Symplocos lanata*, a forest-tree belonging to the sweetleaf family.

Nissl or **Nissl's bodies.** See ★*body*.

nisus¹, *n.* **2.** The generative impulse occurring periodically, as with many creatures in the spring.

nit¹, *n.* **3**†. A small insect; a gnat or fly: applied contemptuously to persons.

> How most sweetly a' will swear!
> And his page o' t' other side, that handful of wit!
> Ah, heavens, it is a most pathetical *nit!*
> Sola, sola! *Shak.*, L. L. L. iv. 1.

nit³ (nit), *adv.* [G. *nicht*, not: see *not*¹.] No; not; not at all. [Slang.]

niter, *n.* The word *niter* (in its Hebrew, Greek, and Latin forms) was used in early times to signify any kind of saline efflorescence, and therefore included a number of substances now recognized as distinct. The 'niter' of the Old Testament scriptures was obviously natron in the sense of naturally occurring carbonate of soda (from Egypt). The 'nitrum' mentioned by Pliny, which gave off a strong smell on being sprinkled with lime, must have been a salt of ammonium, probably the chlorid; but potassium nitrate (the niter or saltpeter of the present age), and also calcium nitrate, potassium carbonate, sodium chlorid, magnesium sulphate, and the sulphates of zinc, iron, and copper (later distinguished as metallic vitriols) were probably more or less confounded under the general name.

nit-grass, *n.* **2.** Same as ★*slough-grass*.

nithialine (ni-thī′ạ-lin), *n.* [*ni*(*trogen*) + Gr. *θεῖον*, sulphur, + *-äl*³ + *-ine*³.] A yellow, amorphous, pulverulent compound, $C_{12}H_{16}ON_4S$, prepared by the action of ammonium sulphid on metadinitrobenzene or metanitraniline. It decomposes at 200° C.

nitidity (ni-tid′ị-ti), *n.* [L. *nitiditas*, ‹ *nitidus*, shining: see *nitid*.] **1.** Brightness; brilliancy; lustrousness.—**2.** Spruceness; gayness: applied to persons.

nitidulid (nī-tid′ụ̄-lid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Nitidulidæ*.

II. *a.* Having the characters of or belonging to the family *Nitidulidæ*.

nito (nē′tō), *n.* [Tagalog *nito*.] In the Philippine Islands, a climbing fern, *Lygodium scandens*, the glossy, wiry stems of which are used for weaving hats, receptacles for betel-nuts, etc. The species is of wide distribution and in the Bismarck Archipelago is used by the natives for making baskets.

Nito (*Lygodium scandens*).
a, group of sporanges, enlarged.

nitragin (nī′trạ-jin), *n.* [*nitr*(*ogen*) + Gr. *ἄγειν*, bring, + *-in*².] A trade-name for a culture of the specific bacteria which, when present in the soil and reaching the roots of leguminous plants, produce the tubercles by which such plants become capable of assimilating the free nitrogen of the air and converting it into proteid compounds.

> The growth of plants by . . . [nitrification of the soil . . .] may be encouraged and stimulated by the use of phosphatic manures and also by inoculating the ground and the seed to be sown on it with cultures of these earth bacteria referred to, which are sold commercially under the name of *nitragin*.
> *Lancet*, June 6, 1903, p. 1590.

nitramine (nī-tram′in), *n.* [*nitr*(*ogen*) + *amine*.] In *organic chem.*, the class-name applied to compounds prepared by the action of nitric acid on the amido derivatives of primary amines. They contain the univalent radical R, where R is a hydrogen atom or an alkyl group, such as methyl. In the former case the hydrogen is replaceable by metals. Sometimes called *nitro-amines*.

nitramite (nī′trạ-mīt), *n.* [*nitr*(*ate*) + *am*(*monium*) + *-ite*².] A class-name of explosives in which ammonium nitrate is a principal component, patented in Belgium by Favier. See *Favier* ★*explosives*.

nitranilic (nī-tra-nil′ik), *a.* [*nitranil*(*ine*) + *-ic*.] Pertaining to nitraniline: noting an acid, a golden-yellow compound, $(\overset{6,\ 3}{HO})_2C_6(\overset{2,\ 5}{NO_2})_2\overset{1,\ 4}{O_2}$, prepared by the action of nitrous acid on hydroquinol or hydroquinone. It crystallizes in needles and explodes at 170° C.

nitraniline (nī-tran′i-lin), *n.* [*nitr*(*ic*) + *anilide* + *-ine*².] Any one of three compounds, $H_2NC_6H_4NO_2$. They are distinguished as ortho- or 1, 2, or meta- or 1, 3, and para- or 1, 4. They are formed by the action of nitric acid on acetanilide, are crystalline, and melt at 71° C., 114° C., and 147° C. respectively. Also called *nitro-anilines*.

nitrate, *n.* Important experiments have been made on an industrial scale for the production economically of nitrates from atmospheric air by high-tension electrical discharges through moist air in the presence of basic materials.— **Alkaline nitrate of silver**, a compound obtained by the action of an alkaline base upon silver nitrate.— **Cellulose nitrates.** Same as *nitrocellulose*.— **Nitrate of iron.** See ★*iron*.

nitratoxygen (nī-trạ̈-tok′si-jen), *n.* [*nitrat*(*e*) + *oxygen*.] In *chem.*, a name suggested for the radical NO_3. See *nitran* and ★*oxynitrion*.

nitric, *a.*— **Fuming nitric acid.** See ★*fume*.

nitricum (nī′tri-kum), *n.* [NL.: see *nitric*.] An imaginary substance of early chemistry which, in union with oxygen, was supposed to constitute nitrogen.

nitrifaction (nī-tri-fak′shọ̈n), *n.* [See *nitrification*.] The production of niter or nitrates.

nitrifier (nī′tri-fī-ėr), *n.* Anything which serves to bring about or to facilitate the production of niter or nitrates; specifically, in *bacteriol.*, any micro-organism which is capable of oxidizing ammonia to nitrous acid, or nitrous acid to nitric acid; a micro-organism which serves to fix, and accumulate in the soil, the free nitrogen of the air. See ★*nitrogen-fixing*.

> The bacterial organisms themselves are, however, the real nitrogen bringers or *nitrifiers*, the leguminosæ being dependent upon their presence at the roots for healthy growth. These organisms abound in all good cultivated soils in which there is a sufficiency of phosphates, potash, and lime, the last especially being of vital necessity to them, and they are most active at a temperature of about 99° F., cold and absence of moisture inhibiting them. Good cultivation assists them. It is possible with their aid to grow crops extremely rich in nitrogen on a soil which is otherwise almost devoid of nitrogenous elements. Their presence in a soil is indicated by the growth upon the leguminosæ roots of small nodules sometimes as large as a small pea.
> *Lancet*, June 6, 1903, p. 1590.

nitrify, *v. t.* **2.** To impregnate (the soil) with nitrates in order to stimulate the growth of plants.—**3.** In *bacteriol.*, to oxidize (ammonia compounds) to nitrites or (nitrites) to nitrates, by bacterial action.

nitrile (nī′tril), *n.* [*nitr*(*ogen*) + *-ile*.] In *organic chem.*, the class-name of compounds which contain the univalent radical $-C \vdots N$. They are prepared by the action of alkyl haloids on potassium cyanide and, in some cases, by the dehydration of organic ammonium salts into which they are reconverted by the action of acids or alkalies. They are also called *acid nitriles* or *alkyl cyanides*. Occasionally tertiary amines (R_3N) are called *nitrile bases*.

nitrine, *n.* **2.** In *chem.*, a name proposed for the hypothetical radical of hydrazoic acid or azoimide, N_3, or, if supposed to be isolated, $(N_3)_2$.

nitro (nī′trō), *n.* An abbreviation of ★*nitro-powder*.

nitro-. It is also employed, very commonly but in regard to technical use incorrectly, as a part of the name of a compound which does not contain the radical nitryl (NO_2) with its nitrogen directly united to carbon. Thus *nitro*glycerin and *nitro*cellulose (guncotton) are not nitro-compounds in the technical sense of the term, but nitrates.

nitro-acid (nī′trọ̄-as″id), *n.* In *organic chem.*, the class-name of acids which contain in the molecule one or more univalent nitro-groups ($-NO_2$).

nitro-alizarin (nī″trọ̄-al-i-zä′rin), *n.* Same as *alizarin* ★*orange*.

nitro-amine (nī-trọ̄-am′in), *n.* Same as ★*nitramine*.

nitro-aniline (nī-trọ̄-an′i-lin), *n.* Same as ★*nitraniline*.

nitrobacteria (nī″trọ̄-bak-tē′ri-ạ̈), *n. pl.* Soil bacteria which oxidize nitrous acid to nitric acid. See *nodule-*★*bacteria*, with cut.

> The *Nitro-bacteria* are smaller, finer, and quite different from the nitroso-bacteria, and are incapable of attacking and utilizing ammonium carbonate.
> *Encyc. Brit.*, XXVI. 56.

nitrobarbituric (nī-trọ̄-bär-bi-tū′rik), *a.* Same as ★*dilituric*.

nitrocarbole (nī-trọ̄-kär′bōl), *n.* Same as ★*nitromethane*. [Rare.]

nitro-color (nī′trọ̄-kul″ọr), *n.* A dye-stuff containing the nitro-group (NO_2): one of a subdivision of the acid colors.

nitrocotton (nī-trọ̄-kot′n), *n.* Cotton treated with nitric acid; a high explosive. See *guncotton.*

He [Nobel] next combined nitro-glycerine with another high explosive, *nitro-cotton,* into a form that could be safely employed for blasting. *Encyc. Brit.,* XXXI. 248.

nitro-ester (nī″trọ̄-es′tėr), *n.* In *organic chem.,* a class-name of compounds which contain the univalent group –N:O(OR)OM, where R is an alkyl group such as methyl, and M a metal such as sodium. In general it might also be applied to an ester containing one or more nitro-groups in its molecule.

nitro-explosive (nī′trọ̄-eks-plō′siv), *n.* An explosive in the preparation of which nitric acid is used.

nitroferricyanic (nī-trọ̄-fer″i-sī-an′ik), *a.* Same as ★*nitroprussic.*

nitroform (nī′trọ̄-fôrm), *n.* [*nitro-* + *form-(ic)*?] A colorless crystalline compound, $CH(NO_2)_3$, prepared by the action of water on trinitro-acetonitrile; trinitromethane. It melts at 15° C., explodes when rapidly heated, is a strong monobasic acid, and gives yellow solutions and colored salts.

nitrogelatin, *n.* This important explosive has no relation in chemical composition to gelatin. The name has reference merely to its jelly-like consistence. Its value depends in large measure upon the fact that of its two principal components the one, guncotton, contains an insufficient proportion of oxygen for complete combustion, while the other, nitroglycerin, contains an excess of the same element; by blending proper quantities of the two, complete oxidation of the carbon and hydrogen is effected, with consequent maximum evolution of energy.

nitrogen, *n.* The boiling-point of liquid nitrogen under ordinary atmospheric pressure is –194.4° C. or –317.9° F. For the fixation of atmospheric nitrogen by growing plants, see ★*nitragin.*—**Nitrogen chlorid,** a pale-yellow oily-looking liquid, NCl_3, much heavier than water, produced by the action of chlorin on a warm solution of ammonium chlorid. It has a peculiar irritant odor and upon slight heating, or by contact with phosphorus, turpentine, fatty matter, or other substances tending to abstract the chlorin, it explodes with most dangerous violence.—**Nitrogen-free extract,** in agricultural chemistry, a sum of organic compounds comprising starch, sugar, gums, and the like, but exclusive of cellulose or fiber, together with which they compose the carbohydrates.—**Nitrogen sulphid,** a yellow powder, produced by the interaction of dry ammonia and sulphur chlorid, which crystallizes in reddish-yellow prisms, decomposes rapidly at 160° C. with evolution of heat and light, and explodes violently on percussion.—**Organic nitrogen,** the name given generally in chemistry to nitrogen in carbon compounds: sometimes restricted to nitrogen in its original form of combination in animal or vegetable substances, that is, before these have undergone decay or putrefaction.

nitrogen-bulbs (nī′trọ̄-jen-bulbz), *n. pl.* In *chem.,* a piece of apparatus consisting of a series of three or sometimes five glass bulbs which contain hydrochloric acid, by means of which the nitrogen of an organic substance submitted to analysis, having been evolved as ammonia, is absorbed and collected.

nitrogen-consumer (nī′trọ̄-jen-kọn-sū″mėr), *n.* A plant which depends for its nitrogen upon the soil, as the cereals.

nitrogen-fixing (nī′trọ̄-jen-fik″sing), *a.* Fixing and accumulating the free nitrogen of the air: said of plants whose roots serve as hosts to microbes which perform this function. The microbes operate by means of tubercles formed through their agency on the roots. See ★*nitrifier* and ★*nodule.*

As this peculiar property pertaining to this order of plants belongs more to the domain of agricultural chemistry than medicine it may be well if I explain that they react at their roots with certain earth bacteria, the result being the fixing in the soil of nitrogen from the atmosphere. They are accordingly referred to as *nitrogen-fixing* plants. *Lancet,* June 6, 1903, p. 1589.

Nitrogen-fixing crop. See ★*crop.*

nitrogen-gatherer (nī′trọ̄-jen-gaᴛʜ″ėr-ėr), *n.* A plant capable, through bacterial agency, of acquiring and fixing the nitrogen of the air. See *nitrogen-fixing* ★*crop.*

nitrogen-gathering (nī′trọ̄-jen-gaᴛʜ″ėr-ing), *a.* Same as ★*nitrogen-fixing.*

nitrogenization (nī″trọ̄-jen-i-zā′shọn), *n.* The act or process of nitrogenizing, or impregnating with nitrogen; impregnation or inoculation with nitrogen; nitrification. *Lancet,* June 6, 1903, p. 1590.

nitrogen-trap (nī′trọ̄-jen-trap″), *n.* A popular name for the nodules upon the roots of leguminous plants. The nodules are caused by microbes which fix the free nitrogen of the air. See ★*nitrogen-fixing.*

nitroglauberite (nī-trọ̄-glâ′bėr-īt), *n.* [*nitro-* + *glauberite.*] A white, fibrous, crystalline mineral consisting of the nitrate and sulphate of sodium: found in the desert of Atacama.

nitrohippuric (nī″trọ̄-hi-pū′rik), *a.* Pertaining to or derived from hippuric acid and nitrogen.—**Nitrohippuric acid,** an acid which appears in the urine after the administration of nitro-benzoic acid.

nitrohydrocellulose (nī-trọ̄-hī-drọ̄-sel′ụ̄-lōs), *n.* A product obtained by treating cotton fiber for a short time with dilute sulphuric or hydrochloric acid, washing out the residual acid, drying, and subjecting the resultant hydrocellulose, which is readily reduced to fine powder, to the action of a mixture of concentrated nitric and sulphuric acids, as in the common process for making guncotton. Nitrohydrocellulose resembles ordinary guncotton, but is more sensitive to shock. It has been used in the manufacture of detonating primers.

nitrojute (nī′trọ̄-jöt), *n.* [*nitro-* + *jute*[2].] An explosive made by treating jute fiber with a mixture of concentrated nitric and sulphuric acids; a variety of nitrolignin.

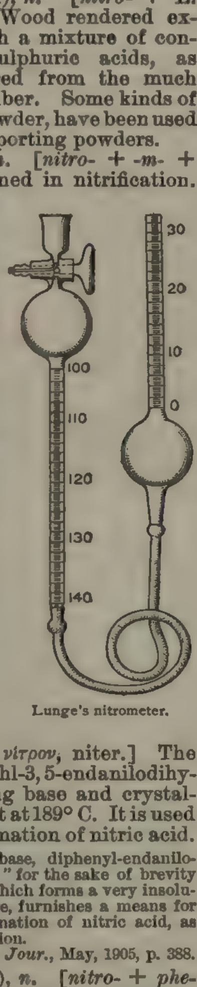
nitrol (nī′trol), *n.* [*nitro-* + *-ol.*] In *organic chem.,* a class-name of compounds containing the group $RCH(NO)NO_2$ or $RC(NO_2):NOH.$, where R is an alkyl group such as methyl. They are strong acids, give dark red, explosive salts with alkalies, and are prepared by the action of nitrous acid on the sodium derivatives of primary nitro-paraffins. Also called *nitrolic acids.*

nitrolic (nī-trol′ik), *a.* [*nitrol* + *-ic.*] Noting compounds containing a nitro- and a hydroxime group or nitrolic acids.—**Nitrolic acid.** Same as ★*nitrol.*

nitrolignin (nī-trọ̄-lig′nin), *n.* [*nitro-* + L. *lignum,* wood, + *-in*[2].] Wood rendered explosive by treatment with a mixture of concentrated nitric and sulphuric acids, as guncotton is manufactured from the much purer cellulose of cotton fiber. Some kinds of nitrolignin, as Schultze powder, have been used as explosives, chiefly as sporting powders.

nitromase (nī′trọ̄-mās), *n.* [*nitro-* + *-m-* + *-ase.*] A ferment concerned in nitrification.

nitrometer, *n.*—**Lunge's nitrometer,** an apparatus used in the analysis of nitrates, as guncotton. It brings together, in a stoppered bulb-tube, the substance to be treated, with mercury and sulphuric acid. Nitrogen dioxid gas is evolved, and its volume is measured under observed conditions of temperature and pressure.



Lunge's nitrometer.

nitromethane (nī-trọ̄-meth′ān), *n.* [*nitro-* + *methane.*] A colorless oily compound, CH_3NO_2, prepared by the action of silver nitrite on methyl iodide. It boils at 101° C. and has acid properties.

Nitromonas (nī-trọ̄-mon′as), *n.* [Gr. *νίτρον,* niter, + *μονάς,* a unit.] The nitrifying organism which brings about the conversion of ammonia into nitric acid in the fermentative decay of nitrogenous organic substances.

nitron (nī′tron), *n.* [Gr. *νίτρον,* niter.] The trade-name of 1,4-diphenyhl-3,5-endanilodihydrotriazole. It is a strong base and crystallizes in leaflets which melt at 189° C. It is used for the detection and estimation of nitric acid.

M. Busch has synthesized a base, diphenyl-endanilodihydro-triazol, named "*Nitron*" for the sake of brevity and for commercial purposes, which forms a very insoluble, stable nitrate, and, therefore, furnishes a means for the direct gravimetric determination of nitric acid, as well as for its qualitative detection.
Amer. Chem. Jour., May, 1905, p. 388.

nitrophenol (nī-trọ̄-fē′nol), *n.* [*nitro-* + *phenol.*] Any one of three compounds, HOC_6H_4-NO_2, distinguished as ortho- or 1, 2, meta- or 1, 3, and para- or 1, 4. The ortho- and para-compounds are prepared by the action of dilute nitric acid on phenol. The former crystallizes in yellow needles or prisms, melts at 44.27° C., boils at 214° C., and is the only one volatile with steam. The para-derivative crystallizes in colorless needles or monoclinic columns and melts at 114° C. The meta-isomer is prepared from metanitraniline and nitrous acid. It forms thick, sulphur-colored crystals, melts at 96° C., and boils at 194° C. under 70 millimeters pressure.

nitrophyte (nī′trọ̄-fīt), *n.* [NL. *nitrum,* niter, + Gr. *φυτόν,* plant.] In *phytogeog.,* a plant which requires a large nitrogen content in the soil.

A general mixture of psammophytes, lithophytes, *nitrophytes,* and hydrophytes that indicate . . . the complexity of the substratum as an ecological area.
C. MacMillan, in Minn. Bot. Stud., Bulletin IX. 1014.

nitrophytic (nī-trọ̄-fit′ik), *a.* [*nitrophyte* + *-ic.*] Having the character of a nitrophyte.

nitropowder (nī′trọ̄-pou-dėr), *n.* A gunpowder into the composition of which nitric acid enters.

nitroprussiate (nī-trọ̄-prus′i-āt), *n.* Same as ★*nitroprussid.*

nitroprussic (nī-trọ̄-prus′ik), *a.* [*nitro-* + *prussic* (acid).] Pertaining to nitric and prussic acids or to nitroferricyanic acid.—**Nitroprussic acid,** a dark red, deliquescent, crystalline compound, $H_2Fe(CN)_5NO$, prepared by the action of hydrochloric acid on the silver salt. Also called *nitroferricyanic acid.*

nitroprusside (nī-trō-prus′id), *n.* [*nitro-* + *pruss(ic)* + *-ide*[2].] A compound of a basic element or radical with the dyad radical $Fe.NO.(CN)_5$. Thus sodium nitroprusside, the compound most frequently prepared, has the composition $Na_2Fe.NO.(CN)_5$ and crystallizes with two molecules of water. Such a compound gives an intense but transient purple color with the solution of an alkaline sulphid, this reaction being often utilized for the detection of sulphur in minute quantity.—**Sodium nitroprusside,** the most important salt of nitroferricyanic acid; a ruby-colored compound, $Na_2Fe(CN)_5NO.2H_2O$, prepared by the action of nitric acid on potassium ferrocyanide and subsequent treatment of the product with sodium hydroxid. It crystallizes in rhombic prisms and decomposes when heated.

nitros-. A prefix denoting derivation from nitrous acid, or indicating the presence of the univalent group –NO in the molecule of a compound. See *nitroso-.*

nitrosamine (nī-trọ̄-sam′in), *n.* [*nitros-* + *amine.*] 1. A class-name of compounds which contain the group $\begin{matrix}R\\R'\end{matrix}\!>N.NO$, where R is an alphyl group such as phenyl, C_6H_5, and R′ is an alkyl such as methyl, CH_3. They are formed by the action of nitrous acid on secondary aromatic, aliphatic amines.—2. Same as *nitrosamine* ★*red.*

nitrosate (nī′trọ̄-sāt), *n.* [*nitros-* + *-ate*[1].] In *organic chem.,* a class-name of compounds which contain the group $RC(ONO_2).C(R)$:-NOH, where R is a hydrocarbon radical such as methyl, CH_3. They are formed by the addition of nitrogen tetroxid to aliphatic or aromatic hydrocarbons of the ethylene series.

nitrosite (nī′trọ̄-sīt), *n.* [*nitros-* + *-ite*[2].] In *organic chem.,* a class-name of compounds which contain the group $>CONO.\overset{\vee}{C}:NOH.$ They are prepared by the action of nitrogen trioxid (nitrous anhydrid) on ethylene hydrocarbons.

Nitroso color. See ★*color.*

nitrosobacteria (nī-trō′sọ̄-bak-tē″ri-ạ̈), *n. pl.* Bacteria of the soil which oxidize ammonia to nitrous acid.

Winogradsky's investigations resulted in the discovery that two kinds of bacteria are concerned in nitrification; one of these, which he terms *Nitrosobacteria,* is only capable of bringing about the oxidation of the ammonia to nitrous acid. *Encyc. Brit.,* XXVI. 56.

nitrosodimethylaniline (nī-trō″sọ̄-dī-meth″il-an′i-lin), *n.* The para-compound, $O\overset{4}{N}C_6H_4\overset{1}{N}$-$(CH_3)_2$, prepared by the action of nitrous acid on dimethylaniline. It crystallizes in large green plates and melts at 85° C. It is used in the manufacture of certain dyes.

nitroso-indol (nī-trō-sọ̄-in′dol), *n.* A red compound obtained by treating a solution of indol with concentrated sulphuric acid in the presence of a nitrite.

nitrostarch (nī′trọ̄-stärch), *n.* An explosive substance obtained by dissolving starch in nitric acid, adding the solution gradually, after cooling, to a mixture of concentrated nitric and sulphuric acids, and washing away all traces of surplus acid. It may be obtained of several different grades of nitration, is liable to undergo spontaneous decomposition, and has no practical value as an explosive. Also called *nitramidin.*

nitrosulphonic (nī″trọ̄-sul-fon′ik), *a.* In *organic chem.,* noting a class of compounds which contain in their molecule the univalent nitro-radical $-NO_2$ and the univalent sulphonic-acid radical $-SO_3H$.—**Nitrosulphonic acid.** (*a*) A colorless crystalline compound, O_2NSO_3H, formed during the manufacture of sulphuric acid by the chamber process, if the quantity of water present is insufficient for the production of sulphuric acid. See *lead-chamber* ★*crystals.* (*b*) In *organic chem.,* the general name given to sulphonic acids containing one or more nitro-groups, NO_2, in their molecules.

Nitrosyl chlorid, a substance, NOCl, formed by the direct union of nitrogen dioxid with chlorin. Below – 8°

C. it is a deep orange-colored liquid which boils at that temperature and appears as an orange-yellow gas. With a solution of caustic soda it produces sodium nitrate, sodium chlorid, and water.

nitrosylic (nī-trō-sil′ik), *a.* [*nitrosyl* + *-ic.*] Pertaining to the univalent nitrosyl radical -NO, which is also called the *nitroso group.*

nitrotartaric (nī″trọ-tär-tar′ik), *a.* Noting an acid, a colorless compound, $HOOC.CH(NO_3)$-$CH(NO_3)COOH$, prepared by the action of nitric acid on tartaric acid. It crystallizes in silky prisms and is decomposed by hot water.

nitroxyl (nī-trok′sil), *n.* A nitro-group; specifically, the group NO_2.

Nitrum fixum, an old name for potassium carbonate made by the deflagration of saltpeter with charcoal.—**Nitrum seri lactis,** a seventeenth-century name for lactose or milk-sugar obtained by evaporating the whey of milk.

niu (nẹ̄-ö′), *n.* [Polynesian name.] In Hawaii and throughout Polynesia, the cocoanut-palm. See ★*niog.*

nivate (nī′vāt), *v. t.*; pret. and pp. *nivated*, ppr. *nivating.* [L. *nivatus*, cooled with snow. See ★*nivation.*] Cover with snow; specifically, in *geol.*, affect (as a surface) by nivation. See ★*nivation.*

> In this manner glaciated forms are seen to shade out into *nivated* forms; and it is possible to establish a complete series of gradations from the deepest glaciated cirque to the most featureless *nivated* flat.
>
> *F. E. Matthes*, Glacial Sculpture of the Bighorn Mountains, in Rep. U. S. Geol. Survey, 1899–1900, ii. 184.

nivation (nī-vā′shọn), *n.* [NL. *nivatio(n-)* (cf. L. *nivatus*, cooled with snow), < *nix* (*niv-*), snow (see *névé*).] In *geol.*, the condition of being snow-covered; also the erosive and transporting action of a cover of snow.

> The effects of the occupation by quiescent névé are thus to convert V-shaped valleys into U-shaped ones and to efface their drainage lines without material change of grade. These névé effects, which are wholly different from those produced by glaciation, I shall for the sake of brevity, speak of as effects of *nivation*, the valleys exhibiting them having been nivated.
>
> *F. E. Matthes*, Glacial Sculpture of the Bighorn Mountains, Rep. U. S. Geol. Survey, 1899–1900, ii. 183.

niveau (ni-vō′), *n.* [Pr. *niveau.* See *level*^{1}, *n.*] A level; a flat surface.

nivellate (niv′e-lāt), *v. t.*; pret. and pp. *nivellated*, ppr. *nivellating.* [F. *niveler*, level, + *-ate*^{2}.] To level; reduce to a level.—**Nivellating table,** a table the top of which can be brought, by a suitable mechanism, to a perfect level.

> The *nivellating table* is designed to take the place of the usual forms of nivellating apparatus, as it is itself perfectly level, is provided with several shelves divided into compartments, the whole being covered with a glass hood, excluding dust but not light.
>
> *Sci. Amer. Sup.*, April 9, 1898, p. 18574.

nivenite, *n.* Like other varieties of uraninite, this mineral exhibits marked radioactivity.

nivosity (nī-vos′i-ti), *n.* [L. *nivosus*, snowy. See *Nivôse.*] Abundance of snow; snowiness.

> That faculty . . . which had brought the forces of nature,—its pluviosity, *nivosity*, germinality, and vendemiarity,—under the yoke for the service of men.
>
> *J. Morley*, Critical Miscellanies, Ser. II. 110. *N. E. D.*

nixie^2, *n.* Same as *nix*^{2}.

niyog (nē′yọ̈g), *n.* [Chamorro and Tagalog name.] The cocoanut-palm. See ★*niog.*

nizamate (ni-zäm′āt), *n.* [*Nizam* + *-ate*^{3}.] The territory or jurisdiction of the *Nizam.*

N. J. An abbreviation of *New Jersey.*

nkungu, *n.* See ★*kungu.*

N. L. An abbreviation (*b*) of *north latitude*; (*c*) [*l. c.*] of the Latin *non licet*, it is not permitted; (*d*) of the Latin *non liquet*, it does not appear, it is doubtful, the case is not clear; (*e*) of the Latin *non longe*, not far.

N. Lat. An abbreviation of *north latitude.*

N. L. F. An abbreviation of *National Liberal Federation.* [English.]

N. M. An abbreviation (*a*) of *New Mexico*; (*b*) of the Latin *nux moschata*, nutmeg.

N. Mex. An abbreviation of *New Mexico.*

no^2, *a.*—**No ball.** See ★*ball*^{1}.

no^3 (nō), *n.* [Jap. *nō.*] In Japan, a sort of dignified operatic performance consisting of music and dancing, with recitation. The carved masks worn by the performers indicate the characters portrayed.

> The stage on which the *No-dance* is performed is made of hard, unpainted wood, with a single pine tree somewhat conventionally portrayed on the background. Thus is suggested a grand monotony. The main parts are three in number, the small chorus and orchestra being seated on the stage at one side. Masks are worn by the chief players—who might almost better be termed tellers—and assist in the general idealisation. The poem deals with historical subjects, always interpreting them through Buddhist ideas. The standard of excellence is an infinite suggestiveness, naturalism the one thing to be condemned.
>
> *Okakura*, Ideals of the East, p. 183.

No. An abbreviation (*b*) of *north.*—**2.** In *chem.*, the symbol for *norium.*

N. O. An abbreviation (*a*) of *natural order*; (*b*) of *New Orleans.*

Noachical (nọ-ā′ki-kạl), *a.* Same as *Noachic.*

nob^3, *n.*—**His nobs.** (*a*) A slang title for an aristocrat or a swell. (*b*) In *cribbage*, the jack of the same suit as the starter held in either hand or crib.

no-ball (nō′bâl), *v. t.* In *cricket*: (*a*) To condemn as a 'no ball.' See *no ball*, under ★*ball*^{1}. (*b*) To declare (a bowler) to have delivered a 'no ball.' *N. E. D.*

> It was discovered that he had lost his residential qualification, so the matter terminated through a side issue, and Crossland was never *no-balled* by any umpire. There are six prominent instances of *no-balling* for throwing in first-class matches.
>
> *Encyc. Brit.*, XXVII. 277.

nobber (nob′ėr), *n.* [*nob*^{1}.] **1.** A blow on the head. [Slang.]—**2.** A pugilist skilful in delivering blows on the head. [Slang.]

nobblerize (nob′lėr-īz), *v. i.*; pret. and pp. *nobblerized*, ppr. *nobblerizing.* [*nobbler* + *-ize.*] To drink nobblers with frequency. See *nobbler*, 3. [Slang, Australia.]

noble. I. *a.*—**Noble elements.** See ★*element.*

II. *n.*—**Harry noble,** a gold coin of Henry V. and Henry VI. of England.

nobs† (nobz), *n.* [Origin obscure.] A dear; a darling: applied to a woman.

> He calleth me his whytyng,
> His mullyng and his mytyng,
> His *nobbes* and his conny,
> His swetyng and his honny,
> With, Bas, my prety bonny,
> Thou art worth good and monny.
>
> *Skelton*, Elynour Rummynge, p. 102.

noca (nō′kạ̈), *n.* [Sp.] An edible prawn, *Bithynis acanthurus*, of Porto Rico and elsewhere.

Nocca (nok′ạ̈), *n.* [NL. (Cavanilles, 1794), named in honor of Domenico *Nocca*, an Italian botanist who published several botanical works between 1793 and 1814.] A genus of dicotyledonous plants belonging to the family *Asteraceæ.* See *Lagascea.*

nocerite (nō′sẹ̄-rīt), *n.* Same as *nocerine.*

nociceptive (nō-si-sep′tiv), *a.* [L. *nocere*, inflict injury, + *capere*, take.] In *neurol.*, receptive of injury.

> In this reaction the reflex arc is (i.) the receptive neurone (*nociceptive*) from the foot to the spinal segment, (ii.) perhaps a short intraspinal neurone, and (iii.) the motor neurone to the flexor muscle.
>
> *Nature*, Sept. 8, 1904, p. 463.

nocking-plug (nok′ing-plug), *n.* A plug inserted at the base of a cane arrow, used for strengthening the nock.

noctambulistic (nok-tam-bụ̄-lis′tik), *a.* [*noctambulist* + *-ic.*] Pertaining to, or subject to, noctambulism or sleep-walking.

noctambulous (nok-tam′bụ̄-lus), *a.* [*noctambul(ism)* + *-ous.*] Subject to noctambulism or sleep-walking.

noctilucal (nok-ti-lū′kạl), *a.* [*Noctiluc(a)* + *-al*^{1}.] **1**†. Phosphorescent. *Boyle.*—**2.** Pertaining to, or consisting of, phosphorescent animalcules of the genus *Noctiluca.*

noctilucan (nok-ti-lū′kạn), *n.* A phosphorescent animalcule of the genus *Noctiluca.*

noctilucence (nok-ti-lū′sẹns), *n.* The character or state of being noctilucent; luminousness at night, or in the dark, as the phosphorescence of the pelagic animalcules of the genus *Noctiluca.* *Science*, July 7, 1893, p. 10.

noctiluminous (nok-ti-lū′mi-nus), *a.* [L. *nox* (*noct-*), night, + *lumen* (*lumin-*), light, + *-ous.*] Luminous or shining at night; as a *noctiluminous* cloud. See *night-shining cloud*, under ★*cloud*^{1}.

noctivagator† (nok-tiv′ạ̄-gā-tọr), *n.* [See *noctivagant.*] One who, or an animal which, walks or wanders at night. [Rare.]

Noct. maneq. An abbreviation of the Latin *nocte maneque*, at night and in the morning.

noctuideous (nok-tụ̄-id′ẹ̄-us), *a.* Same as *noctuidous.*

noctum, *n.* **4.** An organism whose color is different at night from what it is in the daytime. Also *nocturne.*

nocturn (nok′tėrn), *v. i.* [*nocturn*, *n.*] To be different in color at night from what it is in the daytime; be a nocturn. Also *nocturne.* *Nature*, April 5, 1900.

nocuity (no-kū′i-ti), *n.* [NL. **nocuitas*, < L. *nocuus*, harmful.] Harmfulness; noxiousness.

Nodal circle, plane, points (*b*). See ★*circle*, etc.

nodality (nọ-dal′ị-ti), *n.* [*nodal* + *-ity.*] The fact or character of being nodal; the character of being the intersection of several converging lines, paths, or the like.

> A higher degree of "*nodality*," to use Mr. Mackinder's term, is found where several such furrows meet to form a well-marked though by no means deep hollow. . . . Where from any cause a gap exists running through the Chalk, obviously the village which lies at that gap at the base of the Chalk tends to be a point of convergence for roads leading to the gap. The "*nodality*" of the point rises to a high degree. *Geog. Jour.* (R. G. S.), IX. 78, 79.

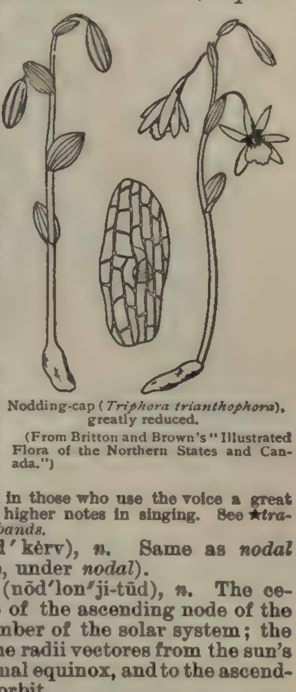
nod-crafty (nod′kraf″ti), *a.* Able to nod with an air of great wisdom. *N. E. D.* [Rare.]

> Solemne goose. stately least wyse *nodd crafty.* They have made him beleeve he is wondrous wy.
>
> *J. Spedding*, Letters and Life of Bacon, IV. 92.

nodding-cap (nod′ing-kap), *n.* An orchidaceous plant of eastern North America, *Triphora trianthophora*, with nodding purple flowers. Sometimes called *three-birds.*

noddy-peak†, *n.* A variant of *hoddy-peak.*

node, *n.*—**Heberden's nodes,** nodular swellings on the knuckles, associated with lateral deflection of the finger-joints, in those of advancing years. *Med. Record*, Feb. 7, 1903, p. 216.—**Petiolar node,** a node on the petiole of the abdomen of an ant.—**Singers' nodes** or **nodules,** a circumscribed swelling between the arytenoid cartilages of the larynx, sometimes observed in those who use the voice a great deal, especially the higher notes in singing. See ★*trachoma of the vocal bands.*



Nodding-cap (*Triphora trianthophora*), greatly reduced.

(From Britton and Brown's "Illustrated Flora of the Northern States and Canada.")

node-curve (nōd′kėrv), *n.* Same as *nodal curve* (which see, under *nodal*).

node-longitude (nōd′lon″ji-tūd), *n.* The celestial longitude of the ascending node of the orbit of any member of the solar system; the angle between the radii vectores from the sun's center to the vernal equinox, and to the ascending node of the orbit.

nodiflorous (nọ-dif′lọ-rus), *a.* [L. *nodus*, knot, + *flos* (*flor-*), flower, + *-ous.*] Bearing flowers at the nodes of the stem.

nodiform, *a.* **2.** Having the form of a node.

nodium (nō′di-um), *n.* [NL., < *Nod(on)* (see def.) + *-ium.*] The trade-name of an alloy offered for industrial use by a French engineer, Albert Nodon: said to have the density 2.4, high electric conductivity, and greater resistance to the chemical action of the atmosphere than aluminium.

nodobicuspidal (nō″dọ-bī-kus′pi-dạl), *a.* [L. *nodus*, node, + E. *bicuspidal.*] Having a node and two cusps: used to designate a class of quartic curves.

> *Nodobicuspidal* quartics admit of three primary subdivisions. *Nature*, Nov. 27, 1902, p. 80.

nodocuspidal (nō-dọ-kus′pi-dạl), *a.* [L. *nodus*, node, + E. *cuspidal.*] Having a node-cusp.

> *Nodocuspidal* quartics admit of only four primary subdivisions, three of which depend on the character of the node, whilst the fourth arises from the fact that the node and cusp may unite into a rhamphoid cusp.
>
> *Nature*, Nov. 27, 1902, p. 80.

nodoid (nō′doid), *n.* [L. *nodus*, node, + *-oid.*] The surface of revolution of the hyperbolic catenary.

nodosity, *n.*—**Haygarth's nodosities,** nodular swellings on the articular surfaces of the bones in arthritis deformans.—**Heberden's nodosities.** Same as *Heberden's* ★*nodes.*

nodule, *n.* (*e*) The peculiar knot upon the roots of leguminous and a few other plants, caused by bacteria. (See *nodule-bacteria*, under ★*bacterium.*) They enable the plant to use atmospheric nitrogen. See ★*root-tubercle.*—**Nodule-bacteria.** See ★*bacterium.*—**Nodule beds.** See ★*bed*^{1}.—**Radial nodule,** a nodule of bone or cartilage found at the base of each dorsal and each anal ray of some fishes.—**Root nodule.** Same as *root-knot.* Also applied to ★*root-tubercles.* See ★*nodule* (*e*).—**Vocal nodules.** Same as *singers'* ★*nodes.*

nodulose, *a.* **2.** Abounding in nodes or tubercles: used in descriptive zoölogy.

nodulus, *n.*—**Noduli laqueati pilorum,** the occurrence of knots in the hair, especially in the long hairs of the beard in man, or of the head in women.

noël (nō-el′), *n.* [F. Christmas, a Christmas song. See *nowel*^{1} and *natal*^{1}.] A Christmas song or carol; specifically, in the South of

France, a popular ballad relating to the Nativity sung at Christmas time; also the air to which it is sung.

> The most consistently popular form of poetry in the South of France was always the *noël*. There has been no limit to the production of these. . . . They have deservedly maintained their popularity to the present day.
> *Encyc. Brit.*, XXXII. 43.

> The Provençal *noëls*—being some real, or some imagined, incident of the Nativity told in verse set to a gay or tender air—are the crèche translated into song. The simplest of them are direct renderings of the Bible narrative. *T. A. Janvier*, Christmas Kalends of Provence, xiv.

noësis (nō-ē'sis), *n.* [Gr. *νόησις*, thought. See *noëtic.*] In *philos.*, pure thought; reason; intellection.

> Identity, the situations in time and place, and causation . . . are thus obviously not the result of grounding or *noesis* merely, are not ideal but empirical, and have, that is to say, existential import. *Encyc. Brit.*, XXXII. 64.

noëtic, *a.* **2.** In *psychol.*, consciously logical: opposed to ⋆*hyponoëtic*, or unconsciously logical.

noëtics (nọ-et'iks), *n.* [Pl. of *noëtic.*] The science of pure thought, reason, or intellection; "the science that deals with the phenomena that arise from efforts to satisfy the craving for truth." *Ross*, in Amer. Jour. Sociol., VIII. 776. [Rare.]

nœud (nė), *n.* [F., a knot, node.] **1.** A nautical mile, taken as 1855 meters, or 2028 yards.—**2.** Same as *node*, 10.

> The case of a differential equation of the first order and a point on the discriminant locus at which the integral curves have not a cusp is a good example, and shows the existence of a *nœud* may be predicted from an inspection of the diagram.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 555.

Nœud vital, a point in the medulla oblongata where the respiratory center is supposed to be: disease or injury of it is fatal.

nogal (nō-gäl'), *n.* [Sp. *nogal*, walnut-tree.] In Spanish America, a name given to various species of *Juglans*: in Porto Rico, to the indigenous *J. Jamaicensis*.

noggle-head (nog'l-hed), *n.* *Cottus gobio*, commonly known as *miller's-thumb*, a cottoid fish widely distributed over Europe. See cut at *miller's-thumb*.

noi, nooi (nō'i), *n.* [Cape D.] Among the South African Dutch, a title of women, especially of young women, equivalent to *Madame*, or *Mistress* (*Mrs.*).

noio (nō-ē'ō), *n.* [Hawaiian.] One of the noddy-terns, *Anous hawaiiensis*, peculiar to the Sandwich Islands.

noir (nwor), *a.* and *n.* [F.] Black; in *roulette*, the space in which are placed bets on the color of the number coming black.

noise, *n.*—**Moodus noises**, dull rumbling sounds, like distant thunder, heard from time to time near Moodus, Connecticut, and attributed to earth-movements.—**Simple noise**, in *psychol.*, a noise-sensation; the elementary noise experience. It is at present unsettled whether simple noises are all reducible to the type of the pop or crack, or whether the hiss must be added as a second class of noise-sensation. *E. B. Titchener*, Exper. Psychol., I. i. 31.

noise-sensation (noiz'sen-sā"shọn), *n.* In *psychol.*, the less differentiated form of auditory sensation; the pop, crack, hiss, etc., as distinguished from the tone.

> If we abstract from these elementary *noise-sensations*, . . . we may say that all kinds of auditory sensation . . . are combinations of simple tone-sensations.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 78.

noise-stimulus (noiz'stim"ụ̄-lus), *n.* In *psychol.*, the adequate stimulus of the sensation of noise, thought by some to consist of a single jar or shock of the surrounding medium, but more probably a mixed medley of broken and interrupted wave-motions (tonal stimuli). *E. B. Titchener*, Exper. Psychol., I. i. 33.

Nolan (nō'lạn), *a.* Of or pertaining to Nola, near Naples, in Italy; especially noting the numerous Greek vases found in excavations at that locality.

> The selection and grouping of figures on *Nolan* Amphorae is seldom very careful or suggestive.
> *P. Gardner*, in Jour. Hellenic Studies, XIII. 138.

nolanaceous (nō-lạ̄-nā'shius), *a.* Belonging to the plant family *Nolanaceæ*.

nolid (nol'id), *n.* and *a.* [*Nolid*(*æ*).] **I.** *n.* A member of the lepidopterous family *Nolidæ*.

II. *a.* Having the characters of or belonging to the family *Nolidæ*.

nomadization (nom"ạ-di-zā'shọn), *n.* [*nomadiz*(*e*) + *-ation.*] The process of rendering nomadic; adoption of a nomadic life.

> The Turks triumphed by breaking up intercourse and trade, destroying industries and manufactures, and flooding the land with a sea of wandering tribes, so that the soil passed out of cultivation, the population decreased, and all sources of wealth shrank—in short, by bringing about the *nomadisation* of Asia Minor.
> *W. M. Ramsay*, in Contemporary Rev., Aug., 1897, p. 235.

nomarch, *n.* **2.** The governor of a nome in ancient Egypt.

> Like the Pharaohs of old, the Macedonian conqueror became the son of Amon-Ra, and in Egypt at least claimed divine honours. Before leaving Egypt Alexander appointed the *nomarchs* who were to govern it, and ordered that justice should be administered according to the ancient law of the land.
> *Sayce*, The Egypt of the Hebrews and Herodotus, p. 137.

Nomeidæ (nọ-mē'i-dē), *n. pl.* [NL., < *Nomeus* + *-idæ.*] A family of small fishes, most of which are found in the open sea, of no value for food.

nomenclate (nō'men-klāt), *v. t.*; pret. and pp. *nomenclated*, ppr. *nomenclating*. [*nomenclature.*] To assign a name to, especially in accordance with a particular system of nomenclature; name. [Rare.]

> The natural history of the doctor has not yet been written, but the classes are easily *nomenclated*.
> *Tuckerman*, Collector, p. 127. *N. E. D.*

nomenclaturist (nō"men-klā'ṭụ̄-rist), *n.* [*nomenclature* + *-ist.*] Same as *nomenclator*, 1 and 2.

Nomeus (nọ-mē'us), *n.* [NL., < Gr. *νομεύς*, a herdsman, < *νέμειν*, manage, feed. Early travelers compared the fish to a mullet (D. *harder*, mullet, *herder*, herder, herdsman).] A genus of fishes of the family *Nomeidæ*, found in warm seas, some of them living commonly among the tentacles of the Portuguese man-of-war.

Nomin. An abbreviation of *nominative*.

Nominal partner. See ⋆*partner*.

nominated (nom'i-nā-ted), *p. a.* **1.** Named; mentioned or designated by name.—**2**†. Noted; famous.

> Such of them as were thought the chief and most *nominated* opposer on the other side.
> *Milton*, An Apology for Smectymnuus, p. 75. *N. E. D.*

nomineeism (nom-i-nē'izm), *n.* [*nominee* + *-ism.*] The principle of nomination to office; the political practice of selecting a nominee, in distinction from the practice of appointment.

nominy (nom'i-ni), *n.* [Perhaps a corruption of L. *nomine*, ab. sing. of *nomen*, name; from its use in the formula *in nomine patris* (in the name of the Father), etc. *N. E. D.*] A riming formula; a set or form of words in popular use; a rigmarole; a long story. *N. E. D.* [Prov. Eng.]

> Should the boy be unable to recite this rhyme, he would be told 'he didn't knaw his *nominy*.'
> *J. Nicholson*, Folk-Sp. Yorksh., p. 8. *N. E. D.*

nomism (nō'mizm), *n.* [Gr. *νόμος*, law, + *-ism.*] Strict adherence to law, especially in the nomistic religions, that is, religions which possess codes for the regulation of the cult and of life.

nomocratic (nom-ọ̄-krat'ik), *a.* [*nomocracy* (*-crat-*) + *-ic.*] Of or pertaining to nomocracy. *Haeckel* (trans.), Riddle of the Universe.

nomogram (nom'ọ̄-gram), *n.* [Gr. *νόμος*, law, + *γράμμα*, a writing.] **1.** A graphic table for computation. *Fr. Schilling.*—**2.** [F. *nomogramme.*] A written rule or law.

nomograph (nom'ọ̄-gråf), *n.* [Gr. *νόμος*, law, + *γράφειν*, write.] The graphic presentation of numerical relations by any one of various processes or systems.

nomography, *n.* **2.** In *math.*, the theory of the construction and use of abaci or graphic tables for computation; the theory of the geometric representation of interdependences of variables. *D'Ocagne*, 1891.

nomophylactic (nọ-mof-i-lak'tik), *a.* [Irregularly from *nomophylax.*] Pertaining to the protection and preservation of law; especially, in *Gr. antiq.*, said of the functions and duties of the nomophylax (which see). [Rare.]

> Above all the *nomophylactic* Areiopagus to observe the officials and to check illegality.
> *R. W. Macan*, in Jour. Hellenic Studies, XII. 33.

nomothetic, *a.* **4.** Noting a science which aims at the discovery of universals or general laws: opposed to ⋆*idiographic*.

> This is the same distinction as that made by Windelband under the names *nomothetic* and idiographic sciences.
> *Jour. Philos., Psychol. Sci. Methods*, Jan. 21, 1904, p. 42.

nonadecane (non-ạ-dek'ān), *n.* Same as ⋆*nondecane*.

non-aërobiotic (non-ā"ẹ-rō-bī-ot'ik), *a.* Same as *anaërobiotic, anaërobious*.

nonane (non'ān), *n.* [L. *nonus*, ninth, + *-ane.*] A colorless liquid compound of the methane series, $CH_3(CH_2)_7CH_3$, prepared by the action of hydriodic acid and phosphorus on pelargonic acid. It melts at −51° C., boils at 149.5° C., and is probably present in petroleum.

non-Archimedean (non-är"ki-mē'dẹ̄-ạn), *a.* Pertaining to or designating any system in which either (*a*) the assumption of Archimedes is contradicted, or (*b*) is not used. See ⋆*assumption*.

non-arcing (non'ärk"ing), *a.* In *elect.*, noting the property of metals of not being able to maintain an alternating arc under certain conditions, but of blowing it out explosively. This property is shown more by some metals (as zinc, mercury, etc.) than by others (as copper and aluminium) and is utilized in making the tẹrminals of lightning-arresters to keep the machine-current from following the lightning-discharge as arc.

non-being (non'bē-ing), *n.* The negation of being; absence of the attribute of being.

non-bituminous (non-bi-tū'mi-nus), *a.* Lacking bitumen, as anthracite coal in contrast with bituminous coal.

non-cellular (non-sel'ụ̄-lạ̈r), *a.* In *bot.*, same as ⋆*apocytial*.

non-commensurable (non-kọ-men'ṣụ̄-rạ-bl), *a.* Incommensurable: said of two quantities whose ratio cannot be expressed as a *rational* number but is irrational.

Non-commissioned staff. See ⋆*staff*¹.

non-commonable (non-kom'on-ạ-bl), *a.* Not subject to or having the privilege of the right of common. See *common*, 4.

> A right may be claimed for other animals, such as donkeys, pigs, and geese; but they are termed *non-commonable*, and the right can only be established on proof of special usage. *Encyc. Brit.*, XXVII. 167.

nonconformism (non-kọn-fôr'mizm), *n.* Same as *nonconformity*.

> Sir Henry Fowler, that stanch pillar of *nonconformism*. *N. Y. Times*, Sat. Rev., Dec. 16, 1905, p. 898.

non-conjugate (non-kon'jọ̈-gāt), *a.* Not conjugate: said of the ambulacral pores of the sea-urchins (*Echinoidea*) when not united by transverse furrows.

non-convergent (non-kọn-vėr'jẹnt), *a.* Not convergent; in *math.*, either divergent or oscillating.

non cul., non culp. Abbreviations of the Latin *non culpabilis*, not guilty.

nondecane (non-dek'ān), *n.* [L. *nonus*, ninth, + E. *decane.*] A colorless compound of the methane series, $CH_3(CH_2)_{17}CH_3$, prepared by the action of hydriodic acid and phosphorus on the corresponding dichlorid and contained in the paraffin from bituminous shale. It melts at 32° C. and boils at 330° C. Also called *nonadecane* and *enndecane*.

nondecatoic (non"dek-ạ-tō'ik), *a.* Noting an acid, a colorless compound, $CH_3(CH_2)_{17}$-COOH, prepared by the hydrolysis of octodecyl cyanide. It melts at 66.5° C. and boils at 297–299° C. under 100 millimeters pressure.

non-degenerate (non-dẹ̄-jen'ẹ-rạ̄t), *a.* Not degenerate; in *geom.*, not consisting of an aggregation of forms of a lower order or class. *Science*, Jan. 18, 1901, p. 103.

non-diathermanous (non-dī-ạ-thėr'mạ-nus), *a.* Not diathermanous; not conducting heat freely; that is a poor-conductor or a non-conductor of heat.

non-dichogamous (non-dī-kog'ạ-mus), *a.* Not dichogamous; having anthers and stigmas simultaneously produced; synanthetic.

non-dichogamy (non-dī-kog'ạ-mi), *n.* Simultaneous maturity of anthers and stigmas; synanthesis.

non-directional (non-di-rek'shọn-ạl), *a.* In *math.*, scalar or undirected: thus velocity has direction, but speed is *non-directional*.

> In Prof. Henrici's algebra the products of two vectors α, β are:—($\alpha\beta$) a *non-directional* or "scalar," in magnitude equal to the product of one vector into the component of the other along the first, and [$\alpha\beta$] a vector perpendicular to the plane drawn through α and β, and in magnitude equal to the area of the parallelogram of which α and β are concurrent sides.
> *Nature*, Oct. 22, 1903, p. 610.

non-electrolyte (non-ẹ̄-lek'trọ̄-līt), *n.* In *phys. chem.*, a substance which does not conduct electrolytically and which is not dissociated into ions on being dissolved.

> The *non-electrolytes* used, distilled water, cane sugar and urea, affect the protoplasm of paramœcia only through the osmotic pressure of the solution. There is no chemical effect. *Biol. Bulletin*, June, 1904, p. 10.

non-emanating (non-em′a̤-nāt-ing), *a.* Incapable of emitting an emanation: said of certain compounds of the radioactive elements.

nonene (non′ēn), *n.* [L. *nonus*, ninth, + *-ene.*] A name given to two hydrocarbons, C_9H_{18}. One is obtained by heating 4-ethyl-4-iodoheptane with alcoholic potash and boils at 139.5° C. The other is $CH_3C(C_6H_{13}):CH_2$, which is obtained by heating the corresponding hydrochlorid of nonylamine. It boils at 141–143° C.

Non-essential singularity, singular point. See ★*singularity*, ★*point*[1].

non-Euclidean (non″ū-kli-dē′a̤n), *a.* Not comprehended within or not in conformity with the system of geometry established by Euclid; pertaining to or designating any system of geometry which, while differing in essential particulars from that of Euclid, is nevertheless in accord with the facts of experience within the limits of the errors of observation.

> Similarly it has been supposed (*e.g.* by Newcomb) that *non-Euclidean* spaces of three dimensions should be regarded as figures in a four-dimensional Euclidean space, being related to it as the sphere to ordinary space.
> *Encyc. Brit.*, XXVIII. 669.

Non-Euclidean geometry, in its primitive meaning, the system which follows from the denial of Euclid's postulate that "through a given point there is not more than one parallel to a given straight line," when all of his other assumptions, explicit and unconscious, are retained. The name has sometimes been applied to what Bolyai called *absolute geometry* and Lobachevski *pangeometry*, namely, the system which simply dispensed with the above Euclidean postulate, using neither it nor any contrary assumption, and was undifferentiated, therefore, as between Euclidean and primitive non-Euclidean geometry. —**Non-Euclidean motion.** See ★*motion.*—**Non-Euclidean space.** See ★*space.*

non-Euclidian (non-ū-klid′i-a̤n), *a.* See ★*non-Euclidean.*

non-exportation (non″eks-pôr-tā′sho̤n), *n.* A refraining from exportation or a failure to export. Compare *non-importation.*

non-homogeneity (non-hō″mọ-jẹ-nē′ị-ti), *n.* The state of being non-homogeneous; lack of uniformity of structure or composition; diverseness as regards some specified quality: thus, a beam of white light has non-homogeneity as to wave-length.

non-homogeneous (non-hō-mọ-jē′nẹ-us), *a.* Not homogeneous.

nonic (nō′nik), *a.* and *n.* [L. *nonus*, ninth, + *-ic.*] **I.** *a.* In *math.*, of the ninth degree or order.

II. *n.* An algebraic function or form of the ninth degree; a quantic of the ninth degree.

> In another case, which primâ facie seemed normal, Professor Pearson found that "all nine roots of the fundamental *nonic* lead to imaginary solutions of the problem."
> *Encyc. Brit.*, XXVIII. 291.

non-identist (non-ī-den′tist), *n.* One who opposes the theory that all venereal diseases are of one and the same origin, that is, caused by the same virus.

nonillionth (nọ-nil′yo̤nth), *a.* and *n.* [*nonillion.*] **I.** *a.* **1.** Last in a series of a nonillion individuals.—**2.** Being one of a nonillion equal portions.

II. *n.* One of a nonillion equal parts.

non-inductive (non-in-duk′tiv), *a.* In *elect.*, containing no, or only very low, inductance. See ★*inductance.* A *non-inductive circuit* is a circuit in which an alternating current flows in phase, or practically in phase, with the electromotive force.

nonine (non′in), *n.* [L. *nonus*, ninth, + *-ine*[2].] A colorless liquid compound of the acetylene series, C_9H_{16}, prepared by the action of phosphoric anhydrid on campholic acid. It boils at 135–137° C.

non-ionized (non-ī′ọ-nīzd), *p. a.* In *phys. chem.*, not dissociated into ions capable of carrying a current in electrolysis. *Encyc. Brit.*, XXVIII. 15.

non-ionizing (non-ī′ọ-nī-zing), *a.* In *phys. chem.*, not separating a dissolved electrolyte into ions: said of a solvent. *Nature*, Dec. 3, 1903, p. 103.

non-irrigable (non-ir′i-ga̤-bl), *a.* Not capable of being irrigated; so situated that irrigation is impossible.

> That the *nonirrigable* grazing lands should be leased in small tracts so as to unite the irrigable and the pasture lands. *Yearbook U. S. Dept. Agr.*, 1901, p. 96.

non-linear (non-lin′ẹ-är), *a.* Not linear; in *math.*, not of the first degree.

> There is an infinite number of linear complexes touching a *non-linear* complex at a given line.
> *Encyc. Brit.*, XXVIII. 661.

non-malignant (non-mạ-lig′na̤nt), *a.* In *pathol.*, benignant; not malignant: as, a *non-malignant* tumor.

non-Mendelian (non-men-dē′li-a̤n), *a.* Exhibiting non-conformity with Mendel's principles, or definite departure from these principles, in the breeding of animals or plants. See ★*Mendelism.*

non-metal (non′met″al), In. n *chem.*, an element which has not the character of a metal. See *metalloid.*

non-metalliferous (non-met-a̤-lif′e̤-rus), *a.* Not metalliferous; that does not contain a metal or metals: as, the *non-metalliferous* minerals.

non-miscible (non-mis′i-bl), *a.* Incapable of mixing: said of certain liquids which, upon contact, maintain a definite dividing surface.

non-motile (non-mō′til), *a.* Not motile; not capable of moving of itself.—**Non-motile serum.** See ★*serum.*

non-nitrogenous (non-nī-troj′e-nus), *a.* Not containing nitrogen as a constituent: as, the *non-nitrogenous* portion of human food.

non-nucleated (non-nū′klẹ-ā-ted), *a.* In *cytol.*, not provided with a nucleus; without a nucleus; enucleate.

non obst. An abbreviation of the Latin *non obstante*, not standing in the way; notwithstanding.

nonoic (nọ-nō′ik), *a.* [L. *nonus*, ninth.] Noting an acid, a colorless compound of the acetic acid series, $C_8H_{17}COOH$, prepared by the hydrolysis of octyl cyanide. It melts at 12.5° C., boils at 253–254° C., and is probably identical with pelargonic acid prepared from oil of rue.

nonose (non′ōs), *n.* [L. *nonus*, ninth, + *-ose.*] In *organic chem.*, the class-name of sugars having the formula $C_9H_{18}O_9$. The designation refers to the number of oxygen atoms in the molecule. The most important members of the class are d-mannononose and glucononose.

non-oxygenous (non-ok-sij′e-nus), *a.* Not containing oxygen as a constituent.

non-periodic (non-pē-ri-od′ik), *a.* Not having a regular period of repetition or orbital motion: as, *non-periodic* variables (stars) and comets.

> The *non-periodic* comets appearing since 1700 are nearly all in the hands of computers. *Encyc. Brit.*, XXVII. 161.

non-phosphorized (non-fos′fọ-rīzd), *a.* Not containing phosphorus as a constituent: as, *non-phosphorized* cast-iron.

non-photobiotic (non-fō″tọ-bī-ot′ik), *a.* Not photobiotic; living in darkness.

non placet (non plā′set). [L. *non*, not, *placet*, it pleases. See *placet.*] It does not please (me, us): a formula, used in certain universities and assemblies, for expressing a negative vote; as a substantive, a negative vote. In the latter sense often written *non-placet.*

> Cambridge.—It was agreed by the senate on January 29, by a large number of placets to one *non-placet*, to appoint two additional demonstrators of human anatomy.
> *Nature*, Feb. 5, 1903, p. 332.

non-placet (non-plā′set), *v. t.* [See ★*non placet.*] To cast a non-placet or negative vote against; vote down (a measure).

> To-day I brought in a Grace with that view: it is *non-placeted.* *Whewell*, Life, p. 287. *N. E. D.*

non-plane (non-plān′), *a.* Not lying all in one plane.

non-plussation (non-plu-sā′sho̤n), *n.* [*non-plus, v.*, + *-ation.*] The act of nonplussing or perplexing.

non plus ultra. [L.] Same as *ne plus ultra.*

non-productive (non-prọ-duk′tiv), *a.* and *n.* **I.** *a.* **1.** Lacking the power of producing; not fertile.—**2.** Unproductive financially; not yielding revenue; unprofitable, as a mine or a farm.—**3.** In *polit. econ.*, not causing or tending to cause an increase in the quantity or quality of things of value; not causing commodities to possess exchangeable value: as, *non-productive* labor.

II. *n.* A person or industry that does not cause an increase in the quantity, quality, or exchangeable value of commodities.

nonproteid (non-prō′tẹ-id), *n.* Any complex organic substance which is not an albumin.

non-radiable (non-rā′di-a̤-bl), *a.* Impervious to cathode rays, X-rays, or similar forms of radiation: as, a *non-radiable* metal.

non-restraint (non-rẹ-strānt′), *n.* Freedom from restraint: noting the treatment of insanity without strapping, the use of the strait-jacket, or the like.

non-saccharine (non-sak′a̤-rin), *a.* Not having the qualities of a sugar.

non-seat (non′sēt), *n.* In *coal-mining*, see the extract.

> *Non-seat.* See D Link. [A flat iron bar attached to chains, and suspended from a hemp rope to a windlass at surface.] *Gresley*, Gloss. Coal Mining. *N. E. D.*

nonsensification (non-sen″si-fi-kā′sho̤n), *n.* The act of making nonsensical; production of nonsense. [Rare.]

> Only a simple suffumigation . . . accompanied by availing ourselves of the suitable planetary hour. Simple suffumigation? simple *nonsensification*— planetary hour? planetary fiddlestick! *Scott*, Antiquary, xxii.

nonsensify (non-sen′si-fī), *v. t.*; pret. and pp. *nonsensified*, ppr. *nonsensifying.* To make nonsense of; render nonsensical. [Rare.]

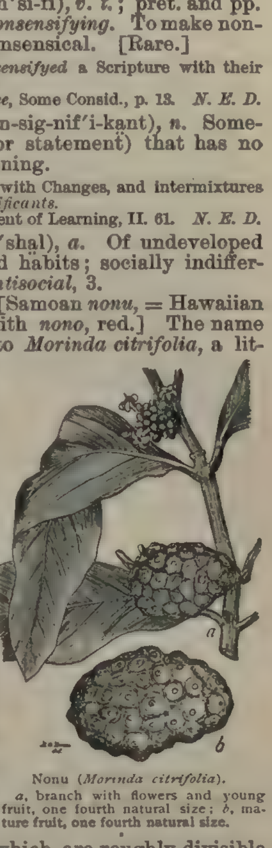
> They have . . . *nonsensifyed* a Scripture with their Figures and Allegories.
> *H. Lawrence*, Some Consid., p. 13. *N. E. D.*

non-significant (non-sig-nif′i-ka̤nt), *n.* Something (as a sign, or statement) that has no significance or meaning.

> The Simple Cyphars with Changes, and intermixtures of Nulles, and *Nonsignificants.*
> *Bacon*, Advancement of Learning, II. 61. *N. E. D.*

non-social (non-sō′sha̤l), *a.* Of undeveloped social instincts and habits; socially indifferent. Compare ★*antisocial*, 3.

nonu (nō′nö), *n.* [Samoan *nonu*, = Hawaiian *noni*; connected with *nono*, red.] The name applied in Samoa to *Morinda citrifolia*, a littoral tree the bark of the roots and stem of which yields a valuable coloring-matter which is the source of the al dye of India. The fleshy composite fruit is sometimes eaten by the natives, but is full of seeds and is not held in great esteem. The seeds are of especial interest in possessing a separate air-chamber or vesicle which renders them buoyant and capable of being transported to distant shores by ocean-currents. See ★*al*[1].



Nonu (*Morinda citrifolia*).
a, branch with flowers and young fruit, one fourth natural size; *b*, mature fruit, one fourth natural size.

non-umbilicate (non-um-bil′i-kāt), *a.* Not umbilicate: said of gasteropod shells which are roughly divisible into the umbilicate or non-umbilicate, according as the umbilicus is open or closed.

non-uniform (non-ū′ni-fôrm), *a.* Not uniform; irregular. In *math.*, if for each ϵ we can select a positive integer m which is independent of x and such that $| r_n(x) | < \epsilon$ when $n \geqq m$, whatever be the value of x in an interval (a, b), the series is said to converge uniformly in that interval; but the convergence is *non-uniform* if the value of the variable x has to be assigned before m can be given.

non-union, *a.* **2.** That does not submit to the rules or the dictation of a trade-union; not employing union men as such, and exclusively: as, a *non-union* shop.

non-unionism (non-ū′nyo̤n-izm), *n.* Disregard of or opposition to the rules of trade-unions; non-union sentiments.

non-unionist (non-ū′nyo̤n-ist), *n.* One who is not a member of a trade-union; one who advocates the principles of non-unionism.

nonuple (non′ụ-pl), *a.* [L. *nonus*, ninth, + *-plus* as in *duplus*, double, etc.] Ninefold; nine times told: as, in *music*, *nonuple* rhythm, a rhythm with nine beats to the measure.

non-use (non-ūs′), *n.* The fact of not using; abandonment or neglect of use; failure to use.

> Many considerations have been established which point to the *non-use* of the candle as a light unit for photometry.
> *W. M. Stine*, Photometrical Measurements, p. 120.

non-valent (non-vā′le̤nt), *a.* Having no chemical valency, and hence not able to enter into chemical combination.

non-variant (non-vā′ri-a̤nt), *a.* Incapable of variation; fixed: applied in thermodynamics to certain relations between the solid, liquid, and gaseous phases of matter.—**Non-variant system,** in *thermodynam.*, a system in which solid, liquid, and gaseous phases coexist for one or more discrete points and in which neither pressure nor temperature can be changed without the disappearance of one of the phases.

> So long as there is present only a single, chemically definite substance, three co-existent phases form a *non-variant system.*
> *E. Buckingham*, Theory of Thermodynamics, p. 183.

non vult (non vult). [L. 'he does not wish.'] A shortening of the Latin phrase, *non vult contendere,* he does not wish to contest (the case). See *nolo contendere.*

nonylene (non′i-lēn), *n.* [L. *nonus,* ninth, + *-yl* + *-ene.*] Same as ★*nonene.*

nonylenic (non-i-len′ik), *a.* [*nonylene* + *-ic.*] Of or pertaining to nonylene; having nine carbon atoms and one double union in the molecule.—**Nonylenic acid,** a colorless liquid, CH_3-$(CH_2)_5CH{:}CHCOOH$, prepared by the action of acetic anhydrid and sodium acetate on œnanthol. It has an odor of tallow, and decomposes when distilled. Also called *ennenoic acid.*

nonylic (no-nil′ik), *a.* Same as ★*nonylenic.*

nook-shaft (nůk′shȧft), *n.* In *arch.*, a shaft placed in the internal angle formed by the meeting of two contiguous faces in a compound archway. *N. E. D.*

noon^1, *n.*—**Local apparent noon,** midday determined by the passage of the real sun across the meridian of the observer.—**Local mean noon,** midday determined by the passage of the mean or imaginary sun across the observer's meridian.—**Local noon,** midday according to either apparent or mean time. See *local apparent* and *local mean* ★*noon.*—**Sidereal noon,** midday determined when the first point of Aries comes to the meridian.

noon-house (nön′hous), *n.* See the extract.

> There might have been seen a hundred years ago, by the side of many an old meeting-house in New England, a long, low, mean, stable-like building, with a rough stone chimney at one end. This was the "*noon-house,*" or "Sabba-dayhouse," or "horse-hows," as it was variously called. It was a place of refuge in the winter time, at the noon interval between the two services, for the half-frozen members of the pious congregation. . . . They built in the rude stone fireplace a great fire of logs, and in front of the blazing wood ate their noon-day meal.
> *A. M. Earle,* Sabbath in Puritan New England, ix.

nop^1 (nop), *n.* Another spelling of *knop,* common in dialect works.

nop^2, *n.* Same as *nap*^{1}, *nep*^{2}.

nop^3 (nop), *n.* 1. The original and still a common dialect form of *nap*^{2}.—2. An accidental spot or speck in a textile fabric.

nop^3 (nop), *v. t.*; pret. and pp. *nopped,* ppr. *nopping.* [A variant of *nap*^{2}, *v.*] To remove specks (as vegetable matter) from (woolen fabrics).

n. o. p. An abbreviation of *not otherwise provided for.*

nope^2 (nōp), *adv.* [*no*^{1} + *-p,* added, as in *yep,* to give an abrupt character to the word.] No: a vulgar corruption.

> I 'll make the thing [a business] over to you. How 's that, Harve?
> *Nope;* never pays to split up a going concern.
> *R. Kipling,* Captains Courageous, x.

Nor. An abbreviation of *Norman.*

Nordic (nôr′dik), *a.* [Sw. Dan. G. *nord,* north, + *-ic.*] In *anthrop.*, of or pertaining to the type of man inhabiting northwestern Europe and characterized by tall stature, blond hair, blue eyes, and elongated head. Also called *Teutonic.*

nordmarkite (nôrd′mär-kīt), *n.* [*Nordmark,* Norway, + *-ite*^{2}.] In *petrog.*, a phaneric igneous rock composed of orthoclase, a little oligoclase, a small amount of quartz and biotite, and sometimes diopside, hornblende, and ægirite; a variety of quartz-syenite rich in soda, related to nephelite-syenite. *Brögger,* 1890.

Norfolkian epoch. See ★*epoch.*

Norfolk Island bloodwood. See ★*bloodwood.*

Nor. Fr. An abbreviation of *Norman French.*

norgare (nôr-gãr′), *n.* [Norw. *Norge,* Norway, + *-are,* suffix applied to names of orders in petrography.] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*^{1}), the lendofelic order of dosalanes, that is, of all igneous rocks having salic components dominant over femic ones within the limits $<\frac{7}{1}>\frac{5}{3}$, and having normative feldspars dominant over the lenads within the same limits.

Norian (nō′ri-an), *a.* and *n.* [*Nor*(*ic*) + *-ian.*] In *geol.*, noting a subdivision of the Archæan next above the Laurentian, a group characterized by great masses of gabbro and related anorthosite: proposed by T. Sterry Hunt, who adopted the following succession: Laurentian, Norian, Arvonian, Huronian, Montalban, and Taconian.

noric (nor′ik), *a.* and *n.* [L. *Noricus, adj.*, < *Noricum,* a country between the Danube and Alps.] See ★*stage.*

norie^2, **nory** (nō′ri), *n.* [From a personal name. See the def.] A copy of the "Epitome of Navigation" by J. W. Norie, originally published in 1803. *N. E. D.*

norium (nō′ri-um), *n.* [NL., < *Norge,* Norway, + *-ium.*] A supposed new chemical element announced in 1845 by Svanberg as detected by him in the mineral zircon, especially in specimens from Norway. It has been shown to be identical with the already known zirconium.

norm, *n.* 3. In *petrog.*, in the quantitative classification (see ★*rock*^{1}), the standard mineral composition of an igneous rock, that is, the chemical composition expressed in terms of standard minerals.—**Norm of a complex number** $a + bi$, the real number $a^2 + b^2$.

Norm. An abbreviation of *Norman.*

Norma basilaris, the lower aspect of the skull.—**Norma facialis.** Same as ★*norma frontalis.*—**Norma frontalis,** the anterior aspect of the skull.—**Norma lateralis,** the lateral aspect or profile of the skull.—**Norma occipitalis,** the posterior aspect of the skull.—**Norma superior.** Same as ★*norma verticalis* (*b*).—**Norma ventralis,** the outline of the base of the cerebral hemispheres.—**Norma verticalis.** (*b*) The superior aspect of the skull.

normal. I. *a.* 5. In *chem.*: (*a*) Of a salt, having all the readily replaceable or basic hydrogen of the corresponding acid replaced by one or more metals or strongly electropositive radicals: distinguished from an acid salt in which this replacement is only partial. (*b*) Of a solution for use in volumetric analysis, containing of the dissolved chemical substance the reactive equivalent of 1 gram of hydrogen in 1 liter of the solution at 16° C. See *normal* ★*solution.*—**Normal curve,** the curve of lowest order into which a curve of given deficiency can be transformed by a birational transformation.—**Normal linear substitution.** See ★*substitution.*—**Normal paper, phosphate, piling, powder.** See ★*paper,* etc.—**Normal pyrometric cones.** Same as *Seger's* ★*cones.*—**Normal Riemann surface.** See ★*surface.*—**Normal series.** Same as ★*well-ordered set.*—**Normal serum, solution, spectrum,** etc. See ★*serum,* etc.

II. *n.* 2. The rule; the standard.

> It still falls within the *normal* for alloxuric nitrogen however, although at the highest limit of this.
> *Jour. Exper. Med.*, V. 545.

3. In *biol.*, a species or race considered as a fixed standard which individual organisms may approach by heredity and from which they may recede by variation. The conception of a normal is statistical rather than biological, for there is no evidence that an exceptional specimen of a species differs, as such, from an average specimen in any essential or qualitative way. The notion of a species as a fixed standard belongs to the pre-Darwinian period in the history of biology.

> [The] belief that such races are descended from the putative *normal* scarcely ever rests on proof.
> *W. Bateson,* Study of Variation, p. 17.

4. In *meteor.*, the average of a large number of observed values of any given meteorological element, for example, mean temperature, pressure, or rainfall for any hour of the day, or day of the year. The number of observations must be so large that a second group of the same number would give the same average or normal. The normals for the hours of local mean solar time may be corrected or adjusted so as to become normals for the hours of any other standard of time.—5. In *compar. psychol.*, an untrained or uninjured animal whose behavior is made the standard of reference for the interpretation of the conduct of other, trained or operated animals.

> The results with rat Y were even more interesting, as she was certainly totally blind after Exp. 2. She was somewhat longer in learning the way than X and the *normals.* *Amer. Jour. Psychol.*, XII. 235.

Hemispheric normal, the average condition of the whole of any circle of latitude on the earth's surface. See ★*holospheric normal.*

normality, *n.* 3. In *chem. anal.*, the quality of being normal or of normal strength: said of a solution.

> Boric acid was agitated in a thermostat at 26° with an excess of aqueous hydrochloric acids of different *normalities.* After saturation, a given volume of clear solution was taken away with a pipette, the total acidity being ascertained by titration. Deducting the amount of alkali required by the known *normality* of the hydrochloric acid used, the remaining alkali gave the amount of boric acid dissolved. *Science Abstracts,* VI., Sec. A., p. 315.

Normally ordered. Same as ★*well-ordered,* 2.

Normandy soap. See ★*soap.*

Normanesque (nôr-man-esk′), *a.* [*Norman*^{1} + *-esque.*] Resembling the Norman style of architecture.

Norman-French (nôr′man-french′), *a.* Of or pertaining to the form of French spoken by the Normans. See *Norman French,* under *Norman*^{1}.

Normanism (nôr′man-izm), *n.* [*Norman*^{1} + *-ism.*] 1. A custom, manner, or appearance characteristic of the Normans.—2. Partiality for the Normans. [Rare.]

> Thou art English, Edward too is English now,
> He hath clean repented of his *Normanism.*
> *Tennyson,* Harold, iii. 1.

Normanly (nôr′man-li), *adv.* In the Norman way; as the Normans.

> His contemplative eye could crowd itself with various and brilliant pictures, and whence his impartial brain—one lobe of which seems to have been *Normanly* refined and the other Saxonly sagacious—could draw its morals of courtly and worldly wisdom.
> *Lowell,* Among My Books, 1st ser., p. 152.

Normannic (nôr-man′ik), *a.* Same as *Norman*^{1}. *N. E. D.*

Normanskill shale. See ★*shale*^{2}.

normative, *a.* 2. In *petrog.*, relating to the norm; making up the norm, as distinguished from 'normal' in the sense of regular, usual.—**Normative mode,** in *petrog.*, a mode in which the actual mineral composition of a rock is so nearly the same as the norm or standard mineral composition, as calculated from the analysis, that either may be used to classify the rock correctly in the quantitative system. See ★*rock*^{1}.

Norm. Fr. An abbreviation of *Norman French.*

normoblast (nôr′mọ-blȧst), *n.* [NL. *norma,* rule, + Gr. *βλαστός,* germ.] A nucleated red blood-cell developed from an erythroblast, and having a globular, deeply staining nucleus in which a chromatin reticulum cannot be recognized. This nucleus is surrounded by a layer of cytoplasm containing hemoglobin. The normoblast becomes a typical red blood-corpuscle by extruding its nucleus. See cut under ★*lymphocyte,* and under ★*blood,* 1.

> The erythroblasts of the hypertrophied bone-marrow are not of the normal size (*normoblasts*), but are much larger than normal (megaloblasts).
> *Encyc. Brit.*, XXXI. 558.

normoblastic (nôr-mọ-blas′tik), *a.* [*normoblast* + *-ic.*] Having the character of a normoblast.

> In counting five hundred cells forty-three to sixty-four nucleated red cells were seen, all of the *normoblastic* or intermediate type—no typical megaloblasts being seen. *Jour. Med. Research,* Dec., 1907, p. 260.

normocyte (nôr′mọ-sīt), *n.* [L. *norma,* rule, + Gr. *κύτος,* a hollow (a cell).] The ordinary non-nucleated red corpuscle of the circulating blood. See cut under ★*blood,* 1.

> The red cells . . . are spoken of as microcytes, *normocytes,* and megalocytes, according to their size.
> *Buck,* Med. Handbook, I. 273.

normocytic (nôr-mọ-sit′ik), *a.* [*normocyte* + *-ic.*] Having the character of a normocyte.

noropianic (nō-rop-i-an′ik), *a.* Noting an acid, a colorless crystalline compound, $(\overset{3,4}{HO})_2$-$C_6H_2(\overset{1}{CHO})\overset{2}{C}OOH.1\frac{1}{2}H_2O$, prepared by the action of hydriodic acid on opianic acid. It melts, when anhydrous, at 171° C.

Norsk (nôrsk), *a.* [Sw. Dan. Norw. *norsk.*] Norse.

North. An abbreviation of *northern.*

Northampton sands. See ★*sand*^{1}.

Northants. An abbreviation of *Northamptonshire.*

norther (nôr′ᴛʜėr), *v. i.* [*north* + *-er.*] To veer or tend toward the north, as the wind; run toward the north.

> The hills which form the western coast of the Red Sea run inland with a slight *northering* tendency, until they are lost in the sand-waves of the perennial deserts.
> *F. Adams,* The New Egypt, p. 86.

Northern sucker. Same as *long-nosed* ★*sucker.*

Northum., Northumb. Abbreviations of *Northumberland.*

Northumber (nôr-thum′bėr), *n.* [See *Northumbrian.*] A Northumbrian. [Obsolete or rare.]

northupite (nôrth′up-īt), *n.* [Named after C. H. *Northup,* who first obtained the mineral.] A carbonate of magnesium and sodium with sodium chlorid, occurring in colorless to gray or yellowish octahedrons: found in San Bernardino county, California.

northwester, *n.* 2. In Canada, one who is employed by the Northwest Fur Company.

Norw. An abbreviation (*b*) of *Norway.*

Norwegian itch. See *sarcoptic* ★*acariasis.*

Norwich canary, poplin. See ★*canary,* ★*poplin.*

nosconongé (nos′kọ-nonj), *n.* The American Indian name of *Esox masquinongy,* the maskalonge.

nose^1, *n.* 3. (*l*) Same as ★*chase*^{2}, 7. (*m*) In *mining,* a projecting angle of coal or other mineral.

5. In *golf*, the extreme end of a club opposite the neck or heel.—**Dudley nose**, a dog-fancier's name for a flesh-colored nose.

nose[1], *v.* **I.** *trans.* **5.** In *forestry*, to round off the end of (a log) in order to make it drag or slip more easily. Also called *snipe*.

II. *intrans.*—**To nose about**, said of a vessel when it changes its course frequently, remaining on each course for only a short time.

nosebleed, *n.* **3.** The American birthroot or wake-robin, *Trillium erectum*.

nose-key, *n.* **2.** A nose-ring worn by East Indian women as a badge of widowhood.

noselite (nō'zē-līt), *n.* Same as *nosean*.

Nosema (nō'sē-mä), *n.* [NL.] The typical genus of the family *Nosematidæ*. *Nägeli*, 1857.

Nosematidæ (nō-sē-mat'i-dē), *n. pl.* [NL. *Nosema* (*-t-*) + *-idæ*.] A family of *Myxosporidia* having a bivalve spore. It contains the genus *Nosema*.

nose-paint (nōz'pānt), *n.* Liquor; any strong drink that reddens the nose or otherwise stamps the drinker. [Slang.]

> The barkeep . . slams his *nose-paint* where the short-horn [green-horn] can get action.
> *A. H. Lewis*, Wolfville Days, i.

nose-peg (nōz'peg), *n.* A pin or stud attached to the quadrant-arm in a spinning-mule to effect an acceleration of the spindle in forming the cop.

nose-plow (nōz'plou), *n.* See ★*snow-plow*.

nose-pole (nōz'pōl), *n.* A bowsprit. [Rare.]

nose-puller (nōz'pul"ėr), *n.* One of a set of unruly persons who infested public places in London in the last half of the eighteenth century, and emphasized their opinions by pulling their opponents' noses.

> If a quiet man in the pit ventured on making a remark to his neighbour, who happened to be a "*nose-puller*," and who disagreed with the remark, the speaker's nose was sure to be painfully wrung by the "puller."
> *Doran*, Annals of Eng. Stage, III. 30.

nose-shield (nōz'shēld), *n.* In *foot-ball*, a piece of hard rubber or some other substance, used to protect the nose.

nosine (nō'zin), *n.* Same as *nosean*.

nosing-peg (nō'zing-peg), *n.* A peg, or pin, attached to the end of the quadrant-arm in a spinning-mule, and acting upon a chain so as to increase the velocity of the spindle as the cop is built higher upon it. *C. Vickerman*, Woolen Spinning, p. 326.

nosism (nōs'izm), *n.* [L. *nos*, we, + *-ism*.] **1.** Self-esteem in a group corresponding to egotism in an individual. *N. E. D.* [Rare.] —**2.** Excessive use of the pronoun 'we' in writing or speaking.

> On the one hand, it tempts a man to indulge in *Nosism*, where modesty and a sense of propriety would have made him shrink from undisguised egotism.
> *Edinburgh Rev.*, July, 1864, p. 52.

nosode (nos'ōd), *n.* [Gr. *νόσος*, disease, + *εἶδος*, form.] A remedy used for the cure of disease according to the theory of isopathy; a specific disease-producing substance given, greatly diluted, in the treatment of the same disease.

nosogenic (nos-ọ-jen'ik), *a.* [Gr. *νόσος*, disease, + *-γενης*, -producing.] Pathogenic; producing disease.

nosogeography (nos"ọ-jẹ-og'ra̤-fi), *n.* [Gr. *νόσος*, disease, + *γεωγραφία*, geography.] Medical geography.

nosophen (nos'ọ-fen), *n.* [Gr. *νόσος*, disease, + E. *phen*(*yl*).] A pale-yellow odorless and tasteless compound, obtained by the action of iodine on a solution of phenolphtalein: an antiseptic dusting-powder. Also called *tetraiodophenolphtalein* and ★*iodophen*.

nosophyte (nos'ọ-fīt), *n.* [Gr. *νόσος*, disease, + *φυτόν*, plant.] A pathogenic bacterium.

nostic (nos'tik), *a.* [Gr. *νόστος*, a return home.] Same as ★*paragerontic*. *Hyatt.*

nostril, *n.*—**False nostril**, a diverticulum, or pocket, three or four inches in length, opening into the upper outer side of the nasal passage in the horse and other perissodactyls, notably the tapir.—**Pervious nostrils**, in *ornith.*, nostrils that communicate with one another, thus forming an opening through the beak: typically present in such a bird as the turkey-buzzard. Same as *perforate nostrils*. Contrasted with *impervious nostrils*.

nostrility (nos-tril'i-ti), *n.* [Irreg. < *nostril* + *-ity*.] The character of having the alæ of the nose strongly set off by a curve extending upward and forward, as in typical Jewish noses. *W. Z. Ripley*, Races of Europe, p. 395.

Notal[3] (nō'tal), *a.* [L. *Notus*, < Gr. *Νότος*, the south wind, the south, + *-al*[1].] Of or pertaining to Notalia.

> An example known to most zoologists is furnished by the genus Serolis, of which many species are developed in the *notal* surface-water, and a still greater number in the deep sea, yet its range, apparently, does not extend beyond the equator.
> *Annals and Mag. Nat. Hist.*, April, 1901, p. 317.

Notamia (nọ-tā'mi-ä̤), *n.* [NL.] The typical genus of the family *Notamiidæ*. *Fleming.*

Notamiidæ (nō-ta-mī'i-dē), *n. pl.* [NL. *Notamia* + *-idæ*.] A family of chilostomatous gymnolæmatous polyzoans having the zoœcia in pairs, each pair arising by tubular prolongations from the second pair below it, and at each bifurcation a new series of cells intercalated into the branches. It contains the genus *Notamia*.

notandum (nō-tan'dum), *n.*; pl. *notanda* (-dä̤). [L. gerund of *notare*, to note.] Something to be noted; a memorandum.

notarial[2] (nọ-tā'ri-a̤l), *a.* [NL. *notari*(*um*) + *-al*[1].] Of or pertaining to the notarium, or united vertebræ in the anterior part of the thoracic region of some pterodactyls.

> The eighth vertebra . . . was lying close to the first *notarial* vertebra.
> *Williston*, Osteology of Nyctosaurus, p. 133.

notariate (nọ-tā'ri-āt), *n.* [See *notary*[1].] The profession of a notary. *N. E. D.*

> The peculiar importance attached to the *notariate*, and the limitations imposed on its membership are seen in the papal privileges issued for the appointment of notaries. *H. C. Lea*, Hist. of the Inquisition, I. 379.

notarium (nọ-tā'ri-um), *n.*; pl. *notaria* (-ä̤). [NL., < L. *notarius*. See *notary*[1].] A union of several vertebræ (at least three) in the anterior part of the thoracic region in certain large cretaceous pterodactyls. The ends of the scapulæ rest against the neural spines of these vertebræ, thus making an unusually firm support for the wing.

> The structure so formed may be named the *notarium* to distinguish it from the sacrum.
> *Seeley*, Dragons of the Air, p. 87.

notation, *n.*—**Dualistic notation.** See ★*dualistic*.—**Numerical notation.** (*b*) In *music*, a method of indicating tones by numerals, instead of by notes, advocated by Rousseau in the eighteenth century.—**Vigesimal notation**, in *arith.*, the system with radix twenty.

notative (nō'ta-tiv), *a.* [As if L. **notativus*. Cf. *connotative*.] See the extract.

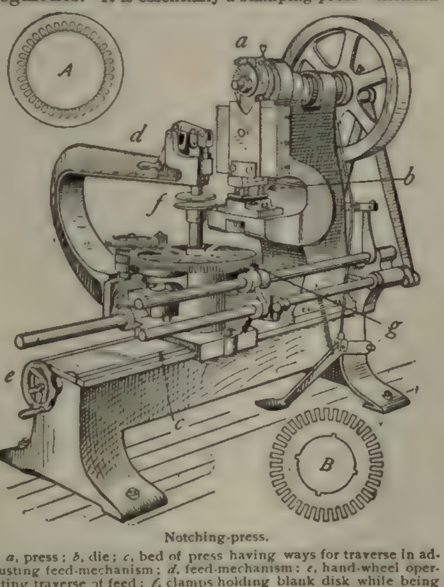
> A *Notative* Conception . . . suggests its own marks (notæ) by its very name. *Atwater*, Logic, p. 67. *N. E. D.*

notch, *n.* **6.** (*b*) The posterior or lower angle, formed by the meeting of the pubic bones. Same as *pubic arch*.—**8.** Same as ★*undercut*, 2.—**Glenoid notch**, the indentation on the cranium of a bird which marks the place wherein lies the glenoid cavity for the outer head of the quadrate.—**Obturator notch**, in *ornith.*, the angle formed by the meeting of the ischium and pubis. When closed posteriorly by bone it becomes the *obturator foramen*.—**Sternal notch.** Same as *suprasternal notch* (which see, under *notch*).

notch, *v. t.* **4.** To make an undercut in (a tree) preparatory to felling (it). Also *undercut*.

notch-gun (noch'gun), *n.* A patented device (1904) for stopping the iron-hole in a blast-furnace or cupola after the charge has been drawn.

notching-press (noch'ing-pres), *n.* In *sheet-metal working*, a machine for cutting the notches or indentations in armature disks and segments. It is essentially a stamping-press which has a feed-mechanism adapted to the work of holding the blank disk or segment in position during the cutting of the notch, moves it the right distance for the next cut, clamps it, moves it again, and repeats the operation continuously until the work is complete. By suitable attachments the number and shape of the notches can be changed to suit the size of the disk or the character of the armature. The illustration shows a machine for notching disks, a separate attachment (not shown) being used for armature segments. The blank disk is placed in the revolving feed between the two circular clamps that are controlled by the handle at the top. On starting the machine the geared feed automatically presents the blank to the press until every cut is made, when it stops the machine. The hand-wheel at the left causes the feed-mechanism to slide on the bed of the press to adapt it to different sizes of disks. The machine cuts several blanks at once and at a high speed. It is sometimes called a *notching-machine*. Armature disks are also stamped in presses.



Notching-press.

a, press; *b*, die; *c*, bed of press having ways for traverse in adjusting feed-mechanism; *d*, feed-mechanism; *e*, hand-wheel operating traverse of feed; *f*, clamps holding blank disk while being stamped; *g*, mechanism for revolving blank after each stroke of die; *A*, *B*, samples of notched work.

notch-wheel (noch'hwēl), *n.* An arrangement for actuating the detaching-roller in a Heilmann cotton-combing machine.

note[1], *n.*—**Binding note.** See *binding note*, under ★*bind*.—**Changing-note**, in *music*, a note foreign to the essential harmony: either a *passing-note*, a *grace-note*, or a *nota cambiata*. (See these terms.)—**Characteristic note**, in *music*, same as *leading note*.—**Collateral note**, a promissory note secured by the deposit of collateral.—**Connecting note.** Same as *binding note* (which see, under ★*bind*).—**Double-stemmed note**, in *musical notation*, a note having two stems, one directed upward, the other downward, indicating that two voice-parts use it together: as 𝅗𝅥.—**Ground note**, in *music*, the fundamental note or root of a chord. Also called *ground tone*.—**Intercalary note** or **tone**, in *music*, same as *accidental note* (which see, under *note*[1]).—**Kossuth note**, a Hungarian bank or government note bearing the name of Louis Kossuth, the Hungarian patriot (1802–94).

> With wonderful energy he [Kossuth] began developing the internal resources of the country . . . and it was characteristic that on the new Hungarian notes which he issued his own name was the most prominent inscription; hence the name of *Kossuth notes*, which was long celebrated. *Encyc. Brit.*, XXX. 69.

Natural note, in musical wind-instruments, a tone produced without the use of keys or valves, that is, either the fundamental tone of the tube or one of its harmonics. Also *natural tone*.—**Note of color**, any especially harmonious combination of colors in representative or decorative painting.—**Risk note**, in *Eng. law*, a contract signed by the consignor of goods exempting the carrier, chiefly on account of lower freight, from liability for injury or loss rising from negligence. The law requires the contract to be just. Much litigation has been caused by these notes.—**Unessential note** or **tone**, in *music*, any note or tone not normal to or constituent of the harmony, including all passing-notes, suspensions, embellishments, etc.

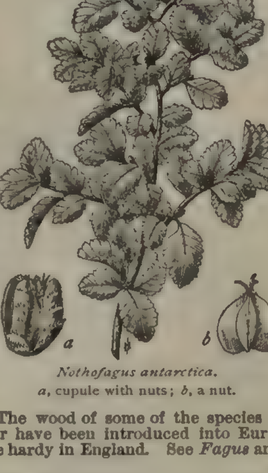
note-book, *n.* **2.** A book in which notes of hand are registered; a bill-book.

note-head (nōt'hed), *n.* **1.** Printed matter, usually the name and address of the writer, at the head of a sheet of note-paper.—**2.** In *musical notation*, the square or oval part of a note by the position of which on a staff the pitch of the intended tone is indicated.

note-value (nōt'val"ū), *n.* In *acoustics*, the pitch or frequency of a musical tone.

Notharctidæ (nọ-thärk'ti-dē), *n. pl.* [NL., < *Notharctus*, generic name, + *-idæ*.] A family of lemurs containing extinct species of moderate size from the Eocene strata of the United States. *Trouessart*, 1879.

Nothofagus (nō-thọ-fā'gus), *n.* [NL. (Blume, 1850), < Gr. *νόθος*, bastard, false, + L. *fagus*, beech, < Gr. *φηγός*, oak.] A genus of evergreen or deciduous trees or shrubs belonging to the family *Fagaceæ*, and closely related to *Fagus*, to which it was formerly referred by many authors. It is distinguished from that genus by the usually much smaller leaves and especially by the fact that the flowers, both staminate and pistillate, are borne in threes or are solitary. About 12 species are recognized, natives of southern South America, Australia, and New Zealand. The wood of some of the species is much valued and four have been introduced into European gardens and are hardy in England. See *Fagus* and ★*birch*, 4.



Nothofagus antarctica.

a, cupule with nuts; *b*, a nut.

nothogamy (nọ-thog'a̤-mi), *n.* [Gr. *νόθος*, spurious, + *γάμος*, marriage.] Cross-fertilization between different species; hybridization. *Pound and Clements.*

nothris (nō′thris), *n.* [NL., ‹ Gr. *νωθρός*, sluggish, torpid.] An American tineid moth, *Ypsolophus citrifoliellus* (formerly placed in the genus *Nothris*), found in Florida. Its larva feeds on young orange-leaves.

Notice of motion. See ★*motion.*—**On short notice,** in a brief space of time; quickly.

notified (nō′ti-fīd), *p. a.* Celebrated; notorious; well-known. *N. E. D.* [Obsolete or dial.]

notifier (nō′ti-fī-ėr), *n.* One who or that which notifies; specifically, an appliance in connection with a coal-miner's safety-lamp which serves to give warning of the presence of a dangerous amount of fire-damp in the atmosphere of the mine-workings.

notionalist (nō′shọn-a̤l-ist), *n.* [*notional* + *-ist.*] An abstract or speculative thinker; a theorist; an idealist.

> No *notionalist*, one should think, can be so practically insane, as to see an abstract right or wrong in any particular combination of political powers.
> *Edinburgh Rev.*, LIII. 529.

notitia, *n.* **2.** [*cap.*] See ★*Regionary Catalogues.*

notocentrous (nō-tọ-sen′trus), *a.* [*notocentr*(*um*) + *-ous.*] Having the centra of the vertebæ formed by the dorsal arcualia or interdorsalia, two of the ossifications that form on the superior face of the notochord.

notocentrum (nō-tọ-sen′trum), *n.*; pl. *notocentra* (-tra̤). [NL., ‹ Gr. *νῶτος*, the back, + *κέντρον*, center.] The centrum of a vertebra when formed by the dorsal arcualia or interdorsalia, as in toads and frogs.

notochord, *n.* **2.** A vestigial structure, representing a very ancient form of alimentary canal not in itself a part of the skeleton.

> This *notochord* is no part of the skeleton; it was originally a canal, but in the absence of any animal which preserves this structure as such it is difficult to understand what was its original function. . . . It probably was an archaic form of alimentary canal, around which were disposed the segmented skeletal and other tissues.
> *Encyc. Brit.*, XXV. 397.

Notochordal sheath. See ★*sheath.*

notodontian (nō-tọ-don′ti-a̤n), *n.* and *a.* Same as ★*notodontid.*

notodontid (nō-tọ-don′tid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Notodontidæ.*

II. *a.* Having the characters of or belonging to the family *Notodontidæ.*

Notogæic (nō-tọ-jē′ik), *a.* [*Notogæa* + *-ic.*] Pertaining to or characteristic of the zoögeographical division known as Notogæa.

> In laying down the great zoological subdivisions of the Earth's surface, he [Lyddeker] agrees in the main with Mr. Sclater, adopting, like him, the three broad divisions proposed by Dr. Blanford in 1890, and using likewise for them the terms *Notogæic*, Neogæic, and Arctogæic. These he considers as "realms," the minor subdivisions being designated "regions." In the definition of these latter, he rather follows Dr. Heilprin than Mr. Sclater, uniting the Palæarctic and Nearctic regions under the name "Holarctic," and raising the Sonoran transition tract of the former to an equal rank with the other subdivisions of Arctogæa. Madagascar and neighbouring islands form another separate region, while Notogæa constitutes four separate regions, instead of the two of Dr. Heilprin. *Geog. Jour.* (R. G. S.), X. 99.

Notogæic realm. Same as *Notogæa.*

Notohippidæ (nō-tọ-hip′i-dē), *n. pl.* [NL., ‹ *Notohippus*, generic name, + *-idæ.*] A family of ungulate mammals, of the suborder *Litopterna*, containing extinct species from the Miocene (?) of Patagonia. *Ameghino*, 1894.

Notommata (nọ-tom′a̤-tä), *n.* [NL.] The typical genus of the family *Notommatidæ*. *N. werneckii* is parasitic in the cells of the fresh-water alga *Vaucheria*. *Ehrenberg.*

Notommatidæ (nō-tọ-mat′i-dē), *n. pl.* [NL., ‹ *Notommata* + *-idæ.*] A family of illoricate rotifers, of the order *Ploima*, having the corona obliquely transverse, the velum of interrupted curves and clusters, usually with a marginal band surrounding the mouth, the trophi forcipate, and the foot furcate. It includes several genera, among which are *Notommata*, *Furcularia*, and *Albertia*, the last parasitic in annelids.

notonectid (nō-tọ-nek′tid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Notonectidæ.*

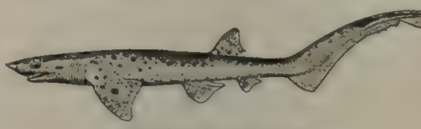
II. *a.* Having the characters of or belonging to the family *Notonectidæ.*

Notopelagia (nō″tọ-pẹ-lā′ji-a̤), *n.* [Gr. *νότος*, the south, + *πέλαγος*, the sea.] The southern sea region, comprising the sea south of 40° south latitude.

> The Southern Sea-region, or *Notopelagia*, containing the whole of the South Polar ocean all round the globe south of the above mentioned limits.
> *Geog. Jour.* (R. G. S.), X. 220.

Notopithecidæ (nō″tọ-pi-thē′si-dē), *n. pl.* [NL., ‹ *Notopithecus*, a generic name, + *-idæ.*] A family of extinct lemur-like mammals, comprising species from the Miocene (?) of Patagonia. *Ameghino*, 1897.

Notorhynchus (nō-tọ-ring′kus), *n.* [NL., ‹ Gr. *νῶτος*, back, + *ῥύγχος*, snout.] A genus of sharks of the family *Hexanchidæ*, found in the Pacific Ocean.



Notorhynchus masculatus.
(From Bulletin 47, U. S. Nat. Museum.)

Notoryctidæ (nō-tọ-rik′ti-dē), *n. pl.* [NL., ‹ *Notoryctes*, a generic name, + *-idæ.*] A family of marsupial mammals whose only known member is the little mole-marsupial, *Notoryctes typhlops*. *J. D. Ogilby*, 1891. See cut at ★*mole-marsupial.*

Notosema (nō-tọ-sē′ma̤), *n.* [NL., ‹ Gr. *νῶτος*, back, + *σῆμα*, mark.] A genus of flounders taken in the deep waters of the Gulf Stream along the Carolina coast.

notostome (nō′tọ-stōm), *n.* [Gr. *νῶτος*, back, + *στόμα*, mouth.] See the extract.

> The valve of the dorsal mouth, or *notostome*, is broken.
> *E. D. Cope*, Origin of the Fittest, p. 323. *N. E. D.*

Notostylopidæ (nō″tọ-sti-lop′i-dē), *n. pl.* [NL., ‹ *Notostylops*, generic name, + *-idæ.*] A family of tillodont mammals, containing extinct species from the Miocene (?) of Patagonia. *Ameghino*, 1897.

nototrocha (nō-tọ-trō′kä), *n.*; pl. *nototrochæ* (-kē). [Gr. *νῶτος*, the back, + *τροχός*, something round.] A larval stage of a chætopodous annelid having several incomplete bands of cilia on the dorsal surface.

not-out (not′out), *n.* In *cricket*, a batsman who at the drawing of stumps has not been got out.

no-trump (nō-trump′), *n.* In *bridge*, the declaration to play without any trump suit, each trick being worth 12 points: the most valuable declaration. See ★*bridge*², *n.*

> In the play of the cards the ace is high and the deuce low. You must follow suit, but if you have no card of the suit led, you may either trump or discard. At *no-trump* the best card, if of the suit led, wins the trick.
> *Elwell*, Bridge, p. 4.

no-trumper (nō-trum′pėr), *n.* A hand at bridge upon which 'no trumps' can be declared. See ★*bridge*², *n.*

> With a strong heart hand and a doubtful "*no-trumper*," or if the hand contain one unguarded suit, hearts should always be given the preference. As the adversaries have the lead and the privilege of doubling, a weak suit exposes the hand to some danger at no-trump.
> *Elwell*, Bridge, p. 13.

Sporty no-trumper, in *bridge*, a no-trump declaration which is not sound, but may be demanded by the state of the score, as a declaration on two suits only, there being no protection in the others.

Nottingham ware. See ★*ware*².

Notts. An abbreviation of *Nottinghamshire.*

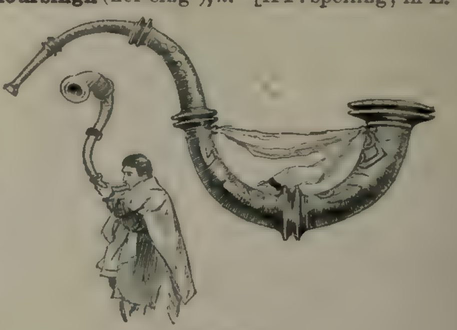
nouille (nö-ēy′), *n.* [F. *nouille*, also *noule*, ‹ G. *nudel*, whence E. *noodle*², q. v.] A ribbon vermicelli.

nounism (noun′izm), *n.* [*noun* + *-ism.*] A marked disposition to multiply nouns, at the expense of other parts of speech, in writing and speaking. [Rare.]

> Adjectivism, adverbism, *nounism*, . . . in the above order, also occur near the early teens.
> *G. S. Hall*, Adolescence, II. 467.

nourishment, *n.* **4.** A fluid applied to glazed leather to make it pliable and prevent it from hardening. *C. T. Davis*, Manuf. of Leather, p. 596.

noursingh (nėr-sing′), *n.* [A F. spelling; in E. prop. **nursing* or **narsing*, ‹ Hind. *narsinga.*] A Hindu trumpet with a curved tube.



Noursingh.

Nouveau style. See ★*art nouveau.*

nova (nō′va̤), *n.*; pl. *novæ* (-vē) or *novas* (-vaz). [NL., 'new,' sc. *stella*, 'star.'] A 'new' or temporary star; a star which makes its appearance suddenly and gradually fades away, the whole decline generally occupying some years and leaving the star still visible in large telescopes. About twenty such stars have thus far been recorded.

> In all these views the chance of passing another star at some small distance such as one or two or three times the sun's radius has been overlooked; and that this chance is not excessively rare seems proved by the multitude of *Novas* (collisions and their sequels) known in astronomical history.
> *Lord Kelvin*, in Smithsonian Rep., 1901, p. 226.

Nova Cassiopeiæ, the temporary star observed by Tycho, which appeared in November, 1572, the most brilliant on record. When first seen it was brighter than Jupiter and became brighter than Venus, so that it was visible in daylight. It disappeared in 16 months.—**Nova Geminorum,** a nova of the eighth magnitude which appeared in 1903 in the constellation of Gemini.—**Nova Persei,** the most remarkable of the temporary stars since Kepler's star of 1604. It appeared suddenly on February 20 or 21, 1901; on the 22d was for some hours brighter than any star except Sirius and Canopus, and then gradually faded, exhibiting a series of extremely interesting phenomena during its decline, especially the swift motion of luminous knots in the nebulosity surrounding it. In 1904 it was still visible as a star of the thirteenth magnitude.

Novaculichthys (nọ-vak″ụ-lik′this), *n.* [NL., ‹ L. *novacula*, a sharp knife, + Gr. *ἰχθύς*, a fish.] A genus of fishes of the family *Labridæ*, which has numerous species in warm seas.

Novanglian (nōv-ang′gli-a̤n), *a.* and *n.* [*Nova Anglia*, New England.] Of or pertaining to New England; an inhabitant of New England. *N. E. D.*

Novanglican (nōv-ang′gli-ka̤n), *a.* and *n.* Same as ★*Novanglian.*

> I must say, I rather admire this stolid self-reliance and *Novanglican* assumption—if for nothing else, at least because it shows a thicker cuticle than we excitable New-Yorkers possess.
> *B. Taylor*, At Home and Abroad, 2d ser., p. 339.

novate (nō′vāt), *v. t.*; pret. and pp. *novated*, ppr. *novating*. [L. *novat*(*us*), pp. of *novare*, make new, ‹ *novus*, new.] To make new; renovate; specifically, in *law*, to substitute a new obligation for an old one. See *novation*, 3.

> Non-statutory actions, or actions founded on the executive authority of the Praetor, are required to terminate within twelve months from their institution, and have no power at civil law of consuming or *novating* a right of action, but bar a subsequent action when pleaded by the exceptio rei judicatae. *Poste*, Gaius, p. xv.

novative (nō′va̤-tiv), *a.* Of the nature of novation. See *novation*, 3.

novel, *n.*—**Problem novel,** a novel with the same characteristics as the problem play (which see, under ★*play*¹).

novelese (nov-e-lēs′ or -lēz′), *a.* and *n.* [*novel* + *-ese.*] **I.** *a.* Exhibiting the language or literary style of the ordinary novel.

II. *n.* A literary style supposed to be observable in the ordinary novel, flimsy in construction and lacking in point and elegance.

> The English is *novelese*, when it does not degenerate into sheer bad grammar.
> *Pall Mall Gazette*, Jan. 13, 1900, p. 3.

novelettist (nov-e-let′ist), *n.* [*novelette* + *-ist.*] A writer of novelettes. *N. E. D.*

novelism, *n.* **2.** Novel-writing. [Rare.]

> Let a novel work of literary merit be brought forward, though it shall find thousands of copiers, how few will be the instances of adequate and commendable imitation! What a host of pens and printers have been pressed into the service of romance and *novelism* by the appearance of the Waverly Novels! *Blackwood's Mag.*, XXIV. 469.

novemole (nō′ve-mōl), *n.* [L. *novem*, nine, + *-ole* (cf. ★*duole, triole*, etc.).] Same as *nonuplet*.

novice, *n.* 3. In bench shows and other similar exhibitions, an animal which has not before been exhibited for a prize.

> *Novice* dogs was a large class, 28 in all. First went to Westlake Chancellor, a good dog.
> *Forest and Stream*, Feb. 21, 1903, p. 151.

4. In *athletics*, one who has not won a prize, when the competition is open to members of two or more clubs.

novocaine (nō-vō′ka-in), *n.* [Trade-name.] A synthetic alkaloid having local anesthetic properties similar to those of cocaine.

> It is possible, according to Donitz . . ., to extend the anesthesia to the upper part of the chest and even to the arms without danger if tropacocaine is used instead of *novocaine* or stovaine, which have more effect on the motor roots and thus are likely to cause paralysis of respiration if pushed too high.
> *Alien. and Neurol.*, Nov., 1907, p. 521.

noxa (nok′sä̤), *n.*; pl. *noxæ* (-sē). [L., harm, injury. See *noxious*.] Anything which causes injury to the body or its organs or tissues.

nozle, *n.*—**Cyclone nozle,** a nozle in which the water under pressure is made to eddy round the interior of a chamber and to issue in the form of a fine spray.

nozler (noz′lėr), *n.* A blow on the nozle or nose. [Slang.]

nozle-tip (noz′l-tip), *n.* A tip or short-coned end screwed on to the end of a nozle or otherwise adjusted to it to make a change in the shape of the stream it throws.

N. P. An abbreviation (*a*) of the Latin *nisi prius*, unless before; (*b*) of *Notary Public*.

N. P. D. An abbreviation of *North Polar Distance*.

nr. An abbreviation of *near*.

N-radiation (en′rā-di-ā″shon), *n.* Radiation consisting of N-rays. See *N-rays*, under ★*ray*¹.

> The phenomenon was discovered while concentrating the rays by a quartz lens upon a phosphorescent screen, when it was found that the *N-radiation* persisted with the lens as a source after the original source was removed. Following up this clue, it turned out that various other substances became temporarily active after exposure to *N-radiation*.
> *Elect. World and Engin.*, Dec. 26, 1903, p. 1034.

N-rays. See ★*ray*¹.

N. S. An abbreviation (*c*) of *National Society*; (*d*) of *New School*; (*e*) of *New Side*; (*f*) of the French *Notre Seigneur*, Our Lord; (*g*) [*l. c.*] of *not specified*; (*h*) of *Nova Scotia*; (*i*) of *Numismatic Society*.

nsambi (nsäm′bi), *n.* [S. African.] A South African guitar which has strings of palm-fiber.

N. S. D. An abbreviation of the Latin *Naturalis Scientiæ Doctor*, Doctor of Natural Science.

N. S. J. C. An abbreviation (*a*) of the Latin *Noster Salvator Jesus Christus*, Our Savior Jesus Christ; (*b*) of the French *Notre Seigneur Jésu Christ*, Our Lord Jesus Christ.

N. S. P. C. C. An abbreviation of *National Society for the Prevention of Cruelty to Children*.

N. S. W. An abbreviation of *New South Wales*.

N. T. An abbreviation (*b*) of *New Translation*; (*c*) of *Northern Territory*, of South Australia.

nu (nū), *n.* The Greek letter *ν*, corresponding to the English *n*.

n. u. An abbreviation of *name unknown*.

nuance (nü-oṅs′), *v. t.*; pret. and pp. *nuanced*, ppr. *nuancing*. [F. *nuancer*, < *nuance*, shading. See *nuance*, *n.*] To shade and give delicate tones of expression to, as a piece of music or a picture.

nubbin, *n.* 2. A small lump of gold which has once been melted.

Nubian sandstone. See ★*sandstone*.

nubiform (nū′bi-fôrm), *a.* [L. *nubes*, cloud, + *-form*.] Having the form or aspect of a cloud; cloud-like.

> This accident of nomenclature . . . may in many points curiously illustrate for you that contest of Frederick the Second with Innocent the Fourth, which . . . represents to all time the war of the solid, rational, and earthly authority of the King, and State, with the more or less spectral, hooded, imaginative, and *nubiform* authority of the Pope, and Church.
> *Ruskin*, Val d'Arno, p. 3.

nubilation (nū-bi-lā′shon), *n.* [*nubilate*.] Cloudiness. [Rare.]

> The under parts white . . . but clouded everywhere with dusky patches. . . Varying degrees of this dusky *nubilation* approach in some specimens nearly to the uniform dusky below characterized; in others fade almost into the pure white of the adult.
> *Coues*, Birds of the Northwest, p. 613.

nucal (nū′kal), *a.* [LL. *nucalis*, pertaining to a nut, < *nux*, nut.] Of or pertaining to a nut.

nucellar (nụ̄-sel′ä̤r), *a.* [*nucell(us)* + *-ar*.] Of or pertaining to the nucellus of flowering plants.

> Two series of vascular bundles run in the ovule, and it is proved that the inner series, frequently described as "*nucellar*," belong to the soft inner layer of the integument. These bundles do not invariably die out at the region where the nucellus becomes free from the integument, as hitherto supposed, but in more than one species are found continuing in the inner layer of the integument almost to the micropyle.
> *Jour. Roy. Micros. Soc.*, Dec., 1904, p. 665.

nuchal, *a.* 3. In the trilobites, relating to the axial segment and groove at the base of the cephalon.—**Nuchal cartilage,** in cephalopods, same as *nuchicartilage*.—**Nuchal cirrus, crest.** See ★*cirrus*, ★*crest*.—**Nuchal furrow.** Same as ★*neck-furrow*. **Nuchal plate.** Same as *nuchicartilage*.—**Nuchal tubercle.** See ★*tubercle*.

II. *n.* One of two or more plates forming part of the covering of the dorsal portion of the neck in reptiles. The term is usually applied to the well-marked bony plates of crocodiles but also, as in lizards, to horny plates or shields.

nuchale (nụ̄-kā′lē̤), *n.*; pl. *nuchalia* (-li-ä̤). Same as ★*nuchal*.

nuciculture (nū′si-kul″tū̆r), *n.* [L. *nux* (*nuc-*), nut, + *cultura*, culture.] Nut-culture: generally considered to be one of the branches of pomology.

nucin (nū′sin), *n.* [L. *nux* (*nuc-*), nut, + *-in*².] Same as ★*juglone*.

nucitannin (nū-si-tan′in), *n.* [L. *nux* (*nuc-*), nut, + E. *tannin*.] A glucoside contained in the husks of walnuts.

nucivorous (nū-siv′ọ-rus), *a.* [L. *nux* (*nuc-*), nut, + *vorare*, devour.] Nut-eating.

> The great majority [of Mammalians] may be said to be granivorous, or *nucivorous*, or even graminivorous; but many live upon dried vegetable substances and wood.
> *Kirby*, the Power, . . . of God, as manifested in Crea- [tion of Animals, etc., II. 377.

nucleal, *a.* 2. Attracting or collecting likes or similars; forming a nucleus for similar persons or things.

> It would be worth while to induce such *nucleal* men to lecture in large cities, if only to discover . . . how the partakers of one level of intellect are scattered through the different levels of politics, religion, and society.
> *N. P. Willis*, Hurry-graphs, p. 178.

Nuclear cap, sap, shadow, spindle, thread. See ★*cap*¹, etc.

nucleary (nū′klē-ā̤-ri), *a.* Same as *nuclear*.

nuclease (nū′klē̤-ā̤s), *n.* [*nucleus* + *-ase*.] 1. A ferment which can cause the cleavage of nucleins. Specifically—2. One of several bacteriolytic ferments so-named on account of their ability to digest the nucleoproteids of the bacterial cells.

> Jones has shown the existence of enzymes in the thymus and adrenal that have the power of decomposing nucleic acids into their constituents, phosphoric acid and the xanthin bases. Sachs found a similar enzyme in the pancreas and called it "*nuclease*."
> *Jour. Med. Research*, July, 1906, p. 163.

nucleated, *a.* 2. In *phys.*, in a state of nucleation: said of a vapor, portions of which have condensed in the form of minute globules about suspended nuclei.

> Also, The Diffusion of Vapor into *Nucleated* Air, by Carl Barus. *Sci. Amer.*, May 9, 1903, p. 351.

nucleation (nū-klē̤-ā′shọn), *n.* [*nucleate* + *-ion*.] 1. The act or process of nucleating or forming nuclei; the state of aggregation of matter about nuclei; the loading of central nuclei with specific kinds of otherwise amorphous material lying adjacent to them.

> Experiments are described showing different temperatures for the maxima of *nucleation* and of ionisation.
> *Nature*, Oct. 8, 1903, p. 548.

2. Specifically, in *phys.*, cloudy condensation, in an atmosphere containing vapor, due to the gathering of minute globules of liquid about floating particles called nuclei.

> After *nucleation* the first dense fogs were vaguely annular. *C. Barus*, in Science, Jan. 31, 1902, p. 177.

nucleator (nū′klē̤-ā-tọr), *n.* In *phys.*, any substance, such as lycopodium powder, or any medium which, like the ionized gases from flames, affords nuclei of condensation in an atmosphere containing vapor; any medium or agent which produces nucleation of a vapor.

> The very interesting result that phosphorus as a *nucleator* suddenly bursts forth into maximum activity at about 13°. *C. Barus*, in Nature, Dec. 3, 1903, p. 103.

nucleic (nụ̄-klē′ik), *a.* Same as ★*nucleinic*.

nucleide (nū′klē̤-id), *n.* [*nucle(ic)* + *-ide*¹.] A compound formed by the action of nucleic acid on a base.

nucleinate (nū′klē̤-in-āt), *a.* [*nuclein* + *-ate*¹.] Containing or consisting of nuclein.

nucleinic (nū-klē̤-in′ik), *a.* [*nuclein* + *-ic*.] Consisting of or pertaining to nuclein.—**Nucleinic acid,** the phosphorus-containing radical of the nucleoproteids, from which the xanthin bases are derived. There are different forms. The formula for that occurring in combination with salmin is supposedly $C_{40}H_{54}N_{14}O_{27}P_4$.

nucleo-albumin (nū-klē̤-ọ-al-bū′min), *n.* A compound albumin in which an albuminous radical is in combination with a special phosphorized radical (possibly a pseudo- or paranuclein). On decomposition the nucleo-albumins, unlike the nucleoproteids, do not give rise to the formation of xanthin bases. The group is closely related to the globulins (hence the term *phosphoglobulins* which has also been applied to them) and comprises some of the most important food-stuffs, such as the casein of milk, the vitellin of egg-yolk, the phytoglobulins of the leguminous plants, etc.

Nucleoblastidæ (nū″klē̤-ọ-blas′ti-dē), *n. pl.* [NL., < L. *nucleus*, a kernel, + Gr. *βλαστός*, germ, + *-idæ*.] A family of *Blastoidea*, typified by the genus *Nucleocrinus*.

nucleochyme (nū′klē̤-ọ-kīm), *n.* Same as ★*karyolymph* or ★*karyenchyma*.

Nucleocrinus (nū-klē̤-ok′ri-nus), *n.* [NL., < L. *nucleus*, a kernel, + Gr. *κρίνον*, a lily (see *crinoid*).] A genus of Devonian blastoids, with globular or ovoid calyx, linear ambulacra, double spiracles, and divided posterior deltoid plate.

nucleohiston (nū″klē-ọ-his′ton), *n.* [L. *nucleus*, kernel, + Gr. *ἱστός*, a web.] A nucleoproteid which has been obtained from the thymus gland, lymph glands, etc. It is characterized by a very high phosphorus content, 3.025 per cent., and on decomposition yields histon and Lilienfeld's leuconuclein.

nucleolocentrosome (nụ̄-klē″ọ-lō-sen′trọ-sōm), *n.* A persisting body within the nucleus of certain *Protozoa*, as *Euglena*, *Amœba*, etc., which divides to form a kind of central spindle.

nucleololus (nū-klē̤-ol′ọ-lus), *n.*; pl. *nucleololi* (-lī). [NL., dim. of *nucleolus*: see *nucleolus*.] In *cytol.*, a small body inclosed in the nucleolus of certain cells. Same as *nucleolinus*.

nucleoplast (nū′klē̤-ọ-plast), *n.* [*nucleoplasm*.] A nucleoplasmic body.

nucleoplastic (nū″klē̤-ọ-plas′tik), *a.* [*nucleoplast* + *-ic*.] Of or pertaining to a nucleoplast.

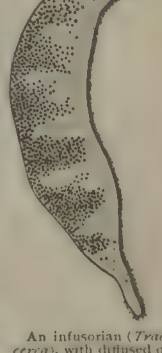
nucleoproteid (nū″klē̤-ọ-prō′tē̤-id), *n.* [L. *nucleus*, nucleus, + E. *proteid*.] One of a group of substances which represent one of the most important classes of compound albumins and are characterized by their phosphorus content and the fact that on decomposition they all give rise to the formation of xanthin bases. Structurally they are probably made up of an albuminous group in combination with a phosphorized radical, which in turn may be simple (a nucleinic-acid group) or itself a compound of an albumin with nucleinic acid (nuclein). The nucleoproteids are essentially nuclear constituents, and all or nearly all contain iron. In contradistinction to the native albumins they turn the plane of polarization to the right.

nucleoprotein (nū″klē̤-ọ-prō′tē̤-in), *n.* [L. *nucleus*, kernel, + E. *protein*.] A nucleo-albumin or a nucleoproteid.

nucleoreticulum (nū-klē̤-ọ-rē̤-tik′ụ̄-lum), *n.* [L. *nucleus*, kernel, + L. *reticulum*, a net.] The network of linin and chromatin within the nucleus of the resting-cell.

nucleosin (nū′klē̤-ọ-sin), *n.* [*nucleose* + *-in*².] Same as ★*thymin*.

nucleus, 1. (*g*) In *phys.*, any particle, suspended in an atmosphere containing vapor, about which the vapor condenses. Finely divided matter floating in the air affords nuclei of condensation, and the free ions of an ionized gas appear to have the same property. (*h*) In *chem.*, a name introduced in the earlier part of the nineteenth century to signify a group of atoms in a particular state of combination, or, as it would now be expressed, presenting a particular structure, one or more of which atoms might be replaced by others without change in the characteristic arrangement or structure. This idea was developed by Laurent in his so-called nucleus theory.



An infusorian (*Trachelocerca*), with diffused or distributed nucleus consisting of scattered chromatin-granules. (*Gruber*.) (From Wilson's "The Cell.") Enlarged.

3. A very small colony of honey-bees started for the purpose of rearing queens to exchange with the queens of full colonies, thus assisting in

the prevention of swarming.—**Abducens nucleus.** See ★*abducens.*—**Benzene nucleus,** that portion of a benzene derivative which retains the structure and chemical properties of the benzene-ring.—**Dentate nucleus.** Same as *dentate body.*—**Distributed nucleus,** a peculiar nucleus occurring in some *Protozoa* and consisting of a number of chromatin granules lying free in the cytoplasm and not inclosed in a nuclear membrane or karyotheca.—**Free nucleus,** in *phys.*, a floating nucleus of condensation about which the surrounding vapor has not yet gathered in liquid form.—**Gracile nucleus,** an area of small nerve-cells in the dorsal pyramid of the oblongata.—**Loaded nucleus,** in *phys.*, a floating nucleus about which some of the surrounding vapor has condensed in the form of a minute globule of liquid.—**Medullary nucleus,** the white nervous substance in the cerebellum.—**Nucleus funiculi gracilis.** Same as *clavate nucleus.*—**Nucleus of a set.** Any closed set of points ϵ can be reduced by a finite, or at most countably infinite, series of the operations of derivation and deduction to one of two forms: (*a*) no points at all; (*b*) a perfect set. This result (set) is the nucleus E_{Ω}.—**Nucleus peduncularis,** a group or nucleus of nerve-cells in the brain of a bird, posterior to the optic tract. Also known as the *ganglion ectomammillare. Philos. Trans. Roy. Soc.* (London), 1899, ser. B, p. 301.—**Nucleus pulposus,** the vestige of the notochord which appears as a pulpy mass in the center of the intervertebral fibrocartilages.—**Nucleus theory,** a theory of the constitution of organic chemical compounds proposed by Laurent and Gmelin. According to this theory such compounds consist of groups of atoms (radicals) containing even numbers of carbon and hydrogen atoms combined in certain typical ways, such as the water type, the ammonia type, etc. As the atomic weight of carbon was then supposed to be 6, C_2 was written where we should now use C.—**Oculomotor nucleus,** the center of origin in the brain of the third or oculomotor nerve.—**Sensory nucleus,** a group of nerve-cells which pertain to the origin of the sensory portion of the trigeminal nerve.—**Vagoglossopharyngeal nucleus,** a group of nerve-cells at the origin of the vagus and glossopharyngeal nerves.

nucleus-parasite (nū'klẹ̄-us-par″ạ-sīt), *n.* A fungus, such as *Puccinia asarina*, which penetrates the cell and directly attacks the nucleus, causing deformation or complete destruction.

nucoline (nū'kọ̄-lin), *n.* [L. *nux* (*nuc-*), nut, + *ole*(*um*), oil, + *-ine.*] A kind of butter made from nuts; nut-butter. *N. E. D.*

nucule, *n.* **2.** In *bot.* Same as *nutlet*, 1.

nuculiform (nū'kụ̄-li-fôrm), *a.* [*Nucula* + L. *forma*, form.] Having the form of the mollusk *Nucula*.

nudel, *n.* See *noodle*².

nudicaulous (nū-di-kâ'lus), *a.* Same as *nudicaul.*

nuez (nwāth), *n.* [Sp. *nuez*, walnut.] In Porto Rico, the nut of the nogal, *Juglans Jamaicensis.*

nug² (nug), *n.* In *mining*, the dull sound caused by the breaking of subsiding strata. [Scotch.]

nugget, *n.* **2.** A thick-set, strong, young horse. [Australia.]—**3.** A lump of tobacco. [Australian slang.]

nugget (nug'et), *v. t.*; pret. and pp. *nuggeted*, ppr. *nuggeting.* [*nugget, n.*] To steal or appropriate the unbranded calves of (one's neighbors). [Australian slang.]

If he does steal a calf now and then, I know several squatters who are given to *nuggeting.*
R. M. Praed, Longleat of Kooralbyn, p. 25, in E. E. [Morris, Austral English.

nuggety, *a.* **2.** Short, thickset, and strong: applied to a horse or a man. *E. E. Morris*, Austral English. [Australian slang.]

nul, *a.*, *n.*, and *v.* A simplified spelling of *null.*

nul disseizin (nul dis-sē'zin). [AF.] No disseizin; in *law*, the general issue in an action concerning real property.

null. **I.** *a.* **4.** Zero in algebraic measure.—**5.** In *math. logic*, noting a propositional function when it is false for all values of *x*.—**Null element.** See ★*element.*

II. *n.* **4.** Specifically, one of the bids in the game of skat. Same as ★*misère.* See ★*skat*².—**Grand null ouvert,** in *skat*, a bid to lose every trick with the hand exposed on the table from the first. See ★*null ouvert*, in which the first trick is played before the hand is exposed.—**Null ouvert,** in *skat*, a bid to lose every trick with the hand exposed on the table, but not until after the first trick.—**Null tourné,** in *skat*, a change from tourné to nullo when the card is a seven.

nulla bona (nul'ạ̈ bō'nạ̈). [L., no goods.] The return made by a sheriff upon an execution where the party has no goods to be distrained. *N. E. D.*

null-circle (nul' sėr″kl), *n.* The imaginary circle about the point (*a*, *b*) with radius null, $(x-a)^2 + (y-b)^2 = 0$.

null-class (nul'klȧs), *n.* A class of no terms.

null-conic (nul'kon″ik), *n.* In the theory of averages, the equation of the *null-conic* of an area is $\iint (lx + my + n)^2\, dx\, dy = 0$, which may, by proper choice of axes and use of the notation of averages, be written in the form $l^2x^2 + m^2y^2 + n^2 = 0$. *Rep. Brit. Ass'n Advancement of Sci.*, 1903, p. 560.

nulliparity (nul-i-par'i-ti), *n.* [*nullipar*(*ous*) + *-ity.*] The state of not having given birth to a child.

nullipore-sand (nul'i-pōr-sand), *n.* In *geol.*, a marine sand consisting of the detritus of calcareous seaweeds or nullipores.

Nullity of a determinant. A determinant of order *n*, all of whose subdeterminants of order $(n-i+1)$ vanish, but not all of order $(n-i)$, is a determinant of nullity *i*.

null-moment (nul'mō″mẹnt), *n.* In *mech.*, a zero moment.

The lines of *nul-moment* for the system form a linear complex of which the given line is the central axis and the quotient G/R is the pitch.
Encyc. Brit., XXVIII. 660.

nullo (nul'ọ̄), *n.* [It. ?: see *null.*] Same as ★*misère.* See also *Cayenne* ★*whist.*

null-plane (nul'plān), *n.* One of the corresponding planes of a null-system.

In the case of a complex of the first degree (or linear complex) the lines through a fixed point lie in a plane called the polar plane or *nul-plane* of that point.
Encyc. Brit., XXVIII. 660.

null-point (nul'point), *n.* **1.** In *phys.*, the zero-point upon the scale of any instrument.—**2.** The dual of a null-plane.—**3.** The origin or beginning point in the representation of a set by the points on a straight line.

null-set (nul'set), *n.* An empty class, corresponding to a condition satisfied by no entity in the universe.

null-sphere (nul'sfēr), *n.* The sphere about the point (*a*, *b*, *c*) which has zero radius, $(x-a)^2 + (y-b)^2 + (z-c)^2 = 0$.

nul tiel record (nůl' tiel re-kôrd'). [AF., 'no such record.'] In *law*, a plea which puts in issue the existence of a record upon which an opposing party relies, or the fact that the record is what it is alleged to be.

nul tort (nůl tôrt). [AF., 'no wrong.'] In *law*, a plea in a real action, by which a general issue is joined, denying any wrong done by the defendant.

nul waste (nůl wāst). [AF., 'no waste'.] In *law*, the plea in an action for waste by which the general issue is joined.

num, *a.* and *v.* A simplified spelling of *numb.*

num. An abbreviation (*a*) of *number*; (*b*) of *numeral.*

number, *n.* **17.** A term used in the textile-industry to designate the size or fineness of yarn; the number of units of length contained in a given weight of the product. The length of yarn required to produce the definite weight on which the numbering is based is called a *hank*, as with cotton, or, in case of flax or jute, a *lay* or *lea*. The fundamental rule, in the various systems of numbering yarn, is that the finer the yarn the higher shall be the number. The number, or titre, of true or reeled silk differs from that of all other yarns in being based on a constant length and variable weight. The higher the number, or titre, the coarser the yarn or thread. The number is expressed in deniers. According to the international (French) titre system, a denier is .05 gram, or .771 grain, for 500 meters. In the new Lyons titre system a denier is 1.2747 grams, or 19.66 grains, for 12,000 meters.—**Abbreviated numbers** numbers obtained by cutting off the expression for each number at a certain number of places after the decimal point.—**Absolute number,** a signless or plus rational or irrational.—**Absolute value of a complex number,** $x = a + bi$, is $+(a^2 + b^2)^{\frac{1}{2}}$: denoted by $|x|$.—**Absolute value of a real number,** *a*, its value taken positively: denoted by $|a|$. Thus $|2| = |-2| = +2$.—**Abstract number,** one in which there is no statement of the points in which the objects numbered agree.—**Absurd number,** negative number. *Stifel*, 1544.—**Affirmative number.** Same as *positive* ★*number. Newton.*—**Aleph number,** a Cantorian cardinal number belonging to a normally ordered set.—**Approximate numbers,** a simpler set of numbers equal to those for which they are substituted, to within a fixed degree of approximation.—**Arithmetical number.** Same as *positive* ★*number.*—**Associate numbers,** the four numbers obtained by multiplying any whole complex number by $+1, -1, +i, -i$.—**Back number,** a number of a magazine or other periodical that has been followed by more recent issues and is no longer read or in demand; hence (in United States slang), a person or a thing that is behind the times or has become superannuated.—**Barlong number.** Same as *heteromecic* ★*number.*—**Cantorian cardinal number.** In Cantor's words: "We call the potency or cardinal number of the set M that general idea which by means of our active faculty of thought we deduce from the set M, by abstracting from the nature of its diverse elements and from the order in which they are given." It is a property of the set independent of the nature of its terms and of their order. It is finite or transfinite according as the set is finite or infinite.—**Cantorian ordinal number.** See ★*Cantorian.*—**Cardinal number of a series,** the cardinal number or potency of the class of elements which occur in the series, without regard to their order.—**Commensurable numbers,** such as have a common measure; two numbers whose ratio is a rational number.—**Concrete number,** one in which there is a statement of points in which the objects numbered agree: as, 3 dogs.—**Condensed numbers,** numbers expressed each in the form of a product of a power of 10 and a decimal, with the decimal point appearing after the first digit from the left.—**Congruent number,** one having the same remainder with regard to a given modulus.—**Conjugate complex numbers,** two numbers with equal moduli and amplitudes of equal magnitude but contrary sense.—**Constant number,** a number the value of which does not change: usually represented by one of the first letters of the alphabet.—**Cyclical number,** a number, such as 5 or 6, the square of which ends with the same number.—**Determinate number,** a number referred to some given unit.—**Diacritical number,** in *elect.*, the number of ampere turns necessary to magnetize the core of a coil to half saturation.—**Dual number,** one written in the system with radix two.—**Ester number.** See ★*ester.*—**Euclidean number.** Same as *perfect number* (which see, under *perfect*).—**Finite number,** a number which can be reached or exceeded by starting from 0 and increasing by 1 at each step.—**Fractional number,** a symbol of the form a/b, defined by its position in an ordinal system which includes the natural numbers.—**Heteromecic number,** a number of the form $n\,(n-1)$.—**Hexagonal number,** any one of the series of polygonal numbers 1, 6, 15, . . . obtained by successively summing the terms of the series 1, 5, 9, . . . in which the difference is 4.—**Imaginary number.** (*a*) Same as *neomonic* ★*number.* (*b*) Same as *complex number* (*a*) (which see, under *complex*).—**Incommensurable numbers,** two numbers whose ratio is an irrational.—**Infinitesimal number.** If P and Q are two numbers, and if, *n* being any finite integer whatever, *n* P is always less than Q, then P is infinitesimal with respect to Q.—**Integral number,** a whole number.—**Irrational number,** the one number between all numbers in B and all in A,—two classes to one and but one of which every rational falls as soon as given, and such that (1) each number in B precedes every number in A and (2) there is no last number in B and no first number in A.—**Koettstorfer's number.** Same as *saponification* ★*value.*—**Law of great numbers.** See ★*law*¹.—**Literal number,** a number represented by a letter.—**Maiden number.** See the extract.

7 was called the *maiden number*, because within the decade it has no factors or product.
New Century Rev., May, 1900, p. 374.

Minus number. Same as *negative* ★*number.*—**Modulus of a complex number.** See ★*modulus.*—**Modulus of a real number.** See ★*modulus.*—**Multipartite number.** Objects not all similar cannot be effectively enumerated by a single integer, a succession of integers being required. If the objects be *p* in number of one kind, *q* of a second kind, *r* of a third, etc., the enumeration is given by the succession *p q r*, which is a *multipartite number*, written $\overline{p\ q\ r}\ .\ .\ .$, where $p + q + r = n$.—**Natural number.** (*a*) An element of an ideal manifold defined solely by the following conditions: (1) that there is one element anterior to all the rest, and (2) that every element *a* is followed by a definite next element *a′*, so that $a < a'$ and no element falls within the interval (a, a'). (*b*) A sign or symbol for a cardinal number; a sign 1, 2, 3, . . . or its name 'one,' 'two,' 'three,' . . .—**Negative number,** a number indicating the remainder, when the subtrahend is greater than the minuend; a number preceding 0 in the complete scale.—**Neomonic number,** a number whose unit is the neomon; for example $\sqrt{-3}$.—**Number eleven,** an umbrella. [Slang.]

Number eleven! Why, it is only by favour and connivance that a person can manage to make it shelter two.
N. and Q, 9th ser., XII. 406.

Number of degree. See ★*degree.*—**Numerical value of a real number.** Same as *absolute value of a real* ★*number.*—**Oblong number,** a product of two unequal factors.—**Odd number,** a number that is not divisible by 2.—**Opposite numbers,** two numbers which have the same absolute value but are of opposite quality: as, $+3$ and -3.—**Pentagonal numbers,** the series of polygonal numbers 1, 5, 12, 22, 35.—**Pitch number.** See ★*pitch*¹.—**Plus number.** Same as *positive* ★*number.*—**Positive number,** a number greater than 0.—**Primary number.** (*a*) See *primary.* (*b*) The cardinal number of a finite set; that property of the set because of which we shall arrive at the same natural number in whatever order we count the set.—**Pronic number,** a number of the form $a^n + a$.—**Pure number.** Same as *abstract* ★*number.*—**Real number,** a number which may be indefinitely approximated to by a fraction whose numerator and denominator are sums of the primitive unit one.—**Reichert number,** the number of cubic centimeters of decinormal alkali solution necessary to neutralize the volatile fatty acids in 5 grams of fat. This is fairly high in genuine butter, while in oleomargarin it is very low.—**Relatively finite numbers,** two such that the product of the lesser by a finite number exceeds the greater.—**Relative number,** a number with a sign (+ or −).—**Saponificaton number.** Same as *saponification* ★*value.*—**Single-valued number,** a number with a definite, particular value: opposed to *general number*, one representing more than one value.—**Spheric number,** a product of three unequal factors.—**Surd number,** an irrational.—**The number e,** $1 + 1 + \frac{1}{2!} + \frac{1}{3!} + . . . = 2.718281829 . . .$, the base of the natural logarithms, a transcendental irrational, connected with π by Euler's equation $e^{i\pi} = -1$. See *logarithm.*—**The number π.** Same as *Ludolphian number* (which see, under *number*).—**To make her number,** to signal her number (on Lloyd's books) to a Lloyd's station on nearing land: said of a ship.

The *Flamingo* picked up the landmarks of the Southern Irish coast, and *made her number* to Lloyds' station on Brow Head, stood across for the Tuskar, and so on up St. George's Channel for Holyhead.
Cutcliffe Hyne, A Master of Fortune, xii.

Transcendental number, a number which cannot be defined by any combination of a finite number of equations with rational integral coefficients; one which cannot occur as root of an algebraic equation: *e* and π are such numbers.—**Transfinite cardinal number,** the number of a class having a proper part similar to the whole.—**Transfinite ordinal number,** a number which, starting from 0 or 1, cannot be reached by mathematical induction; a class or type of serial relations, of well-ordered series; a type of order or of generating relation presented by series of finite and transfinite cardinals which begin with some cardinal.—**Transport numbers of Hittorf,** in *phys. chem.*, numbers which express the fraction of the current between the electrodes which is carried by the motion of the anions and by the motion of the cations. The transport number of the anion is often denoted by *n*, 1 − *n* being given as the transport number of the cation.

> In a preceding paragraph, it was noted that each ion had its own specific constant of electrical conductivity, the sums of which for all anions and all cations was the conductivity of the solution. These constants for ions are intimately connected with the so-called "*transport numbers*" (a rendering into English of the word Ueberführungszahl).
>
> *Electrochemical Industry*, March, 1904, p. 99.

Triangular number, a number of the form $n(n+1)/2$. See *triangular*.—**Unipartite number,** a number, say *n*, regarded as enumerating *n* similar objects.—**Variable number,** a number which takes a set of values: usually represented by one of the final letters of the alphabet.—**Vessel's number,** a numeral made by a hoist of flags which corresponds to the distinguishing number given to the ship in the signal-book.—**Watch number,** the hammock-number, which is changed as the seaman's station is shifted.—**Whole number.** See *whole*.—**Wolf's relative sun-spot numbers.** See ★*sun-spot*.

number-continuum (num′bėr-kon-tin″ụ̄-um), *n.*; pl. *number-continua* (-ạ̈). **1**. The whole system of positive and negative integral, fractional, and irrational numbers.—**2.** The real numbers from 0 to 1, both inclusive.

numbering-machine, *n.* **2.** An automatic mechanism attached to a printing-machine which registers the number of each printed sheet.

number-interval (num′bėr-in′tėr-vạl), *n.* The set of all real numbers between *a* and *b*, both inclusive.

number-man (num′bėr-man), *n.* A man who delivers to subscribers the successive numbers of a subscription-book that is issued in numbers. [Great Britain.]

> Those subscribers, therefore, who choose to be accommodated with the Apocrypha may now be supplied by giving orders to the . . . *Number-men.*
>
> *N. and Q.*, 10th ser., III. 66.

numbly (num′li), *adv.* In a numb or dull manner.

> Her fingers fumbled *numbly* with the string. She might as well have tried to untie the knotted cords with her feet. *Crockett*, Lads' Love, xxiv.

numda (num′dä), *n.* [Also *numna;* Hind. *namdā*, < Pers. *namad*, felt.] Felt; a saddle-cloth originally made of felt.

numerable, *a.* **2.** In *math.*, capable of being put into one-to-one correspondence with the elements of a progression.—**Numerable manifold.** See ★*manifold*¹.

numeral, *n.*—**Hindu numerals, Indian numerals,** the so-called Arabic numerals.—**Numerals in shipbuilding,** the products of certain dimensions used to classify and determine the scantlings of the different structural items of a vessel when being built according to rule.

Numerical quadrature. Same as *arithmetical quadrature.* See *the problem of the quadrature*, under *quadrature.*

numis. An abbreviation (*a*) of *numismatic;* (*b*) of *numismatics;* (*c*) of *numismatology.*

nummulation (num-ụ̄-lā′shọn), *n.* [L. *nummulus*, a coin, + *-ation.*] The peculiar arrangement exhibited by red blood-corpuscles when they unite to form columns like stacked-up coins.

nummuloidal (num-ū-loi′dal), *a.* [L. *nummulus*, a coin, + *-oid* + *-al*¹.] Coin- or button-shaped, as the siphuncular segments in some fossil cephalopods.

numna, numnah (num′nạ̈), *n.* Same as ★*numda*.

> Biting cold winds, from which some protection was afforded by having a large *numnah* held up close to the plane-table. *Geog. Jour.* (R. G. S.), XVI. 519.

numskul, *n.* A simplified spelling of *numskull.*

nun¹, *n.* **5.** Same as ★*nun-moth.*—**Capuchin nun,** a nun of the order founded by Maria Longa in 1534, which adopted the Capuchin rule in 1538, and afterward that of St. Claire.—**Nun's work,** an old name in England for lace.

> Lace was long called '*nun's work*,' and even to the present day the term lingers in remote districts.
>
> *Mrs. F. N. Jackson*, in Burlington Mag., IV. 54.

nun² (nön), *n.* [Native name in Yucatan?] A yellowish-brown, neutral, fatty substance produced by an insect found in Yucatan. It melts at 48.9° C. and readily absorbs oxygen from the air.

nun³ (nön), *n.* [Heb. *nūn*, Aram. Syr. Ar. *nūn.*] The fourteenth letter (נ) of the Hebrew alphabet, corresponding to the Greek *νῦ* and the English *n.* Its numerical value is 50.

nunciative (nun′shi-ạ̄-tiv), *a.* Making an announcement; conveying a message.

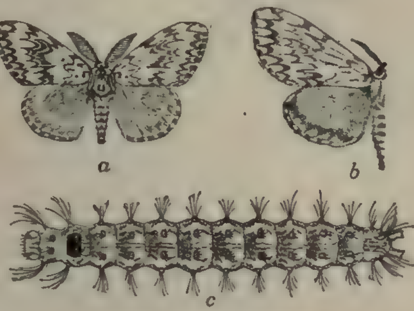
> We have . . . to look for some more positive bond of connection between them . . . which makes them worth our prolonged investigation. This we shall find in the fact that they are all of them message-bearing or *nunciative* automatisms.
>
> *F. W. H. Myers*, Human Personality, II. 88.

nundine (nun′dīn), *n.* [L. *nundinæ*, the ninth day, < *novem*, nine, + *dies*, day.] In *Roman antiq.*, a market-day occurring every ninth day (in Roman reckoning). Also as plural. *N. E. D.*

Nungu butter. Same as *shea-butter.*

nunlet (nun′let), *n.* A book-name for the small South American birds of the genus *Nonnula.*

nun-moth (nun′môth), *n.* A European liparid moth, *Lymantria monacha*, whose larva is a noted enemy to forest-trees in Europe.



Nun-moth (*Lymantria monacha*).

a, male moth; *b*, female; *c*, full-grown caterpillar: all reduced about one third.

nuns (nunz), *n. pl.* Bluets; innocence, *Houstonia cærulea.*

nun's-fiddle (nunz′fid″l), *n.* Same as *sea-trumpet*, 1.

nupharetum (nū-fạ-rē′tum), *n.*; pl. *nuphareta* (-tạ̈). [*Nuphar* + *-etum.*] A zone of vegetation near the shore of a body of fresh water, characterized by the presence of plants which belong to the genus *Nymphæa* (*Nuphar*). See *Nymphæa*¹, 1.

nupharin (nū′fạ-rin), *n.* [*Nuphar* + *-in*².] An amorphous, optically inactive compound, $C_{18}H_{24}O_2N_2$, contained in the rhizome of *Nuphar luteum.*

nuptiality (nup-shi-al′ị-ti), *n.* [*nuptial* + *-ity.*] The tendency of a people toward marriage, expressed statistically by the marriage-rate.

> *Nuptiality* and Fecundity.—In connection with the subject of natural increase may be mentioned the tendency of a people towards marriage, and the average fertility of each union. *Encyc. Brit.*, XXXI. 839.

nuque (nük), *n.* [F.] The nape of the neck.

nurag, nuragh, nuraghe, *n.* Same as *nurhag.*

nurish¹, *v.* **2.** A simplified spelling of *nourish.*

Nuritate lacquer. See ★*lacquer.*

nurse, *n.* **11.** In *entom.*, one of the worker-ants or worker-bees whose function in the colony is to care for the young brood.—**Captain's nurse,** one who instructed the captain in the merchant marine. Before compulsory examinations were in force, an incompetent man might obtain command of a vessel by virtue of ownership and go to sea as her captain; but in such cases it was common to give the experienced chief mate an extra compensation for instructing the captain in the laws of seamanship and navigation as well as in the general duties of a master.—**Gray nurse,** a common name in Tasmania for *Carcharias littoralis*, a carcharioid shark.—**Rub nurse,** in *billiards*, a stroke made by hitting the cushion first, rubbing the first object-ball, and not much more than shaking the second. In this way runs of 50 and over have been made in practice-play. The needful position can occasionally be obtained at regular cushion-caroms, but not once in every hundred thousand trials at the bank-shot game, which is the only one in which the cushion must be hit first. The point not commonly understood is that a run by bank-shot process is not necessarily a bank-shot run.

nurse, *v. t.* **7.** In *billiards*, formerly, to make a number of consecutive caroms, as rapid as dainty, off (balls) held but an inch or two apart. In addition, nursing now comprehends perhaps 65 per cent. of the scientific manœuvering imposed by the balk-line games. Until straight-rail play was developed in 1876–78, adroit players sought to do all their caroming at either end of the table. It was so with all the exceptional runs. Straight-rail play was quickly frowned upon, and end-play came into use again; but the 'anchor' (see ★*anchored*, 4) which was developed was abolished even more quickly than the straight-rail. Three maxims underlie all of modern billiards not played for diversion: never drive the second object-ball; drive the first no oftener than is urgently needful; and make the cue-ball's journeys as short as possible.

nurse-bee (nėrs′bē), *n.* **1.** Same as ★*nurse*, 11.—**2.** A honey-bee not yet sixteen days of age.

nurse-crop (nėrs′krop), *n.* In *agri.*, a crop which is employed to aid another crop in getting established, as in the practice of planting certain rapid-growing short-lived trees or bushes to shade the slow-growing conifers in an intended conifer forest, or in the sowing of a straw crop to shade and shield a lawn seeding.

nursery, *n.* **8.** In *Eng. billiards*, the section, about 2 feet by 6, farthest from balk: it may extend along the cushion almost to the middle pocket: formerly a condition rather than a locality.—**Nursery stock,** in *plant-breeding*, the contents of a centgener and its offspring so long as the plants remain in the nursery and have not been subjected to field tests. See ★*centgener*, *n.*, 2.

nursing-pouch (nėr′sing-pouch), *n.* The pouch, characteristic of the marsupial mammals, in which the young are carried. *Nature*, Aug. 14, 1902, p. 374.

nut, *n.* **2.** Loosely, a similar vegetable product, as a tuberous root (earth-*nut*, ground-*nut*), leguminous pod (pea*nut*), or seed (physic-*nut*). —**3.** (*f*) (3) In general, the lower end or heel of the bow: opposed to *point* or *head.*

8. In Australia: (*a*) See the extract. [Slang.]

> The peculiar type of the Australian native (I do not mean the aboriginal blackfellow, but the Australian white), which has received the significant sobriquet of "The *Nut*," may be met with in all parts of Australia, but more particularly . . . in far-off inland bush townships. . . . What is a *Nut?* . . . Imagine a long, lank, lantern-jawed, whiskerless, colonial youth . . . generally nineteen years of age, with a smooth face, destitute of all semblance of a crop of "grass" as he calls it in his vernacular.
>
> *A. J. Boyd*, Old Colonials, p. 60, quoted in E. E. Morris, [Austral English.

(*b*) A daredevil. [Slang.]

> "Tommy the *Nut*" was the alias of the prisoner who, according to the story, was first described as "a larrikin" by Sergeant Dalton. *E. E. Morris*, Austral English.

African nuts, a commercial name for the Spanish nutmeg, *Virola Surinamensis.*—**Artificial nut,** in playing on the violin and other instruments with a finger-board, the act or effect of shortening the effective length of the strings by stopping them below the nut proper either by the fingers or by a special appliance. See *barré*, 2, and *capo tasto.*—**Boma nut,** the almond-like seed of *Wetriaria macrophylla*, which furnishes an abundance of sweet, bland oil, much used in cooking by the natives of eastern Central Africa. It is cultivated abundantly in the region of the Upper Zambesi. See *bomah-nut.*—**Burrawang nut,** the seed of the *burrawang* (which see). —**Capped nut,** a threaded nut with an ornamental disk covering one side.—**Deaf nut.** See ★*deaf.*—**Elastic nut,** a form of nut which can be kept to a close fit on the screw. The nut may be split along one side and sprung as far as is necessary to compensate for the wear, or it may be cut in halves which are separated by a spring or a screw.—**French nut.** (*b*) The Old World chestnut, *Castanea vesca.*—**Mote-nut.** (*b*) *pl.* The seeds of *Carapa procera*, which yield a bitter, cathartic oil. See *kundah-oil* and *Carapa*, 1.—**Traveling nut,** a nut which travels on a screw when the screw is turned, the nut being prevented from turning.—**Untapped nut,** a mechanical nut-blank which has not been tapped or in which the hole has been formed but the thread has not been cut.

nutation, *n.*—**Chandler's nutation,** Sir G. H. Darwin's designation of the slight movement of the earth's axis within the globe: discovered by Küstner in 1888, but first thoroughly discussed and reduced to law by Dr. S. C. Chandler of Cambridge, United States. It produces among the stars with respect to the zenith of an observer slight displacements which are somewhat analogous to those due to the nutation proper. *G. H. Darwin*, The Tides, p. 227.—**Constant of nutation.** See ★*constant.*

nut-crab (nut′krab), *n.* A crab of the genus *Ebalia;* so called from its resemblance to a nut when the legs are tucked in.

nut-fudge (nut′fuj), *n.* See ★*fudge*, 4.

nutlet, *n.* **1.** (*b*) One of the achene-like segments of a pericarp or schizocarp, as in the borage and mint families.

nutmeg, *n.*—**Queensland nutmeg,** a small tree of the north coast of Australia, a variety of *Myristica cimicifera*, or its seeds, which are not so strongly aromatic as those of the true nutmeg, *M. fragrans.*—**Spanish nutmeg,** in the West Indies, *Virola Surinamensis* or its seeds, which are an article of export for their oil. See *African* ★*nuts*, *dali*, and *dollee-wood.*—**Stinking nutmeg.** Same as *California nutmeg* (which see, under *nutmeg*).

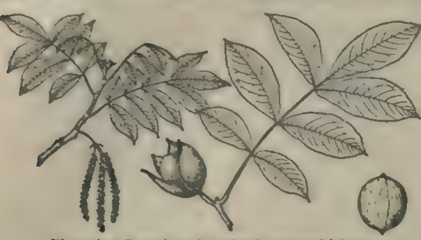
nutmeg-apple (nut′meg-ap″l), *n.* The fruit of the nutmeg-tree.

> Here and there a *nutmeg-apple* has split, and shows within the delicate crimson caul of mace; or the nutmegs, the mace still clinging round them, lie scattered on the grass. *Kingsley*, At Last, v.

nutmeg-butter, *n.* **2.** The fat oil from the seeds of *Myristica moschata*, which contains, as glyceride, myristic acid ($C_{14}H_{28}O_2$). This fat oil is a quite different substance from the essence or volatile oil obtained by distillation with water.

nutmegged, *a.* **2.** Same as *nutmeggy.*

nutmeg-hickory, *n.* This tree, rare in South Carolina, is now known to range through Alabama and Mississippi to southern Arkansas, where it is abundant. It is a forest-tree 80 to 100 feet high, valuable for timber and fuel.



Flowering Branch and Fruit of nutmeg-hickory (*Hicoria myristicæformis*).
(From Sargent's "Manual of the Trees of North America.")

nutmeg-pigeon, *n.*—**Nicobar nutmeg-pigeon,** *Carpophaga insularis*, a species gray beneath, and bronze green above: found on the Nicobar Islands.

nutmeg-tree, *n.*—**California nutmeg-tree.** Same as *California nutmeg* (which see, under *nutmeg*).

nut-Monday (nut′mun″dā̤), *n.* The first Monday in August, locally observed as a holiday. *N. E. D.* [Eng.]

nut-palm (nut′päm), *n.* A cycad of northern Australia, *Cycas media*, the seeds of which are used as food by the aborigines. The kernels are broken, steeped in water for some days to remove a poisonous principle, then reduced to a fine paste between two stones, and baked in hot ashes.

nutricism (nū′tri-sizm), *n.* [L. *nutrix* (*nutric-*), nurse, + *-ism.*] That form of symbiosis in which the fungus becomes the nurse or feeder of the host, usually resulting in the formation of *Mycorrhiza*.

Nutrient canal. Same as *Haversian canal* (which see, under *canal*^{1}).

Nutritive ratio. See ★*ratio.*

nutrium (nū′tri-um), *n.* [NL., < L. *nutrire*, nourish, + *-ium.*] The trade-name of a food-material obtained by evaporating to dryness milk deprived of its fat and pulverizing the solid residue. This contains the proteids of the milk, the milk-sugar, and the mineral salts.

nutrose (nū′tros), *n.* [L. *nutrire*, nourish, + *-ose.*] A water-soluble sodium salt of casein.

nut-sedge, *n.* 2. The nutgrass, *Cyperus rotundus.*

Nuttall's-weed (nut′a̤lz-wēd), *n.* The golden coreopsis, *Coreopsis tinctoria.* The species was named by Thomas Nuttall, an eminent American botanist.

nuttery (nut′ėr-i), *n.* [*nut* + *-ery.*] A plantation where nuts are grown; a copse where nuts grow.

nutting (nut′ing), *n.* The gathering of nuts.

N. V. An abbreviation of *New Version.*

N. V. M. An abbreviation of *Nativity of the Virgin Mary.*

N. W. An abbreviation (*b*) of *northwestern;* (*c*) of *Northwestern Postal District, London.*

N. W. P. An abbreviation of *Northwestern Provinces.*

N. W. T. An abbreviation (*a*) of *Northwest Territory;* (*b*) of *Northwestern Territories.*

Ny. In *chem.*, the symbol for ★*neo-ytterbium.*

N. Y. An abbreviation of *New York*, city or State.

nyala, *n.* See ★*inyala.*

nyanda (ni-an′dä̤), *n.* [African (Livingstone).] A coarse fabric made from the fibers of fig-tree (*Ficus Indica*) bark.

nyanza (ni-an′zä̤), *n.* [Central African.] A lake. *H. M. Stanley.*—**Nyanza black.** See ★*black.*

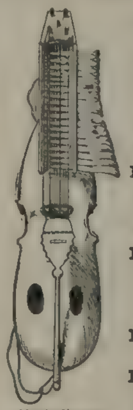
nyarong (nyä′rong), *n.* [Dayak (Dyak), also spelled *njaring* (Hardeland).] The spirit of an ancestor or dead relative, which appears to a youth in a dream and which becomes his protector. The nyarong has often the outer form of an animal. *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 742.

N. Y. C. An abbreviation of *New York City.*

nychthemer (nik′thē̤-mėr), *n.* An anglicized form of *nychthemeron.*

nychthemeral (nik-thē′me̤-ra̤l), *a.* [*nychthemer*(*on*) + *-al*^{1}.] Of or pertaining to, or consisting in, a nychthemeron, or the whole period of day and night (twenty-four hours). *Nature*, Jan. 17, 1907, p. 287.

nyckelharpa (nik′el-här-pä̤), *n.* [Sw., < *nyckel*, key, + *harpa*, harp.] A stringed instrument once used in Sweden, essentially similar to the hurdy-gurdy, but sounded with a bow instead of a wheel. It had 4 principal strings of gut, 2 of which were drones, 8 sympathetic strings of metal, and 19 keys or tangents.



Nyckelharpa. From Engel's "Early History of the Violin Family."

nyctaginaceous (nik-taj-i-nā′shius), *a.* Belonging to the four-o'clock family, *Nyctaginaceæ.*

nyctalgia (nik-tal′ji-ä̤), *n.* [NL., < Gr. *νύξ* (*νυκτ-*), night, + *ἄλγος*, pain.] Pain which occurs only or chiefly at night.

nyctalope (nik′ta̤-lōp), *n.* One who is affected with nyctalopia.

nyctamblyopia (nik″tam-bli-ō′pi-ä̤), *n.* Same as *nyctalopia.*

nyctanthous (nik-tan′thus), *a.* [Gr. *νύξ* (*νυκτ-*), night, + *ἄνθος*, blossom, + *-ous.*] In *bot.*, of flowers, opening only at the approach of twilight or in the night, or, of plants, having flowers which so open. *Pound and Clements.*

nyctemerid (nik-tem′e̤-rid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Nyctemeridæ.*

II. *a.* Having the characters of or belonging to the family *Nyctemeridæ.*

nycteribiid (nik-te̤-rib′i-id), *n.* and *a.* **I.** *n.* A member of the dipterous family *Nycteribiidæ.*

II. *a.* Having the characters of or belonging to the family *Nycteribiidæ.*

Nycthemerus (nik-thē′me̤-rus), *n.* The customary form of *Nychthemerus* (which see).

nyctipelagic (nik″ti-pē̤-laj′ik), *a.* [Gr. *νύξ* (*νυκτ-*), night, + *πέλαγος*, sea.] Living on the surface of the sea only at night, and sinking to the depths of the sea during the day. *Pyrosoma*, most pteropods and heteropods, and many crustaceans, medusæ, and siphonophores, are examples of nyctipelagic organisms.

nykin†, *n.* [Origin obscure.] Dear; darling: a term of endearment.

> Fond. See you have made me weep — made poor *Nykin* weep —
>
> . . . .
>
> Læt. No you shan't neglect your Business for me — No indeed you sant *Nykin* — If you don't go, I'll think you been dealous of me still. *Congreve*, Old Bachelor, iv. 4.

Nymanina (nī-ma̤-nī′nä̤), *n.* [NL. (Kuntze, 1891), named in honor of C. F. *Nyman* (1820–1893), a Swedish botanist.] A genus of bulbous iridaceous plants with fragrant white or pale yellow flowers. Two species are in cultivation and are often forced by florists, especially for cut flowers for Christmas. See *Freesia.*

nymf, *n.* A simplified spelling of *nymph.*

nymph, *n.* 3. (*b*) In insects which undergo an incomplete metamorphosis, the stage in which the wing-pads appear.

nymphæaceous (nim-fē̤-ā′shius), *a.* Belonging to the water-lily family, *Nymphæaceæ.*

nymphid (nim′fid), *n.* A nymph. [Rare.]

nymphine (nim′fin), *a.* Same as *nymphal.*

nymphology (nim-fol′ō̤-ji), *n.* [*nymph* + *-ology.*] Legends about nymphs, collectively.

nymphosis (nim-fō′sis), *n.* [NL., < *nympha*, nymph, + *-osis.*] In *entom.*, the transformation from larva to nymph or pupa.

nyssonid (ni-son′id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Nyssonidæ.*

II. *a.* Having the characters of or belonging to the family *Nyssonidæ.*

nystagmic (nis-tag′mik), *a.* [*nystagm*(*us*) + *-ic.*] Pertaining to or of the nature of nystagmus.

nystagmiform (nis-tag′mi-fôrm), *a.* [*nystagm*(*us*) + *-i-* + *-form.*] Having the appearance of mystagmus.

nystagmoid (nis-tag′moid), *a.* [*nystagmus* + *-oid.*] Resembling mystagmus.

nyxis (nik′sis), *n.* [NL., < Gr. *νύξις*, a puncture, < *νύσσειν*, puncture, pierce.] A puncture.

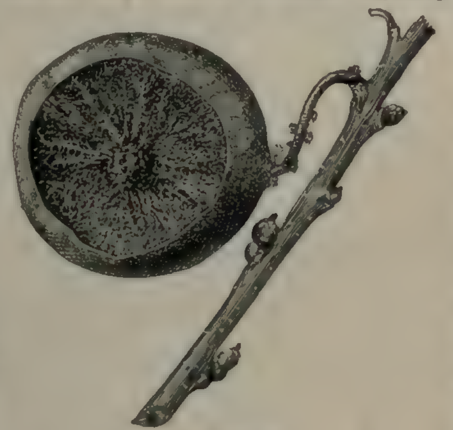
N. Z., N. Zeal. Abbreviations of *New Zealand.*

O 4. An abbreviation (*d*) in *elect.*, of *ohm*; (*e*) of *Ohio*; (*f*) [*l. c.*] of *only*; (*g*) of *opening of the circuit*; (*h*) in *psychol.*, of *observer*.

ω. [Gr. omega.] **1.** A symbol for *angular velocity*.—**2.** In *elect.*, a symbol (*a*) [*cap.* Ω] for *megohm*; (*b*) for *ohm*.

oak, *n.*—**Arizona white oak,** *Quercus Arizonica*, a tree 50 or 60 feet high and from 3 to 4 feet in diameter, found on plateaus and mountain slopes in southern New Mexico and Arizona and northern Mexico.—**Australian oak,** any one of several species of *Casuarina* (which see).—**Blue oak.** (*b*) *Quercus oblongifolia*, a small tree of western Texas, New Mexico, Arizona, and northern Mexico. It rarely exceeds 30 feet in height and has small oblong leaves and small acorns. Very little use is made of it except as fuel. It is commonly called *white oak*, but sometimes *dwarf black oak*.—**Box white oak,** the post-oak, *Quercus minor*.—**Bray oak,** the durmast, *Quercus sessiliflora*.—**California black oak.** Same as *Sonoma oak* (which see, under *Sonoma*).—**California live-oak.** Same as *encino*.—**California white oak,** *Quercus lobata*. See *white oak*, under *oak*.—**Cañon live-oak.** See ★*live-oak*.—**Chapman's oak,** *Quercus Chapmani* of the southern United States, most abundant in Florida on the Gulf Coast. It is closely related to the post-oak, with which it was formerly confounded.—**Cochineal-oak.** Same as *kermes-oak*.—**Durand's oak,** *Quercus breviloba*, a tree of the eastern and southern United States, sometimes 90 feet high and 3 feet in diameter, with obovate undulate leaves and small acorns. The wood is hard and heavy, but brittle. It belongs to the white oak group and is often called *white oak*.—**Dwarf black oak.** See *blue* ★*oak* (*b*).—**Dwarf chestnut-oak,** *Quercus prinoides*, which sometimes bears acorns at the height of two feet. See *chestnut-oak*, under *oak*.—**Emory's oak.** Same as *black oak* (*c*) (which see, under *oak*).—**Engelmann's oak,** *Quercus Engelmanni*, a medium-sized evergreen tree of southwestern California, sometimes called *evergreen white oak*.—**English oak,** *Quercus Robur*. See *oak*, 1.—**European oak,** chiefly *Quercus Robur*, but also *Q. pedunculata* and *Q. sessiliflora*.—**Evergreen oak.** (*b*) Same as *Engelmann's* ★*oak*.—**Female oak,** the quercitron or dyers' oak, *Quercus velutina*.—**Gambel's oak,** *Quercus Gambelii*, a small tree of the Rocky Mountain regions up to 7,000 feet altitude, the only oak in southern Colorado. It frequently covers hillsides of great extent and provides a favorite resort of bears. It shares with *Q. undulata*, with which it has close affinities, the name of *shin-oak*. It is also called *white oak*.—**Georgia oak,** *Quercus Georgiana*, a small tree of the black oak group, restricted to a portion of central Georgia.—**Golden oak.** (*a*) See ★*goldenoak* and ★*Dasistoma*. (*b*) Same as *cañon* ★*live-oak*.—**Ground-oak.** (*a*) See *ground-oak*. (*b*) The wall germander, *Teucrium Chamædrys*.—**Highland oak,** *Quercus Wislizeni*, a live oak of California, found in the highlands of both the Sierras and the Coast Ranges: a very variable tree both in size and in appearance. The wood is heavy and very hard, but is little used except for fuel.—**Kellogg's oak.** Same as *Sonoma oak* (which see, under *Sonoma*).—**Manna-oak,** a variety of the British oak, *Quercus Robur*, found in Kurdistan, the leaves of which yield a sweet exudation. See ★*oak-manna*.—**Marden oak,** the durmast, *Quercus sessiliflora*.—**Mountain-oak.** (*a*) The chestnut-oak, *Quercus Prinus*. (*b*) Gambel's oak, *Q. Gambelii*. (*c*) The Texan oak, *Q. Texana*.—**Myrtle-oak,** *Quercus myrtifolia*, a small tree 20 feet high found on sandy shores and islands from South Carolina to Florida and along the Gulf Coast to Mississippi. It has obovate myrtle-like leaves and small sessile acorns.—**Native oak,** in Australia, same as *Australian* ★*oak*.—**New Zealand oak.** (*b*) Same as ★*titoki*. (*c*) Same as ★*tarata*.—**Oak canker, leaf-miner, root-borer.** See ★*canker*, etc.—**Oakroot-gall,** a cynipid gall which occurs on the roots of various species of European oaks, caused by *Andricus trilineatus*.—**Oak-seedling disease.** See ★*disease*. **Oil of oak,** punishment with an oaken stick. [Colloq.]—**Red rot of oak.** See ★*rot*.—**Rock chestnut-oak,** the chestnut-oak.—**Rock-oak.** (*a*) The chestnut-oak, *Quercus Prinus*. (*b*) The mountain white oak, *Q. Douglasii*.—**Rocky Mountain oak,** *Quercus undulata*, the widely diffused scrub-oak of the Rocky Mountain region, especially the slopes and foot-hills, covering vast areas and often forming thickets. It is a low tree, rarely 30 feet high, of the white oak group and serves chiefly for fuel and shelter. Also called *shin-oak*.—**Running white oak, scrub chestnut-oak,** the yellow or chinkapin oak, *Quercus prinoides*.—**Scrub silky oak,** a large tree of the family *Icacinaceæ*, *Chariessa Moorei*, a native of eastern Australia and yielding a close-grained, prettily figured, durable white wood, suitable for making furniture. Also called *maple*.—**Shin-oak.** (*a*) Same as *Rocky Mountain* ★*oak*. (*b*) Same as *Gambel's* ★*oak*. (*c*) The California white oak, *Quercus lobata*.—**Silky oak.** (*b*) Same as *silvery* ★*oak*. See also *Stenocarpus*.—**Silver oak,** *Fremontodendron Californicum*, better known as *California slippery-elm* (which see, under *slippery-elm*).—**Silvery oak,** *Cybele saligna*, an Australian tree which yields a beautifully figured hard red-brown wood, used for making furniture, veneers, and picture-frames. Called also *silky oak*. See *Stenocarpus*.—**Spotted oak.** (*a*) The dyers oak or quercitron, *Quercus velutina*. (*b*) Same as *Texan* ★*oak*. (*c*) The water-oak, *Q. nigra*.—**Swamp chestnut-oak.** Same as *basket-oak* (which see, under *oak*).—**Texan oak, Texan red oak,** *Quercus Texana*, a large tree of the black oak group found throughout most of the Mississippi valley and southern United States. The wood makes valuable lumber.—**Valley-oak,** the California white oak, *Quercus lobata*.—**Water-oak.** (*a*) See *water-oak*. (*b*) The laurel-oak, *Quercus laurifolia*.—**Water white oak,** the swamp white oak, *Quercus lyrata*.—**Western oak, western white oak,** *Quercus Garrayana*. See *white oak*, under *oak*.—**White-leaved oak,** *Quercus hypoleuca*, which has the under surface of the lanceolate leaves covered with a hoary tomentum. It is a small and somewhat rare tree of the southwestern United States and northeastern Mexico.—**White oak.** (*b*) See *Gambel's* ★*oak*. (*c*) See *Durand's* ★*oak*. (*d*) In Australia, a small malvaceous tree, *Lagunaria Patersoni*. See *whitewood*.—**White rot of oak.** See ★*rot*.—**Wild oak,** in the Bahamas, a tall shrub of the spurge family, *Lasiocroton macrophyllus*, with leaves which resemble certain species of oaks.

oak-apple, *n.* **2.** In Australia, a cone of any one of several species of *Casuarina*, or she-oak, especially *C. stricta*. The young cones and foliage have an acid taste when chewed, and afford great relief in cases of thirst. See *she-oak* and *Casuarina*.—**Fibrous oak-apple,** an American oak-gall made by the cynipid *Amphibolips coccineæ*. It is a large spherical leaf-gall with a small hollow kernel in the center in which the insect develops. From the central kernel there radiate many fibers.—**Large empty oak-apple,** a large round American cynipid gall, an inch or more in diameter, found commonly on oak-leaves and produced by *Holcaspis inanis*.—**Smaller empty oak-apple,** an American cynipid gall found on the post-oak, measuring three fourths of an inch or less in diameter, and produced by *Holcaspis centricola*.—**Spongy oak-apple,** an American oak-gall made by the cynipid *Amphibolips spongifica*, occurring commonly on both the red and the black oak. It is a round gall in which the space between the kernel and the outer layer is closely filled with a spongy mass.

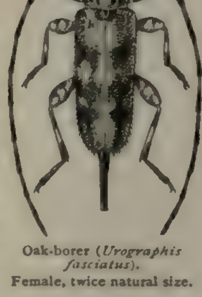


Fibrous oak-apple.

oak-ball (ōk′bâl), *n.* Same as *nutgall*: used especially of those borne by the California white oak, *Quercus lobata*.

oak-blight (ōk′blīt), *n.* An aphid of the genus *Schizoneura* (*S. querci*), which affects the branches of oak. Also called *woolly aphis of the oak*.

oak-borer (ōk′bōr″ėr), *n.* **1.** The larva of any one of several cossid moths, as *Prionoxystus robiniæ*, *P. macmurtrei*, and *Cossula magnifica*.—**2.** The larva of any one of several buprestid beetles, as *Chrysobothris femorata*.—**3.** The larva of any one of several cerambycid beetles, as *Urographis fasciatus*, *Liopus querci*, and *Xylotrechus colonus*.—**4.** Any one of several species of scolytid beetles, as *Xyleborus celsus* and *Pityophthorus querciperda*.—**5.** The brenthid beetle *Eupsalis minuta*, the curculionid *Magdalis olyra*, and others.



Oak-borer (*Urographis fasciatus*).
Female, twice natural size.

oak-button (ōk′but″n), *n.* An oak-gall. See *gall*^{3}, 1.

oak-caterpillar (ōk′kat″ėr-pil-ạ̈r), *n.* A caterpillar which infests the oak.—**Orange-striped oak-caterpillar,** the larva of an American ceratocampid moth, *Anisota senatoria*.

oak-fly (ōk′flī), *n.* An anglers' name for an undetermined insect and for the artificial fly supposed to resemble it; probably the common European cockchafer, *Melolontha vulgaris*.

oak-gall, *n.*—**Giant oak-gall,** a cynipid gall produced on the twigs and branches of the California white oak by *Andricus californicus*. It is a polythalamous gall and reaches a circumference of 10 or 12 inches.

oaklet (ōk′let), *n.* [*oak* + *-let*.] A small oak-tree. *Tyndall*, Fragments of Sci., II. 24.

oak-manna (ōk′man″ạ̈), *n.* A sweet substance which in warm weather exudes from the upper surface of the leaves of an oak, a variety of *Quercus Robur*, found in Kurdistan.

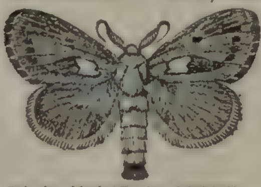
oak-moth (ōk′môth), *n.* The European tortricid moth *Tortrix viridana*, whose larvæ roll the leaves of oak. [Eng.]—**Japanese oak-moth,** a large saturniid moth, *Antheræa yama-mai*, whose larva feeds on oak. See *yama-mai*.—**North China oak-moth,** a large saturniid moth, *Antheræa pernyi*, found in north China. Its larvæ feed on oak-leaves, and their silk is used in the manufacture of fabrics.

oak-pruner (ōk′prö″nėr), *n.* An American cerambycid beetle, *Elaphidion parallelum* or *E. villosum*. Its larvæ bore into twigs of oak and, when approaching full growth, girdle them from within so that they are broken off by the wind. See cut at *Elaphidion*.

oak-scale (ōk′skāl), *n.* Any species of the coccid genus *Kermes*, all of which live on oak. See *kermes*, 2.

oak-silkworm (ōk′silk″wėrm), *n.* Same as *yama-mai* (which see).

oak-slug (ōk′slug), *n.* The larva of an American cochlidiid moth, *Euclea delphinii*. It is spiny, slug-like, and feeds on oak-leaves.



Oak-slug Moth (*Euclea delphinii*).
One and one half times natural size.

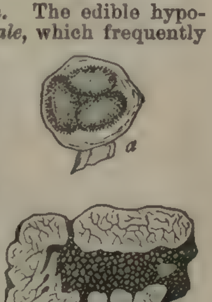
oak-spangle, *n.* **2.** A small cynipid gall, found on the leaves of several species of European oaks, caused by *Neuroterus lenticularis*.

oak-truffle (ōk′truf″l), *n.* The edible hypogean fungus *Tuber brumale*, which frequently is found among the roots of oaks.

oakum, *n.*—**Teased oakum,** oakum that has been picked apart very fine for use in calking.

oakum-boy (ō′kum-boi), *n.* An apprentice to a calker.

oak-weevil (ōk′wē″vl), *n.* A curculionid beetle *Eupsalis minuta*, whose larva bores a cylindrical burrow in the solid wood of white oak.



Oak-truffle (*Tuber brumale*). *a*, cross-section of plant, two thirds natural size; *b*, ascus with three spores, enlarged.

oak-worm (ōk′wėrm), *n.* Any lepidopterous larva which feeds on oak-leaves. More than 100 different species are known to have this habit in the United States, and more than 250 in Europe.—**Orange-striped oak-worm.** Same as *orange-striped* ★*oak-caterpillar*.—**Rosy-striped oak-worm,** the larva of the American ceratocampid moth, *Anisota virginiensis*.—**Spiny oak-worm,** the larva of *Anisota stigma*.

Oamaru (ō-ä-mä-rö′), *n.* [The name of a town on the east coast of South Island, New Zealand.] In *geol.*, a division of the Eocene Tertiary rocks in New Zealand.—**Oamaru stone,** a white granular limestone, extensively quarried as a building-stone at Oamaru, on the east coast of the South Island of New Zealand.

oangium (ō-an′ji-um), *n.*; pl. *oangia* (-ạ̈). In *bot.*, a multicellular organ which produces eggs: same as *archegonium.*

oar^1, *n.*—**Rigged oar,** an oar which ships into a thole-pin, or a becket, or rowlock, at the stern of a boat, and is used both for sculling and for steering.

oarage (ōr′ạj), *n.* [*oar*^{1} + *-age.*] **1.** The use of oars in rowing; rowing.—**2.** Apparatus of the nature of oars, or resembling oars in action. [Rare.]

> He plies along the Empyrean vast
> On th' *oarage* of his wings.
> *R. C. Singleton*, tr. of Virgil, I. 240. *N. E. D.*

oar-feather (ōr′feᴛʜ′ėr), *n.* A rendering of *remex*, the scientific name for a primary or flight-feather.

oar-foot (ōr′fu̇t), *n.* A crustacean of the family *Hippidæ.*

oariopathy (ọ-ā-ri-op′ạ-thi), *n.* [Gr. ᾠάριον, used for NL. *ovarium*, ovary, + πάθος, disease.] Disease of the ovary.

oariotomy (ō-ā-ri-ot′ọ-mi), *n.* [Gr. ᾠάριον, used for NL. *ovarium*, ovary, + -τομια, < ταμεῖν, cut.] Same as *ovariotomy.*

oar-lop (ōr′lop), *n.* A fanciers' name for a breed of rabbits in which the ears stand out at right angles to the head, suggesting a pair of oars.

oar-peg (ōr′peg), *n.* Same as *thole*^{2}, 1.

oarweed, *n.* See *oreweed.*

oary, *a.* **2.** Having oars; equipped with oars. [Rare.]

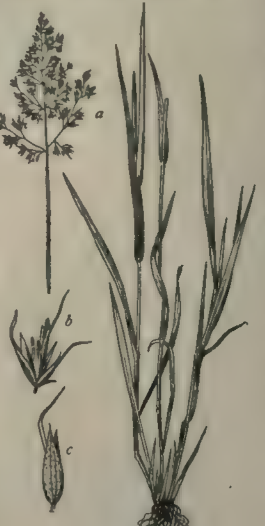
> Haste! Seek the mail-arm'd multitude, by force
> Detain them of thy soothing speech, ere yet
> All launch their *oary* barks into the flood.
> *Cowper*, tr. of Iliad, ii. 193.

oasitic (ō-ạ̈-sit′ik), *a.* [*oasis* + *-it-ic.*] Of or pertaining to, or resembling, an oasis. *N. E. D.*

oat, *n.*—**Animated oat,** in England, the wild oat, *Avena fatua*, so called from the coiling and uncoiling of the awns according as they are dry or wet. The awns are used in making hygrometers and the whole spikelet, with awns and hairy seed, serves as a fly in rustic fishing, whence also the name *fly-oat.* These names are shared by *A. sterilis*, for which see *oat*, 1 (*b*).—**Australian oats.** Same as *rescue-grass.*—**Canadian oats.** Same as *wild rice.*—**Golden oat.** Same as *yellow* ★*oat-grass.*—**Indian oats.** Same as *Indian rice* (*a*) (which see, under *rice*^{1}).—**Oat-field procedure.** See ★*procedure.*—**Rust-proof oats,** a variety of oats particularly resistant to the attack of the fungus *Puccinia coronata*, the oat-rust.—**Sand-oat,** the wild oat, *Avena fatua.*—**Sea-oats.** See *spike-grass* (*c*).—**To feel one's oats,** to be frisky, like a horse that has been well fed; hence, to be exhilarated or expansive. [Slang.]—**Turf-oats,** a variety of the common oat more hardy than usual and stooling very freely: highly esteemed for winter grazing in the southern United States.—**Wild oat.** (*d*) Most properly, *Avena fatua.* In the United States sometimes also the wild rice, *Zizania*; the reed bent-grass, *Calamagrostis cinnoides*; the porcupine-grass, *Stipa spartea*; the feather bunch-grass, *S. viridula*; and the broad-leafed spike-grass, *Uniola latifolia.* In Australia, an indigenous grass, *Bromus arenarius*, growing near the sea-coast, from which good hay can be made.

oat (ōt), *v. t.* [*oat*, *n.*] To feed with oats; feed oats to. *N. E. D.*

oat-grass, *n.*—**American oat-grass,** *Avena Hookeri*, a species resembling the European *A. pratensis*, found on the eastern slopes of the Rocky Mountains. It is useful for grazing where abundant and may deserve cultivation.—**California oat-grass,** *Danthonia Californica*, the largest native *Danthonia* (three feet high), in Wyoming and Montana forming a considerable part of the meadow vegetation at altitudes of from 5,500 to 8,000 feet.—**Downy oat-grass,** *Avena pubescens*, a European species valuable for mowing and pasturage on sandy loams. It is occasionally found in the grain region of the Pacific slope in America.—**Golden oat-grass.** Same as *yellow* ★*oat-grass.*—**Parry's oat-grass,** *Danthonia Parryi.* It resembles the California oat-grass and replaces it farther southward.—**Rocky Mountain oat-grass,** *Danthonia intermedia*, a species occurring with the California oat-grass, but ascending to higher altitudes.—**Tall oat-grass.** (*a*) See *oat-grass*, 2. (*b*) In New South Wales, *Themeda gigantea*, a grass generally growing in tussocks, sending its roots deep and thus able to withstand drought. It yields a large amount of forage in its basal leaves, is suitable for ensiling if cut early, and has the advantage of seeding freely.—**Tennessee oat-grass,** a slender tufted perennial, *Danthonia compressa*, common in hilly country in North Carolina and Tennessee and farther north, forming the bulk of the forage of "balds" or parks.—**Wild oat-grass.** (*a*) See *oat-grass*, 3. The common wild oat-grass, *Danthonia spicata*, ranges from Canada to the Gulf of Mexico. It is a light-colored tufted perennial of thin soils, without marked agricultural value. Also called *white-top* and *old-fog.* (*b*) The wild oat, *Avena fatua.* (*c*) The *Indian grass, Sorghastrum avenaceum.* See *Indian* ★*grass* (*a*). (*d*) Same as *feather* ★*bunch-grass.*—**Yellow oat-grass,** a slender loosely tufted perennial, *Trisetum flavescens*, a native of Europe, northern Africa, and western Asia. In Europe it is highly esteemed as a fodder plant, being valuable for temporary, and still more for permanent, pastures and yielding a good return of hay. It is not well known in the United States.



Yellow Oat-grass
(*Trisetum flavescens*).

a, plant and inflorescence, one fourth natural size; *b*, spikelet, enlarged; *c*, flowering glume, enlarged.

oath, *n.*—**Gospel oath,** an oath, such as that required of witnesses, sworn on the Gospels; a solemn oath.—**Hippocratic oath,** an oath, said to have originated with Hippocrates (460–377 B.C.), to discharge worthily the duties of their calling, taken, in modified form, by medical students upon receiving their medical degree.—**Oath decisory,** or **decision oath,** in *civil law*, an oath taken by one of the parties to an action when the other, conceiving that he had not sufficient proof of the facts upon which his claim was founded, offered to abide by the oath of his adversary as to the matter at issue. The adversary must then either take the oath or refer it back to the party offering it. In case of his refusal to do either, the issue was determined against him.—**Oath ex officio,** in *Eng. law*, an oath by which a member of the clergy accused of crime was formerly allowed to establish his innocence. The term was also applied to the oath of those who were allowed to swear to their belief in his innocence. See *compurgator.*—**Oath in litem,** an oath taken by a plaintiff as to a thing in dispute where other proof is not found.—**Oath of Amnesty,** an oath of loyalty to the Constitution of the United States prescribed by Lincoln's proclamation of amnesty and reconstruction, December 8, 1863. It also pledged support to all acts of Congress passed, and all proclamations made during the Civil War in reference to slaves. Among those exempt from its benefits were civil and diplomatic officers of the Confederacy, the superior officers (above the rank of colonel in the army and above that of lieutenant in the navy) of the Confederate army and navy, and those who left the United States Congress, United States judgeships, or the United States army or navy to support the Confederacy.—**Oath of calumny,** an oath required from a plaintiff to the effect that he had a good and meritorious cause of action and that he was not actuated by unworthy and illegal motives in bringing his suit.—**Oath purgatory,** an oath by which a man purges himself of an offense, and which is sufficient to remove any presumptions of guilt that may exist—for example, for disobedience to a subpœna to serve as a juror.—**Parliamentary oath,** in *Eng. law*, an oath taken by the members of Parliament upon assuming their official duties.—**Suppletory oath.** See *suppletory.*—**Test-oath,** an oath of loyalty to the government; specifically, in the United States, an oath prescribed after the Civil War to candidates for certain offices, in which, in addition to the pledge of loyalty, the affiant declared that he had not participated in or aided or sympathized with the war against the Union. The test oaths of the various States were substantially the same. The Supreme Court pronounced them unconstitutional because *ex post facto.* See also *iron-clad oath* (under *oath*) and ★*Oath of Amnesty.*

oath (ōth or ōᴛʜ), *v.* [ME. *othen, athen*; < *oath*, *n.*] **I.** *trans.* **1**†. To make to take an oath; put to the oath.—**2.** To use as an oath; swear by.—**3.** To call, speak to, or curse with an oath.

II. *intrans.* To swear; use oaths.—**To oath it,** to use oaths.

oat-land (ōt′land), *n.* Land sowed with and bearing a crop of oats.

oat-rust (ōt′rust), *n.* See ★*rust*^{1}.

oat-shell (ōt′shel), *n.* The shell of a small marine mollusk, one of the various species of *Columbella*, used for necklaces. *E. E. Morris*, Austral English.

oat-smut (ōt′smut), *n.* A disease of oats due to the fungus *Ustilago avenæ.*

oat-stone (ōt′stōn), *n.* In *pathol.*, a concretion composed of indigestible fragments of oatmeal; an avenolith.

oaty (ō′ti), *a.* [*oat* + *-y*^{1}.] Of the nature of or full of oats. *N. E. D.* [Rare.]

ob. An abbreviation (*b*) of the Latin *obiter*, incidentally, by the way; (*c*) of *oboe.*

O. B. An abbreviation of NL. *Oratoriæ Baccalaureus*, Bachelor of Oratory.

obambulatory (ob-am′bụ̄-lạ̄-tọ̄-ri), *a.* [*obambulat(e)* + *-ory.*] Ambulatory; continually walking about; itinerant: as, *obambulatory* merchants. [Rare.]

obclude (ob-klöd′), *v. t.*; pret. and pp. *obcluded*, ppr. *obcluding.* [See *occlude.*] To shut off or hide from view. *Proc. Zool. Soc. London*, 1894, p. 434. [Rare.]

obcuneate (ob-kū′nẹ̄-āt), *a.* [*ob-* + *cuneate.*] Inversely cuneate; wedge-shaped, with the thin end at the base.

obe (ōb), *n.* [Gr. ὠβά.] In ancient Laconia, a village; a district; a subdivision of an original phyle or clan.

obedience, *n.*—**Passive obedience.** (*b*) In *theol.*, a term used to comprehend Christ's sufferings of every kind, as distinguished from his active obedience, or perfect performance of the requirements of the moral law. The distinction is considered artificial by most theologians.

obediency (ọ-bē′di-ẹn-si), *n.* Obedience; submission to rule. [Rare.]

> O! what a rent thou makest in my heart!
> The ingrain'd instinct of old reverence,
> The holy habit of *obediency*,
> Must I pluck live asunder from thy name?
> *Coleridge*, tr. of Schiller, Piccolomini, v. 2.

obedientiary (ọ-bē-di-en′shi-ạ̄-ri), *a.* and *n.* [ML. *obedientiarius*, < L. *obedientia*, obedience.] **I.** *a.* Owning allegiance and obedience to one of higher rank.

II. *n.* **1**†. Same as *obedienciary.*—**2.** In a monastery or religious house, the holder of any office under the abbot or superior; also, one charged with any special duty or 'obedience.' *N. E. D.*

obedient-plant (ō-bē′di-ẹnt-plant), *n.* The false dragon's-head, *Physostegia Virginiana.*

Obeliscaria (ob″e-lis-kā′ri-ạ̈), *n.* [NL. (Cassini, 1825), < Gr. ὀβελίσκος, obelisk; doubtless in allusion to the elongated receptacle.] An old generic name, still sometimes used by horticulturists, for one or more of the species of ★*Ratibida* (which see).

obeliskoid (ob-e-lis′koid), *a.* [*obelisk* + *-oid.*] Having the shape of an obelisk; like an obelisk.

> The *obeliskoid* form may itself be regarded as another trace of Egyptian influence on the externals of Mycenean cult. *A. J. Evans*, in Jour. Hellenic Studies, XXI. 173.

obelism (ob′e-lizm), *n.* [*obelus* + *-ism.*] The act of obelizing: the noting of a word as spurious or obsolete by marking it with an obelus.

oberland (G. ō′ber-länt), *n.* [G., < *ober*, upper, + *land*, land.] The high land; highlands: as [*cap.*], the Bernese *Oberland.*

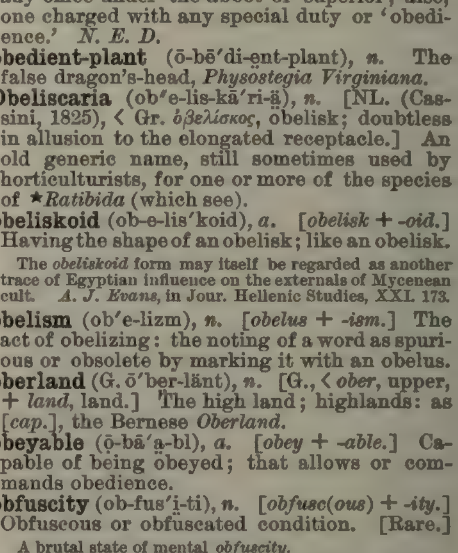
obeyable (ọ-bā′ạ̈-bl), *a.* [*obey* + *-able.*] Capable of being obeyed; that allows or commands obedience.

obfuscity (ob-fus′ị̈-ti), *n.* [*obfusc(ous)* + *-ity.*] Obfuscous or obfuscated condition. [Rare.]

> A brutal state of mental *obfuscity.*
> *J. Wilson*, Noctes Ambrosianæ, IV. 177. *N. E. D.*

obi (ō′bi), *v. t.* [*obi*^{1}, *n.*] To bewitch by the practice of obi; charm for the cure of disease, for revenge, etc.

obispo, *n.* **2.** In Bolivia, Peru, and other parts of Spanish America, the four-horned sheep.



Obispo.

obit, *n.* **4**†. The sinking of a star or planet below the horizon; setting.

obital (ō′bit-ạ̈l), *a.* and *n.* [*obit* + *-al*^{1}.] **I.** *a.* Serving to register or commemorate a death or a memorial service: as, an *obital* book, the *obital* day.

II. *n.* A register of obital days or of deaths; an obituary: as, an English *obital.*

obitual, *a.* **II.** *n.* A register of deaths or of obit days; an obital.

obituarian (ō″bit-ụ̄-ā′ri-ạ̈n), *n.* [ML. *obituarius*, obituary, + *-an.*] An obituarist. [Rare.]

> There is one characteristic story to be told about Robert Louis Stevenson which his *obituarians* have missed, probably because they knew nothing about it. It relates to his first visit to New York. *English Newspaper.*

obituarize (ọ-biṭ'ụ-ā̤-rīz), *v. i.*; pret. and pp. *obituarized*, ppr. *obituarizing*. [*obituar(y)* + *-ize*.] To write an obituary. [Rare.] *N. E. D.*

obj. An abbreviation (*b*) of *objection*; (*c*) of *objectively*.

objectative (ọb-jek'tā-tiv), *a.* [NL. **objectativus*, < L. *objectare*, object.] Given to objecting; fond of making objections. *N. E. D.*

object-ball (ob'jekt-bâl), *n.* In *billiards*, any ball except the striker's: at caroms, distinguished as *first* or *second*.

object-clause (ob'jekt-klâz″), *n.* In *gram.*, a substantive or a substantive clause which stands in the relation of an object of a verb.

objectionable, *a.* **II.** *n.* An objectionable person. [Rare.]

> So be, the whiskified *Objectionable*,
> Unclean, abominable, out-at-heels,
> Became the tutelary Deity
> Of all the Gauri valley villages.
>
> *R. Kipling*, Giffen's Debt, l. 63.

objectional (ọb-jek'shọn-al), *a.* [*objection* + *-al*¹.] **1.** Of the nature of or involving objection. *N. E. D.*—**2.** That can be objected to; objectionable.

objectionist (ọb-jek'shọn-ist), *n.* One who objects; one who raises objections.

objective. **I.** *a.* **5.** In *gram.*: (*b*) Noting the case expressing the subject of the intransitive verb. (*c*) In *Eskimo gram.*, noting the thing possessed. Also ★*intransitive* (which see).—**Objective certainty.** See ★*certainty*.—**Objective spectroscope.** See ★*spectroscope*.

II. *n.*—**Achromatic objective,** a combination of lenses used in optical instruments, as the microscope or telescope, in which chromatic aberration is corrected.—**Protar objectives.** See ★*protar*.

objectivist (ọb-jek'ti-vist), *n.* [*objective* + *-ist*.] One who believes in objectivism.

objectivity, *n.* **2.** In *psychol.*, detachment from oneself; independent existence. See the extract.

> Among the other mental properties of sounds, the *objectivity* and the emotional tinge may be mentioned. The *objectivity* of a tone is a property expressing the degree to which we consider the tone not to belong to ourselves. A tone produced in imagination, as in mentally singing a song, has almost no *objectivity*. . . . Tones actually sung by ourselves are more objective; those sung by others are highly objective, though even here the degree of *objectivity* increases with the strangeness of the singer, the distance, etc.
>
> *Scripture*, Exper. Phonetics, pp. 111, 112.

objectization (ọb-jek-ti-zā'shọn), *n.* [*objectize* + *-ation*.] The action of objectizing, objectifying, or making objective: as, the externalization or *objectization* of one's own feelings.

objectlessly (ob'jekt-les-li), *adv.* In a way that is purposeless.

objectlessness (ob'jekt-les-nes), *n.* The condition of being without object or purpose. *N. E. D.*

object-memory (ob'jekt-mem″ọ̄-ri), *n.* In *psychol.*, the memory of things or objects aroused by the presentation of a verbal stimulus or the occurrence of a verbal idea.

> The learner should make an effort to actively produce the complete idea with its *object-memories* and internal word and not rely on the so-called 'spontaneous' rise of the idea from memory.
>
> *Scripture*, Exper. Phonetics, p. 150.

object-point (ob'jekt-point), *n.* In an apparatus for the drawing of objects on a greatly enlarged scale from microscopic originals, that point in the pantographic system of links at which the microscopic objective is located over the slide or object being observed and reproduced. As the object-point is moved over the original, a tracing-point at the long end of the leverage traces the outline on a scale which gives the desired multiplication of size. *Jour. Roy. Micros. Soc.*, Aug., 1905, p. 509.

object-space (ob'jekt-spās), *n.* In *optics*, a space or region, pertaining to any optical system, every point of which has an image in a corresponding space called the *image-space*.

object-speculum (ob'jekt-spek″ụ̄-lum), *n.* The mirror in a reflecting telescope which receives and reflects the rays proceeding from the object. *N. E. D.*

object-table (ob'jekt-tā″bl), *n.* The stage of a microscope.

> When the record may be cut out, a micrometer *object table* under a microscope may be used.
>
> *Scripture*, Exper. Phonetics, p. 74.

objurgative (ọb-jėr'gạ̄-tiv), *a.* [*objurgate* + *-ive*.] Same as *objurgatory*.

objurgator (ọb-jėr'gạ̄-tọr), *n.* One who objurgates or chides.

objurgatorily (ọb-jėr'gạ̄-tọ̄-ri-li), *adv.* In an objurgatory manner.

objurgatrix (ob-jėr-gā'triks), *n.*; pl. *objurgatrices* (-tri-sēz). [ML., fem. of L. *objurgator*, a chider, scolder. See ★*objurgator*.] In *law*, a common scold.

obl. An abbreviation (*a*) of *oblique*; (*b*) of *oblong*.

oblately (ob-lāt'li), *adv.* In *geom.*, in an oblate manner.

oblational (ob-lā'shọn-ạl), *a.* [*oblation* + *-al*¹.] Relating to or of the nature of an oblation.

oblationary (ob-lā'shọn-ā̤-ri), *a.* and *n.* [*oblation* + *-ary*.] **I.** *a.* Of or pertaining to an oblation; oblational.

II. *n.* In the celebration of the eucharist, the official who accepts the oblations offered by the faithful. He also had a part in the service in the early church, bringing the oblations of bread and wine from the patriarchium to the pontiff celebrating the mass.

oblatory (ob-lā'tọ̄-ri), *a.* [*oblat(ion)* + *-ory*.] Relating to oblations or offerings.

> The Iesuiticall Priests . . . concluded their Masses and *oblatory* Sacrifices, with their prayers for the good successe of their expected hopes.
>
> *Speed*, Hist. Great Britaine, x. 1.

oblatum (ob-lā'tum), *n.*; pl. *oblata* (-tạ̈). [NL. See *oblate*.] An oblate spheroid or ellipsoid.

obligancy (ob'li-gạ̈n-si), *n.* [*obligan(t)* + *-cy*.] The quality of enforcing or obliging, or of being obligatory.

obligate, *a.* **II.** *n.* An obligate parasite. See quotation under *obligate*, *a.*

> It is probable that the intestinal bacteria are not essential to healthy life. The chief value of these *obligates* lies probably in their potential capacity to check the growth and development of harmful bacteria.
>
> *Med. Record*, Aug. 3, 1907, p. 172.

obligation, *n.*—**Imperfect obligations,** obligations which are enjoined by moral law, but which are unenforceable in any legal tribunal.—**Obligation of contract.** See ★*contract*.

obligationary (ob-li-gā'shọn-ạ̄-ri), *a.* [*obligation* + *-ary*.] Pertaining to or containing or expressing an obligation.

obligative, *a.* **2.** In *bot.*, same as *obligate*: applied to parasites and saprophytes. See *obligate* and *obligate parasite*, under *parasite*. *C. MacMillan*, in Minn. Bot. Stud., Bulletin IX. 930.

obligator (ob'li-gạ̄-tọr), *n.* **1.** In *law*, one who binds himself or gives his bond to another. —**2.** One who obliges another.

obligatory, *a.*—**Bill obligatory.** See ★*bill3*.

obliquangular (ob-lēk-ang'gụ̄-lär), *a.* Oblique-angled. *N. E. D.* [Rare.]

oblique. **I.** *a.*—**Oblique strophoid.** See ★*strophoid*.

II. *n.* **2.** In *geom.*, except the perpendicular, any sect from a point to a straight or a plane.

obliquitous (ọb-lik'wị̈-tus), *a.* [*obliquit(y)* + *-ous*.] Exhibiting moral or intellectual obliquity.

obliviscence (ob-li-vis'ẹ̈ns), *n.* [NL. **obliviscentia*, < *obliviscens*, forgetting, ppr. of *oblivisci*, forget: see *oblivion*.] Forgetfulness.

obliviscible (ob-li-vis'i-bl), *a.* [Cf. ★*obliviscence* and *-able*, *-ible*.] Easily forgotten; forgettable. [Rare.]

> That does not exactly strike us as a good reason for including in the anthology the sonnets he wrote about those poets, so *obliviscible*, excepting by himself.
>
> *N. Y. Times*, Sat. Rev., Aug. 12, 1905, p. 526.

Oblong number. See ★*number*.

oblongated (ob'lông-gạ̄-ted), *a.* [*oblong* + *-ate*¹ + *-ed*².] Having greater length than breadth; prolonged.

oblong-elliptical (ob″lông-ẹ̄-lip'ti-kạ̈l), *a.* Having the shape of a long ellipse: used by Ridgway to denote the shape of certain eggs of birds.

oblongish (ob'lông-ish), *a.* [*oblong* + *-ish*¹.] Somewhat longer than wide.

oblongitude (ob-lon'ji-tūd), *n.* [*oblong* + *-itude*, as in *longitude*.] Oblong form. *N. E. D.*

oblongitudinal (ob-lon-ji-tū'di-nạ̈l), *a.* Oblong. *N. E. D.* [Rare.]

oblongum (ob-long'gum), *n.*; pl. *oblonga* (-gạ̈). [See *oblong*.] A prolate ellipsoid.

obloquial (ob-lō'kwi-ạl), *a.* [L. *obloquium*, obloquy, + *-al*¹.] Relating to, or of the nature of, obloquy.

obmutescent (ob-mụ̄-tes'ẹ̈nt), *a.* [L. *obmutescens*, ppr. of *obmutescere*, become mute, < *ob-* + *mutescere*, grow mute, < *mutus*, mute.] Growing mute; wilfully mute; dumb.

obnebulate (ob-neb'ụ̄-lāt), *v. t.*; pret. and pp. *obnebulated*, ppr. *obnebulating*. [*ob-* + L. *nebula*, cloud, + *-ate*².] Same as *obnubilate*.

obnounce (ob-nouns'), *v. i.*; pret. and pp. *obnounced*, ppr. *obnouncing*. [L. *obnuntiare*, < *ob-* + *nuntiare*, tell, announce. See *announce*.] To announce an unfavorable result of the auspices taken with reference to some proposed public action: a sort of veto: said of a Roman magistrate.

> The people . . . offered him, his colleague in vain *obnouncing*, the provinces of the Cisalpine and Illyricum for five years, with an army of three legions.
>
> *Merivale*, Roman Republic, ix.

obnoxiety (ob-nok-sī'e-ti), *n.* [L. *obnoxius*, obnoxious, + *-ety*.] Obnoxiousness. [Rare.]

obnunciate (ob-nun'ṣi-āt), *v. t.*; pret. and pp. *obnunciated*, ppr. *obnunciating*. [L. *obnuntiare* (pp. *-atus*). See ★*obnounce*.] Same as ★*obnounce*.

obnunciation (ob-nun-ṣi-ā'shọ̈n), *n.* [L. *obnuntiatio(n-)*, < *obnuntiare*. See ★*obnounce*.] The announcement of an unfavorable omen by a Roman magistrate; hence the dissolution of the assembly and the rendering void of some public transaction. *Blount*, Glossographia.

obolos (ob'ọ̄-los), *n.* [Gr. ὀβολός. See *obol*.] **1.** Same as *obolus* and *obol*.—**2.** In modern Greek currency, a piece of 5 lepta.

obomegoid (ob-ọ̄-mē'goid), *a.* [*ob-* + *omega* + *-oid*.] Shaped like the Greek capital omega (Ω) reversed (℧). *N. E. D.*

oboz (ọ̄-bōz'), *n.* [Russ. *obózŭ*, *obvozŭ*, a train of loaded wagons or sledges, = OBulg. *obozŭ* (> Rum. *oboz*), baggage, = Pol. *oboz*, an encampment, = OPruss. *abasus*, abbas, wagon; < OBulg. *vezaⁿ*, *vesti*, etc., = L. *vehere*, etc., carry. See *vehicle*, *wagon*, and *weigh*¹.] A wagon-train composed of a considerable number of wagons, each horse being fastened to the wagon in front so as to form a continuous line.

obplacenta (ob-plạ̄-sen'tạ̈), *n.* [*ob-* + *placenta*.] The part of the uterine mucosa which is opposite the mesometrium. It is typically present in the rabbit.

> The contemplation of the described phenomena of the rabbit's *obplacenta*. *Science*, March 29, 1901, p. 494.

obpyramidal (ob-pi-ram'i-dạ̈l), *a.* [*ob-* + *pyramidal*.] Having the form of an inverted pyramid; inversely pyramidal.

obpyriform (ob-pir'i-fôrm), *a.* [*ob-* + L. *pyrus*, prop. *pirus*, pear, + *forma*, form.] Having the form of a pear with its smaller end upward.

obreguin (ob-rā-gēn'), *n.* [Mex. Sp. ?] A substance of fatty and resinous character found in Mexico as an exudation on the twigs of *Alcea rosea*. *Thorpe*, Dict. Applied Chem., III. 1.

obrok (ọ̄-brōk'), *n.* [Russ. *obrókŭ*, a poll-tax, quit-rent, tax, = Pol. *obrok*, provision, pension, etc., = OBulg. *obrokŭ*, a promise, a stipend.] A fine levied on a Russian peasant for absence from his village.

obs. An abbreviation (*b*) of *observation*; (*c*) of *observatory*.

obscurancy (ọb-skū'rạ̈n-si), *n.* [*obscuran(t)* + *-cy*.] The state or character of being obscurant; obscurantism. *N. E. D.* [Rare.]

obscurant, *n.* **II.** *a.* Obscuring or darkening; of the nature of, or characteristic of, an obscurant. [Rare.]

obscurism (ọb-skūr'izm), *n.* [*obscure* + *-ism*.] Same as *obscurantism*.

obsede (ob-sēd'), *v. t.*; pret. and pp. *obseded*, ppr. *obseding*. [F. *obséder*, based on L. *obsidere*, obsess. See *obsess*.] To assail or vex from without, as an evil spirit; obsess. *N. E. D.* [Rare.]

obsequence (ob'sẹ̄-kwẹns), *n.* [L. *obsequentia*, < L. *obsequens*, ppr.: see *obsequent*.] Compliance; obsequiousness. *N. E. D.* [Rare.]

obsequent, *a.* **2.** In *phys. geog.*, the opposite of consequent: said of streams which have grown by headward erosion so as to flow in a direction opposite to the dip of the underlying strata.

> The beheaded stream . . . holds its former course below the divide, but is weakened by the loss of its headwaters; the portion of the stream . . . from the divide on the hard bed to where the subsequent stream . . . intersected it, is reversed. For such reversed streams Davis has proposed the name *obsequent*.
>
> *I. C. Russell*, Rivers of North America, p. 191.

obsequian (ọb-sē'kwi-ạ̈n), *a.* [ML. *obsequium*, > MGr. ὀβσέκουιον, ὀψίκιον, retinue, suite, esp. of the emperor; lit., in L., following, obedience. See *obsequy*, *obsequious*.] Of or pertaining to the retinue (of the Byzantine emperor). See the extract.

> This generous enterprise was defeated by the cowardice or treachery of the troops who, in the new language of the empire, were styled of the *Obsequian* Theme. (Note. In the division of the Themes, or provinces described by Constantine Porphyrogenitus . . . the Obsequium, a Latin appellation of the army and palace, was the fourth in the public order.) *Gibbon*, Decline and Fall, VI. lii.

obsequity (o̤b-sē'kwi-ti), *n.* [*obsequi*(*ous*) + *-ty.*] Obsequiousness. *N. E. D.* [Rare.]

observ, *v.* A simplified spelling of *observe.*

observation, *n.*—**Batten observations.** See ★*batten*². —**Meridian observation.** Same as *meridian altitude of a star* (which see, under *altitude*).—**Pendulum observation.** See ★*pendulum.*—**Zone of observation.** See ★*zone.*

observatorial (ob-zėr-va-tō'ri-a̤l), *a.* [*observatory* + *-al*¹.] Of or characteristic of a scientific observer or of an observatory. *N. E. D.*

observatory, *n.*—**National observatory,** the astronomical observatory of a country, generally situated in the capital city. Washington contains the national observatory of the United States; Paris holds the same for France; Saint Petersburg for Russia; and Greenwich for England.—**Physical observatory,** an observatory designed for the observation of physical, meteorologic, magnetic, or other terrestrial phenomena, and, to some extent, of certain solar phenomena.

observer, *n.* **5.** In *exper. psychol.*, the general term for the subject of a psychological experiment: opposed to *experimenter*, the general term for the person who arranges the conditions of the experiment.

> Some experiments are best performed by oneself on oneself. Most, however, require two persons for their performance: the *observer*, O, who makes the introspection, and the experimenter, E, who handles the instruments and makes the records. *E. B. Titchener*, Exper. Psychol., I. i. xiii.

obsession, *n.* **3.** In *pathol.*, a constant brooding upon any subject, such as the thought of death, until the mind becomes dominated by that one idea.

obsessional (ob-sesh'o̤n-a̤l), *a.* [*obsession* + *-al*¹.] **1.** Of or pertaining to a siege; obsidional.—**2.** Pertaining to or of the nature of obsession.

obsolescently (ob-sọ-les'ẹnt-li), *adv.* In such a way as to be obsolescent, or gradually becoming obsolete.

obsolete, *a.* **3.** In *bot.*, noting an organ which is rudimentary or scarcely apparent.

> The sporophore is *obsolete* when the spore-bearing hyphæ are not sharply distinct from the mycelium. *Encyc. Brit.*, XXVIII. 556.

obstet. An abbreviation (*a*) of *obstetrical;* (*b*) of *obstetrics.*

Obstetric canal. See ★*canal*¹.

Obstetrical chair. See ★*chair.*

obstinacious (ob-sti-nā'shus), *a.* [*obstinate* + *-ious* (after *contumacious*, etc.).] Having an obstinate nature; obstinate. *N. E. D.* [Rare.]

> "Well, I guess, Squire, the old man has been again an *obstinacious* fool. Had I not been as everlasting *obstinacious* as a pine stump, I'd 'a followed your counselling." *Galt*, Lawrie Todd, iv. 6.

obstructant (o̤b-struk'ta̤nt), *n.* [*obstruct* + *-ant.*] That which obstructs.

> The ruptured walls of the interna curling up in the lumen act as an *obstructant* to the current. *Med. Record*, May 30, 1903, p. 884.

obstructivism (o̤b-struk'ti-vizm), *n.* [*obstructive* + *-ism.*] The practice of systematic obstruction.

obt., obdt. [*l. c.* or *cap.*] Abbreviations of *obedient.*

obtainal (o̤b-tā'na̤l), *n.* [*obtain* + *-al*¹.] Obtainment. *N. E. D.* [Rare.]

obtainance (o̤b-tā'na̤ns), *n.* [*obtain* + *-ance.*] Same as ★*obtainal.* [Rare.]

obtrigonal (ob-trig'ọ-na̤l), *a.* [*ob-* + *trigonal.*] Same as *obtriangular.*

obtrigonate (ob-trig'ọ-nāt), *a.* [*ob-* + *trigonate.*] Same as *obtriangular.*

obtunder (ob-tun'dėr), *n.* [*obtund* + *-er*¹.] **1.** Same as *obtundent.*—**2.** Same as *obturator:* an incorrect use.

obturator, *n.* (*d*) In *photog.*, the instantaneous shutter of a camera. (*e*) Anything used to close the orifice of a hollow instrument, such as a speculum or catheter, during its introduction.

> Each instrument has its *obturator*, which is to be used only for the purpose of rounding out the end of the speculum during introduction. *Buck*, Med. Handbook, I. 779.

Obturator fissure. Same as *ilio-ischiadic* ★*fissure.* —**Obturator index.** See ★*index.*—**Obturator notch.** See ★*notch.*

obtusifid (o̤b-tū'si-fid), *a.* [L. *obtusus*, obtuse, + *-fidus*, < *findere*, split.] Divided into obtuse parts.

obtusilinguine (o̤b-tū-si-ling'gwin), *a.* Of or pertaining to the *Obtusilingues.*

obtusipennate (o̤b-tū-si-pen'āt), *a.* [L. *obtusus*, obtuse, + *pennatus*, winged.] Having wings which are obtuse at the apex.

obtusirostrate (o̤b-tū-si-ros'trāt), *a.* [L. *obtusus*, obtuse, + *rostrum*, beak, + *-ate*¹.] **1.** Having an obtuse beak.—**2.** In *entom.*, having a blunt rostrum or proboscis.

O. Bulg. An abbreviation of *Old Bulgarian.*

obumbratory (ob-um'brạ-tọ-ri), *a.* [*obumbrate* + *-ory.*] Overshadowing, darkening, or shading. *N. E. D.*

obvelation (ob-vẹ-lā'sho̤n), *n.* [NL., **obvelatio*(*n-*), < LL. *obvelare*, cover over, < L. *ob-* + *velare*, cover, veil: see *veil, v.*] A concealing; concealment; opposed to *revelation.*

obverse, *n.* **3.** Specifically, in *logic*, the contranominal of the inverse of a proposition.

> If C is D, then A is B, (iii) is the converse of the typical Theorem (i). The contrapositive of the last Theorem, viz.: If A is not B, then C is not D, (iv) is termed the *obverse* of the typical Theorem (i). *Ass'n Improvement of Geom. Teaching*, Plane Geom., [p. 12.

obversion, *n.* **2.** In *logic:* (*b*) The taking of the contranominal of the inverse.

obvert, *v. t.* **2.** In *logic*, to form or take the obverse of (a proposition).

obvertend (ob-vėr'tend), *n.* [L. *obvertendus*, < *obvertere*, turn toward. See *obvert, v.*] In *logic*, the original proposition to be obverted.

obvolution (ob-vọ-lū'sho̤n), *n.* [LL. *obvolutio*(*n-*), < L. *obvolvere*, wrap around. See ★*obvolve.*] A folding around, as of a bandage round a limb; a twist; a fold. *N. E. D.*

obvolutive (ob-vọ-lū'tiv), *a.* [L. *obvolutus*, pp. of *obvolvere*, wrap around, + *-ive.*] Same as *obvolute. Thomas.*

obvolve (ob-volv'), *v. t.*; pret. and pp. *obvolved*, ppr. *obvolving.* [L. *obvolvere*, wrap around, cover all over, < *ob-* + *volvere*, wrap, roll: see *volute.*] **1.** To fold or roll around; cover up by wrapping around; disguise, as an odor.—**2**†. To cause to roll or revolve: as, to *obvolve* the eyeball.

obyism, *n.* Same as *obiism.*

oc. An abbreviation of *ocean.*

Ocapia, *n.* An amended form of *Okapia*, but untenable because antedated. See ★*Okapia.*

Occamistic (ok-a̤-mis'tik), *a.* Pertaining to or of the nature of Occamism.

occasionless (o̤-kā'zho̤n-les), *a.* Without occasion; without ground or reason.

occidentality (ok″si-den-tal'i̤-ti), *n.* [*occidental* + *-ity.*] **1.** The quality of being occidental; the state of being in the west. See *orientality.*—**2.** Westernism; a Western or American trait or characteristic.

> His *occidentalities* had for her the charm of novelty. They affected her taste . . . as something dubiously delightful. *W. S. Mayo*, Never Again, i.

occidentalization (ok-si-den″ta̤l-i-zā'sho̤n), *n.* [*occidentalize* + *-ation.*] The act of imbuing with Occidental or Western thought and peculiarities.

> The *Occidentalization* of Russia proceeded with giant strides in the reign of Catherine. The Imperial dilettante, as our author calls her, wrote comedies and essays. *Athenæum*, Jan. 6, 1906, p. 11.

Occipital eminence, a protuberance in the lateral ventricle of the brain which marks the situation of the occipital fissure.—**Occipital fissure.** Same as *parieto-occipital fissure.*—**Occipital index, operculum, plane.** See ★*index*, etc.—**Occipital segment.** (*b*) The posterior of three principal segments, or sections, into which the skull may be divided, the others being the *frontal* and *parietal segments.* It is composed of the basioccipital, exoccipitals, and infra-occipital.

occipito-anterior (ok-sip″i-tō-an-tē'ri-o̤r), *a.* Having the occiput anterior: noting a position of the fetus in which its occiput is directed toward the anterior abdominal wall of the mother.

occipitobasilar (ok-sip″i-tō-bas'i-lä̤r), *a.* Relating to both the occiput and the base of the skull.

occipitocervical (ok-sip″i-tō-sėr'vi-ka̤l), *a.* Relating to both the back of the head and the neck.

occipito-iliac (ok-sip″i-tō-il'i-ak), *a.* Having the occiput directed to the iliac region: noting a position of the fetus in which its occiput points toward the groin of the mother.

occipitonuchal (ok-sip″i-tọ-nu'ka̤l), *a.* Pertaining to the occiput and the nape; specifically, in *ichth.*, of or pertaining to bony plates on fishes which extend over the back of the head and down over the nape.

> *Occipito-nuchal* shield a little longer than broad, ending in two rounded processes. *Proc. Zool. Soc. London*, 1903, p. 26.

occipitoposterior (ok-sip″i-tō-pos-tē'ri-o̤r), *a.* Having the occiput directed backward: noting a position of the fetus in which its occiput points to the sacrum of the mother.

occipitorostral (ok-sip″i-tō-ros'tra̤l), *a.* Belonging to both occiput and rostrum.

occlusal (o-klö'sa̤l), *a.* [L. *occlusus*, pp. of *occludere*, close up, + *-al*¹.] Same as ★*morsal:* noting the biting or grinding surface of a tooth.

occlusion, *n.* **3.** In *dentistry*, the fitting into each other of the cusps of the opposing teeth in the upper and lower jaws.

> The age, sex, and health of the patient, the character of the *occlusion* or bite, and the force exerted in mastication. *Encyc. Brit.*, XXVII. 418.

Occlusion of gases. See *occlude*, 2.

occult, *v. t.*—**Occulting apparatus,** the apparatus used in lighthouses for rendering the beam of light intermittent, so that it may be possible to distinguish a particular lighthouse from others.

II. *intrans.* To undergo occultation; be hidden or concealed, as a star or the intermittent beam of light from a lighthouse.

> The light *occults* every ten seconds, seven seconds visibility and three seconds' obscuration, the occultations being actuated by a double valve arrangement. *Encyc. Brit.*, XXVI. 464.

occulter (o-kul'tėr), *n.* That which occults: specifically applied to the mechanism or device which, in lighthouses, periodically interrupts or occults the beam of light; also to the device used in heliographic signaling to interrupt or divert the beam of light reflected from the mirror of the heliostat, heliograph, or heliotrope.

> This light shows, instead of one prolonged flash at intervals of one minute, as would be produced by the apparatus in the absence of a gas *occulter*, a group of short flashes varying in number between six and seven. *Encyc. Brit.*, XXX. 256.

occultist, *n.* **II.** *a.* Of or pertaining to occultism; characteristic of, or characterized by, occultism.

> Cabalistic, *occultist*, Indian, and modern spiritualistic ideas and formulas. *Encyc. Brit.*, XXVI. 275.

occultistic (ok-ul-tis'tik), *a.* Pertaining to occultists or to occultism; occultist.

occupancy, *n.*—**Title by occupancy.** See ★*title.*

occupant, *n.*—**General occupant.** In *common law*, when the life tenant, who held an estate, for himself only and not for his heirs, pour auter vie, died, any person was entitled to enter into possession of the estate and to hold it during the life of the cestui que vie. The first person who so entered was called the *general occupant.*

Occupation disease, a disease arising from causes incident to the patient's occupation, as lead-poisoning among painters.

> The many causes of *occupation diseases*, so-called, in which we recognize the introduction into the body chiefly with the inspired air, but also by way of the digestive tract and possibly by way of other mucous surfaces and the skin, of injurious foreign particles, are at present only slightly understood and act not wholly, probably, by increasing susceptibility to bacterial and allied infections, but often through direct chemical and physical malinfluences. *S. Flexner*, in Science, Jan. 24, 1908, p. 128.

occupiable (ok'ụ̄-pī-a̤-bl), *a.* [*occupy* + *-able.*] Capable of being occupied.

ocean-bug (ō'sha̤n-bug), *n.* Any aquatic heteropterous insect of the genus *Halobates* (which see).

ocean-going (ō'sha̤n-gō″ing), *a.* Sea-going; able to meet safely the dangers of ocean navigation.

> The former is an *ocean-going* vessel, and must be prepared to meet all conditions of wind and sea. *Encyc. Brit.*, XXXII. 600.

oceanic, *a.* **4.** [*cap.*] Pertaining to or noting the languages of the Malay-Polynesian group.

oceanid (ō'shẹ̄-a̤-nid), *n.* A marine mollusk, as distinguished from a naiad or fresh-water shell.

ocean-river (ō'sha̤n-riv″ėr), *n.* [Tr. Gr. *'Ωκεανὸς ποταμός* (Homer).] The great river which was formerly supposed to surround the inhabited world. Also called *ocean-stream.*

ocean-stream (ō'sha̤n-strēm), *n.* The great stream formerly supposed to surround the inhabited world. See ★*ocean-river.*

oceanward (ō'sha̤n-wä̤rd), *a.* [*ocean* + *-ward.*] Directed to or toward the ocean: as, an *oceanward* view.

oceanward, oceanwards (ō'sha̤n-wä̤rd, -wä̤rdz), *adv.* [*oceanward, a.*] In the direction of the ocean.

oceanwise (ō'sha̤n-wīz), *adv.* By way of the ocean; appropriately to the ocean.

O. Cel., O. Celt. Abbreviations of *Old Celtic.*

ocellation (os-e-lā'sho̤n), *n.* [*ocellate* + *-ion.*] An eye-shaped marking; an ocellus.

ocelliform (ọ-sel'i-fôrm), *a.* [L. *ocellus*, eye, + *forma*, form.] Resembling an ocellus in shape.

ocelloid (ọ-sel'oid), *a.* [*ocellus* + *-oid.*] Like an ocellus.

och (oċh), *interj.* An Irish form of *O.* See *O*².

ochavo (ọ-chä'vō), *n.* [Sp., < L. *octavus*, eighth: see *octave.*] The half-cuarto of the Spanish monetary system under Ferdinand and Isabella and their successors. Also called *chavo.*

ocher, *n.* 3. A metallic oxid which occurs in the form of an earthy powder or easily crumbled mass: as antimony *ocher*; bismuth *ocher*; tungstic *ocher.*—**Cadmium ocher.** See ★*cadmium.*—**Flowers of ocher**, a local name for barite in certain regions, as the Cartersville district in Georgia, where its presence in the soil is found to indicate the presence of ocher deposits.—**Plumbic ocher**, massicot.—**Spanish ocher**, red ocher (hematite).—**Tantalic ocher**, a brownish oxid of tantalum observed on crystals of tantalite.—**Telluric ocher**, tellurite.—**Uranic ocher**, uraconite.—**Vanadic ocher**, a yellow pulverulent substance observed with the native copper of Lake Superior, inferred to be an oxid of vanadium.—**Vitriol ocher.** Same as ★*glockerite.*—**Yellow ocher**, limonite. See also *yellow ocher*, under *yellow.*

ocher, ochre (ō'kėr), *v. t.*; pret. and pp. *ochered, ochred*, ppr. *ochering, ochring.* [*ocher*, *n.*] To mark or stain with ocher. *N. E. D.*

ocheraceous, ochraceous (ō-kėr-ā'shius, ọ-krā'shius), *a.* [*ocher* + *-aceous.*] Same as *ocherous.*

ocherish (ō'kėr-ish), *a.* Same as *ocherous* or *ochery.*

ochlocrat (ok'lọ-krat), *n.* [*ochlocracy* (*-crat-*).] An upholder of ochlocracy or mob-rule.

ochlophobist (ok-lof'ọ-bist), *n.* [Gr. *ὄχλος*, crowd, + *-φοβος*, -fearing, + *-ist.*] One who fears crowds or mobs; one who dreads the ascendancy of the mob or mob-rule.

ochnaceous (ok-nā'shius), *a.* Belonging to the plant family *Ochnaceæ.*

Ochotona (ok-ọ-tō'nä̤), *n.* [*Ochodona*, the Mongol name for the pika.] The generic name of the small duplicidentate rodents commonly known as pikas or little chief hares: used by Link in 1795. The name *Lagomys*, long used, was originally given to "an unnatural and undefined combination of forms with squat bodies," and is untenable. See cut at *Lagomys.*

Ochotonidæ (ok-ō-ton'i-dē), *n. pl.* [NL., < *Ochotona* + *-idæ.*] A family of small rodents, related to the hares. The name replaces *Lagomyidæ*, and the characters of the group are given under that word. *Oldfield Thomas*, 1897.

ochrodermia (ō-krọ-dėr'mi-ä̤), *n.* [NL., < Gr. *ὠχρός*, pale yellow, + *δέρμα*, skin.] Yellowness of the skin.

ochroite (ok'rọ-īt), *n.* [Gr. *ὠχρός*, pale yellow (see *ocher*), + *-ite*².] A name given by Klaproth in 1803 to the Swedish mineral now called *cerite*, from which he had extracted a new earth (impure oxid of cerium) which he termed *ockroiterde* on account of its ocherous yellow color.

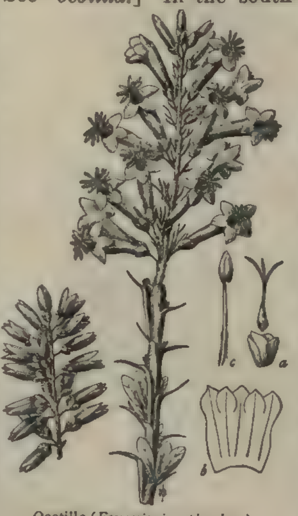
ochronosus (ō-krọ-nō'sus), *n.* [NL., < Gr. *ὠχρός*, pale yellow, + *νόσος*, disease.] A dark yellowish-brown or brownish-black pigmentation of the tissues, especially of the ligaments and other structures which enter into the formation of the joints: in some cases this appearance is associated with alkaptonuria.

o-cm. An abbreviation of *ohm-centimeter.*

ocote (ọ-kō'te), *n.* [Nahuatl *ocotl.*] The common Mexican or candlewood pine (which see, under *pine*). In New Mexico the word is used to designate very resinous pine-wood.

ocotilla (ō-kō-tēl'yä), *n.* [Mex. *ocotilla*, dimin. of *ocote*, < Nahuatl *ocotl*, a pine-tree.] 1. In Mexico, a name applied to resinous splints of pine-wood, especially those of *Pinus Teocote*, used in the market-places and churches as torches and candles.—2. The stems and splints of stems of other plants, especially those of *Fouquieria splendens* and allied species, which contain resin and a peculiar wax, and burn with a fragrant aromatic odor.

ocotillo (ō-kō-tēl'yō), *n.* [Mex. Sp., diminutive of *ocote.* See ★*ocotilla.*] In the southwestern United States, northern Mexico, and Lower California, a name applied to several species of *Fouquieria*, especially to *F. splendens*, a shrub which grows in arid, stony soil, and which has many spiny stems terminating in slender panicles of red flowers. The stems readily take root when cut off and stuck in the ground, and are much used for fences and hedges. The bark contains, in addition to resin, a peculiar wax like that of the Brazilian wax-palm, *Copernicia cerifera.* It is cut into splints, called *ocotillas*, which burn with an aromatic fragrance and are used as candles in illuminating churches and for carrying at funerals.—**Tree-ocotillo**, *Fouquieria Macdougalii*, an arboreus species which grows in the states of Sonora and Sinaloa, Mexico, having pendulous branches and slender panicles of bright red flowers. See *Fouquieria* and ★*Fouquieriaceæ.*



Ocotillo (*Fouquieria splendens*).
a, calice and pistil; *b*, corolla; *c*, stamen.

ocreaceous (ok-rẹ-ā'shius), *a.* In *bot.*, consisting of or resembling ocreæ. See *ocrea*, 1.

octactine (ok-tak'tin), *n.* [Gr. *ὀκτώ*, eight, + *ἀκτίς* (*ἀκτιν-*), ray.] A sponge-spicule having eight regular arms; an octaster.

octad, *n.* II. *a.* Having balance equal to that of eight monad atoms, as platinum in the double chlorid of platinum and potassium (K_2PtCl_6).

octaëteric (ok″ta̤-e-ter'ik), *a.* [*octaëter*(*is*) + *-ic.*] Belonging to or of the nature of the octaëteris.

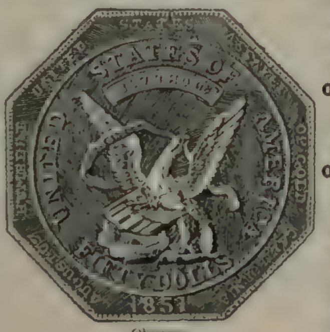
octaëterid (ok″ta̤-e-ter'id), *n.* Same as *octaëteris.*

octagon, *n.* 3. A gold coin of octagonal shape, of the value of 50 dollars, issued in 1851 by the United States assay-office in San Francisco.

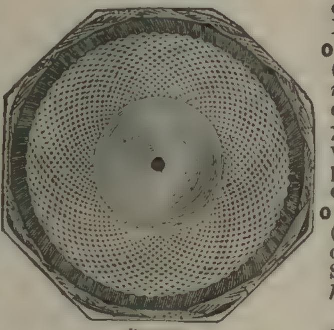
octagram (ok'ta-gram), *n.* [Gr. *ὀκτώ*, eight, + *γράμμα*, a writing.] A polygram of eight sides.

octahedric (ok-ta̤-hē'drik), *a.* Same as *octahedral.*

> In the course of three to four hours *octahedric* crystals of K platinum chloride form a yellow precipitate that presents characteristic microscopic features.
>
> *Buck*, Med. Handbook, VIII. 56.



Obverse.



Reverse.
Octagon. (Size of the original.)

octahedrical (ok-ta̤-hē'dri-ka̤l), *a.* Same as *octahedral.*

octahedrid (ok-ta̤-hē'drid), *n.* and *a.* [Cf. *octahedron.*] I. *n.* The name given by N. Story-Maskelyne ("Crystallography," 1895) to any plane which intersects all the three crystallographic axes.

II. *a.* In *crystal.*, cutting all three axes of coördinates.

octahedrite, *n.* 2. A meteoric iron with octahedral structure, which is usually distinctly marked by the lamellæ of kamacite, tænite, and plessite, seen in the Widmannstättian figures. Most iron meteorites fall in this class. See ★*meteorite.*

octahedroid (ok-ta̤-hē'droid), *n.* [*octahedr*(*on*) + *-oid.*] In *math.*, a four-dimensional body bounded by 8 cubes.

octahedron, *n.*—**Octahedron function.** See ★*function.*—**Three-faced octahedron**, a trisoctahedron.

octahedrous (ok-ta̤-hē'drus), *a.* Same as *octahedral.*

octaid (ok'ta̤-id), *a.* Same as ★*octahedrid.* *W. J. Lewis*, Crystallography, p. 493.

octakishexahedron (ok″ta-kis-hek″sa̤-hē'dro̤n), *n.*; pl. *octakishexahedra* (-drä̤). [Gr. *ὀκτάκις*, eight times, + *ἕξ*, six, + *ἕδρα*, seat, base.] Same as *hexoctahedron.*

octameral (ok-tam'e-ra̤l), *a.* [Gr. *ὀκταμερής*, in eight parts, + *-al*¹.] Same as *octamerous.*

octamerism (ok-tam'ẹ-rizm), *n.* [*octamer*(*ous*) + *-ism.*] The state of having parts or organs in series of eight: used specifically in zoölogy and botany.

octane (ok'tān), *n.* [L. *octo*, eight, + *-ane.*] An oily hydrocarbon, C_8H_{18}, of the paraffin series. It occurs in petroleum, and is one of the chief constituents of ligroin. It boils at 124° C. The name is sometimes given to diisobutyl (C_8H_{18}).

octanol (ok'ta̤-nol), *n.* [*octane* + *-ol.*] Octyl alcohol, $C_8H_{17}.OH$, derived from octane. It is a liquid which boils at 195.5° C. The acetate occurs in the oil of *Heracleum Sphondylium*, and the butyrate in the oils of *H. giganteum* and *Pastinaca sativa.*

octant, *n.* 4. Each of the eight regions into which space is divided by three copunctal noncostraight planes.

octantal (ok-tan'ta̤l), *a.* [*octant* + *-al*¹.] Pertaining to or of the nature of an octant, in any sense.

octarch (ok'tärk), *a.* [Gr. *ὀκτώ*, eight, + *ἀρχή*, origin.] In *bot.*, having eight centripetally developed xylem plates: said of some radial vascular cylinders.

octarticulate (ok-tär-tik'ụ-lạt), *a.* [L. *octo*, eight, + *articulatus*, jointed (see *articulate*).] Having eight joints.

octaseme (ok'ta̤-sēm), *a.* Same as *octasemic.*

octaster (ok-tas'tėr), *n.* A sponge-spicule having eight actines radiating from a center; an octactine.

octastichous (ok-tas'ti-kus), *a.* Same as *octostichous.*

octastyle, *a.* II. *n.* A building having eight columns in front; especially, a Greek or Roman temple having that number of columns in the front row of the portico.

octatomic (ok-ta̤-tom'ik), *a.* [Gr. *ὀκτώ*, eight, + *ἄτομος*, atom, + *-ic.*] Forming molecules which consist of eight similar atoms, as sulphur.

octavalent (ok-tav'a̤-lent), *a.* [Gr. *ὀκτώ*, eight, + E. *valent.*] Having a quantivalence of eight; octad.

octave. I. *n.* 5. In *fencing*, the eighth guard: point low, hand moving to the right.—**Law of octaves.** See ★*law*¹.—**Subcontra octave**, in *acoustics*, the lowest octave of the musical scale, comprising the interval between 16½ and 33 complete vibrations per second.—**Thrust in octave**, in *fencing*, a thrust with the knuckles upward toward the lower part of the opponent's right.

II. *a.* 2. In *music*, noting a tone, note, instrument, organ-stop, etc., whose pitch is an octave above the ordinary pitch or any pitch taken for reference: as, the piccolo is an *octave* flute.

octave-forks (ok'tāv-fôrkz), *n. pl.* In *exper. psychol.*, a pair of tuning-forks tuned to the interval of the octave.

> Try with a pair of *octave-forks* on resonance boxes or held over resonance bottles.
>
> *E. C. Sanford*, Exper. Psychol., p. 67.

octave-stretch (ok'tāv-strech), *n.* The distance the hand stretches in striking an octave on the pianoforte; the distance the ordinary hand is able to stretch.

> Poor gay child, who had not caught
> Yet the *octave-stretch* forlorn
> Of your larger wisdom.
>
> *Mrs. Browning*, Little Mattie, st. 6.

Octavian² (ok-tā'vi-a̤n), *n.* [L. *octavus*, eighth, + *-i-an.*] One of the members of a committee of finance appointed by James VI., in 1595, to control the Royal Exchequer: so called because eight members of the Secret Council composed the committee.

octavic (ok-tā′vik), *a.* [L. *octavus*, eighth, + *-ic.*] Of the eighth order: as, *octavic* curves.

octavina (ok-tạ-vī′nạ̈), *n.* [NL., ‹ L. *octavus*, eighth (octave), + *-ina*^{1}.] A spinet tuned an octave higher than the usual form.

octavo, *n.* **2.** A sheet of paper evenly folded to make eight leaves and sixteen pages.—**3.** A form of type containing eight pages.

octene (ok′tēn), *n.* [L. *octo*, eight, + *-ene.*] An unsaturated oily hydrocarbon, C_8H_{16}, of the ethylene series. It boils at 125° C. Also called *octylene* and *caprylene*.

octibbehite, *n.* See ★*oktibbehite*.

octic (ok′tik), *a.* and *n.* [L. *octo*, eight, + *-ic.*] **I.** *a.* In *math.*, of the eighth degree or order.—**Octic equation, surface.** See ★*equation*, ★*surface*.

II. *n.* An algebraic function or form of the eighth degree; a quantic of the eighth degree.

octile, *n.* **2.** In *statistics*, a group containing one eighth of the total number of observations or of observed objects arranged upon a curve of frequency: usually marked off, as *upper* and *lower octiles*, to right and left of the abscissal points which bound the upper and lower quartiles.

II. *a.* Said of the aspect of two planets distant 45° from one another.

octillionth (ok-til′yọnth), *a.* and *n.* [*octillion* + *-th*^{2}.] **I.** *a.* **1.** The ordinal numeral adjective corresponding to octillion; last in an ordered set of an octillion elements.—**2.** Being one of an octillion all equal: as an *octillionth* part.

II. *n.* The quotient of unity divided by an octillion.

octine (ok′tin), *n.* [L. *octo*, eight, + *-ine*^{2}.] An oily hydrocarbon, C_8H_{14}, of the acetylene series. Two varieties, 1-*octine* and 2-*octine*, are known; they boil at 131–132° C. and 133–134° C. respectively. Also called *caprylidene*.

octingentenary (ok-tin-jen′te-nạ̄-ri), *n.* [L. *octingenti*, eight hundred. Cf. *centenary*.] Same as *octocentenary*.

octoad (ok′tọ̄-ad), *n.* Same as *ogdoad*.

October-flower (ok-tō′bėr-flou″ėr), *n.* One of the jointweeds, *Polygonella polygama*, of the southern United States: so called from its late flowering.

octocarbon (ok-tọ̄-kär′bon), *a.* [L. *octo*, eight, + E. *carbon*.] Containing eight atoms of carbon in the molecule.

octocentennial (ok″tọ̄-sen-ten′i-ạl), *a.* [L. *octo*, eight, + E. *centennial*.] Of or pertaining to eight hundred years, or the eight hundredth anniversary.

octoceratous (ok-tọ̄-ser′a̤-tus), *a.* Same as *octocerous*.

octocosane (ok-tọ̄-kō′sān), *n.* [Gr. ὀκτώ, eight, + (εἰ)κοσ(ι), twenty, + *-ane*.] A solid hydrocarbon, $C_{28}H_{58}$, of the paraffin series. It occurs in paraffin obtained by distillation from petroleum and lignite. It melts at 60° C. and boils at 310–312° C. under 50 millimeters pressure.

octodactylous (ok-tọ̄-dak′ti-lus), *a.* [*octodactyl* + *-ous*.] Same as *octodactyl*.

octodecimal (ok-tọ̄-des′i-ma̤l), *a.* [L. *octo*, eight, + *decem*, ten (*decimus*, tenth), + *-al*^{1}.] **1.** Based on the number eighteen; pertaining to or of the size of an octodecimo.—**2.** In *crystal.*, having eight faces on the middle part and five on each of the two ends.

octodianome (ok-tọ̄-dī′a̤-nōm), *n.* A surface of the fourth degree with eight double points. *Cayley.*

octoduodecimal (ok-tọ̄-dụ̄-ọ̄-des′i-ma̤l), *a.* [L. *octo*, eight, + *duodecim*, twelve, + *-al*^{1}.] Containing the numbers eight and twelve: in *chem.*, applied to a basic or oxysulphate of copper which has its constituents in the proportion $(CuO)_8.SO_3.(H_2O)_{12}$.

octoedral (ok-tọ̄-ē′dra̤l), *a.* Same as *octahedral*.

octogenarianism (ok″tọ̄-je-nā′ri-a̤n-izm), *n.* [*octogenarian* + *-ism*.] The state of being an octogenarian; the characteristics of an octogenarian.

octogenary, *a.* **II.** *n.* An octogenarian. *Webster.*

octoglot (ok′tọ̄-glot), *a.* and *n.* [Gr. ὀκτώ, eight, + γλῶττα, tongue.] **I.** *a.* Written in eight versions, each in a different language, as a book or manuscript; eight-languaged, as a lexicon.

II. *n.* A book or manuscript written in eight tongues.

octogon (ok′tọ̄-gon), *n.* Same as *octagon*.

octogynian (ok-tọ̄-jin′i-a̤n), *a.* Same as *octogynous*.

octohedric (ok-tọ̄-hē′drik), *a.* Same as ★*octahedric*.

octoic (ok-tō′ik), *a.* [L. *octo*, eight, + *-o-* + *-ic.*] Derived from octane. See ★*caprilic*.

octonal, *a.* **2.** Of, consisting of, or pertaining to, eight.

> The mechanical-arithmetical structure of the *octonal* square. *An. Rep. Bur. Am. Ethnol.*, 1897-98, p. 850.

octonaphthene (ok-tọ̄-naf′thēn), *n.* Hexahydrometaxylene, an oily hydrocarbon, C_8H_{16}, found in Caucasian petroleum and in rosin-oil.

octonarian (ok-tọ̄-nā′ri-a̤n), *a.* and *n.* [L. *octonarius*, octonary, + *-an*.] **I.** *a.* In *Lat. pros.*, having eight feet.

II. *n.* Same as *octonarius*.

octonemous (ok-tọ̄-nē′mus), *a.* Same as *octonematous*.

octonion (ok-tō′ni-ọn), *n.* [L. *octoni*, eight each. Cf. *quaternion*.] Same as *biquaternion*, 2. *McAulay.*

Octonum (ok-tō′num), *n.* [NL. (Rafinesque, 1838), ‹ L. *octoni*, eight each. The name alludes to the usually octamerous flowers of the type-species.] A genus of dicotyledonous shrubs of the family *Melastomaceæ*. See *Heterotrichum*, 2.

octopartite (ok-tọ̄-pär′tīt), *a.* [NL. *octopartitus*, ‹ L. *octo*, eight, + *partitus*, divided.] Divided into eight parts; consisting of eight parts, as a contract signed by eight parties in eight copies.

octopartition (ok″tọ̄-pär-tish′ọn), *n.* [L. *octo*, eight, + *partitio(n-)*, division.] The state of being divided into eight parts; the act of so dividing something.

octopean (ok-tọ̄-pē′a̤n), *a.* [Irreg. ‹ *octop(us)* + *-e-an*.] Characteristic of an octopus; like an octopus: in figurative uses.

octopolar (ok-tọ̄-pō′lạ̈r), *a.* [Gr. ὀκτώ, eight, + E. *polar*.] Having eight poles.—**Octopolar dynamo**, an electric generator the field of which has eight poles.—**Octopolar field**, a magnetic field of eight poles: specifically, such a field in certain generators and motors.—**Octopolar generator**, in *elect.*, a generator the field of which has eight poles.

octopolarity (ok″tọ̄-pọ̄-lar′i-ti), *n.* [*octopolar* (‹ Gr. ὀκτώ, eight, + πόλος, pole) + *-ity*.] The condition of having, or involving, eight poles or centers of attraction or repulsion.

Octopus, *n.* Hence—**3.** [*l. c.*; pl. *octopi* (-pī).] Figuratively, any centralized organization which has many branches and secret connections, and thereby maintains an oppressive hold upon the public.

octoreme (ok′tọ̄-rēm), *n.* Same as *octireme*.

octose (ok′tōs), *n.* [L. *octo*, eight, + *-ose*.] A synthetic sugar, $C_8H_{16}O_8$, containing eight carbon atoms in the molecule.

octovalent, *a.* Same as ★*octavalent*.

octozoic (ok-tọ̄-zō′ik), *a.* [Gr. ὀκτώ, eight, + ζῷον, an animal.] Containing eight sporozoites, as the spores of typical gregarines.

octroy (ok-trwo′), *v. t.* [F. *octroyer*, grant; See *octroi, n.*] **1.** To grant as a privilege; authorize; concede, as an exclusive right of trade by a government or company.—**2.** [G. *octroyiren*.] To impose by authority. [Rare.]

octuple, *a.* **2.** Having eight units; specifically, noting a motor-car with eight cylinders which drive a common crank-shaft.—**Octuple press.** See *press*.

octuple (ok′tụ̄-pl), *v. t.*; pret. and pp. *octupled*, ppr. *octupling*. [*octuple, a.*] To multiply by eight; increase eightfold.

octuplex (ok′tụ̄-pleks), *a.* and *n.* [NL., ‹ *octo*, eight, + *plicare*, fold.] **I.** *a.* Eightfold; specifically, of or pertaining to a device or system for sending eight simultaneous telegraphic messages over a single wire.

II. *n.* In *teleg.*, an eightfold system; a system permitting of the simultaneous transmission of eight messages over one wire.

octuplex (ok′tụ̄-pleks), *v. t.* [*octuplex, a.*] In *teleg.*, to adjust or arrange (a telegraphic system) for the simultaneous sending of eight messages.

octuply (ok′tụ̄-pli), *adv.* [Cf. ★*octuplex*.] Eightfold; so as to be eight times multiplied.

ocular. **I.** *a.*—**Ocular quadrangle, spot.** See ★*quadrangle*, ★*spot*.

II. *n.* **2**†. Something which is conveyed to the mind through actual sight.—**3.** The eye. [Humorous.]—**4.** In *Echinoidea*, an ocular plate.—**Achromatic ocular**, in *optics*, an eyepiece corrected for chromatic aberration.—**Micrometer ocular.** Same as *ocular* ★*micrometer*.—**Orthoscopic ocular.** See *Kellner's* ★*eyepiece*.

ocularist (ok′ụ̄-la̤-rist), *n.* [*ocular* + *-ist*.] A manufacturer of artificial eyes. *N. E. D.*

ocularium (ok-ụ̄-lā′ri-um), *n.*; pl. *ocularia* (-ạ̈). [ML., neut. of *ocularius*, of the eye. See *oculary*.] Same as *œillère*.

oculocephalic (ok″ụ̄-lọ̄-se-fal′ik), *a.* Belonging to the eyes and the head.

oculofacial (ok″ụ̄-lọ̄-fā′sha̤l), *a.* [L. *oculus*, eye, + *facies*, face, + *-al*^{1}.] Relating to both the eyes and the face: noting especially a form of paralysis involving these parts.

Oculomotor nucleus. See ★*nucleus*.

oculonasal (ok″ụ̄-lọ̄-nā′za̤l), *a.* [L. *oculus*, eye, + *nasus*, nose, + *-al*^{1}.] Relating to both the eye and the nose.

oculopupilary (ok″ụ̄-lọ̄-pū′pi-lạ̄-ri), *a.* [L. *oculus*, eye, + *pupilla*, pupil, + *-ary*.] Relating to the pupil of the eye.

oculospinal (ok″ụ̄-lọ̄-spī′nal), *a.* [L. *oculus*, eye, + *spina*, spine, + *-al*^{1}.] Same as *ciliospinal*.

oculus, *n.* **3.** In *arch.*, a circular window, usually a small one without tracery or other special subdivision; also an opening at the summit of a dome-shaped vault.

ocupod (ok′ụ̄-pod), *a.* and *n.* Same as ★*ocypode*.

Ocyanthias (ō-sī-an′thi-as), *n.* [NL., ‹ Gr. ὠκύς, swift, + NL. *Anthias*, a generic name.] A genus of serranoid fishes found in the Caribbean Sea.

ocypode (os′i-pōd), *a.* and *n.* [See *Ocypoda*.] **I.** *a.* Of or belonging to the family *Ocypodidæ*.

II. *n.* A crab of the family *Ocypodidæ*.

Ocyurus (ō-sī-ū′rus), *n.* [NL., ‹ Gr. ὠκύς, swift, + οὐρά, tail.] A genus of fishes, of the family *Lutianidæ*, found from Florida to Brazil.

od, *a.* A simplified spelling of *odd*.

O. D. An abbreviation (*a*) of the Latin *oculus dexter*, right eye; (*b*) of *Old Dutch*; (*c*) of *Official Document*.

oda^3 (ō′dạ̈), *n.* [Also *odah*; ‹ Turk. Ar. *ōda*, *ōdah*, a room, chamber, office, bureau.] A room in an Eastern harem; also the occupants of such a room. See *odalisk*.

O. Dan. An abbreviation of *Old Danish*.

odd. **I.** *a.*—**Odd number.** See ★*number*.—**Odd permutation.** See ★*permutation*.

II. *n.* Something that is numerically odd. In *golf*, 'an odd,' 'two odds,' etc., per hole is the handicap given to a weaker opponent by deducting one, two, etc., strokes from his total for every hole. To have played the 'odd' is to have played one stroke more than one's opponent. If one's opponent has played one stroke more, that is, the 'odd,' one's next stroke is the 'like'; if two strokes more, one's next stroke will be 'one off two'; if three more, 'one off three'; and so on.—**Thirteen and the odd.** Same as *humbug* ★*whist*.

odd-horse (od′hôrs), *n.* Same as ★*odd-man-out*.

odd-man-out (od″man-out′), *n.* The person singled out, as by tossing a coin or in some similar way, from among a number to perform some special act or service; also, the mode of selection itself.

odd-man-wins (od″man-winz′), *n.* A gambling game in which the one of three persons tossing coins who has a different result from the other two wins.

odds, *n. pl.*—**Game at odds.** See ★*game*^{1}.—**Long odds.** (*b*) In *golf*, the situation when a player has to play a stroke more than his opponent who is much nearer the hole.

odd-side (od′sīd), *n.* In *founding*, a part of a mold made similar to a false-part, but used in casting instead of being broken up; a part of a mold actually used in making a casting from a pattern which is not parted. It is the drag in which the pattern is bedded.

ode^1, *n.*—**Choral ode.** See ★*choral*.

Odinist (ō′din-ist), *n.* [*Odin* + *-ist*.] One who worshiped Odin. *N. E. D.*

odinite (ō′din-īt), *n.* [G. *odinit* (Chelius, 1892), ‹ *Odin*, for *Odenwald*, Germany, + *-ite*^{2}.] In *petrog.*, an aphanitic porphyry, with few small phenocrysts of labradorite and augite in a ground-mass of feldspar prisms and needles of hornblende.

odmyl (od′mil), *n.* [Gr. ὀδμή, smell, + *-yl*.] The supposed radical, C_4H_{10}, of odmyl sulphid, a volatile oil which is obtained by distilling oleic acid, olive-oil, and other oils with sulphur. It is now believed to be butyl mercaptan ($C_4H_9.SH$).

Odocoileus (ō-dọ-koi'lẹ-us), *n.* [NL., ‹ Gr. *ὀδούς*, a tooth, + *κοῖλος*, hollowed.] The generic name for the American deer of which the Virginia deer is a typical example. The name was given by Rafinesque in 1832 to a premolar, supposed by him to belong to an extinct species, found in a cave near Carlisle, Pennsylvania. The spelling has been amended to *Odocœlus* by Sclater, and *Odontocoileus* by Elliot, but according to commonly accepted rules the original spelling stands.

odograph (ō'dọ-gráf), *n.* 1. Same as *hodograph*.—2. An odometer or pedometer.

odology (ọ-dol'ọ-ji), *n.* [*od*^{3} + *-ology*.] The so-called science of the hypothetical force called *od*. See *od*^{3}.

odont. An abbreviation of *odontology*.

odontagra (ō-don-tag'rä̤), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *ἄγρα*, a catching.] Toothache of supposed rheumatic or gouty origin.

odontinoid (ō-don'ti-noid), *n.* [*odont-ic* + *-ine*^{1} + *-oid*.] An osseous tumor which resembles a tooth in its composition.

odontist (ọ-don'tist), *n.* [Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *-ist*.] A dentist. *N. E. D.* [Rare.]

odontitis (ō-don-tī'tis), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *-itis*.] Inflammation of the tooth-pulp.

odontocetous (ọ-don-tọ-sē'tus), *a.* [*odontocete* + *-ous*.] Same as *odontocete*.

Odontochile (ọ-don-tọ-kī'lē), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *χεῖλος*, lip.] A genus of proparian trilobites having the general structure of ★*Dalmanites* (which see). It occurs in the Upper Silurian and Lower Devonian rocks.

odontochirurgical (ọ-don"tọ-kī-rėr'ji-kạl), *a.* [Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *χειρουργία*, surgery, + *-ical*.] Relating to dental operations.

odontoclast (ọ-don'tọ-klast), *n.* [Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *κλαστός*, ‹ *κλᾶν*, break.] One of the cells which bring about the absorption of the root of a deciduous tooth.

odontodynia (ọ-don-tọ-din'i-ä̤), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *ὀδύνη*, ache.] Toothache.

Odontogenic fibers. See ★*fiber*^{1}.

Odontognathus (ō-don-tog'nạ-thus), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *γνάθος*, jaw.] A genus of clupeoid fishes found in the tropical waters of America.

odontographic (ọ-don-tọ-graf'ik), *a.* and *n.* **I.** *a.* Pertaining to an odontograph or to odontography.

II. *n.* A curve which has been laid out by the use of an odontograph.

odontographically (ọ-don-tọ-graf'i-kạl-i), *adv.* By means of an odontograph.

Odontoid bone, the odontoid process of the axis when free, as in many reptiles. The odontoid process is the centrum of the atlas and when free represents to some extent the primitive or original condition.

odontolith (ọ-don'tọ-lith), *n.* [Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *λίθος*, stone.] 1. A calculus of the tooth-pulp.—2. Same as *tartar*^{1}, 2.

odontonecrosis (ọ-don"tọ-nek-rō'sis), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + NL. *necrosis*.] Extensive caries or loss of vitality of the greater part of a tooth.

odontoperiosteum (ọ-don"tọ-per-i-os'tẹ-um), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *περί*, around, + *ὀστέον*, bone.] Same as ★*periodontium*.

odontoplerosis (ọ-don"tọ-plẹ-rō'sis), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), bone, + *πλήρωσις*, filling.] The process of plugging or filling a tooth-cavity.

Odontopteryx (ō-don-top'tẹ-riks), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *πτέρυξ*, wing.] A genus of fossil birds from the London clay (Lower Eocene) of England, having tooth-like projections on the mandible and believed to be related to the gannets (*Steganopodes*).

Odontopyxis (ọ-don-tọ-pik'sis), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *πυξίς*, box.] A genus of fishes of the family *Agonidæ*, which inhabit the Pacific ocean along the coast of the United States.

odontorrhagia (ō-don-tọ-rā'ji-ä̤), *n.* [NL., ‹ Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *-ραγια*, ‹ *ῥηγνύναι*, burst.] Profuse bleeding from the socket of an extracted tooth.

odontoscope (ọ-don'tọ-skōp), *n.* [Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *σκοπεῖν*, view.] A small mirror, attached at an angle to a long handle, used in the examination of the teeth.

odontotherapy (ō-don-tọ-ther'ạ-pi), *n.* [Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *θεραπεία*, medical treatment.] The medical care of the teeth; dental medicine.

odontothrypsis (ō-don-tọ-thrip'sis), *n.* [Gr. *ὀδούς* (*ὀδοντ-*), tooth, + *θρύψις*, a breaking into small pieces.] Wearing away of the teeth by use.

odoom, *n.* See ★*odum*.

odophone (ō'dọ-fōn), *n.* [L. *od*(*or*), odor, + Gr. *φωνή*, sound.] A scale or gamut of scents.

> These [tinctures] are sometimes made upon a quasi-scientific basis, namely, that of the *odophone* or gamut of odours of the late Dr. Septimus Piesse.
> *Encyc. Brit.*, XVIII. 525.

odorate, *a.* **II.** *n.* A perfume-giving substance; a substance that diffuses odor.

odorimeter (ō-dọ-rim'e-tėr), *n.* [L. *odor*, smell, + Gr. *μέτρον*, measure.] An instrument for measuring and recording the objective intensity of olfactory stimuli: opposed to and correlated with *olfactometer*. *Amer. Jour. Psychol.*, X. 85.

odorimetry (ō-dọ-rim'e-tri), *n.* [*odorimeter* + *-y*^{3}.] The science which is concerned with the objective measurement of olfactory stimuli: correlated with *photometry* and ★*phonometry*. *Amer. Jour. Psychol.*, X. 85.

odorine (ō'dọr-in), *n.* [L. *odor*, smell, + *-ine*^{2}.] In *chem.*, a volatile liquid of oily consistence and basic character obtained by Unverdorben from bone-oil. It appears to have been picoline in an impure state.

odorize (ō'dọr-īz), *v. t.*; pret. and pp. *odorized*, ppr. *odorizing*. [*odor* + *-ize*.] To impart an odor to; scent.

> They have a wide use . . . in *odorizing* and flavoring.
> *Buck*, Med. Handbook, I. 103.

odorosity (ō-dọ-ros'i-ti), *n.* [*odorous* (*-os-*) + *-ity*.] Same as *odorousness*.

odor-tube (ō'dọr-tūb), *n.* In *exper. psychol.*, a glass tube lined with a tube composed of some solid odoriferous substance; the stimulus-tube of the Zwaardemaker dry olfactometer. *E. C. Sanford*, Exper. Psychol., p. 50.

odum (ō-döm'), *n.* [Native name in the Gold Coast.] Same as ★*iroko*. Sometimes written *odoom*.

odylist (ō'di-list), *n.* [*odyl* + *-ist*.] One who believes in odylism.

odylize (ō'di-līz), *v. t.*; pret. and pp. *odylized*, ppr. *odylizing*. [*odyl* + *-ize*.] To affect by means of odyl or od.

odynerid (od-i-nē'rid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Odyneridæ*.

II. *a.* Having the characters of or belonging to the family *Odyneridæ*. See *Odynerus*.

odynometer (od-i-nom'e-tėr), *n.* [Gr. *ὀδύνη*, pain, + *μέτρον*, measure.] A measurer or recorder of pain; an algometer.

> But we have no *odynometer*, and cannot tell whether, when one person bears pain better than another, he is bearing . . . the same amount and quality of pain.
> *Daily News* (London), Dec. 23, 1893.

odynometrical (od"i-nọ-met'ri-kạl), *a.* [*odynometer* + *-ical*.] Algometrical; pertaining to the use of the odynometer, or to the measurement of pain.

> As yet we have no . . . good *odynometrical* resources, to test and measure pain.
> *J. M. Duncan*, Lect. on the Diseases of Women, iii.

odynophobia (od"i-nọ-fō'bi-ä̤), *n.* [Gr. *ὀδύνη*, pain, + *-φοβια*, ‹ *φοβεῖν*, fear.] A morbid dread of pain.

Odyssean (od-i-sē'an), *a.* [L. *Odyssēa*, ‹ Gr. *'Οδύσσεια*, Odyssey.] Relating to or having the characteristics of Homer's 'Odyssey.'

œciomania (ē"si-ọ-mā'ni-ä̤), *n.* [Gr. *οἰκίον*, dim. of *οἶκος*, house, + *μανία*, madness.] Monomania in relation to household affairs.

Œcological distribution, embryology, morphology, physiology. See *plant* ★*œcology*.—**Œcological optimum.** See ★*optimum*.—**Œcological phytogeography**, that branch of botany which studies the distribution of plants in the light of their adaptations to life under specific local conditions, that is, of heat, water, soil-composition and -texture, light, animal agency, etc. It accordingly is interested in vegetation, rather than flora (see ★*vegetation*, 4), and is thus opposed to floristic phytogeography. As the latter requires taxonomy, so this continually uses plant œcology (see *plant* ★*œcology*). Since the œcological characters of plants are not coincident with the morphological, it makes only an ancillary use of taxonomic classification and forms for itself œcological classes, based either upon the relation of the individual to its environment (see ★*hydrophyte*, 2, ★*mesophyte*, 1, *tropophyte*, and ★*xerophyte*) or upon the aggregation of individuals according to law (see ★*association*, 4, *plant* ★*association*, and *plant* ★*formation*). Historically, œcological phytogeography dates from Humboldt (1806, 1807), who organized the study of vegetation, characterizing different landscapes by their dominant species, and (the truly œcological feature) recognized heat as the prime factor governing plant distribution (see *floral* ★*zones*). De Candolle (1820) recognized the œcological point of view, but only projectively. Grisebach (1838) wrote in the spirit of Humboldt and introduced the term *formation*. Thurmann (1849) made an explicit distinction between the flora and the vegetation of a country. Darwin brought in a new era by calling attention to the adaptations of organisms and their struggles together for existence. Grisebach, Drude, and others now made important contributions, and Warming (1895) gave a fresh impulse by organizing the results of previous work and by recognizing water content as the basis of association; while Schimper (1898) distinguished *physical* from *physiological* water and analyzed thoroughly the conditions determining the distribution of plants in the large. In America work in this line has been initiated by C. MacMillan, F. V. Coville, C. H. Merriam, R. Pound, F. E. Clements, C. Mohr, H. C. Cowles, T. H. Kearney, and others.

œcologist, ecologist (ẹ-kol'ọ-jist), *n.* [*œcology, ecology*, + *-ist*.] One who studies or is versed in œcology, ethology, or bionomics.

> Whether with the *œcologist*, we regard the organism in relation to the world, or with the physiologist as a wonderful complex of vital energies, the two branches have this in common, that both studies fix their attention, not on stuffed animals, butterflies in cases, or even microscopical sections of the animal or plant body—all of which relate to the framework of life—but on life itself.
> *Smithsonian Rep.*, 1893, p. 439.

œcology, *n.*—**Economic œcology**, the science of the adaptations of plants and animals to human interests. *C. MacMillan*.—**Geographic œcology**, that division of œcological phytogeography which relates to the *climatic formations* (so termed by Schimper). See ★*formation*, 5. This term was proposed by H. C. Cowles, who would also restrict the term *œcological plant geography* to this application.—**Physiographic œcology**, that part of œcological phytogeography which relates to the more local plant formations, the edaphic formations of Schimper. (See ★*formation*, 5.) *H. C. Cowles*.—**Plant œcology**, the science of the adaptation of plants to life under particular environing conditions, whether physical or biological. Plant œcology presupposes and interacts with plant physiology (physiological botany), the science of the life-process as such, considered in its various phases, including the reproductive function and so the capacity of variation. Similarly, œcology presupposes morphology, the descriptive knowledge of the transformations which are passed through by ideal types in the process of adjustment to conditions. Œcology completes these sciences by pointing out the correlations of organic forms and the life-process operating through them, with the determining environment. Œcology, if it does not presuppose, at least finds indispensable, taxonomy—the classification of plants upon the basis of morphology. Œcology is not in itself geographical, since it studies the effects not of local environment but of particular kinds of environment. But as soon as the plant covering of particular areas is interpreted according to adaptations we have ★*œcological phytogeography* (which see). See also ★*paleoœcology*. See *œcology*.

œcoparasite (ē-kọ-par'ạ-sīt), *n.* [Gr. *οἶκος*, house, + E. *parasite*.] Any specialized parasitic fungus which is able to infect its proper host under normal conditions: applied by Salmon to certain *Erysiphaceæ*. Compare ★*xenoparasite*.

> In a recent paper, E. S. Salmon described methods of culture in which he wounded, or otherwise injured, a host plant hitherto immune to the fungus, and thus rendered it liable to infection. For such a case he proposes the terms xenoparasite and xenoparisitism. In the case of the specialized fungus on its proper host under normal conditions, he uses the terms *œcoparasite* and œcoparasitism.
> *Jour. Roy. Micros. Soc.*, April, 1905, p. 219.

œcoparasitism (ē-kọ-par'ạ-sī-tizm), *n.* [*œcoparasite* + *-ism*.] The particular form of parasitism due to an œcoparasite. See ★*œcoparasite*.

œcophobia (ē-kọ-fō'bi-ä̤), *n.* [Gr. *οἶκος*, home, + *-φοβια* ‹ *φέβεσθαι*, fear.] Morbid aversion to the home. Also written *ecophobia* and *oicophobia*. *G. S. Hall*, Adolescence, I. 291.

œcotone, *n.* See ★*ecotone*.

œcumene, *n.* See ★*ecumene*.

œcus (ē'kus), *n.*; pl. *œci* (-sī). [L., ‹ Gr. *οἶκος*, a house, a hall, a room.] In *Rom. archæol.*, a room in a large dwelling. The word occurs in Vitruvius and Pliny, in ways that have suggested to modern writers the idea that it had a technical meaning; but it was merely the Greek word transferred.

œdagus (ed'ạ-gus), *n.*; pl. *œdagi* (-jī). [NL.] The penis of an insect. Also written *œdeagus* and *ædeagus*.

œdematin (ẹ-dem'ạ-tin), *n.* [Gr. *οἴδημα*(*τ-*), swelling, + *-in*^{2}.] In *cytol.*, the nuclear ground-substance, or substance of which the microsomes or granulæ of the karyoplasm are supposed to consist. *Reinke*, 1893.

œdemerid (ẹ-dem'ẹ-rid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Œdemeridæ*.

II. *a.* Having the characters of or belonging to the coleopterous family *Œdemeridæ*.

œdemic, edemic (ẹ-dem′ik), *a.* [*œdema* + *-ic.* The correct form would be *œdematic.*] Same as *edematous.*

> An atmosphere containing one half part per thousand sulphureted hydrogen produces death with cramps and *œdemic* inflammation of the lungs.
> *Science*, April 15, 1904, p. 633.

Œdipean (ed-i-pē′ạn), *a.* [Irreg. ‹ *Œdipus* + *-ean.*] Of or pertaining to or resembling Œdipus: used in allusion to the story of his solving the riddle proposed by the Sphinx. The right adjective would be *Œdipodean.*

œdogoniaceous (ē″dọ-gọ-ni-ā′shius), *a.* Of or pertaining to the green alga *Œdogonium;* belonging to the family *Œdogoniaceæ.*

œgopsid (ẹ-gop′sid), *n.* and *a.* Same as *oigopsid.*

Œgopsida (ẹ-gop′si-dạ̈), *n. pl.* Same as *Oigopsidæ.* The group includes the families *Ommatostrephidæ, Onycoteuthidæ, Chiroteuthidæ,* and *Cranchiidæ.*

œil-de-bœuf, *n.* **2.** Same as ★*bull's-eye,* 16.

oellacherite (ė′laċh-ẹr-īt), *n.* [*Oellacher* (see def.) + *-ite*².] A variety of muscovite containing several per cent. of baryta. The original, analyzed by Oellacher, was from the Pfitschthal, Tyrol.

œnanthine (ẹ-nan′thin), *n.* [See *œnanthin.*] Same as ★*heptine.*

œnanthylene (ē-nan′thi-lēn), *n.* [*œnanthyl* + *-ene.*] An oily unsaturated hydrocarbon, $CH_3(CH_2)_4.CH{:}CH_2$, of the ethylene series, made by the action of heated lime on chloroheptane. It boils at 98–99° C. Also called *normal* 6-*heptylene.*

œnanthylidene (ē-nan-thil′i-dēn), *n.* [*œnanthyl* + *-id*¹ + *-ene.*] Same as ★*heptine.*

Oeningen stage. See ★*stage.*

Oeningian (ė-ning′gi-an), *a.* [G. *Oening*(*en*) (see def.) + *-ian.*] Of or pertaining to the Oeningen stage, or to its rocks and fossils. See ★*stage.*

œnocarpol (ē-nọ-kär′pol), *n.* [Gr. *οἶνος,* wine, + *καρπός,* fruit, + *-ol.*] A crystalline triacid alcohol, $C_{26}H_{39}(OH)_3$, occurring as the palmitate in grape-skins.

œnocyan (ē-nọ-sī′an), *n.* Same as ★*œnocyanin.*

œnocyanin (ē-nọ-sī′ạ-nin), *n.* [Gr. *οἶνος,* wine, + *κύανος,* blue, + *-in*².] The coloring-matter of black grapes and red wines. It is produced by the oxidation, and probably also hydration, of a substance in the green grapes. Also called *œnolin. Sadtler,* Handbook of Indust. Chem., p. 203.

œnocyte (ē′nọ-sīt), *n.* [Gr. *οἶνος,* wine, + *κύτος,* a hollow (a cell).] One of the large succulent cells of unknown function, which arise in metameric clusters from the ectoderm of the insect embryo and migrate into the body-cavity, where they remain in contact with the fat-body or tracheæ. The œnocytes are often of a wine-yellow color; hence the name. *Wielowiejski,* in Jour. Roy. Micros. Soc., Oct., 1904, p. 527.

œnocytic (ē-nọ-sit′ik), *a.* [*œnocyte* + *-ic.*] Pertaining to or of the nature of œnocytes.

œnogallic (ē-nọ-gal′ik), *a.* [Gr. *οἶνος,* wine, + E. *gallic*².] Noting an acid, a derivative of gallic acid said to occur in wines.

œnoglucose (ē-nọ-glö′kōs), *n.* [Gr. *οἶνος,* wine, + E. *glucose.*] A trade-name of a good grade of starch sugar used, with raisins, in France, in the manufacture of factitious wine.

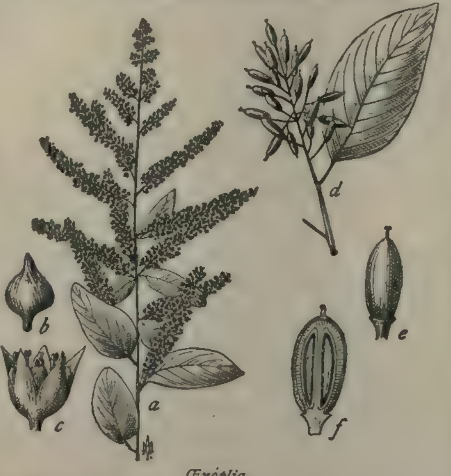
œnolin (ē′nọ-lin), *n.* [Gr. *οἶνος,* wine, + *-ol* + *-in*².] Same as ★*œnocyanin.*

œnologist (ẹ-nol′ọ-jist), *n.* [*œnolog*(*y*) + *-ist.*] One who is interested in the study of wines; a connoisseur of wines.

œnomaniac (ē-nọ-mā′ni-ak), *n.* [Gr. *οἶνος,* wine, + *μανία,* madness, + *-ac.*] One who has a mania for wine; a dipsomaniac.

œnophobist (ē-nof′ọ-bist), *n.* [Gr. *οἶνος,* wine, + *-φοβια,* ‹ *φοβεῖν,* fear, + *-ist.*] One who fears wine, that is, its use.

Œnoplia (ẹ-nō′pli-ạ̈), *n.* [NL. (established in 1819 by Roemer and Schlutes, from a section name proposed by Persoon in 1805), emended *Œnoplea,* given as ‹ Gr. *οἶνος,* wine, + *πλέως* (*πλέα*), full. The allusion is to the drunken (contradictory) descriptions by various authors.] A genus of climbing shrubs, rarely trees, of the family *Rhamnaceæ.* The leaves are deciduous, alternate, slender, petiolate, and entire, or nearly so; the fruit is a small berry-like drupe with a 2-celled stone; and the flowers are inconspicuous, 5-merous, and in terminal, usually leafy, panicles. The common varieties are tender ornamental climbing shrubs and are used for covering trellis-work in sunny positions. There are about 12 species in eastern Asia, North America, and eastern Africa, the most common of which in cultivation are *Œ. scandens* (*Rhamnus scandens* of Hill), known as the supple-jack, and *Œ. racemosa* (*Berchemia racemosa* of Siebold and Zuccarini).



Œnóplia.
a, Œnoplia racemosa; b, bud; *c,* flower; *d, Œnoplia scandens; e,* a fruit; *f,* section of a fruit.

œnopoetic (ē″nọ-pō-et′ik), *a.* [Gr. *οἶνος,* wine, + *ποιητικός,* ‹ *ποιεῖν,* make.] Relating to wine-making.

œnotannin (ē-nọ-tan′in), *n.* [Gr. *οἶνος,* wine, + E. *tannin.*] A mixture of gallotannic acid, quercitin, and a third unidentified body. The mixture is found in red wine, and was formerly supposed to be a definite compound.

Œnotheraceæ (ē″nọ-thẹ̄-rā′sẹ̄-ē), *n. pl.* [NL. (Drude, 1879), ‹ *Œnothera* + *-aceæ.*] A family of dicotyledonous choripetalous plants, of the order *Myrtales,* typified by the genus *Œnothera:* the evening-primrose family. It is the same as the *Onagraceæ* of Dumortier, still used by most authors, although *Onagra,* upon which the name is based, has no systematic standing. See *Onagraceæ* and *Œnothera.*

œnothionic (ē″nọ-thī-on′ik), *a.* [Gr. *οἶνος,* wine, + *θεῖον,* sulphur, + *-ic.*] Same as ★*ethylsulphuric.*

œnoxidase (ē-nok′si-dās), *n.* [Gr. *οἶνος,* wine, + E. *oxid* + *-ase.*] An oxidizing ferment occurring in spoiled wine: supposedly identical with laccase.

oeoe (ō′ạ-ō-ạ), *n.* The stormy petrel of the Sandwich Islands, *Oceanodroma castro.*

oersted (ėr′sted), *n.* [H. C. *Oersted,* a Danish physicist.] In *elect.,* the unit of magnetic reluctance.

> Theoretically the unit of reluctance is that of a cubic centimeter of a . . . vacuum, but to all intents and purposes, for practical work at least, the magnetic reluctance of a cubic centimeter of all non-magnetic materials . . . is the same as that of an air-pump vacuum. This unit of reluctance is called the "*oersted*" and is symbolized by the script letter, $\mathscr{R}$.
> *Elect. World and Engin.,* June 13, 1903, p. 1010.

oerstedite (ėr′sted-īt), *n.* [G. *oerstedit,* named after H. C. *Oersted,* a Danish physicist.] A mineral from Arendal in Norway, which appears to be zircon altered by hydration.

œsar, *n.* See ★*ås.*

oese (ė′zẹ), *n.* [G. *oese, öse,* a loop, link, hoop.] In *bacteriol.,* a platinum wire loop used for making cultures.

Oesel zone. See ★*zone.*

œsophagoblast, *n.* See ★*esophagoblast.*

œsophagomalacia (ẹ-sof″ạ-gọ-ma-lā′si-ạ̈), *n.* [NL., ‹ Gr. *οἰσοφάγος,* gullet, + *μαλακία,* softness.] Pathological softening of the wall of the esophagus.

œsophagoplasty, œsophagoscopic, œsophagoscopy, œsophagospasm, œsophagostomy, œsophagotome. See ★*esophagoplasty,* etc.

œstriasis (es-trī′ạ-sis), *n.* [NL., ‹ Gr. *οἶστρος,* gadfly, + *-iasis.*] Any infection with fly-larvæ of the family *Œstridæ;* in particular, the 'snotty nose' of sheep, due to the presence of *Œstrus ovis* in the nasal passages: a more restricted term than ★*myiasis.*

œstrid (es′trid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Œstridæ.*

II. *a.* Having the characters of or belonging to the family *Œstridæ.*

œstroid (es′troid), *a.* [Gr. *οἶστρος,* gadfly, + *εἶδος,* form.] Resembling or pertaining to bot-flies of the genus *Œstrus.*

œstromania (es-trọ-mā′ni-ạ̈), *n.* [Gr. *οἰστρομανία,* a frenzy, ‹ *οἶστρος,* vehement impulse, + *μανία,* madness.] Same as *nymphomania.*

œstrous (es′trus), *a.* [*œstr*(*us*) + *-ous.*] **1.** Relating to œstruation.—**2.** Relating to an œstrus or gadfly.—**Œstrous cycle,** the complete period of sexual desire in female mammals comprising the commencement or procœstrum, climax or œstrus, and decline or metœstrum.

œstrus, *n.* **4.** The climax or height of the period of sexual desire in female mammals. This is preceded by the procœstrum and followed by the metœstrum.

Oettel's apparatus. See ★*apparatus.*

œuvre (ėv′r), *n.* [F., a work: see *ure, manœuver.*] Work or a work, especially of a writer, musician, or artist.

> The technical execution of these canvases, the treatment of landscape in the former, would lead the writer to place them some years farther on still in the *œuvre* of the master. *C. Phillips,* in Portfolio, July, 1898, p. 66.

Of., Off. [*l. c.* or *cap.*] Abbreviations (*a*) of *official;* (*b*) of *officinal.*

O. F. An abbreviation (*b*) of *Odd Fellow* or *Odd Fellows;* (*c*) in *mineral.,* of *oxidizing flame.*

off, *prep.*—**Off the wind.** A vessel is said to *sail off the wind,* when the latter is abaft the beam: opposed to *on the wind,* which has reference to a breeze forward of the beam. When a vessel sails off the wind, she sails *free;* but when a vessel sails on the wind, she sails *close-hauled.*—**One off two, one off three,** in *golf,* expressions used to indicate the state of the game at different stages as regards one's own play and the play of one's opponent. When one's opponent has played three strokes more, one's next stroke is *one off three.* If it is one's turn to play again, one plays *one off two,* and so on.

off, *a.*—**Off grade of oil,** a trade-name for cotton-seed oil of an inferior quality due to bad seed, mustiness, etc.

Off. An abbreviation. See ★*Of.*

offage (ôf′āj), *n.* [*off* + *-age.*] Waste; rubbish; anything thrown off or away, as of no value.

off-break (ôf′brāk), *n.* In *cricket,* a ball which after it has pitched alters its course, or twists, as viewed by the bowler, from left to right: such a ball is said to 'break from the off.'

off-color (ôf′kul″ọr), *a.* **1.** Not of standard coloration; differing from the shade or pattern of color considered as characteristic. The term is generally applied to domesticated animals.—**2.** Somewhat improper or indecent. [Colloq.]

off-colored (ôf′kul″ọ̈rd), *a.* Same as ★*off-color,* 1.

> We elected to take in their place, if I may be permitted to use a seeming contradiction of terms, that bete noir to breeders of rival breeds—*off-colored,* scurred or horned Aberdeen-Angus grade steers.
> *Rep. Kansas State Board Agr.,* 1901–02, p. 339.

off-come, *n.* **2.** Outcome; the way something 'comes off'; good or ill result.—**3**†. In *arith.,* the product of multiplication.—**4**†. The finish of an argument; the conclusion.

off-drive (ôf′drīv), *v. t.;* pret. *off-drove,* pp. *off-driven,* ppr. *off-driving.* In *cricket,* to strike (a ball), usually a half volley, forcibly, so as to send (it) somewhere on the off-side, in front of point.

off-drive (ôf′drīv), *n.* In *cricket,* a powerful stroke by which an over-pitched ball is hit somewhere on the off-side, in front of point.

offendable (ọ-fen′dạ-bl), *a.* [*offend* + *-able.*] Capable of taking offense; liable to be angry or displeased.

offendedly (ọ-fen′ded-li), *adv.* In a manner showing that one is offended.

offense, *n.*—**Divisible offense,** in *law,* an offense in the commission of which two or more acts are done each of which is, by itself, a crime.—**Major offense,** in *criminal law,* the greater of two crimes which are joined, as murder and assault.—**Summary offense,** a trivial offense against the law, which may be dealt with promptly and without the formality of a jury trial.

offenseful (ọ-fens′fụl), *a.* [*offense* + *-ful.*] Causing offense; offensive; full of offenses.

> So then it seems your most *offenceful* act
> Was mutually committed?
> *Shak.,* M. for M., ii. 3.

offertorial (of-ėr-tō′ri-ạl), *a.* [*offertory* + *-al*¹.] Pertaining to, received or used in, an offertory. *N. E. D.* [Rare.]

off-falling (ôf′fâ″ling), *n.* That which falls off, as blossoms from a tree; also, the state of falling off: as, an *off-falling* in attendance; an *off-falling* in health.

offg. An abbreviation of *officiating.*

off-gas (ôf′gas), *n.* Chimney gas; waste gas; a product of combustion which is given off from a fire or process and is to be removed.

off-go (ôf′gō), *n.* A start; a going off.

off-grade (ôf′grād), *a.* Of inferior quality, or below a commercially recognized standard of quality: as, *off-grade* cotton-seed oil.

office, *n.*— **Front office,** police headquarters. [Thieves' cant.]

> No one knows absolutely how many guns there are in New York; the *Front Office* itself could not tell for a certainty the number of first-class thieves who are on the streets at this moment; but it is a generally accepted fact among the guns themselves that every day in the week there are enough grafters in the city to people a good-sized county-seat.
> *Josiah Flynt*, in McClure's Mag., April, 1901, p. 571.

Offices of the Virgin, that part of the Roman Catholic ritual which relates to the Virgin Mary; also a book containing such service.

officer, *n.*— **Chief officer.** See ⋆*chief.*— **Chief petty officer,** the highest rating for enlisted men in the United States navy, equivalent to sergeant-major in the army. Chief petty officers are designated according to their specialty, as: chief master-at-arms, chief boatswains' mates, chief quartermasters, chief machinists' mates, chief electricians, chief carpenters' mates, chief yeomen, hospital stewards, band-masters, etc.— **First officer,** the officer of a merchant vessel next in rank to the captain; the first mate.— **Gun-room officer.** See *steerage* ⋆*officer.* — **Marriage officer.** See ⋆*marriage.*— **Navigating officer.** Same as *navigator*, 1.— **Steerage officer,** an officer of junior rank in the United States navy, quartered in the steerage. In the British navy, the equivalent term is *gun-room officer.*

> Ensigns, not watch and division officers, second lieutenants in the Marine Corps not in command of the detachment, pay officers having the rank of ensign not heads of departments, midshipmen, and clerks shall occupy the steerage. *U. S. Navy Regulations*, Art. 1111.

officer-bush (of′i-sėr-bu̇sh), *n.* Same as ⋆*officer-plant.* See ⋆*Christmas-bush.*

officer-plant (of′i-sėr-plant), *n.* The Australian Christmas-bush, *Ceratopetalum gummiferum*: so called from its bright red appearance. See ⋆*Christmas-bush.*

officership (of′i-sėr-ship), *n.* [*officer* + *-ship.*] The whole body of officers; also, the status of an officer. *N. E. D.*

official, *a.* 4. In *pharm.*, authorized by the pharmacopœia of some country or countries: as, an *official* drug; an *official* preparation. In this sense recent, displacing the broader term *officinal.* *U. S. Dispensatory.*

officiarian (o̤-fish-i-ā′ri-an), *a.* [L. *officium*, duty, + *-ary* + *-an.*] One who makes duty the principle of ethics. *J. Grote*, Moral Ideals, p. 126. *N. E. D.*

officiary, *a.* II. *n.* 1. An official: as, one of the state *officiaries.*— 2. Officers of an organization collectively; an official body.— 3. A division of a Highland estate in charge of 'a ground officer.' *N. E. D.*

officiation (o̤-fish-i-ā′sho̤n), *n.* [*officiate* + *-ion.*] The performance of any act or ceremony by the proper officers; also, the time or term during which this performance continues.

officinally (o̤-fis′i-nal-i), *adv.* 1. In an officinal manner; according to officinal or prescribed use. Specifically — 2. In *phar.*, in accordance with the directions of the pharmacopœia.

offing, *n.*— **To keep a good offing,** to keep well off from the land.

offishness (ôf′ish-nes), *n.* Disposition to be offish; unapproachableness: implying the inclination to take offense readily.

off-load (ôf′lōd), *v. t.* and *i.* To unload.

> "Ubique" means "Entrain at once for Grootdefeatfontein!"
> "Ubique" means "*Off-load* your guns"— at midnight in the rain!
> *Kipling*, Ubique (motto of Royal Artillery).

> Every march meant dragging the donkeys one by one through several swamps or streams, *off-loading* on one side and carrying the loads through to load up again on the other. *Geog. Jour.* (R. G. S.), XVIII. 69.

off-lying (ôf′lī-ing), *a.* Lying at a distance; lying away from the main, central, or important part; lying off, as a ship off a coast.

offprint (ôf′print), *v. t.* To print off; print separately (an article or paper which is first printed as part of a periodical or other miscellany). Compare ⋆*deprint, v.*

off-put (ôf′pu̇t), *n.* A putting aside; the act of putting off, in any sense.

offretite (of′re-tīt), *n.* [Named after Professor *Offret* of Lyons.] A hydrous silicate of aluminium, potassium, and calcium occurring in minute colorless or white hexagonal prisms, also in hemispherical forms: found in the basalt of Mont Simiouse, France.

offscape (ôf′skāp), *n.* [Also *offskip*; *off* + (*land*)*scape*, (*land*)*skip.*] The background of a landscape; in *landscape-gardening*, that part of the landscape which lies beyond the property that is to be improved: an old term now coming again into use. The landscape-garden proper comprises the domain over which the artist has immediate jurisdiction and control; the offscape is the outlying scenery, with which his own work should articulate.

offscour (ôf′skour), *v. t.* To scour off, literally or figuratively.

offset, *v. t.* 2. In *mech.*, to bend so as to bring the axis out of line, but parallel to its original direction: said of a pipe, bar, rod, or shaft.— 3. To build with an offset: as, to *offset* the second story wall four inches.— 4. To transfer, by negligence (the moist or undried ink of a newly printed sheet upon the face of an overlying or facing sheet).

offset, *n.* 11. In *iron ship-building*, an abrupt deviation to one side of the general line of a bar, as an angle-bar, designed to enable it to fit over a part projecting above the surface against which the bar is fitted.

offsetting, *n.* 2. The stain which is sometimes caused upon the back of a sheet by the colored or printed matter on the sheet which is placed against it.

> If the water colors have been properly applied there is no fear of *offsetting* on the backs of the sheets.
> *S. R. Koehler*, in Smithsonian Rep. (Nat. Mus.), 1892, [p. 225.

offset-vise (ôf′set-vīs″), *n.* A bench-vise having one jaw longer than the other.

offtake, *n.* 3. A suction; an opening or pipe through which a fluid is drawn off.— 4. A taking off; specifically, a taking of goods off the market by purchase; the amount or value of goods thus taken off the market; a deduction.

> *Off-takes*, all deductions retained from men's wages for house-rent, house-coal, doctor's fees, tool-sharpening, etc.
> *Labour Com. Glossary.* N. E. D.

ofidian, *a.* and *n.* An amended spelling of *ophidian.*

O. F. M. An abbreviation of *Order of Friars Minor.*

O. Fris. An abbreviation of *Old Frisian.*

ofthalmic, ofthalmy. Amended spellings of *ophthalmic, ophthalmy.*

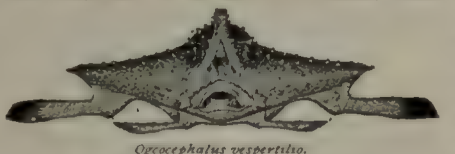
oftly (ôft′li), *adv.* Frequently.

> When you see a face there — that is
> Not the old familiar one,—
> Will you *oftly*
> Murmur softly,
> 'Here, ye watched me morn and e'en,
> Sweetest eyes, were ever seen!'
> *Mrs. Browning*, Catarina to Camoens, st. 12.

O. G. An abbreviation of *Outside Guard* or *Guardian.*

O. Gael. An abbreviation of *Old Gaelic.*

Ogcocephalus (og-ko̤-sef′a̤-lus), *n.* [NL., < Gr. ὄγκος, barb of an arrow, + κεφαλή, head.] A genus of fishes of the family *Ogcocephalidæ*, found in tropical America.



Ogcocephalus vespertilio.
(From Bulletin 47, U. S. Nat. Museum.)

ogdohedral (og-do̤-hē′dra̤l), *a.* [Gr. ὀγδοάς, eight, + ἕδρα, seat, base, + *-al*[1].] Noting a class of crystals of which the hemimorphic trigonal pyramid is the characteristic form. See ⋆*symmetry*, 6.

ogi (ō′gē), *n.* [Jap. *ogi.* The flat screen fan is called *uchiwa.*] In Japan, a folding-fan, in distinction from the flat screen fan, *uchiwa.* See the extract.

> The *ogi* is composed of sticks varying in number. The inside limbs seldom reach to the top of the fan faces, so as to enable the whole to adhere firmly when closed; and the outer frame sticks are purposely made to incurve slightly. This is a marked peculiarity of Japanese folding fans, and it is the means of particularising them among the productions of other nations.
> *C. M. Salwey*, Fans of Japan, p. 26.

Ogilbia (ō-gil′bi-ä̤), *n.* [NL., named after J. D. *Ogilby*, an Australian ichthyologist.] A genus of brotuloid fishes which inhabit tropical shores of America.

ogi otoshi (ō′gē̤ o̤-tō′shē̤). [Jap.; *ogi*, fan, *otoshi*, a dropping, a falling, a trap.] A Japanese game in which a fan with bells is set on a stand and the players sitting around endeavor to hit this target with other fans thrown in a peculiar way.

ogival, *a.* 2. Resembling in shape a pointed arch.— 3. In *ordnance*, noting the form of longitudinal section of the head of modern projectiles. The radius of the ogive is from 2 to 3 calibers.

ogive, *n.* II. *a.* Ogival.

> It is cylindrical in form, with an *ogive* nose and a nearly hemispherical stern.
> *Sci. Amer.*, Jan. 16, 1904, p. 44.

Ogygia (o̤-jij′i-ä̤), *n.* [NL., < Gr. Ὠγύγης, Ogyges, a legendary king of remote antiquity. See *Ogygian.*] A genus of Silurian opisthoparian trilobites with cephalon and pygidium of subequal size, glabella lobed, and thoracic segments with grooved pleuræ.

oha-wai (ō-hä-wī′), *n.* [Hawaiian *oha-wai*, < *oha*, a stick for catching birds, + *wai*, a liquid.] In the Hawaiian Islands, a general name for plants of the genus *Clermontia*, belonging to the family *Campanulaceæ.* They yield a milky latex which is used by the natives as bird-lime. *Clermontia macrocarpa* bears fruit about the size of a crab-apple, which, though insipid, is eaten by the natives.

ohelo (ō-hā′lō), *n.* [Hawaiian name.] The Hawaiian huckleberry, *Vaccinium reticulatum*, a low shrub found in the high mountains of several islands of the group, covering large open tracts in some places. The shining fleshy berry, though astringent, is not unpleasant to the taste, and makes a good preserve. It is the principal food of the mountain wild goose. It was formerly used as a propitiatory offering to the fire-goddess Pele, and is still celebrated in the songs of the natives.

ohelo-kai (ō-hā′lō-kī), *n.* [Hawaiian *ohelo* + *kai*, sea.] Same as ⋆*aeae.*

ohia (ō-hē′ä̤), *n.* [Hawaiian.] One of several trees, but particularly the Malay apple, *Caryophyllus Malaccensis.* (See *Malay apple*, under *Malay.*) It is often called *ohia-ai* (edible ohia), in distinction from *ohia-lehua* (flowering ohia), *Metrosideros polymorpha*, a related tree. See ⋆*lehua.*

Ohi pottery. See ⋆*pottery.*

ohm, *n.*— **Legal ohm,** a practical unit of electrical resistance defined by the Electrical Congress in Paris (1884) as the resistance of a column of mercury 106 centimeters long and one square millimeter in cross-section. The legal ohm was subsequently supplanted by the international ohm, which was more nearly an exact multiple of the absolute unit.— **New ohm,** the practical unit of resistance adopted by the British Board of Trade and defined as equal to 1.01358 British Association units.— **Reichsanstalt ohm,** the practical unit of resistance adopted by the Physikalish-Technische Reichsanstalt in Charlottenburg. It is represented by the resistance at 0°C. of a column of pure mercury 106.3 centimeters long and weighing 14.4521 grams. Same as *international ohm.* — **True ohm.** Same as *theoretical* or *absolute ohm.* See *ohm.*

ohmage (ō′mā̤j), *n.* Electrical resistance expressed in ohms as the unit.

ohm-centimeter (ōm′sen″ti-mē-tėr), *n.* A practical unit of resistivity or specific resistance equal to one ohm of resistance per centimeter of length in a conductor of one square centimeter cross-section.

Ohmic drop, in an electric circuit, fall of potential due to resistance.— **Ohmic heat.** See *irreversible* ⋆*heat* (6).

ohm-inch (ōm′inch), *n.* A unit used in comparing the conductivity of wires having the same length but differing in diameter; the product of the resistance per unit length and the cross-section of a conductor in square inches.

ohm-mile (ōm′mīl), *n.* A standard of electrical conductivity: thus, the conductivity of a metal may be given by the weight of an ohm-mile, that is, the weight of a wire which is one mile long and has a resistance of one ohm.

O. H. M. S. An abbreviation of *On His* (or *Her*) *Majesty's Service.*

oho (ō-hō′), *interj.* [*O*[2] + *ho*[1]; compare *aha*, etc.] Oh! ha! aha!: an exclamation expressing a somewhat scornful surprise, a taunt, a self-congratulatory exultation, or a bantering address.

> "*Oho!*" thought Mr. Hardie, "he comes with a proposal: I'll hear it, anyway." *C. Reade*, Hard Cash, xxv.

O. Ice., O. Icel. Abbreviations of *Old Icelandic.*

oïdioid (ō-id′i-oid), *a.* [*Oïdium* + *-oid.*] Resembling or pertaining to *Oïdium*, a genus of fungi.

oïdiomycosis (ọ-id″i-ō-mī-kō′sis), *n.* [NL. *Oïdium*, + E. *mycosis*.] Infection with some form of *Oïdium*.

> Thus far there have been reported forty-two cases of blastomycosis or blastomycotic dermatitis, of which thirty-two were local and ten disseminated. Of coccidioidal granuloma or *oïdiomycosis* there have been eighteen cases reported. *Jour. Med. Research*, May, 1907, p. 246.

oïdiospore (ọ-id′i-ọ-spōr), *n.* [NL. *Oïdium* + Gr. *σπορά*, seed (spore).] Same as ★*oïdium*, 2.

Oïdium, *n.* 2. [*l. c.*] In *bot.*, one of a considerable chain of conidia.—**Oïdium albicans**, the thrush-fungus.

oikofugic (oi-kọ-fū′jik), *a.* [Gr. *οἶκος*, a house, + L. *fugere*, flee.] Relating to or characterized by the desire to travel, migrate, play truant, etc.: opposed to ★*oikotropic*. [Rare.]

> These two opposite instincts, which we may dub oikotropic and *oikofugic*, between which the soul oscillates especially in youth, suggest again atavistic psychic stratifications, and also a once earlier pubescence. *G. S. Hall*, Adolescence, II. 382.

oikomania (oi′kọ-mā″ni-ạ̈), *n.* Same as ★*œciomania*.

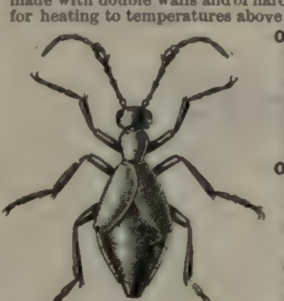
oikotropic (oi-kọ-trop′ik), *a.* [Gr. *οἶκος*, a home, + *τροπή*, a turning, < *τρέπειν*, turn.] Relating to or characterized by love of home, nostalgia, etc.: opposed to ★*oikofugic*. *G. S. Hall*, Adolescence, II. 382. [Rare.]

oil, *n.*—**Acajou oil.** See ★*acajou*^{2}.—**Alizarin-oil.** Same as *Turkey-red* ★*oil*.—**Anda-assu oil.** Same as *oil of anda*. See *Joannesia*.—**Banana-oil**, a commercial name for amyl-acetate, a liquid which possesses a pungent odor resembling that of bananas. It is used as a solvent in the preparation of pyroxylin lacquers and for mixing bronze and aluminium paints.—**Basswood-oil**, a fixed oil contained in basswood (*Tilia Americana*) and extracted by means of volatile solvents.—**Blackfish-oil**, animal oil, obtained probably from more than one species of whale and dolphin, used in tanning and finishing leather.—**Blown-oil**, a fixed oil, usually of vegetable origin, as linseed-, rape-, or corn-oil, which has been partly oxidized by heating it and blowing air through it. This increases the density and viscosity and augments its value as a lubricant when mixed with other oils.—**Blue oil**, the residual oil from the destructive distillation of Scotch bituminous shale after the portion known as paraffin-oil has been cooled and thereby the 'crude scale' (solid paraffin wax) has separated out. It exhibits marked bluish fluorescence.—**Bottlenose-oil.** (*b*) Same as *doegling* ★*oil*.—**Bread-oil**, an orange-red fluorescent oil, probably mineral in origin, said to be used by bakers to smear over oven plates.—**Butter-oil.** See ★*cotton-seed oil*.—**Calamus-oil**, an ethereal oil obtained from the root of *Acorus calamus*. It consists chiefly of two terpenes which boil at 158–159° and 255–258° C., respectively.—**Camelina-oil**, an oil obtained from the seeds of *Myagrum sativum*, used to burn and as a slow-drying vehicle for paints. See *camelina*^{3}, 2.—**Caparrapi-oil**, an oil obtained from *Nectandra caparrapi*, recommended as a substitute for copaiba balsam.—**Cascarilla-oil**, a yellow to greenish volatile oil, of aromatic odor and taste, obtained by distillation from cascarilla, the bark of *Croton Eleuteria*: sometimes used in perfumery.—**Cassia-flower oil**, an essential oil from the flowers of *Acacia Farnesiana*, used in perfumery.—**Certificate oil.** See ★*pipe-line certificate*.—**Chaulmugra-oil.** It has been recently shown that the chaulmugra-oil of commerce is not obtained from the seeds of *Gynocardia odorata*, but from those of *Taraktogenos Kurzii*.—**Chinese cabbage-oil.** Same as *Shanghai* ★*oil*.—**Choice oil**, the trade-name of a very light-colored cotton-seed oil, bland and free from any decided taste.—**Cold-pressed oil.** See *hot-expressed* ★*oil*.—**Compound oil**, oil compounded of two or all of the three kinds of oil, animal, mineral, and vegetable, or of mixtures of each. Animal oils are liable to do injury to a bearing by reason of the fatty acids they contain; mineral oils are liable to be squeezed out from a bearing and to evaporate or volatilize; vegetable oils are liable to oxidize or dry and gum, becoming sticky. Many combinations of these can, however, be made, in which the advantages of each are to some extent combined and the disadvantages lessened.—**Cotton-seed oil.** See ★*cotton-seed*.—**Coundi-oil, crab-wood oil.** Same as *Touloucouna* ★*oil*.—**Creosote-oil**, formerly the same as the 'heavy oil' or 'dead oil' from the distillation of coal-tar. It now includes, beside this, somewhat similar but chemically different products obtained from bituminous shale, from the waste gases of blast-furnaces, and from bone-oil. Creosote-oils are used chiefly in the preservation of timber from decay.—**Cress-seed oil**, a vegetable oil obtained from *Lepidium sativum*.—**Crude oil.** See ★*crude*.—**Cylinder oil**, an oil or mixture of oils, generally mineral, suitable for lubricating the piston moving in the cylinder of an engine. It should have a high flash-point, be sufficiently viscid at the high temperature of the cylinder, and contain as little as possible of any constituent capable of volatilizing at this temperature.—**Cypress-oil**, a yellowish volatile oil obtained by the distillation of the leaves and young branches of *Cupressus sempervirens*. It consists principally of δ-pinene. From the last runnings of the distillate a crystalline body, cypress camphor, sometimes separates out. Cypress-oil is used as an inhalant to relieve whooping-cough.—**Danforth's oil**, the trade-name of a petroleum naphtha of specific gravity 0.69 to .70, boiling at 80–110° C. used as a solvent and for burning in vapor-stoves.—**Detonating oil**, a name applied to nitroglycerin when it was first introduced into practical use for blasting.—**Doegling oil**, or **doegling train-oil**, oil obtained from the blubber of certain cetaceans, chiefly *Hyperoödon rostratus* and *H. bidens*: used as a substitute for and adulterant of sperm-oil. Also called *bottlenose-oil* and *arctic sperm-oil*.—**Drying oil.** See *oil*, 1.—**Elæococca oil.** See ★*Elæococca*.—**Eucalyptus-oil**, a pale yellow oil, usually slightly dextrorotatory. It is obtained by distillation from the leaves of *Eucalyptus globulus*, *E. amygdalina*, and *E. citriodora* from Australia, and is used in perfumery and medicine. The oil is a mixture of cineol with several terpenes.—**Euonymus oil.** See ★*euonymus-oil*.—**Fennel-oil**, a volatile oil, of aromatic anise odor, obtained by distilling the fruits of fennel, *Fœniculum capillaceum*. It contains anethol and several terpenes.—**Fulminating oil**, a former name of nitroglycerin.—**Garden-cress oil.** Same as *cress-seed* ★*oil*.—**Geranium-oil.** (*a*) Pelargonium or rose-geranium oil, a fragrant essential oil distilled from the leaves of several cultivated species of pelargonium, used in perfumery. It comes chiefly from Spain, France, Algiers, and the island of Réunion. (*b*) Indian geranium or palmarosa oil (formerly called *Turkish geranium-oil*), a fragrant essential oil distilled from the leaves of *Andropogon Schœnanthus*, used in perfumery. It comes from the Bombay Presidency in India.—**Gray oil**, a preparation made by rubbing up metallic mercury and lanolin, with perhaps the addition of olive-oil: employed in hypodermic injection.—**Green oil**, the second product obtained in purifying Yorkshire grease from wool or other similar material, by distillation with superheated steam: sometimes used for coarse lubricating purposes, sometimes returned to the still to be worked over along with more of the crude material.—**Guaiac-wood oil**, an essential oil distilled from guaiacum wood. It is now esteemed of considerable value in perfumery.—**Guilandina-moringa oil.** Same as *ben-oil*, a fat oil obtained from the seeds of *Moringa oleifera*, used in the extraction of perfume from flowers by the process of enfleurage, as it shows little tendency to become rancid.—**Guizot-oil.** Same as *ramtil*-★*oil*.—**Gundschit oil.** Same as *lallemantia*-★*oil*.—**Hammer-fish oil**, an oil obtained from the liver of the hammer-fish, *Sphyrna zygæna* or *Zygæna malleus*: one of the varieties of shark-oil.—**Headlight oil**, an illuminating oil distilled from petroleum, colorless and of 150° F. fire-test, fit for use in the headlight lamps of locomotives.—**Hemp-oil**, an oil obtained from the seed of *Cannabis sativa*. It belongs to the class of drying oils and is used to mix with paints, in making varnishes and soft soap, and to adulterate linseed-oil.—**Heracleum-oil**, in *chem.*, an essential oil obtained from cow-parsnip, *Heracleum spondylium* and *H. giganteum*. It consists essentially of octyl acetate, $C_8H_{17}.C_2H_3O_2$.—**Horse-chestnut oil**, a fatty oil obtained in small quantity from the kernels of the horse-chestnut (*Æsculus Hippocastanum*).—**Horsefoot-oil**, a fixed oil extracted from the feet (hocks) of horses.—**Hot-expressed oil**, an oil obtained by pressure aided by heating, in contradistinction to *cold-pressed oil*, obtained at common temperature.—**Incandescent oil-vapor burner.** See ★*burner*.—**Indian-cress oil**, an oil obtained from the seed of Indian cress, *Tropæolum majus*.—**Indian geranium-oil** or **grass-oil.** Same as *geranium*-★*oil* (*b*).—**Indarjau-oil** [Hindustani, *indarjau*, the barley of India, + *-oil*], a fatty oil obtained from the seed of *Wrightia antidysenterica*, the bark of which (conessi bark) is medicinally used in India. The seeds and oil are used on account of their vermifuge effect.—**Japanese sardine-oil**, a fish-oil introduced into European commerce in 1885, obtained by boiling fish with water or by allowing the fish to rot and separating the oil by drainage and pressure. The crude oil, which has a most unpleasant smell, is refined at Yokohama by remelting, producing two layers, the one of liquid oil, the other of solid fish-stearin or fish-wax. It is believed to be available for use in making soap and candles, and in some of the operations of dyeing. It is obtainable in large quantity.—**Jasmine-oil**, the natural oil of jasmine, originally extracted by the process of enfleurage. It appears to consist to a large extent of benzyl acetate, and this ester, artificially produced and having its odor modified by the addition of other substances (one of which is probably the methyl ester of anthranilic acid), is sold as a perfume under the name of synthetic oil of jasmine.—**Jonquil-oil**, a yellowish substance of butter-like consistence, extracted by ether, along with odorless jonquil camphor, from the fresh flowers of *Narcissus jonquilla*. It has a strong odor of the flowers.—**Kulp-liver oil**, an oil obtained from the liver of the kulp.—**Kurung-oil** or **kurunj-oil.** See ★*kurunj-oil*.—**Laintlaintain-seed oil**, a fat oil obtained from the seed of meni or laintlaintain, *Lophira alata*, of Senegambia and Sierra Leone, brought from the west coast of Africa.—**Lallemantia-oil**, a fatty oil, of distinctly drying character, obtained from *Lallemantia iberica* of Persia and Kurdistan.—**Lima oil**, crude petroleum obtained from the district about Lima, Ohio. It contains sulphur compounds which unfit it for refining by the ordinary process, and hence it is either treated by special methods or is used as fuel.—**Lime-oil**, the essential oil or essence obtained from the rind of the fruit of *Citrus limetta* in Italy, a distinct essence being also obtainable from the leaves of the same tree. West Indian lime-oil or limette-oil is obtained from the rind of the fruit of *Citrus medica*, and differs in composition and character from the Italian. It is produced by expression; a very inferior grade is produced by distillation as a by-product in evaporating the juice of the fruit.—**Linaloa-oil**, an essential oil or essence of importance in perfumery, obtained chiefly by distillation from the wood of a Mexican tree, *Bursera delphechiana* or *B. aloexylon*, locally known as *lignaloë* or *linalué*. (See *linaloa*.) The annual consumption is estimated at about 20,000 kilograms. A similar oil is obtained in French Guiana from a wood called *likari*, probably *Ocotea caudata*, and this product is known as *essence de likari*. In both oils the principal constituent is an alcohol, $C_{10}H_{18}O$, which has been named ★*linalool*.—**Ling-liver oil**, a fatty oil extracted from the liver of the ling, *Molva vulgaris*, similar in general character to cod-liver oil.—**Louar-oil**, a fish-oil obtained from the Indian and Malayan louar, *Clupea lemuru* and *C. palasah*.—**Manatee-oil**, a fatty oil obtained from the carcass of the sea-cow or manatee, *Manatus americanus* or *australis*.—**Mangosteen-oil.** Same as *cocum-butter*.—**Massoy-oil.** See *oil of Massoy*.—**Meni-seed oil.** Same as *laintlaintain-seed* ★*oil*.—**Middle-oil**, the trade-name of the second principal portion of the products of the distillation of coal-tar. It represents the part of the distillate which comes over between 170° and 230° C., and by further separation yields phenol or carbolic acid and naphthalene.—**Mignonette-oil**, a fragrant oil, obtained from *Reseda odorata*, which has been found to contain the diolefine alcohol geraniol.—**Monarda-oil**, an essential oil of varying composition and character obtained from several species of *Monarda*, as from *M. punctata*, *citriodora*, *didyma*, and *fistulosa*.—**Mururé-oil**, an oil obtained in Brazil from *Bichetea officinalis*, used locally in medicine as an emmenagogue and antisyphilitic remedy.—**Mustard-seed oil**, the essential oil or essence of black mustard-seed, essentially allyl isothiocyanate: now artificially reproduced in large quantity as an article of commerce.—**Myagrum-oil.** Same as *German* ★*sesame-oil* or *camelina*-★*oil*.—**Naphthalene-oil**, that portion of coal-tar which distils over between 200° and 300° C. It contains chiefly phenols, naphthalene, and naphthalene derivatives.—**Neroli-oil.** See *oil of neroli*, under *oil*.—**Neutral oil**, the lightest portion of the lubricating oil from petroleum, of density 32° to 38° Bé., used to mix with animal or vegetable oil.—**Nigella-oil**, the essence or volatile oil distilled from the seed of *Nigella sativa*. It has a disagreeable odor, but the oil from the seed of *N. damascena* is said to have the pleasant odor and taste of the wild strawberry.—**Niger oil.** Same as *ramtil*-★*oil*.—**Nikkei oil**, a volatile oil obtained in Japan by distillation with water of the leaves and young twigs of *Cinnamomum loureirii*, the Japanese cinnamon or cassia-bark tree.—**Niko-nut oil**, a vegetable fat oil from the west coast of Africa, likely to prove valuable if obtainable in large quantity.—**Non-drying oils**, oils which, like olive-oil, do not absorb oxygen freely from the air with production of a solid resinous or india-rubber-like substance.—**Off-grade of oil.** See ★*off*.—**Oil of Anacardium**, a blistering oil, which turns black on exposure to the air, obtained from the pericarp of *Anacardium orientale*.—**Oil of ants**, a fat oil of yellow color obtained from the residue left after distilling the bodies of ants with water in order to procure dilute formic acid.—**Oil of apple**, the isoamyl ester of isovaleric acid, $C_4H_9COO.C_5H_{11}$, made by the action of isovaleric acid on a mixture of fusel-oil and sulphuric acid. It boils at 190.3° C.—**Oil of behen.** Same as *ben-oil*.—**Oil of Canada snakeroot**, an essential oil derived by distillation from the rhizome of *Asarum Canadense*, the wild ginger or Canada snakeroot, and probably also of some related species. It has an agreeable aromatic odor and is considerably used in perfumery in this country, chiefly for strengthening other odors.—**Oil of cognac.** See ★*cognac*.—**Oil of culilawan**, an essence or essential oil obtained, by distillation with water, from the bark of *Cinnamomum culilawan*. Its principal constituent is eugenol.—**Oil of geranium.** For East Indian and Turkish oil of geranium, see *palmarosa* ★*oil*. For *rose-geranium oil*, see ★*oil of rose-geranium*.—**Oil of ginger**, a volatile oil consisting of camphene, phellandrene, and sesquiterpene, which exists to the extent of 1–3 per cent. in the rhizome of *Zingiber officinale*. It gives to ginger its odor and flavor.—**Oil of ginger-grass**, an oil imported from India, generally assumed to be an inferior and usually adulterated variety of Indian geranium or palmarosa oil; but there seems to be some reason for believing that it is occasionally a genuine product of the distillation of other grasses than *Andropogon Schœnanthus*. See *Andropogon*.—**Oil of grapes**, the trade-name of diluted fusel-oil.—**Oil of hartshorn.** See ★*hartshorn*.—**Oil of mastic**, a colorless, balsamic volatile oil obtained by the distillation of mastic.—**Oil of Osmitopsis**, an essence or volatile oil from the South African plant *Osmitopsis asteriscoides*.—**Oil of pear**, the isoamyl ester of acetic acid, $CH_3COO.C_5H_{11}$, made by heating fusel-oil with sulphuric and acetic acids. It boils at 138.6° C.—**Oil of petitgrain**, a volatile oil, similar in odor to oil of neroli, obtained by the distillation of the leaves, twigs, and immature fruit of the bitter orange, *Citrus bigaradia*. It is now manufactured chiefly in Paraguay.—**Oil of pineapple**, the ethyl ester of normal butyric acid, $C_4H_9O_2.C_2H_5$, made by the action of butyric acid, or rancid butter, on a mixture of sulphuric acid and alcohol. It boils at 119.9° C.—**Oil of rose.** Artificial rose-oil is now extensively sold as a substitute for the product of rose-flower distillation. It consists mainly of geraniol and citronellol obtained from other and cheaper vegetable sources, but in actual composition and properties it is essentially identical with the natural rose-oil aside from its odorless stearoptene.—**Oil of rose-geranium**, an oil distilled from the leaves of *Pelargonium*, chiefly *P. capitatum*, the common rose-geranium, a variety of *P. radula*, the skeleton-leafed geranium, and *P. odoratissimum*, the nutmeg geranium. It is produced commercially in France, Algiers, Réunion Island, and Spain. Its chief constituent is geraniol. It serves as a substitute for the oil of roses.—**Oil of rosemary.** Recent examination of English, French, Spanish, and Dalmatian rosemary-oil seems to show the presence of more than one substance, with difference of optical character as respects polarization.—**Oil of sweet birch**, an oil distilled from the bark of the cherry-birch or sweet birch, *Betula lenta*. It is almost pure methyl salicylate. It has mainly taken the place of the similar oil of wintergreen, being more cheaply procured, and commercially goes under its name.—**Oil of tartar**, deliquesced carbonate of potash.—**Oleander-seed oil**, a fatty oil extracted from the seed of *Nerium thevetia* in India.—**Olive-kernel oil**, an oil extracted from the kernels of the stones or seeds of the olive as distinguished from that yielded by the pulp of the fruit. It is generally produced, not by expression, but by extraction with carbon disulphid or some other volatile solvent, is darker in color than the oil from the pulp, and has a disagreeable smell which unfits it for table use.—**Oolachan oil.** Same as *eulachon-oil* (which see, under *eulachon*).—**Opachala** or **owala oil**, a fatty oil extracted from the kernels of *Pentechlethra macrophylla*, an African leguminous tree. The term *opachala* belongs to the Eboe country, *owala* to the Gaboon.—**Orange-seed oil**, a fat oil extracted from the seed of the orange, *Citrus aurantium*.—**Owala oil.** Same as *opachala* ★*oil*.—**Oxidized oil.** Same as *blown* ★*oil*. Cotton-seed oil and rape-oil are those most frequently treated in this way.—**Palmarosa oil.** See *geranium*-★*oil* (*b*).—**Palm-kernel oil**, the white concrete oil obtained by expression from palm-kernels. It is used in the manufacture of fine soaps and artificial butter. Though obtained from the same plant which is the principal source of palm-oil, this substance has quite different properties. The former is an African product of native manufacture, prepared from the pulp of the fresh fruit, while the latter is the product of modern machinery and its production is almost entirely confined to Europe. See *palm-oil*.—**Palm-nut oil.** Same as *palm-kernel ★oil*.—**Peach-kernel oil,** a bland fixed oil obtained by expression from the seed of the peach, very similar to and used instead of sweet-almond oil and olive-oil. Also called *peach-oil*.—**Peanut-oil,** oil obtained by expression from the nuts of *Arachis hypogæa*. It is produced on a large scale, particularly in France, and is used as a substitute for and an adulterant of olive-oil for table use, as also in soap-making. It is chemically peculiar in containing the glycerides of two special fatty acids, arachidic acid ($C_{20}H_{40}O_2$) and hypogæic acid ($C_{16}H_{30}O_2$). Also known as *groundnut-oil, earthnut-oil*, or *arachis-oil*.—**Pea-oil,** a fatty material extracted by solvents from the seeds of the common pea, *Pisum sativum*. It contains phosphorized constituents of the nature of lecithin.—**Pear-oil.** See *★oil of pear*.—**Pepper-oil,** a fragrant essence or volatile oil obtained by distilling with water crushed black pepper, the unripe fruit of *Piper nigrum*. Similar but somewhat different products are obtained from several other species of *Piper*, and an entirely different oil, known as *Japanese oil of pepper*, is prepared from the fruit of *Anthoxylum piperitum*. This smells like the lemon, its principal constituent being citrol.—**Petit-grain oil.** See *★oil of petit-grain*.—**Phinotas-oil,** the trade-name of an insecticide preparation which contains coal-tar phenols and light petroleum hydrocarbons: used for the extermination of mosquitos in stagnant water, marshes, etc. *U. S. Dept. Agr.*, Div. Entom., Bulletin 46, p. 108.—**Pilchard-oil,** a fat oil obtained from the body of the pilchard, *Clupea pilchardus*, of the coast of Cornwall.—**Pine-needle oil,** an essence or volatile oil obtained by distillation, with water, of the needles, young twigs, and cones of sundry species of pines, firs, spruces, and larches—among others *Pinus sylvestris* and *montana*, *Picea excelsa*, *Abies alba*, and *Canadensis*, and *Larix decidua*. It is used in the production of sprays in the sick-room, in baths, and in perfuming soaps.—**Pistachio-oil,** a volatile oil or essence obtained by distilling mastic, the resinous exudation from *Pistacia lentiscus*, a tree growing in Chios and elsewhere in the basin of the Mediterranean. It is used in Turkey in flavoring a spirituous liquor.—**Plum-kernel oil,** a bland fat oil obtained by expression from the seed of the plum, *Prunus domestica*, not produced as extensively as the similar product from the almond, apricot, and peach.—**Polei-oil,** the essence or volatile oil distilled with water from European pennyroyal, *Mentha Pulegium*.—**Poola oil.** Same as *★kurunj-oil*.—**Porgy-oil,** a fish-oil from the menhaden, *Brevoortia tyrannus*.—**Portugallo oil,** the essential oil obtained by expression from the rind of the fruit of the sweet orange, *Citrus aurantium*.—**Prima oil,** the trade-name of the grade of 'solar oil' from bituminous shale with lower density and boiling-point.—**Prime oil** the trade-name of a particular grade of cotton-seed oil, without disagreeable taste, though a little dark in color, available for direct use as food.—**Purgir-nut oil** or **purqueira-oil.** Same as *★jatropha-oil*. **Radish-seed oil,** a fat oil obtained from the seed of the radish, *Raphanus sativus oleiferus*, of China.—**Ramtil-oil,** a semi-drying fat oil from the seeds of *Guizotia abyssinica* (see *Guizotia*), produced in India and Abyssinia. It is used as food in India, and in the manufacture of soap in England. Also known as *Niger oil* and *guizot-oil*.—**Rangoon oil,** the trade-name of a semisolid or butter-like petroleum from Upper Burma. It was refined for a time in England, chiefly for the sake of the solid paraffin it yielded, which was employed in making candles.—**Raphigaster-oil,** a brown oil, with fetid smell, obtained from the body of the gray leaf-bug, *Raphigaster punctipennis*. It yields cimicic acid, of the oleic-acid series.—**Raps-oil.** Same as *rape-oil* (which see, under *oil*).—**Ray-liver oil.** Same as *ray-oil*.—**Rectified oil of vitriol,** the trade-name of sulphuric acid concentrated by boiling off the water of the originally dilute acid until the product contains about 95 per cent. of real acid, though often not more than 93 or 94 per cent. is met with.—**Red oil.** (*b*) A manufacturers' name for crude oleic acid obtained as a by-product in making the hard fatty acids for candles. It is largely employed in soap-making, and has been utilized to some extent for candles by conversion into artificial palmitic acid. See *★sulpholeic acid*.—**Reduced oil,** crude petroleum from which the more volatile hydrocarbons have been driven off by partial evaporation. It is valuable as material for the manufacture of lubricating-oils.—**Resin-oil.** Same as *rosin-oil*.—**Secunda oil,** the trade-name of the grade of 'solar oil' from bituminous shale with higher density and boiling-point.—**Shanghai oil,** the trade-name of a kind of colza- or rape-oil obtained from the seed of *Brassica* or *Sinapis chinensis*, imported from China. Also known as *Chinese cabbage-oil*.—**Sherwood oil,** the trade-name of petroleum ether which boils at 40° to 70° C., used as a solvent for india-rubber and in the extraction of fat oils, and burned as vapor in so-called portable gas-machines.—**Soap-oil,** the trade-name of the lowest of four grades of summer yellow cotton-seed oil. It is darkest in color and least agreeable in taste: used for soap-making.—**Solar oil,** the trade-name of illuminating oil from bituminous shales, marketed in two grades, *prima*, of specific gravity .825 to .830 and boiling at 175 to 180° C., and *secunda*, of specific gravity .830 to .835 and boiling at 195 to 200° C.—**Spindle-oil,** the lighter portion of the petroleum distillates used for lubrication, especially Russian lubricating-oil of specific gravity .885 to .895, suitable for light-running machinery such as that used in cotton-spinning.—**Spirit-oil,** the first product obtained in the distillation of Yorkshire grease from wool-scouring, or of similar recovered greases from other sources.—**Sulphocarbon-oil,** the trade-name of olive-oil of inferior quality, obtained from the marc, or pressed cake, by the solvent action of carbon disulphid.—**Summer white oil,** the trade-name of a grade of cotton-seed oil made from summer yellow oil by treating it with fullers earth and filtering, or otherwise removing the greater part of the yellow color.—**Summer yellow oil,** the trade-name for cotton-seed oil which is liquid at summer temperature and possesses the natural yellow, but has not yet been deprived of color or caused by artificial cooling to deposit the stearin which would lead to its partially solidifying in winter.—**Sunned oil,** the trade-name of crude petroleum which, in an early stage of its industrial development, was sometimes increased in density and fitted for use as a lubricating-oil by exposing it to the sun as a thin layer on the surface of a tank of warm water, the more volatile portions being thus in part removed by evaporation.—**Tea-seed oil.** Same as *tea-oil*.—**Tobacco-seed oil,** a greenish-yellow fatty oil obtained from the seed of tobacco by expression. It dries on exposure to air.—**Touloucouna-oil,** a fat oil obtained from the seeds of *Carapa Guianensis* by expression. Also known as *carapa fat, andiroba fat, kundah-oil* (which see), *crabwood oil*, and *tulucana-oil*. It is said to be used by the natives of Brazil and Guiana as an unguent for the head to get rid of insects. See *Carapa*.—**Toulouron-oil,** a fat oil obtained from *Pagarus latro*, said to be used medicinally in Senegal in cases of rheumatism.—**Tulucana-oil.** Same as *Touloucouna-★oil*.—**Turkey-red oil,** an oil-mordanting assistant used in the production of alizarin or Turkey red. It is a sulphonated castor-oil, prepared by allowing sulphuric acid to run slowly into castor-oil with continual agitation during a period of from 16 to 20 hours. It readily mixes with water that has been made slightly ammoniacal. Also known as *alizarin-oil, soluble oil*, and *sulphonated oil*. See *★sulpholeic acid*.—**Vaseline-oil,** the trade-name of a paraffin-oil obtained from bituminous shale, used in Germany to dissolve ceresin or solid paraffin, thereby producing the German vaseline or *unguentum paraffini*.—**White oil,** the trade-name of cotton-seed oil of which the yellow color has been removed or nearly removed, generally by agitation with a little fullers' earth, followed by filtration. See *★cotton-seed oil*.—**Winter white oil,** the trade-name of a grade of cotton-seed oil which has been exposed to a low temperature and separated by expression from the solid stearin deposited, so that it remains liquid at ordinary winter temperature, and has also been deprived of yellow color by agitation with fullers' earth and filtration.—**Winter yellow oil,** the trade-name of a grade of cotton-seed oil which has been cooled and the separated stearin removed by pressing, so that the oil remains liquid in winter, but has not had the natural yellow color removed.—**Yomugi oil,** a volatile oil or essence from Japan, of uncertain botanical origin, by some reported as distilled from the 'kiku' or chrysanthemum, but more probably from *Artemisia vulgaris*.

oil-bath (oil′bȧth), *n.* 1. In *mech.*: (*a*) A quantity of oil in a cup or receptacle, such as a gear-case or engine-case, into which a running part of a mechanism dips, carrying or throwing oil to other parts.

> A motor mounted on four wheels, two running on top and two underneath the rail, all four wheels being driven by the motor through worm gearing running in an *oil-bath*.
> *Elect. Rev.*, Sept. 24, 1904, p. 536.

(*b*) The vat or vessel filled with oil in which pieces of steel are dipped in oil-tempering. (*c*) A stream of oil directed upon a tool that is cutting steel.—2. In *phys.*, a vessel containing oil, in which an object, as a resistance-coil or the bulb of a thermometer, the temperature of which is to be held constant, is submerged.—**Fresenius's oil-bath,** a convenient form of oil-bath, made with double walls and of hard soldered copper, used for heating to temperatures above that of boiling water.



Buttercup Oil-beetle (*Meloë angusticollis*).
Twice natural size.

oil-beetle, *n.*—**Buttercup oil-beetle,** an American meloid beetle, *Meloë angusticollis*, found commonly in meadows and pastures, feeding on the leaves of buttercup.

oil-belt (oil′belt), *n.* A region in which petroleum is found.

> From the general direction in which developments were made, the term "*Oil belt*" . . . came into use early in the history of the oil region.
> *Mag. of Western* [*Hist.*, III. 225.

oil-coat (oil′kōt), *n.* An oilskin coat; a slicker. See *sleeker*, 3.

oil-collector (oil′kọ-lek″tọr), *n.* A shallow pan or vessel for catching the oil that drips from a machine or bearing, so that it may be used again.

oil-compass (oil′kum″pas), *n.* See *★compass.*

Oil-creek group. See *★group*¹.

oil-cushioned (oil′ku̇sh″und), *a.* Carried on a thin film of oil: said of journals. This is easily done for light pressures, but for heavy pressures the oil must be forced into the bearing.

oil-engine (oil′en″jin), *n.* An internal-combustion engine in which the fuel is derived from oil, usually a derivative from petroleum, injected as a mist or spray mixed with air.

oiler, *n.* 6†. An oil-merchant; an oilman.—7. An oil-well. [Colloq.]—**Pressure-feed oiler,** a device for supplying oil to one or more bearings regularly, by keeping the supply of oil in a reservoir under a constant pressure.

oilery, *n.* 2. An establishment where oil is manufactured for the market and sold.

oil-extractor (oil′eks-trak″tọr), *n.* 1. An apparatus for dissolving out residual oil from vegetable marc, or pressed cake, by means of carbon disulphid, petroleum ether, or some other volatile solvent, which is distilled off, condensed, and used over again.—2. An oil-filter; a device for separating oil from water or other substances.—3. A centrifugal wringer used to extract the oil used in cutting metals from the metal chips.

oil-feed (oil′fēd), *n.* An oil-cup; a device for feeding oil to a bearing; a device for feeding oil to a tool that is cutting steel.

oil-field (oil′fēld), *n.* An area in which petroleum may be found.

oil-firing (oil′fīr″ing), *n.* The act or process of burning oil as a fuel.

oil-fish (oil′fish), *n.* A name of the escolar, *Ruvettus pretiosus*.

oil-fuse (oil′fūz), *n.* A fuse for electric circuits, in which the fuse-wire is submerged in a heavy oil. When rupture occurs through the melting of the fuse-wire, the oil fills the gap and chokes the arc formed between the terminals.

oil-globe (oil′glōb), *n.* In *mech.*, a spherical oil-cup.

oil-globule (oil′glob″ūl), *n.* One of the minute spherules of oil or fat often found as inclusions in the living protoplasm of cells or eggs.

oil-harden (oil′här″dn), *v. t.* To harden (as steel) by quenching in oil. The general effect of quenching from any temperature in oil heated to 80° C. is to increase the ultimate stress without reducing the elastic limit. The latter result, however, depends in some cases on the proportion of carbon present in the steel. *Electrochemical Industry*, Feb., 1904, p. 51.

oil-hardened (oil′här″dnd), *p. a.* Hardened by being heated and then quenched in an oil-bath.

oil-hardening (oil′härd″ning), *n.* The process of hardening steel by quenching it, when hot, in oil instead of in water. The oil cools the steel less rapidly than water, thus producing greater elasticity and tensile strength and the absence of extreme brittleness.

oil-kiln (oil′kil), *n.* In *ceram.*, a kiln in which kerosene-oil is burned as fuel.

oil-lease (oil′lēs), *n.* 1. A grant to a lessee of the right to bore within certain limits for "oil, salt, or other minerals," the work to be commenced within a certain time and "to be prosecuted with all reasonable diligence." *J. H. A. Bone*, Petroleum and Petroleum Wells, p. 33.—2. The land covered by such a lease.

oil-mist (oil′mist), *n.* Oil spray; vapor from a quantity of oil which is being constantly agitated.

oil-mold (oil′mold), *n.* Same as *★grease-mold.* See also *mold*², *n.*, and *Phycomyces*.

oilometer (oi-lom′e-tėr), *n.* [*oil* + Gr. *μέτρον*, measure.] A reservoir for the storage of oil. *N. E. D.*

oil-pipe (oil′pīp), *n.* A pipe used to convey oil.

oil-pulp (oil′pulp), *n.* A soft pasty mass obtained by mixing a solution of alum with one of soap, the precipitate consisting of aluminium salts of the fatty acids, chiefly oleic, palmitic, and stearic acids. It is dissolved in mineral oil to form an oil-thickener, used to increase the viscidity of mineral lubricating-oil. The real value of the factitious viscidity thus given to lubricants is doubtful.

oil-pump, *n.* 2. A pump for pumping oil under pressure through a pipe-line to a burner or to an oil-engine.—3. A sinking-pump for raising oil from a non-flowing well.

oil-purifier (oil′pū″ri-fī-ėr), *n.* An oil-filter; a device for cleaning oil which has been used on a machine, either on the bearings or on a tool that is cutting steel.

oil-ring, *n.* 2. In *mach.*, a loose ring which surrounds a horizontal journal and the lower part of the bearing, and dips into an oil-cellar from which, by its rotation, it brings oil to the top of the journal.

> Bearings of the usual self-oiling type, with two revolving brass *oil rings* in each.
> *Elect. World and Engin.*, April 23, 1904, p. 777.

oil-river (oil′riv″ėr), *n.* **1.** A river whose banks produce rock-oil or petroleum.—**2.** A river down which large quantities of oil (generally palm-oil) are carried to the sea for export.

oil-rock (oil′rok), *n.* The stratum which is productive of oil in a petroleum-field. It may be limestone, shale, or sandstone. Compare *oil-sand.*

> With regard to the Spindletop *oil-rock*, the report states that its exceptional character explains in a measure the remarkable features of the Spindletop pool.
> *Sci. Amer. Sup.*, Nov. 15, 1902, p. 22469.

oil-sardine (oil′sär-dēn″), *n.* A common name of *Clupea scombrina*, a clupeoid fish of the East Indian fauna.

Oil-seed cake. Same as *oil-cake.*

oil-separator (oil′sep″ạ-rā-tọr), *n.* A device for extracting oil from steam or water with which it has become mixed. See ★*steam-separator.*

oil-shell (oil′shel), *n.* A projectile of metal, wood, or heavy water-proof card-board, containing oil, and designed to be shot from a gun in heavy storms at sea to a position some distance ahead of the vessel, as a means of spreading the oil over the surface of the water that the ship is approaching. Upon striking the water the head of the projectile opens, the contents escape, and the sea is calmed for the passage of the ship. *Sci. Amer. Sup.*, April 9, 1904, p. 23641.

oil-sign (oil′sīn), *n.* An indication, in the form of oil-seepage or oil-springs, of subterranean pools of petroleum; a guide for the driller in selecting a point for a boring.

oilskinned (oil′skind), *a.* Protected with an oilskin coat.

oil-still (oil′stil), *n.* The still in which the first stage of the distillation of crude petroleum is carried out, furnishing the gasolene, naphtha, and illuminating oil, the material remaining being then transferred to the tar-still.

oil-sugar (oil′shůg″ặr), *n.* In *phar.*, a trituration of 1 part of a volatile oil with 30 parts of sugar. Also called *elæosaccharum* and *oleosaccharum.*

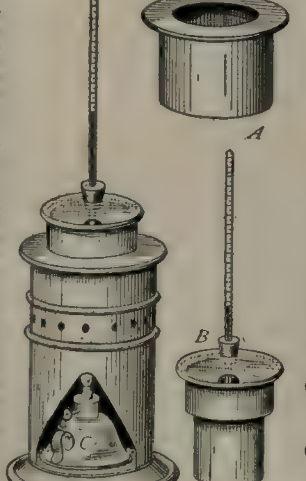
oil-switch (oil′swich), *n.* In *elect.*, an electric switch or circuit-breaker in which the break occurs under oil: used for opening circuits of very great power and of very high voltage. *Trans. Amer. Inst. Elect. Engin.*, 1904, p. 13.

oil-tank, *n.*—**Oil-tank steamer, vessel.** See ★*tank-vessel.*

oil-tanned (oil′tand), *p. a.* Tanned principally by oil and heat: a process applied to sheepskins and lambskins. *Flemming*, Practical Tanning, p. 46.

oil-temper (oil′tem″pėr), *n.* A temper obtained in steel by heating it to a temperature corresponding to the degree of hardness desired and then cooling it by quenching it in oil.

oil-tester, *n.* **2.** It consists of a copper vessel, *A*, serving as a water-bath in which a second copper vessel, *B*, containing about 10 ounces of the oil, is placed. The water is heated at the rate of 20° F. per minute by a small alcohol or oil flame, *C*. The temperature of the oil is noted by the aid of a thermometer supported by a glass plate which covers the oil except at one point where an opening is left for the insertion of a small flame such as a lighted broom-splint or match-stick would give. When the oil has reached 85° F., testing is begun by applying a flame at the opening. When a flash of blue flame is seen over the surface of the oil, the reading of the thermometer is taken. Generally a flash-test of 100° F. is required by law.



Oil-tester.

oil-thickener (oil′thik″nėr), *n.* A substance used to increase the viscidity of oil, especially mineral oil, and so improve it as a lubricating material.

oil-thrower (oil′thrō″ėr), *n.* A device to throw or scatter oil; specifically, a raised ring on a shaft at the end of a journal or on the body of a revolving shaft. Oil creeping along the shaft from the journal is thrown off at this ring by centrifugal force.

> The lubrication is automatic, by the use of continuous oil ring lubricators; special *oil throwers* are provided to prevent the creepage of oil along the shaft.
> *Elect. World and Engin.*, Nov. 7, 1903, p. 777.

oil-torch (oil′tôrch), *n.* See *gasolene* ★*torch.*

oil-transformer (oil′trȧns-fôr″mėr), *n.* In *elect.*, an alternating-current transformer immersed in oil for cooling and insulation. See *transformer.*

oil-well, *n.* **2.** An oil-cellar; a dish or receptacle, under a bearing, filled with oil to furnish a supply for the bearing.

oil-yellow (oil′yel″ō), *n.* Same as ★*butter-yellow.*

oinochoös (oi-nok′ọ-os), *n.* [Gr. οἰνοχόος, wine-pourer, < οἶνος, wine, + χεῖν, pour.] In *Gr. antiq.*, the bearer of the oinochoë; a cup-bearer; a wine-pourer.

> Terra-cotta fragment of sepulchral slab . . . representing a deceased person naked and recumbent on the funeral couch, at the foot of which stands a boy *œnochoos*, also nude, holding œnochoê and wine-cup.
> *A. J. Evans*, in Jour. Hellenic Studies, VII. 34.

oinomania (oi-nọ-mā′ni-ạ̈), *n.* Same as *œnomania.*

ointment, *n.*—**Casein ointment**, a thick white emulsion, miscible with water, composed of casein 14 parts, potassium and sodium hydrates (1 to 4) .43 part, glycerin 7 parts, vaseline 21 parts, salicylic acid or borax 1 part, and water 56 parts: a water-soluble varnish used in applying drugs to the skin.—**Credé's ointment**, an ointment containing colloidal or soluble silver (collargolum), employed as an antiseptic, by external or subcutaneous use, in the treatment of erysipelas and septicemia. Also called *Credé's silver ointment.*—**Gray ointment of mercury.** Same as *mercurial ointment* (which see, under *ointment*).—**Kentish ointment**, turpentine liniment.

O. Ir. An abbreviation of *Old Irish.*

Oiron ware. See ★*ware*².

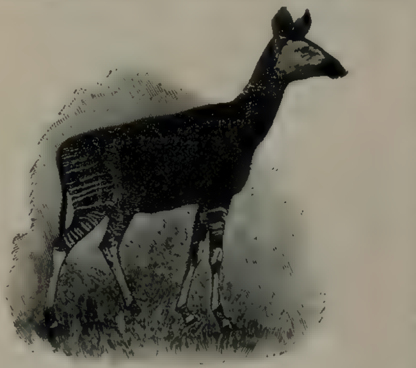
O. It. An abbreviation of *Old Italian.*

oitavo (ō-i-tä′vō), *n.* [Pg., < L. *octavus*, eighth.] A unit of weight in Brazil, equal to 55.34 grains.

ojanco (ọ-hän′kō), *n.* [Cuban Sp.] A fish of the family *Lutianidæ*, *Lutianus mahogoni*, found in the West Indies.

ojo (ō′hō), *n.* [Sp., an eye, < L. *oculus*, eye. See *oculus.*] In Spanish America, a spring; especially, a small spring on rather level ground.

okapi (ō-kä′pi), *n.* [W. African.] A member of the giraffe family, discovered by Sir Harry Johnston, in 1902, in the forest region near Lake Albert, Africa. The general form of the okapi, which has been named *Okapia johnstoni*, is much like that of the giraffe, but the animal is decidedly smaller, and the neck and legs are shorter. The upper parts are dark purplish brown; forehead and ears reddish; sides of face nearly white; legs buff, the flanks and upper parts marked with horizontal blackish stripes resembling those of a zebra. It was described by Sclater in 1901 as *Equus johnstoni*, from two fragments of skin, and later by Lankester as *Okapia johnstoni*, from a skin and two skulls. All these specimens were secured by Sir Harry Johnston.



Okapi (*Okapia johnstoni*).

Okapia (ō-kä′pi-ạ̈), *n.* [NL., < *Okapi.*] A genus of ungulate mammals, containing the okapi and placed in the family *Giraffidæ.*

oki (ō′ki), *n.* [Also *okki*; < Huron (Indian) *oki.*] Mysterious power.

> The guardian spirit was obtained in various ways by different American tribes, but the dream apparition was the most widely spread. Dr. Frazer calls it 'individual totem'; Miss Fletcher speaks of the object dreamed of (the wahube of the Omaha) as the 'personal totem' or simply as the 'totem'; it is termed by the Algonkin manitu, by the Huron *okki*, by the Salish Indians sulia, and nagual in Mexico. Perhaps it would be best to adopt either wahube or manitu to express the guardian spirit.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 741.

okianago (ō-kẹ-än′ä-gō), *n.* [Jap., < *oki*, the wide sea, + *anago*, a species of conger-eel.] The off-shore conger-eel, *Congrellus megastomus.*

okieh (ō′kē), *n.* [Also *oke*; < Ar. *oqqa*, also *wiqqa*, also *ūnqīya*, < L, *uncia*, ounce: see *ounce*¹.] **1.** An Egyptian measure of weight, equal to 1.32 ounces.—**2.** A silver coin of Morocco, equal to 4 mazunehs or about 5 cents.

okigisu (ō-ki-gē′sọ̈), *n.* [Jap., < *oki*, the wide sea (as opposed to *oka*, the land), + *kisu* (*gisu*), a kind of fish.] A Japanese name of *Pterothissus gissu*, a fish of the family *Pterothissidæ*, found in the deep waters of Japan.

okimono (ō-ki-mō′nō), *n.* [Jap., < *oki*, place, set, + *mono*, a thing.] An ornament or figure placed in the alcove or slightly raised portion of a Japanese room. The name is also applied to small table ornaments, such as paper-weights, etc.

> The new artisan makers of the *okimono* struck out a line for themselves, one influenced more by the naturalistic and popular schools than by the classical art, and the quails of Kaméjo, the tortoises of Seimin, the dragons of Tôün and Tôriū, and in recent years the falcons and the peacocks of Susuki Chôkichi, are the joy of the European collector. These are usually modelled in wax and cast in bronze and various other alloys, and sometimes in pure silver, and finished, if necessary, with the chisel and graver; they are sometimes fashioned in repoussé with the hammer.
> *Encyc. Brit.*, XXIX. 719.

okki, *n.* See ★*oki.*

Okla. An abbreviation of *Oklahoma.*

oktibbehite (ok-tib′ẹ-hīt), *n.* A name given by Meunier to the type of nickel-iron meteorite represented by the mass found in Oktibbeha, Mississippi, in 1854, and generally regarded as of meteoric origin. It contains about 60 per cent. of nickel. See ★*meteorite.*

Ol. An abbreviation (*b*) [*l. c.* or *cap.*] of the Latin *oleum*, oil; (*c*) [*l. c.*] of *overlimen.*

O. L. An abbreviation (*a*) of *Officer of the Order of Leopold*; (*b*) of *Old Latin.*

ola (ō′lạ̈), *n.* [Also *olla*; < Malayalam *ōla* = Tamil *ōlai*, a palm-leaf.] A smoothed palm-leaf used in Ceylon and southern India for writing upon, or a letter or other document written on such a leaf. The writing is scratched on the leaf with a steel-pointed stylus, and is sometimes rubbed over with some material to make it more legible.

olacaceous (ol-ạ-kā′shius), *a.* Belonging to the *Olacaceæ*, a family of plants.

olay (ō′lī), *n.* [Tamil *olai* = Malayalam *ōla*, a palm-leaf: see ★*ola.*] Same as ★*ola.*

olcott-root (ol′kot-röt), *n.* The bloody dock, *Rumex sanguineus.*

old, *a.* **15.** In *phys. geog.*, far advanced in the geographical cycle: noting a stage in which land-forms have been reduced to small relief and in which all processes of erosion and transportation have become relatively inactive.—**Old horse**, a sailors' name for tough salted meat.—**Old lady.** (*b*) A name given by Australian colonists to a large noctuid moth, *Erebus pluto.*—**Old man.** (*d*) A rocking center to guide a pump-rod at an angle. (*e*) A pivoted attachment of a pump-rod to a bell-crank.

Oldbury shales. See ★*shale*².

oldermost (ōl′dėr-mōst), *a.* [*older* + *-most.*] Oldest. [Provincial, U. S.]

oldfangled (ōld-fang′gld), *a.* Old-fashioned; clinging to what is old: opposed to *newfangled.*

oldfangledness (ōld-fang′gld-nes), *n.* Oldfangled or old-fashioned character; a lack of novelty.

oldfangleness (ōld-fang′gl-nes), *n.* Same as ★*oldfangledness.*

old-field (ōld′fēld), *n.* Land formerly cultivated; a field which has become exhausted by continuous cropping without renovation and left to run wild; specifically, in the United States, land cultivated by the Indians before the beginning of colonization by the whites.

old-fog (ōld-fog′), *n.* See *wild* ★*oat-grass* (*a*).

old-goose (ōld-gös′), *n.* The stemless lady's-slipper, *Cypripedium acaule.*

oldish (ōl′dish), *a.* [*old* + *-ish*¹.] Rather old; elderly.

old-land (ōld′land), *n.* In *phys. geog.*, the hilly country or upland on the interior side of a coastal plain: so called because it was a land-surface before the coastal plain was raised from the sea.

> The line where the waves lapped for the first time against the land at the beginning of this cycle [of coastal

abrasion] may be called the initial shoreline. For convenience all the land back of this initial shoreline will be called the "*oldland.*" *Geog. Jour.* (R. G. S.), IX. 538.

old-maidenish (ōld-mā′dn-ish), *a.* Having the habits of an old maid.

old-maid's-bonnets (ōld-mādz″bon′ets), *n.* The wild lupine, *Lupinus perennis.*

old-maid's-nightcap (ōld-mādz″nīt′kap), *n.* The spotted crane's-bill, *Geranium maculatum.*

old-man, *n.* **2.** In *mech.*, a drill-clamp; an iron strap or frame which can be clamped to or caught on a piece it is desired to drill, to furnish an abutment or brace to resist the driving or feeding pressure which forces the drill-point to its work.

old-man cactus (ōld′man kak′tus), *n.* See *Cereus.*

old-man's-root (ōld-manz″röt′), *n.* The American spikenard, *Aralia racemosa.*

old-standing (ōld′stan″ding), *a.* Of long continuance; long-standing.

> In a case of *old-standing* softening of this area secondary atrophy was observed.
> *Philos. Trans. Roy. Soc.* (London), 1898, ser. B, p. 32.

old-style (ōld′stīl), *a.* Old-fashioned; of the old style.

> And gentry-fashioned *old-style* haunts of sleep.
> *Browning*, Red Cotton Night-Cap Country, ii. l. 964.

Old Test. An abbreviation of *Old Testament.*

oldwife, *n.* **2.** (*g*) A carangoid fish, *Trachinotus glaucus*, found in West Indian waters.
3. A cowl for a chimney, to prevent its smoking.—**Black oldwife,** a fish, *Melichthys piceus*, of the family *Balistidæ*, of the West Indies and southward: possibly identical with a species found in the East Indies.

oleamide (ō-lẹ̄-am′id), *n.* [L. *oleum*, oil, + E. *amide.*] The amide of oleic acid, $C_{17}H_{33}$-$CONH_2$: made by allowing alcoholic ammonia to act on almond or hazelnut oil. It is crystalline and melts at 75° C.

Oleandreæ (ō-lẹ̄-an′drẹ̄-ē), *n. pl.* [NL., < *Oleandra* + *-eæ.*] A tribe of polypodiaceous ferns, containing the single genus *Oleandra*, distinguished by having the simple lanceolate fronds distinctly articulated to the wide-creeping rhizome and the reniform or roundish indusiate sori borne more or less obliquely toward the base of the close parallel veins.

olease (ō′lẹ̄-ās), *n.* [L. *oleum*, oil, + *-ase.*] An oxidizing ferment.

> Tolomei showed that the oxidase extracted with water and purified by a repeated precipitation with alcohol produces guaiac blue from guaiac tincture, forms purpurogallol from pyrogallol without the aid of peroxide of hydrogen, quinhydrone from hydroquinone, and a brown substance from gallic acid. He calls this oxidizing enzym *olease.* *U. S. Dept. Agr.*, Rep. No. 59, p. 33.

oleate, *n.* **2.** In *med.*, a salve prepared by triturating a metal oxid or an alkaloid with oleic acid, which is generally used in excess. It is a solution of the salt in the excess of acid.—**Oleate of morphine,** a salt rubbed into the skin to relieve pain in cases in which the stomach rejects morphine internally administered. It is liable to alteration when kept for a considerable time, losing its medicinal efficacy.

olecranian (ō-lẹ̄-krā′ni-a̤n), *a.* Same as *olecranal.*

olefinic (ō-lẹ̄-fin′ik), *a.* [*olefin(e)* + *-ic.*] Related to the olefines; designating, in organic chemistry, open-chain compounds containing an ethylene or double union between the carbon atoms.

olein, *n.* (*b*) The trade-name of the oil, fluid at common temperature, obtained by means of hydraulic pressure from the butter-like tropical fats, such as cocoanut-oil and palm-oil, especially the former. It is not chemically pure olein, but contains beside this some palmitin and some of the glycerides of the lower fatty acids, such as myristin, laurin, and caprin. In the so-called olein from cocoanut there is a large proportion of laurin and but little real olein.—**Cocoanut olein.** See ★*cocoanut.*

olena (ō-lā′nä̤), *n.* [Hawaiian, connected with *lena*, yellow.] The Hawaiian name for the turmeric, *Curcuma longa.* The natives extracted the dye for coloring their kapa yellow. See *turmeric*, 1, *curcuma*, 2, and *huldee.*

Olenellus (ō-le-nel′us), *n.* [NL., dim. of *Olenus.*] A genus of opisthoparian trilobites, often of notable size, having a well-defined and lobed glabella, fourteen thoracic segments, and small round pygidium with a telson-like spine: characteristic of the Lower Cambrian or *Olenellus* stage.—**Olenellus group.** See ★*group*¹.—**Olenellus stage,** the lower Cambrian stage. Called in North American geology, the *Georgian.* See *Georgian* ★*stage.*

Olenidian group. See ★*group*¹.

Olenus (ō′le-nus), *n.* [NL., < (?) Gr. ὠλένη, elbow.] A genus of opisthoparian trilobites having a well-defined glabella, twelve to fifteen thoracic segments, and a small pygidium: characteristic of the Upper Cambrian rocks, the Olenus horizon, or Olenidian stage.—**Olenus series.** Same as *Olenidian* ★*group.*

oleobutyrometer (ō″lẹ̄-ọ̄-bū″ti-rom′e-tėr), *n.* Same as *Abbe's refractometer.* See ★*refractometer.* *Nature*, May 26, 1904, p. 96.

oleocalcareous (ō″lẹ̄-ọ̄-kal-kā′rẹ̄-us), *a.* Noting a liniment or dressing consisting of a mixture or emulsion of an oil with lime-water, as lime-liniment. *Sci. Amer. Sup.*, Feb. 28, 1903, p. 22710.

oleocyst (ō′lẹ̄-ọ̄-sist), *n.* [L. *oleum*, oil, + E. *cyst.*] In some siphonophorans, as *Diphyes*, the upper end of the somatocyst in which a large oil-globule is secreted, presumably to perform a hydrostatic function.

oleoduct (ō′lẹ̄-ọ̄-dukt), *n.* [L. *oleum*, oil, + *ductus*, duct.] A duct or channel for oil; specifically, a method of conveying petroleum or rock-oil from the oil-field to its point of export; in the United States, a pipe-line. *N. E. D.*

oleographer (ō-lẹ̄-og′ra̤-fėr), *n.* [*oleograph* + *-er*¹.] One who produces oleographs.

oleoid (ō′lẹ̄-oid), *n.* [L. *oleum*, oil, + *-oid.*] An oily substance derived from vegetable matter.—**Ether oleoid,** a volatile, odoriferous oil, extracted from vegetable matter, such as oil of mustard.—**Fixed oleoids,** non-volatile oleoids, such as olive-oil, croton-oil, etc.—**Resinous oleoids.** Same as *oleoresins.*

oleojector (ō″lẹ̄-ọ̄-jek′to̤r), *n.* [L. *oleum*, oil, + *-jector*, < *-jicere*, *jacere*, throw.] The trade-name of a form of lubricator which injects oil under pressure into a chamber or vessel, such as the working cylinder of a gas or steam-engine.

oleomargaric (ō″lẹ̄-ọ̄-mär-gar′ik), *a.* [*oleomargar(in)* + *-ic.*] Related to or resembling oleomargarin.

oleometer, *n.* **2.** An apparatus for determining the proportion of oil contained in seeds, nuts, pressed seed-cakes, and other materials. It is so contrived as to allow of a small quantity of a volatile solvent being used to extract the oil, being distilled back upon the material under treatment, and filtered through it a number of times in succession. See *Soxhlet's extraction* ★*apparatus.*

oleo-oil, *n.* **2.** The trade-name of the liquid portion of tallow which can be pressed out at 70–80° F.

oleopalmitate (ō″lẹ̄-ọ̄-pal′mi-tāt), *n.* [*ole(ic)* + *palmit(ic)* + *-ate*¹.] A salt of oleic and palmitic acids.—**Lead oleopalmitate,** a lead salt of oleic and palmitic acids.

oleopalmitin (ō″lẹ̄-ọ̄-pal′mi-tin), *n.* [*ole(ic)* + *palmit(ic)* + *-in*².] A mixed glyceride of oleic and palmitic acids.

oleopalmitobutyrin (ō″lẹ̄-ọ̄-pal″mi-tọ̄-bū′ti-rin), *n.* [*ole(ic)* + *palmit(ic)* + *butyr(ic)* + *-in*¹.] A mixed glyceride of oleic, palmitic, and butyric acids.

Oleophosphoric acid, a viscous yellow liquid, C_{78}-$H_{143}PO_{12}$, found in the brain, probably as a decomposition product of lecithin. By long boiling with water it yields olein and phosphoric acid.

oleorefractometer (ō″lẹ̄-ọ̄-rē″frak-tom′e-tėr), *n.* A piece of optical apparatus for determining the refractive indices of oils, as the means of identifying and distinguishing them.

Oleoresin of male-fern, a greenish or brownish-green liquid obtained by exhausting powdered male-fern with acetone and removing the solvent by distillation, and finally by spontaneous evaporation. It is used as an anthelmintic. See *oleoresin*, 2.—**Sumbul oleoresin,** a resin extracted from the root of *Ferula Sumbul*, or musk-root, a perennial plant inhabiting the mountains of Bokhara.

oleosaccharum, *n.* **2.** Specifically, in *pharm.*, same as ★*oil-sugar.*

oleostearin (ō″lẹ̄-ọ̄-stē′a̤-rin), *n.* The trade-name of the solid portion of tallow which remains when the liquid portions, called *oleo-oil*, are pressed out at a temperature of 70–80° F.

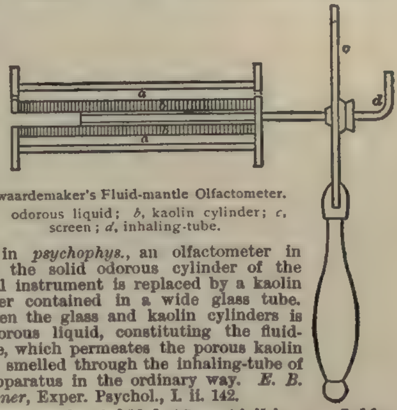
Oléron code. A set of maritime laws compiled about the time of Richard I. of England, and promulgàted at the Island of Oléron, for governing the sea-trade of western Europe. See *Judgments of Oléron*, in the Century Cyclopedia of Names.

olfacient (ol-fā′shie̤nt), *n.* [L. *olfaciens* (*-ent-*), ppr. of *olfacere*, smell: see *olfactory.*] Something which stimulates or affects the olfactory organs.

olfactible (ol-fak′ti-bl), *a.* [L. *olfactus*, pp. of *olfacere*, smell, + *-ible.* See *-able.*] **1.** Having or connected with the power of smelling: as, *olfactible* perceptions. *Berkeley.*—**2.** Capable of being perceived by the sense of smell. *N. E. D.*

olfactology (ol-fak-tol′ọ̄-ji), *n.* [*olfact(ion)* + *-ology.*] The science of smell, including both olfactometry and odorimetry: a study correlated with optics, acoustics, and haptics. *Amer. Jour. Psychol.*, X. 86. [Rare.]

olfactometer, *n.*—**Double olfactometer,** in *exper. psychol.*, an olfactometer arranged with two inhaling tubes for insertion in the two nostrils. *E. B. Titchener*, Exper. Psychol., I. ii. 142.—**Fluid-mantle olfactometer,** in *psychophys.*, an olfactometer in which the solid odorous cylinder of the clinical instrument is replaced by a kaolin cylinder contained in a wide glass tube. Between the glass and kaolin cylinders is an odorous liquid, constituting the fluid-mantle, which permeates the porous kaolin and is smelled through the inhaling-tube of the apparatus in the ordinary way. *E. B. Titchener*, Exper. Psychol., I. ii. 142.



Zwaardemaker's Fluid-mantle Olfactometer.
a, odorous liquid; *b*, kaolin cylinder; *c*, screen; *d*, inhaling-tube.

olfactometric (ol″fak-tọ̄-met′rik), *a.* [*olfactometer.*] In *exper. psychol.*, relating to or implying the use of the olfactometer: as, the *olfactometric* method, *olfactometric* experiments. *E. B. Titchener*, Exper. Psychol., I. ii. 119.

olfactometry (ol-fak-tom′e-tri), *n.* [*olfactometer.*] **1.** In *psychophys.*, the study of the quantitative relations of olfactory sensation.

> *Olfactometry* is that branch of psychophysics which is concerned with the measurement of the keenness of smell. *Amer. Jour. Psychol.*, X. 85.

2. In *exper. psychol.*, the general term for investigations of the sense of smell, qualitative or quantitative, made with the help of the olfactometer.

olfactorily (ol-fak′tọ̄-ri-li), *adv.* By the sense of smell. *N. E. D.*

Olfactory capsule, fossa, image. See ★*capsule*, ★*fossa*¹, ★*image.*—**Olfactory organs,** in *entom.*, the antennæ, generally accepted as the main organs of smell, and certain palpal structures, also supposed to have this function.—**Olfactory peduncle.** See ★*peduncle.*—**Olfactory peg,** a minute structure in the palpi of certain insects supposed to have olfactory functions.—**Olfactory pits.** (*b*) Pits, filled with a serous fluid, occurring in the antennæ of insects and supposed to be olfactory.—**Olfactory sac.** See ★*sac*².—**Olfactory teeth,** certain pale rods, perforated at the end, occurring on the antennæ of many insects: supposed to be olfactory.

olfactus (ol-fak′tus), *n.*; pl. *olfactus.* [L., smell, sense of smell.] In *exper. psychol.*, the unit of keenness or acuity of smell. See extract under ★*olfacty.*

olfacty (ol-fak′ti), *n.*; pl. *olfacties* (-tiz). [L. *olfact(are)*, to smell, + *-y*³.] In *exper. psychol.*, the normal stimulus limen for a given odorous substance.

> If, for example, a subject's stimulus-limen on the olfactometer is 10 mm. when the normal stimulus-limen used is 5 mm., then his stimulus-limen is two *olfacties*, and his olfactus ½. *Amer. Jour. Psychol.*, X. 86.

OLG., O. L. G. Abbreviations of *Old Low German.*

olibano-resin (ọ̄-lib″a̤-nọ̄-rez′in), *n.* [*olibanum* + *resin.*] Same as *olibanum.*

olibene (ol′i-bēn), *n.* [*olib(anum)* + *-ene.*] A mixture of levopentene and dipentene, obtained by distilling olibanum with water.

olic (ol′ik), *a.* [*ol(ivin)* + *-ic.*] In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*¹), having the properties of or containing normative olivin and akermanite.

oligacanthous (ol″i-ga̤-kan′thus), *a.* [Gr. ὀλίγος, few, + ἄκανθα, thorn, spine.] In *bot.*, having few spines.

oligarch² (ol′i-gärk), *a.* [Gr. ὀλίγος, few, + ἀρχή, a beginning.] In *bot.*, having a few centripetally developed xylem plates: said of some radial vascular cylinders.

oligarchically (ol-i-gär′ki-ka̤l-i), *adv.* By an oligarchy; after the methods of an oligarchy.

oligarchism (ol′i-gär-kizm), *n.* [*oligarch* + *-ism.*] The system of oligarchy; attachment or devotion to the principles of oligarchy.

oligarchize (ol′i-gär-kīz), *v. t.*; pret. and pp. *oligarchized*, ppr. *oligarchizing*. To make to conform to oligarchical principles; render oligarchic.

oligoblennia (ol″i-gọ-blen′i-a̤), *n.* [Gr. *ὀλίγος*, little, + *βλέννος*, slime.] A condition in which the secretion of mucus is deficient.

oligocardia (ol″i-gọ-kär′di-a̤), *n.* [NL., < Gr. *ὀλίγος*, few, little, + *καρδία*, heart.] Slow beating of the heart. *Lancet*, Aug. 22, 1903, p. 529.

oligocephalic (ol″i-gō-se-fal′ik), *a.* [Gr. *ὀλίγος*, small, + *κεφαλή*, head, + *-ic.*] Having a small head. *Sergi.*

oligochæte (ol′i-gọ-kēt), *a.* and *n.* [*Oligochæta.*] **I.** *a.* Belonging to or having the characteristics of the *Oligochæta.*

Studies in the *oligochæte* worms by Mr. A. Ditlevsen, and investigations into the development of the eye of the bee by Mr. O. Dickel, complete the contents of this number. *Nature*, Oct. 13, 1904, p. 582.

II. *n.* A worm of the order *Oligochæta.* *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 628.

oligochrone (ol′i-gọ-krōn), *a.* [Gr. *ὀλίγος*, little, + *χρόνος*, time.] Brief. [Rare.]

oligochronometer (ol″i-gọ-krọ-nom′e-tėr), *n.* [Gr. *ὀλίγος*, little, + *χρόνος*, time, + *μέτρον*, measure.] An instrument for recording very brief periods of time.

Oligocottus (ol″i-gọ-kot′us), *n.* [NL., < Gr. *ὀλίγος*, small, + NL. *Cottus*.] A genus of cottoid fishes inhabiting the North Pacific.

oligocythemic (ol″i-gọ-sī-them′ik), *a.* Pertaining to or affected with oligocythemia.

oligodacrya (ol″i-gọ-dak′ri-a̤), *n.* [NL., prop. **oligodacryia*, < Gr. *ὀλίγος*, few, little, + *δάκρυον*, tear.] Deficient lacrymal secretion.

oligodont (ol′i-gọ-dont), *a.* [See ★*oligodontous.*] Same as ★*oligodontous:* contrasted with *polyodont.*

oligodontous (ol″i-gọ-don′tus), *a.* [Gr. *ὀλίγος*, few, + *ὀδούς* (*ὀδοντ-*), tooth, + *-ous.*] Having few teeth.

oligodynamic (ol″i-gọ-dī-nam′ik), *a.* [Gr. *ὀλίγος*, small, + *δύναμις*, power, + *-ic.*] **1.** In *phys.*, produced by extremely small forces, or by small quantities of an active substance.—**2.** Chemically active in extremely small quantity, as an oligodynamic solution of a salt of copper, capable of destroying the lower forms of vegetable or animal life, though containing, it is asserted, not more than one part of copper in many million or even many hundred million parts of water.

oligohydramnion (ol″i-gọ-hī-dram′ni-on), *n.* [NL., irreg. < Gr. *ὀλίγος*, few, little, + *ὕδωρ* (*ὑδρ-*), water, + NL. *amnion.*] A deficiency of the amniotic fluid.

oligohydramnios (ol″i-gọ-hī-dram′ni-os), *n.* Same as ★*oligohydramnion.*

oligomenorrhea (ol″i-gō-men-ọ-rē′a̤), *n.* [Gr. *ὀλίγος*, few, little, + NL. *menorrhœa.*] Insufficient menstruation.

oligomesomyodous (ol″i-gọ-mes-ọ-mī-ō′dus), *a.* [Gr. *ὀλίγος*, little, + E. *mesomyodous.*] In *ornith.*, noting a condition of the muscles of the syrinx which resembles both the oligomyodous and mesomyodous states. It is found in the broadbills, *Eurylæmidæ*, of tropical Asia. *Proc. Zool. Soc. London*, 1892, p. 253.

oligomyodan (ol″i-gọ-mī-ō′da̤n), *a.* Same as *oligomyoid.*

Oligonephria (ol″i-gọ-nef′ri-a̤), *n. pl.* [NL., < Gr. *ὀλίγος*, few, + *νεφρός*, kidney.] Those insects which possess but few urinary or Malpighian tubules. This grouping of insects shows no relation to classification or phylogeny. Distinguished from ★*Polynephria.*

oligonephrous (ol″i-gọ-nef′rus), *a.* [Gr. *ὀλίγος*, few, + *νεφρός*, kidney, + *-ous.*] Having few Malpighian tubules.

Oligoneura (ol″i-gọ-nū′ra̤), *n. pl.* [NL., < Gr. *ὀλίγος*, few, + *νεῦρον*, nerve.] A group or suborder of dipterous insects including only the family *Cecidomyiidæ.*

oligonitrophile (ol″i-gō-nī′trọ-fil), *n.* [Gr. *ὀλίγος*, few, little, + NL. *nitrum* + Gr. *φιλεῖν*, love.] In *bacteriol.*, an organism capable of fixing free nitrogen and able to grow upon media very poor in nitrogen.

The *oligonitrophiles* belong to the Clostridium group or to Beijerinck's Granulobacter group. *Science*, March 6, 1903, p. 371.

oligonitrophilic (ol″i-gō-nī″trọ-fil′ik), *a.* [*oligonitrophile* + *-ic.*] In *bacteriol.*, requiring little nitrogen: said of those organisms which grow in media containing little or no nitrogen and which have the power of fixing atmospheric nitrogen.

Oligonitrophilic bacteria are those that grow in nitrogen-free or nitrogen-poor media, and that possess the power of utilizing the free nitrogen of the air. *Science*, March 6, 1903, p. 371.

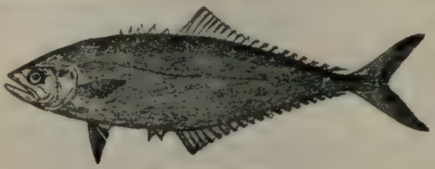
oligopelic (ol″i-gọ-pel′ik), *a.* [Gr. *ὀλίγος*, little, + *πηλός*, clay, + *-ic.*] Of a coarsely clayey consistency. See ★*pelogenous.*

oligopepsia (ol″i-gọ-pep′si-a̤), *n.* [Gr *ὀλίγος*, little, + *πέψις*, digestion.] Imperfect digestion.

oligopetalous (ol″i-gọ-pet′a̤-lus), *a.* [Gr. *ὀλίγος*, few, + E. *petal* + *-ous.*] In *bot.*, having few petals.

Oligoplastina (ol″i-gọ-plas-tī′na̤), *n. pl.* [NL.] A group of *Coccidiidea* in which the schizont divides into few (from two to four) archispores: contrasted with ★*Polyplastina.*

Oligoplites (ol″i-gọ-plī′tēz), *n.* [NL., < Gr. *ὀλίγος*, few, little, + *ὁπλίτης*, armed: see *hoplite.*] A genus of carangoid fishes found in the tropical seas of America.



Oligoplites saurus.
(From Bulletin 47, U. S. Nat. Museum.)

oligoprothesy (ol″i-gọ-proth′e-si), *n.* [Gr. *ὀλίγος*, few, + *πρόθεσις*, a preposition. See *prothesis.*] In *philol.*, the habit of using few prepositions. *N. E. D.*

oligoprothetic (ol″i-gọ-prō-thet′ik), *a.* [Gr. *ὀλίγος*, few, + *προθετικός*, prepositional.] Characterized by oligoprothesy.

oligopsammic (ol″i-gop-sam′ik), *a.* [Gr. *ὀλίγος*, little, + *ψάμμος*, sand, + *-ic.*] Of a finely sandy texture. See ★*psammogenous.*

oligopyrene (ol″i-gọ-pī′rēn), *a.* [Gr. *ὀλίγος*, few, + *πυρήν*, stone of a fruit (nucleus).] Having a small amount of chromatin in the nucleus: said of certain spermatozoa: opposed to ★*eupyrene* and ★*apyrene.*

Fr. Meves has continued his investigation of this interesting subject. He gives an account of the spermatogenesis in *Paludina*, which has normal "hair-like" and peculiar "worm-like" spermatozoa. The former may be called "eupyrene" [*εὐ* and *πυρήν* = nucleus], and the latter "*oligopyrene*," for they have little nuclear material. In the case of the Lepidopteron *Pygæra*, the term "apyrene" is more appropriate for the peculiar type of spermatozoa, corresponding to the *oligopyrene* type in *Paludina.* Meves gives an account of the spermatogenesis in both cases. *Jour. Roy. Micros. Soc.*, Feb., 1903, p. 23.

oligosepalous (ol″i-gọ-sep′a̤-lus), *a.* [Gr. *ὀλίγος*, few, + E. *sepal*, + *-ous.*] In *bot.*, having few sepals.

oligosideric (ol″i-gọ-si-der′ik), *a.* [Gr. *ὀλίγος*, little, + *σίδηρος*, iron, + *-ic.*] Containing iron in small amount: said of certain meteorites. See ★*meteorite.*

oligosiderite (ol″i-gọ-sid′e̤-rīt), *n.* [Gr. *ὀλίγος*, small, + *σίδηρος*, iron, + *-ite*²] A name given by Daubrée to a class of meteoric stones, or aërolites, in which the grains of metallic iron are in relatively small quantity. See ★*meteorite.*

oligospermism (ol″i-gọ-spėr′mizm), *n.* [*oligosperm(ia)* + *-ism.*] Same as *oligospermia.*

oligotrichia (ol″i-gọ-trik′i-a̤), *n.* [Gr. *ὀλίγος*, few, little, + *θρίξ* (*τριχ-*), hair.] A condition in which the growth of hair is scanty. *Buck*, Med. Handbook, I. 195.

oligotrophia (ol″i-gọ-trō′fi-a̤), *n.* [NL.] Same as *oligotrophy.*

oligotropic (ol″i-gọ-trop′ik), *a.* [Gr. *ὀλίγος*, few, + *-τροπος*, < *τρέπειν*, turn.] In *entom.*, visiting but few flowers: applied to bees or other insects.

oligozoöspermia (ol″i-gọ-zō-ọ-spėr′mi-a̤), *n.* [Gr. *ὀλίγος*, few, + *ζῷον*, animal, + *σπέρμα*, seed.] The presence of but few spermatozoa, resulting in practical sterility.

oliguresis (ol″i-gụ-rē′sis), *n.* [NL., < Gr. *ὀλίγος*, few, + *οὔρησις*, urination.] Same as *oliguria.*

Olinia (ọ-lin′i-a̤), *n.* [NL. (Thunberg, 1799), named after Johan Henrik *Olin*, a Swedish botanist.] A genus of plants constituting the family *Oliniaceæ.* They are closely branched shrubs or small trees with opposite, entire, feather-veined evergreen leaves, small white or red flowers in terminal cymes, and fruit consisting of thin-fleshed drupes containing from 1 to 5 nutlets. The ovary is inferior, surmounted by a tube bearing at its summit the 5 petal-like calyx-lobes, 5 scale-like petals, and 5 stamens. There are 6 species, all natives of Africa.

Oliniaceæ (ọ-lin-i-ā′sẹ-ē), *n. pl.* [NL. (Presl, 1845), < *Olinia* + *-aceæ.*] A small family of dicotyledonous choripetalous shrubs or small trees of the order *Daphnales*, the hard-pear family, containing only the genus ★*Olinia* (which see for characters).

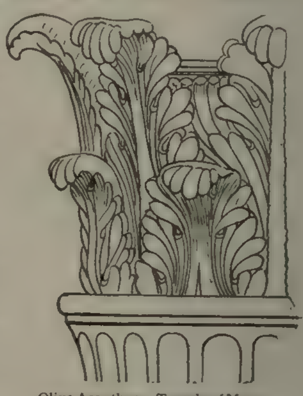
oliv, *n.* and *a.* A simplified spelling of *olive.*

olivaceous, *a.* **2.** Applied to complexion, of a dull tawny color, with a greenish tinge in the shadows.

olive, *n.*—**Black olive.** See *black* ★*olive-tree* (*a*).—**Nasal olive**, in *phonetics*, a hard-rubber bulb with a tubule which fits into the nostril, and is connected by rubber tubing, as to a Marey tambour for the recording of expiration curves. *E. W. Scripture*, Exper. Phonetics, p. 219.—**Native olive**, in Australia, one of the many names given to any one of four trees: (*a*) *Bursaria spinosa.* See *native* ★*box* and ★*box-thorn*, 2. (*b*) *Elæocarpus cyaneus.* Compare *olive-nut.* (*c*) *Notelæa ovata.* See ★*dunga-runga* and *Notelæa.* (*d*) The Queensland olive, *Olea paniculata.* See ★*marblewood*, 2.—**Olive acanthus**, in classic decoration, a form of acanthus in which the terminal points of the leaves are oval like olive-leaves, and not spiked as in the typical acanthus. A standard example is the capital of the temple of Mars Ultor in Rome.

olive-berry (ol′iv-ber″i), *n.* The berry of the wild olive or oleaster, *Olea Europæa.* See cut under *olive*, 1.

olive-clad (ol′-iv-klad), *a.* Covered with olive orchards.



Olive Acanthus. Temple of Mars Ultor, Rome.

olive-fly (ol′-iv-flī), *n.* A trypetid fly, *Dacus oleæ*, whose larvæ injure the fruit of the olive.

Olivella (ol-i-vel′a̤), *n.* [NL.] A genus of gastropods of the family *Olividæ.* *O. biplicata* was used as money by Indians in California.

olive-press (ol′iv-pres), *n.* A press for squeezing the oil from olives. See *oil-press.*

olive-scab (ol′iv-skab), *n.* See ★*scab.*

olive-scale (ol′iv-skāl), *n.* A scale which infests the olive-trees: (*a*) The black scale, *Saissetia oleæ.* (*b*) The greedy scale, *Aspidiotus rapax.*

olivescent (ol-i-ves′e̤nt), *a.* [*olive* + *-escent.*] Having an olive tinge; growing olive-colored.

olivetoric (ol″i-ve-tor′ik), *a.* Noting a crystalline acid, $C_{27}H_{36}O_8$, found in *Evernia furfuracea*, a lichen. It melts at 141–142° C.

olive-tree, *n.*—**Black olive-tree.** (*a*) *Bucida Buceras*, a small tree of the family *Combretaceæ*, common in tropical America and also found in Florida and the Keys. Also called *olivebark-tree, black olive*, and *wild olive.* See *ox-horn*, *n.*, 2, and *bois-chène.* (*b*) *Ximenia Americana* of tropical America. See *tallow-nut.*

olivette (ol-i-vet′), *n.* [F., < *olive*, olive.] A South European dance at the ingathering of the olive harvest.

oliviferous (ol-i-vif′e̤-rus), *a.* [L. *oliva*, olive, + *ferre*, bear.] Bearing olives. *Blount.*

olivil, *n.* **2.** A bitter crystalline substance, $C_{14}H_{18}O_5+H_2O$, which occurs in the gum and other parts of the olive-tree. It is easily oxidized to vanillin. Also called *olivite.*

olivinite (ol′i-vi-nīt), *n.* [*olivine* + *-ite*².] In *petrog.*, a name given by Eichstädt (1887) to a variety of peridotite or hornblende-picrite containing olivin and its decomposition-products, with hornblende and augite and occasionally a little anorthite.

olivite (ol′i-vīt), *n.* [*olive* + *-ite*².] Same as ★*olivil*, 2.

olla² (ol′a̤), *n.* Same as ★*ola*, ★*olay.*

ollapod (ol′a̤-pod), *n.* A contraction of *olla podrida.*

ollapodism (ol′a̤-pod-izm), *n.* [*ollapod* + *-ism.*] A phrase or sentence made up of a number of languages. [Nonce-word.]

olm (ōlm), *n.* [G.] The local name of the blind cave-salamander, *Proteus anguinus*, of Carniola, adopted as a common name. See cut at *Proteus.*

ological (ō-loj′i-kal), *a.* [Detached from *geological, zoölogical*, and similar words. See *ology.*] Relating to or versed in the ‘ologies.’ [Colloq.]

> However, I give you joy, my dear—and I hope you may now turn all your *ological* studies to good account, I am sure I do! *Dickens*, Hard Times, I. i. 15.
>
> “Don't tell me that's the reason,” . . . said Mrs. Gradgrind. “Go and be something*ological* directly.” *Dickens*, Hard Times, I. i. 4.

ologist (ol′ọ̄-jist), *n.* [Detached from *geölogist*, *zoölogist*, and similar words.] One who is versed in or professor of an ‘ology’; a scientist. [Colloq.]

ologistic (ol-ō-jis′tik), *a.* [*ologist* + *-ic.*] Relating to or derived from an ‘ology.’ *Clough.*

oloná (ō-lō-nä′), *n.* [Hawaiian name.] A Hawaiian fiber-plant. See *oloná* ★*fiber.*

Olym. An abbreviation of *Olympiad.*

Olympian, *n.*—**The Olympian,** Zeus or Jove.

Olympianism (ọ̄-lim′pi-ạn-izm), *n.* [*Olympian* + *-ism.*] In the religious system of the ancient Greeks, the worship of the twelve greater gods, dwellers in Olympus: distinguished from the older Pelasgic traditions and from the later mythology.

Olympianize (ọ̄-lim′pi-ạ-nīz), *v.*; pret. and pp. *Olympianized*, ppr. *Olympianizing.* [*Olympian* + *-ize.*] **I.** *trans.* To invest with the attributes of an Olympian: usually alluding to the majesty of Zeus.

II. *intrans.* To assume or affect a high Olympian style.

Olympianly (ọ̄-lim′pi-ạn-li), *adv.* In a high Olympian style; with an assumption of condescending greatness.

Olympia orange-tip. See ★*orange-tip.*

Olynthus, *n.* **3.** [*l. c.*] A transitory stage in the development of all calcareous sponges, illustrating in form and structure the simplest known type of sponge. It consists of a hollow vase-like body with a large exhalant opening, the osculum, at the upper end, and the wall perforated by numerous pores except at the upper and lower ends. The wall consists of two layers of cells, the dermal without and the gastral within, the former containing the skeletal elements. The name was given by Haeckel under the impression that this stage of development represented an adult ancestral type. See cut at ★*Clathrina.*

O. M. An abbreviation (*a*) of *old measurement;* (*b*) [*l. c.*] of the Latin *omni mane,* every morning: (*c*) of *Order of Merit.*

omagra (ọ̄-mag′rä̤), *n.* [NL., < Gr. ὦμος, shoulder, + ἄγρα, a catching (cf. *podagra*, *chiragra*, etc.).] Gouty inflammation of the shoulder-joint.

omal (ō′mạl), *a.* [Gr. ὁμός, the same, + *-al*¹.] In *math.*: (*a*) Having the differential coefficient always of one sign. *Legendre.* (*b*) Homaloidal or linear. *Cayley.*

omalgia (ọ̄-mal′ji-ä̤), *n.* [NL., < Gr. ὦμος, shoulder, + ἄλγος, pain.] Pain in the shoulder.

omam (ō′mam), *n.* In India, a name of the plant also called *ajwan* or *ajwain*, *Carum ajowan*, or *Ptychotis ajowan.* It yields ajowan-oil, the distillation-water of which, and the crystalline thymol separating from which, are medicinally used in India, especially as remedies in cholera.

omau (ō-mä′ö), *n.* [Hawaiian.] *Phæornis obscura*, one of the Sandwich Island thrushes.

ombi (om′bi), *n.* [African.] An African harp made from a crooked branch or root and strung with plant-fibers.

ombrifuge (om′bri-fūj), *n.* [As if F. **ombrifuge*, < Gr. ὄμβρος, a rain-storm, + L. *fugere*, flee.] A protection or refuge from rain. [Rare.]

> The belfry proves a fortress of a sort,
> Has other uses than to teach the hour,
> Turns sunscreen, paravent and *ombrifuge*
> To whoso seeks a shelter in its pale.
> *Browning*, Ring and Book, x. 466.

ombrograph (om′brọ̄-gråf), *n.* [Gr. ὄμβρος, a rain-storm, + γράφειν, write.] A self-recording ombrometer.

ombrological (om-brọ̄-loj′i-kạl), *a.* [*ombrolog*(*y*) + *-ic-al*¹.] Relating to rain, rainfall, or rainy weather.

ombrology (om-brol′ọ̄-ji), *n.* [Gr. ὄμβρος, a rain-storm, + -λογια, < λέγειν, speak.] The scientific knowledge of rain; also, a treatise or discourse about rain.

ombrophil (om′brọ̄-fil), *a.* and *n.* **I.** *a.* Same as ★*ombrophilous.*

II. *n.* A name proposed by Wiesner for a plant which requires much rain.

ombrophilic (om-brọ̄-fil′ik), *a.* [*ombrophil* + *-ic.*] Same as ★*ombrophilous.* *C. MacMillan.*

ombrophilous (om-brof′i-lus), *a.* [*ombrophil* + *-ous.*] Loving rain; inviting the contact of rain: in *phytogeog.*, said of plants or their parts, chiefly their foliage, or of the abstract character. Ombrophilous character is manifested by the fact that the leaves or other parts are wettable: opposed to ★*ombrophobous.* *Wiesner*, 1893.

ombrophily (om-brof′i-li), *n.* [*ombrophil* + *-y*³.] The character of being ombrophilous. *A. F. W. Schimper.*

ombrophobe (om′brọ̄-fōb), *n.* [See ★*ombrophobous.*] An ombrophobous plant.

ombrophobic (om-brọ̄-fō′bik), *a.* Same as ★*ombrophobous.* *T. H. Kearney.*

ombrophobous (om-brof′ọ̄-bus), *a.* [Gr. ὄμβρος, a rain-storm, + -φοβος, < φοβεῖν, fear, + *-ous.*] Shunning rain: in *phytogeog.*, said of plants or their parts, chiefly the foliage. Ombrophobous character is usually shown by a water-shedding or unwettable surface (due to hairs or a waxy covering), as in the common *Caladium*, in *Impatiens*, etc. Other adaptations, as the form or position of the leaf, assist in shedding or escaping water. *Wiesner*, 1893.

> Xerophytes perish after two or three days of continuous rain; they are rain-avoiding, *ombrophobous*, whereas hygrophytes are, as a rule, ombrophilous.
> *A. W. F. Schimper* (trans.), Plant-geog., p. 2.

ombrophoby (om-brof′ọ̄-bi), *n.* [*ombrophob*(*ous*) + *-y*³.] In *phytogeog.*, the condition of being ombrophobous. *A. F. W. Schimper.*

ombrophytic (om-brọ̄-fit′ik), *a.* [Gr. ὄμβρος, a rain-storm, + φυτόν, plant, + *-ic.*] Of or pertaining to plants to which rain is peculiarly favorable (ombrophiles).

> On the tali which seem younger, or which do not present quite so purely *ombrophytic* conditions, the lichens occupy nearly the whole of the surface. . . . Such an *ombrophytic* habitat is well adapted to the development of lichens. *Bot. Gazette*, March, 1903, pp. 199, 200.

ombroscope (om′brọ̄-skōp), *n.* [Gr. ὄμβρος, a rain-storm, + σκοπεῖν, view.] A rain-gage arranged to make the rate of rainfall immediately observable; specifically—(*a*) Symon's ombroscope, in which the rain over a large area is led into a narrow vertical tube which fills up rapidly so that the rate per minute is easily perceived; (*b*) Fassig's attachment to the ordinary self-registering rain-gage, by which the first few drops of a shower make a blotch or other mark, so that the exact time of beginning and the occurrence of very slight showers may be recorded.

Omega nebula. See ★*nebula.*

omegoid (ọ̄-mē′goid), *a.* [*omega* + *-oid.*] Shaped like the Greek letter omega (Ω).

omeire (ọ̄-mī′re), *n.* [Native name?] A drink, similar to kumiss, prepared in southwest Africa by allowing milk to ferment. It is a thick liquid with a slightly acid taste and a pleasant odor like that of wine. *Jour. Soc. Chem. Industry*, VI. 831.

omentitis (ō-men-tī′tis), *n.* [NL., < *omentum* + *-itis.*] Inflammation of the omentum.

omer (ō′mėr), *n.* [Heb.] **1.** A handful of grain; a sheaf.—**2.** A Hebrew dry measure equal to the tenth part of an ephah.

omiak, *n.* See *oomiak.*

Omish, *n.* Same as ★*Amish.*

omlah (om′lä̤), *n. pl.* [Ar. *'amala*, *'amalāt*, pl. of *'āmil.* See *aumil.*] In India, native civil officers. Also used as a singular noun.

ommateal (om-ạ-tē′ạl), *a.* [*ommate*(*um*) + *-al*¹.] Pertaining to an ommateum or compound eye.

ommateum (om-ạ-tē′um), *n.*; pl. *ommatea* (-ä̤). [NL., < Gr. ὄμμα (ὀμματ-), eye.] A compound eye, as in crustaceans and insects.

Omn. bid. An abbreviation of the Latin *omni biduo*, every two days.

Omn. bih. An abbreviation of the Latin *omni bihora*, every two hours.

Omn. hor. An abbreviation of the Latin *omni hora*, every hour.

omniana (om-ni-ā′nä̤), *n.* [L. *omnia*, all things, + *-ana.*] Notes, anecdotes, and information upon all subjects.

omniarch (om′ni-ärk), *n.* [L. *omnis*, all, + Gr. ἀρχός, ruler.] The ruler or head of the universe.

omnibenevolence (om″ni-bē-nev′ọ̄-lens), *n.* [L. *omnis*, all, + *benevolentia*, good-will.] Benevolence toward all.

omnibenevolent (om″ni-bẹ̄-nev′ọ̄-lent), *a.* [L. *omnis*, all, + *benevolens*, well-wishing.] Benevolent toward all.

omnibus-bar (om′ni-bus-bär), *n.* Same as *bus-bar.*

omnicausality (om″ni-kâ-zal′ị-ti), *n.* [L. *omnis*, all, + NL. *causalitas*, causality.] Universal causality; being the cause of everything.

omnicompetence (om-ni-kom′pē-tẹns), *n.* [L. *omnis*, all, + E. *competence.*] Competence in every case; capacity to answer all requirements.

omnicompetent (om-ni-kom′pẹ̄-tẹnt), *a.* [L. *omnis*, all, + E. *competent.*] Competent in all cases; competent for everything.

omnicredulity (om″ni-krẹ̄-dū′li-ti), *n.* [L. *omnis*, all, + *credulitas*, credulity.] Capacity for believing everything; unlimited credulity.

omnicredulous (om-ni-kred′ụ̄-lus), *a.* [L. *omnis*, all, + *credulus*, credulous.] Believing everything; credulous to an unlimited extent.

omniessence (om-ni-es′ẹns), *n.* [L. *omnis*, all, + ML. *essentia*, essence.] Universal being.

omnificent (om-nif′i-sẹnt), *a.* [*omnific* + *-ent.*] Same as *omnific.* [Rare.]

omniformal (om-ni-fôr′mạl), *a.* Same as *omniform.*

omnigener (om-nij′e-nėr), *a.* Omnigenous. *N. E. D.* [Rare.]

omnigerent (om-nij′e-rẹnt), *a.* [L. *omnis*, all, + *gerens*, pp. of *gerere*, bear, carry on, manage.] Able to perform every kind of work; universally operative.

omnigraph, *n.* **2.** The trade-name of a device for teaching telegraphy by means of automatically produced dots and dashes of the Morse code.

omnilingual (om-ni-ling′gwạl), *a.* [L. *omnis*, all, + *lingua*, tongue, + *-al*¹.] Able to speak or to understand all languages. *N. E. D.*

omniloquent (om-nil′ọ̄-kwẹnt), *a.* [L. *omnis*, all, + *loquens*, ppr. of *loqui*, speak.] Speaking on all subjects.

omnilucent (om-ni-lū′sẹnt), *a.* [L. *omnis*, all, + *lucens*, ppr. of *lucere*, shine.] Giving light or shining everywhere.

omnimeter (om-nim′e-tėr), *n.* [L. *omnis*, all, + Gr. μέτρον, measure.] A form of sliding rule of extended scope, the scales of which are on concentric cards or disks rotated on a common axis.

omninescience (om-ni-nesh′ẹns), *n.* [L. *omnis*, all, + LL. *nescientia*, lack of knowledge.] Lack of knowledge of all things; total ignorance.

omninescient (om-ni-nesh′ẹnt), *a.* [L. *omnis*, all, + *nesciens*, not knowing, ignorant.] Absolutely ignorant; knowing nothing.

omniperfect (om-ni-pėr′fekt), *a.* [L. *omnis*, all, + *perfectus*, perfect.] Perfect in all ways.

omnipregnant (om-ni-preg′nạnt), *a.* [L. *omnis*, all, + *prægnans*, pregnant.] Ready to produce anything. *N. E. D.*

omnipresently (om-ni-prez′ẹnt-li), *adv.* In an omnipresent manner; in such a way or with such powers as to be present everywhere.

omniprevalence (om-ni-prev′ạ-lens), *n.* [L. *omnis*, all, + LL. *prævalentia*, prevalence.] The character or power of prevailing everywhere or over all things.

omniprudent† (om-ni-prö′dẹnt), *a.* [L. *omnis*, all, + *prudens*, foreseeing.] Foreseeing everything; having a universal providence.

omnisciturient† (om″ni-si-tū′ri-ẹnt), *a.* [L. *omnis*, all, + NL. **scituriens*, ppr. of **sciturire*, desiderative of *scire*, know.] Desiring or wishing to know everything.

omniscope (om′ni-skōp), *n.* [L. *omnis*, all, + Gr. σκοπεῖν, view.] An improved periscope designed to be used in the conning-tower of a submarine boat. It consists of a brass tube projecting 8 inches above the sighting-hood, carrying five prisms with lenses. Four of these, used as finders, cover each a field of 21½ degrees of the horizon, giving images of diminished size. The fifth looks only ahead, and covers a field of 2° 40′, and presents the image in its true size without distortion. Eyepieces and a direct-vision prism are provided within the conning-tower. Two horizontal hair-lines on the lens of the direct-vision prism act as a range-finder, the space between representing the height of a man at 300 yards.

omniscribent (om-ni-skrī′bẹnt), *a.* [L. *omnis*, all, + *scribens*, ppr. of *scribere*, write.] Writing about everything.

omniscriptive (om-ni-skrip'tiv), *a.* [L. *omnis*, all, + *scriptus*, pp. of *scribere*, write, + *-ive.*] Having a tendency to write about everything; omniscribent.

omnisentience (om-ni-sen'shi-ens), *n.* [*omnisentien(t)* + *-ce.*] Sentience of all things.

omnisentient (om-ni-sen'shi-e̤nt), *a.* [L. *omnis*, all, + *sentiens*, feeling: see *sentient.*] All-feeling; having knowledge, by sensation, of all things.

omnisignificance (om″ni-sig-nif'i-ka̤ns), *n.* [L. *omnis*, all, + *significantia*, significance.] Universal meaning; having the property of meaning everything.

omnitemporal (om-ni-tem'pọ-ra̤l), *a.* [L. *omnis*, all, + *tempus* (*tempor-*), time, + *-al*¹.] 1. Having reference to all time.—2. In *gram.*, including in its significance all the tenses.

> The infinitive as an abstract is always future and the same idea grows out of its datival origin, unless limited by the terms of development to distinct time: in this sense it may be called timeless = *omnitemporal*.
> *Classical Rev.*, Oct., 1890, p. 381.

omnitolerant (om-ni-tol'ẹ-ra̤nt), *a.* [L. *omnis*, all, + *tolerans*, tolerant.] Tolerant of all things.

omnitonic (om-ni-ton'ik), *a.* [L. *omnis*, all, + Gr. *τόνος*, tone, + *-ic.*] In *music.* See the extract.

> The '*omnitonic*' system [of Fétis], whose main principle is that harmonic combinations exist by which any given sound may be resolved into any key and any mode.
> *Grove*, Dict. Music, II. 30.

omnitude (om'ni-tūd), *n.* [NL. **omnitudo*, < *omnis*, all.] The character of being all; wholeness; omneity.

omnivalous† (om-niv'a̤-lus), *a.* Same as *omnivalent.*

omnivarious (om-ni-vā'ri-us), *a.* [L. *omnis*, all, + *various*, various.] Of all varieties.

omnivision (om-ni-vizh'ọn), *n.* [L. *omnis*, all, + *visio*(*n-*), vision.] Same as *omnividence.*

omnivolent† (om-niv'ọ-le̤nt), *a.* [L. *omnis*, all, + *volens*, willing.] Willing all things.

omnivoracity (om″ni-vọ-ras'i̤-ti), *n.* [L. *omnis*, all, + *voracitas*, voracity.] The capacity of devouring everything; unlimited voracity.

omnivorant (om-niv'ọ-ra̤nt), *a.* [L. *omnis*, all, + *vorans*, ppr. of *vorare*, devour.] Devouring everything and anything; omnivorous.

omnivore (om'ni-vōr), *n.* [L. *omnivorus*, adj.: see *omnivorous.*] An omnivorous animal, or one whose food is extremely varied in its character. Good examples of omnivores are to be found in some of the small monkeys that feed on fruit, eggs, insects, and birds. Correlative with *herbivore, carnivore*, etc.

omnivorously (om-niv'ọ-rus-li), *adv.* In an omnivorous or all-devouring way.

Omn. man. An abbreviation of the Latin *omni mane*, every morning.

Omn. quad. hor. An abbreviation of the Latin *omni quadrante horæ*, every quarter hour.

omocotyle (ō-mọ-kot'i-lē), *n.* [NL., < Gr. *ὦμος*, shoulder, + *κοτύλη*, cup, socket.] The glenoid fossa of the scapula which receives the head of the humerus.

omodynia (ō-mọ-din'i-ä̤), *n.* [NL., < Gr. *ὦμος*, shoulder, + *ὀδύνη*, pain.] Pain in the shoulder.

omolite (ō'mọ-līt), *n.* [Gr. *ὦμος*, shoulder, + *λίθος*, stone.] In *ichth.*, the post-temporal bone; the bone which usually connects the shoulder-girdle with the cranium. *Starks*, Synonymy of the Fish Skeleton, p. 520.

omophagist (ọ-mof'a̤-jist), *n.* Same as *omophagus.*

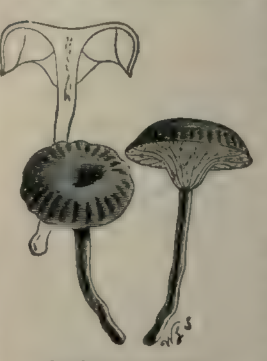
omophore (ō'mọ-fōr), *n.* [Gr. *ὠμοφόρος*, < *ὦμος*, shoulder, + *-φορος*, < *φέρειν*, bear.] One who bears the world on his shoulders: alluding to ancient Hindu and Greek cosmologic myths (Atlas, etc.).

> The world-bearing elephants of the Hindus, . . . the gigantic *Omophore* of the Manichæan cosmology, are all creatures who carry the earth on their backs or heads.
> *E. B. Tylor*, Primitive Culture, I. 329. *N. E. D.*

omoplata (ọ-mop'la̤-tä̤), *n.* [NL. See *omoplate.*] In *ichth.*, the post-temporal; the upper bone of the shoulder-girdle, usually joined to the cranium.

omphalectomy (om-pha̤-lek'tọ-mi), *n.* [Gr. *ὀμφαλός*, navel, + *ἐκτομή*, excision.] Excision of the navel.

Omphalia (om-fā'li-ä̤), *n.* [NL. (J. E. Gray, 1821), from the navel-like depression in the pileus; < Gr. *ὀμφαλός*, navel.] A genus of white-spored agarics having a cartilaginous stem broadened at the apex and gills decurrent. The pileus is somewhat membranaceous. The species are numerous, widely distributed, inodorous, and none are known to be edible. *O. campanella* is a common species on decaying trunks of coniferous trees and *O. umbilicata* in woods among moss.



Omphalia campanella.
(From Stevenson's "British Fungi.")

omphalism (om'fa̤-lizm), *n.* [Gr. *ὀμφαλός*, navel, center, + *-ism.*] Centralization of government both by placing the capital in the geographical center and by consolidation of governmental powers. *N. E. D.*

omphalochorion (om″fa̤-lọ-kō'ri-on), *n.*; pl. *omphalochoria* (-ä̤). [NL., < Gr. *ὀμφαλός*, navel, + NL. *chorion.*] In *embryol.*, the structure which results from a fusion of the yolk-sac with the chorion.

omphaloncus (om-fa̤-long'kus), *n.*; pl. *omphalonci* (-lon'sī). [NL., < Gr. *ὀμφαλός*, navel, + *ὄγκος*, mass.] A tumor at the umbilicus.

omphalophyma (om″fa̤-lọ-fī'mä̤), *n.*; pl. *omphalophymata* (-ma̤-tä̤). [NL., < Gr. *ὀμφαλός*, navel, + *φῦμα*, a growth.] Same as ★*omphaloncus.*

omphalopsychic (om″fa̤-lop-sī'kik), *a.* [Gr. *ὀμφαλός*, navel, + *ψυχή*, soul, + *-ic.*] Of or pertaining to the Omphalopsychites or their theories.

omphalosoter (om″fa̤-lọ-sō'tėr), *n.* [NL., < Gr. *ὀμφαλός*, navel, + *σωτήρ*, saver.] A device for replacing a prolapsed umbilical cord during childbirth.

omphalotomy (om-fa̤-lot'ọ-mi), *n.* [Gr. *ὀμφαλός*, navel, + *-τομια*, < *τέμνειν*, cut.] In *surg.*, the cutting of the umbilical cord.

Omphyma (om-fī'mä̤), *n.* [NL., < *ὀμ*(*φαλός*), navel, + *φῦμα*, growth.] A genus of Silurian tetracorals with simple conical corallum bearing radiciform extensions from about the apex.

omrah (om'rä̤), *n.* [Ar. *umarā*, pl. of *amir*, ameer.] A high official or grandee at a Mohammedan court, especially at that of the Great Mogul. *Encyc. Brit.*, XII. 795.

on¹, *prep.*—**On air.** In *mining*, a pump is said to be on air when drawing air with the water at each stroke.—**On end.** (*a*) and (*b*). See *end.* (*c*) In *coal-mining*, in a direction parallel to the main cleavage-planes or -joints of a coal-seam, and at right angles to the end-joints.—**On side**, in *foot-ball* and *hockey*, between the ball or puck and one's own goal: its opposite is *off side.* A player off side must be put on side before he can touch the ball or an opponent.—**On the spot** (*c*), **on the town.** See ★*spot*, ★*town.*

ON., O. N. An abbreviation of *Old Norse.*

onagon (o-nä'gon), *n.* [Chippewa?] A form of drum used by the Chippewa Indians.

onagra² (on'a̤-grä̤), *n.* [See *onager.*] The female of the wild ass or onager.

onagraceous (on-a̤-grā'shius), *a.* Belonging to the *Onagraceæ*, a family of plants.

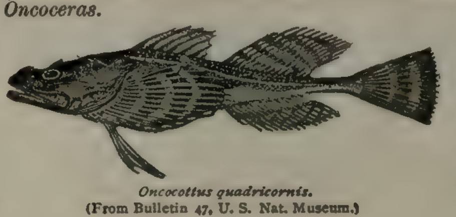
oncha (ōn'chä), *n.* [Amer. Sp.] A Spanish-American unit of weight, equal to twenty-five times the libra, or local pound.

onchosphere, *n.* See ★*oncosphere.*

onchus, *n.* See ★*oncus.*

Oncoceras (ong-kos'ẹ-ra̤s), *n.* [NL., < Gr. *ὄγκος*, barb, hook, + *κέρας*, horn.] A genus of Silurian nautiloid cephalopods having slightly curved, short, and exogastric shells with expanded living-chamber.

oncoceratite (ong-kọ-ser'a̤-tīt), *n.* [*Oncoceras* (*-at-*) + *-ite*².] A cephalopod of the genus *Oncoceras.*



Oncocottus quadricornis.
(From Bulletin 47, U. S. Nat. Museum.)

Oncocottus (ong-kọ-kot'us), *n.* [NL., < Gr. *ὄγκος*, hook, barb, + NL. *Cottus.*] A genus of cottoid fishes inhabiting circumpolar waters and extending south to England, Labrador, and Alaska.

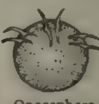
oncological (ong-kọ-loj'i-ka̤l), *a.* [*oncolog*(*y*) + *-ic-al*¹.] Relating to oncology.

oncometric (ong-kọ-met'rik), *a.* 1. Measured with or relating to the oncometer.—2. Relating to oncometry.

> The *oncometric* curves are nearly normal.
> *Buck*, Med. Handbook, I. 298.

oncometry (ong-kom'e-tri), *n.* [Gr. *ὄγκος*, a mass (tumor), + *-μετρια*, < *μέτρον*, measure.] Measurement of the variations in volume of the spleen, kidneys, etc., or of internal tumors.

oncosphere (ong'kọ-sfēr), *n.* [Gr. *ὄγκος*, barb, hook, + *σφαῖρα*, sphere.] The embryo of the tapeworm while it is in the spherical or subspherical stage, inclosed in a thick membrane, the embryophore, and armed with six hooks: same as *hexacanth* ★*embryo.*



Oncosphere (*Bothriocephalus latus*). Highly magnified.

> The embryo [of the tapeworm] itself is small, usually spherical, and regularly armed with six hooks arranged in three pairs near one pole. This six-hooked *oncosphere*, as it is called, is borne in an inner membrane of considerable thickness, and often prominent in appearance by virtue of its structure, and to this the name of embryophore has been given.
> *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 159.

oncospore (ong'kọ-spōr), *n.* [Gr. *ὄγκος*, hook, + *σπορά*, seed.] In *phytogeog.*, a plant whose fruit or seed is provided with hooks to assist distribution. *F. E. Clements.*

oncost (on'kôst), *n.* and *a.* [*on* + *cost*².] **I.** *n.* 1. Additional costs; extra expenses.

> The goods thus sent (damaged) are disposed of at the fairs of Bruges, Ghent, and Antwerp, or to itinerant traders, the commission being included in the item for *oncosts.* *J. Colville*, Social England, III. 392.

2. In *coal-mining*, the cost of upkeep, making and maintaining shafts and roads, pumping, etc. The engineers and others employed on this work are paid by time. [Scotch.]—3. The indirect expenditure incurred for the purpose of increasing the productive power of organized labor. *Trans. Inst. Engin. and Shipbuilders*, Scotland, March, 1900, p. 236.

II. *a.* Noting work done on time wages; also, noting men who work on such terms: as, *oncost*-men.

oncost-man (on'kôst-ma̤n), *n.* In *mining*, a workman other than a miner, who is paid by days' wages. *Barrowman*, Glossary.

oncotylid (ong-kot'i-lid), *n.* and *a.* **I.** A member of the family *Oncotylidæ.*

II. *a.* Having the characters of or belonging to the heteropterous family *Oncotylidæ.*

oncus (ong'kus), *n.*; pl. *onci* (on'sī). [NL. *oncus*, < Gr. *ὄγκος*, a hook.] A name given to certain fossil selachian fin-spines from the Paleozoic rocks, characterized by their bilateral symmetry, smooth base, and grooved surface.

ondograph (on'dọ-gråf), *n.* [Irreg. < F. *onde*, < L. *unda*, wave, + Gr. *γράφειν*, write.] In *phys.*, an instrument for recording wave-forms in alternating-current circuits and for the investigation of other oscillatory phenomena in electricity.

ondometer (on-dom'e-tėr), *n.* [Irreg. < F. *onde*, < L. *unda*, wave, + Gr. *μέτρον*, measure.] An instrument consisting of a system of adjustable condensers and inductance-coils for determining the wave-length of the electric waves, used in wireless telegraphy.

ondraw (on'drâ), *v. i.*; pret. *ondrew*, pp. *ondrawn*, ppr. *ondrawing.* [*on*¹ + *draw.*] To approach; draw on; draw near.

> By Joidoigne, near the east, as we *ondrew*,
> Dawn pierced the humid air;
> And eastward faced I with him, though I knew
> Never marched Grouchy there.
> *T. Hardy*, Peasant's Confession, Wessex Poems, p. 78.

ondrive (ôn'drīv), *v. t.*; pret. *ondrove*, pp. *ondriven*, ppr. *ondriving.* In *cricket*, to drive (a ball) to the on, that is, to that part of the field which is in front of the batsman's wicket and to the left of the wicket-keeper.

One old cat. See ★*cat*¹.

one-foot (wun'fůt), *a.* In *organ-building*, at a pitch three octaves above that of the keys used: said of stops or tones. See *stop*¹, 6, and *foot*, 12 (*c*) (2).

onegite (ọ-nē'gīt), *n.* [*Onega* (see def.) + *-ite*².] Acicular goethite-penetrating quartz:

used as an ornamental stone. The original came from Lake Onega, Russia. It is also found in Colorado.

Oneida conglomerate, sandstone. See ★*conglomerate*, ★*sandstone*.

Oneirodes (on-ī-rō′dēz), *n.* [NL., so called in allusion to the small, almost covered eyes; < Gr. *ὀνειρώδης*, dream-like, < *ὄνειρος*, dream, + *εἶδος*, form.] A genus of fishes, of the family *Ceratiidæ*, found in Greenland waters.

oneiromancer (ọ-nī′rọ-man-sėr), *n.* [*oneiromanc(y)* + *-er*^{2}.] One who divines by means of dreams; an interpreter of dreams.

oneiromantist (ọ-nī′rọ-man-tist), *n.* [*oneiromancy* (*-mant-*) + *-ist*.] Same as ★*oneiromancer*.

one-one (wun′wun), *a.* In *math.*, of two constructs, having every element of each paired with one and only one element of the other.

A relation is *one-one* when, if x has the relation to y, and x′ differs from x, y′ from y, then it follows that x′ does not have the relation to y, nor x to y′.
B. A. W. Russell, Princ. of Math., p. 305.

Oneonta sandstone. See ★*sandstone*.

onerative (on′ẹ-rā-tiv), *a.* [*onerate* + *-ive*.] Imposing a burden or obligation on; conveying an accusation: opposed to *exonerative*.

onerosity (on-ẹ-ros′i̤-ti), *n.* [*onerous* + *-ity*.] The fact of being onerous; specifically in *Scots law*, the fact that a deed, contract, note, or the like, has valid consideration. See *onerous*, 2.

Onerous contract, gift. See ★*contract*, etc.

one-time (wun′tīm), *a.* Sometime; former; whilom: as, with their *one-time* king.

It no longer needs to fear that its boom will collapse, for the *one-time* boom has passed off to be succeeded by slower but fully as substantial progress.
Outing, Feb., 1906, p. 584.

one-time (wun′tīm), *adv.* At once; without delay. [Colloq.]

'Oh, yes,' I said, 'I came on board her sixteen minutes ago; saw the Purser, and found I knew him; made him give me the best room in the ship instead of the one I'd got; carted my things in there *one-time*, and locked the door; and then cleared out here, and didn't worry any more.'
Cutcliffe Hyne, in Athenæum, Jan. 14, 1905, p. 46.

one-to-one (wun′tö-wun′), *a.* Same as ★*one-one*.

The meanings to be attached to addition, subtraction, multiplication, and division, the commutative, associative, and distributive laws of operation, can all be based on the notion of order and the possibility of *one-to-one* correspondences. *Encyc. Brit.*, XXVIII. 545.

one-valued (wun′val″ūd), *a.* Having but one value; in *math.*, noting a function, $y = fx$, as regards x, when for each x there is only one value of y. For example, $y = x^n$ is one-valued; whereas the function $y = x^{\frac{1}{n}}$ is, in general, an n-valued function of x.

The fundamental assumption concerning a homogeneous phase in equilibrium is that its energy ϵ is a continuous *one-valued* function of its entropy η, its volume v, and the masses $m_1, m_2, \ldots, m_n$ of its independent components. *Jour. Phys. Chem.*, May, 1904, p. 325.

O. N. F. An abbreviation of *Old Northern French*.

onflow (on′flō), *n.* [*on*^{1} + *flow*.] A continuous flowing, as of liquid; a flowing onward.

onflowing (on′flō-ing), *n.* Same as ★*onflow*.

onglaze (on′glāz), *a.* In *ceram.*, noting the decoration or tinting of ware after it has been glazed. See *overglaze*, *a*.

onion, *n.*—**Native onion.** In Australia, same as *native* ★*leek*.

onion (un′yun), *v. t.* [*onion*, *n.*] To affect by or with onions: (*a*) To flavor with onions. (*b*) To rub with onion; produce by the presence of onion, as tears. *N. E. D.*

onionized (un′yun-īzd), *a.* [*onion* + *-ize* + *-ed*^{2}.] Flavored with or smelling of onions. *N. E. D.*

onion-rust (un′yun-rust), *n.* A fungus, *Peronospora Schleideniana*, which produces a grayish coating upon onion-tops.

onion-scab (un′yun-skab), *n.* See ★*scab*.

onion-thrips (un′yun-thrips), *n.* Same as ★*tobacco-thrips*.

onion-twitch (un′yun-twich), *n.* Same as *onion-couch*.

onion-weevil (un′yun-wē″vl), *n.* An American otiorhynchid beetle, *Epicærus imbricatus*, which feeds on onion-leaves and other garden vegetables and plants. See cut at *Epicærus*.

oniscoidean (ō-nis-koi′dẹ-a̤n), *a.* and *n.* **I.** *a.* Same as *oniscoid*.

II. *n.* A wood-louse or sow-bug.

-onium. [NL. *-onium*, as in *ammonium*, etc.] In *chem.*, a termination given to the names of compound radicals which are analogous in structure and chemical function to ammonium, NH_4, as phosphonium, PH_4, or tetramethylphosphonium, $P^3 (CH_3)_4$.

onkos (ong′kos), *n.*; pl. *onkoi* (-koi). [Gr. *ὄγκος*, a bulk, a mass, a bushy topknot imitated in tragic masks: see ★*oncus*.] In *Gr. antiq.*, a cone-shaped projection of the upper part of the tragic mask which was supposed to give it size and impressiveness.

It seems to me possible that in this *onkos* we have a relic of the elongated animal-head, or even of the crest which we noticed on the Island stones in the case of the ass, lion, and horse.
A. B. Cook, in Jour. Hellenic Studies, XIV. 166.

onlik (on′lik), *n.* [Turk. *onliq*, < *on*, ten, + *-liq*, adj. ending.] A silver coin of Turkey, equal to 10 piasters.

onlook (on′lu̇k), *n.* The act of looking on (something); a thing or situation looked at.

onocerine (ọ-nos′ẹ-rin), *n.* [*Ono*(*nis*) + L. *cera*, wax, + *-ine*^{2}.] A crystalline substance, $C_{12}H_{20}O$, obtained from the root of *Ononis spinosa*, or rest-harrow.

onolatry (ọ-nol′a̤-tri), *n.* [Gr. *ὄνος*, ass, + *λατρεία*, worship.] The worship of an ass or asses: ascribed to various ancient sects. *Jour. Amer. Folk-lore*, July–Sept., 1903, p. 203.

onomatomania (on-ọ-mat-ọ-mā′ni-ä̤), *n.* [Gr. *ὄνομα*(*τ-*), name, + *μανία*, madness.] Obsession by a word or name; constant involuntary dwelling of the mind upon some one word.

onomatoplasm (on-ọ-mat′ọ-plazm), *n.* [Gr. *ὄνομα*(*τ-*), name, + *πγάσμα*, anything formed.] A word which imitates the sound of the thing it signifies.

onomatopœia, *n.* **3.** A word formed in imitation of the sound of the thing it signifies; an imitative word. See the extract.

Many interjections are what are called "imitative," or *onomatopœias*:—Sounds produced (a) by inanimate objects—ding-dong, . . . splash, clank, puff. (b) By animate objects—bow-wow, mew, . . . tu-whit, tu-whoo.
R. Morris, Hist. Outlines Eng. Accidence, xvii. § 318.

onomatopœial (on-ọ-mat-ọ-pē′ya̤l), *a.* [*onomatopœia* + *-al*^{1}.] Relating to or of the nature of onomatopœia; formed by onomatopœia; onomatopœic.

onomatopœian (on-ọ-mat-ọ-pē′ya̤n), *a.* and *n.* [*onomatopœia* + *-an*.] **I.** *a.* Same as *onomatopœic*.

II. *n.* Same as *onomatope*.

ononial (ọ-nō′ni-al), *n.* [*Ononi*(*s*) + *-al*^{3}.] An amorphous compound, $C_{19}H_{26}O_8$, found in the root of *Ononis spinosa*, or rest-harrow.

ononin (ọ-nō′nin), *n.* [*Onon*(*is*) + *-in*^{2}.] A glucoside, $C_{30}H_{34}O_{13}$, obtained from the root of *Ononis spinosa*, or rest-harrow.

onotillo (ō-nō-tēl′yō), *n.* [Amer. Sp., dim. of *onoto*, a Venezuelan form of *annotto*, *annatto*.] In Venezuela, a tree of the gamboge family, *Vismia ferruginea*. It yields a reddish-yellow gum-resin which can be used like gamboge.

onoto (ō-nō′tō), *n.* [A Venezuelan form of Galibi *annoto*, E. *annotto*, *annatto*, *arnotto*, etc.] Same as *arnotto*.

onsetter (on′set-ėr), *n.* **1.** One who urges, incites, or sets on (another).—**2.** One who assails or makes an onset.

onsetting (on′set-ing), *a.* Assailing; attacking.

on-side (on′sīd), *n.* In *cricket*, that part of the field of play to the left of the wicket-keeper and to the left of an imaginary line drawn between the wickets and extended in either direction to the boundary.

Leg hitting has so entirely departed—the last great exponent having been William Oscroft—that for some bowlers not a single man is placed on the *on-side*.
Encyc. Brit., XXVII. 276.

onstand (on′stand), *n.* Whatever the outgoing tenant of a farm leaves on the land (as manure, straw, etc.) for the incoming tenant, who pays for it at a price to be determined. [Prov. Eng.]

Ont. An abbreviation of *Ontario*.

ontal (on′ta̤l), *a.* [Gr. *ὤν*, neut. *ὄν* (*ὀντ-*), being (see *ontology*), + *-al*^{1}.] Real; actually existent: opposed to *phenomenal*. See the extract.

Difference of aspect [the Double Aspect Theory] may result solely from difference of standpoint, or it may be due to difference in the reality itself. The circle, seen as concave from within and as convex from without, is an ancient instance of the first still in great favour; the pillar, that was cloud and darkness to the Egyptians but light to the children of Israel, may serve to exemplify the second. The former we may call the phenomenal, and the latter the *ontal*, meaning of "aspect." With these two very different meanings our theory plays fast and loose as suits its own convenience.
Encyc. Brit., XXXII. 67.

Ontarian, *n.* **2.** In the classification of the New York series of geological formations, a term including all formations and stages of Upper Silurian age: equivalent to *Upper Silurian*.

ontocycle (on′tọ-sī-kl), *n.* [Gr. *ὤν* (*ὀντ-*), being, + *κύκλος*, cycle.] The cycle of individual development or ontogeny. [Rare.]

This enables us to speak confidently of the whole cycle of the ontogeny or *ontocycle* as more or less exactly parallel with the cycle of the phylogeny or phylocycle.
Hyatt, Biol. Lectures, 1899, p. 134.

ontocyclic (on-tọ-sik′lik), *a.* [*ontocycl*(*e*) + *-ic*.] Of or pertaining to an ontocycle.

ontocyclon (on-tọ-sī′klon), *n.* Same as ★*ontocycle*.

Ontogenetic adaptation. See ★*adaptation*.—**Ontogenetic forces**, the influences that work for the maintenance and stability of any organism or organization; the forces of social as well as individual preservation. *L. F. Ward*, Pure Sociol., p. 260.—**Ontogenetic migration.** See ★*migration*.—**Ontogenetic psychology.** See ★*psychology*.

Ontogenic variation. See ★*variation*.

ontogony (on-tog′ọ-ni), *n.* [Gr. *ὤν* (*ὀντ-*), being, + *γόνος*, generation, + *-y*^{3}.] Same as *ontogeny*.

ontography, *n.* **2.** That division of geography which is concerned with the responses of organic beings to their physiographic surroundings or environment.

ontoidic (on-tọ-id′ik), *a.* [Gr. *ὤν* (*ὀντ-*), being, + *ἴδιος*, own.] Of or pertaining to the ontogenetic stages of the idioplasm of Weismann.

We must . . . form an idea of the constitution and nature of the germ-plasm, and of the ontogenetic stages of the idioplasm, or *onto-idic* stages.
Weismann (trans.), Germ-plasm, p. 35.

ontonomy (on-ton′ọ-mi), *n.* [Gr. *ὤν* (*ὀντ-*), being, + *νόμος*, law, + *-y*^{3}.] Same as *ontology*.

ontophyletic (on″tọ-fī-let′ik), *a.* [Gr. *ὤν* (*ὀντ-*), being, + *φῦλον*, tribe, + *-et-ic*.] Intergenetic. [Rare.]

Recurring to an earlier suggestion (p. 3, above) we may note that all three of these conceptions are 'intergenetic,' or '*ontophyletic*.'
J. M. Baldwin, Development and Evolution, p. 11, note.

ontotrophy (on-tot′rọ-fi), *n.* [Gr. *ὤν* (*ὀντ-*), low, + *-τροφια*, < *τρέφειν*, nourish.] Individual nutrition. *L. F. Ward*, Pure Sociology, p. 291.

onuphin (on′ū-fin), *n.* [*Onuphis* (see def.) + *-in*^{2}.] An albuminous substance belonging to the hyalins, found in the tubes of *Onuphis tubicola*.

Onychaster (on′i-kas-tėr), *n.* [NL., < Gr. *ὄνυξ* (*ὀνυχ-*), claw, + *ἀστήρ*, star.] A genus of fossil ophiurans or brittle-stars with small round central disk and five long simple arms, occurring in the Subcarboniferous rocks, frequently associated with or adhering to the calyx of a crinoid.

onychatrophia (on″i-ka̤-trō′fi-ä̤), *n.* [NL., < Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *ἀτροφία*, atrophy.] In *pathol.*, atrophy of the nails.

onychoclasis (on-i-kok′la̤-sis), *n.* [NL., < Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *κλάσις*, breaking.] Breaking of a finger-nail or toe-nail.

Onychodus (ọ-nik′ọ-dus), *n.* [NL., < Gr. *ὄνυξ* (*ὀνυχ-*), claw, + *ὀδούς*, tooth.] A genus of Paleozoic fishes of uncertain relationship, best known from its remarkable arrangement of curved spur-like presymphyseal teeth. It occurs in the Devonian rocks.

onychograph (on′i-kọ-gråf), *n.* [Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *γράφειν*, write.] A device for recording the capillary pulse, if present, under the nails.

onychoid (on′i-koid), *a.* [Gr. *ὀνυχοειδής*, < *ὄνυξ* (*ὀνυχ-*), nail, + *εἶδος*, form.] Resembling a finger-nail or toe-nail.

onychophage (on′i-kọ-fāj), *n.* [Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *-φαγος*, < *φαγεῖν*, eat.] One who has the habit of biting the finger-nails.

onychophagia (on″i-kọ-fā′ji-ä̤), *n.* [NL.] Same as ★*onychophagy*.

onychophagist (on-i-kof′a̤-jist), *n.* Same as ★*onychophage*.

onychophagy (on-i-kof′a̤-ji), *n.* [NL. *onycophagia*, < Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *-φαγια*, < *φαγεῖν*, eat.] The habit of biting the finger-nails.

Habits of various kinds, such as *onycophagie* or finger-nail biting, excessive smoking, dypsomania, nervous twitchings, etc. *Pop. Sci. Mo.*, Nov., 1905, p. 607.

onychophyma (on″i-kọ̄-fī′mä̤), *n.* [Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *φῦμα*, a growth.] Thickening of the nails.

onychoptosis (on″i-kop-tō′sis), *n.* [NL., < Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *πτῶσις*, falling.] In *pathol.*, falling off of the nails.

onychorrhexis (on″i-kọ̄-rek′sis), *n.* [Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *ῥῆξις*, breaking, rupture.] A disease of the nail resulting in a longitudinal splitting.

Onycoteuthidæ (on″i-kọ̄-tū′thi-dē), *n. pl.* [NL. *Onycoteuth*(*is*) + *-idæ.*] A family of decapodous cephalopods of world-wide distribution. They have a cylindrical body with terminal or lateral fins, very long tentacular arms, the sessile or tentacular arms furnished with retractile hooks, and the gladius lanceolate with a terminal cone. The family contains *Onycoteuthis, Gonatus, Ancistrochirus*, and several other genera.

Onycoteuthis (on″i-kọ̄-tū′this), *n.* [NL., < Gr. *ὄνυξ* (*ὀνυχ-*), nail, + *τευθίς*, cuttle-fish.] The typical genus of the family *Onycoteuthidæ. Lichtenstein.*

Onygena (o-nij′ẹ̄-nä̤), *n.* [NL. (Persoon, 1798), irreg. < Gr. *ὄνυξ*, nail, hoof, + *-γενης*, -produced.] A genus of ascomycetous fungi having small, more or less globose, stipitate or sessile ascocarps surrounded by a peridium which becomes variously ruptured at maturity. The spores are unicellular, brown, becoming free in the peridium and intermingled with capillitium threads. Six species have been described. They occur on decaying hoofs and horns of various animals.

Onygenaceæ (on″i-jẹ̄-nā′sẹ̄-ē), *n. pl.* [NL., < *Onygena* + *-aceæ.*] A family of ascomycetous fungi containing the single genus *Onygena*. See ⋆*Onygena.*

onygophagist (on-i-gof′a̤-jist), *n.* An incorrect form of ⋆*onychophagist.*

> I was sitting at my desk, pen in hand and in mouth at the same time; (a substitute for biting the nails which I recommend to all *onygophagists*).
>
> *Southey*, Doctor, iii, A. i.

onymity (on-im′i̤-ti), *n.* [*onym* + *-ity.*] The possession of a name: opposed to *anonymity.* [Rare.]

onymizer (on′i-mī-zėr), *n.* [*onymize* + *-er*¹.] One who applies onyms or technical names, as to species or groups in zoölogy. *Coues*, in The Auk, Oct., 1884, p. 321. [Rare.]

onymous (on′i-mus), *a.* [*onym* + *-ous* or detached from (*an*)*onymous.*] Having a name: opposed to *anonymous:* said of persons or things, as letters, books, etc. *N. E. D.* [Rare.]

onyx, *n.*—**Oriental onyx.** Same as *onyx marble* or *Mexican onyx.*

onza (ōn′thä, ōn′sä), *n.* [Sp. *onza*, ounce. See *ounce*¹.] **1.** The ounce of Spain and Spanish America, the sixteenth part of the libra, or a little more than the avoirdupois ounce.—**2.** A Mexican gold coin, equal to 8 scudos or 16 pesos.

oo² (ō′ō), *n.* [Hawaiian.] One of the Sandwich Island honeysuckers, *Moho* or *Acrulocercus nobilis*, the bright yellow axillary feathers of which were used with those of the mamo in making cloaks and leis for the chiefs. See *Moho*, with cut.

oöangium (ō-ọ̄-an′ji-um), *n.*; pl. *oöangia* (-ä̤). [NL., < Gr. *ᾠόν*, egg, + *ἀγγεῖον*, vessel.] In *bot.*, a multicellular organ which develops the egg-cells. Same as *archegonium.* See ⋆*oöcyst*, 3.

oöblastema (ō″ọ̄-blas-tē′mä̤), *n.*; pl. *oöblastemata* (-ma̤-tä̤). [NL., < Gr. *ᾠόν*, egg, + *βλάστημα*, a sprout.] A simple or branched filament arising from the carpogonium of certain of the red algæ. It conjugates with an auxiliary cell, and as a result, carpospores are formed.

oöcapt (ō′ọ̄-kapt), *n.* [Gr. *ᾠόν*, egg, + *κάπτειν*, gulp down.] A muscular organ in *Cestoda* by which the eggs are taken from the ovary and forced onward to the vagina. *Buck*, Med. Handbook, II. 780.

oöchlorin (ō-ọ̄-klō′rin), *n.* [Gr. *ᾠόν*, egg, + *χλωρός*, greenish-yellow, + *-in*².] A green pigment found in certain egg-shells of birds.

Oöcorys (ō-ọ̄-kō′ris), *n.* [NL., < Gr. *ᾠόν*, egg, + *κόρυς*, a helmet.] The typical genus of the family *Oöcorythidæ. Fischer*, 1883.

Oöcorythidæ (ō″ọ̄-kō-rith′i-dē), *n. pl.* [NL. *Oöcorys* (*-ryth-*), + *-idæ.*] A family of gastropodous mollusks of the order *Prosobranchiata.* They have a short siphon, broad foot, no eyes, the radula tænioglossate, the shell buccinoid or cassidiform, and the corneous operculum spiral. It contains the single genus *Oöcorys.*

oöcyan (ō-ọ̄-sī′a̤n), *n.* [Gr. *ᾠόν*, egg, + *κύανος*, blue.] Same as ⋆*oöcyanin.*

oöcyanin (ō-ọ̄-sī′a̤-nin), *n.* [Gr. *ᾠόν*, egg, + *κύανος*, blue, + *-in*².] A blue pigment which has been found in certain egg-shells.

oöcyesis (ō″ọ̄-sī-ē′sis), *n.* [Gr. *ᾠόν*, egg, + *κύησις*, gestation.] Ovarian gestation.

oöcyst, *n.* **3.** A unicellular structure of the algæ, producing egg-cells: same as *carpogonium.* See ⋆*oöangium.*—**4.** In sporozoans, the tough, resistent wall surrounding a zygote. *Proc. Roy. Soc.* (London), 1902, I. 77.

oöcyte (ō′ọ̄-sīt), *n.* [Gr. *ᾠόν*, egg, + *κύτος*, a hollow (a cell).] The ovarian egg before maturation, that is, before the formation of the polar bodies. The primary oöcyte divides to form the secondary oöcyte and the first polar body; the secondary oöcyte divides to form the mature egg (oötid) and the second polar body. The primary and secondary oöcytes in oögenesis, with their corresponding polar bodies, are the homologues of the primary and secondary spermatocytes in spermatogenesis. *Boveri*, 1891.

oœciostome (ō-ē′si-ọ̄-stōm), *n.* [NL. *oœcium* + Gr. *στόμα*, mouth.] The orifice of a zoœcium among the moss-animals or *Polyzoa.*

> A zoœcium in which the egg develops becomes an ovicell; it differs to a conspicuous extent from the other individuals of the colony, and often acquires a complicated form. Its orifice ("*oœciostome*") is valuable for the discrimination of the species.
>
> *Encyc. Brit.*, XXXI. 828.

oof (öf), *n.* [Short for *ooftish.*] Money; cash. [Slang.]

> I believe his family 's all right, and of course he has plenty of *oof*, but then, you know, as I 've often said to Weginald, 'Whatever happens, we must keep select.'
>
> *N. Y. Times*, Sept. 7, 1902.

oof-bird (öf′bėrd), *n.* [*oof* + *bird*¹, used humorously.] An imaginary 'bird' or fairy godmother who can be coaxed into generosity; hence, the one who furnishes the money; the source of supplies. [Slang.]

> In these days, when the *oof-bird* is so wild and wary, it won't do . . . to kick up your heels at a good thing just because it may n't be all that your fancy painted.
>
> *Jane Barlow*, Founding of Fortunes, iii. 8.

oofless (öf′les), *a.* [*oof* + *-less.*] Without money; penniless. [Slang.]

ooftish (öf′tish), *n.* [Said to be Yiddish *oof tish*, for G. *auf tische*, that is, *auf dem tische*, 'on the table,' meaning money laid down on the counter, 'cash down.'] Money; money down. See the extract. [Slang.]

> 'Oof' as a current pseudonym for money has been in use for about seven years, but '*ooftish*,' which also is Whitechapel slang for coin of the realm, has been in use in England over thirty years.
>
> *J. W. Pearce*, in Mod. Soc., Jan. 16, 1892. *N. E. D.*

oofy (öf′i), *a.* [*oof* + *-y*¹.] Rich; very wealthy. [Slang.]

> Awfully good family, the Walders, not particularly *oofy*, are they? *Albert Kinross*, Philbrick Howell, xxix.

oögonial (ō-ọ̄-gō′ni-a̤l), *a.* [*oögoni*(*um*) + *-al*¹.] Of or pertaining to oögonia or an oögonium.

> The fertilizing tube is entirely of *oogonial* origin.
>
> *Science*, March 21, 1902, p. 457.

oögonium, *n.* 2. In *zoöl.*: (*a*) The primordial mother-cell which gives rise to the ovum and its follicle. *Pflüger.* (*b*) One of the youngest ovarian cells, characterized by having in its nucleus the same number of chromosomes as in the nuclei of the somatic or body-cells. The oögonia, which eventually give rise to the primary oöcytes, are homologous in the oögenesis with the spermatogonia in the spermatogenesis of the male animal of the same species. *Boveri*, 1891.

oöid (ō′oid), *a.* [Gr. *ᾠοειδής*, < *ᾠόν*, egg, + *εἶδος*, form.] Same as *oöidal.*

oöidocephalic (ọ̄-ō″i-dọ̄-se-fal′ik), *a.* [Gr. *ᾠοειδής*, oval, + *κεφαλή*, head, + *-ic.*] In *craniom.*, having a head of an oval form: noting one of the divisions of cranial forms given by Aitken Meigs.

oökaryon (ō-ọ̄-kar′i-on), *n.*; pl. *oökarya* (-ä̤). [NL., < Gr. *ᾠόν*, egg, + *κάρυον*, nut.] The nucleus of the unfertilized egg or ovum; the egg-nucleus.

oökinesis (ō″ọ̄-ki-nē′sis), *n.* [NL., < Gr. *ᾠόν*, egg, + *κίνησις*, movement.] The karyokinetic or mitotic phenomena exhibited by the egg during its maturation and fertilization. *Whitman*, 1887.

oökinete (ō-ọ̄-kī′nēt), *n.* [Cf. ⋆*oökinesis.*] In sporozoans, a zygote which is at first a freely moving gregarine-like organism which penetrates the cells or tissues, comes to rest, and becomes encysted as an oöcyst. *Proc. Roy. Soc.* (London), 1902, I. 74.

oökinetic (ō″ọ̄-ki-net′ik), *a.* [*oökinesis* (*-et-*) + *-ic.*] Of or pertaining to, or exhibiting, oökinesis.

oölem (ō′ọ̄-lem), *n.* [Also *oölemm;* < Gr. *ᾠόν*, egg, + *λέμμα*, peel, skin, scale.] The innermost of the three external coats of an insect's egg. See *oölemma. Cambridge Nat. Hist.*, V. 144.

oölite, *n.*—**Hambleton Oölite** [*Hambleton* Hills in Yorkshire], in *geol.*, a division of the Corallian Oolite in Yorkshire which lies between the Lower and Middle Calcareous grits and is recognized as the zone of the ammonite *Aspidoceras perarmatum.*

oölith (ō′ọ̄-lith), *n.* [Gr. *ᾠόν*, egg, + *λίθος*, stone.] A fossil egg of a bird or reptile.

oölogize (ọ̄-ol′ọ̄-jīz), *v. i.*; pret. and pp. *oölogized*, ppr. *oölogizing.* [*oölog*(*y*) + *-ize.*] To study birds' eggs; collect birds' eggs.

ooloo, *n.* See ⋆*ulu.*

oom (ōm), *n.* [D., AS. *eám*, uncle. See *eam.*] In Dutch, uncle: used like Eng. *uncle*, as a title of mention and address: as, *Oom* Paul, the popular name of Paul (Stephanus Johannes Paulus) Kruger, president (1883–1900) of the late Transvaal Republic.

oömancy (ō′ọ̄-man-si), *n.* [NL. *oömantia*, < Gr. *ᾠόν*, egg, + *μαντεία*, divination.] Same as ⋆*oöscopy.*

oont (önt), *n.* [Hind. *ūṅt*, a camel, a reduced form (prob. taken as imitative of a grunt) of Skt. *ushtra*, a camel, a buffalo.] The camel. [Anglo-Ind.]

> O the *oont*, O the *oont*, O the commissariat *oont!*
> With 'is silly neck a-bobbin' like a basket full o' snakes;
> We packs 'im like an idol, an' you ought to 'ear 'im grunt,
> An' when we gets 'im loaded up 'is blessed girth-rope breaks.
>
> *R. Kipling*, Barrack-room Ballads, Oonts, st. 1.

oöphagous (ọ̄-of′a̤-gus), *a.* [Gr. *ᾠόν*, egg, + *-φαγος*, < *φαγεῖν*, eat.] Subsisting on eggs; egg-eating.

oöphagy (ọ̄-of′a̤-gi), *n.* [Gr. *ᾠόν*, egg, + *-φαγια*, < *φαγεῖν*, eat.] The habit of eating eggs.

oöphoric (ō-ọ̄-for′ik), *a.* [*oöphor*(*e*) + *-ic.*] Of or pertaining to an oöphore.

oöphorid (ọ̄-of′ọ̄-rid), *n.* Same as *oöphoridium.*

oöphytic (ō-ọ̄-fit′ik), *a.* [*oöphyte* + *-ic.*] Of or pertaining to an oöphyte.

oöplasm (ō′ọ̄-plazm), *n.* [NL. *oöplasma*, < Gr. *ᾠόν*, egg, + *πλάσμα*, anything formed.] The protoplasm or living substance of the egg or ovum.

oöplasma (ō-ọ̄-plas′mä̤), *n.*; pl. *oöplasmata* (-ma̤-tä̤). Same as ⋆*oöplasm.*

oöpod (ō′ọ̄-pod), *n.* [Gr. *ᾠόν*, egg, + *πούς* (*ποδ-*), foot.] Any one of the sclerites of an insect's ovipositor.

oörhodein (ō-ọ̄-rō′dẹ̄-in), *n.* [Gr. *ᾠόν*, egg, + *ῥόδον*, rose, + *-e-in.*] A reddish or brownish-reddish pigment occurring in egg-shells: supposedly identical with hematoporphyrin.

oöscope (ō′ọ̄-skōp), *n.* [Gr. *ᾠόν*, egg, + *σκοπεῖν*, view.] An instrument for observing the interior of an egg and noting its condition; an egg-tester.

oöscopy (ọ̄-os′kọ̄-pi), *n.* [Gr. *ᾠόν*, egg, + *-σκοπια*, < *σκοπεῖν*, view.] **1.** The act of observing the process of development within an egg by means of an instrument made for that purpose.—**2.** Divination by the examination of eggs.

oösite (ō′ọ̄-sīt), *n.* [G. *oösit* (Marx, 1834), named from *Oos*, a stream in Baden.] A kind of pinite from the Oos valley, Baden.

Oöspora² (ọ̄-os′pọ̄-rä̤), *n.* [NL. (Wallroth, 1833), < Gr. *ᾠόν*, egg, + *σπορά*, seed (spore).] A genus of hyphomycetous fungi having a scanty mycelium. The fertile hyphæ are short, sometimes branched, and bear a great abundance of catenulate hyaline or bright-colored unicellular conidia. *O. lactis* is a common species occurring on the surface of cheese, milk, and other substances, and forming a white mold-like layer.

oöstegopod (ō-ọ̄-steg′ọ̄-pod), *n.* [Gr. *ᾠόν*, egg, + *στέγος*, cover, + *πούς* (*ποδ-*), foot.] An oöstegite; a brood-foot; a thoracic appendage on the females of certain crustaceans, as *Apus*, the distal portion of which is cup-like and covered by a lid, the whole forming a cavity for the reception of the eggs. See cut at *oöstegite.*

> A capsule or brood-pouch is produced, which serves for the reception of the eggs, and the appendage is distinguished as the *oostegopod* or brood-foot.
>
> *Parker and Haswell*, Zoology, I. 489.

oöthecotomy (ō″ọ-thẹ̄-kot′ọ-mi), *n.* [NL., < *oötheca* + Gr. *-τομια*, < *ταμεῖν*, cut.] Same as *ovariotomy*.

oötid (ō′ọ-tid), *n.* [Gr. *ᾠόν*, egg, + *-t-* + *-id*²(as in *spermatid*).] One of the four cells which result from the two consecutive divisions of the primary oöcyte during oögenesis. These four cells are the mature ovum and three polar bodies. Often there are only two polar bodies, owing to a failure of the first polar body to divide. The four oötids formed during oögenesis correspond to the four spermatids derived by two consecutive divisions of the primary spermatocyte during spermatogenesis. See ★*polar body*.

oötype (ō′ọ-tīp), *n.* [Gr. *ᾠόν*, egg, + *τύπος*, impression.] In some *Trematoda*, a dilated portion of the uterus into which the oviduct opens and in which the egg is fertilized, acquires its investment of yolk, and is provided with a shell. *Parker and Haswell*, Zoology, I. 254.

oöxanthin (ō-ok-zan′thin), *n.* [Gr. *ᾠόν*, egg, + *ξανθός*, yellow, + *-in*².] A yellow pigment found in egg-shells.

ooz, *n.* and *v.* A simplified spelling of *ooze*.

ooze, *n.* **5.** The short fibers on the surface of cotton thread, usually burned off in manufacture. *Nasmith*, Cotton Spinning, p. 373.—**Ooze calf.** See ★*calf*¹.—**Pteropod-ooze**, an ooze formed of the shells of organisms which live at the surface in tropical seas, and containing a large proportion of pteropod shells. It is found on submarine ridges rising to within 1000 fathoms of the surface. The reason for its absence at greater depths is that the delicate shells are dissolved by the action of the sea-water before they have sunk to the abysses of the ocean.

ooze-eel (öz′ēl), *n.* An eel of the family *Ilyophidæ*: a translation of the generic name *Ilyophis*.

ooze-leather (öz′leᴛʜ″ėr), *n.* Soft leather made by finishing skins on the flesh side.

oozily (ö′zi-li), *adv.* With an oozy, damp, or muddy look or feeling: as, ropes dripping *oozily*.

op. An abbreviation (*b*) [*cap.*] of *Opera*; (*c*) of *opposite*.

O.P. An abbreviation of *overproof* in the English excise system of stating the strength of alcoholic liquors. See *overproof*.

o. p. An abbreviation of *opposite prompt* [*side*] or *prompter*.

opacification (ọ-pas″i̤-fi-kā′shọn), *n.* [L. *opacus*, opaque, + *-ficare*, < *facere*, make.] The formation of an opacity; the process of rendering opaque. [Rare.]

> Hyperplasia, degeneration—these are results of malnutrition and the essentials of *opacification*.
>
> *Med. Record*, Feb. 28, 1903, p. 333.

opacity, *n.*—**Acoustic opacity**, the property of being impervious to sound-waves.

opal, *n.*—**Ceylonese opal**, one of the names applied to the Ceylonese moonstone.—**Harlequin opal.** See *harlequin*, 4, and *opal* (*a*).

opal-agate (ō′pa̤l-ag″āt), *n.* A natural mixture of opal and agate. The agate contains a part of opal silica, that is, chalcedony silica and opal silica, the latter having five, or more, per cent. of combined water. Opal-agate occasionally replaces wood in fossilization.

opalesque (ō-pa̤-lesk′), *a.* [*opal* + *-esque*.] Having the color and iridescence of an opal; milky-white like an opal.

opalish (ō′pa̤l-ish), *a.* [*opal* + *-ish*.] Something like an opal.

opalite (ō′pa̤-līt), *n.* [*opal* + *-ite*².] A milky-white variety of glass or fusible porcelain. Also used adjectively: as, *opalite* tile.

> The feature of this building is the treatment of the interior of the cages with light-green *opalite* tile, and a frieze of faïence tile representing desert and jungle scenes for the lions and tigers, respectively.
>
> *Science*, Feb. 13, 1903, p. 266.

opalotype (ō′pa̤-lọ-tīp), *n.* [*opal* + *-type*.] A photograph made on opal glass. *Woodbury*, Encyc. Dict. of Photog., p. 307.

opaque. I. *a.*—**Opaque twist.** See ★*twist*.

II. *n.* **2.** Something opaque; specifically, a shade which can be worn over the forehead to protect the eyes from brilliant light.

op. cit. An abbreviation of the Latin *opus citatum* (abl. *opere citato*), pl. *opera citata*, etc., the work cited.

Opegrapha (ọ-peg′ra̤-fä̤), *n.* [NL. (Persoon, 1794), < Gr. *ὀπή*, an opening, + *γραφή*, writing. The name alludes to certain markings seen through openings.] A large genus of lichens of the family *Graphidaceæ*, having the thallus crustaceous and the apothecia more or less elongate and carbonaceous. The spores are elongate hyaline, and many-celled. The species are widely distributed, occurring on bark, wood, and rocks. *O. varia* is a species common on bark.

opelet (ō′pẹ̄-let), *n.* [*ope*, open, + *-let*.] A European sea-anemone, *Anthea cereus*, having long tentacles which cannot be retracted, whence the name.

> The olive-green tangle-blades and other seaweeds are studded with the *opelet* (Anthea cereus), whose long trailing tentacles, with their hues of green and red, wave with every surge of the tide.
>
> *Annals and Mag. Nat. Hist.*, March, 1901, p. 224.

Opelousas cat. See ★*cat*¹.

open. I. *a.* **14.** In *printing*, said of a composition in type that is wide-leaded or with excess of quadrats or other blanking-out material, known to compositors as 'fat matter.'—**Open bet.** See ★*bet*².—**Open champion**, one who has won in an open-championship competition.—**Open championship**, a championship which may be competed for with no restriction.—**Open class**, in bench-shows, horse-shows, etc., a class open to all.—**Open-coil armature**, an armature of a direct-current generator or motor, such that at any moment only those coils the terminals of which are under the brushes are traversed by current, the others being in open circuit.—**Open-coil dynamo**, an electric generator the armature of which is of the open-coil type.—**Open door, file, game, method, pig.** See ★*door*, etc.—**Open-plate wheel, open port, race, ranks.** See ★*wheel*¹, etc.—**Open rate**, the announced public rate (of freight, etc.), as distinguished from secret rates given to favored parties.

> Had from the Central a rebate of from ten cents to forty-five cents a barrel—usually it was twenty-five cents on the *open rate* for refined oil to the seaboard.
>
> *I. M. Tarbell*, in McClure's Mag., Feb., 1903, p. 403.

Open-running fan, in *mining*, a form of centrifugal ventilating fan in which the casing revolves with the fan and the air is discharged from the whole circumference. Closed fans are those in which the casing is stationary and the air is discharged at one point only.—**Open score, sea.** See ★*score*¹, ★*sea*¹.—**Open-shelf system**, a method of library management in which the reader is permitted free access to the books upon the shelves.—**Open shop.** See ★*shop*¹.—**Open-side planer.** See ★*planer*.—**Open test.** See ★*test*¹.—**Open timber**, said of roofs whose beams are exposed from beneath, the under side of the beams being carved and forming an ornamental ceiling.—**Open town**, a town or city in which the laws relating to the closing of drinking-places on Sunday or between certain hours are ignored by the authorities; hence, a town or city in which gambling and other vices are winked at by the authorities. [Slang, U. S.]—**Open trade, woods.** See ★*trade*¹, ★*wood*¹.

II. *n.* **2.** An opening; a hole; the widening of a river at its mouth: as, the *open* of Humber; a gap in sand-dunes through which a road can pass. [Local, Eng.] *N. E. D.*—**3.** An opportunity; an opening; a chance.

open, *v.* I. *trans.*—**To open her up**, to open the throttle in the steam-pipe of a ship's engine and throw an increased volume of steam into the cylinders.—**To open out**, in *mining*, to enlarge (a heading) to form a working face: as, *to open out* a room; *to open out* a long wall-face.

II. *intrans.* **10.** *Naut.*, to appear to separate and become distinct, as lights in a harbor when the vessel nears.

> The lights . . . will appear to separate, or, in the nautical phrase, they will *open*.
>
> *Moseley*, Astron., I. 2. *N. E. D.*

Open-air cure, the treatment of disease, especially of pulmonary tuberculosis, by a more or less continuous existence, by day and by night, in the open air.—**Open-air school of painting.** See ★*painting*, 1.

open-casting (ō′pn-kås″ting), *n.* In *mining*, holing above the seam, that is, working as in a quarry or open-cast. *Barrowman*, Glossary.

open-cut (ō′pn-kut), *a.* In *engin.*, dug down from the surface; not tunneled; not covered during construction, as an underground railroad.

opener, *n.* **3.** *pl.* In *poker*, the necessary qualification for opening a jack-pot, namely, jacks or better.—**Porcupine-opener**, a form of machine for opening up cotton as taken from the bale: so named because the beater consists of a number of spikes or blades. See *opener*, 2 (*b*).

open-hearth (ō′pn-härth), *a.* **1.** Having a hearth which is shallow or open to inspection and to access of the workmen: said of steel-furnaces for the Siemens-Martin process.—**2.** Made in an open-hearth furnace: said of steel. See ★*steel*¹.

opening, *n.*—**Close opening**, in *chess*, any commencement of the game wherein the king's pawn is not early advanced to its fourth square by both players.—**Damiano defense opening**, in *chess*, 1 P—K 4, P—K 4: 2 Kt—KB 3, P—KB 3: an obviously incorrect defense.—**Defense to King's Knight's opening**, in *chess*. The regular defenses are 2 . . . Kt—QB 3, 2 . . . Kt—KB 3, and 2 . . . P—Q 3.; all others are considered irregular.—**English opening**, in *chess*, same as *Staunton's opening*.—**Fianchetto di donna opening**, in *chess*, the moving of the Queen's Knight's Pawn on the first move: a flank movement, mostly available by the second player.—**Hampe opening.** Same as *Vienna opening*. See *opening*, 9.—**Hazard opening.** See ★*hazard chase*.—**Irregular opening**, in *chess*, an opening not found among any of the regular or 'book' openings.—**King's Bishop's opening.** See *opening*, 9.—**King's Knight's opening**, in *chess*, 1 P—K 4, P—K 4; 2 Kt—KB 3.—**Pawn-and-move opening**, in *chess*, an opening in which black concedes to white the odds of the King's Bishop's Pawn and the move.—**Ponziani opening**, in *chess*, same as *Staunton's opening* (which see, under *opening*, 9).—**Queen's Bishop's Pawn's opening.** Same as *Staunton's opening*.—**Sicilian opening**, in *chess*, 1 P—K 4, P—QB 4. More commonly called the *Sicilian defense*.—**Spherical opening**, the size of a solid angle, now measured in steradians.—**Staunton's opening.** See *opening*, 9.—**Two Bishops' opening**, in *chess*, 1 P—K 4, P—K 4; 2 B—B 4, B—B 4. [Obsolete.]—**Vienna opening.** See *opening*, 9.

opening-knife (ōp′ning-nīf), *n.* A short, strong knife for opening oysters, tin cans, etc.

open-sand (ō′pn-sand), *a.* In *founding*, made in sand without a cope or cover. See *open-sand* ★*molding*.

open-timbered (ō′pn-tim″bėrd), *a.* Built so that the timber framing shows and forms the design as seen from within, as the roofs in many English churches and halls of the fourteenth and fifteenth centuries.

opera¹, *n.*—**Opera buffa.** Same as *opera bouffe*: opposed to ★*opera seria*.—**Opera da camera**, an opera or operetta designed for performance in a private house.—**Opera seria**, the tragic or serious opera, as distinguished from the ★*opera buffa* or comic opera.

operamania (op″ẹ-rä̤-mā′ni-ä̤), *n.* [Also *operamanie*, *op'ramany*; E. *opera* + Gr. *μανία*, madness.] A craze for the opera.

> Adieu my hopes, if *op'ramany*
> Has seiz'd on Peter's pericranie.
> Drunk with Italian syren's cup!
> Nay then, in troth, I give him up:
> The man 's a quack whoe'er pretends he
> Can cure him of that fiddling phrenzy.
>
> *Byron*, Letter to R. L., Esq., st. 6.

operand (op′ẹ-rand), *n.* [L. *operandum*, neut. gerundive of *operari*, work.] That which is to be operated upon; in *math.*, that which is subjected to an operator. In $\frac{d}{dx} f(x)$, $\frac{(d)}{dx}$ is the operator, $f(x)$ the operand.

operatic² (op-ẹ-rat′ik), *a.* [Irreg. < *operate* + *-ic*.] Working; productive; operative. [Rare.]

> The place of our labourers and *operatic* manufacturers being almost entirely supplied by slaves.
>
> *T. Arnold*, Later Rom. Comm., II. 446.

operation, *n.*—**Algebraic operations**, addition, multiplication, involution, and their inverses.—**Arithmetic operation**, addition, subtraction, multiplication, or division.—**Bassini's operation**, an operation for the radical cure of hernia, consisting essentially in obliteration of the inguinal canal by twisting the hernial sac and suturing the abdominal muscles to Poupart's ligament.—**Beatson's operation**, ovariotomy in cases of inoperable cancer of the breast, the loss of the internal secretion of the ovaries being thought to cause a shrinking of the mammary tumor.—**Bier's operation**, an operation for obtaining a stump (following amputation of the leg) which will bear the weight of the body. After the amputation a wedge is cut out of tibia and fibula a few inches above the end of the stump, and the lower piece is raised so that, when union of the bones takes place, there is a foot-shaped extremity to the leg.—**Bottini's operation**, the formation of a channel, by use of the galvanocautery, through the prostate, in hypertrophy of that gland.—**Celsian operation.** (*a*) Lithotomy by incision through the perineum. (*b*) Embryotomy by decapitation. (*c*) Amputation by a circular incision down to the bone. (*d*) Removal of epithelioma of the lip by a V-shaped incision.—**Chopart's operation.** (*b*) A plastic operation for the restoration of a lost lip.—**Emmet's buttonhole operation**, a vesicovaginal fissure artificially produced in order to insure drainage of the bladder in certain cases of cystitis.—**Estlander's operation**, an operation for the relief of empyema by resection of the rib and drainage of the pleural cavity.—**Flap operation**, amputation in which flaps are utilized to round over the end of the stump. See *flap*, 6.—**Guyon's operation**, amputation of the foot by means of an elliptical incision made just above the malleoli.—**Infinitesimal operation**, in *math.*, one causing an infinitesimal change in each of the variables of the operand.—**Inverse operation.** See *inverse*, 2.—**Kocher's operation.** (*b*) A method of resection of the elbow.—**Kraske's operation**, exsection of the rectum after removal of part of the sacrum and coccyx.—**Langenbeck's operation.** (*b*) A plastic operation for the restoration of a lost lip.—**Lisfranc's operation.** (*c*) A plastic operation for the restoration of a lost lip.—**Lorenz's operation**, the forcible reduction of a congenital dislocation of the hip, and retention of the head of the femur in its normal position until a new socket forms: this is done entirely by manipulation, no cutting operation being resorted to.—**Macewen's operation.** (*a*) Chiseling through the femur just above the knee in order to permit of straightening of the leg in cases of knock-knee. (*b*) An operation for the radical cure of hernia by closing the internal ring by a pad formed of the hernial sac.—**Malgaigne's operation.** (*c*) A plastic operation for the reconstruction of a lost lip.—**Mastoid operation.** Same as ★*mastoidotomy*.—**Mules's operation**, insertion of a hollow ball of non-irritating material after evisceration of the contents of the eyeball in order to preserve its shape and give support for an artificial eye.—**Ogston's operation.** (*a*) Removal of the inner condyle of the femur for knock-knee. (*b*) Excision of a wedge-shaped piece from the tarsus in order to restore the arch in flat-foot.—**Operation of complaisance.** See ★*complaisance*.—**Permutable operations**, such operations as are commutative.—**Phelps's operation.** (*a*) The operation of cutting through all the contracted tissues to the bone and then forcibly straightening the foot, in the treatment of talipes equinovarus. (*b*) An operation for the closure of harelip.—**Rational operations**, additions, subtractions, multiplications, and divisions (the divisor not being zero).—**Reverse operation**, in *math.*, inverse operation.—**Rydygier's operation for osteoplastic resection**, an operation for exsection of the rectum, in which access to the bowel is facilitated by dividing the sacrum and turning it back, replacing it (with the attached soft parts) upon the conclusion of the operation.—**Saenger's operation**, a modified Cæsarean section.—**Schede's operation.** (*a*) Resection of a portion of the thoracic wall together with some of the thickened pleura, in the treatment of empyema. (*b*) Removal of the necrosed portion of a bone, allowing the cavity to fill with blood which clots and later becomes organized.—**Stacke's operation**, the hollowing out of the mastoid process and of the drum of the ear, converting them into one cavity.—**Stephen Smith's operation**, a method of amputation at the knee-joint in which the flaps are so formed that the cicatrix lies between the condyles of the femur posteriorly.—**Syme's operation.** (*b*) A plastic operation for the reconstruction of a lost lip.—**Talma's operation**, the attachment of the omentum to the inner wall of the abdomen in order to establish an anastomosis between the veins of the portal and of the systemic systems.—**Trendelenburg's operation**, a method of bloodless amputation at the hip-joint, in which bleeding is prevented by passing an iron rod through the tissues and a rubber tube by figure-of-8 turns over the projecting ends of the rod.—**Univocal operation**, in *math.*, an operation which has only one result.—**Wölfler's operation**, the establishment of a permanent opening between the stomach and the lower portion of the duodenum or the jejunum, in cases of obstruction at the pylorus.—**Wood's operation.** (*b*) A plastic operation for exstrophy of the bladder in which the defect is closed by a flap of skin cut from the abdominal wall and turned over so that the cutaneous surface forms the inner wall of the bladder.—**Wyeth's operation**, a method of bloodless amputation at the hip-joint, similar to Trendelenburg's operation.

operative. I. *a.*—**Operative surgery.** See ★*surgery.*

II. *n.* 2. One who operates in any line of business; an operator: used in certain circumstances as a convenient substitute for *detective.*

> The word "detective" became so offensive . . . that it was dropped by some successful [detective] agencies. The word chosen by the Pinkertons to take its place was "*operative.*" Don't telegraph to Bob to send you a detective; say "send me an *operative.*"
> *N. Y. Press*, Oct. 23, 1905.

operatize (op'ẹ-ra-tīz), *v. t.*; pret. and pp. *operatized*, ppr. *operatizing*. [*opera*^{1} + *-t-* + *-ize* (as in *dramatize*).] To change into an opera; cause to resemble an opera by the addition of songs and music, as a play.

operator, *n.* 3. One who conducts a business, as mining; a capitalist who carries on a business: opposed to *operative.*

> The *operators* have intimated to sales agents and wholesalers that if the conference set for Thursday terminates in an agreement to continue work, the mines will have to be shut down for a time at any rate.
> *N. Y. Eve. Mail*, Feb. 10, 1906.

operatress (op'ẹ-rā-tres), *n.* [*operator* + *-ess.*] A female operator.

operatrix (op-ẹ-rā'triks), *n.* [LL. *operatrix*, fem. of L. *operator.* See *operable.*] Same as ★*operatress.*

opercular, *a.* II. *n.* The upper posterior bone of the series of bones forming the gill-cover in fishes. *Starks*, Synonymy of the Fish Skeleton, p. 515.

operculare (ọ-pėr-kụ-lā'rē), *n.* [NL., neut. of *opercularis.* See *opercular.*] In the osteology of the fishes, same as *splenial.*

operculate, *a.* II. *n.* An operculated gastropod.

operculomandibular (ọ-pėr″kụ-lō-man-dib'ụ-lạ̈r), *a.* Pertaining to the opercle and the mandible, as a sensory canal in fishes running across the preopercle and mandible.

operculum, *n.*—**Genital operculum**, an organ on the ventral side of the body in the extinct crustacean *Eurypterus* and its allies, consisting of amalgamated plates longitudinally crossing the first two abdominal segments, the form of the median lobe varying with the sex.—**Occipital operculum**, a portion of the occipital lobe of the brain which is separated from the main part by the ape-fissure: found in certain apes and occasionally in the brain of man.

> The presence of such an *occipital operculum* implies the existence, in the cerebral hemisphere possessing it, of a sulcus, called by Prof. Elliott Smith the sulcus lunatus, which is strictly comparable to, if not absolutely identical with, the "Affenspalte" so typical of the brains of Simiidæ and Cercopithecidæ.
> *Nature*, Dec. 3, 1903, p. 104.

opesia (ọ-pē'zi-ạ̈), *n.*; pl. *opesiæ* (-ē). [NL., ⟨ Gr. *ὀπή*, a hole.] An aperture in the front wall of the zoœcium of a bryozoan.

opesial (ọ-pē'zi-ạl), *a.* [*opesia* + *-al*^{1}.] Of or pertaining to an opesia; of the nature of an opesia.

opesiula (ọ-pē'zi-ụ-lạ̈), *n.*; pl. *opesiulæ* (-lē). [NL., ⟨ *opesia* + dim. *-ula.*] A secondary or small opesia.

opesiule (ọ-pē'si-ūl), *n.* An opesiula.

> The parietal muscles [in Microporidæ, etc.] are here reduced to a single distal pair, which may pass through foramina ("*opesiules*," Jullien) to reach their insertion into the aperture.
> *Encyc. Brit.*, XXXI. 830.

Ophelia (ọ-fē'li-ạ̈), *n.* The typical genus of the family *Opheliidæ.* *Savigny*, 1817.

ophelic (ọ-fel'ik), *a.* [*Ophelia* + *-ic.*] Derived from the plant *Ophelia Chirata.*—**Ophelic acid**, a yellowish-brown syrup, $C_{13}H_{20}O_{10}$ (?), formed by the decomposition of the glucoside chiratin, which occurs in *Ophelia Chirata.*

Opheliidæ (ō-fẹ-lī'i-dē), *n. pl.* [NL. *Ophelia* + *-idæ.*] A family of polychætous annelids, having a short body, conical præstomium without appendages but with two ciliated pits, parapodia reduced with two groups of simple setæ and usually with dorsal cirri present and acting as gills. They inhabit the sand, and among the several genera are *Ophelia*, *Ammotrypane*, and *Polyophthalmus.*

ophelimity (ō-fe-lim'ị-ti), *n.* [Gr. *ὠφέλιμος*, useful, ⟨ *ὠφελεῖν*, help, be useful.] In *polit. econ.*, a term suggested by Professor V. Pareto as a substitute for 'utility,' as used in political economy.

Ophichthus (of-ik'thus), *n.* [NL., prop. *Ophichthys*, ⟨ Gr. *ὄφις*, serpent, + *ἰχθύς*, fish.] A genus of eels of the family *Ophichthyidæ*, very numerous in tropical seas.

ophicleide, *n.* 2. In *organ-building*, a powerful reed stop with a trumpet-like tone.

ophicleidean (of-i-klī'dẹ-ạn), *a.* [*ophicleide* + *-e-an.*] Produced by or resembling an ophicleide; resembling the sound produced by the ophicleide.

> He recognized the intermittent honk of the Owl, . . . the stalwart snort of the Terrapin, and the mighty *ophicleidean* roll of the able organ of the Bone. "And yet," he thought, "if one were to wake one of them up and say to him that he was snoring, he would not believe a word of it!"
> *W. M. Laffan*, in The Century, Feb., 1882, p. 489.

ophiderid (ọ-fid'ẹ-rid), *n.* and *a.* I. *n.* A member of the lepidopterous family *Ophideridæ.*

II. *a.* Having the characters of or belonging to the family *Ophideridæ.*

Ophidioceras (ọ-fid-i-os'ẹ-ras), *n.* [NL., ⟨ Gr. *ὀφίδιον*, a little snake, + *κέρας*, horn.] A genus of Silurian nautiloid cephalopods. They were closely coiled until a late stage of growth, when the shell became straight and free with a much-constricted aperture.

Ophidioidei (ọ-fid-i-oi'dē-ī), *n. pl.* [NL.: see *ophidioid.*] A group of fishes of the order *Acanthopteri*, having no ventral spines, or no spines in the anterior part of the dorsal.

Ophidion (ọ-fid'i-on), *n.* [NL., ⟨ Gr. *ὀφίδιον*, dim. of *ὄφις*, a serpent.] A genus of fishes, of the family *Hexagrammidæ*, found on the Pacific coast of North America from Sitka to Santa Barbara.

Ophidion elongatus.
(From Bulletin 47, U. S. Nat. Museum.)

Ophileta (of-i-lē'tạ̈), *n.* [NL.] A genus of rhipidoglossal gastropods very characteristic of the late Cambrian and early Silurian rocks.

Ophiobolus (of-i-ob'ọ-lus), *n.* [NL. (Riess, 1854), ⟨ Gr. *ὄφις*, a snake, + *βόλος*, a throw. The name alludes to the elongate, sinuous, spotted spores.] A large genus of pyrenomycetous fungi of the family *Pleosporaceæ*, having small perithecia embedded in the tissue of the host. The spores are yellowish, many-septate, and long filiform. About 125 species have been described. They are common and widely distributed, occurring chiefly on dead herbaceous stems.

Ophioderma (of″i-ō-dėr'mạ̈), *n.* [NL., ⟨ Gr. *ὄφις*, a serpent, + *δέρμα*, skin.] The typical genus of the family *Ophiodermatidæ.* *Müller* and *Troschel*, 1840.

Ophiodermatidæ (of″i-ọ-dėr-mat'i-dē), *n. pl.* [NL., ⟨ *Ophioderma* (*-mat-*) + *-idæ.*] A family of ophiuroids, of the order *Zygophiuræ*, having numerous oral papillæ, none being infradental, arm incisures on the disk, and dental papillæ absent. It includes several genera, among them being *Ophioderma*, *Ophioconeta*, and *Ophioplax.*

Ophiogenes (of-i-oj'ẹ-nēz), *n. pl.* [Gr. *'Οφιογενεῖς*, pl. of *ὀφιογενής*, serpent-born, ⟨ *ὄφις*, serpent, + *-γενης*, -born.] A people of the Troad who, according to fable, were of serpent kin and could cure by touch the bite of a serpent.

> These Naga tribes of South Asia are . . . analogues . . . of the *Ophiogenes*, or Serpent-race of the Troad, kindred of the vipers whose bite they could cure by touch, and descendants of an ancient hero transformed into a snake.
> *E. B. Tylor*, Primitive Culture, II. 218.

ophioglossaceous (of″i-ọ-glo-sā'shius), *a.* Belonging to the *Ophioglossaceæ*, a family of ferns.

ophioid (of'i-oid), *a.* [Gr. *ὄφις*, snake, + *-oid.*] Resembling or having the characters of a snake.

Ophiolepididæ (of″i-ọ-le-pid'i-dē), *n. pl.* [NL., ⟨ *Ophiolepis* + *-idæ.*] A family of ophiuroids, of the order *Zygophiuræ*, having from 3 to 6 oral papillæ, of which the last may be infradental, arm incisures on the disk, and no dental papillæ. Among the several genera are *Ophiolepis*, *Ophiura*, and *Ophioglypha.*

Ophiolepis (of-i-ol'e-pis), *n.* [NL., ⟨ Gr. *ὄφις*, snake, + *λεπίς*, scale.] The typical genus of the family *Ophiolepididæ.* *Müller* and *Troschel*, 1840.

Ophion, *n.* 2. [*l. c.*] An insect of this genus.—**Long-tailed ophion**, a large yellowish-brown American ichneumon-fly, *Ophion macrurum*, a common parasite of the cecropia caterpillar and other allied insects. See cut under *Ophion.*

ophiophilism (of-i-of'i-lizm), *n.* [Gr. *ὄφις*, serpent, + *φιλεῖν*, love, + *-ism.*] A love for and care of snakes.

> *Ophiophilism* is by no means an ugly word.
> *Daily News* (London), Feb. 19, 1883. *N. E. D.*

ophiophilist (of-i-of'i-list), *n.* [*ophiophil*(*ism*) + *-ist.*] One who loves snakes. *Daily News* (London), Feb. 19, 1883. *N. E. D.*

ophiopluteus (of″i-ō-plö'tẹ-us), *n.*; pl. *ophioplutei* (-ī). The larva of *Ophiuroidea*; contrasted with ★*echinopluteus.* *Mortensen.*

> Mortensen . . . in his recent review of the echinoderm larvæ, has suggested the names echinopluteus and *ophiopluteus* for the larvæ of Echinoidea and Ophiuroidea respectively.
> *Phil. Trans. Roy. Soc. London*, B, 1903, p. 286.

ophiosaurian (of-i-ọ-sâ'ri-ạn), *a.* and *n.* Of or pertaining to the *Ophiosauria*; one of the *Ophiosauria.*

Ophioscion (of-i-os'i-on), *n.* [NL., ⟨ Gr. *ὄφις*, serpent, + *σκιά*, shadow (alluding to *Sciæna*).] A genus of small fishes, nearly all American, belonging to the family *Sciænidæ.*

Ophiothricidæ (of″i-ọ-thris'i-dē), *n. pl.* [NL., ⟨ *Ophiothrix* (*-thric-*) + *-idæ.*] A family of ophiuroids, of the order *Zygophiuræ*, having dental papillæ but no oral papillæ. It includes among other genera *Ophiothrix*, *Ophionema*, and *Ophiocnemis.*

Ophiothrix (of'i-ọ-thriks), *n.* [NL., ⟨ Gr. *ὄφις*, snake, + *θρίξ*, hair.] The typical genus of the family *Ophiothricidæ.* *Müller* and *Troschel*, 1840.

ophiotoxin (of'i-ọ-tok″sin), *n.* [Gr. *ὄφις*, a serpent, + E. *toxin.*] Snake venom. *Science*, Feb. 7, 1908, p. 223.

ophiouride (of-i-ö'rid), *n.* [Gr. *ὄφις*, snake, + *οὐρά*, tail, + *-ide*^{2}. See ★*ophiurid.*] A cubic curve, the snake's-tail.

ophioxylin (of-i-ok'si-lin), *n.* [*Ophioxylon* + *-in*^{2}.] A crystalline compound, $C_{16}H_{12}O_6$(?), occurring in the root of *Ophioxylon serpentinum.* It melts at 71.8° C. See ★*plumbagin.*

Ophioxylon (of-i-ok'si-lon), *n.* [NL. (Linnæus 1747–1753), ⟨ Gr. *ὄφις*, snake, + *ξύλον*, wood; in allusion to the use of the root in India as an antidote for snake-bites.] A former genus name for plants now referred to the genus *Rauvolfia*, of the family *Apocynaceæ.* See *Rauvolfia* and *serpentwood.*

ophism (of'izm), *n.* [Gr. *ὄφις*, serpent, + *-ism.*] Serpent-worship; ophiolatry.

ophisuroid (o-fis'ụ-roid), *a.* [NL. *Ophisurus* + *-oid.*] Pertaining to or connected with the lapsed genus *Ophisurus.*

> This genus contains all the *ophisuroid* eels which have sharp teeth, no marked canines, well-developed pectoral fins, and the dorsal inserted behind the head.
> *Jordan and Evermann*, Fishes of North and Middle [Amer., p. 381.

Ophitic^2 (o-fit'ik), *a.* [*Ophite*^{2} + *-ic.*] Relating to the Ophites. See *Ophite*^{2}.

Ophitism (of'i-tizm), *n.* [*Ophite*^{2} + *-ism.*] The doctrines of the Ophites. See *Ophite*^{2}.

Ophiuchid (of-i-ū'kid), *n.* [*Ophiuchus* + *-id*^{2}.] A meteor belonging to the flock which appears to radiate from the constellation Ophiuchus.

> In April many fine meteors diverge from Virgo and Libra, while in May there are Serpentids, Scorpiids, and *Ophiuchids.*
> *Nature*, April 14, 1904, p. 571

ophiurid (of-i-ū'rid), *n.* An ophiuran; a member of the family *Ophiuridæ*.

Finally, in the *ophiurid Ophioglypha*, the rate of regeneration of the arms is greater the greater the number of removed arms, with the exception of the case where all are removed. *Science*, Feb. 5, 1904, p. 215.

ophiurin (of-i-ū'rin), *n.* [*Ophiur*(*is*) + *-in*^{2}.] A yellowish-brown pigment found in the ophiuris or brittle-star.

ophiuris (of-i-ū'ris), *n.* [NL., < Gr. *ὀφίουρος*, serpent-tailed, < *ὄφις*, serpent, + *οὐρά*, tail.] A brittle-star; an animal belonging to the echinoderms.

ophritis (of-rī'tis), *n.* [NL., < Gr. *ὀφρύς*, eyebrow, + *-itis.*] Inflammation of the eyebrows.

Ophth. An abbreviation of *ophthalmology*.

ophthalmagra (of-thal-mag'rạ̈), *n.* [Gr. *ὀφθαλμός*, eye, + *ἄγρα*, a catching.] Gouty conjunctivitis or ophthalmia.

ophthalmalgic (of-thal-mal'jik), *a.* [*ophthalmalg*(*ia*) + *-ic.*] Pertaining to, or suffering from, ophthalmalgia or pain in the eyeball.

ophthalmatrophy (of-thal-mat'rọ̄-fi), *n.* Same as *ophthalmatrophia*.

ophthalmia, *n.*—**Egyptian ophthalmia.** Same as *trachoma. Jour. Trop. Med.*, June 1, 1903, p. 183.—**Migratory ophthalmia,** inflammation in one eye following upon inflammation in the uveal tract of the other eye. Also called *sympathetic ophthalmia.*—**Ophthalmia tarsi,** inflammation of the edges of the eyelids.—**Periodic ophthalmia.** Same as ★*moon-blindness*, 2.

ophthalmiac (of-thal'mi-ak), *n.* [*ophthalmi*(*a*) + *-ac.*] A sufferer from inflammation of the eye or of the conjunctiva.

ophthalmiater (of-thal'mi-ā-tėr), *n.* [Gr. *ὀφθαλμός*, eye, + *ἰατήρ*, physician.] An oculist. [Rare.]

ophthalmiatric (of-thal-mi-at'rik), *a.* [Gr. *ὀφθαλμός*, eye, + *ἰατρός*, physician, + *-ic.*] Of or pertaining to ocular therapeutics.

Ophthalmic migraine, vertigo. See ★*migraine*, ★*vertigo*.

ophthalmious (of-thal'mi-us), *a.* Suffering from inflammation of the eyes, or ophthalmia.

ophthalmocace (of-thal-mok'ạ-sē), *n.* [Gr. *ὀφθαλμός*, eye, + *κάκη*, bad condition.] Severe, often gangrenous, general inflammation of the eye.

ophthalmolith (of-thal'mọ̄-lith), *n.* [Gr. *ὀφθαλμός*, eye, + *λίθος*, a stone.] A lacrymal calculus.

ophthalmometric (of-thal-mọ̄-met'rik), *a.* Of or pertaining to ophthalmometry.

ophthalmomyositis (of-thal'mọ̄-mī-ọ̄-sī'tis), *n.* [NL., < Gr. *ὀφθαλμός*, eye, + *μῦς* (*μυ-*), muscle, + *-itis.*] Inflammation of the ocular muscles.

ophthalmomyotomy (of-thal''mọ̄-mī-ot'ọ̄-mi), *n.* [Gr. *ὀφθαλμός*, eye, + *μῦς* (*μυ-*), muscle, + *-τομια*, < *ταμεῖν*, cut.] Operative division of the ocular muscles.

ophthalmoneuritis (of-thal''mọ̄-nụ̄-rī'tis), *n.* [Gr. *ὀφθαλμός*, eye, + *νεῦρον*, nerve, + *-itis.*] Inflammation of the ophthalmic nerve.

ophthalmophacometer (of-thal''mọ̄-fạ̄-kom'e-tėr), *n.* [Gr. *ὀφθαλμός*, eye, + *φακός*, lentil (used to represent 'lens'), + *μέτρον*, measure.] An instrument for determining the lines of curvature of the crystalline lens of the eye.

ophthalmophantom (of-thal-mọ̄-fan'tom), *n.* [Gr. *ὀφθαλμός*, eye, + E. *phantom.*] **1.** A model of the human eye used in the instruction of students in ophthalmoscopy.—**2.** A frame in which sheep's eyes can be inserted for use in practising various ophthalmic operations.

ophthalmoplasty (of-thal'mō-plas-ti), *n.* [Gr. *ὀφθαλμός*, eye, + *πλάσσειν*, mold.] Plastic surgery of the eyeball or of its adnexa.

ophthalmoplegic (of-thal-mọ̄-plej'ik), *a.* [*ophthalmopleg*(*ia*) + *-ic.*] Pertaining to or affected with ophthalmoplegia.

ophthalmoplegy (of-thal'mọ̄-plē-ji), *n.* Same as *ophthalmoplegia*.

ophthalmopod (of-thal'mọ̄-pod), *n.* [Gr. *ὀφθαλμός*, eye, + *πούς* (*ποδ-*), foot.] In crustaceans, the eye-stalk or ophthalmite.

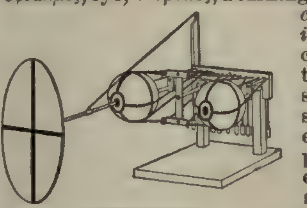
It [rostrum of Sergestes profundus] is described by Bate: "It consists of a short fine point projecting horizontally for about one-fourth the length of the *ophthalmopod*, and is dorsally furnished on the crest with a small tooth." *Proc. Zool. Soc. London*, 1903, p. 55.

ophthalmoscope, *n.*—**Ghost ophthalmoscope,** an ophthalmoscope containing a sheet of glass in the course of the efferent rays by which they are partially deflected, giving another image.

ophthalmostatometer (of-thal''mō-stạ̄-tom'e-tėr), *n.* [Gr. *ὀφθαλμός*, eye, + *στατός*, < *ἵστασθαι*, stand, + *μέτρον*, measure.] An instrument for determining accurately the position of the eyes.

ophthalmostatometry (of-thal''mọ̄-stạ̄-tom'e-tri), *n.* Measurement by means of the ophthalmostatometer.

ophthalmotrope (of-thal'mọ̄-trōp), *n.* [Gr. *ὀφθαλμός*, eye, + *τρόπος*, a turning.] In *exper. psychol.* and *physiol.*, a mechanical model of the two eyes, constructed as two spheres upon each of which pull six weighted strings representing the six eye-muscles.



Ophthalmotrope.

The instrument is used especially to demonstrate the action upon the eyeball of the various eye-muscles, acting singly or in combination. In the more elaborate models, the weights attached to the strings are accurately graded to reproduce the effect due to the separate muscles. For purposes of class-demonstration, a disk of white cardboard, with the vertical and horizontal diameters drawn in black, is attached to the one eyeball, in the manner shown in the figure. *E. B. Titchener*, Exper. Psychol., I. i. 135.

ophthalmotropometer (of-thal''mọ̄-trọ̄-pom'e-tėr), *n.* [Gr. *ὀφθαλμός*, eye, + *τρόπος*, a turning, + *μέτρον*, measure.] An apparatus for measuring the extent and direction of the movements of the eyeballs.

ophthalmotropometry (of-thal-mō-trọ̄-pom'e-tri), *n.* [Gr. *ὀφθαλμός*, eye, + *τρόπος*, turning, + *-μετρια*, < *μέτρον*, measure.] Measurement of the movements of the eyeballs.

ophyte, *n.* Same as *ophite*^{1}.

opiammone (ō-pi-am'ōn), *n.* [*opi*(*anate*) + *ammon*(*ium*).] A yellow crystalline powder, $C_{20}H_{19}O_8N$, made by evaporating a solution of ammonium opianate. It is insoluble in water and when heated with it to 150° C. yields opianic acid and ammonia.

opiane† (ō'pi-ān), *n.* [*opi*(*um*) + *-ane.*] Same as *narcotine*.

opianine (ō'pi-ạn-in), *n.* [*opiane* + *-ine*^{2}.] Same as *narcotine*.

opianyl (ō'pi-ạ-nil), *n.* [*opiane* + *-yl.*] **1.** Same as *meconin.*—**2.** The radical, $C_{10}H_9O_4$, of meconin. *Gerhardt.*—**3.** The radical, $(CH_3O)_2C_6H_2(CHO)CO$, of opianic acid.

Opimian (ọ̄-pim'i-ạn), *a.* [L. *Opimianus*, of Opimius, < *Opimius*, Opimius.] Of Opimius: applied to a celebrated Roman wine of the year A. U. C. 633, when Opimius was consul.

Italie knew her owne good, and what it was to maintain vineyards. . . . And therefore it is that all the wines of that time bear the onely name of that one Consull, and be called *Opimian*. *Holland*, tr. of Pliny, I. 419.

The cry for light will not be silenced, though we crown ourselves with roses, and pour the hundred-yeared *Opimian* before the shrine of Apollo. *Shirley*, in Fraser's Mag., Feb., 1863, p. 241. *N. E. D.*

opinability (ọ̄-pin-ạ-bil'i-ti), *adv.* [*opinable* + *-ity.*] The quality of being opinable.

opinably (ọ̄-pin'ạ-bli), *adv.* Conjecturally; as a matter of opinion.

opinic (ọ̄-pin'ik), *a.* Noting a crystalline acid, $C_9H_6O_5 + 2H_2O$, formed by the action of hydriodic acid on hemipinic acid. It melts at 148° C.

opinional (ọ̄-pin'yọn-al), *a.* [*opinion* + *-al*^{1}.] Being a matter of opinion not of certainty; of the nature of opinion.

No mere body of *opinional* truths or doctrines meets our case — nothing meets it but to give us back . . . the personal inhabitation we have lost. *Bushnell*, Sermons on Living Subjects, p. 84.

opiology (ō-pi-ol'ọ̄-ji), *n.* [Gr. *ὄπιον*, opium, + *-λογια*, < *λέγειν*, speak.] The investigation of the properties of opium. *N. E. D.*

opiomania (ō''pi-ọ̄-mā'ni-ạ̈), *n.* [Gr. *ὄπιον*, opium, + *μανία*, madness.] Morphiomania in which use is made of opium rather than of its alkaloid morphine.

opiomaniac (ō''pi-ọ̄-mā'ni-ak), *n.* [*opiomania* + *-ac.*] One who has a morbid craving for opium.

opiophagy (ō-pi-of'ạ-ji), *n.* [Gr. *ὄπιον*, opium, + *-φαγια*, < *φαγεῖν*, eat.] The eating of opium; a chronic craving for opium. *N. E. D.*

Opis (ō'pis), *n.* [NL., < L. *Opis*, < Gr. *Ὦπις*, a nymph in the train of Artemis.] A genus of teleodesmaceous pelecypod mollusks related to *Astarte*, having trigonal valves, prominent beaks, and very deep lunule. It occurs in rocks from the Trias to the Cretaceous.

opisthenar (ọ̄-pis'the-när), *n.* [Gr. *ὀπισθέναρ*, < *ὀπισ*(*θεν*), at the back, + *θέναρ*, the palm of the hand.] The back of the hand.

opisthenogenesis (ọ̄-pis''the-nọ̄-jen'e-sis), *n.* [NL., < Gr. *ὄπισθεν*, at the back, + *γένεσις*, generation.] The development of segments, tubercles, and markings in animals *a tergo*, or successively from the posterior toward the anterior end of the body. *A. S. Packard*, 1904.

opisthenogenetic (ọ̄-pis''the-nọ̄-jẹ̄-net'ik), *a.* Pertaining to or characterized by opisthenogenesis.

opisthiobasilar (ọ̄-pis''thi-ọ̄-bas'i-lär), *a.* [Gr. *ὀπίσθιος*, hinder (see *opisthion*), + E. *basilar.*] In *craniom.*, relating to the opisthion and to the basion.—**Opisthiobasilar plane.** See ★*plane*^{1}.

Opisthocentrus (ọ̄-pis-thọ̄-sen'trus), *n.* [NL., < Gr. *ὀπισθόκεντρος*, with a sting in the tail, < *ὄπισθεν*, behind, + *κέντρον*, sting.] A genus of blennioid fishes of the North Pacific.

opisthodetic (ọ̄-pis-thọ̄-det'ik), *n.* [Gr. *ὄπισθεν*, behind, + *δετός*, bound, + *-ic.*] Extending behind the beaks, as the ligament in certain pelecypod mollusks: contrasted with ★*amphidetic* (which see).

opisthoglyph (ọ̄-pis'thọ̄-glif), *n.* [*Opisthoglyph*(*a*).] A member of a group of poisonous snakes having some of the posterior upper teeth grooved.

Opisthoglypha (ọ̄-pis-thog'li-fạ̈), *n. pl.* [NL. See *Opisthoglyphia.*] The commonly accepted spelling of *Opisthoglyphia*, a division (usually considered as a superfamily) of snakes.

opisthoglyphous (ọ̄-pis-thog'li-fus), *a.* [NL. *Opisthoglyph*(*a*) + *-ous.*] Having some of the posterior teeth in the upper jaw grooved, as in certain poisonous snakes; opisthoglyphic.

Opisthognathus (op-is-thog'nạ-thus), *n.* [NL., < Gr. *ὄπισθεν*, behind, + *γνάθος*, jaw.] A genus of fishes of the family *Opisthognathidæ*, found in warm seas. See cut at *Opisthognathidæ*.

opisthogoneate (ō-pis-thọ̄-gō'nẹ̄-āt), *a.* [Gr. *ὄπισθεν*, behind, + *γονή*, genitalia, + *-ate*^{1}.] Having the genitalia behind.

The genital openings *opisthogoneate*, usually single, but paired in Thysanura (Lepisma), Dermaptera, and Plectoptera (Ephemeridæ). *A. S. Packard*, Text-book of Entom., p. 27.

opisthogyrate (ō-pis-thọ̄-jī'rāt), *a.* [*opisthogyre* + *-ate*^{1}.] Same as ★*opisthogyrous*.

opisthogyre (ọ̄-pis'thọ̄-jīr), *a.* [Gr. *ὄπισθεν*, back, backward, + *γυρός*, turning.] Same as ★*opisthogyrous*.

opisthogyrous (ō-pis-thō-jī'rus), *a.* [*opisthogyr*(*e*) + *-ous.*] Having the beaks of the valves twisted backward, as some species of pelecypod mollusks. Also *opisthogyre* and *opisthogyrate*.

opisthome (op'is-thōm), *n.* [See *Opisthomi.*] A fish belonging to the order *Opisthomi*.

Opisthonema (ọ̄-pis-thọ̄-nē'mạ̈), *n.* [NL., < Gr. *ὄπισθεν*, back, + *νῆμα*, thread.] A genus of clupeoid fishes the species of which are all found in American waters.

Opisthoparia (ọ̄-pis-thọ̄-pa-rī'ä), *n. pl.* [Gr. *ὄπισθεν*, behind, + *παρειά*, the cheek.] In Beecher's classification of the trilobites, an order including forms in which the facial sutures begin on the posterior margin of the cephalon within the genal angles and cut the anterior margin separately or unite in front of the glabella. Contrasted with *Hypoparia* and *Proparia*.

opisthopneumonic (ọ̄-pis''thọ̄-nụ̄-mon'ik), *a.* [Gr. *ὄπισθεν*, behind, + *πνεύμων*, the lungs, + *-ic.*] Having the vascularized pulmonary tissue situated behind the pericardium, as in some mollusks, for example *Daudebardia rufa*.

opisthopodial (ọ̄-pis-thọ̄-pō'di-ạl), *a.* [*opisthopodi*(*um*) + *-al*^{1}.] Of or pertaining to the opisthopodium.

opisthopodium (ọ̄-pis-thọ̄-pō'di-um), *n.*; pl. *opisthopodia* (-ạ̈). [NL., < Gr. *ὄπισθεν*, behind, + *πούς* (*ποδ-*), foot.] An accessory foot-like organ which is developed at the posterior end of the visceral mass in some *Pelecypoda*, such as *Pholadomya* and *Halicardia*.

Behind the byssal groove [of Halicardia flexuosa], on the median line of the visceral mass, is produced a thin, compressed, fin-like body, which I propose to name the *opisthopodium*, and which in life may be nearly flat vertically. Something analogous was described by Owen in *Pholadomya. Smithsonian Rep.* (*Nat. Mus.*), 1896, p. 700.

opisthorchiasis (ọ̄-pis-thôr-kī'ạ-sis), *n.* [NL., < *Opisthorchis* + *-iasis.*] A disease of the liver in man, dogs, cats, and some other animals, caused by the presence (in the bile-ducts) of flukes (trematodes) belonging to the genus *Opisthorchis*.

Opisthorchis (op-is-thôr'kis), *n.* [NL., < Gr.

ὀπισθεν, behind, + *ὀρχις*, testicle.] A genus of trematodes of the family *Fasciolidæ*, of which the type is *felineus*. They are parasitic, particularly in the liver of mammals, and are characterized by the posterior position of the testicles.

opisthosomal (ọ̄-pis-thọ̄-sō′mạl), *a.* [Gr. *ὀπισθεν*, behind, + *σῶμα*, body, + *-al*^{1}.] Postabdominal.

In both Limulus and the Scorpion the first six of the eighteen segments are well known to be fused into a prosoma bearing the limbs, but while in the Scorpion the remaining twelve are free, in Limulus they are united into a compact *opisthosomal* mass.
Smithsonian Rep., 1902, p. 604.

opisthotome (ọ̄-pis′thọ̄-tōm), *a.* [Gr. *ὀπισθεν*, behind, + *τέμνειν*, cut.] Cutting by a backward movement of the jaw, as does the elephant in masticating food. [Rare.]

opium, *n.*—**Boston opium**, a term formerly used to designate opium so diluted with inert matter that it barely met official requirements.—**Camphorated tincture of opium**, an aromatic tincture of opium, being one twenty-fifth as strong as laudanum; paregoric; the tinctura opii camphorata of the United States Pharmacopœia.—**Opium war.** See ★*war*^{1}.—**Pudding-opium.** See *Boston* ★*opium*.—**Wild opium**, the wild lettuce, *Lactuca Canadensis*.

opiumate (ō′pi-um-āt), *n.* [*opium* + *-ate*^{1}.] One who has the opium habit. *N. E. D.* [Rare.]

opiumism (ō′pi-um-izm), *n.* [*opium* + *-ism.*] The morbid state which results from the habitual use of opium.

opium-pipe (ō′pi-um-pīp), *n.* A pipe adapted to the smoking of opium.

O-plate (ō′plāt), *n.* A cast-iron plate with a circular ridge in the center, on which mine-cars are turned at the crossing of two mine-roads. *Barrowman*, Glossary.

opochala (ō-pō-chä′lä), *n.* [Native name in Fernando Po.] Same as ★*owala*.

opomyzid (op-ọ̄-mī′zid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Opomyzidæ*.

II. *a.* Having the characters of or belonging to the family *Opomyzidæ*.

opopanax, *n.* **3.** In the southern United States, the huisache, *Acacia Farnesiana*. In this sense sometimes with the French spelling *opoponax*. See ★*huisache*.

opossum-tree (ọ̄-pos′um-trē), *n.* **1.** The sweet-gum, *Liquidambar Styraciflua*. See cut at *Liquidambar*.—**2.** An Australian timber-tree of the saxifrage family, *Quintinia Sieberi*, which yields a heavy, close-grained yellowish wood.

opossum-wood (ọ̄-pos′um-wu̇d), *n.* The silver-bell-tree, *Mohrodendron Carolinum*.

opotherapy (op-ọ̄-ther′ạ-pi), *n.* [Gr. *ὀπός*, juice, + *θεραπεία*, medical treatment.] Treatment of disease by means of extracts made from the various glands and organs of animals. The most commonly used extracts of this kind are from the thyroid gland, the suprarenal capsule, the testicle, and the ovary. Also called *organotherapy*.

Opotherapy, or treatment by organic extracts. Extracts from the pancreas, the liver, the suprarenal capsules, the spinal cord, the ovary, the prostate, the testicle, the thyroid gland, have thus been successively used in therapeutics with varying degrees of success. The study of the thyroid extract especially has led scientists to the most unmistakable results.
Smithsonian Rep., 1898, p. 696.

opp. An abbreviation (*a*) of *opposed*; (*b*) of *opposite*.

Oppel's lines. See ★*line*^{2}.

oppidum (op′i-dum), *n.*; pl. *oppida* (-dạ̈). [L.] In *Rom. antiq.*, a provincial town, as distinguished from *urbs*, the city of Rome itself.

oppilant (op′i-lạnt), *a.* [L. *oppilans* (*-ant-*), ppr. of *oppilare*, stop up.] Stopping up; obstructing; hindering. *N. E. D.*

opposit, *a.* and *n.* A simplified spelling of *opposite*.

opposite. **I.** *a.* **6.** In *geom.*, in any complete set of connectors or fans, said of the first and the $(n/2+1)$th, when n is even.—**On opposite sides** of a point, a straight, or a plane: said of two points whose sect intersects the point, straight, or plane.—**Opposite numbers.** See ★*number*.—**Opposite points.** See ★*point*^{1}.

II. *n.* **3.** In *geom.*, an opposite point.—**The opposite to a point**, of P on a sect AB, a point P′ such that P and P′ are equidistant from the bisection point of AB, but on opposite sides of it.

oppositiflorous (o-poz-i-ti-flō′rus), *a.* [L. *oppositus*, opposite, + *flos* (*flor-*), flower, + *-ous*.] Having the flowers or flower-clusters opposite.

opposition, *n.* **10.** In *astrol.*, the aspect formed between two heavenly bodies 180 degrees (or about that distance) from each other: regarded as inimical and pernicious.

oppositipinnate (o-poz″i-ti-pin′āt), *a.* [L. *oppositus*, opposite, + E. *pinnate*.] Having the leaflets of a pinnate leaf opposite: the usual case.

oppositipolar (o-poz″i-ti-pō′lar), *a.* [L. *oppositus*, opposite, + *polus*, pole, + *-ar*^{3}.] In *neurol.*, having two poles or structures on opposite sides of a cell, as in the case of two neuraxones coming off from opposite sides of a nerve-cell.

The dendrites which often run far out into the white substance tend to be arranged in *oppositipolar* groups corresponding to the spindle shape of many of these cells.
Buck, Med. Handbook, VII. 311.

oppositively (o-poz′i-tiv-li), *adv.* In an antithetic manner; in an opposed or contrasted manner.

oppositiveness (o-poz′i-tiv-nes), *n.* The character of being contentious; tendency to opposition.

oppressionist (ọ-presh′ọn-ist), *n.* [*oppression* + *-ist.*] One who practises or approves of oppression. *Bentham. N. E. D.*

oppugnance (o-pug′nạns), *n.* Same as *oppugnancy*.

Opsanus (op′sạ-nus), *n.* [NL. (Rafinesque, 1817), erroneously formed, < Gr. *ὤψ*, eye, + *ἄνω*, up.] A genus of fishes of the family *Batrachoididæ*, found on the coasts of temperate regions.

opsigamy (op-sig′ạ-mi), *n.* [Gr. *ὀψίγαμος*, late-married (< *ὀψέ*, late, + *γάμος*, marriage), + *-y*^{3}.] Late marriage.

opsilus (op′si-lus), *n.* A form of anemometer in which a wind-vane carries a short tube opening freely to receive the wind. The pressure of the wind is communicated through a tube to a distant indicator or manometer where it is observed or recorded. Specifically, the device invented by Lander.

opsimath (op′si-math), *n.* [Gr. *ὀψιμαθής*, late in learning.] One who is late in learning or in beginning to learn.

opsonic (op-son′ik), *a.* [*opson*(*in*) + *-ic.*] Of or pertaining to opsonin.—**Opsonic immunity.** See ★*immunity*.—**Opsonic index**, the ratio of a normal to a pathological phagocytic index, the former being taken as the unit.

Bacterial vaccines are now coming to play an important rôle in the newer therapeutics. It is obvious that such means of treatment must be carefully controlled, or, instead of being of material aid to the body, they become a damaging factor. Therefore, in order to follow opsonic treatment, a means must be found by which a fairly accurate measurement can be made of the opsonius in normal bloods and in the bloods of patients suffering from any bacterial infection. Wright and Douglas have practically overcome this difficulty by a technical method by which they derive the so-called "*opsonic index*." This "index" simply shows the relation existing between the opsonic content of a patient's blood as compared with the opsonic content of the blood of a normal person.
Buck, Med. Handbook, Appendix, p. 445.

Opsonic power, the power of a serum determined by calculating the phagocytic ★index (which see).—**Opsonic therapy**, the treatment of an infectious disease by the injection of dead bacteria of the same species as those causing the disease.

opsoniferous (op-sọ̄-nif′ẹ-rus), *a.* [*opsonin* + L. *ferre*, bear.] Bearing opsonin.

It appears that opsonins, like toxins and complements, possess two groups of molecules, one haptophore, whereby it attaches itself to the bacterial receptors, and one which may be called the *opsoniferous* group, whereby is effected in the bacteria some change, physical or chemical, that is necessary for phagocytosis.
Jour. Med. Research, Oct., 1907, p. 58.

opsonin (op′sō-nin), *n.* [Gr. *ὀψώνιον*, provisions, + *-in*^{2}.] A hypothetical substance, present in blood-serum, upon which the phagocytic action of the leucocytes is dependent. Wright and Douglas have demonstrated the presence of substances in the blood which act upon bacteria, rendering them subject to phagocytosis. These bodies they have termed *opsonins*. It is thought that their presence has to do with the production or existence of immunity. Such immunity is spoken of as *opsonic immunity*.

The best known cause of phagocytosis at present, and the one occupying the attention of medical men almost exclusively, is the *opsonin* of the blood serum, first clearly demonstrated by Wright and Douglas. Of the several protective bodies known to exist in normal and immune sera, only the *opsonins* can be quantitatively determined with any considerable degree of accuracy by any methods so far discovered. It should be remembered, however, that all the immune protective bodies arise from the action of the bacteria and their chemical products; so that, while the *opsonins* are distinct from the others, the probable quantity of the others may at least be inferred from the amount of *opsonin* found to be present. . . . *Jour. Med. Research*, July, 1907, p. 521.

opsonization (op″sọ̄-ni-zā′shọn), *n.* The act or process of opsonizing.

The author found that opsonins were most active in neutral liquids. An alkalinity exceeding $n/20$ KOH prevented *opsonization*. An acidity of $n/30$ HCl was sufficient to stop the opsonic function of serum.
Science, Sept. 13, 1907, p. 346.

opsonize (op″sọ̄-nīz), *v. t.*; pret. and pp. *opsonized*, ppr. *opsonizing*. [*opson*(*in*) + *-ize.*] To produce opsonins in; affect by means of opsonins.

opsonoid (op′sọ̄-noid), *n.* [*opson*(*in*) + *-oid.*] An opsonin the opsonophoric group of which has been destroyed.

We may say that when sensitized cocci are heated the opsoniferous group is largely inactivated, but as the bacterial receptors remain occupied by the haptophore group, bacteria are prevented from taking up new opsonin. In accordance with Ehrlich's nomenclature opsonin, the opsoniferous group of which is destroyed or inactivated, may be termed *opsonoid*.
Jour. Med. Research, Oct., 1907, p. 58.

opsonophoric (op″sọ̄-nọ̄-for′ik), *a.* [*opson*(*in*) + Gr. *-φορος*, -bearing, + *-ic.*] Referring to that group of an opsonin which produces changes in a bacterium of such a character that it will become subject to phagocytosis. Also *opsoniferous*.

opsony (op′sọ̄-ni), *n.* Same as *opsonium*.

opsophagist (op-sof′ạ̈-jist), *n.* [Gr. *ὄψον*, cooked meat, dainties, + *φαγεῖν*, eat, + *-ist.*] One who habitually eats dainties; a gourmet.

opsophagize (op-sof′ạ̈-gīz), *v. i.*; pret. and pp. *opsophagized*, ppr. *opsophagizing*. [*opsophag*(*y*) + *-ize.*] To feed luxuriously on dainties.

opsophagy (op-sof′ạ̈-ji), *n.* [Gr. *ὄψον*, dainties, + *-φαγια*, < *φαγεῖν*, eat.] The act or fact of eating dainties; luxuriousness in eating.

opt (opt), *v. i.* [L. *optare*, choose.] To choose one of two alternatives; choose.

The present Heligolanders *opting* to be British subjects.
Gladstone, in Leeds Mercury, July 25, 1890. *N. E. D.*

opt. An abbreviation (*b*) of *optical*; (*c*) of *optician*; (*d*) [*l. c.* or *cap.*] of *optics*.

Optic aphasia, capsule, radiations, tract. See ★*aphasia*, etc.

Optical agraphia, bench, constant, contact, correction, density. See ★*agraphia*, etc.—**Optical doubles.** See ★*double*, 18.—**Optical efficiency.** See ★*efficiency of a source of light*.—**Optical illusions.** See ★*illusion*, 2.—**Optical length of a ray, lever, resonance, strain, train, wedge.** See ★*length*, etc.—**Optical properties of metals**, those properties which affect reflection, refraction, polarization, and absorption of light at the surface of or within the body of a metal. One of the most obvious of these is opacity. It follows from the electromagnetic theory of light that dielectrics will, in general, be transparent, and bodies which conduct electricity opaque. The opacity of metals, however, is by no means absolute. Taken in sufficiently thin layers all metals transmit light; usually, with strong color. Thus the light transmitted by gold-leaf is green; that by silver, blue, etc. The transmitting power of metals, which is highly selective, is expressed by means of an extinction coefficient, or sometimes an absorption coefficient. *Metallic reflection.* The reflection of metallic surfaces differs from that of transparent media in that the reflected light is in general elliptically polarized. The intensity of the reflected ray, in the case of polarized light, depends upon the plane of incidence. When two rays, one polarized parallel to the plane of incidence, the other at right angles to the same, are reflected from a metallic surface the reflected rays differ in phase, and at the angle of maximum polarization this difference is always a quarter wave-length. *Indexes of refraction.* Table I gives the index of refraction of various metals for the D line. It will be noted that certain metals, such as gold, copper, and silver, have an index of refraction smaller than unity, while in other cases the index is much larger than for transparent media.

Table I.

Metal.	Index of refraction.
Silver	0.18
Gold	0.37
Platinum	[illegible]
Copper	0.64
Steel	2.41
Sodium	[illegible]
Mercury	1.73
Antimony	3.04
Lead	2.01
Magnesium	0.37

Anomalous dispersion of metals. In common with other media showing marked selective absorption, metals in general exhibit anomalous dispersion, as will be seen by comparing the index of refraction for red with the index for blue light in Table II.

Table II.

Metal.	Index of refraction.	
	Red.	Blue.
Silver	0.35	0.20
Platinum	1.99	1.63
Bismuth.	2.61	2.13
Iron	1.81	1.52
Nickel	2.17	1.85
Cobalt.	3.10	2.39

The only exceptions are gold, copper, and lead. *Surface color.* Another result of selective absorption in metals is the greater reflection of certain wave-lengths of light than of others. The reflected beam consequently differs in composition from the incident beam and the metal shows surface color.—**Optical vertigo.** Same as *ophthalmic ★vertigo.*

opticity (op-tis′i̤-ti), *n.* [*optic* + *-ity.*] The power of rotating the plane of polarization of light possessed by the so-called optically active substances and by the magnetic field.

opticochemical (op″ti-kọ̄-kem′i-kạl), *a.* Pertaining both to optics and to chemistry.

opticon (op′ti-kon), *n.*; pl. *optica* (-kạ̈). [NL., ‹ Gr. *ὀπτικόν*, neut. of *ὀπτικός*, optic.] The first of the three ganglionic swellings in the optic tract of an insect's brain.

opticonasion (op″ti-kọ̄-nā′si-on), *n.* [Gr. *ὀπτικός*, optic, + NL. *nasion.*] In *craniom.*, the distance from the posterior border of the optic foramen to the nasion. *Harrison Allen*, in Jour. Acad. Nat. Sci., Phila., 2d ser., X. 410.

opticopapillary (op″ti-kọ̄-pap′i-lạ̄-ri), *a.* Relating to the optic papilla.

optimal (op′ti-mạl), *a.* [L. *optimus*, best, + *-al*^{1}.] **1.** Best; most favorable: specifically, in *exper. psychol.*, referring to the frequency or duration of stimuli, to the length of intervals between experiments, etc., so timed as to allow of most accurate reproduction or apprehension, or of most adequate attentive preparation: as, the *optimal* interval for reproduction, the *optimal* preparation-time, the *optimal* rate of recurrence, the *optimal* rhythm, etc.

> These results do not enable us therefore to locate an *optimal* interval with any high degree of probability, nor even to establish the existence of such an interval with certainty. *Psychol. Rev. Mon. Sup.*, III. xiii. 44.

> The greatest happiness in life can be obtained only if all the instincts—that of workmanship included—can be maintained at a certain *optimal* intensity.
> *J. Loeb*, Compar. Physiol. of the Brain, p. 233.

2. Of or pertaining to the optimum, as of temperature, moisture, etc. See *★optimum.*

optimistical (op-ti-mis′ti-kạl), *a.* Same as *optimistic.*

optimization (op″ti-mi-zā′shọn), *n.* [L. *optimize* + *-ation.*] The act of optimizing or taking an optimistic view of; the act of turning to the best account or making the best of.

optimum, *n.* The term is applicable not only to the factor of heat, but also to those of light, moisture, etc. The optimum for each several function must be distinguished from the total optimum for the plant, the most intense activity of a function often being injurious. According to Schimper, that condition which secures the highest intensity of a function is its *absolute optimum*; that which secures its most favorable activity is its *harmonic optimum*; and the harmonic optima together compose the *œcological optimum* for the plant. *A. F. W. Schimper* (trans.), Plant-Geog., p. 44.

II. *a.* Best; most desirable.—**Optimum capacity,** "in an induction-coil, that capacity of the condenser, which, when placed around the break, will give the longest spark in the secondary. This has also been found by experiment to be the least capacity that causes the sparking at the break to disappear, or if not entirely to disappear, to become very small." *Ives*, in Elect. World and Engin., Oct. 31, 1903, p. 731.

optive (op′tiv), *a.* [L. *optivus*, chosen, ‹ *optare*, choose: see *★opt, option.*] **1.** Relating to the power of option; elective.—**2.** In *Rom. law*, selected by option or through a power of option.

> Tutors appointed in a testament by express nomination are called tutors dative; those selected in virtue of a power of option, tutors *optive*.
> *Muirhead*, Gaius, I. § 154. *N. E. D.*

optoblast (op′tọ̄-blȧst), *n.* [Gr. *ὀπτ(ικός)*, optic, + *βλαστός*, germ.] In *neurol.*, a cell of the layer of large ganglion-cells (eighth or ninth layer) of the human retina.

> These different currents are discharged upon the *optoblasts*, which are differentiated by the influence of habit and heredity, and hence result the differences in color sensations. *Smithsonian Rep.*, 1898, p. 193.

optocœle (op′tō-sēl), *n.* [Gr. *ὀπτ(ικός)*, optic, + *κοῖλος*, hollow.] An optic ventricle or cavity of one of the optic lobes of the midbrain in lower vertebrates. *Parker and Haswell*, Textbook of Zoology, II. 94.

optogenic (op-tọ̄-jen′ik), *a.* [Gr. *ὀπτ(ικός)*, optic, + *-γενης*, -producing, + *-ic.*] Of or pertaining to the cells of the integumental disk, in certain stages of the development of the compound eye of an insect.

optography (op-tog′rạ-fi), *n.* [Gr. *ὀπτ(ικός)*, optic, + *-γραφια*, ‹ *γράφειν*, write.] The fixation of an image on the retina. See *optogram.*

optoid (op′toid), *n.* [Gr. *ὀπτ(ικός)*, optic, + *-oid.*] The oval of Descartes.

optologist (op-tol′ọ̄-jist), *n.* [Gr. *ὀπτ(ικός)*, optic, + *-λογια*, ‹ *λέγειν*, speak, + *-ist.*] Same as *ophthalmologist. Lancet*, June 6, 1903, p. 1601. [Rare.]

optometrical (op-tọ̄-met′ri-kạl), *a.* Of or relating to optometry. *Optical Jour.*, Dec., 1903, p. 810

optometrist (op-tom′e-trist), *n.* [*optometr(y)* + *-ist.*] One who measures the visual power; specifically, an optician without medical training, who fits eyeglasses.

> One of the points to be thoroughly discussed will be the best name to give those who professionally test eyes for refractive errors. It is well to thoroughly discuss this question, but it seems to us that it is already settled. In those States which have laws governing this line of work the term used is "*Optometrist*"; also in those States where these laws are being agitated the same truth holds. *Optical Jour.*, June 23, 1904, p. 69.

optotechnics (op″tō-tek′niks), *n.* [Gr. *ὀπτ(ικός)*, optic, + E. *technics.*] The technology of microscopic, telescopic, photographic, stereoscopic, and other optical instruments.

> The task of *opto-technics* consists in extending the field of vision beyond the ordinary limitations.
> *Paul and Cheshire*, The Zeiss Works, p. 4.

opulus (op′ụ̄-lus), *n.* [L., a variety of maple.] The guelder-rose, *Viburnum Opulus.*

Opuntiales (ọ̄-pun-shi-ā′lēz), *n. pl.* [NL. (Engler, 1892), ‹ *Opuntia* + *-ales.*] Same as *★Cactales*: a name introduced without good reason, but now much used.

opuntioid (ọ̄-pun′shi-oid), *a.* [*Opunti(a)* + *-oid.*] Resembling *Opuntia*, the prickly-pear.

Opus Anglicanum, English work: a style of old embroidery. The human face was done in a manner suggesting low relief, by means of circular lines of chain-stitch beginning in the center of the cheek. After the whole figure had been done in circles and straight lines, a thin iron rod ending in a smooth knob was slightly heated and pressed in the middle spots of the circular lines of chain-stitch wherever they had been worked. The hollows thus made were lasting, and brought out a play of light and shadow which gave its distinctive character to the English work. This embroidery was highly prized for ecclesiastical use, it brought large prices, and much of it was sent to foreign churches. By the time of the Wars of the Roses, however, it had lost its high reputation. *D. Rock*, S. K. Handbook, Textile Fabrics, p. 80.—**Opus pectineum,** a kind of woven work which imitated embroidery. It was probably made by women with small looms and a comb-like instrument or pecten. Also called *comb-work.*—**Opus tectorium,** a hard plaster, somewhat like stucco, used for covering walls in Roman buildings. Three or four coats are necessary.—**Opus vermiculatum,** a species of mosaic which is made with little rods of stone instead of square pieces, the usual form.

opuscular (ọ̄-pus′kụ̄-lạ̈r), *a.* [*opuscule* + *-ar*^{3}.] Pertaining to or resembling an opuscule or small work.

Or. An abbreviation (*a*) of *oriental*; (*b*) of *Oregon.*

ora^{3} (ō′rạ̈), *n.* [L. *ora*, margin, edge, shore, coast.] A margin, or border, in technical uses; specifically, in *entom.*, the inflexed or inferior lateral margin of the prothorax, often separated from the antepectus by a suture. *Kirby and Spence.*—**Ora serrata,** in *anat.*, the serrate border of the retina posterior to the outer edge of the ciliary processes.

ora^{4} (ô′rạ̈), *n.* [It. *ora*, breeze, ‹ L. *aura*, breeze: see *aura*^{1}.] The day wind which blows from the south up the valley of lake Garda, in northern Italy.

oral. **I.** *a.*—**Oral gland, hood, method** or **system.** See *★gland, ★hood, ★oralism.*

II. *n.* In crinoids, same as *oral valve* (which see, under *oral*).

orale, *n.* **2.** In *craniom.*, the anterior terminal point of the sutura incisiva, on the inner face of the alveolar process. *Von Török.*

oralism (ō′rạl-izm), *n.* [*oral* + *-ism.*] The system of teaching deaf-mutes by means of ordinary speech or lip-language, without the use of the hand-manual.

oralist (ō′rạl-ist), *n.* [*oral* + *-ist.*] **1.** One who speaks correctly and with precision.—**2.** One who advocates or uses the oral system in teaching deaf-mutes.
